Among the bequests are \$730,000 from Hon. Henry L. Pierce, given without restriction, and \$146,500 from Mrs. Julia B. H. James, the income to be used for the purchase of works of art. The museum has been largely enriched, and has so outgrown its surroundings that measures are now taking for the procuring of a larger and more eligible site. The museum differs from the Metropolitan Museum of New York in receiving no aid from city or State.

Philadelphia: Pennsylvania Academy of Fine Arts.—The sixty-eighth annual exhibition, which opened on Jan. 14, was more than usually interesting. Most of the prominent New York artists contributed pictures, and more than 20 works were sent from Boston.

Pittsburg: Carnegie Institute.—The fourth annual celebration of Founder's Day was held in the Carnegie Music Hall on Nov. 2. The principal speaker was President Arthur Twining Hadley, of Yale University, who delivered an able discourse on Modern Changes in Educational Ideas.

The awards made by the International Jury of Award were as follow: Medal of the first class (gold), carrying with it an award of \$1,500, to Cecilia Beaux, Philadelphia, for her painting entitled *Mother and Daughter*. Medal of the second class (silver), with an award of \$1,000, to Frank M. Benson, of Salem, Mass., for his painting *The Sisters*. Medal of the third class (bronze), with an award of \$500, to Andrée Dauchez, Paris, for his painting *The Boats*. Honorable mention, to Lucien Simon, Paris, for his painting entitled *Portraits*, and to J. H. Twachtman, Greenwich, Conn., for his painting *The Waterfall*.

The exhibition, comprising 258 pictures, was one of the best displays ever held in America. The most striking new works by American artists, besides the prize pictures, were Childe Hassam's *Improvisation*, George De Forest Brush's *A Family Group*, Edward C. Tarbell's *My Family*, William M. Chase's portrait of Frank Wadsworth, Winslow Homer's *High Seas and Summer Night*, Carl Melchor's *Young Mother*, and Frederick W. Freer's *Moonrise*. Among foreign canvases were Thaulow's *Old Factory in Norway*, two marines by Mesdag, Charles Collet's *The Three Holy Kings*, and some good pictures from Italy and Scotland.

Miscellaneous.—A noteworthy recognition of American art is the election to membership in the Accademia di San Luca of Rome of Daniel Chester French, the sculptor. The Accademia di San Luca, which was founded A. D. 800, has 41 members, 20 of whom are foreigners. Its rooms are in the Colonna Palace, near the Quirinal. Mr.

French is the first American artist to receive this honor.

The international contest for the Phœbe Hearst architectural plans for the buildings of the University of California has been decided in favor of E. Benard, of Paris. Ninety-eight architects contributed designs, which were submitted to a jury in Antwerp. Eleven plans survived a third examination, and these were sent to San Francisco for final decision, with the result that Benard was awarded the first prize of \$10,000. The second prize, \$4,000, was given to Howells, Stokes & Hornbostel, of New York; the third, \$3,000, to Despardelles of Stephen Codman, of Boston; the fourth, \$2,000, to Howard & Cauldwell, of New York; and the fifth, \$1,000, to Lord, Hewlett & Hull, of New York. While M. Benard's plan involves the removal of the present buildings and the virtual creation of a new city, he has preserved the natural contour of the ground. The style of the architecture is modern, but leans to the Roman Ionic order.

A bronze bust of Edgar Allan Poe, by Julian Zolnay, of New York, was unveiled at the University of Virginia, at Charlottesville, Va., on Oct. 7. It occupies an alcove in the rotunda of the new library building. The bust, which represents the poet in a reflective mood, with his head slightly bent, bears a facsimile of the poet's signature and the inscription: "Edgar Allan Poe, 1809-1849. Student of the University of Virginia, February to December, 1826." The principal address was made by Hamilton W. Mabie. Letters were received from prominent literary men all over the United States.

FLORIDA, a Southern State, admitted to the Union March 3, 1845; area, 58,680 square miles. The population, according to each decennial census since admission, was 87,445 in 1850; 140,424 in 1860; 187,748 in 1870; 269,493 in 1880; and 391,422 in 1890. By the State census of 1895 it was 464,639. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, William D. Bloxham; Secretary of State, John L. Crawford; Treasurer, James B. Whitfield; Comptroller, W. H. Reynolds; Attorney-General, William B. Lamar; Superintendent of Public Instruction, William N. Sheats; Adjutant General, Patrick Houston; Commissioner of Agriculture, Lucius B. Wombwell; State Chemist, W. A. Rawls; State Examiner, W. V. Knott; Railroad Commissioners, R. H. M. Davidson, H. E. Day, J. M. Bryan; Board of Health, W. B. Henderson, D. T. Gerow, H. L. Simpson; Chief Justice of the Supreme Court, R. F. Taylor; Associate Justices, Milton H. Mabry and Francis B. Carter.

Finances.—The report of Treasurer shows a balance, Jan. 1, 1899, of \$317,372.06. The balance in the treasury, Jan. 1, 1900, to the credit of the several State funds was \$318,416.40. The deficit of the former Treasurer, C. B. Collins, \$52,591.97, was reduced \$26,225.38 through suits instituted by the State against him and his bondsmen. Payment on a loan of \$200,000 borrowed by the State in 1891 was made, reducing the amount to \$100,000, and arrangements were made for payment of the entire amount in January, 1900. The total bonded indebtedness of the State is \$322,500. The aggregate assessed valuation of property in 1898 was \$93,900,823.75. The total tax levy for 1899 was 4½ mills; general revenue tax, 3 mills; Board of Health tax, ¼ mill; pension tax, ¼ mill; school tax, 1 mill. The Treasurer in his report says the general revenue tax for 1900 can be reduced to 2½ mills because of the final payment of the debt of \$200,000.

Insurance.—The fire insurance companies in Florida number 54; life insurance companies, 11; miscellaneous (accident, plate-glass, tornado, surety, etc.), 17. The aggregate premium receipts in the State for 1898 were as follow: Fire, \$622,669.58; life, \$603,716.77; miscellaneous, \$54,141.33; total, \$1,280,517.68. The aggregate losses paid in Florida in 1898 were: Fire, \$312,388.64; life, \$213,361.68; miscellaneous, \$19,118.11; total, \$554,868.48. The net outgo for insurance during the year was: Fire, \$310,270.94; life, \$390,355.09; miscellaneous, \$35,023.22; total, \$735,649.25.

Charities.—The report of the State Insane Asylum for 1898 shows 491 patients at the close of the year, 48 more than during 1897, as follow: White males, 147; white females, 138; colored males, 106; colored females, 100. The per capita expense during the year was \$76.33.

Prisons.—The number of convicts in State camps Jan. 1, 1899, was 717, an increase of 30 over 1898. In the preceding year 344 were received and 237 discharged, 15 were pardoned, 40 died, 21 escaped, and 2 were committed to insane asylums. The convicts sentenced during 1898 were 50 white males, 2 white females, 269 negro males, 13 negro females. The Reformatory, at Marianna, for offenders under sixteen years of age was completed the last of the year.

Militia.—The report of the Adjutant General for 1899 shows the total of the active military force of Florida to be 1,254, of whom 99 were officers and 1,155 noncommissioned officers and enlisted soldiers, a gain of 75 enlisted men during the year. The naval militia had an aggregate of 218 men, 5 of whom were commissioned officers.

Communications.—The railroad mileage for 1899 is reported at 3,370.73, which is assessed at \$18,759,155.44. A passenger tariff rate of 3 cents a mile on some roads and 4 cents a mile on other roads, to go into effect July 18, 1898, was made by the Railroad Commissioners. The railroads involved contested this ruling in the courts of the State in 1898 and 1899. A compromise was effected of 3 cents a mile for round-trip tickets and 4 cents a mile for straight tickets.

The State of Florida in 1899 is reported to have 3,101.44 miles of telegraph lines. Their value is assessed at \$252,726.15.

Products.—According to the last report of the Commissioner of Agriculture, Florida has under cultivation 882,062 acres. The aggregate value of farm products was \$17,905,060; value of mine, forest, and miscellaneous products, \$31,059,015; total, \$48,965,075.

Periodicals.—The following list of periodical publications in the State is believed to be accurate: Dailies, 18; triweekly, 1; semiweeklies, 6; weeklies, 108; monthlies, 10; total, 143.

Indians.—The Seminole Indians in Florida number about 600. During the year a movement was begun to provide them with land in severalty in the Everglades. The State, in making drainage contracts, set aside for their use 10,000 acres subject to legislative action.

Homestead Land.—The State in 1898 held 1,592,793 acres open to homestead entry. Suwannee County contains the fewest, 768, and Walton County the greatest, 206,260.

Birth and Death Rate.—The birth rate of Florida for five years ending with 1898 per 1,000 of population was 14.63; the death rate was 8.05.

Legislative Session.—The biennial session of the Legislature convened April 1 and closed May 31. The Legislature comprises 32 Senators and 68 Representatives—all Democrats.

In his message the Governor called attention

to the excellent financial condition of the State, and said: "Since the adjournment of the last Legislature \$100,000 of the principal of the State's debt has been paid; \$75,000 of this amount was paid in 1898 and \$25,000 in 1899. The State tax proper has also been reduced to 3 mills.

"One of the most serious financial problems that confront the Legislature is the payment of pensions under the law enacted by the last Legislature. Prior to that period all pension laws were passed for the benefit of those who enlisted in the military or naval service of the Confederate States or of this State, who lost limbs or who were permanently injured by wounds or diseases contracted while in said service. The last Legislature departed from this principle, and gave the benefit of the pension laws not only to those who enlisted and are permanently injured from wounds or disease contracted during the service, but since. The same change was made as to the widows of pensioners." The Governor called attention to his recommendation to the former Legislature that the "Constitution should be so amended as to have a circuit judge appointed for the State, who could be directed to hold court in any county where a necessity existed, whether that necessity was produced by unusual crime or by disability of the judge of the circuit."

The Legislature was asked to consider a remedy for the failure of the Constitution to provide a successor to the Governor in case of a vacancy. The Constitution provides for the succession of the President of the Senate, and, failing him, the Speaker of the House. Owing to the death of the President of the Senate and the expiration of the term of the Speaker of the House, the Governor had no successor, in event of a vacancy, from Nov. 8, 1898, the date of the general election, to the meeting of the Legislature, April 1, 1899.

More than 200 bills were passed by the Legislature. The more important of these were:

To increase revenue by taxing railroad spurs.

Extending the pension law to a larger class.

Protecting fire insurance companies paying taxes from outside companies.

Compelling fire insurance companies to pay face value on policies drawn.

Providing for a tax for maintenance of the State Board of Health.

Giving enlarged judicial powers to the State Railroad Commissioners under a constitutional amendment previously passed. The general provisions of this act have been confirmed by the Supreme Court of Florida.

For suppression of the sale of railroad tickets by persons known as "scalpers."

Compelling the fencing in of railroad tracks.

Authorizing the Governor to appoint a committee of three to investigate the convict system of the State and to report to the next Legislature the best method of working convicts. Florida has no penitentiary, and its convicts are hired out to the highest bidder. They are kept in stockaded camps guarded by armed men.

For the protection of children. Up to this time no redress, except for personal assault, could be had by law for children.

To recover damages for death of minors.

For protection of shippers of merchandise.

For preservation of game.

A joint resolution relative to election of Senators of the United States by direct vote was passed.

A concurrent resolution and memorial to Congress relative to the Interstate Commerce Commission law was passed.

A memorial to Congress asking for additional powers to be conferred on the Interstate Commerce Commission was passed.

FRANCE, a republic in western Europe, proclaimed on Sept. 4, 1870, when the Emperor Napoleon III was deposed. The Constitution of Feb. 24, 1875, vests the legislative power in the Chamber of Deputies and the Senate, forming together the National Assembly, and the executive power in the President of the republic and the Council of Ministers. The National Assembly, united in Congress, elects the President for the term of seven years, and has authority to revise the Constitution, which has been modified by the additional laws of Aug. 2 and Nov. 30, 1875, Dec. 9, 1884, and June 16, 1885. The Senate is composed of 300 members, elected in the departments for nine years, one third retiring every three years, by the Senators, Deputies, members of the departmental and district councils, and delegates of the communal councils. There were 75 Senators elected by the National Assembly or by the Senate for life, but at the death of one of these the vacancy is filled by the election of a Senator for nine years by one of the departments determined by lot. Of the life Senators there were 26 survivors in October, 1897. The Chamber of Deputies is composed of 584 members, one to each *arrondissement* having less than 100,000 inhabitants, or to each electoral district of the more populous *arrondissements*. The ministers are responsible to the Chamber, and in case of their defeat the President selects a new premier minister representing the victorious party or combination, who in consultation with the President selects his colleagues. The President can dissolve the Chamber with the consent of the Senate.

The President of the republic at the beginning of 1899 was Félix Faure, elected on Jan. 17, 1895, as successor of Sadi-Carnot. The ministry formed on Oct. 30, 1898, was composed of the following members: President of the Council and Minister of the Interior, Charles Dupuy; Minister of Foreign Affairs, Théophile Delcassé; Minister of War, Charles de Freycinet; Minister of Marine, Édouard Simon Lockroy; Minister of Finance, Paul Peytral; Minister of Public Instruction and Worship, Georges Leygues; Minister of Justice, M. Lebreton; Minister of Commerce, Industry, and Posts and Telegraphs, Paul Delombre; Minister of Public Works, Camille Krantz; Minister of Agriculture, Albert Viger; Minister of the Colonies, Georges Guillaumin.

Area and Population.—The area of France is 204,092 square miles. The population present on March 29, 1896, was 38,517,975, comprising 37,490,484 French and 1,027,491 foreigners. The enumeration compared with that of 1891 showed a total increase of 175,027, which was confined to 24 departments, while in 63 there was a decrease of population. The number of marriages in 1897 was 291,462, compared with 290,171 in 1896; of births, 859,107, compared with 865,586; of deaths, 751,019, compared with 771,886; excess of births, 108,088, compared with 93,700. In 1895 deaths exceeded births by 17,813, as the birth rate was abnormally low. In 1896 the birth rate was 22.7 per mille and the death rate 20.2; in 1897 the birth rate was 22.4 and the death rate 19.9. The number of divorces in 1897 was 7,460, compared with 7,051 in 1896 and 6,743 in 1894.

Finances.—The budget estimates for 1899 make the total revenue 3,474,937,000 francs, of which 3,420,684,629 francs are the general budget of France, including exceptional receipts of 14,000,000 francs and 62,617,931 francs receipts *d'ordre*, and 54,152,371 francs are the revenue of

Algeria. Of the revenue of France 472,181,557 francs come from direct taxes, 36,363,527 francs from taxes assimilated to direct taxes, 2,025,176,450 francs from indirect taxes, 692,903,100 francs from Government monopolies and manufactories, 60,865,370 francs from state domains and forests, and 56,576,694 francs from various sources. Of the indirect taxes registration yields 526,904,000 francs, the stamp duty 179,219,400 francs, the tax on income from personal property 72,078,100 francs, the tax on stock-exchange operations 5,526,000 francs, import duties 433,272,050 francs, the duty on sugar 186,494,000 francs, and other indirect contributions 621,682,000 francs. The revenue from Government monopolies and factories is made up of 401,563,000 francs from tobacco, 234,099,400 francs from the post office, telegraphs, and telephones, 41,305,000 francs from gunpowder and matches, and 15,935,700 francs from railroads, mint, and other establishments.

The total expenditure for France was estimated for 1899 at 3,400,724,730 francs and Algerian expenditure at 73,370,449 francs, making the total budget 3,474,095,179 francs. Of the expenditure for France 1,248,264,165 francs are for the public debt, 13,368,560 francs for the President, Senate, and Chamber of Deputies, 20,149,410 francs for the Ministry of Finance, 35,074,033 francs for the Ministry of Justice, 16,066,800 francs for the Ministry of Foreign Affairs, 77,973,912 francs for the Ministry of the Interior, 647,998,109 francs for the Ministry of War, 304,078,400 francs for the Ministry of Marine, 217,405,043 francs for the Ministry of Public Instruction and Fine Arts, 43,065,553 francs for the Ministry of Public Worship, 218,006,188 francs for the Ministry of Commerce, Industry, and Posts and Telegraphs, 85,957,600 francs for the Ministry of the Colonies, 44,512,348 francs for the Ministry of Agriculture, 191,438,894 francs for the Ministry of Public Works, 204,921,715 francs for *régie* and collection of taxes, and 32,444,000 francs for repayments. The capital of the debt on Jan. 1, 1896, was 31,094,350,744 francs. The interest charges and annuities provided for in the budget for 1899 amounted to 1,255,748,884 francs, of which 693,680,314 francs were for the consolidated debt, 326,332,926 francs for interest and amortization of the redeemable debt, and 235,735,644 francs for the floating debt.

The local revenues collected in all the departments in 1896 amounted to 280,499,000 francs; expenditures, 280,499,908 francs. The debts of the departments made the sum of 751,770,240 francs. The ordinary revenues of all the communes amounted collectively to 751,770,240 francs; expenditures, 718,381,279 francs. The sum of the communal debts reached 3,511,984,252 francs. The ordinary receipts for the city of Paris were estimated for 1898 at 298,854,415 francs, and the extraordinary receipts at 54,874,705 francs; total, 353,729,120 francs, which balanced the estimated expenditures. The debt of Paris in 1896 was 1,769,000,000 francs.

The Army.—The law of July 27, 1872, made personal military service obligatory on all Frenchmen, who from the age of twenty-one are bound to serve three years in the active army; ten years in the active army reserve, which is twice called out for four weeks of exercises; six years in the territorial army, subject to one call for two weeks; and six years in the territorial reserve, called out once for a single day. A part of the conscripts, chosen by lot, the number being fixed each year by the Minister of War, pass into the reserve after one year of service; also those who are needed for the support of their parents

and the conscripts from the French population of Algeria. All those who are incapable of bearing arms or who serve less than the full term of three years pay a military tax of 6 francs and a variable surtax. For the colonial forces men are recruited only by voluntary enlistment. Since 1890 the annual recruit for the French army, inclusive of about 11,400 marines and the volunteers, has averaged 220,000. In 1895 the number was 224,535. The territory of France is divided into 20 regions, including Algeria, each occupied by an army corps, composed ordinarily of two divisions of infantry, a brigade of cavalry, a brigade of artillery, a battalion of engineers, a squadron of train, a section of the general staff, sections of recruitment, artificers, and the hospital service, and a legion of gendarmery. The military government of Paris, with the fortress artillery and a separate brigade of engineers, is distinct. Seven divisions of cavalry are attached to the army corps and the military government of Paris according to their requirements. The Nineteenth Army Corps in Algeria has three special divisions of cavalry and a division of infantry occupying Tunis. The infantry is armed with the Lebel rifle of 1886, having a bore of 8 millimetres and a magazine holding 8 cartridges. The dragoons, hussars, and chasseurs are armed with carbines of the model of 1886, the cuirassiers with revolvers. The field artillery comprises 430 mounted batteries of 6 pieces, 52 batteries of horse artillery, and 14 batteries of mountain artillery, besides 4 mounted and 8 mountain batteries in Algeria and Tunis. It is armed with rapid-firing guns of 7.5 centimetres or the recently introduced 12-centimetre guns. The foot artillery, comprising 107 batteries, has guns of 9.5, 20, and 27 centimetres and mortars of 15 centimetres.

The army in France on the peace footing, as provided for in the budget of 1899, had a total strength of 547,515 officers and men, 26,849 being officers. The Algerian corps numbered 55,122, of whom 2,195 were officers, and in Tunis were stationed 13,455, of whom 560 were officers, making the total peace strength of the French army, inclusive of 29,604 officers, 616,092 men, with 142,333 horses. The general staff numbered 3,485 officers, with 704 men, in France; 283 officers, with 94 men, in Algeria; and 70 officers, with 23 men, in Tunis. In the military schools there were 347 officers and 3,027 men. On other details there were 1,728 officers and 245 men in France, 550 officers and 222 men in Algeria, and 110 officers and 4 men in Tunis. In the 19 army corps of France there were 336,006 infantry, including 12,300 officers; 11,860 administrative troops; 66,681 cavalry, including 3,489 officers; 78,090 artillery, including 3,948 officers; 12,219 engineers, including 484 officers; and 8,527 train, including 361 officers; making a total of 513,383 men, including 20,582 officers. The gendarmery numbered 21,546 men, including 624 officers; the Garde Républicaine, 3,050 men, including 83 officers. In Algeria the infantry numbered 36,052 men, including 866 officers; the administrative troops, 3,527 men; the cavalry, 7,597, including 365 officers; the artillery, 2,583, including 49 officers; the engineers, 867, including 13 officers; the train, 2,175, including 38 officers. In Tunis the infantry numbered 8,823 men, including 256 officers; the administrative troops, 519 men; the cavalry, 1,853, including 86 officers; the artillery, 854, including 17 officers; the engineers, 340, including 4 officers; the train, 716, including 13 officers. The number of gendarmes in Algeria was 1,172, including 31 officers; in Tunis, 143, including 4

officers. The number of troops present in the active army in the beginning of 1899 was 540,582, and the number of gendarmes and Republican Guards was 25,647. The effective war strength of the French army is estimated at 2,500,000. The total number of men liable to service is about 4,350,000, of whom 2,350,000 are in the active army and its reserve, 900,000 in the territorial army, and 1,100,000 in the territorial army reserve.

The Navy.—The French navy in 1898 comprised 19 first-class, 10 second-class, and 7 third-class battle ships, 14 coast-defense vessels, 13 first-class, 17 second-class, and 10 third-class cruisers, 21 torpedo gunboats, and 125 first-class, 78 second-class, and 45 third-class torpedo boats. In this list only effective vessels are counted. There were building 1 first-class and 1 second-class battle ship, 10 first-class cruisers, 1 third-class cruiser, 1 torpedo gunboat, and 22 first-class torpedo boats. A programme of construction has been adopted which will add 85 vessels to the fleet in the course of eight years, beginning in 1898, at a total expense of 721,815,572 francs. The expenditure for 1899 was fixed at 111,494,942 francs. The vessels to be begun in that year were 1 battle ship of 14,500 tons, 2 armored cruisers of 10,014 tons each, 2 cruisers of 4,000 tons, 2 destroyers of 400 tons, 4 large torpedo boats, 11 first-class torpedo boats, and 6 submarine boats. The total programme comprises 8 battle ships, 10 armored cruisers, 10 other cruisers, 10 destroyers, and 42 torpedo boats of various classes. The superstructures on French battle ships have been much reduced in size on the later constructions, and the principal guns are disposed as in English ships. The *Hoche*, of 10,823 tons, launched in 1886, was the first of the newer type of vessels, having in the bow and stern 13.4-inch guns in closed revolving turrets and 10.8-inch guns on either broadside in barbette turrets protected by shields. The *Neptune*, of 10,810 tons, the *Marceau*, of 10,679 tons, and the *Magenta*, of 10,680 tons, have 13.4-inch guns mounted in barbette turrets as the only heavy guns. In these vessels the protection is better than in the earlier ones, but the side armor is reduced from 20 inches, or 22 inches, as on the *Amiral Baudin* and *Formidable*, to 18 inches. The quick-firing smaller guns are much more numerous and more effectively disposed. The *Brennus*, of 11,215 tons, has the armor plates reduced to 17½ inches, enabling her to carry 3 heavy guns, 2 forward and 1 aft. The *Bouvines*, *Valmy*, and *Jemmapes*, launched in 1892, with a displacement of about 6,500 tons, have 18 inches of armor on the sides, and carry, the first 12-inch, the two last 13.4-inch guns in their turrets. The *Tréhouart*, another vessel of this class, was built a little larger. The *Charles Martel* and *Jauréguiberry*, of 11,600 tons, and the still more powerful *Carnot*, *Masséna*, and *Bouvet*, carry 2 10.8-inch guns in turrets, besides the 12-inch guns mounted in turrets fore and aft. In the latest, the 5.5-inch and 4-inch, the quick-firing guns are also placed in close turrets, and the deck is not only armored but protected by a bulwark of 4-inch plating against the direct action of high explosives in shells. The *Charlemagne* and *St. Louis*, of 11,097 tons, carry 4 12-inch guns coupled in turrets, with a secondary armament of 10 5.5-inch, 8 3.9-inch, and 26 smaller quick firers, and with a belt of armor 15½ inches thick, are engaged for a speed of 18 knots. Their sister ship, the *Gaulois*, has her great guns mounted in barbette. The *Jena*, of 12,052 tons, carries a more powerful secondary armament than the others, consisting of 10 5.5-inch, 8 4-inch,

and 34 smaller quick frirers; and she is better protected, though the heavy plating is reduced to 13½ inches. She is fitted with Belleville boilers. A sister, the Suffren, is building at Brest. The latest development in second-class battle ships is the Henri IV, of 6,889 tons, armed with 1 12-inch, 10 5.5-inch, and 10 small quick-firing guns. The newer type of armored cruiser has been developed from the Dupuy de Lôme, launched in 1890, having a displacement of 6,305 tons, an armament of 2 7.6-inch guns, 6 6.5-inch quick-firing guns, and 20 small ones, and engines of 14,000 horse power, giving a nominal speed of 20 knots. The Latouche-Treville, Charner, Bruix, and Chanzy, of 4,600 tons and upward, with curved turtle decks, carry also 2 7.6-inch guns, but a smaller secondary armament, and can make 18 or 19 knots. The Pothuau, of 5,275 tons, launched in 1895, has 10 5.5-inch and 18 smaller quick frirers, besides the 7.6-inch guns. The Foudre is a torpedo cruiser, launched in 1895, with a displacement of 6,090 tons, a powerful quick-firing armament, and engines capable of making 18½ knots. The D'Entrecasteaux, launched in 1896, is a protected cruiser of 8,114 tons, armed with 2 9.5-inch guns and 12 5.5-inch and 12 small quick-firing guns, and having engines of 13,500 horse power, giving a speed of 19 knots. Higher speed was aimed for in the Guichen, launched in 1897, which has a displacement of 8,277 tons, a quick-firing armament only, consisting of 2 6.4-inch, 6 5.5-inch, and 10 smaller pieces, and engines of 24,000 horse power, capable of giving a sustained speed of 23 knots. The Chateaufort is an improvement, being a little lighter and, while carrying the same number of guns, making the same speed with engines not quite so powerful. This is the rate of speed marked out for the new armored cruiser Jeanne d'Arc, which has a displacement of 11,270 tons and engines of 28,000 horse power, and is armed with 2 7.6-inch guns and a secondary battery of 8 5.5-inch, 12 4-inch, and 26 small quick frirers; also in the protected cruiser Jurien de la Gravière, of 5,500 tons, with engines of 17,000 horse power and an armament of 8 6.4-inch and 12 1.8-inch quick frirers. The Montcalm, Dupetit-Thouars, and Gueydon are armored cruisers of 9,517 tons, carrying 2 7.6-inch, 8 6.4-inch quick-firing, 4 4-inch quick-firing, and 24 smaller guns, having engines of 20,000 horse power, capable of making 21 knots. The Gloire, Condé, and Sully, of the same class, are made a little larger, 10,000 tons. The Kleber, Desaix, and Duplex, of 7,700 tons, with an armament of 10 6.4-inch and 16 smaller quick frirers, are designed to make 21 knots with engines of 17,100 horse power. The vessels of the Gloire class have a complete belt of armor, 6 inches at the water line and thinner above, with armored decks having a splinter-proof lining, and their 2 heavy guns are mounted in armored turrets, the others in casemates. The smaller cruisers are like these in general design, and all are fitted with tubular boilers. The newest French torpedo boats are very fast, excelling even the Forban, which attained a speed of 31 knots.

Commerce and Production.—The soil of France is naturally fertile, and by diligent cultivation is made to produce a great quantity and variety of crops. In 1897, when the product of wheat was only three fourths of an ordinary crop, and many other crops showed a like deficiency, the yield of the principal agricultural products was as follows: Wheat, 86,900,088 hectolitres; barley, 14,503,560 hectolitres; oats, 80,204,076 hectolitres; rye, 16,904,215 hectolitres; buckwheat, 9,372,470 hectolitres; maize, 10,713,182

hectolitres; mixed grains, 3,096,871 hectolitres; potatoes, 113,176,149 quintals; sugar beet, 77,617,324 quintals; other beets and turnips, 120,641,874 quintals; colza, 572,993 quintals; linseed, 133,060 quintals; flax, 186,990 quintals; linseed, 95,077 quintals; hemp, 233,303 quintals; wine, 31,943,073 hectolitres; tobacco, 265,758 quintals; clover, 42,760,072 quintals; hay, 200,890,003 quintals. The total area of the vineyards in 1898 was 1,706,513 hectares, larger than that given up to potatoes or rye. The imports of wine were 7,529,000 hectolitres, and exports only 1,774,862 hectolitres. The production of cider amounted to 10,637,000 hectolitres. The value of the chestnuts and walnuts, olives, cider apples, prunes, and mulberry leaves produced in 1897 was estimated at 171,132,758 francs; of oranges and lemons, grown in the departments of Alpes Maritimes, Var, and Corsica, 1,140,355 francs. The live stock at the end of 1897 comprised 2,899,131 horses, 205,715 mules, 361,414 asses, 13,486,519 cattle, 21,445,113 sheep, 6,262,764 hogs, and 1,495,756 goats. The production of silk cocoons in 1897 was 7,760,132 kilogrammes. The export of cocoons was 463,232 kilogrammes, valued at 4,053,280 francs; of raw silk, 4,142,009 kilogrammes, valued at 89,308,843 francs. The chief mineral products are iron and coal. The number of separate mines in 1896 was 499; the total value of the product, 345,092,580 francs. The production of coal and lignite was 29,189,900 tons; of iron ore, 3,409,372 tons; of pig iron, 2,340,000 tons; of finished iron, 829,000 tons; of steel, 917,500 tons; of zinc, 35,585 tons; of copper, 6,544 tons; of nickel, 1,545 tons; of aluminum, 370 tons; of silver, 70,479 kilogrammes. The silk industry in 1896 employed 1,624,530 spindles for throwing and 150,000 for spinning and 28,270 power looms, besides 39,165 hand looms. In the cotton industry 4,024,811 spindles were at work; in the woolen industry, 3,173,274 spindles, 5,593 carpet looms, and 11,714 power and 16,604 hand looms for weaving cloth. The imports of woolen yarns were valued at 10,800,000 francs, and exports at 24,100,000 francs; imports of woolen cloth at 40,000,000 francs, and exports at 265,500,000 francs; imports of silk goods at 52,000,000 francs, and exports at 270,900,000 francs. The number of sugar works in 1897 was 358; the production of sugar was 668,545 tons. The production of alcohol was 2,208,140 hectolitres. The products of the fisheries in 1896 were valued at 101,624,792 francs. The codfish and oil brought home amounted to 569,155 quintals; herring, 319,186 quintals. The cod fishers receive premiums from the Government amounting to 4,983,000 francs per annum.

The general commerce of France in 1897 had a total value of 5,137,500,000 francs for imports and 4,803,100,000 francs for exports. The value of the special imports was 3,958,000,000 francs, of which 1,029,000,000 francs represent food products, 2,319,000,000 francs raw materials, and 608,000,000 francs manufactured goods. The special exports were valued at 3,598,000,000 francs, of which 721,000,000 francs represent food products, 944,000,000 francs raw materials, and 1,933,000,000 francs manufactured goods. The principal imports and their values in the special commerce of 1897 were: Raw wool, 343,700,000 francs; wine, 280,300,000 francs; raw silk, 266,400,000 francs; cereals, 247,400,000 francs; coal and coke, 189,500,000 francs; timber and wood, 154,600,000 francs; oil seeds, 135,600,000 francs; hides, skins, and furs, 116,500,000 francs; coffee, 105,400,000 francs; ores, 62,700,000 francs; silk manufactures, 52,000,000 francs; flax, 51,400,000 francs;

cattle, 41,100,000 francs; woolen manufactures, 40,000,000 francs; cotton manufactures, 36,300,000 francs; sugar, 32,100,000 francs. The leading exports and their values in 1897 were: Silk goods, 270,900,000 francs; woolen goods, 265,900,000 francs; wine, 232,500,000 francs; woolen yarn and raw wool, 172,200,000 francs; small wares, 160,300,000 francs; cotton goods, 119,300,000 francs; raw silk and yarn, 117,700,000 francs; leather, 102,800,000 francs; linen cloth and clothing, 95,400,000 francs; cheese and butter, 86,000,000 francs; hardware and tools, 79,500,000 francs; furs and skins, 77,100,000 francs; chemical products, 75,400,000 francs; leather goods, 69,400,000 francs; spirits, 51,900,000 francs; refined sugar, 45,400,000 francs.

The special imports of coin and bullion in 1897 were 461,845,329 francs, comprising 290,715,386 francs of gold and 171,129,943 francs of silver; special exports, 326,698,971 francs, comprising 131,862,865 francs of gold and 194,836,106 francs of silver.

The special trade of 1897 was distributed among the different countries as shown in the following table, giving values in francs:

COUNTRIES.	Imports.	Exports.
Great Britain.....	485,000,000	1,132,000,000
Belgium.....	288,000,000	513,000,000
United States.....	458,000,000	242,000,000
Germany.....	308,000,000	380,000,000
Algeria.....	228,000,000	216,000,000
Spain.....	247,000,000	199,000,000
Italy.....	132,000,000	151,000,000
Russia.....	226,000,000
Argentine Republic.....	211,000,000	51,000,000
Switzerland.....	191,000,000
British India.....	122,000,000
Brazil.....	61,000,000

The total export and import trade of the principal ports in 1897 was as follows: Marseilles, 1,763,000,000 francs; Havre, 1,657,000,000 francs; Paris, 740,000,000 francs; Bordeaux, 627,000,000 francs; Dunkerque, 559,000,000 francs; Boulogne, 465,000,000 francs; Calais, 262,000,000 francs; Rouen, 217,000,000 francs; Dieppe, 182,000,000 francs; Tourcoing, 171,000,000 francs; Cette, 164,000,000 francs.

Navigation.—The total number of vessels entered at the ports of France during 1897 was 100,277, of 22,499,031 tons, of which 80,005, of 11,512,233 tons, were French and 20,272, of 10,986,798 tons, were foreign. The total number of vessels cleared was 100,897, of 22,807,548 tons, of which 80,473, of 11,857,131 tons, were French and 20,424, of 10,950,417 tons, foreign. The French vessels entered comprised 8,592, of 4,603,320 tons, engaged in the foreign trade and 71,413, of 6,908,913 tons, in the coasting trade; of those cleared 9,060, of 4,948,218 tons, were in the foreign trade and 71,413, of 6,908,913 tons, in the coasting trade.

The French merchant marine on Jan. 1, 1898, numbered 14,352 sailing vessels, of 421,462 tons, and 1,212 steamers, of 499,409 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1897 was 23,167 miles, besides 2,610 miles for local traffic only and 2,234 miles of tramways.

The number of letters forwarded by the post office in 1896 was 912,438,000, of which 761,605,000 were internal and 150,833,000 international; of registered letters and packets, 43,749,000, of which 41,373,000 were internal and 2,376,000 international; of postal cards, 56,628,000, of which 49,887,000 were internal and 6,741,000 international; of newspapers, books, and samples, 1,195,454,000, of which 1,052,975,000 were internal and

142,479,000 international. The postal and telegraphic receipts amounted to 229,072,774 francs, and expenses to 180,324,215 francs. The total length of telegraph lines on Jan. 1, 1897, was 64,422 miles; length of wire, 208,828 miles. The number of messages in 1896 was 45,708,298, of which 36,968,805 were internal paid messages, 5,944,217 international, 1,410,297 in transit, and 1,384,979 official. The telegraph service is supplemented in Paris by the pneumatic tubes, of which there are 237 miles.

Dependencies.—The French colonies, protectorates, and spheres of influence, including Algeria and Tunis, but not the central Soudan conceded to France in the latest Anglo-French African delimitation treaty, have an aggregate area estimated at 3,630,000 square miles, with a population of 53,000,000. Mayotte, with an area of 140 square miles and 11,640 inhabitants, and the Comoros, with an area of 620 square miles and a population of 53,000 Musulmans, are islands off the east coast of Africa, producing sugar and vanilla, and recently coffee also. Réunion, having an area of 965 square miles and a population of 171,713, has a ruling class of creole proprietors, represented in the French Chambers by a Senator and 2 Deputies, who cultivate plantations of sugar cane, vanilla, coffee, cacao, and spices, with the aid of Indian coolie and negro labor. There is a railroad 78 miles long. The imports were 18,650,000 francs in 1895; exports, 21,734,520 francs.

In Asia France possesses French India, Annam, Cambodia, Cochin China, and Tonquin and Laos, having an aggregate area of 285,147 square miles and 21,821,910 inhabitants. The Indian possessions are towns of Pondicherry, Karikal, Shander-nagar, Mahe, and Yanaon, with adjacent districts, which were left to France by the treaties with England after the Napoleonic wars. There is a governor residing at Pondicherry, and the colony is represented in the French Chambers by a Senator and a Deputy. The total area is about 200 square miles and the population 286,913. The budget in 1897 was 1,209,876 francs, exclusive of the expenditure of the French Government, which for 1899 was 296,619 francs. The chief article of export is oil seeds.

Cochin China, Tonquin, Annam, and Cambodia are united under the general control of the Superior Council of Indo-China, which fixes the budget of Cochin China and advises as to those of Annam, Tonquin, and Cambodia. The French expenditure for Indo-China in 1899 was 20,360,000 francs. The four dependencies form a customs union. The imports into France from Indo-China in 1897 were 23,215,493 francs; exports from France to Indo-China, 38,557,399 francs. Cochin China is a French colony represented in the Chamber by a Deputy. It has an area of about 23,000 square miles and a population estimated in 1897 at 2,034,453. The French population was 4,335. There is a French garrison, numbering 1,217 in 1897; also a native soldiery consisting of about 2,400 Annamites. The main crop is rice, of which 10,086,700 piculs were exported in 1897 to China, Java, and Europe. Other products are salt, cotton, hides, fish, isinglass, pepper, cardamom seeds, and copra. The total value of exports in 1897 was £3,900,050. The port of Saigon was visited by 497 vessels, of 660,920 tons. There are 51 miles of railroad and 2,276 miles of telegraphs, with 3,840 miles of wire.

Cambodia is a kingdom, the titular ruler of which, King Norodom, is under French tutelage. The area is 46,000 square miles, with a popula-

tion estimated at 1,500,000, including 250,000 Chinese and Annamites and 40,000 Malays. The budget for 1898 was \$2,523,000. The products, besides rice, are cotton, betel, tobacco, indigo, pepper, maize, cinnamon, and coffee. Salted fish is also exported.

Annam has a king, Thanh Thai, and the officials are Annamites, but they are under the control of the French Government, which keeps a garrison in the citadel of Hue, the capital. The area of the protectorate is 81,042 square miles, with a population variously estimated between 2,000,000 and 6,000,000. The chief products are sugar, cinnamon, rice, maize, areca nuts, silk, tobacco, sugar, betel, manioc, bamboo, caoutchouc, drugs, and dyes. The natives weave silken stuffs and make pottery, and they work the iron, copper, zinc, and gold mines of the country.

Tonquin was formerly governed through a viceroy of the King of Annam, but has been administered directly by a French resident since July, 1897. The area is 34,740 square miles, with a population of about 9,000,000, not including the Laos territory formerly claimed by Siam, but annexed by France in 1893, which has an estimated area of 110,000 square miles and 270,000 inhabitants. Tonquin produces large quantities of rice for export to China. Other products are sugar, silk, cotton, pepper, and tobacco. Copper and iron are mined by the natives and coal by a French company. There are factories for expressing oil from seeds. In the Laos country are tin, lead, gold, and precious stones, and large forests of teak. The soil is rich, producing rice, cotton, and tobacco, but transportation to the seaboard is difficult, as the island of Khone blocks the Mekong. A railroad, 4 miles long, has been built across the island, and steamboats have been placed in the upper river. The number of vessels entered in 1896 was 1,407, of 461,454 tons. There is some trade with the Chinese province of Yunnan, to which European goods of the value of 5,000,000 francs were forwarded in 1896, and 3,200,000 francs' worth of native goods were brought back. The railroad from Phulang to Langson, 64 miles, is being built through to the Chinese frontier at Nacham. The French forces holding Tonquin and Annam number 23,370 men, of whom 14,500 are native soldiers.

The French colonies in America are Guadeloupe and Martinique (see WEST INDIES), French Guiana, or Cayenne, and St. Pierre and Miquelon. Guiana has an area of 46,850 square miles and a population estimated at 22,714, not including the wild tribes of the mountains. It is a penal colony, and the population includes about 4,500 convicts and convict settlers. The colony is administered by a governor, assisted by a council general, and is represented by a Deputy in the French Chamber. The local revenue in 1898 was 2,453,261 francs. The expenditure of France in 1899 was 6,368,139 francs, of which 4,915,000 francs were for the penal establishment. The products are few. The most important one is gold, of which 101,938 ounces were exported in 1896. More than half came from the tract about which there has been a dispute between France and Brazil that under a convention signed in April, 1897, at Rio de Janeiro was to be submitted to arbitration.

St. Pierre and Miquelon are islands off the south coast of Newfoundland, serving as stations for provisioning and refitting the fleet of French cod fishers who visit the banks. St. Pierre, with the smaller islands of the group, has an area of 10 square miles, with about 5,700

population. The group of which Miquelon is the chief island has an area of 93 square miles and 6,250 inhabitants. The imports of both groups in 1895 amounted to 8,165,792 francs; exports, 11,188,087 francs. There were entered at St. Pierre 1,544 vessels, of 47,868 tons, besides French and colonial vessels numbering 1,986, of 116,774 tons. The local budget for 1898 was 500,710 francs; the expenditure of France for 1899 was 290,791 francs.

In Australasia France possesses the island of New Caledonia and in Oceanica the Society Islands, with Raiatea, Huahine, Bora Bora, and other islands northwest of that group, and in other parts of the ocean the Marquesas, Tuamotu, Gambier, and Tubuai groups and Rapa. The area of New Caledonia is 6,000 square miles. The population in 1896 was 51,033, of whom 8,364 were European civilians, 1,506 military, 10,757 French convicts, 3,041 Asiatics, and 27,345 natives. The local budget in 1898 was 2,807,955 francs; the expenditure of France in 1899 was 7,392,361 francs, including 4,425,323 francs for the penal establishment. The Governor is assisted by a council general. There are mines of nickel, cobalt, chrome, and coal. In 1897 ores and minerals were exported to the amount of 3,900,000 francs. The number of vessels entered at the port of Noumea during 1897 was 127, of 134,656 tons; cleared, 157, of 183,091 tons. Dependencies of New Caledonia are the neighboring Isle of Pines, having an area of 58 square miles; the Loyalty Islands, which have an area of 756 square miles; the Huon Islands; and the more distant Chesterfield and Wallis groups.

The islands in Oceanica are under the administration of a single governor. Tahiti, the largest island of the Society group, has an area of 412 square miles, with a population of 10,287. Moorea, the next in extent, has an area of 50 square miles and a population of 1,596. The local budget in 1898 was 1,229,625 francs; the expenditure of France in 1899 was 856,080 francs. The exports in 1897 were valued at 3,150,668 francs; imports, 3,800,639 francs. The chief exports are copra, pearl shells, cotton, vanilla, and oranges. The port of Papeete was visited in 1897 by 286 vessels, of 29,585 tons.

The colonial budget for 1898 was 91,000,000 francs for 1898 and 86,000,000 francs for 1899, but these figures were largely exceeded. The annual cost of the colonies to the French Government has grown to between 110,000,000 and 120,000,000 francs on the average. Of the 86,000,000 francs voted in the regular budget for 1899 the military occupation absorbs 66,000,000 francs, of which 21,000,000 francs are for Indo-China, 18,500,000 francs for Madagascar, and 6,000,000 francs for the French Soudan. The remaining 20,000,000 francs appropriated for civil administration is double what England contributes to the expenses of colonial government. The French officials in the colonies greatly outnumber the French colonists—in Tonquin and Annam 1,396 to 447, in Cochinchina 1,966 to 272, in Senegal 521 to 367, in the Ivory Coast colony 111 to 52, in the French Congo territories 254 to 20. The expense of the colonies has grown from 5,000,000 francs in 1820. It was only 32,000,000 in 1880, on the eve of the great expeditions in Asia and Africa. In 1890 it exceeded 59,000,000 francs, and the acquisition of the Soudan, Dahomey, and Madagascar has nearly doubled this figure. The money cost of the colonies to France since the beginning of the period of expansion in 1881 has been disproportionate to the commercial returns. The conquest of Cochinchina

absorbed 284,000,000 francs, that of Tonquin 269,000,000 francs. The Soudan since 1881 has swallowed up over 200,000,000 francs, Madagascar close to 150,000,000 francs, Dahomey perhaps 75,000,000 francs since 1892, taking only the sums appropriated in the annual budgets, which do not cover the whole expense. Madagascar, for instance, in the year of the expedition entailed an expense of over 75,000,000 francs that does not appear in the budget. The aggregate sum that has been absorbed in colonial expansion since the period of conquest began has been about 1,500,000,000 francs. The annual exportation of French produce and manufactures to the colonies is only a little over 119,000,000 francs, of which 36,000,000 francs go to the American colonies, 41,000,000 francs to Africa, and 35,000,000 francs to Asia. Foreigners sell 26,000,000 francs of goods in the American, 42,000,000 francs in the African, and 63,000,000 francs in the Asiatic colonies. The trade of the colonies has in some instances declined, in others it has passed into the hands of foreigners, as the Germans on the Guinea coast and elsewhere the British. French exports to Martinique have declined from 22,000,000 francs in 1858 to 15,000,000 francs in 1895, to Guadeloupe from 18,000,000 to 9,000,000 francs, to Réunion from 30,000,000 to 12,000,000 francs. The importations from France of Senegal and the Soudan have, on the other hand, risen from 9,000,000 to 19,000,000 francs, those of other African possessions from 2,000,000 to 13,500,000 francs, those of Indo-China from 4,000,000 to 23,000,000 francs; but from these totals should be deducted the values of war material and stores destined for the troops. Taking the colonies as a whole, their purchases of French goods were 92,500,000 francs in 1858, and were only 28 per cent. greater in 1895; but during this period the expenditure of the French Government in the colonies has grown 500 per cent.

The Dreyfus Case.—Spies of the secret intelligence department of the army in September, 1894, discovered in the waste-paper basket of Lieut.-Col. Von Schwarzkoppen, military *attaché* of the German embassy, fragments of a paper which, when pieced together, formed a memorandum of which this is the translation:

"In the absence of any news indicating your desire to see me, I nevertheless send you, sir, certain information of interest: (1) A note on the hydraulic brake of 120 (method of operating this piece); (2) a note on the outpost troops (a few modifications will be made in the new plan); (3) a note on modifications in artillery formation; (4) a note relating to Madagascar; (5) the scheme relative to the manual of field firing of March 14, 1894. This last paper is extremely difficult to procure, and I can have it at my disposal only for a very few days. The ministry has issued a definite number to the corps, and these corps are responsible for them; each officer is obliged to return his copy after the manoeuvres. If, therefore, you wish me to take from it whatever may interest you, and hold it afterward at my disposal, I will take it, unless you want me to make a copy *in extenso* and address it to you. I am just leaving for the manoeuvres."

It was evidently part of a treasonable correspondence between a French officer and the foreign *attaché*. No one but an artillery officer, and one connected with the general staff, it was thought, could furnish the information enumerated in this *borderceau*, or memorandum. Capt. Alfred Dreyfus, a Jewish officer of artillery attached to the staff, who had made himself un-

popular with his comrades by his inquisitiveness regarding details of the service not connected with his own duties, was suspected, and the chief of his bureau affirmed that the handwriting of the *borderceau* resembled that of Dreyfus. Spies investigated his history for years past, and discovered numerous facts pointing to his guilt. In correspondence between the German and Italian *attachés* in 1893 the former hinted at information he expected to receive from some one on the general staff; and, in a later letter, of receiving the military organization of the French railroads, which could only come from the fourth bureau, where Dreyfus was then at work on the most important of the railroads, the one leading to Germany; and another suggested that the spy should be careful not to speak to his chief in the second bureau about a matter on which information was desired, for the reason that the foreign agent had openly made inquiries of the chief regarding the same subject, and this letter was written at a time when Dreyfus was employed in the second bureau. The Minister of War had knowledge at the same time from an independent source that there was a traitor in the second bureau. A French agent employed to furnish a foreign general staff with false information received a rude letter pointing out that pretended disclosures were contradicted by positive information derived from the map department of the Ministry of War, and another French agent had oral information that there was at this time a traitor in the second bureau. The *borderceau* was couched in the technical language of the general staff, and exactly fitted in with the work done in that office during the summer of 1894. Another suspicious circumstance was the adoption by the German Government of a shell much resembling one that had been elaborated in the artillery school at Bourges while Dreyfus was there. After leaving the school Dreyfus wrote to an officer there asking for the details of later experiments with the shell, falsely alleging that the professors at the École de Guerre desired the information. The charging of melinite shells seems also to have been revealed to a foreign power about the same time. Still another fact was that Germany obtained knowledge that batteries of No. 120 guns had been assigned to the Ninth Army Corps, the note regarding which had been sent to the section in the first bureau of the general staff in which Dreyfus was then working, and the minute taken down at the time had unaccountably disappeared. The notes on the hydraulic brake of gun No. 120 and on artillery formations could only be furnished by an artillery officer, and the language employed in the *borderceau* was such as only an artilleryist would use. The word hydraulic instead of hydro-pneumatic, which is the technical French designation of the gun brake, was an exception, which could be explained by the fact that the Germans applied to it the term hydraulic. Dreyfus being perfectly conversant with the German language, his mother tongue in Alsace. The statement in the *borderceau* that the firing manual was difficult to obtain would not probably be made by a line officer, but might by one of the *stagiaires* of the staff, because these passed the few copies furnished to them from hand to hand, whereas any officer in the corps could have a copy for himself. Information regarding the covering or outpost troops could only come from the staff, and the fact that changes were to be made was known only to the staff. The announcement at the end of the *borderceau* that the writer was going to the manoeuvres

was incorrect as to the *stagiaires*, as they were detained that year to work upon the plans, but they had the promise of the chief of staff that they should go nevertheless if it were possible.

As soon as the fact was revealed in 1893 by the correspondence and oral disclosures of foreign agents that there was a traitor connected with the general staff a watch was set on a great number of persons having access to the War Office, and this surveillance was gradually narrowed to a limited number of individuals, then directed after the *bordereau* reached the War Office in September, 1894, to the artillery *stagiaires*, and finally concentrated on Dreyfus. Major Du Paty de Clam, assisted by the chief detective of the War Office, conducted the preliminary inquiry, and when presumptive proof was in his possession he called Dreyfus into a room and before witnesses began to dictate to him a pretended letter, beginning with insignificant words, and little by little introducing phrases of the *bordereau*. When Dreyfus wrote these his hand trembled more and more, and he said it was so cold that he could not write, although the temperature was really moderate. Major Du Paty de Clam then placed him under arrest. Dreyfus after his arrest increased the suspicions of the officers who interrogated him by his persistent denial of everything. He denied all knowledge of army concentration, although he had himself drawn on a map the zones of concentration; he said he did not know that there was a firing manual, although he had had a copy in his possession. Even after his transportation he refused to discuss the *bordereau*, yet a duplicate of it was found sewed up in the lining of his vest. On the occasion of his degradation, as attested by Capt. Lebrun-Renault, the gendarmery officer who guarded him, he made this confession: "Original documents were not delivered, but only copies. The minister knows I am innocent, and in three years my innocence will be established. If I gave up documents to the foreigner, it was to obtain more important ones in return."

Of the five experts who compared the *bordereau* with the handwriting of Dreyfus, two did not attribute it to him, while three did, though they found the writing of the first page unnatural, constrained, possibly disguised, and different from the second page, which was written in a flowing, natural hand, and was more like the real writing of Dreyfus.

Dreyfus was arrested on Oct. 15, 1894, and kept for two weeks in the Cherche Midi prison in ignorance of the charges against him. His wife was cautioned not to tell of his arrest, nor did it become known until it was divulged by a newspaper. He was tried by court-martial, and when the handwriting experts disagreed secret documents were shown to the judges, but not to the prisoner or his counsel. One of these was a private letter from Lieut.-Col. Von Schwarzkoppen, the German military *attaché*, to Lieut.-Col. Panizzardi, his colleague of the Italian embassy, written two years before, which contained the sentence, "*Cette canaille de D. devient trop exigeante.*" It was afterward conceded by Dreyfus's accusers that the "D." referred to another person. Dreyfus was convicted, publicly degraded on Jan. 5, 1895, and on Feb. 9 transported to Devil's island, Cayenne, on a life sentence. His appeal to the supreme military council was not heard. In 1895 a card telegram (*petit bleu*) was brought by spies, which was in Lieut.-Col. Von Schwarzkoppen's handwriting, and was addressed to Commandant Esterhazy, calling upon him to

give more detailed information. Lieut.-Col. Georges Picquart, who had succeeded Col. Sandherr as chief of the intelligence department, looked up Esterhazy's record, which was bad, procured letters written by him, and found the handwriting so like the *bordereau* that he became convinced that Esterhazy was the traitor and Dreyfus an innocent man. He obtained permission from his superiors to pursue his investigations quietly, but found unexpected obstacles placed in his way. His chiefs would not sanction any steps tending to bring into question the justice of the Dreyfus verdict, for a revision of which the relatives of the condemned man were now agitating, and finally, on the ground that Col. Picquart was so much engrossed and worked up by these researches that he did not attend properly to the business of the office, they replaced him with Lieut.-Col. Henry, and sent him to organize the intelligence department in Tunis. A broker employed by Esterhazy had recognized the resemblance of his client's handwriting to a facsimile of the *bordereau* printed in a newspaper, and had communicated his suspicions to M. Scheurer-Kestner, one of the vice-presidents of the Senate. The latter went to Gen. Billot, Minister of War, but was told that the matter was a *chose jugée*, which could not be reopened. Mathieu Dreyfus, brother to the prisoner, wrote an open letter to the minister accusing Esterhazy. The wife of Capt. Dreyfus renewed her efforts to secure a retrial. Interpellations were made in the Chamber. Gen. De Boisdeffre, chief of the general staff, then asserted that the prisoner had been convicted on secret and irrefragable evidence submitted to the court. When it thus became known that secret documents had been put in evidence against Dreyfus without his knowledge, the illegality of the proceeding caused the agitation for a new trial to take a strong hold on a wide section of the public. Gen. Mercier, then Minister of War, justified the use of secret evidence on the ground that if it were made public it would lead to international complications. He affirmed that the Government possessed proofs that Dreyfus had been in correspondence with the agent of a foreign government for three years. The anti-Semitic press denounced the efforts to secure a revision of the trial as the work of an international syndicate of Jewish capitalists.

Major Esterhazy was ordered by his superiors to demand an investigation; but the court-martial that tried him was precluded from examining into the authorship of the *bordereau*, as Dreyfus had been judicially pronounced its author. Col. Picquart, who was recalled from Tunis to testify, was virtually on trial himself, and after the triumphant acquittal of Esterhazy on Jan. 11, 1898, he was arrested on the charge of forging the *petit bleu*, and, after that charge was dropped, was held on the charge of showing secret documents of the War Office to a lawyer. He was tried by court-martial and sentenced to be expelled from the army for revealing secret documents to his lawyer, and was held by the police to undergo a civil trial on this and on the charge of forgery of the *petit bleu*. Esterhazy was afterward placed on the retired list, and later still orders were given to arrest him for treasonable practices; but he escaped to England, and there published all kinds of startling but conflicting statements, denying what he had said before when he wanted to invent a new story. One of his avowals was that he was the writer of the *bordereau*. Emile Zola, who had published a diatribe against the general staff, was tried twice

for slander, and twice convicted, escaping to England before the second trial because the complaint was so drawn that he could not adduce proofs of his accusations. M. Cavaignac, on becoming Minister of War, informed the Chamber of the existence of a letter in the correspondence between the two foreign *attachés* in which the name of Dreyfus was mentioned. This letter was soon afterward discovered to be a forgery. Col. Henry, who had succeeded Col. Picquart in the intelligence department, confessed to having forged it—for the good of the country, he said—and a few days later he committed suicide in prison. M. Cavaignac and Gen. De Boisdeffre resigned, and the new ministry, headed by M. Dupuy, when Madame Dreyfus petitioned once more for a revision of the trial, on the ground that new material evidence had been discovered, referred the question to the criminal branch of the Court of Cassation. While the case was pending in the criminal chamber M. De Beaurepaire, one of the magistrates of the Court of Cassation, sought to impugn in advance the expected decision in favor of revision by accusing the president and another judge of the criminal branch of having shown partiality to Picquart at the time of his trial and of having held private communications with him and his lawyer. These charges were investigated by order of the Minister of Justice, and were declared to be baseless. M. Quesnay de Beaurepaire resigned his judgeship and published his accusations, adding fresh ones to them. An inquiry was then instituted to ascertain whether the criminal chamber had lost the public confidence. When the "miserable and fastidious details," as M. Dupuy designated them, were laid before the Chamber of Deputies, the insinuations against judges that M. De Beaurepaire had made being repeated in reports that Gen. Zur Linden, the military governor of Paris, had taken it upon himself to order to be made of the proceedings of the civil court, the Court of Cassation and the Government were sustained by a vote of 423 to 124. The Senate also vindicated the Court of Cassation and approved the separation of the judicial and executive powers. Without awaiting the result of the inquiry, an attempt was made by the opponents of revision to pass a special law taking the Dreyfus appeal out of the hands of the criminal chamber when it had already expended three months on the investigation, requiring the whole work to be done over again by the three chambers of the Court of Cassation sitting together. A subscription for the widow of Col. Henry, the suicide, to aid her in bringing suit against Joseph Reinach for defaming his memory by suggesting in newspaper articles that he had supplied Esterhazy with the treasonable information mentioned in the *bordereau*, was one of the means of agitation adopted by the antirevisionists, the Anti-Semites, Nationalists, Boulangists, and monarchistic revolutionists, who, forming the Patriotic League, the League of the French Fatherland, and other associations, which with the active participation of Orleanists and the covert aid of Bonapartists, under the pretext of defending the honor of the army, aimed at the subversion of the republic. The League of Patriots was frankly political, composed of Boulangists and open enemies of the republic as at present constituted. The League of the French Fatherland was joined by many men of the class called intellectual, representatives of the finest French culture, a large part of whom withdrew when they found that its object was not to surmount the prejudices awakened by the Dreyfus case,

and instill respect for the decisions of the civil courts, but to thwart revision and discredit the courts. Attacks on President Loubet, in which M. Coppée, the honorary vice-president of the league, joined, caused the resignation of most of the remaining academicians and distinguished representatives of literature. At the same time many officers of the army joined the league secretly, the names of military adherents being kept from the public.

Yielding to public clamor, the Government, hoping thereby to obviate all public distrust of the decision of the court, introduced a bill providing that the criminal chamber should conclude the taking of evidence, but that all the chambers united should then decide the question of annulling the condemnation or sending Dreyfus before a fresh court-martial. The bill was based on a report of M. Mazeau, first president of the Court of Cassation, who concluded that it would not be well to leave the criminal chamber to judge alone, although the result of the inquiry instituted by the Minister of Justice exonerated the judges of the criminal chamber, and the other members of the court besides M. Mazeau condemned the proposed law, as the commission of the Chamber, which had not yet reported, was also likely to do. The bill was offered by the Government as a measure of appeasement, calculated to satisfy the public mind and remove all doubts as to the justice of the verdict. The ministry threatened to resign if the bill was not passed as it stood, and it was passed on Feb. 10 by 332 to 216 votes. When the revision bill was before the Senate a street mob, headed by Deputies Déroulède, Marcel-Habert, Millevoye, and Drumont, hooted the newly elected President of the republic, calling him a Dreyfusard. The prosecution of Joseph Reinach, the most prominent and ardent of the Jewish defenders of Dreyfus, who had insinuated that Henry was a traitor, and was therefore charged by Mme. Henry with defaming her dead husband, was the greatest lawsuit ever seen at the Paris assizes, over 400 witnesses being summoned and a public subscription raised among the anti-Dreyfusards to defray the expenses of the prosecution. On Feb. 24 Paul Déroulède, president of the League of Patriots, accompanied by its secretary, M. Marcel-Habert, made a bold attempt to incite a military insurrection. The two Deputies, at the head of a few hundred followers, pushed themselves into the ranks of Gen. Roget's brigade as it was returning to the barracks from the funeral of President Faure. They succeeded in entering the barracks, and began to harangue the officers, calling upon them to upset the parliamentary republic in order to establish in its place a plebiscitary republic. Gen. Roget thereupon had them arrested for the offense of provocation by speeches and cries addressed in a public place to soldiers with the object of seducing them from their military duties and from the obedience which they owe to their chiefs. After his arrest M. Déroulède avowed that he had the revolutionary intention of raising the army to rebellion against the parliamentarians in order to abolish limited suffrage and restore universal suffrage for the good of the republic and the deliverance of the nation. M. Millevoye was arrested for inciting a street disturbance, but was released. In consequence of the demonstrations of the leagues, the Government instituted proceedings for their suppression as unauthorized associations under the law of 1834. The first of the prosecutions was directed against the pro-Dreyfus association called the Rights of Man League,

the officers of which were tried on April 18, found guilty, and subjected to a nominal penalty. The secretaries of the League of the French Fatherland and of the League of Patriots underwent the same formal condemnation.

The criminal chamber of the Court of Cassation on March 3 found that Col. Picquart and the lawyer Leblois should be tried by a civil court for the alleged forgery of the *petit bleu* and for using the forgery and divulging matter contained in secret documents of the Dreyfus case. Picquart, moreover, was found liable to trial by court-martial on the charge of communicating documents of the Ministry of War to M. Leblois. The Court of Cassation met on March 21 to consider the Dreyfus appeal. It decided to examine the secret *dossier*. M. Ballot-Beaupré, successor of M. Quesnay de Beaurepaire as president of the civil chamber, was made reporter, and in accordance with his report the court decided in favor of revision of the trial of 1894 and the sending of Alfred Dreyfus before a new court-martial.

The Minister of Foreign Affairs had on different occasions received official communications declaring that neither Col. Von Schwarzkoppen nor Col. Panizzardi had relations with Dreyfus. One of the documents which had confirmed the successive Ministers of War in their conviction of the guilt of Dreyfus was a message sent to the Italian Foreign Office after the arrest of Dreyfus suggesting that if the Italian Government had not been in communication with him it would be well to publish an official denial, so as to avert press comments. The final clause was made to read in the first inaccurate translation of the cipher, "Our emissary has taken his precautions." A key to the cipher was obtained by means of a decoy message, and the War Office was furnished with a copy of the correct reading. This document disappeared, and Col. Henry was sent to the War Office to get another. A copy was given to him, but this he kept or destroyed, and the document was afterward supplied from memory, and got into the secret *dossier* in this form: "Dreyfus arrested; our emissary forewarned." Another of the secret documents made a cousin of Dreyfus say that he believed in his guilt, whereas he had declared the opposite, and there was other falsified evidence of this character. The inquiry of the Court of Cassation revealed so much folly and credulity in the general staff and such tricks and chicanery and fantastic devices to falsify the evidence against Dreyfus, to screen Esterhazy, and to hunt down Picquart, that its reputation suffered, and some of the foremost officers of the French army have in succession lost their places, their standing, and their reputation for sagacity and ability, if not for probity and honor. Gen. Mercier, who sought to make the Dreyfus affair a stepping-stone for his political ambition, was one of the first to suffer. Gen. De Pellieux and Gen. Zurlinden were compromised by the latest revelations. Col. Du Paty de Clam and Col. Henry, with the permission or at the behest of their superiors, sent forged telegrams to Col. Picquart in Tunis, went to Esterhazy disguised in blue spectacles and false beards, made various adventuresses and shady characters their instruments and go-betweens, furnished him with articles to supply to newspapers, dictated or approved letters to the President of the republic, in which Esterhazy threatened the interposition of the Emperors of Austria and Germany. A document incriminating Dreyfus was abstracted from the secret *dossier* and handed to Esterhazy by a veiled lady

whom he met by appointment, and he, after copying the contents, delivered the original at the War Office, never knowing to whom he was indebted for this "liberating document." The dubious character and dishonest transactions of Esterhazy were known, and yet the chiefs of the general staff took him under their protection and declared him a man of honor. They compelled him to challenge Picquart and chose his seconds. Later they threw him over and punished him by dismissing him from the army on the charge of habitual misconduct. Col. Du Paty de Clam was also compulsorily retired on a charge of conduct unbecoming an officer. The motives for all these curious intrigues could not be divined, and, since men who stood at the head of the French army were concerned in them, it was natural to infer that these were a blind to cover up darker transactions in which they were involved. This dire but no doubt unfounded suspicion caused a more painful interest and deeper perturbation than the question of the guilt or innocence of Dreyfus or the justice of his trial. Gen. Gonse, Gen. De Boisdeffre, and all those who were active in the prosecution of Dreyfus and the defense of Esterhazy were made to feel the weight of public distrust.

A large number of forged documents and false affidavits incriminating Dreyfus were sold to the War Office by detectives, which were afterward eliminated from the *dossier*, as they only served to prove the stupidity and credulity of the intelligence department. Such were gossip tales of conversations overheard by cabmen and gambling-house servants, alleged secrets revealed by women of gallantry, and the like. The most notable forgery was that of two letters that were supposed to have been written by the German Emperor to Count Münster about Dreyfus. When their existence was first mentioned in a newspaper the German minister expostulated with the Minister of Foreign Affairs regarding the dangerous license given to the Paris press. After the first Dreyfus trial, when the newspapers and officials insinuated that there were grave secrets involving the question of peace or war, the German Emperor told his ambassador to go to President Casimir-Perier and ask him to declare that the German embassy was not implicated in the affair. President Casimir-Perier told Count Münster that the incriminating document had been obtained from the German embassy. Count Münster was surprised at this information, but still pressed for a note exonerating the embassy, which the President said could only be drawn up by the minister, and could not apply to one embassy alone. A note published in vague and general terms closed the incident.

On May 5 M. De Freycinet resigned his post as Minister of War in consequence of attacks in the Chamber which he had incurred by dismissing Georges Duruy, Professor of History at the Ecole Polytechnique, who had excited the anger of the students by publications in favor of Dreyfus; also as the result of a dispute with the Ministry of Foreign Affairs in regard to the mistranslated Panizzardi telegram. M. Krantz was appointed Minister of War, and he at once struck from the active list Capt. Cuignet, the officer who had prepared the last Dreyfus *dossier*, because he had communicated to the press the letters that had passed between the ministers. The furious attacks of the Anti-Semites impelled the Premier to demand a vote of confidence, obtaining 389 votes to 64. M. Ballot-Beaupré made a report in favor of revision at the end of May. He was convinced that the

bordereau was in Esterhazy's handwriting, adopting the conviction of experts who had first attributed it to Dreyfus, but changed their opinion after seeing the writing of Esterhazy. The submission of secret documents to the judges at the court-martial was an irregularity that would justify annulment of the verdict, but not revision, which was the question before the Court of Cassation. It would not be admissible to quash the verdict because the *bordereau* was a fact showing that a crime had been committed. The interpretations in favor of the innocence of Dreyfus since given to documents supposed to have been submitted and the forgery and suicide of Henry were not new facts warranting a retrial, neither was the discovery of the similarity of Esterhazy's handwriting to the *bordereau* such a new fact; on the other hand, the alleged confession of Dreyfus was not inconsistent with his innocence, because Capt. Lebrun-Renaud perhaps misunderstood his words, and he may have said that Major Du Paty de Clam asked him if he had not given up documents to obtain more serious ones in exchange. A new fact in the opinion of M. Ballot-Beaupré had been found, and this was that the same peculiar tracing paper on which the *bordereau* was written—obtainable in London, but not on sale in Paris—had been used previously by Esterhazy in his correspondence, although he declared in 1897 that he never wrote on such paper. On the other hand, every effort to find this kind of paper in the possession of Dreyfus or his friends had failed. The Court of Cassation on June 3 gave judgment decreeing that Alfred Dreyfus should be tried afresh by a court-martial at Rennes. Ex-President Casimir-Perier had testified that Gen. Mercier had told him that the document containing the words "canaille de D." was submitted to the court-martial; Gen. Mercier and Gen. De Boisdeffre refused to affirm or to deny this statement. The Court of Cassation found the evidence sufficient that this document was illegally communicated to the military judges, and found this illegality thus established to be a new fact justifying revision. Another new fact was the discovery of Esterhazy's letters written on tracing paper like the *bordereau*. The specific issue to be tried by the new court-martial was whether Dreyfus furnished a foreign power with the notes and documents enumerated in the *bordereau*. On the day the judgment was unanimously rendered a fashionable mob of Royalists and Anti-Semites made a disorderly demonstration against President Loubet at the Auteuil races; Baron Christiani even struck at him with a walking stick, and 130 arrests were made. M. Déroulède had been acquitted after turning his trial into a political demonstration. At the suggestion of M. Dupuy the Chamber considered the question of prosecuting Gen. Mercier, the ex-Minister of War, for placing the secret documents before the first court-martial, but by another vote the Chamber decided to await the Rennes court-martial. The Chamber passed a bill extending to prisoners before courts-martial the right to immediate interrogation and to the presence of counsel. Col. Du Paty de Clam was arrested on suspicion of complicity in the Henry forgeries, but was set free after a few days. Col. Picquart was released from custody. When the decision of the Court of Cassation was given Esterhazy, then in England, made a statement to a newspaper correspondent that he wrote the *bordereau*, and that he did so by order of Col. Sandherr; that the object was to supply false evidence for the con-

viction of Dreyfus, whose treason was known from German officers in the pay of France.

Dreyfus arrived in France on July 1 and was taken to the jail at Rennes. The solitary confinement on the Île du Diable had not broken his physical or mental vigor, although he was not allowed to speak to the sentinel, and since 1896 a palisade was built around the hut in which he was confined. This was in order to prevent his being rescued, a story having been printed of his escape on an American yacht, and for two months before it was finished he was chained to the floor at night. After the high fence was erected he was nearly suffocated until the floor of his cabin was raised. A forged letter addressed to him, interlined in sympathetic ink, suggested the precaution of copying all letters from his family and friends and giving him only the copies to read. Various traps and devices were used to induce him to reveal his accomplices in treason, if there were any.

Before the new trial of Dreyfus began the Government instructed the commissary to insist on confining the proceedings within the limits of the complaint defined by the Court of Cassation. Gen. De Gallifet became Minister of War at the grave juncture produced by the decision of the Supreme Court to grant a retrial, and he made important changes in the staff and the military commands to insure the discipline of the army in the event of civil disturbances. Gen. De Pellieux, who had conducted the Esterhazy prosecution, was removed from the command of Paris. Gen. de Négrier was dismissed from the Council of War and the post of inspector general because he issued an order announcing that when the Rennes court-martial was over the Supreme Council of War would call upon the Government to punish those who attacked the army, and if the Government refused to act the generals would act.

The court-martial began on Aug. 7. Ex-President Casimir-Perier, Gen. Mercier, the Minister of War who had ordered the first trial and sent the secret *dossier* to the court, other ex-ministers, members of the first court-martial, the generals of the staff, all who from the beginning had anything to do with the affair, were called as witnesses. The trial had proceeded a week when a political assassin, who was never found, wounded Maître Labori, the leading counsel for Dreyfus, with a pistol shot, so that he was incapacitated for many days. Paul Déroulède, who had been triumphantly acquitted by a sympathetic judge and jury, had renewed with his lieutenants his seditious agitation in Paris for a plebiscitary republic, in which President and Senators, as well as Deputies, should be elected by universal suffrage. When disturbances began he was again arrested. Jules Guérin, an Anti-Semitic leader, when threatened with arrest, provisioned, armed, and barricaded his house, in which he had collected a band of adherents, and bade defiance to the authorities, who, instead of forcing the building, placed a guard of soldiers in front of it.

One of the documents that had disappeared since the first court-martial was Col. Du Paty de Clam's commentary on the documents of the *dossier*, and this Gen. Mercier confessed that he had destroyed. Gen. Billot, though at times his belief had been shaken, M. Cavaignac, in spite of his having been duped by the Henry forgery, Gen. Zurlinden also, and Gen. Chanoine, the successive Ministers of War after Gen. Mercier, were as convinced as he was that Dreyfus was guilty. M. Cavaignac especially, who had taken office with no bias against the prisoner, and had

studied all the evidence conscientiously, and Gen. Roget and Major Cuignet, who had made an independent examination, were the most completely convinced as well as the most thoroughly versed in the case against Dreyfus. M. Cavainac was ready to believe that Dreyfus had sent the information even if Esterhazy had written the *bordereau* or sworn that he wrote it, because Dreyfus alone could have gathered these facts in the different bureaus with which he was connected. All the officers who had been in the Ministry of War had the same conviction of the guilt of the accused, based on technical grounds and on knowledge of his character and habits. Of new evidence not much of importance was brought forward. A man deposed that he had seen a newspaper in the palace at Potsdam with a marginal note that Dreyfus was arrested written by Emperor Wilhelm; a groom that he had driven Dreyfus in company with German officers to the German manœuvres. German officers had spoken his name in a Berlin restaurant. An Austrian adventurer was introduced toward the close of the trial, who said that some diplomatic agents had spoken at length of his treason in a Swiss summer resort. An Italian lady had offered to prove the guilt of Dreyfus. This gave the counsel of Dreyfus, who saw that the case was going against them, an opportunity to ask, since the prosecution had invoked the testimony of a foreigner, that Col. Von Schwarzkoppen and Col. Panizzardi be invited to testify, permission having been requested of the German Emperor and the King of Italy; but the court refused to accept their evidence if it were offered. Col. Du Paty de Clam was very ill, and could not appear. Major Esterhazy refused to come from London, although promised immunity from arrest. Gen. Roget declared that he could not have written the *bordereau*, because he was never employed by the intelligence department; and the denials of the Italian and German *attachés* seemed to him quibbling and equivocal. An officer proved that Dreyfus had drawn mobilization maps, and knew the dispositions of the covering troops when they were not known at the time the *bordereau* was written even to corps commanders. Gen. Mercier introduced a startling piece of evidence against the prisoner, consisting of a letter from Col. Schneider, the Austrian military *attaché* in Paris, stating his conviction that Dreyfus was in relation with the German confidential bureaus in Strasburg and Brussels. Col. Schneider at first denounced this as a forgery, but it appeared that the forgery consisted in putting a date on his memorandum and making it falsely appear as a report. Col. Picquart deposed that a German spy, Richard Cuers, had said that they had but one French officer in their pay, a major, and described Esterhazy. Henry went with others to Switzerland to question him further, but would not let him say what he was willing to reveal. It was Col. Henry and his underlings who had blocked all his investigations concerning Esterhazy. It came out subsequently that Henry was in Esterhazy's debt, and that they had relations with one another extending over many years. M. Bertulus, a magistrate well acquainted with Henry, endeavored to show that the latter was a traitor, recounting an interview in which he betrayed guilt and a fear of arrest. The theory of the defense was that Esterhazy had written the *bordereau* and communicated with the foreign agent, but that Henry had supplied the documents and information from the general staff. Handwriting experts maintained that

Dreyfus did not write the *bordereau*; some had changed their opinion since 1894, and now attributed it to Esterhazy; others retained their original impression. M. Bertillon offered a cryptographic theory that Dreyfus had written the *bordereau* by tracing the words over a keyboard, so that if it were discovered it would appear to be a forgery and himself the victim of a conspiracy; and that Esterhazy had since the conviction of Dreyfus been studying to imitate the writing in the *bordereau* so as to pass for its author. Statements of the Italian minister, Count Tornielli, that Dreyfus was unknown to Italian agents, and of Col. Panizzardi that the German *attaché* had assured him that he had no relations with Dreyfus, but had been in communication with and received documents from Major Esterhazy, were placed in evidence, and an admission of Col. Von Schwarzkoppen that he had sent many telegram cards to Esterhazy, and perhaps the *petit bleu* of the *dossier*, were offered in evidence. The military judges gave little attention to the evidence against Esterhazy, except perhaps as an accomplice of Dreyfus. The confession of Dreyfus, as related by Capt. Lebrun-Renaud and corroborated by statements made before his death by Capt. d'Attel, who had overheard the conversation, influenced their decision, but most of all they were impressed by the weight of the technical evidence against Dreyfus and the overwhelming preponderance of professional opinion in the army as to his guilt. His own demeanor during the trial, his failure to rebut much of the damaging evidence, although acute enough in seizing upon points that told in his favor and wary in clinging to his preconcerted line of defense, did not prepossess the judges in his favor. The verdict was given on Sept. 9. He was found guilty by a vote of 5 to 2, but a majority of the court found extenuating circumstances, and his sentence was therefore ten years' detention in a fortress. The years already spent in Cayenne reduced the term by half, and the remainder of the sentence was afterward canceled by President Loubet on the ground of the prisoner's precarious state of health.

The trial of the leaders of the League of Patriots, the Anti-Semitic League, and the royalist party for high treason, which was begun before the Senate, sitting as the High Court of Justice, on Sept. 18, brought out evidence of an understanding between the various revolutionary factions and an organized attempt to stir up street riots and seduce the army, with a view to overthrowing the Government. Paul Déroulède and Marcel Habert, while aiming avowedly at a plebiscitary republic, conspired with Orleanists to bring about a *coup d'état*, and Jules Guérin, the Anti-Semitic leader, received royalist subventions. Dubuc, the head of the Anti-Semitic Youth, organized the revolutionary movement in the provinces. Godefroy, president of the Royalist Youth League, and André Buffet, the accredited representative of the Duke of Orleans, sought to buy the support of labor syndicates and associations not only in Paris, but all over France, as well as the secret aid of the Anti-Semites. The duke himself directed the conspiracy, furnished funds for the seditious demonstrations that became incessant toward the end of 1898, and prepared to enter France when the propitious moment arrived. The presidential election passed off so quickly that it forestalled the revolutionary movement; but the entry of the President into Paris, the funeral of M. Faure, and the various stages of the revision trial were made the oc-

casion of successive efforts to stir up an insurrection. The police arrested about 60 persons just before the attempt on the life of M. Labori, and seized documents proving a vast network of conspiracy in Paris and the provinces, and connecting the pretender and his agents with the Nationalist and Anti-Semitic leaders. Many of the arrested persons were released, and the following, some of whom had fled beyond the border, were finally indicted and tried before the Senate on the charge of engaging in a plot to destroy or change the Government: André Buffet, Hippolyte de Chevilly, Gaston de Monicourt, Raoul Pujol, Eugène Godefroy, Charles de Pontevès de Sabran, Pierre Gixou, Amédée de Ghaïsne, De Bournemont, Fernand de Ramel, Moisson de Vaux, Eugène de Lur-Sabuces, Paul Déroulède, Marcel Habert, Georges Thiebaut, Achilles Bailières, Ernest Barillier, Jules Guérin, Édouard Dubuc, Édouard Brunet, Louis Davout, and Jean Girard.

Political Crisis.—President Faure died on Feb. 16, 1899, and the National Assembly was convoked for the election of his successor on Feb. 18. The political leagues were at this time disturbing the public mind by their agitation against a revision of the Dreyfus verdict, which was before the Court of Cassation. When the two Chambers met in Congress Paul Déroulède and some of his political followers attempted to deliver harangues, but speech making and motions were, as on former occasions, forcibly repressed. The Anti-Semites, Boulangists, Clericals, royalists, and revolutionaries who were leagued together in the campaign against a retrial of Dreyfus opposed the candidature of Emile Loubet, who as president of the Senate occupied the chair at the opening of the Congress. M. Méline, the most serious opponent of M. Loubet, withdrew his name, and M. Dupuy also declined to oppose the president of the Senate, who was elected on the first ballot by 483 votes, against 279 cast for M. Méline, with 50 scattering votes given to M. Cavaignac, M. Deschanel, and others. Déroulède and his friends continued in the streets their demonstrations against the President-elect, whose leaning toward radicalism brought about his resignation of the premiership in 1888, the Panama scandal furnishing the occasion, although his honor remained unsmirched. Several hundred noisy vagabonds were arrested. The direct agents of the pretenders were not concerned in these tumults. The Duke of Orleans had made a profession of Anti-Semitic principles, but had not advanced his cause thereby. His cousin, Prince Henry of Orleans, was preferred by many of the royalists. The Bonapartists likewise were divided between Prince Victor, who had prudently refused to give a pronouncement on the Dreyfus case, and his brother, Prince Louis Bonaparte, who was a Russian general. President Loubet in his message to the Chamber expressed his confidence that difficulties would be overcome with calmness and patriotism, and that France would respect equally the Chambers, which freely discuss the laws, the magistracy, which applies them, the Government, which insures their execution, and the army, which protects the integrity and independence of the fatherland and is the faithful guardian of its honor and its laws. The Chambers were occupied with the revision bill, transferring the decision on the Dreyfus appeal from the criminal chamber to the whole Court of Cassation, which passed the Senate on March 1 by a majority of 27. Of the disturbers arrested on the day of M. Loubet's election and on that of M. Faure's funeral, 250 were fined for

seditionous cries, but were pardoned on March 14, just after Paul Déroulède's arrest for his theatrical attempt to start a military insurrection. Documents containing plans for a royalist uprising were seized by the police. The publication of the Dreyfus dossier led to the resignation of M. De Freycinet on May 6 and the transfer of M. Krantz to the Ministry of War. M. Monestier succeeded the latter as Minister of Public Works. On May 18 the postmen of Paris went on strike, and those of other towns did the same, the reason being that an increase of salary provided in the budget had been stricken out by the Senate. The Government had the mails delivered by soldiers, and this brought the strike to an end at once. The Chamber, in opposition to the Government, insisted, on May 29, by 427 votes to 118, on the increase in the postmen's pay. The judgment of the Court of Cassation in favor of a new trial for Capt. Dreyfus was followed by seditious demonstrations against the President of the republic at the Auteuil race course, in consequence of which the Government closed certain aristocratic clubs. Baron Fernand de Christiani, who attempted to strike the President, was afterward sentenced to four years' imprisonment for assault on a magistrate in the discharge of his functions.

The Government determined to have enough police at Longchamp races, which the President was also invited to attend, to prevent a recurrence of disorder, and therefore turned out 30,000 troops and police to preserve order. At the race course there were cheers for M. Loubet. The Socialists gave proof of their republicanism by treating roughly some royalists who spoke ill of the President and by parading noisily the streets of Paris, with the result that the police tried to repress their demonstrations in favor of the President, and arrested persons who shouted for the republic. This led to interpellations in the Chamber. M. Dupuy, who with his colleagues was ready to turn over the Government to other hands, would not accept the simple order of the day, but demanded an express vote of confidence. A resolution was carried on June 12, by 321 votes to 173, declaring that the Chamber would only support a government determined on energetically defending republican institutions and maintaining public order. The ministers immediately resigned. Socialists and Radicals, Moderate Republicans, Nationalists, Anti-Semites, Boulangists, and royalists made up the majority, the Extreme Right and the Extreme Left uniting to upset Charles Dupuy as they had upset cabinets before.

M. Poincaré first undertook the task of forming a new Cabinet, which was to be one of Republican union, retaining M. Delcassé and some of the other ministers of M. Dupuy's Cabinet. M. Waldeck-Rousseau, whom the President of the republic next called upon by the advice of the presidents of the two Chambers, proposed to reduce to discipline the generals and colonels who were trying to influence the judgment of the Dreyfus court-martial; but M. Krantz, who was asked to take a portfolio, would not agree to this, and M. Waldeck-Rousseau was therefore unable to bring about the combination. After M. Léon Bourgeois had declined, he attempted a new one, and at last got together a ministry like no other of the 39 that the republic has had during the twenty-nine years of its existence. The Moderates and Radicals have several times tried to work together in a ministry of concentration. This one, however, called into existence by the Dreyfus crisis and the threatening

attitude of enemies of the parliamentary republic, was composed of as many elements as the majority that overturned the late Cabinet. Besides representatives of the Progressive and the Radical wings of the Republican party, two Socialists accepted portfolios, and the Ministry of War was confided to a retired general who was formerly a monarchist, and who incurred the lasting hostility of the Socialists by his energetic action in the suppression of the Paris commune. The new Cabinet was constituted on June 22 as follows: Prime Minister and Minister of the Interior, M. Waldeck-Rousseau; Minister of War, Gen. the Marquis De Gallifet; Minister of Marine, M. De Lanessan; Minister of Justice, M. Monis; Minister of Foreign Affairs, M. Delcassé; Minister of Commerce, M. Millerand; Minister of Finance, M. Caillaux; Minister of Education, Georges Leygues; Minister of Public Works, Pierre Baudin; Minister of the Colonies, M. Decrais; Minister of Agriculture, Jean Dupuy. The new Government was formed, in accordance with the vote of the Chamber, for the defense of the republic. The Premier issued as Minister of the Interior a circular to the prefects directing them to report any act affecting respect for existing institutions or public order, and enjoining them to take immediate action, if necessary, on their own responsibility. The Minister of War wrote to the corps commanders that he would hold them responsible for what happened in their corps, and ordered disciplinary measures against refractory officers. The Minister of Justice dismissed prosecuting officers who had shown partiality to the prisoners in recent state trials. The ministry was subjected at the reassembling of the Chamber, on June 26, to a flood of invective and insult, but came out of the ordeal with a majority of 26 votes. The advent of Socialists into the governing circle was marked by a decree carrying out recommendations of the Labor Committee of the Chamber that the Chamber had not yet voted on, stipulating for all workmen employed on public contracts the current local wages as a minimum, fixed hours of work, a weekly holiday, and a limitation of the number of foreigners employed. The Chambers were prorogued on July 3.

On Aug. 12 the police were instructed to arrest Paul Déroulède; André Buffet and M. De Monicourt, agents of the Duke of Orleans; Jules Guérin, a leader in the Anti-Semitic League; Georges Thiébaud, a Boulangist; the Deputy Marcel-Habert; and fifteen other persons. The seizure of documents effected after M. Déroulède's previous arrest had shown that a plot had existed since July, 1898, to seize the Government by force. A watch was kept by the police over the persons implicated, and evidence was obtained that they were preparing a fresh attempt as the Dreyfus trial drew near its end. When M. Guérin and a band of friends shut themselves up in the offices of the Anti-Semitic League the Government refused to risk the lives of policemen or soldiers, and waited till they capitulated. Members of the Association of Royalist Youth and of the League of Patriots were arrested in the provinces. The police investigations showed that the Duke of Orleans had gone to Brussels, and was ready to enter France at the time of Félix Faure's funeral if the disturbances attempted at that time had resulted in the expected civil commotion. Although M. Déroulède derided the idea of his connection with the royalists and Bonapartists, they acted as though he were one of them. Of M. Guérin's relations with the Orleanists proofs were obtained. During the siege

in the Rue de Chabrol street conflicts were provoked by Anti-Semites and Nationalists in various parts of the city. These demonstrations prompted the anarchists, led by Sebastian Faure, to hold an open-air meeting on Aug. 20 as a protest against anti-Semitism and in favor of social emancipation. Anti-Semites and royalists assembled at the same place for a counter-demonstration. The rival mobs came to blows with each other, and both with the police when these attempted to check disorder and seditious cries, and with the republican guards, who finally cleared the square. The anarchists then marched through the streets, stoning churches, one of which they entered and partly wrecked. The police and the cavalry had to charge into the crowd several times before the vandalism was stopped. The number of persons injured was 380, including 61 policemen, and the number arrested was 150, of whom 80 were detained in custody.

Foreign Affairs.—After the Fashoda incident was settled to the satisfaction of England by the evacuation of the post that Major Marchand had established on the Nile the English Government reopened the controversy regarding British commercial rights in Madagascar. When a French protectorate was declared over Madagascar the British acquiescence was obtained by the renunciation of French extraterritorial rights in Zanzibar, and was combined also with the delimitation of the French sphere on the upper Niger. The French Minister of Foreign Affairs gave the assurance at that time that the commercial rights obtained for British merchants by treaties with the Malagasy Government would not be affected. After the second Madagascar expedition, the result of the military operations being the capture of Antananarivo and the submission of the Hova Queen, Madagascar was annexed by France, and the French Government took the view, well established in international law, that the treaties of the extinguished sovereignty became null and void. The British Government, however, relying on the assurances of the French Government that treaty rights would remain undisturbed, raised a protest when the French tariff was applied in Madagascar.

The Madagascar question was raised by England at a time when, on the urgent demand of the Newfoundlanders, the British Government preferred a request for the renunciation of fishing rights on the French treaty shore of Newfoundland. The right to fish on the northeast and west coasts and to dry their fish on the shore was reserved to the French in the Treaty of Utrecht, by which the island of Newfoundland was ceded to England in 1713. The right included permission to erect temporary huts and stages usual and necessary for the drying and curing of fish, but not the privilege of wintering on the coast or of erecting fortifications. By the Treaty of Paris in 1763 these fishing rights were confirmed, and the islands of St. Pierre and Miquelon were ceded to France as a shelter for her fishermen and for the convenience of the fishery. By the Treaty of Versailles in 1763 these islands were ceded unreservedly, and, to prevent quarrels between French and British fishermen, the limits of the French treaty shore were fixed. Beginning at Cape John, on the northeast coast, it extends round by the north and down the west coast to Cape Ray, at the southwest extremity. The fishery intended to be preserved was the cod fishery. The 12,000 native fishermen who live on the French foreshore have long been at enmity with the French fishermen

who have prior rights to the shore fisheries, and when the cod began to grow scarce their jealousy led them to induce the fishermen on the south shore to refuse longer to sell to the Frenchmen herring for bait. The canning of lobsters was taken up by the French in 1889, although the Newfoundlanders protested, and have continued to protest, that the right to establish canneries is not included in the original treaty rights. The French are charged with arbitrarily preventing the building of railroads or the development of mining and other industries on their shore, and Miquelon, where no English consular agent is allowed to reside, is said to be a nest of smugglers. A royal commission reported that the French cod fishing rights on the treaty coast are now valueless, and should be extinguished by a cash payment or by concessions elsewhere; that the lobster industry is on the decline, and should be settled on the same basis; that the colony should give the French free bait if they will abandon their bounties to the cod fishers, which expire in July, 1901, and are declared to be useless for the promotion of naval enlistment; that no French interference with the development of the treaty coast should longer be tolerated; and that a consular agent should be appointed to St. Pierre.

Another question between France and England arose in connection with the lease for one year to France by the Imam of Muscat of the harbor of Bandar Jisseh, five miles from Muscat. The concession was made in March, 1898, but it was not until the beginning of 1899 that the British agent knew of it. The Indian Government at once protested. The harbor is landlocked, about as large as Muscat, having an island at the entrance capable of being strongly fortified. The British Government objected that the treaty of 1862 precluded either France or England from accepting a cession or lease of Muscat territory, and would only agree to the French having a coaling depot at Muscat itself on the same terms as the English have. Before the French and English governments entered into conversation on the subject a British cruiser on Feb. 11 presented an ultimatum to the Sultan of Oman to prevent the cession, and under a threat of bombardment the Sultan revoked his grant of a coal depot at Bandar Jisseh, which the English feared France might convert into a fortified post. The French Government disclaimed the intention or the right of raising the French flag or erecting fortifications on the leased ground, and expressed complete satisfaction with an arrangement giving France a depot at Muscat.

FREE CHURCHES, EVANGELICAL, FEDERATION OF. The Free Church Handbook for 1899 contains comparative tables of the provision of sittings in churches of the Established Church and in those of the nonconformist denominations, and of the number of communicants recorded by the Episcopal and the nonconformist churches in England and Wales, the numbers of the nonconformist communicants being shown by denominations severally and footed up. From the face of these tables it appears that the Established Church provides 6,886,977 sittings, while the nonconformist churches have total sitting accommodations for 7,848,804 persons; and that the whole number of communicants is in the Established Church 1,886,059, and in the nonconformist or free churches 1,897,175. Besides these, a number of large congregations, it is claimed, should be accounted for which are not connected with any particular body, but which are distinctly nonconformist. The net gain

during the year was represented to be 47,526 communicants in the Evangelical Free Churches, and 45,708 in the Established Church. It is estimated by the editor of the Yearbook, Mr. Howard Evans, that the ordinary income of the free churches in England and Wales is more than £5,000,000, and that the value of their church property exceeds £50,000,000.

The fifth annual meeting of the National Council of Evangelical Free Churches was held in Liverpool, beginning March 14. The opening sermon, preached by the Rev. John Clifford, D.D., had for its subject *The Crisis in the Church: Its Place in the Development of British Religion*. The Rev. Alexander Mackennal, D.D., presided, and delivered an address setting forth the objects of the federation movement. The report of the secretary represented that the work of the federation was growing so rapidly that it was difficult to keep the record of it within bounds. Ninety-nine new councils had been organized in 25 English counties since the meeting in Bristol in the previous year, with 13 new councils in North Wales and 5 in South Wales; and Ireland had joined the movement, with councils in Dublin, Belfast, and Cork. The number of district federations had grown from 20 to 31; the reports from these federations bore strong witness to their value in helping the local councils and bringing the whole strength of a district to the support of weak points. They were doing good work in scattering literature, promoting lantern lectures, and keeping a vigilant eye on the education question and cases of persecution of dissenters. Missions, house-to-house visitation, district interchange of pulpits, mass open-air meetings in the summer months, and other work were also carried on by the federations. The federation movement was extending itself to all parts of the English-speaking world. In South Africa a Cape Town and District Evangelical Council had been formed; the word "free," it was observed, having been dropped from the title, as all churches are free in Cape Colony. Councils were being rapidly formed in the United States and Canada. Many councils had been organized in Australia, and large quantities of federation literature were circulated there. A union of evangelical churches had been formed in Jamaica. Evangelical ministers in Norway were taking a deep interest in the movement, and would probably adopt it. United missions which had been held under the auspices of the federation had produced such results of spiritual revival that the General Committee had been considering the advisability of employing more men specially called of God for this work. It was further proposed to hold a great simultaneous mission in England and Wales as early as possible in 1901. Many councils had adopted, with the best results, house-to-house visitation on the parochial system. Two hundred and fifty boxes, with nearly 7,000 volumes, constituting the circulating library, had been sent out to councils. A resolution adopted by the council respecting the crisis in the Church of England, while expressing joy at the signs of quickened spiritual life in the national Church, deplored the widespread adoption and inculcation of certain defined ideas and practices by members of the clergy; protested against the determination of clergymen to undo the work of the Reformation; and urged Parliament to do its utmost to maintain its own authority, and to safeguard the Protestantism of the realm. "Seeing the difficulty the state had in controlling the clergy of the Established Church, the council was convinced that there is no final and effective

method of terminating the spread of Romanism within and by the Anglican Church except by abolishing the connection between the Church and the state, thus setting the Church free for the management of its own affairs, and delivering the state from the burden of duties it can not adequately discharge." The council therefore appealed to its members and to the evangelical party in the Anglican Church "to support a policy of justice and freedom, in the interest of religion, sound Protestantism, good government, and the well-being of the nation." Another resolution related to the provision of means whereby nonconformists in the army and navy other than Presbyterians and Wesleyan Methodists, who already have special services, may enjoy nonconformist ministrations. A resolution was enthusiastically adopted which contemplated advising all Free Church parents to withdraw their children from Church of England schools where ritualistic practices and sacerdotalistic teachings exist, and requesting the Government "to provide proper accommodation for the primary education of their children until popular control is secured for all state-aided schools." Other resolutions expressed satisfaction at the Czar's call for a conference on disarmament, and approved of the Free Church celebration of the three hundredth anniversary of the birth of Oliver Cromwell. Replying to a criticism of the Free Church Catechism, in which the speaker denied that it had the sanction of the council, the Rev. Dr. Mackennal (president of the council) said that the matter was one that lay entirely within the initiative of the committee. The catechism went out on the responsibility of the committee and the special committee, and the council was only asked to accept the measured responsibility implied by sympathy with the object, without indorsing every detail of the document.

The Free Church Catechism.—The following catechism, intended to cover the points of religious faith on which all the Free Evangelical Churches are agreed, and to be acceptable to them all for common use, was published by a committee of the National Council of England and Wales at the beginning of the year. The work of preparing the catechism had been undertaken two years previously, when the Rev. Dr. Oswald Dykes, principal of the English Presbyterian College, was requested to draw up a draft catechism, to be revised by successive committees appointed by the council of the federation. The committee of final revision consisted of 5 ministers and members of the Congregational churches, 5 of the Wesleyan Methodist Church, 3 of the Baptist churches, 2 of the Primitive Methodist Church, 2 of the Presbyterian Church, and 1 each of the Methodist New Connection, Bible Christian, and United Methodist Free Churches. Every question and every answer in the catechism was finally adopted by the committee without a dissenting vote. It is not pretended that the document carries any authority, it being designed only for optional use:

1. Question. What is the Christian religion? Answer. It is the religion founded by our Lord and Saviour Jesus Christ, who has brought to us the full knowledge of God and of eternal life.

2. Q. How must we think of God? A. God is the one eternal Spirit, Creator, and Sustainer of all things; he is Love, boundless in wisdom and power, perfect in holiness and justice, in mercy and truth.

3. Q. By what name has Jesus taught us to call God? A. Our Father in heaven.

4. Q. What do we learn from this name of

Father? A. We learn that God made us in his own image, that he cares for us by his wise providence, and that he loves us far better than any earthly parent can.

5. Q. What does Jesus say about himself? A. That he is the Son of God, whom the Father in his great love sent into the world to be our Saviour from sin.

6. Q. What is sin? A. Sin is any thought or feeling, word or act, which either is contrary to God's holy law or falls short of what it requires.

7. Q. Say in brief what God's law requires. A. That we should love God with our whole heart, and our neighbor as ourselves.

8. Q. Are we able of ourselves to do this? A. No; for, although man was made innocent at the first, yet he fell into disobedience, and since then no one has been able, in his own strength, to keep God's law.

9. Q. What are the consequences of sin? A. Sin separates man from God, corrupts his nature, exposes him to manifold pains and griefs, and, unless he repents, must issue in death eternal.

10. Q. Can we deliver ourselves from sin and its consequences? A. By no means; for we are unable either to cleanse our own hearts or to make amends for our offenses.

11. Q. How did the Son of God save his people from their sins? A. For our salvation he came down from heaven, and was incarnate by the Holy Ghost of the Virgin Mary, and was made man, and was crucified also for us under Pontius Pilate. He suffered and was buried, and the third day he rose again according to the Scriptures, and ascended into heaven, and sitteth on the right hand of the Father.

12. Q. What benefit have we from the Son of God becoming man? A. We have a Mediator between God and men; one who as God reveals to us what God is; and, as perfect Man, represents our race before God.

13. Q. What further benefits have we from our Lord's life on earth? A. We have in him a brother man who is touched with the feeling of our infirmities, as well as perfect example of what we ought to be.

14. Q. What did he accomplish for us by his death on the cross? A. By offering himself a sacrifice without blemish unto God he fulfilled the requirements of divine holiness, atoned for all our sins, and broke the power of sin.

15. Q. What does the resurrection of Jesus teach us? A. It assures us that he has finished the work of our redemption; that the dominion of death is ended; and that, because he lives, we shall live also.

16. Q. What do we learn from his ascension into heaven? A. That we have in him an advocate with the Father, who ever liveth to make intercession for us.

17. Q. What do we learn from his session at the right hand of God? A. That he is exalted as our Head and King, to whom has been given all authority in heaven and on earth.

18. Q. How does Jesus Christ still carry on his work of salvation? A. By the third person in the blessed Trinity, the Holy Spirit, who was sent forth at Pentecost.

19. Q. What is the mystery of the blessed Trinity? A. That the Father, the Son, and the Holy Spirit, into whose name we are baptized, are one God.

20. Q. What must we do in order to be saved? A. We must repent of our sin and believe on the Lord Jesus Christ.

21. Q. What is it to repent? A. He who truly repents of his sin not only confesses it with shame

and sorrow, but above all he turns from it to God with sincere desire to be forgiven and steadfast purpose to sin no more.

22. Q. What is it to believe on the Lord Jesus Christ? A. It means that we rely on him as our Teacher, Saviour, and Lord, putting our whole trust in the grace of God through him.

23. Q. How are we enabled to repent and believe? A. By the secret power of the Holy Spirit working graciously in our hearts, and using for this end providential discipline and the message of the Gospel.

24. Q. What benefits do we receive when we repent and believe? A. Being united to Christ by faith, our sins are freely forgiven for his sake; our hearts are renewed, and we become children of God and joint heirs with Christ.

25. Q. In what way are we to show ourselves thankful for such great benefits? A. By striving to follow the example of Jesus in doing and bearing the will of our heavenly Father.

26. Q. Where do we find God's will briefly expressed? A. In the Decalogue, or law of the Ten Commandments, as explained by Jesus Christ.

27. Q. Repeat the Ten Commandments. A. (Repetition of the Commandments.)

28. Q. How has our Lord taught us to understand this law? A. He taught that the law reaches to the desires, motives, and intentions of the heart, so that we can not keep it unless we love God with our whole heart and our neighbor as ourselves.

29. Q. What special means has God provided to assist us in leading a life of obedience? A. His word, prayer, the sacraments, and the fellowship of the Church.

30. Q. Where do we find God's word written? A. In the Holy Bible, which is the inspired record of God's revelation given to be our rule of faith and duty.

31. Q. What is prayer? A. In prayer we commune with our Father in heaven, confess our sins, give him thanks for all his benefits, and ask, in the name of Jesus, for such things as he has promised.

32. Q. Repeat the Lord's Prayer. A. (Repetition of the prayer.)

33. Q. What is the Holy Catholic Church? A. It is that holy society of believers in Christ Jesus which he founded, of which he is the only head, and in which he dwells by his Spirit; so that, though made up of many communions, organized in various modes, and scattered throughout the world, it is yet one in him.

34. Q. For what ends did our Lord found his Church? A. He united his people into this visible brotherhood for the worship of God and the ministry of the Word and the sacraments; for mutual edification, the administration of discipline, and the advancement of his kingdom.

35. Q. What is the essential mark of a true branch of the Catholic Church? A. The essential mark of a true branch of the Catholic Church is the presence of Christ, through his indwelling Spirit, manifested in holy life and fellowship.

36. Q. What is a free Church? A. A Church which acknowledges none but Jesus Christ as head, and therefore exercises its right to interpret and administer his laws without restraint or control by the state.

37. Q. What is the duty of the Church to the state? A. To observe all the laws of the state unless contrary to the teaching of Christ; to make intercession for the people, and particularly for those in authority; to teach both rulers and subjects the eternal principles of righteousness, and to imbue the nation with the spirit of Christ.

38. Q. What is the duty of the state to the Church? A. To protect all branches of the Church and their individual members in the enjoyment of liberty to worship God, and in efforts to promote the religion of Christ, which do not interfere with the civil rights of others.

39. Q. What is a Christian minister? A. A Christian minister is one who is called of God and the Church to be a teacher of the Word and a pastor of the flock of Christ.

40. Q. How may the validity of such a ministry be proved? A. The decisive proof of a valid ministry is the sanction of the divine head of the Church, manifested in the conversion of sinners and the edification of the body of Christ.

41. Q. What are the sacraments of the Church? A. Sacred rites instituted by our Lord Jesus to make more plain by visible signs the inward benefits of the Gospel, to assure us of his promised grace, and, when rightly used, to become a means to convey it to our hearts.

42. Q. How many sacraments are there? A. Two only: Baptism and the Lord's Supper.

43. Q. What is the visible sign in the sacrament of baptism? A. Water: wherein the person is baptized into the name of the Father and of the Son and of the Holy Spirit.

44. Q. What inward benefits does this signify? A. The washing away of sin and the new birth wrought by the Holy Spirit in all who repent and believe.

45. Q. What are the outward signs in the Lord's Supper? A. Bread and wine: which the Lord has commanded to be given and received for a perpetual memorial of his death.

46. Q. What is signified by the bread and wine? A. By the bread is signified the body of our Lord Jesus Christ in which he lived and died; by the wine is signified his blood, shed once for all upon the cross for the remission of sins.

47. Q. What do they receive who in penitence and faith partake of this sacrament? A. They feed spiritually upon Christ as the nourishment of the soul, by which they are strengthened and refreshed for the duties and trials of life.

48. Q. Why do Christians partake in common of the Lord's Supper? A. To show their oneness in Christ, to confess openly their faith in him, and to give one another a pledge of brotherly love.

49. Q. What is a Christian's chief comfort in this life? A. That in Christ he belongs to God, who makes all things work together for good to them that love him.

50. Q. What hope have we in the prospect of death? A. We are well assured that all who fall asleep in Christ are with him in rest and peace; and that even as he rose from the dead, so shall we also rise and be clothed with glorified bodies.

51. Q. What has Jesus told us of his second advent? A. That at a time known only to God he shall appear again with power, to be glorified in his saints and to be the judge of all mankind, and that for his appearing we should be always ready.

52. Q. What is the Christian's hope concerning the future state? A. We look for the life everlasting, wherein all who are saved through Christ shall see God and inherit the kingdom prepared for them from the foundation of the world.

FRIENDS. Statistics.—The statistical returns of the Society of Friends for 1898, published in January, 1899, show that the number connected with it throughout the world was 113,877, as compared with 112,413 in 1897. The gain, 1,464, was about 1.30 per cent. The chief gain (1,301) was in the United States, where the mem-

bership now stood at 93,699. The whole number of Friends in Great Britain and its colonies and the Continent of Europe was 20,178, indicating a net gain for the year of 163. The society included 14 yearly meetings on the American continent, 2 in Great Britain, 5 on the Continent of Europe, and 6 in Australasia, with mission stations in every quarter of the globe. The whole number of recognized ministers of the Gospel was 1,648. The foreign-mission stations returned an aggregate native membership of 1,860, with 104 Bible schools having a total attendance of 5,102.

The statistical tables for 1899, published in January, 1900, gave the whole number of Friends throughout the world as 113,580. The yearly meetings of the United Kingdom returned 20,379 members. The total number of recognized meetings for worship was 1,334, and of ministers of the Gospel 1,604, together with 1,234 Bible schools, attended by 101,258 persons. The Quaker mission schools for colored persons returned 3,585 members, with 8,305 persons attending 308 Bible schools.

The Friends' Foreign Missionary Association of London Yearly Meeting has in the foreign-mission field 79 missionaries and 235 native preachers, teachers, and Bible women, 187 churches and 2,639 members in Madagascar, 49 organized Friends' churches in the other missions, and a total of 14,297 adherents. Aside from Madagascar, 159 members were added by confession during 1898, 11 boarding and high schools and 247 other schools returned 20,187 persons under instruction, and 30,063 patients were treated in the hospitals. Fifty-four of the accessions of members, or nearly 33 per cent. of the whole number, were from the schools. The total expense of carrying on the work during 1898 was £20,621. Industrial training was associated with the missionary work in India, and 750 orphans in that country were under the care of Friends. In China 5 persons were received into membership. The mission in Madagascar is carried on in connection with the work of the London Missionary Society.

American Friends.—The 14 American yearly meetings returned at the end of 1899 a total of 93,253 members, against 93,699 in the previous year, showing for the first time in several years a loss—446. The number of ministers was 1,279. The missionary reports of the American Friends give 284 principal and subordinate mission stations in foreign countries, with a native membership of 3,585, not counting the 612 Indians who are members or the 550 Mexican Friends. One hundred and fifty-eight Friends are engaged in foreign-mission work, with 8,305 persons enrolled in 308 Bible schools. The foreign-mission work of the American Orthodox Friends was begun in 1871 in Mexico. These Friends have now 16 stations in 8 different countries, including Alaska, with 31 substations. In these fields 13 men and 38 women missionaries are employed, with 85 native helpers, and they return in all 1,279 members, 117 of whom were received last year, besides 2,938 nonmember attendants of the meetings, 1,795 pupils in Bible schools, and 1,454 pupils in boarding and day schools. The contributions last year from all sources for the support of this work aggregated \$41,499, an average of about 45 cents a member. Fifty-two hundred and seventy-five patients were treated at the hospitals. Fourteen of the American and 7 of the native missionaries are recorded ministers. All the 14 Orthodox yearly meetings take part in this work.

A committee of two members from each of the yearly meetings was appointed at a conference

of American Friends held in Indianapolis, Ind., in 1897, to formulate a plan for a closer union of the yearly meetings, and to prepare a discipline to be submitted to them for approval. A draft of a discipline was made, submitted for criticism and suggestions, and has been published previous to submission to the yearly meetings for final action. It differs in many features from the old Discipline, omitting much of the historical matter and the advice, and contains a statement of belief which, though brief, is believed to include everything fundamental to the Christian religion as Friends interpret it. One of the purposes governing the draft has been to rid the yearly meetings of "useless machinery and formal perfunctory exercises, and make for life and peace." Changes are made in the names of the meetings, and the quinquennial conference, which has been introduced as a voluntary assembly, is adopted and called the Five Years' Meeting.

The Five-year Education Conference of Friends in America was held in Providence, R. I., in June. It was attended by Friends from all the American yearly meetings except Canada, Oregon, and California, and by three Friends from London Yearly Meeting. A number of subjects relating to religion and education were discussed, and the opinions of the meeting were embodied in resolutions urging upon the schools and colleges the importance of endeavoring to give students a clearer knowledge of the doctrines and government of the society, and to lead them into the practice of true worship; defining as the most effective means to that end the strong spiritual personality of the teachers; exhorting Friends to fidelity to the spiritual realities of the Gospel, to "fearless reception of truth from whatever source it may come," and to a more faithful endeavor to meet the needs of the age by the use of all the instrumentalities, spiritual and temporal, which God is placing within reach; and advising that Friends should present the Bible attractively to their children in the home, and that more adequate provision should be made for rendering the biblical instruction given in the schools and colleges "second to no other teaching which they offer."

Friends in Mexico.—The first Friends' meeting of Spanish-speaking people was organized in Matamoras, Mexico, in 1875, by Samuel H. Purdy and H. M. Bimford. The work has increased till it includes 10 monthly meetings in Mexico, into which more than 1,000 members have been received, with several thousand adherents. Schools have been established and a Spanish Protestant literature has been created. The various yearly-meeting committees own property valued at \$20,000 in gold, and other new buildings are contemplated. Through removals from these stations Friends have been scattered throughout southern Texas and northern Mexico. A native ministry has been raised up, and a yearly meeting has been established at Victoria.

The Cuban Evangelical Church.—The Cuban Evangelical Church has been organized at Havana, with the intention of establishing a national church, "which, deriving inspiration from the doctrines and discipline of the old Puritans, should worship the Lord in spirit and in truth." It was in its first organization independent of any religious denomination and sustained by the individual effort of all the brethren composing it. Having adopted Quaker forms in baptism, the Lord's Supper, government, and ministry, it, by the act of its quarterly meeting, entered into correspondence in June with the Friends' Society in Mexico, announcing its organization and ac-

ceptance of the rule of faith, discipline, and doctrines of the Friends' Church; its desire to live by its own efforts, its members promising to defray the salaries of its pastors and the expenses arising from its mission work; and asking for religious literature in Spanish. An executive body had been organized, with Francisco G. Cala, a recorded minister, as presiding clerk, and Angel Serrato as secretary. The Church had, at the time of the writing of this letter, a pastor, 3 other ministers, 2 established meetings, 86 members, 2 Sabbath schools with between 260 and 300 attendants, 2 day schools with about 300 pupils, and 1 orphanage.

The United Fruit Company having purchased 100,000 acres of land near Santiago, and having witnessed the work of Friends in Jamaica, has invited them to engage in a missionary enterprise in that district. The whole Spanish-American work has been taken in charge by the American Friends' Board of Missions, with Iowa, Western, Wilmington, and Indiana Yearly Meetings co-operating.

British Friends.—The statistics of membership presented to the Meeting for Ministry and Oversight of the London Yearly Meeting showed a total in Great Britain of 17,031, an increase during the year of 179, or a little more than 1 per cent. The "habitual attenders," or nonmembers, attending the meetings numbered 7,904, an increase of 428, while an aggregate of about 50,000 persons attended the adult schools and mission meetings. Two hundred and four persons had joined the society "by conviction" or from the outside.

The Meeting for Ministry and Oversight of the London Yearly Meeting considered the subject of the state of the meetings as to vocal ministry and earnest exercise of spirit on the part of the congregations, and also that of the conditions of right development and effective exercise of the ministry. A large committee was appointed to draw up a letter on the latter subject to the various congregations throughout the country.

The sessions of the London Yearly Meeting opened May 24. A considerable part of the time was spent in the discussion of the ministry, in regard to which a wide desire prevails in the society for improvement in quality; not so much that more intellectual sermons were demanded, as that "a more living message is sought and a wider grasp of truth on the part of those who feel themselves called upon to speak." Yet the meeting was not ready for the institution of a regular ministry or for the payment of ministers, and was careful not to approve the steps in these directions that have been taken by some of the American yearly meetings. The Home Mission Committee reported on its policy of inviting applications from men and women who feel it "laid upon them" to devote themselves to missionary work of this kind, and providing for the maintenance of those persons who were selected who had such a purpose in view. Between 20 and 30 workers were now employed in different towns and villages, at a total cost of a little more

than £3,000 a year. The committee were, however, not a unit upon this policy, some thinking they could see in it the beginning of a "hired" ministry.

The Home Mission Committee presented a report upon means of bringing about a closer association between the society and the "attenders" at Friends' meetings, as well as with the members of the adult and other First-Day schools—the number in the former category being estimated at about 7,000, and those in the latter at about 45,000—a subject which had been referred to it two years previously. The report showed that there had been an increase in the number of "convincements," or of persons joining the society from outside, from an average of 73 a year in the period 1862-'66 to 275 in the period 1893-'98, and a concomitant increase in the number of habitual attenders at the ordinary meetings from 3,000 to the present number. Various arrangements had been adopted in different meetings for drawing the attenders into closer fellowship with one another and with the society. In some places, as in London, the object was accomplished by a kind of preliminary membership, forming a stepping stone to full rights in the society. In other places, among which was Birmingham, "Christian societies" were formed of those who regularly attended the Sunday-evening mission meetings; but they seemed to satisfy the need for church life, and did not lead on to any fuller association with the Society of Friends. In other meetings, as at Norwich, where congregational life was exceptionally active, nothing seemed needed between the adult school membership and full membership in the society. The committee recommended that congregational life and initiative be strengthened by giving more importance to the congregational church meeting, or "preparative meeting," which has hitherto been wholly subordinate to the monthly meeting. Attenders might find a place in the work of a congregation which they could not find in the monthly meeting, to which members only were admitted. It recommended further that localities be encouraged to find ways, either by preliminary membership or by some scheme of affiliation, for forming links between the various local mission societies and the main body; also that wherever possible a regular Friends' meeting should be established in each center of mission work, and so held as to be attractive and educative to those who are brought under the influence of the mission. The report was approved by the meeting. A minute was adopted expressing the sense of the meeting of the inconsistency of war "with the precepts of Christ and the whole spirit of his Gospel," and as to the enormous evils attending the military system and "the practices inseparably connected with warfare"; commending the peace congress called by the Czar of Russia to assemble at The Hague, and hoping for the success of its deliberations; and beseeching all Christian people to use their influence in favor of the principles upheld by the resolution.

G

GEOGRAPHICAL PROGRESS. While no great discoveries have distinguished the geographical work of the year, explorers have been active, especially in Africa and in the polar regions of the north and south. Many of the expeditions in Africa were primarily for political purposes,

but they have added something to geographical knowledge, corrected some errors, and filled some gaps. Probably the greatest interest among geographers at present is in antarctic exploration, which promises to be undertaken soon by the proposed German and English expeditions.

Arctic Regions.—Nothing definite or satisfactory has come from Prof. S. A. Andrée, who set out for the pole on a balloon voyage July 11, 1897. (See *Annual Cyclopædia* for 1897, page 336.) A small cork case was found in Norway in June, 1899, containing a slip of paper signed "Andrée," saying that all was well, but by the date it appeared that it must have been thrown out only eight hours after his departure. In April, 1898, a report came from a mail carrier in Alaska saying that one of his carrier pigeons had been found, with a message to the effect that he was on land in northern Alaska, but this seems to have been a fraudulent report. In January, 1899, came another statement that a heap of ropes and other material had been seen on an inaccessible ice floe between Iceland and Greenland in July, 1898, which might have been the wreck of the balloon. Still another unauthenticated report came from Siberia, where the wreck of a balloon and the bodies of three men were said to have been found in January, 1899. A buoy found Sept. 11, 1899, on the north side of King Charles island, northeast of Spitzbergen, 80° latitude and 25° east longitude, was opened at Stockholm, Oct. 2. It was found that the buoy was the so-called "north pole buoy" which the explorer was to have dropped when passing the north pole. A later telegram says: "At the examination of the buoy Capt. Svedenborg, who was present at the ascent of the balloon, said that the ring of the buoy did not seem to be made fast. The buoy, therefore, could not have been let down by means of a cord. It was then opened. First of all the copper cover fixed to the rim underneath the buoy was sawed off, and some sea sand fell out. A copper head with a tube of the same material attached was then taken out. Inside this was some water. The copper tube was then sawed off. In the lower part of the tube was an India-rubber plug, and on it a little sand. Inside the tube was a coating which seemed to resemble paper, but which a microscopical examination showed to be the growth of algæ. Prof. Nathorst declared that the buoy could not have been carried from the pole to King Charles island. Capt. Svedenborg expressed the opinion that the buoy had been thrown out empty. Prof. Montelius said it had not been shown that the buoy had been thrown out empty. The upper part was not further unscrewed. Prof. Nordenskjöld said that a search would be made next year at King Charles island."

A dispatch from St. Petersburg in October gave an account of a scheme to send to the frozen seas one of Russia's new ice-breaking steamers, the *Yermak*, to force a way through the ice. "On the *Yermak*'s first voyage she encountered drift ice in the Baltic. This ice was about 5 feet thick, and there was not the slightest difficulty in getting the *Yermak* through this obstruction, as she went comparatively easy at 9 knots, the engines working slowly. Before going into the ice the vessel had been slowed down to 10 knots, so as to reserve the powers of the engine-room staff for the harder work which was to come. The worst piece of ice encountered was estimated at 25 feet thick, and the ship went nearly through this formidable obstruction before she was brought up by it. The greatest depth of field ice reported by Dr. Nansen is 12 feet."

Dr. A. G. Nathorst led an expedition to eastern Greenland to search for Andrée, but found no traces of him. Some valuable observations were made. The Franz Josef fiord was found to be quite different from its representation on the German map, as far as the interior of the fiord is

concerned, the outer part being in the main as given on the map. It narrows instead of widening toward the inner end, which lies 2° of longitude farther east than the map indicates. It is thus much smaller than it is represented, and the Petermann spitze is probably only two thirds as high as Payer supposed. The southern branch of the fiord east of Payer spitze, found to be a sound, and named the Antarctic Sound, from the name of the vessel, led to a hitherto unknown fiord, very large, which was called King Oscar's fiord. It stretches southward to Davy Sound, and sends two branches eastward, connecting it with the sea. On the western side it sends two branches into the interior; of these, the southern divides into two branchlets, the northern into three. They extend nearly as far west as the interior of Franz Josef fiord. The fiords were mapped, as was also the interior of Hurry inlet.

Walter Wellman, who made an attempt to reach the north pole in 1894, set out again in June, 1898, with a more carefully prepared expedition. He returned this year, reaching Tromsø Aug. 17, 1899, on the steamer *Capella*. The party, in which were a scientific staff and a number of Norwegians, reached Franz Josef Land July 27, 1898. Three days later they were at Cape Tegethoff, latitude 80°, on the coast of Hall island, in the eastern section of the group, where they landed and put up a house for winter quarters, called Harnsworth House, and here the main party wintered. But an expedition was made as far north as 81°, and an outpost was established there. A house was built of rocks and roofed with walrus hides, to which they gave the name Fort McKinley. This was on Wilczek Land. Two Norwegians—Paul Björvig and Bert Bentzen, the latter of whom had been with Nansen in the *Fram*—were left there, while the main party returned to Cape Tegethoff. In February Mr. Wellman went northward with 3 Norwegians and 45 dogs, and reached Fort McKinley Feb. 28. Here he found that Bert Bentzen had died two months before, and during all that time his companion, who had made a compact with him that if either should die the survivor would not bury him till help came, had kept the body beside himself in the little house. He said he had managed to keep up his spirits by reciting Ibsen's poetry.

"Pushing northward through rough ice and severe storms, with a continuous temperature of ten days between 40° and 50° below zero, the party found new lands north of Freedom island, where Nansen landed in 1895. By the middle of March all were confident of reaching latitude 87° or 88°, if not the pole itself. Then began a succession of disasters. Mr. Wellman, while leading the party, fell into a snow-covered crevasse, seriously injuring one of his legs and compelling a retreat. Two days later the party was aroused at midnight by an icequake under them, due to pressure. In a few moments many dogs were crushed and the sledges destroyed. The members of the expedition narrowly escaped with their lives, though they managed to save their sleeping bags and some dogs and provisions. Mr. Wellman's condition became alarming, and the Norwegians dragged him on a sledge, by forced marches, nearly 200 miles to headquarters. After reaching headquarters other members of the expedition explored regions hitherto unknown, and important scientific work was done by Lieut. Evelyn B. Baldwin, of the United States Weather Bureau; Dr. Edward Hofman, of Grand Haven, Mich.; and A. Harlan, of the United States Coast Survey. The expedition killed 14 bears and many walruses."

"In his quest for information and search for rare mammals Mr. Stone was very successful. Leaving here in July, 1897, he went up the Stickeen river into the Laird river country. While he was there his native guides deserted him, and he was left alone in the midst of the Hell Gate Indians, who endeavored to steal his outfit. He stopped on the way down Mackenzie river to traverse a large area of the Rockies in the vicinity of the arctic circle. From Fort McPherson, the Hudson Bay Company's most northern trading post, he again crossed the Rockies, went down the delta of the Mackenzie river, and traveled west along the arctic coast to Hereshall island. Later he explored the Mackenzie delta thoroughly, thence reaching Yukon by way of the Porcupine river."

Explorations have been made in Iceland by F. W. W. Howell, who made the first crossing of the Lang Jökull this autumn with his party, two of whom were from Merton College, Oxford, and two Icelanders of Reykjavik. Dr. Thoroddsen has completed his explorations in Iceland, which have extended over many years.

Antarctic Regions.—The Belgian expedition to the antarctic returned in March, 1899, having left Antwerp Aug. 16, 1897. The following is from an account given to a representative of Reuter's agency by Dr. Arctowski, geologist of the party:

"The Belgian expedition entered the antarctic circle from the opposite direction to that in which the British expedition under Mr. Borchgrevinck is now working, Lieut. Gerlache with the Belgica going via Cape Horn and the South Shetland Islands, while the British expedition started from Hobart for Victoria Land. Dr. Arctowski said their first object was to make a voyage in the antarctic, but beyond this there was on starting no definite programme. It was intended to examine the various scientific conditions. On leaving Staten their object was to go direct to the south and to explore in the region of Grahamsland and Palmer Land, on which no landing had been made since their discovery in the early part of the century. On Feb. 13, four weeks after leaving Staten island, they left the newly discovered land which they had named Danco Land, and in three days sighted Alexander I Land. On the 28th the Belgica ran into the antarctic ice pack. The temperature fell, and the Belgica stuck fast. For a whole year she remained immovable, and for the first time human beings prepared to spend a winter in the antarctic. They had expected to winter in the south polar region, but they had hoped to do so on land. They were, however, unable to find land on which to establish a depot, and had to remain on the ship. They spent the winter in scientific work. All of them suffered a good deal during the antarctic night, owing to defective circulation and heart trouble. All pulled through except Lieut. Danco, who succumbed to heart failure in June of last year, and his remains were buried beneath the ice. The only other member of the expedition to lose his life was Carl Wiencke, a Norwegian sailor, who was lost overboard between Staten island and the antarctic. At the beginning of the present year they began to cut a channel through the ice for the Belgica, and after much hard work they cut a passage 900 metres in length. Unlike the arctic, the antarctic has no land animals. The only signs of life they found on land were very small insects, which were discovered among the penguin rookeries. In the water there was plenty of life. There were far more seals than in the north polar regions, a great quantity of small whales,

and an abundance of penguins. The antarctic land they found to be entirely mountainous, absolutely glaciated, covered with snow and ice. In some places where the cliffs were too precipitous for ice and snow to lodge were found lichen and moss."

The British expedition under Borchgrevinck, mentioned above, was organized by Sir George Newnes, and sailed in *The Southern Cross* for Cape Adare in December, 1898. Terrific storms were encountered. Three of the party ascended the glacier to a height of 700 metres. At the foot of the mountain they discovered a great vein of quartz, presumably containing gold. In February the ship returned to Australia.

A German expedition for deep-sea exploration on board the *Valdivia*, under the leadership of Prof. Chun, returned from antarctic waters April 30, having left Cape Town Nov. 13, 1898. The following paragraph from the official report gives an idea of the general results of the soundings:

"The great depths encountered since leaving Bouvet island [the *Valdivia* passed along the edge of the ice to a point near Enderby Land] must be looked upon as one of the most surprising results of the expedition. Of the 17 soundings taken on the southward voyage, no less than 11 showed depths between 2,700 and 3,300 fathoms, and only 1—in the immediate neighborhood of Bouvet island—was under 1,700 fathoms. This series of soundings, the first of such completeness in antarctic waters, very greatly modifies our conceptions of the form of the ocean bed in the far south. Only 15 soundings had previously been made south of 50° south; the *Valdivia* added 29, and showed that, instead of being a relatively shallow basin, the southern ocean is of very great depth. In one respect, indeed, the great depths did not lend themselves to the carrying out of the plans of the expedition. Twelve hours are necessary to make a successful haul of the dredge at depths approaching 3,000 fathoms—a very long time in the uncertain weather of these latitudes, where a sudden change might mean loss of gear and danger to life." The ocean floor between Enderby Land and Kerguelen is deeply furrowed, depths of 1,300 fathoms alternating with those of 2,000 to 3,000 fathoms.

Bouvet island, one of three sighted by Bouvet, Lindsay, and Norris, is described: "The sharp outline of a steep island clothed in antarctic ice and desolation showed clear about 7 nautical miles distant. The first impression of this land, which had remained unseen for seventy-five years, and eluded three expeditions, was that of a steep and lofty slope on the west and north, on which a magnificent glacier descended to sea level, and a vast snow field above sinking gently to the south and ending with an ice wall at the sea; the summit of the island was covered with clouds. The island fell steeply to the sea, and at a distance of 3 to 4 nautical miles depths of 200 to 300 fathoms were found, in which 5 hauls of the dredge were made with the result of an extraordinarily rich collection of animal life. Every group of marine organisms, except fishes and stalked crinoids, was represented. The center of Bouvet island is in latitude 54° 26.4' south and longitude 3° 24.2' east. Its length from west to east is 5.1 nautical miles, and from north to south 4.3. A photograph shows a wide, sharply indented crater wall sloping gently to the sea on the south and east. The other sides are much steeper, the northeast cape being a prominent cliff. The highest point of the rim of the crater (3,067 feet) was named Kaiser Wilhelm peak; the northernmost of the 5 projecting angles of the

island was named Cape Valdivia. The whole island is covered with one vast glacier, which reaches sea level on the gently sloping southern and eastern sides, where it forms an ice wall 400 feet high. Both Bouvet and Lindsay had reported trees on the island, but no trace of vegetation could be seen from the Valdivia. Animal life also seemed to be extremely sparse. Cape pigeons were the most abundant birds; other antarctic forms were not common. It is noteworthy that the white petrel, deemed by Ross the surest sign of the proximity of ice, was first seen by us while cruising off Bouvet island." Fragments of granite, gneiss, and schist were found, which had been broken off and brought away by icebergs.

Two important expeditions are to undertake the exploration of antarctic regions. They are to be sent out simultaneously by England and Germany. In an address at the International Geographical Congress at Berlin, in September, Sir Clements Markham, President of the Royal Geographical Society of London, outlined the geographical work that will be before the expeditions. He considered the region as divided into four quadrants—two on the Australasian side and two on the Cape Horn and Cape of Good Hope side. The first quadrant, from 90° east to 180°, includes Victoria Land, and he gave it the name Victoria. It presents for examination, he says, Adelie and Sabrina Lands, supposed to form the coast of a continuous continent. Besides this question is the one whether the land from Cape Adare, in 71° 18' south, to Cape Washington, in 74° 37' south, is continuous with the Victoria Land of Mounts Erebus and Terror, or whether it is an island. The second quadrant, 180° to 90° west, he calls the Ross quadrant, since Cook and Ross alone have penetrated it beyond the seventieth parallel. It contains the continuation of the ice barrier, and a principal aim of the expedition would be to ascertain its extent and the outline of the continental land on the Pacific side. The third quadrant, from 90° west to the meridian of Greenwich, includes the winter quarters of Gerlache, islands seen by Bellingshausen, Biscoe, and Larsen, and the part of the southern ocean in which Weddell penetrated to 74° 15' south. This Weddell quadrant "invites discoveries of peculiar interest, including the southern side of Graham Land if it proves to be an island, and still more valuable discoveries if it is found to be a promontory extending from continental land." The fourth quadrant, from the meridian of Greenwich to 90° east, is the least known. In it the seventieth parallel never has been crossed, and distant land on the antarctic circle has only been sighted—namely, Enderby Land and Kemp Land. This he calls the Enderby quadrant, though he suggests that it might receive the name Valdivia, after the German ship mentioned above, which sailed along near Enderby Land in 1899. This quadrant was entered by Biscoe in 1831, when he discovered Enderby Land. Capt. Cook just crossed the antarctic circle in 1773, as did Moore in 1845 at nearly the same place, and the Challenger in 1874. All to the south of the antarctic circle in this quadrant is absolutely unknown. It is suggested that two of these four divisions—the Weddell and Enderby—might be taken for the work of the German expedition, and the other two for the English.

The English Government declined to undertake the enterprise, and funds amounting at that time to £40,000 had been raised by subscription; of this, £25,000 was given by Llewellyn W. Longstaff, a fellow of the Royal Geographical Society, and the Government afterward decided to grant

sums equal to those raised by private subscription up to £45,000.

America.—Several expeditions for exploring Alaska have been sent out by United States authorities—four by the geological survey and two by the army authorities. The Coast and Geodetic Survey examined the Yukon delta, finding a depth of water in one of the southern channels, heretofore little known, sufficient to allow the passage of ocean vessels.

Near the close of 1898 the discovery was reported of a mountain more than 20,000 feet high—therefore higher than St. Elias—on the right bank of the Suchitna river, in Alaska. The leader of the party from the Geological Survey making the discovery, G. H. Eldredge, proposed to call it Bulshae, a word spoken in exclamation by the Indian guide when he first saw the peak.

The volcanoes of the eastern Aleutian Islands are spoken of by Mr. J. Stanley-Brown as presenting an interesting field for exploration. Mount Shishaldin, on Umnak island, is a splendid snowy peak, nearly 9,000 feet high, now in a state of gentle eruption. Another mountain on the same island has about the same size and has a crater. On Akutan island is also an active volcano, and other partially active ones are in the vicinity.

Dr. Francisco P. Moreno, who began exploring the Andean regions of the Argentine Republic in 1882, has continued his work almost without intermission since that time. From 1882 to 1895 he explored the region from parallel 23° to 34°; in 1896 he returned to Patagonia by the slopes of the Cordillera and the interior to Lake Buenos Ayres, in 40° 30'. In 1897 his work was in the Patagonian region between the Straits of Magellan and parallel 51°, and in examination of several of the western firds as far as Puerto Montt, in latitude 42°. In 1898 he ascended the Santa Cruz river for the second time, and traversed the territory along the eastern slopes as far as Lake Nahuel-Huapi and Puerto Montt. In a paper read before the Royal Geographical Society in May, 1899, he gave results of his observations, illustrated by very beautiful photographs. He says that Patagonia does not merit its bad reputation; that it has a vast field worthy of active effort, and a healthy soil capable of supporting a large population. Noting the correspondences between the configuration of North America and that of South America, he says that the broken plains and the plateaus of New Mexico and Arizona find their analogy in the Argentine northern plateaus and in the table-lands of Patagonia; that "the ice-bound plains of Canada find modest companions in the extreme south, and the picturesque firds and white mountains of Alaska" are copied in those of Patagonia. He describes the lakes along the eastern side of the great mountain axis in a depression parallel to the Cordillera. Some of these lakes discharge their waters into "the monotonous Atlantic rivers; others reach the Pacific in impetuous torrents, which cut through the whole mass of the Cordillera." He says: "This phenomenon of a dividing line of waters flowing into opposite oceans, which partly rise in plains and glens hardly higher than the level of the sea, and which overcome such formidable obstacles as the Andean Cordillera, piercing its crystalline axis and the enormous mass of rocks that have accumulated upon this axis, constitutes, in my opinion, a fact which is unique in the world." This longitudinal depression contains the most fertile lands of Patagonia. The Government is constructing a railway, starting from the port of San An-

tonio, which is on the Gulf of San Matias, in the northeastern part of Patagonia, and running westward to the Pacific. In June it will be opened as far as the junction of the Limay and Neuguen rivers with the Negro on its way to Nahuel-Huapi, the most lovely lake in South America. Surveys and plans are making for irrigation works, that will easily change the desert aspect of a large portion of the country. Dr. Moreno has charge of the museum at La Plata, the establishment of which is due to him. (See engraving in Annual Cyclopaedia for 1898, page 19.)

The first report of the second Princeton expedition to Patagonia was published in November,

Other travelers in this region were Oscar von Fischer and Franz Steeger, engineers sent by the Chilean Government to open a road from the valley of the Cochamo by the upper course of the Manso to the Valle Nuevo. Three passes were explored, two in the region of perpetual snow, the other, the one most suitable for the road, covered with snow in winter.

News has been received of the discovery by Dr. Steffen of three large rivers flowing into Baker channel on the western coast of Patagonia, the largest of which, called Rio Baker, he ascended about 45 miles, when a waterfall stopped navigation. An affluent was ascended and found to be the outlet of Lake Cochrane. The

PATAGONIANS.

1898. The expedition explored the country inland and northward 800 miles from the Straits of Magellan, adding much to our knowledge of the geography of the country, and discovering at the base of the Andes a beautiful lake 30 miles in length, not previously reported, which might be called Lake Princeton. In addition to considerable collections of the arts and manufactures of the tribes inhabiting these regions, a splendid series of photographs was secured and a fairly complete dictionary of the Yahgan language compiled. The chief work of the expedition was geological.

Dr. Paul Krttger, in a recent expedition to Chilean Patagonia, discovered that the Futaleufu river, which he found in 1898 not to be connected with the Corcovado, as had been supposed, is identical with the Yelcho, a great river having a large delta with many channels and a very rapid upper course.

other rivers were called Rio Bravo and Rio de la Pascua. The former seems to be fed from glaciers on Mount Cochrane.

The expedition to survey the Pilcomayo was, it is reported, massacred by Indians of the Chaco, on the borders of the Argentine Republic and Paraguay. This region has been peculiarly disastrous to explorers seeking the sources of the river. A Buenos Ayres paper of Dec. 8, 1897, said: "Misfortune and disaster have overtaken all those who have had the temerity to approach the Pilcomayo and lay hands upon the mysterious veil that hides its sources from view; in witness thereof are the bleached bones of the ill-fated Crevaux expedition, the fatal ending of Capt. Page, and the nonsuccess of Fontana, Storm, and others. Under the shadows of these somber precedents the intrepid explorer Ramon Lista organized an expedition, and started for the mysterious region round which cling so many

fatal memories. He has paid the penalty of his intrepidity, and the Cerberus that guards the mysterious region of the Pilcomayo has devoured another victim. According to a telegram received by Mr. Francisco Segui, President of the Geographical Society, Ramon Lista lost his way in the woodlands of Miraflores, and after wander-

date from Roman times, by others from the fifteenth century. In the course of ages this had become choked, and when the waters of the lake rose after rains the land surrounding it was turned into a pestilential swamp. In 1875 there was an unusual deluge of rain, and the movement for a drainage canal was begun soon afterward;

CHACO INDIANS.

ing during five days, perished from thirst. Two men who accompanied him were saved."

A letter from Georgetown to the London Times says: "The award of the international tribunal appointed under the treaty of Washington to delimit the boundary between British Guiana and Venezuela has given unqualified satisfaction throughout the colony. It is recognized that England has gained by having the dispute referred to arbitration, and that, had Venezuela accepted Great Britain's offer, she would have gained more territory than the Paris tribunal has awarded her. The boundary, as fixed by the tribunal, practically follows the Schomburgk line."

Europe.—Lake Trasimene, in central Italy, which for centuries has been a source of disease by reason of having no adequate outlet, is now drained by a canal completed in March, 1898, and formally opened Sept. 27 of the same year. The lake, which is about 50 square miles in extent, and surrounded by hills with olive groves and castles, had no discharge for its waters except an artificial channel, supposed by some to

but it was not until 1896 that the work was actually begun. At the lake end the canal is 800 feet above sea level and 30 feet wide, with sloping sides, discharging into a trapezoidal basin 48 feet long. It is carried under the hill and village of San Savino del Lago by a tunnel more than 3,000 feet long. The waters are finally turned into the little river Caina, a tributary of the Tiber. With the lake kept at the level intended, 2,470 acres of arable land will be reclaimed. The work cost 658,565 Italian lire.

Recent bathymetrical surveys of the Italian lakes show that Como is the deepest, its maximum depth being 1,345 feet; that of Maggiore is 1,220; Garda, 1,134; Lugano, 944; Isso, 820. Como is only surpassed in Europe by Hornisdalsvand, 1,593 feet, and Mjøsen, 1,476 feet, in Norway.

Asia. A journey across central Asia has been made by German travelers for the first time. Prof. Fütterer and Dr. Holderer arrived at Shanghai in February, having been seven months on the route. They brought with them fine zoölogical and geological collections.

The upper valley of the Yarkand has been vis-

ited by Capt. Deasy, who has explored a territory only in part examined heretofore by Russian and English travelers. Although provided with a passport from Chinese authorities, Capt. Deasy found his progress so obstructed that part of his proposed route had to be abandoned.

A Dutch missionary, Mr. Rijuhart, who was stationed in Tibet, undertook a journey to Lhasa, accompanied by his wife and their infant son. It ended disastrously, the child having died from the hardships of the journey and the party having been attacked by Tibetans. The men fled, leaving Mr. Rijuhart and his family alone. He recrossed a river they had just passed to obtain assistance, as there were tents on the opposite bank, but did not return. His wife waited several days, and then made her way with great difficulty to Chinese territory, uncertain whether Mr. Rijuhart was dead or a prisoner.

In 1898 Mr. Gaedertz, a German engineer, made a journey in the Chinese province of Shantung. From the temple-crowned summit of the Yo-Shan a sea of mountains could be seen southward. It is proposed to construct a railway through the region traversed by Mr. Gaedertz, who was engaged by a Hamburg syndicate to examine the proposed route. There are large towns on the route. Chau-Tsun is a city of 50,000 inhabitants, and the center of the silk trade of the province. Po-Shan is in the coal district, and has pottery, glass, and iron works.

Mount Kinabalu, in North Borneo, was ascended in April by H. T. Burls, who gives the height as 12,043 feet. In crevices of the rock on the summit small pellucid quartz crystals were found, and Mr. Burls conjectured that large specimens of the kind had given rise to the legend that there was a great diamond at the top, guarded by a dragon, which had devoured so many Chinamen in search of the diamond that the mountain received the name Kina Balu, meaning "Chinese widow."

Mr. R. P. Cobbold returned in the spring from a thirteen months' journey in the Pamirs, during which he was arrested and detained for three weeks by the Russians, and finally escorted by Cossacks across the Chinese frontier. Mr. Cobbold visited several districts never before explored by Englishmen.

K. T. Stoepel ascended the main northern peak of Mount Morrison, in Formosa, in December, 1898. The mountain group is called in Japanese Niitakayama—"the new high mountain"—but by the natives Pataquan.

Africa.—The agreement between France and England defining the spheres of interest of the two powers in eastern Africa draws, according to the London Times of March 23, "a line running roughly north and south, and pledges England not to acquire either territory or political influence west of this line, and France not to acquire them to the east of it. The line begins on the northern frontier of the Congo State at the watershed of the Congo and the Nile, and follows that watershed to 11° north. From this point to 15° north it is to be traced by a mixed commission between Darfur and Wadai, leaving the former to England and the latter to France. The northern section of the line is traced in the French note from north to south, instead of being continued from the northern frontier of Darfur. It is described as beginning at the intersection of the sixteenth degree east of Greenwich with the tropic of Cancer, a point near the southern frontier of Tripoli. It is to be drawn southeast until it cuts the twenty-fourth degree east of Greenwich, and it is then to follow that de-

gree until it reaches the northern border of Darfur. A glance at the map will show that by this arrangement the whole of the Bahr-el-Ghazal and all the old provinces of Egypt west of the Nile fall within the British sphere—that is, we hold free from French pretensions for the future the entire basin of the upper Nile right up to the great lakes. That is the result which we have sought to obtain throughout the negotiations, and we appear to have obtained it in the amplest way. The report of Sir William Garstin on the portions of this territory immediately south of Khartoum will cause neither surprise nor disappointment to those who have taken the pains to make themselves moderately acquainted with previous accounts of this part of the Soudan. The country about the White Nile is for a great distance a pestilential swamp, and it may be doubted whether even the genius and perseverance of the Anglo-Egyptian engineers will be able to improve it materially within a generation. Beyond the points which he reached lie other portions of the Soudan of a less unpromising character, but, speaking generally, Sir William Garstin is probably not far wrong when he says that at present it can be of no practical advantage to a civilized power if by practical advantage material advantage is intended. But it was not for the sake of material advantages that we were determined to acquire the upper part of the Nile basin. Political and military considerations of an imperative kind gave us no choice in the matter. 'The Nile is Egypt, and Egypt is the Nile,' and it was vital to us as the trustees of Egypt to hold the Nile from the sea to the great lakes."

This gives England a continuous line through eastern Africa, except for that part south of the equator where the Congo State and the German possessions meet. An agreement has been made by which Germany grants to the African Transcontinental Telegraph Company the right to carry across its territory the line intended to connect Cape Town with Cairo.

The railway to Khartoum was to be ready for travel in December. The line through East Africa from north to south can now be carried, like the telegraph, mainly through British territory.

A German steamer has been sent to Lake Tanganyika.

In connection with the agreement concerning Samoa some doubtful boundaries in Africa were settled, given as follows: "Further articles of the agreement provide for the demarcation of the frontier in the *Hinterland* of German Togoland and the British Gold Coast colony, and for the renunciation of German extraterritorial rights in Zanzibar, to take effect when other nations have also given up their extraterritorial rights in that dependency. The neutral zone of Salaga in West Africa has been a bone of contention between Germany and England since the square block of territory was provisionally declared neutral in 1888. The agreement now arrived at appears to secure for England the largest slice of the zone and the territory of Gambaga north of it."

Mr. W. Willcocks wrote from Cairo Sept. 18: "Egypt is experiencing one of the worst floods of the century, and that branch of the river which leaves the great equatorial lakes seems to have failed completely. This branch (let us call it the White Nile) is completely closed by the *sudd*, and the waters are wandering over the immense swamps which stretch from latitude 7° to latitude 10°. The failure of this supply in the summer of 1900 will be serious." He says the waters that leave the great lakes are estimated

never to fall below 18,000 cubic feet a second, while the discharge at Assuan, in spite of the additions of surface and subsoil waters from the Gazelle, the Sobat, the Blue Nile, and the Atbara, has within the past twenty-five years twice fallen as low as 7,000 cubic feet a second. After passing Lado the White Nile splits up into numerous branches, which lose themselves in the swamps. The swamps vanquish the Nile.

The work of building a great Nile reservoir above Assuan, to which the consent of the Khedive was obtained in 1898, was begun Feb. 12, 1899, when the corner stone was laid. It will be more than a mile long and 80 feet wide at the base, and the top will be 90 feet above low-water mark. It will be pierced with 180 sluices for the regulation of the waters, and will raise the level of the river for 140 miles above the first cataract. The reservoir will be done, it is estimated, in two years, but subsidiary works will be required before the whole plan is carried out. A large area will be added to the productive lands of lower Egypt.

Capt. Wellby, who is exploring eastern Africa in the vicinity of Lake Rudolf, has found that the Oms flows into that lake, and a small river called Ruzi flows into the stream called Juba. He traveled north about midway between the lake and the Nile through a fine wooded country abounding in game. The Turkana were found to be a fine race, many of them approaching 7 feet in height. They wear their hair in a matted mass hanging down the back to the waist, and carry in it their tobacco and various small articles—presumably in the hair bag, such as is worn by some other African tribes.

Mount Kenia was ascended this year by Mr. H. J. Mackinder, reader in geography at Oxford. The summit was reached at the third attempt, and was found to be more than 17,000 feet high. Fifteen glaciers, two very large, were discovered. The height of the mountain has been estimated at 19,000 feet.

Col. J. R. L. Macdonald was in command of an exploring expedition that left England in June, 1897, for operations in the neighborhood of Uganda. The work had to be abandoned for nine months when the Uganda protectorate was threatened by the revolt of the Soudanese troops, and the whole strength of the expedition was turned in to the support of the Government. In May, 1898, after the loss of 33 per cent. of the Europeans, 60 per cent. of the escort, 43 per cent. in transport, and 15 per cent. in Swahilis, the expedition was reorganized. Meantime some work had been done in Uganda toward rectifying and filling out the maps. Lake Choga was found to be much larger than had been supposed and to be one of the minor reservoirs of the Nile. A large lake—Mpologoma—was heard of, but not visited, east of Choga. Major H. H. Austin had charge of a column to explore the vicinity of Lake Rudolf. Col. Macdonald advanced with another column into Karamoja, west of Lake Rudolf and the unknown regions beyond, which were a blank on the map. Mount Debasien is described as a magnificent rocky mountain rising to several well-marked peaks, the highest of which is 9,700 feet above the sea. Mount Moroto rises 10,000 feet.

The Karamoja people are of great stature, and have the reputation of being very warlike. Col. Macdonald says: "The women have perhaps more latitude allowed them than in most African tribes, as marriage is not merely a matter of barter. If the girl objects to marrying her suitor, her refusal is absolute and settles the matter. The

women are decently clothed in skins, but the men wear no clothing, unless the extraordinary felted head dress, which hangs low over their shoulders, is classed as clothing. A Karamoja warrior, with his felted hair bag decked with ostrich feathers, his iron collar and ivory bangles, is a very striking sight. He carries two spears, which can be used either for throwing or stabbing, a knob-kerry, and a very small, light shield made of hide. Many also wear a small circular wrist knife, with which terrible wounds can be inflicted in a rough and tumble. The cutting edges of the knife and of the spearheads are carefully protected by ingenious sheaths made of leather."

Later the explorers went to Latuka, still farther west, passing through a mountainous region with peaks rising 6,000 to 10,000 feet.

An account is given in *The Geographical Journal* of Mr. Weatherly's latest expedition to Bangweolo (or, as he says it should be, Bangweulu). He went to the Johnston falls on the Luapula, and thence to the northwest corner of Bangweulu. About 10 miles northwest of the last three rivers—the Mwampanda, the Lifubu, and the Liposori—meet in a great marsh, called Kasamba. These three rivers appear to unite in one, which flows into the lake, which, according to Mr. Weatherly's measurements, is 43½ miles long. He surveyed Lake Kampolombo 3½ to 4 miles across, which has connected with it a lakelet, Kangwena, and opposite its northern half is Chifungwe, a narrow sheet of water. On the voyage down the Luapula the explorer saw the Mumbotuta falls, which, he says, have never before been visited by a white man. "They are due to a great fault cutting the river diagonally, and the mad chaos of the foaming water, the thunder of which can be heard 8 or 9 miles on a still night, is an indescribably grand sight." The greater part of the Luapula above the Johnston falls is quite unnavigable for craft of any size, by reason either of sand banks or its shallowness and rapid current. The Johnston falls are a succession of rapids and cataracts, known to the natives as Mambilima.

Steps have been taken to preserve the inscription that was cut into the tree that marked the place where Dr. Livingston died. After the intelligence was received in London that the tree was so decayed that it must soon fall, Mr. R. Codrington was deputed to visit the site of Chitambo's village and bring away the section of the tree bearing the inscription. The journey appears to have been rather difficult. A folding boat enabled Mr. Codrington to cross the Loangwa, the Molembo, and the Lohombo. Near Chilenga he crossed the Muchinga range, the path leading to a height of 4,950 feet. The tree, which is of the kind called *mpembu*, was found to be hollow and too old to produce seeds. The inscription has been partly effaced by borers. It stands:

DR. LIVINGSTONE

MAY 4, 1873

. ZA MNIASERE
UCHOPERE

A fence was built round the stump of the tree, a space for 60 yards around was cleared, and a sealed bottle buried within the fence.

During the exploration of the Zambesi and its tributaries by the expedition under Dr. Karl

Peters ancient ruins were found by Leonard Puzey near the Muira, a southern affluent, in Portuguese territory. They consisted mainly of great circular walls, rising in places where they were least broken to a height of 12 to 15 feet. Dr. Peters says: "The whole of the ruin is built after the general ancient Semitic pattern. The cyclopean wall skirts the hill about halfway between the bottom and the top; on the top of the buildings the hoarding place and likely the temple were standing. The remains of a ground wall along the edge of the top lead me to believe that a second wall formerly ran around the platform itself. To explore the ruin properly it will be necessary to send a scientific expedition with a proper outfit for such excavations. The *débris* has to be removed, and this, I am sure, will take considerable time. Why the old conquerors chose this spot for their fort is easy to see. The Muira touches the bottom of the hill, so water was handy. A second river we have discovered at the back of the ruin. From the top they had an outlook over the wide plain before them, while they had the bulk of the Fura massive at their back. From their own fort they commanded the plain as well as the mountain. I have called the hill on which the ruin stands after its discoverer, 'Puzey Hill.'"

Besides gold, Dr. Peters claims to have discovered mica, saltpeter, and diamonds in a district practically uninhabited at an altitude of 8,000 feet, and, he believes, easily capable of cultivation. He thinks Fura and Ophir are forms of the same name, and that this may be the Ophir of Scripture.

Major Gibbons, who ascended the Zambesi, found some inaccuracies in existing maps of the region. Mr. J. E. Moore, another explorer, found the greatest depth of Lake Nyassa to be 430 fathoms. Near the junction of the Lulua and Kasai rivers Mr. Verner, an American missionary, found a series of lakes, formed by the expansion of tributary rivers. He named one Lapsley pool, after the founder of the mission, and another after United States Senator Morgan, who was United States representative in Brussels when the Congo State was recognized. Dr. Cuireau has surveyed the Nile-Congo watershed. M. Wauters has completed a map of the Congo State. Herr Von Elpons, commandant of the German station at Langenburg, ascended Mount Rungwe, the highest summit of the region northwest of Lake Nyassa, the height of which he found to be 10,200 feet.

Albert B. Lloyd, an English traveler, spent three weeks in 1898 in the forest in the heart of Africa inhabited by the pygmies described by Du Chaillu and Stanley. For the first five days he was without sight of a pygmy; but suddenly he became aware of their presence by mysterious movements among the trees, which he at first attributed to monkeys. Finally he came to a clearing and stopped at a village where there was a great number of the pygmy people. "They told me," he says, "that unknown to me they had been watching me for five days, peering through the growth of the forest. They appeared very much frightened, and even when speaking covered their faces." Such was their timidity that it was difficult to get good photographs; but Mr. Lloyd finally succeeded in obtaining a considerable number, showing the little people both singly and in groups. The measurements made by Mr. Lloyd show not one over 4 feet in height. The men have long beards, reaching halfway down the chest. "They are," adds Mr. Lloyd, "fairly intelligent. I had a long talk with

a chief, who conversed intelligently about their customs in the forest and the number of the tribesmen. Both men and women, except for a tiny strip of bark, were quite nude. The men were armed with poisoned arrows. The chief told me the tribes were nomadic, and never slept two nights in the same place." Most of these people have the normal negro features, some to an exaggerated degree, although the color is described as inclining rather to various shades of brown and red, or chocolate, than black.

The Ngoko, a western branch of Sauga river, which forms a part of the boundary between German and French territory in western Africa, was explored this year by Dr. Pleyn. The Ngoko is formed by the junction of the Bumba and the Ja, respectively 100 and 150 yards wide at the confluence. The Bumba is a swift stream, with rapids and a fall, which stopped the progress of the explorers. It is in about 2° 30' north latitude and 14° 30' east longitude. Ascending the Ja, the larger stream, Dr. Pleyn found at first a few small villages; then for four days he passed through an uninhabited country. Wooded hills bordered the river, some of them rising 2,000 feet above it. Then a lakelike expansion of the river was reached, and above it a narrow gorge with several rapids. Up to this point the stream is navigable for large river steamers. Above it not even the canoes could be used; but the river was examined to some distance above, where it again broadened to about 150 yards. Rubber abounds in the forests that cover the country, and elephants are numerous. They are hunted by wandering tribes, but the resident population is very scanty.

The Committee on Colonial Agriculture in Berlin sent a mission in charge of Herr Schlechter to West Africa to study the cultivation of the rubber plant in that region. He found that the forests where it once abounded in Lagos now show but few of the trees, and he believes that its day is over there unless measures are taken by the authorities to preserve it. He collected seeds for introduction into the Cameroons.

M. Perregaux has made explorations in Ashanti. A singular story, given in dispatches from West Africa to the French Cabinet Council, is given in the London Times of Sept. 20, 1899, an abstract of which follows: "Capt. Voulet, of the French marines, who had acted with Capt. Chanoine, a son of Gen. Chanoine, Minister of War in the Brisson Cabinet, in the Gurunsi-Mossi country in 1897, desired to explore with his former comrade the country between Say and Lake Chad assigned to France by the last agreement with England. They were authorized to undertake this expedition in July, 1898. In October they were at Jenne, in the Massina country. From this point Capt. Chanoine started to cross the region inclosed in the great bend of the river, while Capt. Voulet descended the stream by way of Timbuctoo. The parties met at Sansanne Hausa, about 90 miles above Say, early in January, and, after spending two months in reorganizing their forces, they left for Lake Chad in March. A lieutenant attached to the mission, named Peteau, lodged charges of cruelty against the officers in command with the French authorities, and a preliminary inquiry was directed. The details have not been made public, but a *prima facie* case against Capt. Voulet and Capt. Chanoine appears to have been made out to the satisfaction of the French resident and the commandant of the eastern Soudan. As a result of the inquiry, Col. Klobb was directed to proceed from Kayes, where he was then stationed, to join the

mission, take over the command, investigate the charges, and, if these were proved, to place Capt. Voulet and Capt. Chanoine under arrest. In the execution of these orders Col. Klobb, who was accompanied by a young lieutenant named Meunier and a small escort, marched to Sinder, on the Niger. On July 10 he received news of the mission, and dispatched four men of his escort with a message to its chiefs. The message was delivered on the evening of July 12, and on the following morning Capt. Voulet, according to the account of the survivors, sent the messengers back to Col. Klobb with a letter, bidding them at the same time inform the colonel that he was about to move to the next village to obtain water. Col. Klobb showed the letter to Lieut. Meunier, and at once sent a second communication to Capt. Voulet, who received it on the evening of July 13. Capt. Voulet immediately called his native noncommissioned officers together and told them that the colonel was coming to set free the prisoners he had given his men. He asked them whether they would obey the colonel or fire upon him. They said they would take their orders from the captain, and then went among their men and instructed them to fire when they got the command. Capt. Voulet sent a second letter and a third, in which he declared that he would not give up his command; that he had 600 rifles under his orders; and that he would treat his superior officer as an enemy if he continued to advance. Col. Klobb gave orders that if the mutineers fired their fire was not to be returned. When the two forces were about 150 yards apart, Capt. Voulet being the only officer present with the mutineers, he called out to Col. Klobb that he knew well enough who was before him and that there was no mistake, but that he would fire if the colonel advanced. The colonel answered that he would advance, but that in no circumstances would he fire, and he repeated his orders to this effect in the hearing of Voulet. The chief of the mutineers formed up his men and ordered them to fire three volleys and then to fire independently. Col. Klobb and Lieut. Meunier were both wounded—the latter fatally—at the first discharge. The second volley killed the colonel, but not until he had again forbidden his men to return the fire and ordered the survivors to report at the nearest French post. Capt. Voulet seems to have completed his butchery by a bayonet charge. Happily, the bush was at hand, and the native escort of the murdered officers knew how to avail themselves of it. By Aug. 3 the survivors had made their way back to Garu, on the Niger, where they were met by Lieut. Cornu, whose dispatch has just reached Paris."

The cruelties charged against Voulet and Chanoine, which led to the sending of Col. Klobb, are so horrible as to be almost past belief. Following is a part of the statement credited to an officer who had left their mission: "On Jan. 8, 1899, a native who was met by some soldiers declared that he did not know the road toward the east. He was brought before Capt. Voulet, who ordered his head to be cut off. Reconnoitering parties sent out on the night of Jan. 8 were ordered to capture his village, kill all the natives who resisted, bring away the rest as captives, and take the heads. On the morning of Jan. 9 a reconnoitering party returned to camp with 250 oxen, 500 sheep, 28 horses, and 80 prisoners. Some of the soldiers having been killed or wounded, Capt. Voulet said that an example must be made. He ordered 20 women, mothers with young children and babes, to be killed with lances at

a few hundred yards from the camp. Their bodies were afterward found by the post commander at Say. On the same day a soldier who had expended 124 cartridges in a skirmish had his brains blown out, by order of Capt. Voulet, for having wasted his ammunition. On Jan. 13 the mission burned Sansanne-Hausa, a city of 10,000 inhabitants and an active commercial center. On the 14th 3 *spahis*, a regular soldier, and 2 auxiliaries charged a native, who, in defending himself, wounded the regular. The auxiliaries, being armed only with lances, did not dare to pursue the native. For this negligence they were shot without trial as soon as they returned to camp, by order of Capt. Chanoine. An entire village was burned. At Libore, on the 17th, 2 prisoners were brought in and taken before Capt. Voulet, who ordered them to be shot. At the same time 2 soldiers brought 2 freshly cut hands to the chief of the mission. From that time forward the practice of cutting off the hands of the massacred natives became general. All the men who brought these sanguinary evidences of murder to the officers' mess table were rewarded. On the 24th Capt. Chanoine lost by surprise 6 *spahis* killed in an engagement. Pursuing the aggressors, he came across the inhabitants of a neighboring village, who had taken refuge in the brushwood. He made 20 prisoners, cut off the heads of 10 of them and had them stuck on poles. During the march of the mission Sergeant-Major Laury and some of the soldiers armed with staves struck those who did not march quickly. The carriers, recruited by chance, were in many cases old and feeble. Some fell out, and the soldiers cut off their heads. Sometimes Sergeant-Major Laury executed them himself with his revolver. All these acts were committed in a peaceful country where the inhabitants were not hostile to the mission."

A journey by M. Fournreau through the less known lands of French Congo led from Wesso, on the upper Sauga, Feb. 14, 1899, to the Gabun, June 10, through at first a sparsely populated, swampy region abounding in elephants; afterward through a wilderness, where rubber trees were abundant, and among villages of the Bakotas. They reached the divide between the Congo and Ogowé systems, examined the Mambili, an affluent of the Mossaka, the Ivindo, the Abombe, the Jadie, the Niona, and the Bokowe. M. Fournreau favors the establishment of a rapid-transit route from the Gabun either to the Sauga by way of the valley of the Jadie or to the Mossaka by way of the valley of the Mambili.

A journey across the Sahara south of Algeria was undertaken by F. Fourreau as explorer and Count Lamy as military commander, and at last accounts was proceeding successfully, though fears for its safety had been entertained. The expedition consisted of 180 Algerian soldiers, besides the officers, and carried 1,000 camels. From southern Algeria the way led by Temassinin, across the Tassili plateau, the western portion of which is 5,700 feet in height. The region is essentially volcanic. The divide between Atlantic and Mediterranean waters is 4,690 feet high. The route by way of the Air oasis, which was taken by the expedition, is said not to have been traversed before since 1849, when it was taken by Barth. At last accounts the explorers had reached Lake Chad.

Dr. F. Weisgerber has made a journey through the interior of Morocco, visiting places rarely or never seen by Europeans; and Dr. Theodor Fischer explored the valley of the Tensift river in Morocco, heretofore almost unknown.

A remarkable journey across the continent, from Loango on the west coast, in French Congo, to Jibuti on the east coast, in French Somaliland, was taken by a military expedition under Major Marchand. The route was by way of the Congo and its tributaries, then over plateau and through forest to the Sueh, an affluent of the Bahr-el-Ghazal, and down these rivers. The troubles in Fashoda interrupted the journey in July, 1898. It was resumed in December, when the Sobat was followed to the junction of the Baro and the Juba. Here the little steamer *Faidherbe*, which had been used on the rivers, was abandoned, and the remainder of the route was traveled by land through Abyssinia and Somaliland. The position of Addis Abbeba, capital of Abyssinia, was found to be farther north and farther west than the place given to it on the maps. The most important geographical work of the expedition was that in the territory of the tributaries of the Bahr-el-Ghazal.

This region was explored at about the same time by M. Liotard, Governor of the French Ubangi territory, who traversed some country hitherto unknown.

According to a communication from Lieut. Cerekel, the syllable *lu* in the names of African rivers is a shortened form of *lut*, meaning river, so that it is not properly a part of the name. It is sometimes placed before, as in Lualaba, sometimes after, as in Sanku Lu, and sometimes the full form is used, as in Chibu Lui. For small streams *ka*, a diminutive, is used instead of *lu*.

Islands.—The Samoan Islands have been assigned by agreement as follow: The two islands of Upolu and Savaii, as well as the adjacent small islands, are assigned to Germany in absolute possession; the island of Tutuila and its adjacent islands to the United States. Great Britain renounces all her rights in the Samoan Islands, and Germany renounces in favor of Great Britain all her claims to the Tonga Islands and to Savage island, and cedes also to this country the two eastern Solomon Islands of Choiseul and Isabel, with their island surroundings.

At the proclamation of the British protectorate over the Santa Cruz Islands it was found by an examination from the English ships that the island laid down on the maps as Motuiti or Kennedy had no existence; at least none at the position indicated.

General.—"The population of the world was estimated by Profs. Supan and Wagner in 1891 at 1,480,000,000. Prof. Supan estimates the present population of the earth at 1,500,000,000, or an increase of 20,000,000 in the past seven years. The population of Europe at the beginning of the Christian era, estimated at 54,000,000, was only a little more than half the present population of European Russia."

The following was published in January: "The Coast and Geodetic Survey has at last completed valuable measurements from which its corps of skilled mathematicians is shortly to determine for the first time, with any degree of accuracy, the figure and size of the earth. In other words, we are soon to learn something definite as to how large a mass the earth is, and whether it is, in truth, flattened at the poles. This tremendous feat of surveying just finished is the most extensive and valuable contribution toward the solution of these problems thus far undertaken. The survey has accurately measured in feet and inches the longest arc of the earth's curvature ever covered by measuring instruments. This line extends from Cape May, N. J., due west over the thirty-ninth parallel to the coast of northern

California, forming more than a seventh of that particular circle spanning the earth. It has required more than a quarter of a century of continuous work for the completion of the triangulation. The length of the arc having thus been actually measured in feet and inches and fractions thereof, and its curvature having been measured in degrees by astronomic work, from this length and curvature combined will be calculated, after months of most difficult computation, the actual shape and expanse of our sphere."

The seventh International Geographical Congress met at Berlin in October. Oceanography held a prominent place in the proceedings of the congress, and the papers and discussions on this subject showed what a complicated and fertile field of research it has become. A commission was nominated for the purpose of devising a nomenclature for the different features of the bed of the ocean.

One result of the discussion of antarctic exploration was the resolution that, as the proposals of the antarctic committees of the two countries form an excellent basis for plans of co-operation, a small joint committee should be formed for the purpose of arriving at a common method of work in meteorological and magnetic observations.

Another important discussion related to the map of the world on the scale of 1:1,000,000 (16 miles to the inch), which has been before the congresses of Berne and London.

It is doubtful if the resolution as to the adoption of the metric system of weights and measures and the centigrade scale for thermometers will have any result either in England or in America. One eminent geographer, Mr. J. G. Buchanan, went so far as to maintain that even from the scientific point of view the fathom and the Fahrenheit scale are far superior to the metre and the centigrade thermometer. A resolution was adopted deprecating the giving of new names to places where native names or names given by early explorers have become familiar. The attendance at the congress—members and associates, including ladies—was 1,667, of whom about 205 were foreigners in the strict sense, including Austrians.

GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,086 in 1800; 252,433 in 1810; 340,985 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; and 1,927,253 in 1890. Capital, Atlanta.

Government.—The following were the State officers in 1899: Governor, Allen D. Candler; Secretary of State, Philip Cook; Treasurer, W. J. Speer; Comptroller, William A. Wright; Attorney-General, Joseph M. Terrell; State School Commissioner, G. R. Glenn; Adjutant General, J. M. Kell; Commissioner of Agriculture, O. B. Stevens; Geologist, W. S. Yeates; Chemist, J. M. McCandless; Librarian, James E. Brown; Railroad Commissioners, L. N. Trammell, S. R. Atkinson, T. C. Crenshaw; Prison Commissioners, J. S. Turner, C. A. Evans, T. Eason; Chief Justice of the Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin, Henry T. Lewis, Andrew J. Cobb, William A. Little, and William H. Fish; Clerk, Z. D. Harrison—all Democrats.

Finances.—The Treasurer's report for the year ending Sept. 30 shows the following figures: Balance Oct. 1, 1898, \$120,004.57; receipts during

the year, \$3,671,932.46; disbursements, \$3,353,160.37; balance Oct. 1, 1899, \$438,776.66.

The largest items of receipts were: From general tax, \$2,201,197.26; from poll tax, \$230,489.71; railroad tax, \$269,044.11; rent Western and Atlantic Railroad, \$420,012; liquor tax, \$142,452.24; hire of convicts under the old lease, \$25,000, and under the new lease, \$50,304.32; insurance tax, \$58,701.42; temporary loans, \$100,000.

The bonded debt of the State Sept. 30, 1898, was \$8,031,500. On Jan. 1 the second installment of bonds issued under act of 1887 became due, and was paid off with the sinking fund then in hand, amounting to \$100,000, leaving the valid interest-bearing debt, \$7,031,500. The rates of interest on the various issues vary from $3\frac{1}{2}$ to 7 per cent., and the total amount of interest is \$339,380. The assets of the State include \$20,700 of Georgia Railroad and Banking Company's stock and \$10,000 of Southern and Atlantic Telegraph stock, besides the public buildings and the Western and Atlantic and Northeastern Railroads, none of which are estimated.

The aggregate value of real estate as reported in 1899 was \$235,410,751, and of personal estate \$137,516,326, making a total of \$372,927,077, which is an advance of more than \$3,000,000 on that of 1898. The whole amount of tax on polls, professions, and property, after deducting defaulters, was \$2,372,246.84. The aggregate value of property returned by colored taxpayers was \$13,447,423, a decrease of \$271,777 from that of 1898.

Education.—The report of the State School Commissioner for 1898 shows the number of schools of the common-school system to be 7,547, and those of local systems 384. The number of teachers of the former was 8,629, and the amount paid them \$1,231,307.67. There were 948 teachers of local systems, receiving \$442,765. The county school commissioners were paid \$62,304.95 and local superintendents \$27,675.

The enrollment in common schools was 421,237, and the average attendance 231,060; the per capita of expenditure estimated by enrollment was \$3.26, while in the local schools, which had an enrollment of 47,870, it was \$11.78. The enrollment in common schools in 1898 was 34,414 more than in 1897, and the amount paid to teachers was \$290,698.24 greater.

The amount of the fund received from the State by the common-school system, including balances from the previous year, was \$1,404,832.88. The local systems received from the State, including balances, \$206,318.14, and \$356,068.36 was raised for them by local taxation.

The sources from which the school fund for 1899 was derived and the amounts were as follow: Direct appropriation, \$800,000; half rental Western and Atlantic Railway, \$210,006; liquor tax, \$104,659; net hire of convicts, \$13,622; tax on shows, \$6,000; dividend on Georgia Railway stock, \$2,146; fees for inspection fertilizers, \$16,749; fees for inspection oils, \$15,000; poll tax, \$230,000; total fund, \$1,398,122.

The amount received from the Peabody fund was \$7,156.

The value of books in use that were bought before July 1, 1898, was \$107,369.45, and the value of those bought during the year 1898-'99 was \$97,765.34, many new books having been adopted. These figures are from reports of 97 counties.

There are 94 school libraries, valued at \$10,918.31.

From a statement in regard to illiteracy in the report it appears that, though the number of illiterates has increased in the past five years,

the percentage has declined. The total number in 1898 was 83,616, of whom 22,917 were white and 60,699 were colored. The percentage of illiterates to the population was 12.6, a decrease of 6.3 per cent. since 1893; the percentage of white illiterates is 6.7, a decrease of 4.6; and the percentage of colored illiterates is 18.9, a decrease of 8.3. The enrollment of colored children in the schools is 166,450; the average attendance, 92,973.

Suit was brought by colored citizens of Richmond County against the Board of Education. This board had closed the colored high school for want of funds, leaving a white high school still in existence, and the suit was instituted for the purpose of securing an injunction to prevent the collection of taxes for the maintenance of the school system generally. In passing upon the case, Justice Harlan said that the education of the young had been remitted to the several States, and that it should be generally left to their control. The court had not been able to discover that the Supreme Court of Georgia had erred in refusing to grant an injunction; hence the decision of that court, which was adverse to the petition of the colored people, was affirmed. He reviewed the testimony at length, saying that it appeared that the school board was confronted with the necessity of closing the colored high school and turning the high-school building over to the negro children of the primary grades or of leaving the latter without educational facilities.

Preparations have been made for a summer session of eight weeks at the university, to which any white person qualified to pursue any of the courses of instruction may gain admittance. Thirty-four courses are offered, in order that the preferences of students may be ascertained.

Andrew Carnegie has offered to give \$100,000 for a free library in Atlanta if a site is provided and a fund for maintenance of not less than \$5,000 a year.

The Normal and Industrial College, at Milledgeville, had a total attendance of 382 girls in the college classes and 60 children in the model school during the session of 1898-'99. The students came from 99 counties in the State; 165 were preparing for teaching in the normal course, 61 were in the collegiate-industrial, and 31 in the special industrial classes. The normal graduating class in June numbered 18, and the collegiate 4.

During the session of 1898-'99 the North Georgia Agricultural College had 237 regular students, of whom 51 were women, representing 60 counties of the State. The cost to the State was \$30 for each student.

The enrollment at the State Normal School, at Athens, in 1899 was 714. The average attendance is not more than half the enrollment, because many students attend for five months and teach for five months each year till their course is finished. There are 10 instructors. The appropriation, which was \$22,500 for 1898, was reduced to \$16,000 for each of the two years next succeeding.

Prisons.—The second annual report of the Prison Commission covers the year ending Sept. 30, 1899, the commission having been created by legislative act in December, 1897, when the old lease-contract system was given up and a new system was established, under which the State resumed control of the convicts. A farm was bought, and the 60 women, 23 boys under sixteen, and 75 old or infirm men were removed to it, leaving 2,022 to be placed at labor for contractors. The expenditures for farm expenses, including pay of officers and guards in charge, transportation, clothing, etc., amounted to \$15,-

859.19. The products of the farm were valued at \$16,495, showing a small profit.

The commission has examined 251 applications for pardons, out of which they recommended pardons in 46 felony cases not capital and 26 in misdemeanors. Commutations were recommended in 4 cases of felony not capital, 17 in misdemeanors, and 2 in capital cases.

Since the passage of the law allowing juries and judges to reduce certain felonies to misdemeanors there has been an increase in the number of convictions for misdemeanors and a corresponding reduction in the number of convicts sent to the Penitentiary.

At the time of the report there were in the chain gangs 37 boys under sixteen and 117 women, 1 of each being white, besides 132 white men and 2,135 colored men. Of the 2,201 remaining in the Penitentiary at the end of the year, 1,080 were wholly illiterate, 250 could read only, and 871 could read and write.

It was decided in September that the new Southern Federal Prison shall be built just outside the limits of Atlanta. The city paid \$25,000 and the Southern Railway \$35,000 for the site—a tract of 300 acres. The buildings are expected to cost about \$2,000,000, and to be finished in 1902.

Railroads.—The total mileage of railroads in the State Oct. 1, 1899, was 5,531.86, an increase in the year of 56.60. The total gross earnings for the year ending June 30 were \$21,087,310.36; the operating expenses, \$14,790,718.85; the total net earnings, \$6,296,591.51; the percentage of operating expenses to gross earnings, 70.14. There are 51 companies or systems operating in the State. Five of these operate 55.8 per cent. of the total mileage, and earned 69.9 of the total gross earnings. Only 6 companies reported deficits. The net earnings this year were \$744,285.50 more than in 1898.

Banks.—By a comparison of the Bank Examiner's report for 1898 and that of 1899, it is found that the number of State banks has increased from 119 to 139; the total resources from \$33,012,557.58 to \$37,577,933.70; the cash on hand from \$2,584,004.93 to \$2,841,083.76; the deposits from \$18,097,635.67 to \$21,150,309.15.

Loan Associations.—A decision was rendered in the Superior Court at Savannah, March 30, in the case of the Georgia State Building and Loan Association against the city of Savannah. The city assessed the association \$250,000 on its property, including the money that has been loaned to shareholders. The association refused to pay the taxes, claiming an exemption under the State law exempting building and loan associations from taxation on capital that is loaned to shareholders. When its property was levied on it sought an injunction in the Superior Court. Judge Falligant heard the argument and handed down a decision holding that the law exempting such associations from taxation on the capital loaned the shareholders was unconstitutional.

Products.—The cotton crop for the year is unusually small, being estimated at not more than 8,900,000 bales for the entire cotton belt; that of Georgia at about 1,000,000 bales. The acreage in Georgia was 3,288,000. The State Commissioner of Agriculture advises the farmers to reduce the acreage of cotton and raise more of such other crops as the land will grow. He says: "For thirty-three years we have relied on cotton alone with which to purchase everything else. During that time we have made not less than 20,000,000 bales, worth at a moderate estimate fully \$800,000,000. What has become of this vast

amount of money, which if kept at home would have made us one of the richest States in the Union? It has all gone to pay the farmers and manufacturers of the North and East for supplies of various kinds, every item of which we could and should have produced within our own borders. Suppose we had made only 10,000,000 bales in the past thirty-three years, and in addition had produced all the supplies that we have bought from other States, is it not self-evident that we would be better off by \$400,000,000 than we are at present? The entire property of the State, cities included, is now but a little over \$400,000,000, and the farmers of Georgia ought to have been richer by this vast amount had they not been deluded by the all-cotton fallacy."

The wheat crop estimate is 2,607,360 bushels. The acreage devoted to corn was 24 per cent. larger than that of 1898. The quantity of fertilizers sold in the State was 20.6 per cent. less than in the previous year.

An effort is making to revive the sugar industry—to increase the acreage and establish sugar plants. Heretofore the cane grown in the State has been almost exclusively made into sirup, a product much less valuable.

Speaking of the beautiful green marble, or rather serpentine, quarried in Georgia, a Maine newspaper says: "The quarry is now over 60 feet deep, and the deeper it gets the better is the marble. When the first company organized to work the marble quarry they attempted to get out the stone by blasting with dynamite, which shattered the stone and greatly wasted it. Shortly afterward the company went into the hands of a receiver. Last spring a Chicago stock company was organized and went to work with channeling machines. During the summer the ragged hole left by the former dynamite method of working has been shaped out, the walls squared, the floor leveled, and now blocks of stone of regular sizes, weighing 8 and 10 tons, are taken out."

Labor.—The operatives in three cotton mills in Augusta struck in November in consequence of a reduction in wages. The owners explained that the reduction was necessary on account of the competition of mills in the Carolinas, and they offered to make a schedule giving 6 per cent. more than was given in those mills. The proposal was not accepted, the men declaring that as wood and rents were higher in Augusta the comparison was not fair. The mills were closed Nov. 30. About 3,000 operatives were involved.

Georgia Monument.—A monument to the soldiers of the State who took part in the battle of Chickamauga was unveiled on the battle ground, May 4, with appropriate ceremonies. The Legislature of 1897 appropriated \$25,000 for this object.

The Buskin Colony.—This co-operative colony was established in 1895 on a tract of 1,800 acres in Middle Tennessee. In September, 1899, it was removed to Duke, Ware County, Ga. About 250 persons comprise the colony. It is organized as a stock company. The entrance fee is \$500 for each family, and before a family can enter the colony it has to be passed on by a vote of all persons in the body. It seems that the trouble arose over the dissatisfaction of a few who wanted to draw out and take out their stock. In the course of the trouble the colony was thrown into the courts by the dissenters, and the result was that it went into the hands of a receiver. Those who still have faith in the principles on which the colony is founded thought best to sell their interest in the property in Tennessee and remove to Georgia.

Lawlessness.—On the night of Jan. 21 a mob went to the home of John Rustin, near Colquitt, in Miller County, killed him and his son and wounded his daughter. The intention had evidently been to exterminate the family. The father lived long enough to give the names of five of the murderers whom he recognized. The motive was easily seen—one of the assailants was out on bail after having been arrested on a warrant charging him with ruining the daughter of the murdered man, and the girl recognized him as the one who fired the shot that wounded her. The Grand Jury found indictments against seven of the mob, and upon trial the father of the young man was the first to be convicted and sentenced to hard labor for life in the Penitentiary.

Feb. 5 was a day of wild excitement in Augusta. A member of a Minnesota regiment was killed by a barkeeper; the comrades of the dead man determined to avenge his death, and about 75 of them broke camp and set out on that errand, but they were rounded up by troops of the regular cavalry and placed under arrest.

A mob of 300 men broke into the jail at Leesburg and took out 3 negroes, whom they shot. The prisoners were concerned in a robbery and assault upon a woman near the town in December, but had been caught only two days before the lynching.

There was a riot at Griffin in March, caused apparently by a regiment of negro immunes who had been mustered out and were passing through on their way home. They fired pistols from the cars; the local militia were called out, and a brakeman on the train was mortally wounded.

On a charge of having set incendiary fires in Palmetto in February 9 negroes were awaiting their preliminary trial in an improvised jail in that place, when in the early morning of March 16 the guards were overpowered by a mob of masked men, variously estimated from 15 to 150, a number of the men were drawn up in line in the room, the negroes were made to stand in a row, and two volleys were fired into them. Four were killed and one mortally wounded, while two were slightly hurt and one escaped injury. Troops were ordered to the town and remained about ten days.

Another horrible tragedy, possibly connected with the one just described, took place near Palmetto a little later. Threats, it is reported, were made against white men who had been active in securing evidence against the incendiaries or who for some other reason were obnoxious to the worst class of negroes, several of whom were supposed to be in a conspiracy to murder these men. One Sam Holt or Hose, sometimes known as Tom Wilkes, committed a horrible crime on the family of Mr. Cranford, by whom he had been employed. The crime is thus described by a correspondent of the New York Herald, who went to Georgia to investigate the affair: "On that fatal day he crept into the house in bare feet, axe in hand, while the father, mother, and two children were at the table. It was a moment of speechless horror to the wife, for she saw the murderer, saw the uplifted axe, but before she could warn her husband the weapon flew to the mark, swung by the frenzied arm of Hose, and buried itself up to the handle in his head. When the victim had fallen Hose hewed and hacked him as one hews a piece of timber. Holt held the baby by the heels with his left hand; the axe was in his right hand, and he threatened to cut off its head unless the mother submitted to his damnable wishes. The dead husband on the floor, one

child lying unconscious from a cruel blow, and now the last child, a babe, to be gashed to death unless—The woman must decide at once. The uplifted axe was ready to fall. Maternal instinct forgot all else, and she cried, 'Save my little ones!'" The negro was captured a few days later, taken to Macon, and put aboard a train for Atlanta. He was recognized at Griffin by some one, who sent word to Newnan that he was on the train. When that station was reached he was taken out at the suggestion of the crowd that had gathered and delivered to the sheriff, by whom he was put into jail, but afterward turned over to the mob. Ex-Gov. Atkinson and Judge A. D. Freeman, who lived in Newnan, addressed the crowd, imploring them to leave the negro's punishment to the law; but their words had no effect. He was taken to the house of Mrs. Cranford's mother, where he was identified, then to a place a mile and a half from the town, where he was chained to a tree and, after being horribly mutilated and tortured, was burned in the presence of 2,000 persons. Before this he had confessed the murder, but said he was hired by Lije Strickland, the negro preacher, who gave him \$12 to kill Mr. Cranford. The next morning, April 24, the body of Strickland was found hanging from a tree near Palmetto. He had protested his innocence, and there appears to have been no evidence against him except that of Hose, who in his confession made other statements that were known to be false. Major W. W. Thomas tried to save Strickland's life when the mob were taking him away. He left them with the understanding that they would take the man to jail at Fairburn, but he was led away to his death.

In May and June there was trouble in Griffin from a band of "regulators," who were in a scheme to drive the negroes out of the place. They took colored men from their houses and beat and cut them. Five were arrested and indicted.

A dispatch from Covington, Ga., July 27, said: "Three Mormon elders, who have been preaching their peculiar doctrines in this section for the past few weeks, were mobbed last night by 30 masked men near Newton factory, in Jasper County, and their present whereabouts are unknown to the people here." From later information it appears that they were not harmed, but were taken to the county line and warned to leave.

Three negroes were killed by a mob at Saffold, Early County, July 22, for being concerned in a robbery and assault. They confessed the crimes, and said five others were in the gang. One of these was taken and hanged July 25. Troops were sent to Bainbridge that day to guard the jail, in which was a negro held for a similar crime.

A negro accused of a criminal assault was in danger of lynching by a mob at Darien about Aug. 26. There was an uprising of negroes, and a race war was threatened. Troops were sent promptly, the danger was averted, and the accused was afterward brought to trial and acquitted.

Seven men were indicted at Greenville, Aug. 29, charged with kidnaping and whitecapping a negro who had refused to work for one of them. He asserted that they took him from his home and beat him unmercifully with buggy traces and whips. Several crimes of a similar nature were reported to have occurred in the neighborhood about the same time.

Gov. Candler appealed to all good citizens of the State, white and black, to join hands and

do all in their power to prevent crime and put an end to mob violence. He said: "The ordinary processes of the law are amply sufficient to punish all crimes. Our judges are pure and incorruptible. Our juries are composed of our most intelligent, upright men, who seldom make mistakes."

Political.—A conference of the Populist leaders in the State was held in Atlanta in August. The object of the meeting was said to be "to ascertain the strength of the party, and see just how the people of the State stood in regard to it. The principal affairs discussed, with the exception of party standing in the State, were the declaration against fusion, the arrangement for complete State organization in every militia district, and the indorsement of the presidential candidate."

By unanimous action the members declared for "middle-of-the-road" populism and against fusion with either of the older parties. They approved the candidacy of Wharton Barker for President and Ignatius Donnelly for Vice-President, and decided to nominate a full State ticket.

Legislative Session.—The annual session of the Legislature extended from Oct. 26 to Dec. 16. The Governor devoted several paragraphs of his message to crime and mob violence. He is reported to have said that the unusual amount of crime by lawless negroes and the consequent vengeance by mobs is due, in part at least, to intermeddling in newspaper articles and incendiary letters, which serve to aggravate the trouble.

The bills introduced numbered 392, and the resolutions 145. More than 200 were passed.

The Tax Commission, whose appointment was provided for by the Legislature of 1898 to consider the question of taxation, reported at this session, recommending an income tax, a collateral-inheritance tax, and the imposition of a special State tax on all quasi-public corporations; also the creation of a State board of tax commissioners, with large powers over local assessments and exclusive authority to assess railroad, telegraph, telephone, and express companies. The House disposed of the proposed measure by referring it to the Governor for transmission to the next Legislature, as it could not receive proper consideration at this session.

A law was made prohibiting the sleeping-car companies operating in the State from furnishing berths to negro passengers, except in coaches used exclusively for negroes.

An act, intended to enable farmers to hold their cotton and other crops for better prices, permits warehousemen to give bond in amount equal to the capacity of their warehouses, and to issue negotiable warehouse receipts.

It was provided that the State militia shall be reorganized. All commissions of officers in the service are to expire Feb. 1, 1900, when new officers shall be elected by the companies. The field officers are then to be elected by the line officers. Commissions are to expire regularly at the end of three years.

A bill was passed providing for a State board of examiners in osteopathy; but it was vetoed, having been opposed by the Atlanta physicians on the ground that graduates of the only school of osteopathy were practically without knowledge of *materia medica*.

Among bills defeated was one for biennial sessions of the Legislature and a franchise act similar to the one passed as a proposed constitutional amendment in North Carolina. This also was proposed as an amendment to the Constitu-

tion. It provided that no person should be allowed to vote in Georgia unless he should be able not only to read and write any paragraph of the State Constitution, but also to "understand" and "give a reasonable interpretation" to any paragraph of it. The election officers were to be the judges of the voter's understanding and interpretation of the paragraphs of the Constitution proposed to him as tests. This provision, standing alone, gave the election officers power to disfranchise any voter, white or black, in their discretion. But the rights of most white voters were protected by a proviso that no person who was entitled to vote on or before Jan. 1, 1867, in the State in which he then resided, and no lineal descendant of any such person should be disfranchised, even if he could neither read, write, understand, nor interpret any paragraph of the State Constitution. This was defeated by a vote of 137 to 3 in the House.

A bill for absolute prohibition of the manufacture, sale, keeping for sale, giving away, or furnishing intoxicating liquors, except as medicine by orders of physicians, passed the House by a vote of 93 to 65, but was defeated in the Senate by a vote of 26 to 14 after a debate lasting three days. The author of the bill, Mr. Willingham, asks to have the measure made an issue to be voted upon at the Democratic primaries. One of the strongest arguments against the bill was that showing how much the school fund would suffer by the loss of the liquor tax—about \$150,000. The counties now have local option.

GERMANY, an empire in central Europe composed of the federated German states. The King of Prussia is German Emperor, and in this capacity has supreme charge of political and military affairs, with power to make war and conclude peace, except that for an offensive war he must have the consent of the federated states and princes. There are two legislative bodies with concurrent powers—the Bundesrath, representing the federated states, and the Reichstag, representing the German people. The acts on which they agree become law upon receiving the Emperor's assent and being countersigned by the Chancellor of the Empire. The Bundesrath has 58 members, appointed by the governments of the federated states. The Reichstag has 397 members, 1 to 124,500 of population, elected by universal manhood suffrage and by secret ballot. In the Bundesrath Prussia is represented by 17 members, Bavaria by 6, Saxony and Württemberg by 4 each, Baden and Hesse by 3 each, Mecklenburg-Schwerin and Brunswick by 2 each, and the other states each by a single member. In the Reichstag there are 236 members from Prussia, 48 from Bavaria, 23 from Saxony, 17 from Württemberg, 15 from Alsace-Lorraine, 14 from Baden, 9 from Hesse, 6 from Mecklenburg-Schwerin, 3 each from Saxe-Weimar, Oldenburg, and Brunswick, 2 each from Saxe-Meiningen, Saxe-Coburg-Gotha, and Anhalt, and 1 from each of the other states.

The German Emperor is Wilhelm II, born Jan. 27, 1859, who succeeded his father, Friedrich III of Prussia, on June 15, 1888. The heir apparent is Prince Friedrich Wilhelm, born May 8, 1882.

The Chancellor of the Empire at the beginning of 1899 was Prince Hohenlohe-Schillingsfürst, appointed Oct. 29, 1894. The following secretaries of state were in charge of the various departments: Minister of Foreign Affairs, B. von Bülow; Secretary of the Interior and Representative of the Chancellor in the Reichstag, Graf Posadowsky-Wehner; Secretary of the Imperial Marine, Rear-Admiral Tirpitz; Ministry of Justice, Dr.

A. Nieberding; Imperial Treasury, Freiherr von Thielmann; Imperial Post Office, Lieut.-Gen. Von Podbielski; Imperial Railroads, Dr. Schulz; Imperial Exchequer, Herr Von Wolff; Imperial Invalid Fund, Dr. Kösing; President of the Imperial Bank, Dr. Koch; President of the Imperial Debt Commission, Herr Von Hoffmann.

Area and Population.—The total area of Germany is 208,830 square miles. The population on Dec. 2, 1895, was 52,279,901, divided into 25,661,250 males and 26,618,651 females. One half of the population lives in towns of upward of 2,000 inhabitants. The number of persons supported by mining, metal works, and other industries in 1895 was 20,253,241; by agriculture, cattle raising, etc., 18,068,663; by commerce and trade, 5,966,846; by forestry, hunting, and fishing, 432,644; employed in domestic and other service, 886,807; engaged in the professions, 2,835,014; without occupation, 3,327,069. The number of foreign residents in 1895 was 486,190, of whom 222,952 were Austro-Hungarians, 50,743 Dutch, 44,875 Swiss, 28,146 Danes, 26,559 Russians and Finns, 22,693 Italians, 19,619 French, 15,788 from the United States, 15,290 British, 11,755 Luxemburgers, 8,947 Belgians, 8,937 Swedes, 2,154 Norwegians, 3,316 other Europeans, and 4,416 from other countries outside of Europe. The number of marriages in 1896 was 432,107; of births, 1,979,747; of deaths, 1,163,964; excess of births, 815,783. The number of emigrants in 1897 was 24,631, of whom 20,346 were bound for the United States, 936 for Brazil, 1,765 for other countries in America, 1,115 for Africa, 324 for Australia, and 145 for Asia. Besides Germans, 64,419 emigrants from Austria-Hungary, Russia, and other countries embarked at German ports, while 6,573 German emigrants sailed from Rotterdam and Amsterdam, still more from Antwerp, and an unknown number from French ports. Of those who sailed from German, Dutch, and Belgian ports, 12,972 were males and 10,248 females. The number of families was 2,609, comprising 8,476 individuals. Of the total number sailing from German ports, Antwerp, Rotterdam, and Amsterdam, 13,497 were from Prussia, 2,638 from Bavaria, 1,401 from Württemberg, 1,449 from Hamburg, 950 from Saxony, 815 from Baden, 506 from Bremen, 468 from Hesse, 271 from Oldenburg, 217 from Mecklenburg-Schwerin, and 198 from Alsace-Lorraine. The population of the principal towns on Dec. 2, 1895, was as follows: Berlin, 1,677,304; Hamburg, 625,552; Munich, 407,307; Leipzig, 399,963; Breslau, 373,169; Dresden, 336,440; Cologne, 321,564; Frankfurt on the Main, 229,279; Magdeburg, 214,424; Hanover, 209,535; Düsseldorf, 175,985; Königsberg, 172,796; Nuremberg, 162,386; Chemnitz, 161,017; Stuttgart, 158,321; Altona, 148,944; Bremen, 141,894; Stettin, 140,724; Elberfeld, 139,337; Strassburg, 135,608; Charlottenburg, 132,377; Barmen, 126,992; Dantzic, 125,605; Halle on the Saal, 116,304; Brunswick, 115,138; Dortmund, 111,232; Aachen, 110,551; Krefeld, 107,245.

Finances.—The revenue of the Imperial Government for 1899 was fixed at 1,355,460,500 marks from ordinary sources and 57,427,000 marks from loans and other extraordinary sources; total, 1,412,886,500 marks. The extraordinary revenue was applied to military and other designated purposes. The ordinary expenditures were estimated at 1,384,152,600 marks. The total expenditures, including the extraordinary disbursements, came to 1,441,578,600 marks, according to the estimates. The estimated receipts from customs and excise were 701,490,000 marks, and from stamps 60,842,000 marks; total tax revenue, 762,332,000

marks. The receipts from customs, tobacco, spirits, and stamp duties in excess of 130,000,000 marks are repaid to the various states. This surplus in 1899 amounted to 441,328,000 marks. The expenditures of the Imperial Government in excess of the receipts from taxation and other sources are assessed on the states in proportion to their population. These federal contributions in 1899 were fixed at 475,526,000 marks. Included in the revenues are the receipts from posts and telegraphs, amounting to 39,771,200 marks, 1,639,300 marks from the imperial printing office, 26,320,900 marks from railroads, 5,988,300 marks from the Imperial Bank, 14,470,200 marks from the various departments, 28,646,500 marks of interest on the Invalid fund, and 565,000 marks of interest on the Imperial fund. The expenditures under the separate heads were 689,400 marks for the Reichstag, 228,400 marks for the Imperial Chancellery, 11,300,700 marks for the Ministry of Foreign Affairs, 40,755,600 marks for the Ministry of the Interior, 511,892,500 marks for the army, 62,750,900 marks for the navy, 2,008,200 marks for the Ministry of Justice, 446,750,900 marks for the Imperial Treasury, 373,200 marks for the railroad bureau, 73,858,800 marks for expenses of the debt of the empire, 809,000 marks for the audit office, 61,713,100 marks for the Pension fund, and 28,646,000 marks for the Invalid fund; total ordinary recurring expenditure, 1,241,836,900 marks. The total of nonrecurring and extraordinary expenditures was 199,741,700 marks. The total expenses of the army, ordinary and extraordinary, were 608,202,000 marks; of the navy, 122,054,000 marks. Of the federal contributions Prussia paid 277,727,700 marks, Bavaria 60,196,800 marks, Saxony 33,046,600 marks, Württemberg 21,047,700 marks, Baden 10,327,700 marks, Alsace-Lorraine 15,544,700 marks, Hesse 9,054,000 marks, Hamburg 5,941,600 marks, Mecklenburg-Schwerin 5,212,000 marks, Brunswick 3,787,300 marks, Oldenburg 3,258,400 marks, Saxe-Weimar 2,959,400 marks, Anhalt 2,558,000 marks, Saxe-Meiningen 2,040,000 marks, Saxe-Coburg-Gotha 1,887,900 marks, Bremen 1,713,000 marks, Saxe-Altenburg 1,574,100 marks, Lippe 1,177,300 marks, Mecklenburg-Strelitz 885,300 marks, Schwarzburg-Rudolstadt 773,800 marks, Lübeck 726,300 marks, Schwarzburg-Sondershausen 679,200 marks, Reuss-Greiz 588,200 marks, Waldeck 503,400 marks, Schaumburg-Lippe 359,300 marks, and Reuss-Schleitz 156,900 marks.

The funded debt of the empire in 1898 amounted to 2,141,242,300 marks, of which 901,242,300 marks pay 3 per cent., 790,000,000 marks 3½ per cent., and 450,000,000 marks 4 per cent. interest. The unfunded debt consists of treasury bills to the amount of 120,000,000 marks. A war treasure of 120,000,000 marks is hoarded in the fortress of Spandau. The Invalid fund of 424,613,700 marks is invested.

The budget and debts of the individual states for 1899, or in the case of a few for 1898, are given in marks in the table on the next page.

The debts were incurred in nearly all cases for railroads and other remunerative improvements. Some of the states own the railroads free of debt, and derive most of their revenue from these and the mines and forests belonging to them. In Alsace-Lorraine there are 998 miles of state railroads. In Anhalt more than half the public revenue is derived from state property. In Baden the whole debt was incurred for railroads, which pay a net profit of 15,000,000 marks a year. Of the Bavarian debt, 1,069,000,000 marks were borrowed for railroad construction, and the

net profits from the railroads, after paying interest and amortization, are about 8,000,000 marks a year. The whole of Bremen's debt was incurred for railroads, harbor works, and other useful improvements. Four fifths of the debt of Brunswick are represented by railroads, besides which the state possesses valuable domains and forests and invested funds amounting to 42,000,000 marks. The railroads have been transferred to the Imperial Government in return for an annual payment of 2,625,000 marks, ceasing in 1932. The duke's civil list of 1,125,000 marks is not paid out of the ordinary revenue, nor is the expenditure of 2,612,880 marks a year for schools and art and science included in the budget, the means being derived from a special fund. In the debt of Brunswick an annuity of 1,219,740 marks, running till 1924, is not reckoned. The debt of Hamburg was raised mainly for harbor improvements and other public works. Against the debt of Hesse the state possesses the railroads, which were responsible for 210,584,000 marks of the total, and active funds amounting to 10,734,000 marks. In Lippe the farms and forests constituting the domains are the entailed estate of the princely house, and the expenses of the court are defrayed from their revenues. Lübeck derives a sixth of its revenue from forests and domains and a fourth from invested funds, while a fourth of the expenditure is for interest and amortization of the debt. In Mecklenburg-Schwerin, besides the common budget of the Grand Duke and the two states, given above, the states have small separate budgets, and the Grand Duke has an independent income of 19,200,000 marks a year. The interest of the railroad debt of 9,860,000 marks is covered by an annuity of 960,000 marks, and that of the consolidated debt by state funds. In Mecklenburg-Strelitz more than half the land is owned by the Grand Duke, and the rest by federal nobles and town corporations. The whole of the public revenue forms the civil list of the Grand Duke, whose Minister of State publishes no accounts of revenue and expenditure. In Oldenburg the debt is fully covered by the value of the railroads.

In Prussia 86,529,004 marks of the revenue were derived from domains and forests, 1,600,000 marks from other receipts of the Ministry of Agriculture, 170,397,700 marks from direct taxation, 75,114,000 marks from indirect taxes, 82,-

474,000 marks from the state lottery, 2,344,000 marks from the Marine Bank, 358,920 marks from the mint, 134,797,310 marks from mines, furnaces, and salt works belonging to the Government, 1,209,717,256 marks from the state railroads, 285,240 marks from dotations, 314,803,652 marks from the general financial administration, 4,465,478 marks from the Ministry of State, 4,600 marks from the Ministry of Foreign Affairs, 2,126,430 marks from the Ministry of Finance, 9,629,000 marks from the Ministry of Public Works, 2,612,076 marks from the Ministry of Commerce and Industry, 68,018,500 marks from the Ministry of Justice, 13,090,184 marks from the Ministry of the Interior, 4,578,046 marks from the Ministry of Agriculture, 4,572,688 marks from the Ministry of Public Worship and Instruction, and 300 marks from the Ministry of War. Of the total expenditures of Prussia for 1899, the sum of 44,660,320 marks was for working expenses of the Ministry of Agriculture, Domains, and Forests, 121,980,090 marks for those of the Ministry of Finance, 118,522,731 marks for those of the Ministry of Commerce and Industry, 693,897,782 marks for the administration of railroads, 8,000,000 marks for an addition to the Crown dotation of the King, 224,133,416 marks for interest of the public debt, including the railroad debt, 38,911,332 marks for the sinking fund of the debt, 181,860 marks for the Herrnhaut, 1,215,920 marks for the Chamber of Deputies, 277,523,878 marks for the federal contribution to the expenses of the Imperial Government, 72,858,164 marks for appanages, annuities, indemnities, etc., 7,340,160 marks for administrative expenses of the Ministry of State, 551,300 marks for those of the Ministry of Foreign Affairs, 91,395,047 marks for those of the Ministry of Finance, 29,063,432 marks for those of the Ministry of Public Works, 8,932,573 marks for those of the Ministry of Commerce and Industry, 103,145,000 marks for those of the Ministry of Justice, 60,259,739 marks for those of the Ministry of the Interior, 20,877,014 marks for those of the Ministry of Agriculture, Domains, and Forests, 129,958,014 marks for those of the Ministry of Public Worship and Instruction, and 137,527 for those of the Ministry of War. The sum of all these is 2,055,891,390 marks, the total ordinary expenditure, to which are added 131,636,004 marks of estimated extraordinary expenditures. The expenditure for the army and navy forms part of the imperial budget. The bulk of the national debt pays 3½ per cent. interest, only 835,000,000 marks having been funded at 3 per cent.

The revenue of Reuss-Greiz passes through the hands of the Prince, who has the sole executive power, and shares the legislative power with the Diet. In Reuss-Schleiz two thirds of the revenue are derived from domains. The state had an invested fund of 5,455,000 marks. In Saxe-Coburg-Gotha the revenue from domains, amounting to 439,600 marks for Coburg and 2,144,226 marks for Gotha, is kept separate from the state revenue, and each state has its special revenue—942,840 marks for Coburg and 2,052,570 marks for Gotha—which is not included in the common budget as given above. The debt of Coburg is 2,778,300 marks, and that of Gotha 146,558, both nearly or quite covered by productive public works. In Saxe-Meiningen also most of the debt is covered by productive investments, while the domains produce a third or more of the public revenue. In Saxe-Weimar the productive capital more than offsets the debt, and the state forests yield a large part of the state revenue. The ordi-

nary revenue and expenditure of Saxony, as given in the table, are kept apart from the extraordinary receipts and disbursements, amounting in 1899 to 106,495,114 marks, which were expended on useful public works. Almost the entire debt was incurred for railroads, telegraphs, and other reproductive works, and more than half of the total revenue is derived from domains and forests and the state railroads, which latter yielded a net revenue of 37,540,190 marks in 1897. In Schaumburg-Lippe the Prince disposes of the revenue, controlled by a Diet. Of the debt of Schwarzburg-Rudolstadt one fourth is covered by investments. The Prince of Schwarzburg-Sondershausen has a large private income from his property, besides receiving a civil list of 500,000 marks. The finances of Waldeck are managed by Prussian officials.

The Army.—The German army is composed of 21 corps, each organized as a strategical unit, with the cavalry, artillery, auxiliary services, and supply arrangements necessary to enable it to operate as a complete army. Every one of these, except the Hessian separate division, which is only brought up to the strength of an army corps in time of war, consists of two divisions of infantry, to each of which a regiment of cavalry is attached, one division of 4 regiments of cavalry, to which are attached 2 batteries of horse artillery, a reserve of artillery, consisting of 6 field batteries and 1 mounted battery, 1 battalion of train, and 1 battalion of pioneers. Besides the Prussian corps of the guards, there are 12 Prussian corps and 7 raised in other states, of which the 2 Bavarian corps and the Württemberg corps are provided for and administered in time of peace by the state governments, and officers are appointed, subject to the Emperor's approval, by the rulers of the two states. All the other corps are under the direction of the Prussian Ministry of War. The First Army Corps is the East Prussian, the Second the Pomeranian, the Third the Brandenburger, the Fourth the Saxon, the Fifth the Posen, the Sixth the Silesian, the Seventh the Westphalian, the Eighth the Rhineland, the Ninth the Schleswig-Holstein, the Tenth the Hanoverian, the Eleventh the Hesse-Nassau, the Twelfth the royal Saxon, the Thirteenth the Württemberg, the Fourteenth the Baden, the Fifteenth the Alsatian, the Sixteenth the Lorraine, and the Seventeenth the West Prussian. The First and Second Bavarian Corps are not numbered consecutively with the others. The empire is divided into 10 fortress districts, containing 17 fortified camps, besides 19 other fortresses. The fortified camps are Königsberg and Dantzic, in the Königsberg district; Posen and Neisse, in the Posen district; Spandau, Magdeburg, and Küstrin, in the Berlin district; Mainz, Ulm, and Rastatt, in the Mainz district; Cologne and Coblenz, in the Cologne district; Metz; Kiel; Strassburg; and Ingolstadt, in the Munich district. The minor fortresses are Pillau, Memel, Friedrichsort, Cuxhaven, Geestemünde, Wilhelmshaven, and Swinemünde, which are coast fortresses; Glogau, Torgau, Diedenhofen, Bitsch, Wesel, Saarlouis, and Gernersheim, which are fortified for the protection of railroads and to command the railroads leading into Germany; the forts at Boyen and Glatz, on the Russian, and Neu Breisach, on the French frontier; and those at Thorn, Graudenz, Dirschau, and the Vistula, in the Thorn district, on the Austro-Hungarian frontier.

The strength of the German army on the peace footing in 1899 was as follows: 215 regiments of infantry, numbering 12,024 officers and 362,940 men; 19 battalions of rifles, numbering 410 offi-

cers and 11,906 men; 288 district commands, numbering 817 officers and 5,499 men; and 2,623 surgeons, instructors, etc., making the total for the infantry 13,251 officers and 383,058 men; 93 regiments of cavalry, numbering 2,385 officers and 65,853 men, not including 817 officers and men on special details; 43 regiments of field artillery, numbering 2,671 officers and 57,984 men, not including 810 officers and men detailed for special service; 17 regiments and 1 battalion of fortress artillery, numbering 870 officers and 22,713 men, not including 132 on special service; 23 battalions of engineers, 3 railroad regiments, 2 balloon detachments, 1 railroad battalion, and 3 railroad companies, numbering altogether 738 officers and 19,085 men, not counting 127 on special service; 21 battalions of train, numbering 310 officers and 7,765 men, not counting 69 on special service; 509 officers and 7,765 men in special formations; and 2,442 staff and nonregimental officers, with 283 men; total peace strength, 23,176 officers and 562,277 men, with 98,038 horses, of which 64,604 are in the cavalry, 29,044 in the field artillery, 43 in the fortresses, and 4,347 in the train. The one-year volunteers, numbering about 8,000, are not counted in the budgetary statement, as they serve at their own expense. Out of 400,000 or more young men arriving at the age of twenty each year nine tenths are fit for military service, but only about 240,000 are drafted into the active army. These are chosen by lot, and the remaining 120,000 are enrolled in the *Ersatztruppen*, or reserves, a part of whom are drilled ten weeks in the first year, six in the second, and four in the third. The drill sergeants and other noncommissioned officers are selected soldiers, who choose to remain with the army after the expiration of the period of enforced service, which is two years for the infantry and three years for the other arms; and when they become too old for the service they are provided with civil employment on railroads, in forests, or in other state services for which they are fitted. The infantry is armed with Mauser rifles of the model of 1888, having a caliber of 7.874 millimetres and 5 cartridges in the magazine. The artillery has for its main weapon the field gun of the models of 1873 and 1888, having a caliber of 88 millimetres.

The Navy.—Germany possesses 6 battle ships of the first class, 4 of the second class, and 6 of the third class; 19 effective coast-defense vessels, consisting of 8 ironclad rams of the Siegfried class and 11 armored gunboats of the Basilisk class; 2 cruisers of the first class, 8 of the second class, and 10 of the third class; and 4 torpedo gunboats, 105 torpedo boats of the first class, and 9 of the second class. There were building 3 first-class battle ships, 1 cruiser of each of the three classes, 4 more torpedo gunboats, and 8 first-class torpedo boats. As the vessels of older construction now counted effective are gradually retired, they are replaced by new ones of the latest design. Thus the König Wilhelm, launched in 1868, the Kaiser, launched in 1874, and the Deutschland, of the same date, are replaced by powerful battle ships of the same design as the Kaiser Friedrich III, launched in 1896, and the Kaiser Wilhelm II, launched in 1897, having a displacement of 11,180 tons, 11½ inches of armor over the vital parts, engines of 13,000 horse power, giving a speed of 18 knots, and an armament of 4 9.6-inch guns in barbettes, with 18 6-inch quick-firing guns and 32 of less caliber. The first-class cruisers are the Kaiserin Augusta, provided with 3 independent screws, of which the middle one alone can give a speed of 10 knots, and Fürst Bismarck, duplicated in a new cruiser, having 7.7

inches of Harveyized steel on sides and turrets and a 3-inch deck, with engines of 14,000 horse power, giving a speed of 19 knots, and an exceedingly powerful armament. The new second-class cruiser is of the same design as the Victoria Luise, Hertha, Freya, Hansa, and Vineta, which have a displacement of 5,500 tons, a powerful armament, good protection, and a speed of 20 knots.

Commerce and Production.—The number of agricultural holdings worked by separate families in 1895 was 5,558,317, including pastoral holdings, orchards, vineyards, etc. There were 2,529,132 of less than a hectare, 2,329,367 between 1 and 10 hectares, 674,757 between 10 and 100 hectares, and 25,061 above 100 hectares. The total area was 43,284,742 hectares, supporting 18,008,663 persons, of whom 8,156,045 worked on the land. There was 5,982,180 hectares under rye, 5,909,693 in meadow, 3,979,643 under oats, 3,062,790 under potatoes, 1,926,885 under wheat, 1,676,329 under barley, 461,074 under turnips, etc., 434,708 under sugar beets, 151,526 under buckwheat, 116,405 in vineyards, 40,700 planted to hops, and 22,145 planted to tobacco in 1897. The number of horses in that year was 4,038,485; of cattle, 18,400,772; of sheep, 10,866,772; of hogs, 14,274,557. Forestry is one of the most important industries of the country, and is conducted on scientific principles, under the supervision of state officials even when the forests are not the property of the state. About a fourth of the whole country is under forest; in the south and central parts from 30 to 38 per cent. The exports of fresh fish in 1897 were valued at 7,100,000 marks, while the value of 17,700,000 marks was imported, besides salt and preserved fish valued at 3,700,000 marks. There were 399 sugar works in 1897, and these worked up 13,721,601 metric tons of beet root, producing 1,738,885 tons of sugar and 342,322 tons of molasses. The pulp, used as fodder, is not less valuable than the sugar. The quantity of beet root required to produce a kilogramme of sugar had been brought down in five years from 8.35 to 7.72 kilogrammes. The quantity of refined sugar produced was 1,004,454 tons. The production of sugar from starch was 6,314 tons. The quantity of beer brewed in 1897 was 61,479,000 hectolitres, of which 16,198,000 hectolitres were produced in Bavaria, 3,795,000 in Württemberg, 2,192,000 in Baden, 937,000 in Alsace-Lorraine, and 38,357,000 in the excise district embracing the rest of the empire. The average annual consumption is 21 gallons per capita. There were 62,108 distilleries in 1897, producing 2,101,000 hectolitres of alcohol. The production of coal in 1897 was estimated at 90,055,000 metric tons; of lignite, 29,419,500 tons; of iron ore, 15,466,000 tons; of zinc ore, 663,900 tons; of lead ore, 150,200 tons; of copper ore, 700,800 tons; of salt, 763,400 tons; of potassic salts, 1,946,200 tons. The quantity of pig iron produced in 1896 was 6,372,575 metric tons, valued at 299,660,000 marks; of zinc, 153,100 tons, valued at 47,108,000 marks; of lead, 113,793 tons, valued at 25,032,000 marks; of copper, 29,319 tons, valued at 29,174,000 marks; of silver, 428 tons, valued at 38,872,000 marks; of tin, 826 tons, valued at 952,000 marks; of gold, 2,487 kilogrammes, valued at 6,915,752 marks; of sulphur and sulphuric acid, 593,150 tons, valued at 15,313,000 marks; of nickel, bismuth, and various mineral products, 33,546 tons, valued at 10,941,149 marks. The total value of the product of foundries of various kinds in 1896 was 473,967,705 marks. The quantity of manufactured iron produced was 7,382,489 tons, valued at 916,787,819 marks.

The special trade of the German customs union in 1897 was distributed among the different countries as shown in the following table, giving values in marks:

COUNTRIES.	Imports.	Exports.
Great Britain	00	708,899,000
Russia	00	873,084,000
Austria-Hungary	00	695,121,000
France	00	210,410,000
Netherlands	00	263,682,000
Switzerland	00	254,368,000
Belgium	00	189,519,000
Norway and Sweden	00	148,426,000
Italy	00	80,265,000
Balkan Peninsula	00	78,561,000
Denmark	00	107,367,000
German free ports	00	84,374,000
Spain	00	99,860,000
Portugal	00	14,081,000
British India	00	47,278,000
The rest of Asia	00	90,908,000
Africa	00	80,446,000
North America	00	439,263,000
South America and West Indies	00	168,728,000
Australia	00	22,594,000
Other countries	00	680,000
Total	4,864,644,000	3,786,241,000

The total value of the special imports in 1897 was 4,864,644,000 marks; of the special exports, 3,786,241,000 marks. The special imports of live animals were 180,444,000 marks in value, and special exports 23,210,000 marks; imports of animal products were 153,064,000 marks, and exports 31,300,000 marks; imports of articles of consumption were 1,434,201,000 marks, and exports 492,447,000 marks; imports of seeds and plants were 44,343,000 marks, and exports 27,882,000 marks; imports of fuel were 130,375,000 marks, and exports 177,972,000 marks; imports of fats and oils were 236,602,000 marks, and exports 30,861,000 marks; imports of chemicals, drugs, and dyes were 285,109,000 marks, and exports 358,581,000 marks; imports of stone, clay, and glass were 68,756,000 marks, and exports 161,089,000 marks; imports of metals and metal manufactures were 465,316,000 marks, and exports 585,912,000 marks; imports of timber and wood manufactures were 282,269,000 marks, and exports 147,159,000 marks; imports of paper and paper manufactures were 23,630,000 marks, and exports 106,786,000 marks; imports of leather and leather manufactures were 236,461,000 marks, and exports 230,500,000 marks; imports of rubber and rubber manufactures were 49,763,000 marks, and exports 37,483,000 marks; imports of textile materials and manufactures were 1,033,546,000 marks, and exports 917,117,000 marks; imports of machinery and instruments were 86,335,000 marks, and exports 230,551,000 marks; imports of hardware were 20,965,000 marks, and exports 109,948,000 marks; imports of books and works of art were 43,405,000 marks, and exports 127,549,000 marks; various other exports, 894,000 marks. Of the total imports, 2,311,120,000 marks were free of duty and 2,553,524,000 marks paid duties amounting to 474,880,826 marks, an average rate of 18.6 per cent. on dutiable goods. Some of the chief imports were raw cotton of the value of 243,221,000 marks; wool, 218,713,000 marks; wheat, 173,698,000 marks; coffee, 160,368,000 marks; hides, 136,547,000 marks; barley, 120,618,000 marks; woolen yarn, 99,128,000 marks; raw silk, 89,400,000 marks; horses, 84,500,000 marks; rye, 80,283,000 marks; petroleum, 75,107,000 marks. Some of the chief exports were sugar of the value of 229,898,000 marks; coal and coke, 170,085,000 marks; woolen cloth, 144,430,000 marks; trimmings and ribbons, 115,459,000 marks; mixed silk and cot-

ton cloth, 83,457,000 marks; hosiery, 82,276,000 marks; leather goods, 74,534,000 marks; coarse cottons, 69,078,000 marks; aniline dyes, 67,028,000 marks; wooden wares, 63,498,000 marks; paper, 59,410,000 marks.

Navigation.—The number of vessels entered at German ports during 1897 was 77,117, of 16,489,970 tons, counting vessels entered at more than one port only once; cleared, 77,734, of 16,626,028 tons. Of the vessels entered 66,383, of 15,305,328 tons, and of those cleared 56,580, of 11,046,178 tons, were with cargoes, while 10,734 of those entered, of 1,184,642 tons, were with ballast, and of those cleared 21,154, of 5,580,450 tons. Of the vessels entered with cargoes 48,578, of 8,091,316 tons, were German; 5,469, of 4,421,869 tons, were British; 4,801, of 822,676 tons, were Danish; 3,711, of 744,755 tons, were Swedish; 1,245, of 563,703 tons, were Norwegian; 1,744, of 260,368 tons, were Dutch; and 604, of 201,945 tons, were Russian. Of the number cleared with cargoes 44,301, of 7,018,987 tons, were German ships; 3,065, of 2,090,279 tons, were British; 4,454, of 660,509 tons, were Danish; 2,187, of 501,908 tons, were Swedish; 750, of 311,909 tons, were Norwegian; 1,322, of 204,277 tons, were Dutch; and 342, of 121,509 tons, were Russian. At the port of Hamburg 10,921 vessels, of 6,942,908 tons, were entered, of which 9,779, of 6,498,402 tons, were with cargoes and 1,142, of 444,504 tons, in ballast; and 11,616, of 7,168,888 tons, were cleared, of which 9,076, of 4,930,707 tons, were with cargoes and 2,540, of 2,238,181 tons, in ballast. At Bremen the number entered was 3,997, of 1,770,223 tons, of which 3,825, of 1,708,243 tons, were with cargoes; and the number cleared was 4,217, of 1,757,312 tons, of which 2,588, of 1,276,174 tons, were with cargoes. At Stettin the number entered was 4,467, of 1,459,880 tons, of which 4,384, of 1,416,258 tons, were with cargoes; the number cleared was 4,317, of 1,464,553 tons, of which 3,056, of 815,368 tons, were with cargoes. At Kiel the total number entered was 3,140, of 514,469 tons; cleared, 3,060, of 512,266 tons. At Lübeck the number entered was 2,866, of 542,809 tons; cleared, 2,862, of 546,328 tons. At Dantzig the number entered was 1,837, of 699,595 tons; cleared, 1,864, of 703,830 tons. At Königsberg the number entered was 1,590, of 326,827 tons; cleared, 1,698, of 369,614 tons.

The German merchant fleet on Jan. 1, 1898, comprised 2,522 sailing vessels, of 855,571 tons, and 1,171 steamers, of 969,800 tons. Of the sailing vessels 2,050, of 526,262 tons, and of the steamers 737, of 747,142 tons, belonged to North Sea ports, while 509 sailing vessels, of 76,703 tons, and 389 steamers, of 142,818 tons, belonged to Baltic ports. The total number of seamen was 42,428. Of the steamers 1,163 and of the sailing vessels 527 were built entirely of steel or iron. The number of vessels engaged in coasting and in inland navigation was at the same date 22,564, of which 21,945 had a total declared tonnage of 3,371,247 tons.

Railroads, Posts, and Telegraphs.—The railroads of the German Empire in the beginning of 1898 had a total length of 29,461 miles, all belonging to the Government, imperial or state, except 2,502 miles, of which 172 miles were operated by the Government. These figures do not include 2,012 miles not open to public traffic nor 819 miles of narrow gauge, of which the Government owned 390 miles. The capital invested in the railroads was 11,680,193,000 marks. The receipts in 1897 were 1,595,242,000 marks, and expenses 889,053,000 marks, showing net receipts equal to 6.05 per cent. of the capital. There were

transported 270,628,000 metric tons of freight, which paid 1,041,790,000 marks in 1897, and 646,461,000 passengers, paying 428,142,000 marks, not including 175,000 soldiers not paid for.

The imperial post office in 1897 forwarded 1,292,091,978 letters, 515,399,716 postal cards, 626,085,928 books and circulars, 984,174,761 newspapers, 41,507,744 samples, and post-office orders and registered letters remitting 25,865,972,482 marks; the Bavarian post office forwarded 136,921,360 letters, 32,483,120 postal cards, 57,229,693 books and circulars, 198,517,392 newspapers, 3,360,220 samples, and postal orders and letters remitting 1,166,487,285 marks; and the Württemberg post office forwarded 55,342,092 letters, 21,039,304 postal cards, 30,731,889 books and circulars, 49,137,301 newspapers, 1,316,926 samples, and orders and letters remitting 1,410,036,763 marks. The total traffic of all three services was 1,484,355,430 letters, 568,922,140 postal cards, 714,047,510 books and circulars, 1,231,829,454 newspapers, 46,184,890 samples, and post-office orders and registered letters of the aggregate value of 29,442,496,530 marks.

The length of telegraphs in the imperial postal district in 1897 was 74,013 miles, with 295,742 miles of wire; in Bavaria, 10,128 miles, with 30,800 miles of wire; in Württemberg, 3,372 miles, with 9,892 miles of wire; total, 87,513 miles of line and 336,434 miles of wire. The imperial lines forwarded 25,693,469 internal and 9,823,895 foreign telegrams in 1897; the Bavarian lines 2,249,248 internal and 584,769 foreign telegrams; the Württemberg lines 1,207,659 internal and 201,052 foreign telegrams; total, 29,150,376 internal and 10,609,716 foreign telegrams. The receipts of the imperial postal and telegraph services for 1898 were 324,783,298 marks, and expenses 290,956,745 marks; Bavarian receipts were 29,337,071 marks, and expenses 25,673,901 marks; total receipts for the empire, 367,839,846 marks; total expenses, 328,074,820 marks, leaving a surplus of 39,765,026 marks for the united services, the surplus of the imperial service being 33,826,553 marks, of the Bavarian service 3,663,170 marks, and of the Württemberg service 2,275,303 marks.

Dependencies.—The German possessions in Africa have an aggregate area estimated at 930,760 square miles, with about 10,200,000 inhabitants (see CAPE COLONY and SOUTH AFRICA, EAST AFRICA, and WEST AFRICA). In Asia Germany holds under a lease from the Chinese Government the naval station of Kiau-Chau Bay, on the Shantung peninsula. The leased land area is about 120 square miles, with 60,000 inhabitants. The neutral zone, over which the German Imperial Governor has control, is 2,500 square miles in extent, with 1,200,000 inhabitants. The town and harbor were occupied by a German naval force in December, 1897, transferred to Germany for ninety-nine years by treaty on March 6, 1898, and declared a German protectorate on April 27, 1898. A garrison of 1,500 marines and artillerymen is stationed there. The sum voted for administrative expenses in 1900 is 8,500,000 marks. The Government has acquired land from the Chinese owners with the object of establishing a European settlement after improving the harbor and declaring the place a free commercial port. German investors will have the privilege of working the Wiehsien and Pashan coal mines, about 100 miles inland, and of building railroads to the boundary of Shantung province through these coal fields and to Chin-Chao and Tsainan.

In the Pacific Ocean Germany possesses Kaiser Wilhelm's Land in New Guinea, having an area of about 70,000 square miles and a population

of 110,000, the Bismarck Archipelago, having an area of 20,000 square miles and 188,000 inhabitants, and the northern part of the Solomon Islands, having an area of 9,000 square miles and 89,000 inhabitants, all of which are administered by the German New Guinea Company; also the Marshall Islands and dependencies, having an area of 150 square miles and 13,000 inhabitants, which are administered by an imperial commissioner. There were 198 Europeans, of whom 71 were Germans, in the Bismarck Archipelago and the Solomon Islands in 1897. The areca and sago palms flourish in the protectorate, as well as the bamboo and ebony. Cotton, coffee, and tobacco have been planted by Europeans, and of the last a crop of 79,000 pounds was obtained. Coconut palms, numbering over 36,000, are carefully preserved, and copra is prepared by the natives, who barter it and trepang and pearl shells for trade goods. The local revenue for 1897 was estimated at 93,000 marks, the expenditure at 273,000 marks. The Imperial Government gave a subvention of 657,000 marks for 1899. In the Bismarck Archipelago there are 46,200 coconut trees. The chief products are copra and coconut fiber, but cotton is grown, yielding 77,360 pounds in 1897. The value of the imports for 1897 was 700,000 marks. The Solomon Islands export sandalwood and tortoise shell. The Marshall Islands had a European population in 1898 of 74 persons, of whom 43 were Germans. The chief commercial product is copra, of which 2,366 tons were exported in 1897. The port of Jaluit was visited during that year by 84 vessels, of 12,333 tons. The Bismarck Archipelago and Solomon Islands were visited by 47 steamers and 113 sailing vessels, having an aggregate burden of 52,679 tons.

Legislation.—The session of the Prussian Landtag witnessed a sharp contest between the Government and the Agrarians controlling the Conservative party, which has heretofore for a long period been distinctively the Government party. The subject of contention was the construction of a canal connecting the Rhine and the Elbe, an important artery in the system of internal water ways that was projected by the Prussian Government a long time ago and was regarded as a settled part of its policy. The Emperor attempted to break down opposition by the exhibition of his royal will and authority, and the curious outcome of his declarations was that the Junkers of Brandenburg, Pomerania, and East and West Prussia, who have been the champions of absolutism and the guardians of the royal prerogative for generations, derided his power and appealed to the Constitution they had fought against. The reason for their resisting the Government project with such determination was that the canal will benefit the iron and coal districts of Westphalia and the Rhine province at their expense, crushing out the primitive industries of their own provinces and stimulating the emigration of their agricultural population to the manufacturing centers of the west; furthermore, that it will facilitate the entrance of sea-borne grain and other agricultural produce from foreign countries into the central parts of Germany to compete with their own. The Clericals, whose adherents in Silesia have coal mines and factories, asked compensation for these as the price of their support. The proposed canal is the continuation of a series of canals that cross Germany from east to west, connecting the great rivers running from south to north, and so form new outlets for the products of the western provinces of Germany. The railroad, al-

though admirably planned and constructed, are already insufficient to transport the constantly increasing produce of the coal and iron districts. The canals are intended to facilitate not only internal and foreign commerce, but also military transport, and thus improve the defensive resources of Germany. The Prussian Government ordered a preliminary survey to be made as early as 1863. The project then met with violent opposition from local interests. The Franco-Prussian War prevented anything being done for some years. In 1877 the Government laid before the Landtag a memorandum on the water communications of Germany, and in the following year the necessary technical and commercial investigations were begun, with the result that in 1882 a scheme was drawn up by engineers for the construction of a canal from the Rhine to the Elbe. The proposals were laid before the Landtag in 1883, and they were rejected. In 1886 a bill for the construction of a canal between the Oder and the Spree was submitted to the Diet, and at the same time the Government again introduced the proposal for the Rhine-Elbe Canal. Both houses agreed to the construction of a canal connecting Dortmund with the Ems. A canal commission was intrusted with the execution of the project, and the canal, begun in 1892, was completed and opened to navigation in August, 1899, having a length of 160 miles, but built for less than 80,000,000 marks. As soon as the Dortmund-Ems Canal was decided upon the Government was urged to extend it westward to the Nile. Accordingly, this matter was laid, in April, 1899, before the Landtag in a comprehensive bill. The Government proposals include the construction of a canal through the valley of the Emischer from Herne to the Rhine, and of a feeder to supply it with water; the construction of locks at Heinrichsburg and Münster to improve the present Dortmund-Ems Canal; the construction of a central system from the Ems to the Elbe, to consist of a main canal from Bevergern to Heinrichsburg, two feeders to bring water from the Weser and the Leine, and eight branch canals to connect the main canal with Osnabrück, Minden, Wülfel, Hildesheim, Lehrte, Peine, Brunswick, and Magdeburg; also the works necessary to make the Weser from Bremen to Hameln suitable for canal traffic. The bill was opposed by the Conservatives in the Chamber of Deputies on the first reading, and was referred to a committee, which condemned it by a vote of 18 to 10. The Diet adjourned in July for six weeks, and at the conclusion of the debate, after the re-assembling of the Chamber in August, both canal bills were rejected by large majorities. The Government, determined on crushing opposition if conciliatory means failed, issued an edict menacing officials who engaged in political opposition to measures advocated by the ministers with disciplinary penalties. When the Landrätthe, or rural magistrates, in the east still continued to participate in the agitation against the canal project, the majority were dismissed. As the ones selected for discipline were those who voted against the bill as members of the Diet, the Radicals raised a protest against the action of the Government as constituting an infraction of the Constitution, which guarantees the parliamentary independence of all Deputies. In consequence of the defeat of their measure in the Landtag, Freiherr Von der Recke and Dr. Bosse resigned their portfolios. Freiherr Von Rheinbaben succeeded the former as Minister of the Interior on Sept. 4, and Herr Studt was appointed Minister of Education and Worship in Dr. Bosse's place.

The Emperor's special measure for the restriction of strikes and the regulation of labor contracts, making certain forms of strike agitation a criminal offense, and hence called the penal servitude bill, when introduced by the Government into the Reichstag was opposed by large majorities. The Reichstag even refused to submit it to a committee or to consider it in any way previous to its adjournment in July. The bill contained provisions against picketing, and sought to limit and impair the right of coalition. The punishment of penal servitude was to be applied only when acts of incitement or intimidation lead to a strike or a lockout, endangering the public peace or the security of life and property. Not only Socialists and Radicals, but Clericals and National Liberals condemned it utterly, and the Minister of Commerce estranged some of the regular supporters of the Government when he said that he would like to have the power to stop every big strike. The bill was introduced to make good a declaration of the Emperor, who said in one of his public speeches that he would enforce penal servitude if necessary to protect workmen against those who would prevent them from working or would incite them to strike. The Clericals and other parties, except the Conservatives, have been anxious to prove that they desire to protect the rights and advance the interests of the laboring classes no less earnestly than the Social Democrats, and therefore none of the restrictive measures introduced to carry out the latest social policy avowed by the Emperor has obtained a majority, and the failure of the penal-servitude bill was more lamentable than that of the antirevolutionary bill of 1895 or that of the bill introduced into the Prussian Landtag in 1897, aiming to restrict the right of political association and of public meeting. The bill did not make mere incitement to striking punishable, but it prescribed penalties for those who by the exercise of physical force, by menaces, or by insults endeavor to induce any person to participate in or to abstain from association for the purpose of obtaining better conditions of work or wages. Undue pressure brought upon employers to induce them to withhold work from particular categories of persons was one of the offenses defined, though it was left open to employers or employed to agree among themselves not to employ or work for certain categories of persons.

An invalid and old-age insurance bill, amending and extending the existing act, was brought before the Reichstag in June, and was carried by a practically unanimous vote. The Socialists, who had voted against the original bill ten years before, voted solidly for the revision, as did the Radicals, who opposed the scheme when first advocated by Prince Bismarck as being a long step toward state socialism. Facts regarding the movement of population and the earning capacity of the laboring people in different parts of the country had come to light that show glaring inequalities in the operation of the system. The pension offices of the agricultural districts especially were at a disadvantage, owing to the enormous migration of the young and strong to the industrial and commercial sections. They had to provide for four times as large a percentage of persons eligible for old-age pensions—that is, seventy years old and upward—as the offices situated in manufacturing and mining districts, and even the invalid insurance to be paid in agriculture and forestry was 75 per cent. greater, the working people engaged in mechanical branches having through their sick funds

and other facilities for procuring medical attendance and their better housing and more intelligent way of living a smaller ratio of sickness than the farm laborers, especially those of the east of Prussia, whom the Emperor pronounced to be worse sheltered than the pigs and the cattle. The pension office in Berlin had accumulated a surplus so large that the interest of it is sufficient to pay the demands upon it, while that of East Prussia had to struggle with a constantly growing deficit. The revision bill, as passed by the Reichstag, provides that two fifths of the income of all the offices shall go into a common fund, out of which 75 per cent. of the old-age pensions shall be paid, the remaining three fifths being treated still as the special fund of each office. The Government had intended to turn three fifths of the receipts into the national fund, and to pay the whole of the old-age pensions out of this, but that was a greater sacrifice than the manufacturing communities were willing to make. The bill also increases the minimum old-age pension from 106 to 110 marks a year and the maximum pension from 190 to 230 marks. To each pension the Imperial Government will contribute 50 marks as a present. The invalid pensions have, under the old law, been calculated by taking a fixed sum of 110 marks, including the 50 marks from the imperial treasury, and adding a sum, reckoned in pfennigs, obtained by multiplying the number of weekly contributions paid in by the applicant by 2, 6, 9, and 13 for the different classes of wage earners. The new law makes the multipliers 3, 6, 8, 10, and 12, and the fixed sum is also graded according to five wage classes, which receive 60, 70, 80, 90, and 100 marks respectively in addition to the imperial contribution. The old law required complete invalidity as the condition of receiving a pension, whereas the loss of two thirds of the earning capacity entitles one to a pension, which begins at the end of six months, instead of a year of inability to work. Furthermore, there has been a reduction of the length of time that the applicant must have paid premiums in order to receive a pension, which is now two hundred weeks for invalid and twelve hundred for old-age pensions, instead of two hundred and thirty-five and fourteen hundred and ten weeks respectively. The new act extends compulsory insurance to master workmen and technical artisans not employed in factories, salesmen, and teachers, but only when their annual salary is less than 2,000 marks; for persons of these classes receiving between 2,000 and 3,000 marks voluntary insurance is provided, as also for employers hiring less than three workmen. Persons who have passed out of the classes requiring compulsory insurance may continue the insurance at their own expense. The new law provides greater facilities for having persons treated in hospitals before the disease has advanced so far as to render them invalids, particularly in cases of tuberculosis. The Government bill provided for the organization of local branch pension offices, and the Reichstag approved this, but made it optional with the state authorities to organize them or not. It has been proposed to consolidate the 31 pension offices into one central administration, and thus reduce the administrative expenses, which now consume 17 per cent. of the funds that pass through the offices.

A copyright amendment bill protects articles in newspapers intended to instruct or amuse and scientific and technical articles, but not political articles, reports of proceedings, news of the day, or miscellaneous intelligence. Separate articles

in newspapers, however, can only be reprinted with indication of the source from which they are taken. Official documents that are not laws, codes, edicts, or judgments are also protected. The bill prohibits the publication of private letters, diaries, or memoranda without express permission of the author or his representatives. Reports of speeches delivered at proceedings of law courts or of political, communal, and ecclesiastical bodies may not be reproduced in collections consisting mainly of the speeches of one speaker, the object being to reserve for the public speaker the right to collect his own speeches. The copyright of a work for thirty years after the death of the author is still maintained. In cases of posthumous publications the period is ten years. The duration of the copyright of an unpublished work is unlimited. The copyright of musical works is extended to fifty years, in view of the fact that years frequently elapse before they are appreciated. German subjects can secure German copyright for their productions even if these are published in foreign countries. Foreigners can obtain copyright if they publish their works in Germany.

A bill to increase the army on the peace footing by 26,576 men, the increase to take place between 1899 and 1902, was debated in the Reichstag in January. Opposition was offered chiefly by the Social Democrats and the Radical Left. The Radical leader, Eugen Richter, opposed the increase in artillery on the ground that it would only lead to a like increase on the part of France and Russia. The Budget Committee by narrow majorities approved the increase in both field batteries and siege artillery. The increase in the strength of the infantry and the creation of three new army corps were recommended by substantial majorities; also the proposal to reorganize the railway, field telegraph, and balloon troops. The Government proposal to increase the cavalry from 472 to 482 squadrons was disapproved by the Budget Committee, and its whole attitude toward the army bill occasioned much concern to the ministry. The Government demanded an increase in the strength of frontier battalions from 639; in 28 other battalions, including the guards, from 573 or 501 to 660; in the new battalions formed in 1897 from 501 to 573 men. The debate drifted from the specific changes to the future average strength of the German infantry battalion. The Clericals insisted on a deduction of 7,006 men from the total increase proposed by the Government, and they demanded that the new strength be attained a year later than the bill proposed. The bill as it finally came out of the hands of the Budget Committee conceded most of the Government demands. It established three more army corps, to be composed of men drafted from corps that are above the normal strength. The cavalry was increased to 482 squadrons, although 17 of them remain detached under the designation of *Melderreiter*, or dispatch riders, instead of being incorporated in new cavalry regiments, as the Government planned. When the increase of the infantry to 502,506 men came to a vote in the Reichstag there was a majority against it. The Emperor thereupon authorized the Minister of War to say that the Government accepted the modifications that the Budget Committee had made, and in that form the bill was finally adopted by a vote of 222 to 132.

After lengthy discussion and determined opposition on the part of Conservatives and Agrarians, who wished a Prussian state bank, the charter of the Imperial Bank was renewed by the Reichstag for another period of ten years. The capital

of the bank will be 180,000,000 marks. The shareholders, who will not be personally responsible for any of the bank's debts, will receive a dividend of 3½ per cent. from the profits of the bank, and of the surplus profits above this dividend 20 per cent. is set aside to form a reserve fund until this fund shall amount to 60,000,000 marks. Of the remainder 25 per cent. goes to the shareholders and 75 per cent. to the Imperial Government. The bank will be allowed to issue notes not covered by reserves to the amount of 450,000,000 marks, and this issue is not subject to taxation. After Jan. 1, 1901, the bank will not be allowed to discount any bills at a lower rate than that published by the bank whenever the rate stands at or above 4 per cent., and the same prohibition applies to private banks; but when the published rate is less than 4 per cent. the Imperial Bank may discount ¼ per cent. lower, in which case private banks may discount ½ per cent. lower than the bank's rate.

The expulsion of Danes from northern Schleswig was the subject of interpellations in the Prussian Diet. The attempts to Germanize the 70,000 Danes residing there by the prohibition of the use of the Danish language in the schools, and even the teaching of Danish altogether, and by a succession of similar measures, has roused a spirit of resistance among the people affected, and kept alive the agitation for the reunion of Schleswig with Denmark. By recent decrees Danes have been expelled in large numbers, even domestic servants, whom their employers preferred to Germans. Still more recently German farmers have obtained lands in the district with the help of the Prussian Government. To counteract this, Danes have raised money by private subscriptions to enable embarrassed proprietors to keep their lands or to settle farmers of Danish blood upon them.

The treaty with Spain for the acquisition of the Caroline Islands was sanctioned by the Reichstag, and the financial measures for carrying it into effect were approved, Radicals and Socialists alone opposing. Spain ceded the Carolines, together with the Pelews and the Ladrões, excepting the island of Guam, for the sum of 25,000,000 francs, Germany agreeing to grant to Spanish trade, agricultural enterprises, and religious orders the same facilities, rights, and liberties as are enjoyed by German subjects. Spain reserved the right to establish a coaling station for her war and trading fleets in each of the groups, and to retain the same even in the event of war. The three groups lie between the Philippines and the Marshall Islands. They are composed of coral islands, producing mainly copra. The Pelews, 26 in number, have 10,000 inhabitants, of whom 8,000 live on the island of Babelthua. The Carolines consist of 500 or more coral reefs, having a population of 35,000 natives and 900 whites. Yap, Ponape, and Kusai are the only ones that produce much copra. The northern division of the Ladrões consists of volcanic islands that are in a state of active eruption and contain no inhabitants. Of the southern division Guam, which has a fortified harbor, belongs to the United States; it contains 8,561 of the 10,172 inhabitants. The annual expenditure of the Imperial Government for the administration of the new possessions is estimated at 220,000 marks, after a preliminary nonrecurring expenditure of 355,000 marks. The administration is subordinated to that of German New Guinea.

By a commercial convention Germany agreed to give Spain the benefits of the conventional tariffs till 1904, Spain having already conceded

most-favored-nation treatment to Germany when the tariff war between the two countries came to an end in 1896. A blow was aimed at American trade by the addition of an amendment to a meat-inspection bill, prohibiting the importation of prepared meat, such as sausages, canned meat, and the like, and only permitting fresh meat to be brought into Germany in the form of whole carcasses. The avowed object of these regulations was to keep out all meat which the inspectors at the customhouse could not guarantee to be free from taint or disease. This and other measures called sanitary, such as the exclusion of American fruits, seemed to have been prompted in some degree by the Agrarian protectionists, and to have something of a retaliatory character also and to be connected with the controversy raised by Germany over some of the schedules of the Dingley tariff, the sugar duties, and tonnage dues. A commercial convention on the most-favored-nation treatment granted to Great Britain and to British colonies pending the negotiation of a new commercial treaty lapsed on July 30, 1899, but was extended for another twelve month, still with the exclusion of Canada, which has adopted a tariff giving preferential treatment to Great Britain, the purpose for which the Anglo-German treaty of 1865 was denounced by Great Britain.

When the Reichstag reassembled in November the Government brought forward its new programme of construction, by which the German navy is to be nearly doubled. The sixennate act passed in 1897 fixed the annual rate of expenditure at 60,000,000 marks for six years, and prescribed that during the last three years of the period construction should be reduced to one ship a year. The new bill proposed to increase the annual rate of expenditure to 85,000,000 marks a year for the remainder of the sixennate, and to make the war fleet stronger in 1903 by six ships than the programme of 1897 contemplated. For fourteen years after the termination of the sixennate it is proposed to construct from three to three and a half powerful war ships a year, giving the navy in 1917 an addition of 54 to 63 battle ships and armored cruisers.

The protracted contest over the succession to the throne of Lippe-Detmold was settled by a decision given by the Federal Council on Jan. 5, 1899, which was really a compromise. The matter was first referred to a court of arbitration, presided over by the King of Saxony, which rendered a decision that ousted from the regency of the principality the Emperor's brother-in-law, Prince Adolf of Schaumburg-Lippe, upon whom the position had been conferred with the sanction of the Lippe-Detmold Diet. Graf Ernst of Lippe-Busterfeld was made regent, and the powerful friends of the prince whom he supplanted acquiesced in the decision, though with bad grace. The Emperor having denied him the military honors customarily paid to the head of a German principality, he laid a protest before the sovereign prince of the German Empire. At the same time his opponents contested the right of his children to succeed to the throne on the ground that their mother was not of princely rank. The question of military honors the Federal Council did not decide at all, and this tribunal, while affirming its competence, refrained from pronouncing judgment in the matter of the contested succession.

The succession to the duchy of Saxe-Coburg and Gotha was renounced by the Duke of Connaught in favor of the Duke of Albany, for whom the Prince of Hohenlohe-Langenburg was appointed regent.

GIFTS AND BEQUESTS. The following list comprises the most notable gifts and bequests for public purposes of \$5,000 each and upwards in amount or value that were made, became operative, or were completed in the United States in 1899. It excludes the ordinary denominational contributions for educational and benevolent purposes, all State and municipal appropriations to public and sectarian institutions, and the grants of Congress for various measures of relief. The known value of the gifts and bequests here enumerated exceeds \$62,750,000—without a doubt the largest amount ever devoted to philanthropic purposes, as individual offerings, in any country in one year. Many gifts and bequests of less than \$5,000, the real but unreported value of numerous educational buildings and other undertakings, the money contributed by our citizens for the relief of suffering caused by the tornado in Puerto Rico, the spontaneous offerings of American women to provide and equip the hospital ship *Maine* for the British military service in the South African war—all these would probably increase the total by at least \$3,000,000, and yield an aggregate of nearly \$66,000,000. The amount here accounted for under the necessary restrictions, however, is a grand evidence of the spirit of helpfulness and sympathy that pervades American citizenship.

Albright, John J., Buffalo, N. Y., gift to the Botanical Garden of that city, a collection of rare palms and tropical plants, valued at \$40,000, and two conservatories constructed mainly of steel and glass.

Allen, Dudley P., and sister, **Mrs. Solon Severance**, Cleveland, Ohio, joint gift to Oberlin College, real estate valued at \$7,000.

Almy, James F., Salem, Mass., bequests to the Young Men's Christian Association of Salem and Boston University each \$5,000; conditionally to the latter, \$20,000.

American Bible Society, gift from friend, name withheld, \$10,000.

American Board of Commissioners for Foreign Missions, gift from anonymous friend, \$10,000.

Ames, Maria E., Concord, Mass., bequests to the American Board, Massachusetts Bible Society, American Missionary Association, Congregational Sunday School and Publishing Society, Congregational Church Building Society, American Sunday School Union, Massachusetts Home Mission Society, and Massachusetts Society for the Prevention of Cruelty to Animals, an aggregate of \$26,000, and to the foregoing, with two exceptions, the residue of her estate.

Andrews, Wallace C., New York, bequest for establishment of an institution in Ohio for the free education of girls, half of his estate of more than \$1,000,000.

Appleton, J. H., Springfield, Mass., gifts to the Public Library building fund and two local hospitals, each \$5,000.

Appley, Mary Effiuye, Honesdale, Pa., bequest to Lafayette College for scholarships for students for the ministry or mechanical professions, \$30,000.

Armour, George A., New York, gift to Princeton University, for classical section of new library, \$10,000.

Armour, Herman O., New York, gift to Whitworth College, at Sumner, in the State of Washington, real and personal property aggregating in value \$20,000.

Armour, Philip D., Chicago, gift to endowment fund of Armour Institute, \$750,000, making total gift to the institute \$2,250,000.

Armstrong, Thomas, Plattsburg, N. Y. (died in 1895), bequest to Union College, Schenectady, for endowment of chair of Sociology, annual prizes, and scholarships, an estate now valued at \$200,000, made available by decision of the Court of Appeals on contest.

Arnold, Howard Payson, Boston, gift to Emmanuel Church, in memory of his wife, a large stained-glass window, representing Christian at the Palace Beautiful, cost \$5,000.

Atwater, Mrs. E. S., Poughkeepsie, N. Y., class of '77, gift to Vassar College for the infirmary, \$12,000.

Austin, Edward, Boston, bequests to Harvard University, \$500,000; Massachusetts Institute of Technology, \$400,000; Radcliffe College, Roanoke College, and Tuskegee Normal and Industrial School, each \$30,000; other public purposes, \$110,000—in all, \$1,100,000, made available by compromise of heirs and probate of will, March 23, 1899.

Ayer, Frederick, New York, gift to the Young Men's Christian Association of Lowell, Mass., \$5,000.

Baker, Melissa, Baltimore, bequests to charitable and religious institutions, \$7,400.

Baldwin, Dwight H., Cincinnati, bequests to the Home and Foreign Missionary Societies of the Presbyterian Church, each \$225,000.

Ballard, William H., Indianapolis, Ind., gift for the benefit of the homeless office girls of that city, the Bertha Ballard Home, cost \$25,000.

Barbadoes, Frederick G., Washington (a negro of large means), bequests to each of five institutions for the benefit of his race, \$1,000; to six others, each \$500; and to Tuskegee University, Alabama, Lincoln University, Pennsylvania, and Manassas Institute, Virginia, the residue of his estate in equal parts.

Barker, Ezra, Stratham, N. H., bequest to the local Baptist society, \$10,000.

Barry, Mrs. William I., Passaic, N. J., gifts to First Presbyterian Church, \$10,000; Second Church, \$2,000; Young Men's Christian Association, \$3,000.

Bates, Elizabeth H., M.D., Port Chester, N. Y., bequest to the medical department of the University of Michigan, her personal and real properties, aggregating \$114,500, for a professorship of Diseases of Women and Children, on condition that the university receive female students. The university accepted the condition in 1899.

Beecher, Prof. Charles E., Sheffield Scientific School of Yale University, gift to the university for the Peabody Museum, his collections of fauna and geological specimens, numbering upward of 100,000 pieces, and pronounced by experts to be invaluable.

Benjamin, Park. See United States Naval Academy, in this article.

Bennett, Thomas G., New Haven, gift to Yale School of Fine Arts, \$5,000.

Benoist, Joseph, Kansas City, Mo., bequests to charitable institutions in that city and St. Louis, a total of \$150,000.

Berea College, Berea, Ky., gifts from friends to secure pledge of \$50,000 from Dr. Daniel K. Pearsons, \$150,000.

Bernheim, I. W., and **Bernard**, Louisville, Ky., joint gift to the city, a bronze statue of Thomas Jefferson by Ezekiel, cost \$50,000.

Berry, George B., Baltimore, bequests to Woman's College, \$50,000; other institutions, \$3,500; contested.

Berwind, Edward J. See United States Naval Academy, in this article.

Bigelow, Albert S., Boston, gift to the Church of the Advent, memorial window, cost \$10,500.

Billings, Robert C., Boston, bequests to Harvard University, Massachusetts Institute of Technology, and Boston Museum of Fine Arts, each \$100,000; Institute of Technology (special fund), Massachusetts General Hospital, New England Hospital for Women and Children, Massachusetts Eye and Ear Infirmary, and Children's Hospital, each \$50,000; Perkins Institution for the Blind, American Unitarian Association, Boston Young Men's Christian Union, Home for Aged Men, and Hampton Normal and Industrial Institute, each \$25,000; Tuskegee Normal School, Atlanta University, and sixteen public and charitable institutions in and around Boston, each \$10,000; and to his executors, for disposition to such charitable purposes as they may select, over \$600,000, making his total bequests \$1,500,000.

Blaine, Mrs. Emmons, Chicago, gifts for the establishment of two educational institutions in that city, an estimated aggregate of \$1,000,000. The largest is a School of Pedagogy, comprising a kindergarten, primary and grammar schools, high school, and junior college, located near Lincoln Park; the other is a thoroughly appointed school for the children of the poor, on Milwaukee Avenue. Both institutions will be opened early in 1900. Mrs. Blaine also gave \$25,000 to defray the expenses of the fourteen members of the faculty of the School of Pedagogy on a preparatory study tour of Europe.

Blair, John Insley, Blairstown, N. J., bequests to the Blair Presbyterian Academy, \$115,000; Presbyterian Church at Blairstown, \$10,000; church at Oxford, \$15,000; Methodist Church, Blairstown, \$1,000. See OBITUARIES, AMERICAN.

Blake, Anna S. C., Santa Barbara, Cal., bequests to trustee for a home for convalescents and invalids, her "Miradero" estate and \$80,000 for its support; and the Santa Barbara Cottage Hospital, Philadelphia Orthopaedic Hospital, and Massachusetts General Hospital, each \$10,000.

Borden, C. D., New York, gift to the new gymnasium fund of Phillips Andover Academy, \$20,000.

Bourne, Emily H., New York, gift to Barnard College for scholarships, \$6,000.

Bradley, Mrs. Elizabeth, New Haven, bequests, made available by the death of her brother, Josephus Forbes, to St. Paul's Church and the Seamen's Bethel, both of that city, an estate that yielded the former \$306,397 and the latter \$153,796.

Bradley, Mrs. Lydia, founder of Bradley Polytechnic Institute, Peoria, Ill., gift to the institution, deeds for all of her property in Peoria County, estimated at more than \$1,000,000. She had previously given 20 acres of ground and \$500,000 for buildings and equipment.

Brimbecom, Mrs. Mary E., Boston, bequests to State and local institutions, \$3,300 free and \$5,000 conditional.

Brinton, Daniel G., gift to the University of Pennsylvania, his great collection of books, pamphlets, and manuscripts relating to the aboriginal languages of North and South America, and nearly 200 volumes of bound pamphlets on the ethnology of American Indians. See OBITUARIES, AMERICAN.

Brown University, Providence, R. I., gifts from three friends, names withheld, \$25,000, \$20,000, and \$20,000 respectively.

Bruce, Catherine Wolfe, New York, gift to Columbia University, for special astronomical investigations, \$10,000.

Bush, W. H., Chicago, Ill., gift for a Methodist old folks' home, in that city, a building site and \$20,000.

Bushnell, Asa S., Springfield, Ohio, gifts to the Ohio Masonic Home and the Young Men's Christian Association of Springfield, each \$10,000.

Callaghan, Patrick, Poughkeepsie, N. Y., bequests to the Society for the Protection of Destitute Roman Catholic Children, convent at Morristania, Foundling Asylum of the Sisters of Charity of New York City, Home of the Good Shepherd in same city, and St. Mary's Church in Poughkeepsie, an aggregate of \$175,000.

Campbell, T. Pearsall, East Orange, N. J., gift to St. Paul's Protestant Episcopal Church there, \$5,000.

Carnegie, Andrew, New York, gifts, many under conditions that were agreed to or fulfilled during the year; the Carnegie Institute, Pittsburgh, Pa., for enlargement of building, \$1,750,000; Cooper Union, New York, for founding a mechanics' day art school, \$300,000; the following cities for a public library: Washington, D. C., \$350,000; Atlanta, Ga., \$125,000; Lincoln, Neb., \$75,000; McKeesport, Pa., \$50,000; Connellsville, Pa., \$50,000; Steubenville, Ohio, \$50,000; East Liverpool, Ohio, \$50,000; Fort Worth, Texas, \$50,000; Emporia, Kan., \$30,000; Davenport, Iowa, \$50,000; Cheyenne, Wyo., \$50,000; Austin, Texas, \$50,000; San Diego, Cal., \$50,000; and Duluth, Minn., \$50,000; the Pennsylvania State College, for a library building, \$100,000; Stevens Institute of Technology, Hoboken, N. J., for new laboratory building, \$50,000; Mechanics' Institute, New York, \$25,000; Newport, Ky., for a public library, \$20,000; Tucson, Arizona, for public library, \$25,000; Virginia Mechanics' Institute, Richmond, for new building, \$10,000; ladies of the "X. X. I.," Denison, Texas, for first woman's club building in the State, \$1,700; New York Zoological Society, for building fund, \$5,000; and Public Library, Erie, Pa., \$5,000. This list, which aggregates \$3,282,000, is not a complete one, comprising only his most notable gifts; probably other similar benefactions amounted to \$1,000,000 more. In addition to these gifts, Mr. Carnegie made several to foreign institutions, amounting to about \$500,000, of which the most conspicuous one was that of \$250,000 to Birmingham (England) University to promote scientific education. His total gifts and pledges in the year amounted to about \$5,000,000.

Catholic University of America, Washington, D. C., gifts from friends, funds for erection and equipment of Holy Cross College, dedicated Oct. 12, and the Monastery and College of the Holy Land, dedicated Sept. 17; also from the Catholic Knights of America, for a chair of English Literature, \$50,000, and the Catholic Knights of Columbus, for a chair of American History, \$50,000.

Chapelle, Archbishop P. L., New Orleans, gift from friends, an archiepiscopal residence, cost \$18,000.

Chesebrough, Nicholas H., M. D., Summit, N. J., bequests to seven denominational institutions, each \$500; Methodist General Hospital, Brooklyn, \$5,000; First Methodist Church, Summit, \$1,000; and to trustees for a Chesebrough Protestant Orphan Asylum at Summit the residue of his estate, amounting to over \$200,000.

Chicago Art Institute, friends of, gift to extinguish debt, \$100,000. See White, Mrs. Catherine M., in this article.

Chipman, George W., Boston, bequests to various Baptist institutions, the reversion of \$50,000.

Cisco, Mrs. Caroline A., New York, bequest to the Church of the Holy Communion, \$10,000.

Clapp, Lucius, Randolph, Mass., gift to the Brockton Hospital, \$5,000.

Clark, Mary J., New York, bequests to Baptist institutions, \$5,000.

Clayton, George W., Denver, Col., bequest to the city for an orphans' college, \$1,000,000.

Clemmons, E. T., Forsyth County North Carolina, bequest to the Moravian Church for new edifice and schoolhouse, \$100,000.

Columbia University, New York, gifts from friends, 63 new scholarships at \$5,000 each; for the library, \$14,821; total gifts of the year for specific purposes, \$73,794; increase of permanent endowment, \$490,417. See also Curtis, George William; Dyckman, Isaac M.; Low, Seth; Proudfit, Alexander M.; Schurz, Carl; Seidl, Anton; Seuff, Charles H., in this article.

Converse, John H., Philadelphia, gifts to the University of Vermont, for endowment of chair of Commerce and Economics, \$50,000; for new gymnasium fund, \$5,000.

Coolidge, Prof. Archibald, Harvard University, joint gift with his father to the University Library, a collection of 10,000 volumes treating of the Crusades.

Coolidge, Thomas Jefferson, Boston, gift to Harvard University for debating prizes, \$5,000.

Cooper, Rev. Edmund D., D. D., Astoria, N. Y., bequests for theological scholarships to the University of the South, General Theological Seminary in New York, and the Washatah Home in Wisconsin, each \$5,000.

Cooper, Edward, and **Abram S. Hewitt**, New York city, joint gift to Cooper Union, \$200,000.

Crane, Job S., Newark, N. J., bequests to local charitable institutions, \$10,000, and residue of his estate.

Crary, Mrs. Horace H., Binghamton, N. Y., bequests to the Woman's Missionary Society of the Methodist Episcopal Church and the Methodist Episcopal Hospital in Brooklyn, each \$25,000; Freedmen's Aid Society of the Methodist Episcopal Church, \$15,000; and the Missionary Society and Wyoming Annual Conference of the same church, each \$10,000.

Crocker, Mrs. George C., San Francisco, Cal., gift to the Hopkins Art Institute in that city, the Benizoni marble group of statuary, The Fall of Pompeii, for which the late Mr. Crocker paid \$20,000.

Crocker, Richard, New York, gift for the poor, \$5,000.

Cumston, Charles McLoughlin, Boston, gift to town of Monmouth, Me., funds for a combined town hall, library, and opera house, estimated cost \$20,000.

Cupples, Samuel, St. Louis, gifts to Washington University, a mechanical and electrical engineering building, cost \$150,000; building for civil engineering and architecture, cost \$100,000; and for endowment of the School of Engineering and Agriculture, \$150,000.

Curtis, George William, Memorial Committee, gift to Columbia University, for a fellowship in political science, \$10,000.

Princeton University, gifts from friends, names withheld, for the department of history, \$800,000; for a Murray chair of English Literature, \$100,000; and for a chair of Politics, \$100,000. See also individual names in this article.

Pringle, Samuel Milligan, New York, bequest to found a Pringle Memorial Home for needy men, particularly educated and literary men, his entire estate. On contest the will was sustained. His sister, **Margaret Pringle Fenton**, also bequeathed her estate to the proposed home. The combined estates amounted to \$125,000.

Proctor, Thomas B. and Frederick I., Utica, N. Y., gift to the city for public library site, a plot of ground that cost \$35,000.

Protestant Episcopal Diocese of New York, gift from friends, a new St. Luke's Home for Aged and Indigent Christian Women, and a chapel for a memorial to the Rev. Isaac H. Tuttle, D. D., who founded the home in 1852; both buildings completely equipped.

Proudfit, Alexander Moncrief, New York, bequests to Columbia University for fellowships in letters and medicine, each \$15,000; St. Luke's Hospital and Samuel R. Smith Infirmary, each \$16,000; New York Cancer Hospital, \$11,000; Loomis Sanitarium for Consumptives and New York Public and New York Free Circulating Libraries, each \$10,000; trustees of town of Salem, N. Y., and the Samaritan Home for the

Aged, each \$7,000; St. Mary's Free Hospital for Children, \$6,000; Presbyterian Hospital, Working Girls' Vacation Society, and Washington Academy in Salem, each \$5,000; and seven other institutions, \$8,500.

Pulitzer, Joseph, New York, gift to Barnard College for a memorial scholarship, \$10,000.

Quaker Boarding School, Westtown, Chester County, Pennsylvania, centennial gift of **Westtown Old Scholars' Association**, \$100,000.

Quintard, James W., Portchester, N. Y., bequest to Christ Church at Rye, \$10,000.

Reid, Mrs. Simon, Lake Forest, Ill., gift to Lake Forest University, funds for the erection of a chapel and a library building. She previously built Reid Hall.

Biley, Mrs. C. E. Crossman, Brooklyn borough, N. Y., gift to the Brooklyn Home for Aged Men and Couples, improved property valued at \$12,000.

Rockefeller, John D., New York, gifts to the city of Cleveland, Ohio, for the improvement of Gordon and Rockefeller Parks, \$225,000; Brown University, \$250,000; Denison University, \$100,000; Columbia University, for a chair of Psychology, \$100,000; new Horace Mann School, New York, \$50,000; and Tuskegee Normal and Industrial Institute, \$10,000. He also offered the Chicago University to duplicate all gifts made to it during the year up to an aggregate of \$2,000,000, the Rochester (N. Y.) Theological Seminary a duplication of \$150,000 in gifts, and the city of Cleveland, improved property valued at \$500,000, for an additional public park.

Rogers, William A., Buffalo, N. Y., gift to the Sheffield Scientific School, Yale University, \$5,000.

Ropes, John Codman, Boston, bequests to the Massachusetts Military Historical Society, the *memorabilia* of the Napoleonic *régime*. See OBITUARIES, AMERICAN.

Ryan, Mrs. Thomas F., New York, gift to the Sisters of the Perpetual Adoration in Washington, D. C., half a block of ground in that city for a site for the Convent of the Blessed Sacrament.

Sage, Russell, New York, gift to new building fund of Woman's Hospital, \$50,000.

St. Johnsbury (Vt.) Academy, gift from a friend, name withheld, \$10,000.

St. Luke's Hospital, New York, gifts from friends to endowment fund, \$227,750.

Sargent, Mrs. Winthrop, Boston, memorial gift to Emmanuel Church, a reredos of Caen stone and altar of marble, cost about \$8,000.

Schieren, Charles A., Brooklyn, N. Y., gift toward erection of Christ English Evangelical Lutheran Church in that borough, dedicated Oct. 1, \$30,000.

Schiff, Jacob H., New York, gifts to Harvard University, for a Semitic museum, \$50,000, and to endowment of the National Academy of Design, \$5,000.

Schurz, Carl, New York, friends of, gift to Columbia University, for two foundations to bear his name, \$20,000.

Scranton, Mary E., New Haven, Conn., gift to Madison, Conn., a public library building as a memorial to her father, Erastus C. Scranton.

Scribner, Charles, New York, gift to Princeton University for a fellowship in English literature, \$12,000.

Searles, Edward F., San Francisco, gift to the directors of the Hopkins Art Institute, given by him to the public, funds for an additional picture gallery, cost between \$15,000 and \$18,000.

Sessions, John H., Bristol, Conn., bequest to Wesleyan University, \$25,000.

Seidl, Anton, Memorial Committee, gift to Columbia University, for a fellowship in music, \$12,000.

Senff, Charles H., New York, gift to Columbia University to equip expedition up the Nile, \$5,000.

Seventh-day Adventists, General Conference of, gift from an English friend, \$405,000.

Severance, Louis H., New York, gifts to Oberlin College, more than \$63,000.

Sharpe, Lucien, Providence, R. I., heirs of, gift to Brown University, unconditioned, \$10,000.

Sheppard, Dr. Robert D., treasurer of Northwestern University, gift to the university for the new gymnasium fund, \$15,000.

Simmons, E. C., Kenosha, Wis., gift to the city for a free library building, \$100,000; also a promise to furnish it with 25,000 volumes.

Simmons, John, Boston, bequest to trustees, for the establishment of a college for women, a portion of his estate, which, under investment for about twenty-five years, reached the sum of \$2,000,000, and thus became available in 1899.

Simpkins, John, Yarmouth, Mass., family of the late, gift to the Lawrence Scientific School, Harvard University, \$20,000.

Sinclair, Charles A., Brookline, Mass., bequest to the Bethlehem (N. H.) Methodist Church, \$5,000.

Sinton, David, Cincinnati, gift to the University of Cincinnati for endowment, \$100,000.

Skinner, William, Holyoke, Mass., gift to public library building fund, \$10,000.

Smith, Charles Frederick, Boston, bequests to the Beverly Historical Society, Beverly Fuel Society, Massachusetts Societies for the Prevention of Cruelty to Animals and to Children, Massachusetts Charitable Eye and Ear Infirmary, Perkins Institution for the Blind, Industrial School for Crippled and Deformed Children, Home for Aged Couples, Boston Dispensary, and Associated Charities of Boston, the reversion in equal shares of an estate of \$1,000,000.

Smith, Elisha D., Menasha, Wis., bequests to several colleges and religious associations, annuities of from \$500 to \$1,000 each.

Smyth, Frederick, Manchester, N. H., bequests to Dartmouth College, New Hampshire Home Missionary Society, Franklin Street Church, City Mission, and Smith Library, each \$5,000; State Industrial School, Children's Home, State Orphans' Home, and State Agricultural College, \$2,000; and New Hampshire Bible Society, \$1,000. See OBITUARIES, AMERICAN.

Snyder, Prof. Edward, Pacific Beach, Cal., gift to the University of Illinois, where he formerly taught, to aid worthy students, the reversion of \$125,000.

Somerville, Maxwell, Philadelphia, gift to the University of Pennsylvania, \$600,000.

Spalding, Right Rev. John L., Bishop of Peoria, Ill., gift to his diocese, a commercial, classical, and manual-training school, cost \$50,000.

Stanford, Mrs. Leland, San Francisco, gift to Leland Sanford Junior University, deeds conveying the bulk of her wealth in stocks and real estate. The first transaction, May 31, transferred property of a face value of \$38,000,000 and a cash market value of \$15,000,000, and the second, June 15, comprised two large tracts of recently purchased grazing land, with valuable water rights, which were incorporated with the famous Vina Ranch, now owned by the university. These gifts swell the endowment of the university to \$45,000,000, calculated on the basis of a 5-per-cent. return from the properties in which the Stanford fortune was invested. The face value of the

securities constituting the bulk of the investments is about \$80,000,000, and any increase in their market price will enhance the total endowment, already the largest of any privately established institution in the world.

Stedman, Mrs. Lucy, gift to Vassar College for new biological laboratory, \$25,000.

Stevens, Mrs. Martha B., Hoboken, N. J., bequests to Protestant Episcopal institutions, \$15,000.

Stewart, Herbert, New York, bequest to Yale University for a special scientific fund, \$50,000.

Stickler, Joseph W., and wife, Orange, N. J., gift to trustees of the Free Library, funds for erection of a library building.

Stillman, James, New York, gift to Harvard University for an infirmary, \$50,000.

Stokes, Caroline Phelps and **Olivia Phelps**, New York, joint gift to Yale University, funds for a new administration building, cost \$40,000; also the former, gift to Smith College, for a scholarship, \$5,000.

Sullivan, Mrs. Alice M., Providence, gift to Brown University Library for books on Church history, \$10,000.

Sunderland, Mass., public library of, gift from friend, name withheld, \$9,000.

Swan, Margaret A., New York, bequest to trustees for First Presbyterian Church, Geneva, N. Y., \$20,000.

Syracuse, University of, gifts from trustees to make up deficiency, \$28,000.

Talcott, James, New York, gift to Mount Holyoke College for an arboretum, \$10,000.

Tammany Hall, New York, gift for relief of poor, \$10,000.

Taylor, William H., Brookline, Mass., bequests to American Board of Commissioners for Foreign Missions, \$15,000; American Missionary Association and American Home Missionary Society, each \$10,000; and Rollins College, Florida, \$5,000.

Taylor, William Y., Philadelphia, bequests to local charities, \$21,000.

Temple of Emanu-El, New York, gifts from friends for a sisterhood home, \$50,000.

Thayer, Mrs. Eliza De Wolf, Newton, Mass., bequests to four missionary boards, each \$5,000; to United Congregational Church, Newton, and three of the missionary societies, the residue of her estate; and to Brown University, the valuable library of her late husband, Dr. Thatcher Thayer.

Theosophical Society, American Section of, the gift from friend, name withheld, \$50,000.

Thompson, Mrs. F. F., New York, gift to new building fund of Woman's Hospital, \$50,000.

Thompson, Mrs. W. B. See Pratt, Mrs. Charles M.

Thompson, Robert M. See United States Naval Academy.

Thorndike, Mrs. Delia D., Boston, bequests, direct and in reversion, to twenty benevolent, religious, and educational institutions, an aggregate of \$39,000.

Thorne, Samuel, New York, gift to the New York Zoological Society, \$5,000.

Tibballs, Sarah J., New York, gift to the University Place Presbyterian Church, a furnished 35-roomed building at Ocean Grove, N. J., for a house of rest for the working women of the congregation.

Tilden, Walter H., Philadelphia, bequest to the Home for Aged Couples, on condition that it takes his name, the bulk of his estate of \$200,000.

Tilford, Charles E., New York, bequests to the Society for the Prevention of Cruelty to Ani-

mals and the Metropolitan Museum of Art, each the reversion of \$25,000; and to the Presbyterian, Mount Sinai, Flower, and St. Vincent's hospitals, Home for Incurables, St. John's Guild, and the Children's Aid Society, in equal parts, the reversion of his residuary estate, estimated at over \$1,000,000.

Toner, James L., Pennsylvania, bequest to the Benedictine Society of the Catholic Church in America, for a manual-training institute, 100 acres of land and about \$185,000.

Tousey, Mary Beach, New York, bequests to Trinity College, Hartford, \$20,000; Society of St. John's, St. Clement's Church, trustees of Diocesan Convention of New York, and Protestant Episcopal Society for the Increase of the Ministry, each \$10,000; cemetery trustees of Newtown, Conn., Protestant Episcopal Orphan Home and Asylum, New York, St. Luke's Home for Indigent Christian Females, Home for Old Men and Aged Couples, Society for Relief of the Destitute Blind, Protestant Episcopal Missionary Society for Seamen, Church Mission to Deaf-mutes, Home of Preservation, St. Agnes's Home, Protestant Episcopal Missionary Society, and St. Mary's Free Hospital for Children, each \$5,000; New York Bible and Common Prayer Book Society, \$2,500; and Protestant Episcopal Domestic and Foreign Missionary Society, amount not specified.

Townsend, Charles J., class of '79, gift to the University of Rochester, for endowment of scholarship in political science, \$5,000.

Trowbridge, Mrs. Ezekiel H., and her son, **E. Hayes Trowbridge**, New Haven, gift to the New Haven Hospital to complete a maternity department, \$10,000.

Trowbridge, Rutherford B., New Haven, gift to the Yale Art School, \$10,000.

Tuck, Edward, New York, gift to Dartmouth College, to be applied exclusively to instruction, \$300,000.

Tuskegee Normal and Industrial Institute, Tuskegee, Ala., gift from woman friend in Ohio, name withheld, \$25,000.

Tuttle, Catharine M., Columbus, Ohio, gifts to Hobart College, Geneva, N. Y., for needy students, \$20,000; to Vassar College, for a Stedman scholarship, \$10,000.

Underhill, Daniel, Jericho, Long Island, N. Y., bequest to Swarthmore College, \$5,000.

Union College, Schenectady, N. Y., gift from friend, name withheld, funds for a Young Men's Christian Association building.

United States Naval Academy, gift from Park Benjamin, Robert M. Thompson, and Edward J. Berwind, a collection of 1,400 books, many of the fifteenth, sixteenth, seventeenth, and eighteenth centuries, and including almost every original treatise on the science of electricity ever published. Fifteen years were spent in gathering the collection, and a large number of them could not be duplicated.

Vanderbilt, Mrs. Alice G., New York, gift to the police pension fund, \$5,000.

Vanderbilt, Cornelius, New York, gifts to endowment of the National Academy of Design, \$10,000, and to the New York Zoological Society, \$5,000; also bequests to St. Bartholomew's Protestant Episcopal Church, for new parish building, \$200,000, and for parish missionary work, \$400,000; Young Men's Christian Association of New York, for its work among railroad employees, \$100,000; Yale University, \$100,000; St. Luke's Hospital, the Domestic and Foreign Missionary Society of the Protestant Episcopal Church, and Vanderbilt University, each \$50,000; Redwood Library at Newport, R. I., New-

port Hospital, Christian Home for Intemperate Men in New York, Working Girls' Society, Bible and Common Prayer Book Society, Society of St. Johnland, and the Protestant Episcopal Society for Seamen, each \$10,000—in all, \$1,020,000; also to the Metropolitan Museum of Art, Turner's painting of the Grand Canal, Venice, valued at \$100,000. See OBITUARIES, AMERICAN.

Vanderbilt, William K., New York, gift to Vanderbilt University, Nashville, Tenn., funds for new dormitory, to cost \$100,000.

Van Nostrand, Mrs. S. A., New York city, bequests to Yale University for the Sheffield Scientific School, \$25,000, and the General Seminary of the Protestant Episcopal Church, \$5,000.

Van Pelt, Albert S., New Brunswick, N. J., bequest to the Board of Foreign Missions of the Reformed Church of America, \$10,000.

Vassar Alumnae Association, gift to the college for an infirmary, \$40,000.

Vassar College, gift from friend, name withheld, one half of amount needed for a biological laboratory, conditioned on securing remainder, \$25,000.

Voorhees, Ralph, Clinton, N. J., gifts to the American Bible Society, \$10,000; Board of Foreign Missions of the Reformed Church, \$10,000; and Clinton Board of Education, \$5,000.

Webb, William Henry, New York, bequests to Webb's Academy and Home for Shipbuilders, founded by him, securities to insure its maintenance (value not specified), all his paintings, busts, books, prints, and manuscripts relating to shipbuilding, and his residuary estate; and the Metropolitan Museum of Art, the paintings Florinde and Columbus unveiling America to the Rest of the World and the statue Venus. See OBITUARIES, AMERICAN.

Weber, Frederick E., Boston, bequest to Atlanta University, \$5,000.

Weis, Julius, New Orleans, gift to the Truro Infirmary, for a new building for aged and infirm beneficiaries, \$25,000.

Wellesley College, gifts from former students toward canceling the debt and creating an endowment fund, \$30,000.

West, George, and wife, Ballston Spa, N. Y., subscription to endowment fund of the Round Lake Institute, \$26,250.

Wetherell, Mrs. Hester N., Worcester, Mass., bequests to the Worcester Children's Friend Society, \$20,000; Washburn Home for Aged Women, Home for Aged Men, Temporary Home and Day Nursery, Worcester Art Museum, and Worcester Employment Society, each \$10,000; Worcester Polytechnic Institute, Worcester Natural History Society, and Society for Supporting District Nurses, each \$5,000; Worcester Boys' Club, \$8,000; and four other institutions, \$9,000—in all, \$102,000.

Wheaton Seminary, Norton, Mass., gift from anonymous friend for endowment, \$60,000.

White, Francis L., New York, gift for endowment of Earlham College, Richmond, Ind., \$25,000.

White, Mrs. Catherine M., Chicago, bequests to the Chicago Art Institute, \$200,000, and to local educational institutions, an aggregate of nearly \$300,000.

Whiting, William, Holyoke, Mass., gift to public library building fund, \$10,000.

Widener, Peter A. B., Philadelphia, Pa., gift for the benefit of crippled children, funds for the erection and endowment of a combined home, hospital, and industrial school, to cost at least \$2,000,000. The gift became active by his purchase of 36 acres of land at Logan, a suburb of Philadelphia, for the site of the institution.

Williams, Daniel B., Stockbridge, Mass., bequests to Hampton (Va.) Institute, \$5,000; other institutions, \$4,000.

Williams, Bishop John, Middletown, Conn., bequests to the Berkeley Divinity School and Trinity College, his library; and to the former the residue of his estate, estimated at about \$10,000. See OBITUARIES, AMERICAN.

Williams, John L., Richmond, Va., gift for endowment of the Charlotte Williams Hospital there, \$100,000.

Wilson, John L., Framingham, Mass., bequests to the First Parish Church, \$2,000; Framingham Hospital, \$5,000; Home for Aged and Infirm Old Men and Women, \$3,000; and city of St. Augustine, Fla., a house and lot for a free public library.

Wolcott, Mrs. Harriet F., Boston, bequests to the Massachusetts General Hospital, \$25,000; Hampton Normal and Industrial Institute, \$3,000; North Bennett Industrial School, Boston, \$2,500; and Tuskegee Normal Institute, \$2,000.

Wolcott, Mrs. Roger, Boston, gift to the town of Pepperell, Mass., a soldiers' monument commemorating the Pepperell men who fought at Bunker Hill.

Wood, Antoinette Eno, New York, gift to the New York Zoölogical Society, \$5,000.

Working Girls' Vacation Society, gifts from friends for its summer home, \$25,000.

Wyman, Mrs. Nancy P. D., Bangor, Me., bequests, to Bangor institutions and foreign missions, an aggregate of \$6,100.

Yale University, gift from friends, funds for a new law-school building, to cost \$100,000.

Young Men's Christian Association, Bar Harbor, Me., gift from summer visitors, for a new building, \$21,000.

Young Men's Christian Association, Cambridge, Mass., gifts from friends to extinguish debt on new building, \$59,000.

Young Men's Christian Association, New Haven, Conn., gift from friend, name withheld, for new building fund, \$40,000.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe, formed by the union of the Kingdom of England and the Principality of Wales with the Kingdom of Scotland, constituting together the Kingdom of Great Britain, and of this with the Kingdom of Ireland, the whole forming the United Kingdom of Great Britain and Ireland, which holds supreme dominion over the Empire of India and colonies and dependencies of various kinds—self-governing colonies, colonies governed and administered partly or wholly by the Crown, and protectorates under native laws and rulers—constituting, with the United Kingdom, the British Empire. The reigning sovereign is the Queen-Empress Victoria, born May 24, 1819, the daughter of Edward, Duke of Kent fourth son of George III. The heir appar-

ent is Albert Edward, Prince of Wales, born Nov. 9, 1841, eldest son of Queen Victoria and the Prince Consort Albert, Duke of Saxe-Coburg-Gotha. George, Duke of York, born June 3, 1865, only surviving son of the Prince of Wales and the Princess Alexandra of Denmark, is next in succession, and next comes his eldest son, Edward Albert, born June 23, 1894, issue of his marriage with Victoria Mary, daughter of the Duke of Teck.

The power to legislate for the United Kingdom and for all parts of the British Empire, except so far as it is delegated to local legislative authorities, is vested in the British Parliament, consisting of a House of Lords and a House of Commons. Members of the House of Lords are princes of the blood royal; spiritual lords, which are the metropolitan bishops of ancient English sees; hereditary peers of England, of Great Britain, and of the United Kingdom; representative peers of Scotland, elected by their fellows for the duration of Parliament, and of Ireland, elected for life; and life peers and law lords, created by the sovereign by advice of the ministers. The number of peers on the roll in 1898 was 586. About two thirds of the hereditary peerages have been created within the nineteenth century, and only 16 go beyond the sixteenth century. The House of Commons contains 670 members, of whom 253 represent the county constituencies, 237 the boroughs, and 5 universities of England; 39 the county constituencies, 31 the boroughs, and 2 the universities of Scotland; and 85 the county constituencies, 16 the boroughs, and 2 the universities of Ireland. The franchise is possessed by all householders and lodgers, about one in six of the total population, the number of electors in 1898 being 5,144,222 in England and Wales, 664,095 in Scotland, and 720,312 in Ireland. The number who voted in 1895 was 3,858,923. The duration of Parliament, unless it is previously dissolved, is seven years. The Committee of Ministers, called the Cabinet, representing the majority for the time being in the House of Commons, exercise in fact the executive authority in the United Kingdom and the British Empire that is nominally vested in the Crown. The Prime Minister chooses his colleagues and dispenses the patronage of the Crown; he initiates to a great extent the policy of the Government or approves the measures suggested by the other ministers in their several departments, and when his policy or his acts encounter the displeasure of Parliament, manifested by an adverse vote on a Cabinet question or a direct vote of censure, he either resigns forthwith, in company with the rest of the Cabinet, or appeals to the country by dissolving Parliament and holding new elections. When a Cabinet resigns the retiring Prime Minister advises the Queen as to the selection of the statesman most competent to form a new government, usually the leader of the Opposition in the House of Commons. The Cabinet formed on June 25, 1895, by Lord Salisbury consisted in the beginning of 1899 of the following members: Prime Minister and Secretary of State for Foreign Affairs, the Marquis of Salisbury; Lord President of the Council, the Duke of Devonshire; Lord High Chancellor, the Earl of Halsbury, formerly Sir Hardinge S. Giffard; Lord Privy Seal, Viscount Cross, formerly Sir Richard Cross; Chancellor of the Duchy of Lancaster, Lord James of Hereford, formerly Sir Henry James; First Lord of the Treasury, Arthur J. Balfour; Secretary of State for the Home Department, Sir M. White Ridley; Chancellor of the Exchequer, Sir Michael E. Hicks-Beach; Secre-

tary of State for the Colonies, Joseph Chamberlain; Secretary of State for War, the Marquis of Lansdowne; Secretary of State for India, Lord George Hamilton; First Lord of the Admiralty, G. J. Goschen; President of the Local Government Board, Henry Chaplin; President of the Board of Trade, C. T. Ritchie; Lord Lieutenant of Ireland, Earl Cadogan; Lord Chancellor of Ireland, Lord Ashbourne, formerly Edward Gibson; Secretary for Scotland, Lord Balfour of Burleigh; First Commissioner of Works, A. Akers-Douglas; President of the Board of Agriculture, W. H. Long.

Area and Population.—The area of the United Kingdom is 120,979 square miles, England having an area of 50,867, Wales 7,442, Scotland 29,785, Ireland 32,583, the Isle of Man 227, and the Channel Islands 75 square miles. The estimated population of England and Wales and the islands in 1898 was 31,397,078; of Scotland, 4,249,946; of Ireland, 4,541,903; total population of the United Kingdom, 40,188,927. The population of the metropolis of London in June, 1898, was estimated at 4,504,766 for the registration district and 1,903,555 for the outer ring; total for greater London, 6,408,321, having increased from 4,766,661 in 1881 and 5,633,332 in 1891. Glasgow, in Scotland, had 724,349 inhabitants in 1898; Edinburgh, 295,628. The number of marriages in England and Wales in 1897 was 248,843; of births, 921,254; of deaths, 541,428; excess of births, 379,826. The number of marriages in Scotland was 30,966; of births, 128,823; of deaths, 79,061; excess of births, 49,762. The number of marriages in Ireland was 22,891; of births, 106,664; of deaths, 83,839; excess of births, 22,825. From 1815 to 1853 the number of emigrants from the United Kingdom was 3,463,592; from 1853 to 1897 it was 8,408,925, counting only persons of British or Irish origin, and of these 5,609,678 emigrated to the United States, 868,099 to British America, 1,399,375 to Australasia, and 531,773 to other countries. The number of emigrants, natives and foreigners, who sailed from British ports in 1898 was 205,073, of whom 123,543 went to the United States, 27,553 to British America, 11,020 to Australasia, and 42,957 to other countries. The total for 1897 was 213,280, of whom 122,317 were males and 90,963 females. The number of British and Irish emigrants in 1898 was 140,630, of whom 90,664 were English, 15,575 Scotch, and 34,391 Irish. The number of immigrants, British and foreign, in 1897 was 155,114, reducing the total net emigration to 58,166; the number of immigrants of British and Irish origin was 95,221, which reduces the emigration from the native population to 51,239. The number of Irish who emigrated from Ireland in 1897 was 32,535; the total number from 1851 to the end of that year was 3,722,658.

Finances.—The revenue for the year ending March 31, 1898, was estimated in the budget at £103,044,000, and the expenditure, including supplementary estimates, at £104,892,900. The actual receipts were £106,614,004 and the actual expenditures £102,935,994, leaving a surplus of £3,678,010. Taxation by customs, excise, and estate duties, stamps, the land tax, the house duty, and the income and property tax produced £89,560,630, or 83 per cent. of the net receipts of the exchequer, in 1898, while the nontax revenue, derived from the postal and telegraph services, Crown lands, interest on Suez Canal shares, and miscellaneous sources, was £17,130,090, making the total net receipts £106,690,720. The net revenue from customs was £21,792,250, of which £11,433,909 came from tobacco, £3,868,207 from tea, £2,072,658 from rum, £1,329,638 from

brandy, £897,664 from other spirits, £1,325,373 from wine, £104,281 from currants, £170,049 from coffee, £212,913 from raisins, and £377,558 from other articles. The net receipts from excise were £28,323,142, of which £16,396,726 came from spirits, £11,388,126 from beer, £243,216 from license duties, £287,924 from railroads, and £7,150 from other sources. The net receipts from estate and legacy duties, etc., were £11,185,998, of which £7,705,855 came from the estate duty, £57,692 from the temporary estate duty collected on property of persons dying before Aug. 1, 1894, £57,414 from the probate duty paid on the same class of property, £2,595,690 from the legacy duty, £727,024 from the succession duty, and £41,723 from the corporation duty. The stamp revenue amounted to £7,598,245, of which £4,121,891 came from deeds, £1,350,691 from receipts, £660,818 from bills of exchange, £260,852 from patent medicines, £166,998 from licenses, etc., £353,959 from the capital of companies, £175,482 from bonds to bearer, £216,666 from insurance, and £290,888 from other sources. The land tax yielded £7,598,245, the house duty £922,860, and the income and property tax £17,171,377. The net receipts from the post office were £12,206,694; from the telegraph service, £3,030,352; from Crown lands, £443,160; interest on Suez Canal shares, £733,898; net receipts from miscellaneous sources, £1,715,986; the actual receipts within the year having been £1,737,106, of which £948,390 came from fee stamps, £421,000 from the mint, £175,562 from the Bank of England, and £192,154 from various sources.

The national expenditure is divided into charges on the consolidated fund, the army and navy supply services, and the civil and miscellaneous services. The consolidated fund charges for 1898 amounted to £26,885,994, of which £25,000,000 were appropriated to the public debt, £79,560 were for salaries, £512,483 for courts of justice, £344,553 for miscellaneous charges, and £250,000 for recoinage. Of the sum devoted to the debt, £16,043,925 went for interest on the consolidated debt, £7,261,159 for terminable annuities, £139,300 for interest on the unfunded debt, and £174,309 for debt management, leaving £1,361,307 for the new sinking fund. The sum appropriated to the army was £19,330,000; to the navy, £20,850,000; to the civil services, £21,560,000; to the collection of customs and inland revenue, £2,745,000; to the post office, £7,592,000; to the telegraph service, £3,226,000; to the packet service, £747,000; total for the supply services, £76,050,000.

The exchequer receipts for the year ending March 31, 1899, were £108,336,000, the budget estimate having been £107,110,000; the total revenue collected, including £9,521,000 that went to local-taxation account, was £117,857,000, against £116,016,000 in 1898. Customs produced £20,850,000, which was £230,000 less than the estimate, the revenue from foreign spirits having fallen off owing to bad potato crops abroad, tobacco also falling below the estimate owing to a rise in price, while tea, coffee, and cocoa showed an increase. The excise receipts were £29,200,000, or £250,000 more than the estimate, the increase being due partly to beer, and in a greater measure to the consumption of British spirits in the place of imported spirits. Death duties yielded £15,633,000, of which £4,233,000 went for the relief of local taxation, the total exceeding the estimate by £730,000. The income tax yielded £18,000,000, exceeding the estimate by £300,000. The estimate of expenditure for 1899 was £106,829,000. Supplementary estimates

amounted to £1,986,000, while savings of £665,000 were effected, making the net expenditure for the year £108,150,000, leaving a surplus of £186,000. Adding £9,521,000 paid to the local-taxation account, £1,843,000 borrowed for telephones, barracks, the Uganda Railroad, and other purposes, and £1,710,000 issued from the exchequer balances for naval and military works, the gross expenditure was £121,224,000.

The budget estimate of expenditure for 1900 was £112,927,000, the increase in the army estimates being £1,396,000, in the navy estimates £2,817,000, in the civil service £387,000, in the postal services £781,000, in the consolidated fund charges £742,000. The Chancellor of the Exchequer reduced the estimate to £110,927,000 by taking off £2,000,000 from the annual sum set apart for the payment of the interest and principal of the debt, which had already been reduced from £28,000,000 to £25,000,000. The revenue for 1900 was estimated at £110,287,000 on the basis of existing taxation. A new stamp tax of a fourth of 1 per cent. was imposed on transactions in foreign and colonial stocks and bonds, a stamp duty of one eighth of 1 per cent. on the loan capital and debenture stock of companies, an increase in the duty on the capital stock of companies from one tenth to one fourth of 1 per cent., and a sixpenny instead of a penny stamp on allotments and transfers of stock, the yield from the new duties being estimated at £450,000. An increase in the wine duties, from 1s. to 1s. 6d. per gallon on wines under 31 degrees of proof, from 2s. 6d. to 3s. on stronger wines, and from 2s. to 2s. 6d. surtax on sparkling wines, was expected to yield £420,000. The increases in taxation raise the estimate of the total revenue of the exchequer to £111,157,000, of which £21,770,000 come from customs, £29,850,000 from excise, £11,150,000 from death duties, £8,050,000 from stamps, £800,000 from land tax, £1,650,000 from house duty, £18,300,000 from income tax, and £19,587,000 from nontax sources.

The first reduction of £3,000,000 in the annual fixed debt charge as established by Sir Stafford Northcote in 1874 was made by Mr. Goschen in 1887. The new inroad of Sir Michael Hicks-Beach into the sinking fund still left nearly £6,000,000 a year available for the reduction of debt. The manner in which the debt is reduced is mainly through the action of terminable annuities. The national debt commissioners purchase consols in the open market to be held as security for postal savings-bank deposits, and from time to time a block of these consols is canceled and replaced by a terminable annuity of such an amount and running for such a time as will suffice to pay the interest on the consols canceled and at the end of the period replace the capital, which may then be used to set up a fresh terminable annuity, or it may pass into the new sinking fund and be applied to the redemption of debt by the direct purchase of consols in the open market or to some other purpose. Between 1902 and 1904 three large terminable annuities come to an end, and the interest on consols will be lowered one fourth of 1 per cent., releasing £7,000,000 a year for the new sinking fund, which would be further increased to £9,200,000 a year by 1906. In order to prevent the diversion of these windfalls to some wholesale remission of taxation, Sir Michael Hicks-Beach proposed to prolong the savings-bank annuity of £2,200,000 from 1902 till 1911, reducing the annual charge to £591,000, and with the savings to set up two terminable annuities of £746,000 and £870,000 respectively for the cancellation of the loan of £13,000,000 obtained

from the savings banks in 1892 to carry out the shipbuilding programme and of £15,000,000 of consols held by the savings banks, both annuities expiring in 1923, when consols will be redeemable at par. Since Sir Stafford Northcote initiated the fixed debt charge in 1874 the amount of the national debt has been reduced from £768,940,000 to £627,505,000. In 1884, when consols were at par, the Government held £82,775,000 and £529,986,000 were in the hands of the public. In 1899 the Government holdings were £162,000,000 and those of the public £358,000,000, the premium had risen to 11 per cent., and it was likely to rise indefinitely if the Government continued its purchases, although in twenty-four years consols would be redeemable at par. During the time in which the taxpayers have borne the debt charge as fixed by Mr. Goschen in connection with the conversion of the 3-per-cent. consols in 1888, while the annual amount applicable to debt redemption has grown from £5,000,000 to £7,750,000, they have been subjected to increased direct taxation in order to meet unprecedentedly heavier expenditure. In the last four years the naval expenditure has increased £7,000,000, army expenditure \$2,500,000, civil-service expenditure £2,750,000, and grants out of the local taxation fund £3,000,000. For fifty years previous to 1878 the imperial taxation and expenditure were almost at a standstill, the increase being less than the growth of population, although other European nations increased their taxation 75 per cent. during this period. In the past twenty years imperial taxation has grown 50 per cent., chiefly as the result of the policy initiated by Disraeli in the check given to Russia after the Turkish war of 1878 and the purchase of Suez Canal shares. The colonial expansion, by which similar enterprises of France and Germany were frustrated or forestalled, the military occupation of Egypt, and the activity in eastern Asia have added to imperial responsibilities, and been attended with a growth of armaments in emulation of the armaments of Continental powers. While the expenditure on the debt was £3,400,000 less in 1898 than in 1878, and the cost of collecting the revenue remained the same, the expenditure on the army and navy increased between those years from £26,300,000 to £40,400,000, that of the postal and telegraph, due to the growth of business, from £5,000,000 to £11,500,000, that of the civil service from £15,600,000 to £22,900,000. Adding the Government contributions to local authorities and the contribution from India, which were formerly included in the accounts, the total expenditure in 1898 was £112,500,000, compared with £78,000,000 in 1878.

The debt on March 31, 1898, amounted to £638,266,482, offset to the extent of assets amounting to £25,241,799, chief of which were the Suez Canal shares purchased from the Khedive of Egypt, valued at £25,241,799, and further offset by exchequer balances of £10,918,422 in the Bank of England and the Bank of Ireland. The national wealth is estimated at £10,000,000,000, and the annual value of property and profits assessed for the income tax are £700,000,000, exceeding the principal of the debt, which represents a burden of £15 17s. 6d. per capita, the annual charge being 12s. 5d. per capita. The principal of the funded debt on March 31, 1898, was £585,787,624, the estimated value of terminable annuities was £40,515,080, and the unfunded debt was £8,133,000; total, £634,435,704. Other capital liabilities, incurred through the imperial defense act of 1888, the telegraph act of 1892,

the barracks act of 1890, and other acts of Parliament, amount to £3,830,778. The sum of £25,000,000 now set apart for the service of the debt is less by £3,898,651 than the annual charge after the Crimean War. After the Napoleonic wars the national debt in 1815 amounted to £861,039,049. It was decreased £56,812,695 in the next forty years, but during the Crimean War was again increased £32,918,243, amounting to £837,144,597 in 1857, since which date there has been a reduction of £202,708,893. The annual charge of £25,000,000 includes a large provision for debt reduction, amounting in 1898 to £7,360,292. On March 31, 1899, the national debt was £634,984,000.

The amount raised in 1896 for local expenditure in England and Wales was £75,474,039, including £11,053,931 of loans and £9,409,561 of Government contributions. The receipts from rates were £35,898,774; water, gas, and electric light, £7,952,980; repayments, £1,017,043; tolls and dues, £5,302,839; rents and interest, £2,108,749; sales, £527,635; miscellaneous receipts, £2,206,527. The total local expenditure of England and Wales in 1896 was £76,104,066, of which £40,019,001 were paid out by town and municipal authorities for police, sanitary works, etc., £10,215,974 by unions and parishes for poor relief, £9,426,472 by school boards, £8,339,436 by county, rural sanitary, and road authorities, and £3,454,089 by harbor authorities. In Scotland the total amount raised for local purposes was £11,289,547, of which £3,668,063 came from rates, £1,897,261 from water, gas, and electric lighting, £1,199,418 from tolls and dues, £629,005 from rents and interest, £38,768 from sales, £1,648,340 from Government contributions, £1,897,144 from loans, and £321,548 from miscellaneous sources. The total expenditures in Scotland were £11,516,116, of which £5,522,779 were for town and municipal police, sanitary works, etc., £1,013,376 for poor relief, £2,153,439 for elementary education, £1,349,847 for rural sanitary works, roads, and county expenses, and £1,200,035 for harbors. The local revenues of Ireland amounted to £5,014,086 in 1896, of which £3,040,558 were derived from rates, including water, etc., £476,427 from tolls and dues, £113,228 from rents and interest, £406,668 from Government contributions, £709,376 from loans, and £267,829 from other sources. The local expenditures of Ireland were £5,003,658, of which £1,527,211 were for town and municipal police, sanitary works, etc., £1,053,391 for poor relief, £1,472,282 for roads and rural sanitation and other expenses, and £482,807 for harbors. The expenditures of the London County Council for 1899 were estimated at £3,719,998 for maintenance, including £89,332 out of rents for tramways, workmen's dwellings, etc., and £6,009,375 of capital expenditure. The debt was £38,011,638 on March 31, 1898.

The Army.—The regular army of the United Kingdom, as provided in the estimates, consisted in 1899 of 8,109 commissioned officers, 1,087 warrant officers, 17,100 sergeants, 3,941 drummers, trumpeters, etc., and 150,267 rank and file; total, 180,513 men, an increase of 16,044 over 1898. The general staff numbered 342 officers, with 137 noncommissioned officers and privates; army accountants, 209; chaplains, 87; medical department, 598; veterinary department, 65, with 7 assistants; total staff and departments, 1,300 officers, 138 noncommissioned officers, and 7 men. The total authorized strength of the regiments was 6,019 officers, 15,264 noncommissioned officers and musicians, and 150,111 rank and file, the cav-

alry, including the Life Guards and Horse Guards, numbering 555 officers, 1,315 noncommissioned officers, etc., and 12,083 privates; the Royal Artillery, 1,140 officers, 2,552 noncommissioned officers, etc., and 26,761 privates; the Royal Engineers, 601 officers, 1,312 noncommissioned officers, etc., and 5,834 privates; the infantry, including the Foot Guards, 3,075 officers, 7,439 noncommissioned officers, etc., and 93,572 privates; the colonial corps, 208 officers, 469 noncommissioned officers, etc., and 5,888 privates; the departmental corps, 195 officers, 1,426 noncommissioned officers, etc., and 3,166 privates; the army service corps, 245 officers, 751 noncommissioned officers, etc., and 2,807 privates. The staff and instructors of the yeomanry, militia, and volunteers numbered 597 officers, 6,164 noncommissioned officers, etc., and 22 privates. Miscellaneous establishments employed as instructors, etc., 193 officers, 562 noncommissioned officers, and 136 privates, of whom 36 officers, 103 noncommissioned officers, and 107 privates were instructors in gunnery and musketry; 18 officers, 23 noncommissioned officers, and 5 privates were in the Royal Military Academy at Woolwich; 29 officers, 22 noncommissioned officers, and 19 privates in the Royal Military Academy at Sandhurst; 37 officers, 50 noncommissioned officers, and 1 private in other colleges and schools; 15 officers and 190 noncommissioned officers in regimental schools; and 58 officers, 174 noncommissioned officers, and 4 privates in other establishments. The total military force maintained for service in the United Kingdom in 1898 was 99,258 officers and men, comprising 11,251 cavalry, 16,989 artillery, 5,368 engineers, and 65,650 infantry and special corps. Of the total number 73,348, with 10,063 horses, were stationed in England; 3,947, with 350 horses, in Scotland; and 22,963, with 2,784 horses, in Ireland. The troops maintained in Egypt numbered 5,553 officers and men, with 686 horses; in the colonies, 40,669 officers and men, with 2,405 horses; in Crete, 900 officers and men. The British army in India had a strength of 74,623 officers and men, with 12,300 horses, making the total strength of the regular army 221,003 men of all ranks, with 28,588 horses. Including the auxiliary forces and the regular forces on Indian establishments, the total established strength of British military forces in 1899 was 742,421 men of all ranks, consisting of 171,394 regular troops at home and in the colonies, 73,162 in India, 83,050 army reserves, 138,961 militia, 11,891 yeomanry, and 263,963 volunteers. The effective strength of the regular forces, home and colonial, was 146,864 in April, 1899; in India, 74,623; army reserve, 82,063; militia, 118,221; yeomanry, 10,191; volunteers, 232,711; total effectives, 664,189. Among the noncommissioned officers and privates composing the regular army on Jan. 1, 1898, there were 158,566 natives of England, 16,485 Scotch, 20,374 Irish, 8,275 born in India and the colonies, 142 foreigners, and 2,551 not designated. The authorized increase in the establishment for the United Kingdom for 1899 was 20,185 rank and file, or from 195,501 to 215,686, but the actual establishment at the beginning of the year consisted of 204,925 rank and file. The additions consist of a third battalion to the Coldstream and Scots Guards, an additional battalion to 7 line regiments, 15 field batteries, 11 garrison companies, and in the colonial corps a third West India battalion, a West African regiment, and a Chinese regiment. The infantry of the line have their term of service with the colors shortened to three years, the term in the reserve being nine

years; but inducements are offered for men to serve two years longer with the colors, and arrangements have been made for the retransfer of men from the reserve to the colors. Deferred pay has been abolished, and the men receive instead a mess allowance and on their discharge a gratuity. All soldiers except the short-service men in the infantry receive an increase in their pay of 3d. a day, and on their discharge a gratuity of £1 for every year of service. The recruiting of a Canadian regiment was begun in 1898. The standard of height and age has been reduced in the cavalry as well as in the infantry, with the result that 40,729 recruits were raised for the regular army in 1898. The effective strength of the militia shrank from 105,531 on Jan. 1, 1898, to 103,647 on Jan. 1, 1899. An addition of 7,900 men to the regular army was sanctioned in 1897, which was swelled in 1898 to 25,000. Extraordinary efforts were made to recruit the additional soldiers, and special recruits of a lower standard than the service requires were admitted. Even boys under fifteen were taken on their declaration that they were eighteen years old. Out of 40,000 recruited in 1898, giving a numerical increase of less than 10,000, nearly 5,000, or half the addition, joined from the reserves and 1,180 were West Indian and West African negroes. The increase of 25,000 men was needed in order that the garrisons in India and South Africa might be strengthened, and those in Egypt and the new stations occupied under the imperial scheme of defense, be supplied. An expenditure of £5,254,000 was sanctioned in the session of 1899 to build barracks, so as to make the service more attractive at home, and defense works for the new stations. This sum is to be raised, in accordance with the policy now followed for raising money for imperial defense, by means of loans repayable after a short term of years.

The Navy.—The effective strength of the British navy in the beginning of 1899 was 35 first-class battle ships, 7 of the second, and 18 of the third class, 14 coast-defense vessels, 9 armored cruisers, 30 first-class, 53 second-class, and 42 third-class cruisers, 34 torpedo gunboats, 108 destroyers, 45 torpedo boats of the first class, and 24 of the second and third classes. The ships under construction were 12 first-class battle ships, 12 armored cruisers, 16 first-class cruisers, 6 second-class cruisers, 4 gunboats, and 41 torpedo-boat destroyers. There were 164 war ships in commission on Jan. 1, 1899, not including gunboats and vessels for coast and port defense. Of that number 14 formed the Channel squadron, 38 were in the Mediterranean and the Red Sea, 12 in North America and the West Indies, 9 in the East Indies, 28 in China, 16 in the Cape of Good Hope and West Africa, 7 in the Pacific, 12 in Australia, 4 on the southeast coast of America, 11 on particular service, 9 on surveying service, and 4 in the training squadron. The naval estimates for 1899 provided for 72,009 officers and seamen for the fleet, 3,700 boys, 4,200 officers and men for the coast guard, 17,807 marines, 198 royal marines, 2,476 officers and seamen on the training ships and on special service, and 6,000 boys in training; total, 106,390 men of all ranks, an increase of 6,340 over 1898.

The newer ships have been built in accordance with the programme embodied in the naval-defense act of 1889 and the programme announced in 1892 and since extended. That act provided for the construction of 70 ships of various classes at a total cost originally estimated at £21,500,000—viz., 10 first-class battle ships, 9 first-class cruisers, 29 second-class cruisers, 4 third-class

cruisers, and 18 torpedo gunboats, all of which have been completed. The battle ships are the Royal Sovereign, Empress of India, Ramillies, Repulse, Resolution, Revenge, Royal Oak, Hood, Centurion, and Barfleur. The first eight, launched in 1891 and 1892, comprising the Royal Sovereign class, have a displacement of 14,500 tons, 18 inches of armor over the vital parts, engines of 13,000 horse power, giving a speed of 17½ knots, and an armament of 4 67-ton guns, with 10 6-inch, 10 6-pounder, and 16 3-pounder quick-firing guns and 7 torpedo tubes. They were the latest development of the Admiral class, heavier by 2,210 tons than the Trafalgar and Nile, the last built and most powerful vessels of the navy before them, with the same main armament as those vessels, but having the heavy guns mounted in barbette towers instead of in close turrets, except the Hood, with a more complete auxiliary armament, the extreme thickness of armor 2 inches less than in their predecessors, the engines more powerful, and the speed four fifths of a knot better. The Centurion and Barfleur were built lighter, having a displacement of 10,500 tons, 12 inches of armor at the water line, and 4 29-ton guns in the barbettes, but their engines were made equally powerful, giving a speed of 18 knots, and the auxiliary armament, consisting of 10 4.7-inch, 8 6-pounder, and 12 3-pounder quick-firing guns, was better disposed. The first ship built under the programme of 1892 was an improved Centurion, the Renown, having a displacement of 12,350 tons, 10 inches of side armor, a main battery of 4 29-ton, or 10-inch, breech-loading guns mounted in two barbettes, an elaborate and powerful secondary armament, consisting of 10 6-inch, 14 12-pounder, and 12 3-pounder quick-firing guns, and engines of 10,000 horse power, developing a speed of 18 knots. The main feature of the new programme was the construction of 9 battle ships of greater size than any afloat, excepting the two largest of the Italian fleet. This is the Majestic class, comprising the Magnificent, Majestic, Prince George, Victorious, Jupiter, Cæsar, Hannibal, Illustrious, and Mars, of 14,900 tons displacement, with only 14 inches of armor at the water line, carrying 4 12-inch, or 40-ton, guns, with 12 6-inch, 16 12-pounder, and 12 3-pounder quick-firing guns and 5 torpedo tubes, and having engines of 12,000 horse power, giving a speed of 16½ knots with natural draught and 17½ knots with moderate forced draught. The heavy guns are mounted in strong armored barbettes, with fixed loading stations and armored shields protecting the revolving platform, and the 6-inch quick firers are protected by heavy armor. These vessels, launched in 1895 and 1896, were followed in 1897 and 1898 by the Canopus class, comprising the Canopus, Ocean, Goliath, Albion, Glory, and Vengeance, of 12,950 tons, with 12 inches of Harvey armor over the vital parts, but carrying also 4 12-inch guns and 12 6-inch quick firers, with only 18 smaller ones, and having engines of 13,500 horse power, so as to obtain a speed of 18½ knots. The Majestic class has been improved in the Formidable, Irresistible, and Implacable, launched in 1898, to which the estimates of 1899 have added the London, Venerable, and Bulwark. The ships have a displacement of 14,700 tons, armor like their predecessors, but of Harvey steel and more powerful, armament the same, but containing the new Vicker 6-inch gun, engines of 15,000 horse power, with Belleville water-tube boilers, intended to give a speed of 18 knots. Under a supplemental programme 4 battle ships of a modified type are being built—the Duncan, Exmouth,

Cornwallis, and Russell—having a displacement of 14,000 tons, with lighter armor and less draught than the others, so as to be able to pass through the Suez Canal without difficulty, and designed for greater speed and a greater radius of action than any battle ships now afloat. Their length is 405 feet, their breadth 75 feet, their mean draught 26 feet. The engines, of 18,000 horse power, give a speed of 19 knots. The chief armament consists of 4 12-inch breech-loading guns in barbettes, 12 6-inch quick-firing guns, and 12 12-pounders.

The first-class cruisers of the programme of 1889 are the *Edgar*, *Endymion*, *Hawke*, *Royal Arthur*, *Crescent*, *St. George*, *Gibraltar*, *Grafton*, and *Theseus*, the three first having a displacement of 7,350 tons, the four next 7,700 tons, and the two last 7,350 tons again, all with engines of 12,000 horse power, making from 19½ to 19½ knots, and carrying 2 22-ton guns, 10 6-inch quick firers, 10 or 12 6-pounders, and 5 3-pounders. These were followed in 1894 and 1895 by the *Eclipse*, *Minerva*, *Talbot*, *Diana*, *Juno*, and *Venus*, and in 1896 by the *Dido*, *Doris*, *Iris*, *Hermes*, *Hyacinth*, and *Highflyer*, of 5,600 tons, engines of 9,600 horse power, capable of making 19½ knots, and an armament of quick firers alone, 5 6-inch, 6 4.7-inch, and smaller ones. In 1895 the *Powerful* and *Terrible* were launched, more formidable than any of the large protected cruisers recently built by other powers, having a displacement of 14,000 tons, an armament of 2 9.2-inch breechloaders and 12 6-inch, 18 6-pounder, and 12 3-pounder quick-firing guns, and engines of 25,000 horse power, with *Belleville* boilers, giving a speed of 22 knots. The *Furious*, *Gladiator*, *Vindictive*, and *Arrogant*, of 5,750 tons, launched in 1896, are an improvement on the *Eclipse* class, having greater coal capacity and better protection, carrying 4 6-inch, 6 4.7-inch, 9 12-pounder, and 8 small quick firers, and with 10,000 horse power, making 19 or 19½ knots. The first vessel of a later type of first-class deck-protected cruisers, the *Diadem*, was launched in 1896, and in the two years succeeding she was followed by the *Andromeda*, *Niobe*, *Europa*, *Spartiate*, *Argonaut*, *Amphitrite*, and *Ariadne*, all of 11,000 tons displacement, with engines of 16,500 horse power, giving a speed of 20½ knots, the first four carrying 16 6-inch quick-firing guns, with 14 12-pounders and 20 smaller ones, the last four replacing four of the 6-inch with 8-inch guns. All the later protected cruisers have 4-inch curved steel decks over the vital parts and numerous water-tight compartments, and their guns are well protected, and by means of the high free board are placed where they can be most effectively used, especially those in the bow and stern. The latest cruisers are armored vessels of still greater speed than the protected cruisers. The *Cressy* and her sister ships, the *Hogue*, *Aboukir*, *Sutlej*, *Euryalus*, and *Bacchante*, have a displacement of 12,000 tons, an armament of 2 9.2-inch guns and 12 6-inch and 14 12-pounder quick firers, and with engines of 21,000 horse power are expected to make 21 knots an hour. A speed of 23 knots is to be attained by armored cruisers ordered still more recently—the *Drake* and three others—which will have a displacement of 14,100 tons, the same armament as the last, except that there are 4 additional 6-inch guns, and engines of 30,000 horse power, giving a speed of 23 knots. The 9.2-inch guns are in armored shields; the large quick firers in casemates. This class has a length of 500 feet, an extreme breadth of 71 feet, and a mean draught of 26 feet. Two other powerful armored cruisers in the supple-

mentary programme for 1899 will have a length of 400 feet, a breadth of 66 feet, a mean draught of 24½ feet, a displacement of 9,800 tons, engines of 22,000 horse power, giving a speed of 23 knots, and a main armament of 14 6-inch quick-firing guns, protected by 4 inches of steel armor. The Government is adding continually to the formidable fleet of destroyers. With three of the latest a speed of 33 knots has been reached, and one fitted with a turbine propeller is designed to make 36 knots or better. The supplemental programme for 1899 provides for 12 new ones. The shipbuilding programme for 1900 includes 2 battle ships, 2 armored cruisers of 9,800 tons, and 3 smaller cruisers.

The number of officers and seamen as provided in the supplementary estimates for 1899 is 110,640, including the coast guard; the number of marines is 18,505. The number of flag officers has been increased from 68 to 80; of captains, from 208 to 245; of commanders, from 304 to 360; of lieutenants, from 1,150 to 1,550; of engineer officers, from 950 to 1,050.

Commerce and Production.—The area sown to grain in Great Britain has decreased from 9,431,490 acres in 1874 to 7,400,335 in 1898, the acreage of green crops from 3,581,276 to 3,133,521 acres, flax from 9,394 to 902 acres, hops from 65,805 to 49,735 acres, small fruits from 74,547 to 69,753 acres, and bare fallow from 660,206 to 352,094 acres, while clover and grass meadows have increased from 4,340,742 to 4,911,189 acres and permanent pastures from 13,178,412 to 16,559,502 acres. The number of horses has increased from 1,311,739 to 1,517,160, cattle from 6,125,491 to 6,622,364, and pigs from 2,422,832 to 2,451,595, while sheep have fallen away from 30,313,941 to 26,743,194 in number. In Ireland the decrease in grain crops has been from 1,901,508 acres to 1,390,941 acres, in green crops from 1,353,362 acres to 1,105,026, in flax from 106,886 acres to 34,489, in bare fallow from 18,056 in 1875 to 16,857 in 1898, and in meadow there has been a decrease to 1,252,889 acres in 1898 from 1,285,357 in 1875, while in permanent pasture the area has grown from 11,189,018 to 11,390,950 acres. The number of horses in Ireland has increased from 468,089 in 1874 to 513,788 in 1898, cattle from 4,118,113 to 4,486,242, sheep have declined from 4,437,613 to 4,287,274, and pigs have increased from 1,096,494 to 1,253,882. The acreage of wheat in Great Britain in 1898 was 2,102,220; barley, 1,903,652; oats, 2,917,760; beans, 232,007; peas, 175,901; potatoes, 524,591; and turnips, 1,772,406 acres. In Ireland the acreage of wheat was 52,862; barley, 158,151; oats, 1,165,295; beans, 1,712; peas, 537; potatoes, 664,912; and turnips, 306,936 acres. The number of farms in Great Britain in 1895 was 520,106, not counting holdings of less than an acre. Nearly three fourths of the land was divided into farms of from 50 to 500 acres, nearly half of it in farms between 100 and 300 acres, though half of the total number of farms were less than 20 acres. Of the total number, 439,405 were rented, 61,014 were owned by the occupiers, and 19,687 were partly rented. Between 1885 and 1895 holdings of less than 5 acres decreased in number from 135,736 to 134,677; those also above 300 acres decreased from 19,364 to 18,787; in those between 100 and 300 acres there was an increase from 79,573 to 81,245, between 50 and 100 acres from 64,715 to 66,625, and between 5 and 50 acres from 232,955 to 235,481. There are 579,133 holdings not exceeding an acre in size. In Ireland there were 576,975 agricultural holdings in 1897, of which 1,563 exceeded 500 acres, 8,245 were be-

tween 200 and 500 acres, 23,041 between 100 and 200 acres, 57,454 between 50 and 100 acres, 74,081 between 30 and 50 acres, 133,308 between 15 and 30 acres, 155,064 between 5 and 15 acres, 62,030 between 1 and 5 acres, and 62,189 not exceeding an acre.

The value of the fish landed on the coasts of the United Kingdom in 1898 was £8,493,498. The quantity, not including shellfish, was 777,916 tons, valued at £7,936,017. The imports of fish for consumption were 103,071 tons, valued at £2,808,381. The value of herrings exported was £1,364,374; of all fish, £2,037,794.

The quantity of iron ore raised in 1897 was 13,787,878 tons, value £3,217,795, containing 4,736,667 tons of iron, value £11,394,779; iron pyrites raised, 10,583 tons, value £4,525; lead ore, 35,338 tons, value £275,409, containing 26,562 tons of metal, value £332,578; tin ore raised, 7,120 tons, containing 4,453 tons of metal, value £291,336; copper ore raised, 7,132 tons, value £18,706, containing 518 tons of metal, value £27,096; bog iron ore raised, 7,124 tons, value £1,781; copper precipitate raised, 220 tons, value £2,320; alum, clay, and shale raised, 13,938 tons, value £2,899, containing 310 tons of metal, value £45,880; sodium, 85 tons, value £12,750; nickel ore, 300 tons, value £300, containing 7 tons of metal, value £1,050; gold ore raised, 4,517 tons, yielding 2,032 ounces, value £7,185; silver extracted, 249,156 ounces, value £28,614; total value of metallic minerals raised, £3,853,389; total value of metals extracted, £12,268,091. The quantity of coal mined was 202,129,931 tons, value £59,740,009; clays, 12,705,106 tons, value £1,453,128; sandstone, 4,904,109 tons, value £1,524,700; slate, 609,194 tons, value £1,649,576; limestone, 11,003,524 tons, value £1,155,998; salt, 1,903,493 tons, value £620,898; oil shale, 2,223,745 tons, value £555,936; granite, 1,847,323 tons, value £552,604; basalt, etc., 2,355,554 tons, value £441,391; chalk, 3,858,448 tons, value £163,595; gravel and sand, 1,356,787 tons, value £111,332; gypsum, 181,385 tons, value £66,978; arsenic and pyrites, 17,302 tons, value £85,529; barytes, 22,723 tons, value £24,117; ocher, 14,422 tons, value £12,997; other minerals, 119,307 tons, value £33,629; total value of nonmetallic minerals, £68,190,412. The total value of minerals, including metallic ores, was £72,043,801, of which £50,285,601 represent the produce of English mines, £11,778,614 of Welsh, £53,116 of Manx, £9,727,402 of Scotch, and £199,068 of Irish. The number of persons employed in and about the mines was 728,713, of whom 558,305 worked underground. The coal exports in 1897 were 37,096,918 tons, valued at £16,654,955. The imports of iron ore, exclusive of 467,318 tons of purple ore, in 1897 were 5,968,680 tons; value, £4,436,004. The exports of iron ore were only 2,588 tons. Of the imports, 5,067,148 tons came from Spain. The 380 blast furnaces in operation in 1897 smelted 21,327,013 tons of ore, making 8,796,465 tons of pig iron. The exports of pig and puddled iron were 1,201,104 tons; imports, 158,003 tons. The exports of bar and angle iron were 167,688 tons; of railroad iron, 782,045 tons; of wire, 51,472 tons; of plates for tinning, 58,648 tons; of tin plates, 271,230 tons; of cast and wrought iron, 374,982 tons; of hoops and plates, 345,947 tons; of old iron, 86,833 tons; of unwrought steel, 299,719 tons; of wrought steel and iron, 46,438 tons; quantity of iron and steel exported, 3,686,106 tons. The imports of copper ore and regulus in 1897 were 171,186 tons; of unmanufactured copper, 64,360 tons; of lead, 167,441 tons; of tin, 26,786 tons; of zinc, 69,884 tons.

The quantity of raw cotton imported in 1897 was 1,724,160,368 pounds, of which 225,070,272 pounds were re-exported, leaving for home consumption 1,499,090,096 pounds. The imports of wool were 740,748,963 pounds, of which 371,502,812 pounds were re-exported and 369,246,151 pounds retained for home consumption. Of the imports, 491,310,839 pounds came from Australasia. The cotton manufactures of the United Kingdom amount to about £100,000,000 a year, woolen manufactures to £50,000,000, and linen manufactures to £20,000,000. The capital employed in the textile industries is about £200,000,000, and they support a laboring population of over 5,000,000. The average value of the cotton exports for three years ending with 1898 has been £66,000,000; of woolen exports, £23,000,000; of linen exports, £6,000,000; total textiles, £95,000,000. The average consumption of raw cotton has been 1,668,000,000 pounds; of wool, 624,000,000 pounds; of flax, 236,000,000 pounds. The imports of cotton in 1898 were 2,128,000,000 pounds; re-exports, 203,000,000, leaving for home consumption 1,925,000,000 pounds; actual consumption, 1,735,000,000 pounds. The imports of wool in 1898 were 694,000,000 pounds, the quantity clipped from imported sheepskins 26,000,000 pounds, the domestic production 139,000,000 pounds, the quantity of goats' hair imported 24,000,000 pounds, and the import of woolen rag 68,000,000 pounds, making the total supply of wool, hair, and shoddy 951,000,000 pounds, of which 283,000,000 pounds of foreign and 12,000,000 pounds of domestic wool were exported, leaving for home consumption 656,000,000 pounds. The imports of flax and tow were 218,000,000 pounds in 1898, and the domestic production was 22,000,000 pounds, making a total of 240,000,000 pounds, of which 13,000,000 pounds were exported, leaving 227,000,000 pounds for home consumption. The exports of cotton piece goods were 5,216,000,000 yards; of woollens, 160,000,000 yards; of linens, 148,000,000 yards; total piece goods, 5,524,000,000 yards. The exports of cotton yarns were 247,000,000 pounds; of woolen yarns, 59,000,000 pounds; of linen yarns, 17,000,000 pounds; total yarn exports, 323,000,000 pounds. The value of cotton manufactures exported was £64,900,000; of woolen manufactures, £20,100,000; of linen manufactures, £5,300,000; total exports of textiles, £90,300,000.

The total value of merchandise imports in 1898 was £470,604,198, against £451,604,960 in 1897. About 7 per cent. of the imports are subject to duty. The exports of articles of British produce and manufacture in 1898 amounted to £233,390,792, against £234,219,708 in 1897; exports of foreign and colonial produce, £60,619,199, against £59,954,410; total value of imports and exports of merchandise, £764,614,189, against £745,203,078 in 1897, £738,118,118 in 1896, £702,522,065 in 1895, and £682,130,677 in 1894. The share of England and Wales in the total trade of 1898 was £676,376,000; of Scotland, £57,811,000; of Ireland, £11,016,000. The imports of live animals were £10,385,676 in value, and exports £1,105,170. The imports of articles of food and drink were £166,894,715 free of duty and £27,028,560 dutiable, and the domestic exports were £21,084,326. The imports of tobacco were £3,877,038. The imports of metals were £21,850,656; of chemicals, dyestuffs, and tanning substances, £5,483,230; of oils, £8,357,177; of textile materials, £71,268,397; of raw materials for various industries, £52,228,035; of manufactured articles, £87,119,504; of miscellaneous articles, £14,797,902; imports by parcel post, £1,313,308.

The exports of yarns and textile fabrics of British manufacture were £94,512,109 in value; of metals and metal manufactures, except machinery, £32,791,044; of machinery, £18,380,076; of apparel and articles of personal use, £9,573,380; of chemicals and medicinal preparations, £8,373,099; of all other manufactured or partly manufactured articles, £33,324,966; exports by parcel post, £2,139,660. The quantity of cereals and flour imported in 1898 was 190,365,323 hundredweight, valued at £62,899,258. The imports of wheat, excluding flour, were 15,240,000 quarters in 1898, compared with 14,659,600 quarters in 1897, 16,361,600 in 1896, 14,063,700 in 1890, 12,752,800 in 1880, and 7,131,100 in 1870. The quantity of flour was 21,017,109 hundredweight, of which 17,445,890 hundredweight came from the United States. Of wheat, 37,804,300 hundredweight was imported from the United States, 9,537,900 from India, 6,232,500 from Russia, 5,012,030 from Canada, 4,034,700 from the Argentine Republic, 807,300 from Chili, and the remainder from Germany, Bulgaria, and Australia. The imports of potatoes in 1898 were 6,752,728 hundredweight; of rice, 4,546,423 hundredweight; of bacon and hams, 7,683,374 hundredweight; of fish, 2,979,824 hundredweight; of refined sugar, 16,419,397 hundredweight; of raw sugar, 14,692,906 hundredweight; of butter, 3,209,093 hundredweight; of margarine, 899,875 hundredweight; of cheese, 2,339,452 hundredweight; of beef, 3,309,166 hundredweight; of preserved meat, 573,947 hundredweight; of fresh mutton, 3,314,003 hundredweight; of cattle, 569,066 head; of sheep and lambs, 663,749; of spirits for consumption, 7,064,952 gallons; of wine, 16,616,645 gallons. The imports of tea for consumption were 235,414,105 pounds. The tea imports in 1897 were 231,399,774 pounds, 50 per cent. of which came from India and 36 per cent. from Ceylon, while China, which furnished 81 per cent. of the tea consumed in the British Islands in 1878, contributed less than 11 per cent.

The values of the imports of merchandise and of the exports of articles of British produce and manufacture to the various British colonies in 1897 are given in the following table:

COUNTRIES.	Imports.	Exports.
India.....	£24,813,099	£27,393,091
Australasia.....	29,362,129	21,310,894
British America.....	19,538,998	5,476,191
South and East Africa.....	5,131,196	13,665,561
Straits Settlements.....	3,643,294	2,496,396
Ceylon.....	4,698,378	1,081,481
West Africa.....	2,153,412	1,763,461
British West Indies.....	1,453,099	1,784,185
Hong-Kong.....	606,314	1,975,374
Channel Islands.....	1,327,111	1,092,216
British Guiana.....	523,566	530,700
Malta.....	74,908	749,707
Mauritius.....	94,548	264,982
All other possessions.....	609,036	1,137,455
Total.....	£94,018,933	£90,675,063

The principal articles of British produce and manufacture exported in 1898 were cotton piece goods of the value of £55,986,598; cotton yarn, £8,921,427; woolen piece goods, £13,702,307; woolen and worsted yarn, £4,625,898; linen piece goods, £4,388,178; linen yarn, £885,965; jute manufactures, £1,853,744; jute yarn, £468,372; apparel and haberdashery, £6,197,946; iron and steel and manufactures thereof, £22,640,092, comprising pig iron for £2,736,804, bar, bolt, rod, and angle iron for £995,625, railroad iron of all sorts for £3,016,258, wire for £772,844, tin plates for £2,753,708, hoops, sheets, and plates for £3,313,937, cast and wrought iron of all sorts for £4,726,013, old iron for £240,210, and steel or

steel and iron manufactures for £4,084,693; hardware and cutlery, £1,989,001; copper, £2,798,746; machinery, £18,380,076; coal, coke, and patent fuel, £18,134,690; chemical products, £8,373,099.

The value of goods transhipped in transit was £10,752,108 in 1897. The imports of gold coin and bullion in 1898 were £43,721,460, and exports £36,590,050; the imports of silver were £14,677,799, and exports £15,023,651.

The values of the imports from foreign countries and of the exports to them of articles of British produce and manufacture in 1897 are given in the following table:

FOREIGN COUNTRIES.	Imports.	Exports.
United States.....	£118,041,627	£20,994,631
France.....	53,846,993	13,818,819
Germany.....	26,189,469	21,602,423
Netherlands.....	23,971,316	8,854,696
Russia.....	22,284,365	7,513,166
Belgium.....	20,885,812	8,231,688
Spain.....	18,195,660	8,330,747
Denmark.....	10,968,397	6,083,195
Egypt.....	9,294,240	4,435,101
Sweden.....	9,089,149	3,565,429
Turkey.....	6,150,163	6,454,397

Navigation.—The number of vessels engaged in foreign commerce entered at British and Irish ports during 1897 was 64,047, of 44,923,000 tons, of which 39,272, of 32,191,000 tons, were British and 25,375, of 12,732,000 tons, were foreign. The number cleared was 64,778, of 45,276,000 tons, of which 39,054, of 32,235,000 tons, were British and 25,724, of 13,040,000 tons, were foreign. The tonnage of vessels entered with cargoes was 34,636,000, of which 25,340,000 tons were British and 9,296,000 tons were foreign. The tonnage cleared with cargoes was 39,308,000, of which 28,101,000 tons were British and 11,207,000 tons foreign. The total tonnage entered and cleared was 73,944,000 tons, of which 53,441,000 tons were British. Of the foreign tonnage entered and cleared, amounting to 25,772,318 tons with cargoes and in ballast, Norway had 6,362,542 tons, Germany 4,046,221 tons, Denmark 2,579,530 tons, Sweden 2,531,342 tons, the Netherlands 2,522,509 tons, France 2,112,648 tons, Spain 1,471,597 tons, Belgium 1,352,450 tons, the United States 710,950 tons, Russia 688,678 tons, Italy 501,526 tons, and Austria-Hungary 273,942 tons. The tonnage en-

tered and cleared at the port of London was 15,197,659 tons; at Cardiff, 11,990,609 tons; at Liverpool, 11,261,051 tons; at Newcastle, 5,210,424 tons; at Hull, 4,140,982 tons; at Glasgow, 3,421,386 tons; at Southampton, 3,008,209 tons; at Newport, 2,618,710 tons; at North and South Shields, 2,172,313 tons; at Middlesboro, 1,996,083 tons; at Sunderland, 1,943,967 tons; at Leith, 1,831,245 tons; at Grimsby, 1,723,666 tons; at Swansea, 1,600,869 tons; at Kirkcaldy, 1,570,203 tons; at Grangemouth, 1,483,116 tons; at Bristol, 1,091,316 tons; at Manchester, 870,921 tons; at Hartlepool, 852,558 tons; at Belfast, 685,400 tons.

The number of vessels registered as belonging to the United Kingdom on Jan. 1, 1898, was 20,601, of 8,953,171 tons, of which 11,911, of 2,589,570 tons, were sailing vessels and 8,590, of 6,363,601 tons, were steamers. The number of vessels engaged in the home and foreign trade was 15,423, of 8,925,813 tons. The number of seamen employed was 240,931, of whom 33,898 were foreigners. The total number of vessels belonging to the British Empire was 34,902, of 10,416,442 tons. The number of vessels built and first registered during 1897 was 1,054, of 482,267 tons, of which 518, of 66,729 tons, were sailing vessels and 536, of 415,538 tons, were steamers. Of the total number of vessels belonging to the United Kingdom, 6,871 sailing vessels, of 434,125 tons, and 2,906 steamers, of 432,839 tons, were employed in the home trade and the coasting trade between the mouth of the Elbe and Brest; 180 sailing vessels, of 22,645 tons, and 313 steamers, of 256,223 tons, were engaged partly in the home trade and partly in the foreign trade; and 1,534 sailing vessels, of 2,016,247 tons, and 3,619 steam vessels, of 5,763,734 tons, were engaged in the foreign trade alone.

Railroads, Posts, and Telegraphs.—The total length of railroads open to traffic in the United Kingdom on Jan. 1, 1898, was 21,433 miles, of which 14,818 miles were in England and Wales, 3,447 miles in Scotland, and 3,168 miles in Ireland. The paid-up share and loan capital amounted to £1,089,765,000. The number of passengers carried during 1897 was 1,030,420,201, exclusive of holders of season tickets. The receipts from all sources were £93,737,054, of which £40,518,064 came from passengers and £47,857,172 from freight. The working expenses were £53,083,804, 57 per cent. of the gross receipts. There were 1,031 miles of tramways on June 30, 1897, the receipts of which for the previous year were £4,235,533 and the expenses £3,198,444, the number of passengers having been 788,569,669.

The number of letters that passed through the British post office during the year ending March 31, 1898, was 2,012,300,000, of which 1,711,200,000 were delivered in England and Wales, 177,400,000 in Scotland, and 123,700,000 in Ireland, being 50 per head of population for the whole United Kingdom, 55 per head for England and Wales, 42 per head for Scotland, and 27 per head for Ireland. The number of postal cards carried by the post office in 1898 was 360,400,000; book packets, 727,300,000; newspapers, 150,900,000; parcels, 67,800,000; money orders, 11,128,258, for the total amount of £32,114,579, of which 9,429,609, for £27,494,145, were inland orders; of postal orders, 71,380,975, for the gross amount of £26,014,583. The receipts of the postal service were £12,420,376 and the expenses £8,689,713, leaving a net revenue of £3,730,663. The telegraph receipts were £3,071,723 and expenses £3,381,261, leaving a deficit of £309,538, not including £298,888 interest on the debt created for the purchase

of the telegraph lines in 1870. The telegraph lines had on March 31, 1898, a total length of 41,516 miles, with 280,578 miles of wire. The number of messages sent during the year was 83,029,999, of which 69,961,350 were sent in England and Wales, 8,463,393 in Scotland, and 4,605,256 in Ireland.

The Session of Parliament.—The fifth session of the fourteenth Parliament of the Queen's reign was opened by commission on Feb. 7, 1899. The royal speech referred to the establishment of order in the conquered provinces of the Soudan by British and Egyptian officers after the subjugation of the Khalifa's dominion by Anglo-Egyptian troops, the delegation of the government of Crete by the powers to Prince Georgios of Greece, the peace conference at The Hague, and the conference to consider the dangers of anarchist conspiracy that was summoned after the assassination of the Empress of Austria, with the conclusions of which the British delegates were unable to concur, though some amendments in the existing British laws upon the subject would be submitted; also to the West Indian hurricane, to the plague in India and the abundant harvests and reviving trade of that empire, and to the recognition by Cape Colony of the principle of common responsibility for the naval defense of the empire as shown by the offer of a permanent annual contribution. The legislative programme comprised a bill for more fully organizing the government of the metropolis; the re-introduction of a measure for the establishment of a board for the administration of primary, secondary, and technical education in England and Wales; the resubmission of provisions for simplifying the process of private legislation for Scotland; and a measure for enabling local authorities to assist the occupiers of small dwellings in the purchase of their houses. In the secondary rank were promised bills for encouraging agriculture and technical instruction in Ireland, and for the relief of the tithe rent charge in that country; for providing a more complete distribution of water supply in cases of emergency in the metropolis; for the regulation of limited companies; for the prevention of the adulteration of articles of food; for controlling the contracts of money lenders; for amending the factory acts in certain respects; and for amending the law in respect to agricultural holdings. The Irish rent-charge relief bill was dropped almost immediately after its introduction, and the factory acts amendment bill and the agricultural holdings bill were not brought in at all, while the companies bill and the money lenders bill, after being carefully considered in the upper house, were sacrificed to more pressing business in the House of Commons. The London government bill, the water companies bill, the Scotch private legislation bill, and the food and drugs adulteration bill were the first ones advanced to a second reading. The debate on the address lasted two weeks, but the Government could not be vigorously assailed on any point by the weak forces of the Opposition. Samuel Smith raised the question of lawlessness in the Church, and his amendment was resisted by Arthur Balfour, the leader of the house, who declared it premature and prejudicial to the legitimate authority of the bishops, which view was sustained by 221 votes against 80. The Welsh as well as the Irish Nationalists made the usual plea for their cause. Mr. Redmond's declaration in favor of home rule for Ireland drew from Sir Henry Campbell-Bannerman, who had succeeded Sir William Vernon Harcourt as leader of the

Opposition, the chilling announcement that the Liberal party was not bound to give precedence to that policy. A majority of 300 against 43 condemned the home-rule amendment, and for the remainder of the session the anti-Parnellite wing of the Irish Nationalists maintained a sullen silence, nor were the other groups much more active, except the individual critics and orators who assailed the foreign and colonial policy of the Government. The prospect of union among the Irish sections seemed farther than ever. The proposal to introduce automatic couplings on British railroads, urged by Mr. Madison, was at first accepted by the President of the Board of Trade, who was willing to introduce a bill on the subject; but experts criticised the measure so severely that it was withdrawn, in order that a thorough inquiry might be instituted.

In debating the heavy supplementary estimates for naval and military purposes, the Opposition censured the employment of the army in South Africa, Uganda, and the Soudan, and the raising of money to build defensive works by loans. Sir Henry Fowler, who conducted the budget debate for the Opposition, was defeated on his motion to reject the budget by 280 votes against 155. The Chancellor of the Exchequer had strong support for his reduction of the sinking fund from financiers who deprecated a too rapid redemption of the public debt, apart from the exigencies of the budget. The increase of the wine duties, however, excited so much resentment in France and Spain, and especially in Australia, where the infant wine industry would be strangled unless colonial wines were excepted, that the Chancellor of the Exchequer consented to a considerable mitigation in the pressure of the new duties, seeking a partial indemnification in a surtax on spirits imported in bottles.

The London government bill aimed at supplanting or curbing the power of the London County Council, often obnoxious and hostile to the party in power, by creating subordinate municipalities, generally corresponding to those existing in provincial towns, with wider powers than those committed to the existing vestries and district boards. The city of London was left untouched. The authority of the London County Council was not directly interfered with, yet it was provided that there might be a transfer of power to the new bodies or from them to the council. The areas to be incorporated were in the main those recognized in existing divisions, though some were left to be delimited by boundary commissioners. Westminster, enlarged so as to embrace the whole of the old parliamentary city, was placed apart in an independent position. The limits of the boroughs were to range between a population of 100,000 or a ratable value of £500,000 and a maximum population of 400,000. In the metropolis the opposition to the measure was intense, not only from the Radicals, who sustain and control the county council, but from the classes that have been influential in the vestries. In the House of Commons, however, no effective resistance could be made to the bill, which was piloted through by Mr. Balfour. Herbert Gladstone was supported by Mr. Asquith in opposing the second reading, but only with reserve by Sir Henry Campbell-Bannerman, and his amendment was lost by 245 votes against 118. In the committee of the whole Sir Lawson Walton could only muster 49 votes in support of his proposal to divide the greater Westminster into two boroughs. On minor issues the Government made concessions. Changes were made in the areas of the boroughs, and the new bodies were

given the option of having annual or triennial elections. On both sides of the house, and especially on the Liberal side, members advocated the principle of making women eligible to municipal offices, and the Government agreed to leave this an open question, for the ministers themselves were divided in opinion, Mr. Balfour, in fact, being in favor of the admission of women, as well as the Prime Minister. When a motion was made that neither sex nor marriage should act as a disqualification, it was decided by 179 votes to 77 that women should not be eligible to the office of mayor, but might be elected councilors or aldermen. Another amendment was voted immediately afterward, by 155 votes against 124, to alter this decision by excluding them from the aldermanship; but this was reversed later when, on the motion of Mr. Courtney, the provision was restored, by 196 votes to 161, allowing women to hold the office either of councilor or alderman. In the House of Lords, however, on the motion of Lord Dunraven, against which the Marquis of Salisbury made a strong plea, while the Earl of Halsbury and the Duke of Devonshire opposed his views with equal warmth, the exclusion of women from all the offices was voted by a majority of 182 against 68, although by existing statutes women had the right to sit on the London vestries. When the amendment of the Lords was considered in the lower house Mr. Courtney endeavored to retain the right of women to sit as councilors, giving up their claim to be admitted to the mayoralty or aldermanship; but Mr. Balfour announced the decision of the Government not to enter into a conflict with the House of Lords on this issue, and he was supported by a majority of 246 votes to 177. The act makes no immediate inroad into the authority or position of the central governing body. The existing local administrative bodies, such as vestries, boards, trustees, and commissioners, having ill-defined functions and areas of jurisdiction varying greatly in size, are all swept away at once, their place being taken by the borough councils, consisting of the mayors, aldermen, and councilors of the boroughs into which the whole of the metropolitan area, exclusive of the city of London, is divided. These councils will be intrusted immediately with the municipal and sanitary work hitherto performed by those in co-ordinate local authorities, and it is hoped that enough dignity and honor will attach to the new offices to attract men of a higher class than those who have usually sat on the vestries. One of the duties transferred to the councils is that of maintaining the streets, but with police, gas, and water they have nothing to do.

Measures not in the ministerial programme were introduced at various periods of the session, some of them very late. The Niger Company bill, the colonial loans bill, and the telephone bill were among the most important; but the chief of these, taking rank only after the London government bill in the business of the session, was the tithe-rent-charge rating bill, which was brought in early. Although the Government had made promises to the clergy to bring in a measure to relieve them from the unequal system of rating, the bill was not mentioned in the Queen's speech for the reason, as alleged, that it was desirable to deal with the subject in connection with the budget. No provisions were made in the budget, however, for the promised relief. It was not until June 22 that a bill was laid before the house for the discharge out of the annually increasing imperial contribution to the local taxation account of half the rates pay-

able by clergymen on the tithe rent charge attached to their benefice. The amount to be provided for the year was computed at £87,000. The introduction of this subject afforded the opportunity to discuss what was called the crisis in the Church. Sir William Harcourt, after resigning the leadership of the Liberal Opposition, threw himself into the campaign against the ritualists, devoting his controversial powers and legal acumen to exposing breaches of ecclesiastical law committed by the High Church clergy and condoned or permitted by the episcopacy. The conduct of the extreme ritualists was brought up for discussion several times, but the ministers stayed off debate. The primate pleaded for more time to introduce discipline and restore harmony in the Church, and the House of Lords accepted this plea when, at the beginning of the session, the Bishop of Winchester called attention to the attacks made by Sir William Harcourt and others on the ritualists, and his scathing strictures on clerical anarchy and the apathy of the bishops who saw the rubrics violated and their own authority ignored. After the Easter intermission Mr. Gedge moved a resolution of censure against the English Church Union, which had issued a declaration practically asserting the right to interpret the laws of the Church independently of episcopal injunctions or the decisions of ecclesiastical courts. His amendment was withdrawn in favor of one deploring the lawlessness of a section of the clergy and recommending obedience to the bishops; yet to this the house insisted on adding, by a majority of 200 to 14, an affirmation of the binding force of the law as laid down by the courts having jurisdiction in ecclesiastical affairs. Mr. Balfour condemned the refractory behavior of Lord Halifax and his allies in the High Church party, and urged that the true interests of the Church depended on a policy of moderation and comprehension. The Protestant or Low Church party favored a Church discipline bill drawn up by some of its members, which affirmed the royal supremacy over the Church, abolished the power of the bishops to quash prosecutions, and substituted for imprisonment as a punishment for ecclesiastical offenses that of the deprivation of the clerical office. This bill came up for a second reading, when the Attorney-General killed it by an amendment declining to create new offenses or to supersede the episcopal authority, while declaring that if the efforts of the bishops to maintain discipline were not speedily effectual further legislation would become necessary. The bill and the amendment were subjects of a heated discussion, in which religious affiliations obliterated party lines, except that Sir William Harcourt led the attack and denounced the bishops, while Mr. Balfour was their apologist, though accepting the view that it is necessary to preserve the character of the national Church as remodeled and purified at the Reformation. The Attorney-General's amendment was finally carried by 310 votes to 156. The attack on the tithe bill was more vigorous and determined on account of the passions raised by this controversy over ritualism. Mr. Asquith and Sir William Harcourt were its most vigorous assailants, and Sir Henry Fowler and Sir Henry Campbell-Bannerman sustained them in their contention that this gift out of the imperial funds was tantamount to a new endowment of the Church, and, like other grants made by the Tory Government in relief of local taxation, was a dole to the rich and avaricious made at the expense of the general body of taxpayers. One of the Liberal Union-

ists, Mr. Whiteley, a member for Stockport, succeeded from the ministerial party and went over to the Liberals on this ground. The bill was carried to a second reading by 314 votes to 176, debated in committee, and finally carried through without amendment, after one long night session, by a majority of 182 against 117. It had the authoritative report of an investigating commission as its basis, and in the House of Lords the Prime Minister overcame the slight opposition that was offered by portraying the hardships under which clerical tithe owners suffered and the illogical system of which they were the victims.

The Board of Education bill was introduced in the upper house by the Duke of Devonshire, and when it passed the second reading in the lower house it was referred to a standing committee, a course that was taken likewise with the food and drugs bill, the small houses bill, the Irish agricultural and technical education bill, and other ministerial measures. The new Board of Education created by this act is a body constituted like the Board of Trade, having a parliamentary president and secretary. It has powers of inspection and examination over secondary schools of every kind, but they are mandatory only in the case of schools under the endowed schools act. In the case of schools maintained for youth of the upper or middle classes of society no grants will be made out of the public funds. Registers of teachers are to be kept under regulations framed on the advice of a consultative committee, representing the universities and other teaching bodies. The aristocratic friends of the public-school system, who feared that the time-honored institutions in which the character distinguishing the Englishman of birth and breeding is largely formed would be revolutionized and the education of all classes made to conform to a modern and scientific but leveling and vulgarizing system, accepted the bill because it does not interfere forcibly with the cherished traditional methods and customs of English higher education. Thoroughgoing educational reformers accepted it as a tentative measure, an initial step in the right direction, after having drawn from the ministers the admission that the bill was not intended to be a final solution, but only an experimental beginning. Some of the Conservatives took alarm at the powers committed to the responsible minister, dreading lest the bill should take away the safeguards now imposed in the case of the Charity Commissioners, and place the schools at the mercy of a partisan or innovating minister; but their fears were not shared by many, and were made light of by the Government speakers. Mr. Long's adulteration of food and drugs bill, notwithstanding the examinations and elucidations of the standing committee, was the subject of a long discussion, and the restrictions on the trade in margarine and all clauses imposing responsibility on retailers for the purity and quality of their goods met with strong opposition. The repugnance of British legislators to placing restraints on the freedom of trade and contract was shown also in the deliberations on the money-lending bill, which was introduced in the upper house by Lord James. The parliamentary investigation of the methods of usurers revealed an enormous amount of poverty and despair caused by the extortions that professional money lenders practice under the shield of the law. The bill placed restrictions on their common deceptions and disguises, such as doing business under several different names. It also sanctioned the principle of limiting the amount of interest and that of reopening and

revising contracts. These features, although the serious and widespread evils they were intended to remedy were recognized by all and the money lenders themselves had no champions in Parliament, were so opposed to the accepted economic theories that the Government yielded to the criticisms made on both sides of the house and withdrew the bill.

The Irish agricultural and technical-education bill creates a department of the Irish administration for carrying out its provisions, having a vice-president under the Chief Secretary and an annual fund, apart from parliamentary grants, of nearly £170,000, derived from the Irish Church surplus and savings coming from the reduction of the judiciary. The Irish Nationalists were at first inclined to criticise the measure, but when they saw that it was popular in Ireland they gave it a qualified approval. The Scotch private legislation bill authorizes commissions, appointed by the chairmen of committees of both houses of Parliament, to conduct local inquiries into the nature and value of proposed private bills. Mr. Balfour gave a pledge to strengthen the control of Parliament over Scotch private business, and consequently changes were made in the bill, providing that orders made by the Scotch Secretary shall not be valid until they have been confirmed by Parliament, and that the commissioners appointed to conduct inquiries shall be members of Parliament whenever they can be found in either house willing and available. The telephones bill was a much-debated measure. The telephone system of Great Britain has had a belated development, and as far as it has gone it is in the hands of the National Telephone Company. A large majority of the public wanted the business taken away from this unpopular and unaccommodating monopoly. The precedent established when the telegraphs were nationalized of paying for the franchise at the market rate of the shares was a bar to the expropriation of the company and the assumption of the telephone business of the country by the postal and telegraph department of the Government except at the cost of an annual deficit. The company was willing to sell out to the Government only as a going concern, and the ministry would not sanction forcible expropriation on any other terms. The post office would have to begin, therefore, by paying an enormous sum and incurring a great debt, only to receive in return a vast quantity of inferior or useless apparatus. As a compromise the Government decided to grant to municipalities the right which they were demanding from all parts of the country to set up telephone exchanges of their own. Many of the municipalities refused to give the company the right to string new wires, and thus brought pressure on the Government to obtain its sanction for municipal telephones. As the ministers were unwilling to confer on the company the rights of eminent domain, they finally gave in to the popular demand and brought in the bill permitting this extension of the rights of municipal trading and ownership. The municipalities may conduct the business themselves or may transfer it to a local company, and the different municipal systems may establish communication with each other, and thus compete with the monopoly in long-distance as well as local traffic. The shareholders of the company, however, displayed no alarm on account of the threatened competition. The factory acts amendment bill was postponed till another year at the suggestion of Sir Charles Dilke, who desired a full investigation of the working of existing acts with

a view to amending and consolidating them in a comprehensive measure. Mr. Chamberlain was challenged by the Opposition to introduce the promised legislation to give pensions to superannuated workmen. Some of the Radicals were eager to advance such a scheme themselves, and every year as the parliamentary period drew nearer to a close their demand grew louder that the Unionist leader should redeem the pledge that was given to the people by his immediate followers and in his name before the last elections. The House of Commons referred the question to a select committee, appointed to consider and report upon the best means of improving the condition of the aged deserving poor. The adverse report of a royal commission strengthened the opinion of several of his ministerial colleagues against such legislation. It was impossible, therefore, for him to redeem that promise; but another of the projects included in his programme of social legislation he did give effect to by introducing and passing a small-houses bill, to give to British workmen facilities for becoming the owners of their houses, analogous to the facilities granted to Irish cottiers under the land-purchase act. Powers under Mr. Chamberlain's act were conferred upon municipalities, but these were limited and hedged in with safeguards to prevent waste or loss of public funds and unfair competition with the building societies, of which there are 2,300, and £100,000,000 at least have been advanced by them for the construction of dwellings. Where the rate reaches a penny a municipality must cease making advances for five years. The metropolitan water companies bill, intended to give to the companies that supply London with water power to make further provision against a water famine, became law early in the session. The limited liability companies bill, which has been before Parliament before, was once more allowed to lapse, although the House of Lords had expended much time and trouble upon it. A metropolitan street-traffic bill and a Scotch parish churches bill were sacrificed also. The abandonment of the Irish tithe-rent-charge bill was resented by the Irish landlords, because the Government had promised the relief afforded by that measure.

Private bills had little chance when Mr. Balfour a little earlier than in other years bespoke for Government business the time allotted to them by the rules of Parliament. A service-franchise bill was intended to restore the right of suffrage to a considerable class of people who, after being allowed to register and vote for ten years from the passing of the representation of the people act in 1884, were excluded by a judicial decision given in the case of a policeman. He was declared to be not entitled to vote under the service franchise because his dwelling house returned under the act was a cubicle, and the same ruling applies to attendants in hospitals and asylums, warders of workhouses, firemen, many shop assistants, stablemen, grooms, gardeners, and caretakers. A Scotch local veto bill proposed to give the inhabitants of any electoral district the power by a majority vote to shut up all or any part of the public houses in the district without appeal and without compensation. A bill received the approval of the Commons, but was not accepted by the Government, the purpose of which was to raise the earliest age at which children can be taken from school from eleven to twelve years. The Lord Chief Justice, Lord Russell, of Killowen, raised a subject that awakened wide interest by bringing forward in the upper house a bill for the pre-

vention of corruption, prohibiting the taking of secret commissions in trade or the professions, as by buying or selling agents who place orders, mechanics who recommend goods to their employers, clergymen who induce parents to send their children to certain schools, physicians who send their patients to particular apothecaries. A bill to raise the flash point of petroleum was rejected by a majority of 244 to 159, because the effect would be, and the probable object was, to shut out American kerosene from the British market for the benefit of the Russian monopoly and the Scotch refiners. In 1871 Parliament prohibited the storing in populous places of oil giving off an inflammable vapor at 100° F. In 1879 the law was changed and a new and more certain test was applied. Instead of testing by bringing a flame close to the surface of oil in an open vessel raised to the temperature of 100°, the new law prescribed the testing of oil in a closed vessel, and decreed that any oil flashing under 73° should be subject to storage regulations. This was intended to be equivalent to the open test; but the bill that was offered in Parliament, after the subject had been considered by committees in previous sessions, raised the close test to 100°, and prohibited the use of oil having a lower flash point in lamps, whereas in previous legislation Parliament had merely prescribed regulations for the storage of oil in bulk.

A bill to compel shopkeepers to provide seats behind the counter for their female assistants was introduced in the House of Commons by Sir John Lubbock and in the House of Lords by the Duke of Westminster, supported by the Bishop of Winchester, the subject having been under public discussion for several years. The bill was not approved by the Government, but it passed through the lower house with very little discussion. In the upper house the Prime Minister argued against the measure that it would be likely to injure rather than benefit the class that it was intended to help, that shopkeepers who might be induced by public opinion to provide the seats would consider it a vexatious infringement on their liberty, especially because it subjected their places of business to the visits of inspectors, and would be likely to dismiss their saleswomen and employ men. He consented, however, to its being sent to a committee, and on the recommendation of this committee it passed the House of Lords in the teeth of Lord Salisbury's protests by a vote of 73 to 28. The University of London act of 1898 was supplemented by some amendments.

A bill for taking under the direct administration of the Crown the vast territories embraced in the protectorate previously acquired and administered by the Royal Niger Company was opposed by Sir Henry Campbell-Bannerman, and the financial provisions for reimbursing or rewarding the chartered company were much criticised. The naval works bill and the military works bill were warmly discussed from both the political and the financial point of view. A colonial loans bill enables colonies that are under the administrative control of the Colonial Office—to wit, the Gold Coast, Lagos, the Niger Coast Protectorate, Sierra Leone, Jamaica, Trinidad, Barbadoes, St. Vincent, Mauritius, the Seychelles, the Malay states, and Cyprus—to raise with an imperial guarantee certain specified loans for particular purposes. The situation in South Africa was the subject of many attempts to extract information from Mr. Chamberlain, but as it grew graver the leaders of the Liberal party evinced practical accord with the demands of Sir Alfred Milner and

the stand taken by the Government. Only Mr. Courtney, some of the advanced Radicals, and the Irish Nationalists dissented vigorously from Mr. Chamberlain's policy, though Sir Henry Campbell-Bannerman expressed the view that there was no sufficient ground for war.

The departure of the Government from the policy of the open door in China to the extent of adopting a sphere of influence coextensive with the Yangtse basin was the subject of strictures from Lord Charles Beresford as well as from the Radical politicians, who, under the lead of John Morley, condemned also British policy in the Soudan and denounced as barbarous the desecration and destruction of the Mahdi's tomb, which Lord Kitchener had ordered as a political and military measure.

There were 98 bills that passed both houses. Parliament was prorogued on Aug. 9. In the Queen's speech the results of the peace conference summoned by the Emperor of Russia were described as falling short of its lofty aims, yet calculated to diminish the frequency of war by the institution of a permanent tribunal of arbitration and to mitigate its horrors by the extension of the Geneva convention. The Anglo-French African agreement was alluded to as having become necessary in respect to the Nile valley after the success of the Anglo-Egyptian army. The railroad agreement with Russia in respect to China was also mentioned. In regard to the South African question, it was declared that the position of British subjects in the South African Republic was inconsistent with the promises of equal treatment on which the grant of internal independence to that republic was founded, and that the unrest caused thereby was a constant source of danger to the peace and prosperity of British dominions in South Africa.

Colonies and Dependencies.—The area of the British Empire was estimated in 1898 at 11,712,170 square miles, with an aggregate population of 385,280,140. This includes India and the feudatory states, having an area of 1,800,258 square miles and 287,223,431 population, and also protectorates and spheres of influence in Africa and Asia with an estimated area of 2,240,000 square miles and 36,210,000 population. The area and estimated population of British colonies are given in the table on the next page.

The colonial empire of Great Britain comprises 40 distinct governments, of which 11 have elective assemblies and responsible government; 16 have a legislative council nominated by the Crown, with the power reserved to the Crown, save in the case of British Honduras, of legislating by orders in Council; 9 have legislative councils partly elected and partly appointed; and 4 are pure Crown colonies, in which the legislative power is delegated to the officer administering the government when measures are not dictated from the Colonial Office in London. The governor of a British colony or the governor in chief or governor general whose jurisdiction embraces several colonies is appointed during the pleasure of the Crown, but by custom the term of office is usually six years. Where there is no representative assembly the initiation of laws belongs in general to him, and in all cases he has the power to veto legislation, which is exercised when the rights of the Crown or imperial interests are affected injuriously. During the century the colonial empire has been increased sixfold in area and the united population is three and a third times greater. The trade of the mother country, which was insignificant in 1800, amounts to about £94,000,000 of imports and £87,000,000 of ex-

ports. Excluding India, the revenue of the colonies has risen from £3,600,000 in 1850 to £54,000,000, and their indebtedness from £5,500,000 to £334,000,000, mostly held by English bondholders, and representing 36,000 miles of railroads, improved harbors, bridges, water supply and irrigation works, the reclamation of waste lands, coast-defense works, Government buildings, and other means of increased wealth and commerce.

The fortress of Gibraltar and the island of Malta are the naval bases of Great Britain in the Mediterranean. The strength of Gibraltar is being increased by extending the mole and building an additional one and a deep harbor. The people living in the port are descendants of early Genoese settlers. The tonnage entered in 1897 was 4,371,126 tons, of which 3,331,477 tons were British. The British garrison in 1898 was 5,505 officers and men. The revenue for 1897 was 1,652,781 pesetas; expenditure, 1,531,784 pesetas. The military expenditure of the British Government was £275,016. The Governor is Gen. Sir Robert Biddulph.

Malta lies 58 miles from the coast of Sicily, and is peopled by a mixed race, part Greek, speaking Italian. The Governor is Lieut.-Gen. Sir Francis Wallace Grenfell. The island produces cotton, potatoes, oranges, and figs. The imports for domestic consumption in 1897 were £824,439 in value, but the total imports were £10,895,639 in value; exports, £10,088,760. The number of vessels entered was 4,111, of 3,637,426 tons; cleared, 4,079, of 3,007,042 tons. There are 8 miles of railroad, 65 miles of telegraph, and 350 miles of telephones. The number of internal letters and postal cards that passed through the post office in 1897 was 1,641,255; newspapers, 669,107; of foreign letters, 1,975,870; postal cards, 118,576; newspapers, 1,022,437. The revenue in 1897 was £323,787; expenditure, £324,673. Malta has an excellent harbor, which is the base for repair, provisioning, and refitting the British fleet in the Mediterranean, and is one of the most

frequented ports of call in the world. The use of English as the language of instruction in the schools, alternatively with Italian, was enacted about 1880. Since 1898 the British Government has endeavored to obtain the consent of the elected members of the Council of Government to a law prescribing the optional use of English or Italian in judicial proceedings, and making English the sole language of the courts after a period of fifteen years. The elected members protested against this measure as degrading the whole population and reducing the people to slavery, and they feared that it would result in flooding the island with British immigrants and supplanting the present professional classes with Englishmen. After they had repeatedly refused to pass the obnoxious ordinances, Mr. Chamberlain on March 15, 1899, enacted them by an order in Council.

Cyprus, a Turkish island in the Mediterranean transferred to British administration by a convention with the Porte concluded on June 4, 1878, has an area of 3,584 square miles and a population of 209,286. The British High Commissioner is Sir William F. Haynes Smith. The principal products are wheat, barley, cotton, carobs, linseed, olives, silk, raisins, fruits, vegetables, silk, cheese, wool, hides, and wine. The imports of merchandise in 1897 were £263,346 in value; exports, £264,802. The tonnage entered and cleared was 702,510. There are 240 miles of telegraphs. The revenue in 1898 was £190,525; expenditure, £132,130. The tribute paid to the Sublime Porte is £92,800 per annum. The British Government contributed £33,000 in aid of revenue in 1898. In 1899 Parliament in the colonial loans bill guaranteed a debt of £314,000 to be raised for the purpose of making a harbor at Famagusta, connecting it by 37 miles of railroad with Nicosia, the capital town, and building an irrigation reservoir not only sufficient to mitigate the effects of periodical droughts in the central grain-growing district, the Mesaoria, but to permit the introduction of many new products for which the quality of the soil is suitable.

Aden, a rocky peninsula on the Arabian coast, is a fortified harbor, coaling station, and naval base at the entrance of the Red Sea. The colony includes the island of Perim, and the protected island of Sokotra and the Kuria Muria Isles are dependencies. Aden has a large transit trade in Arabian and African products, such as coffee, gum, hides, skins, and tobacco. The imports in 1898 were 36,347,980 rupees by sea and 3,310,478 by land, besides 4,408,407 rupees of treasure; exports, 31,329,750 rupees by sea, 1,272,430 rupees by land, and 4,878,196 rupees of treasure. There were 1,079 vessels, of 2,123,339 tons, entered, besides 1,407 local craft, of 48,138 tons. Aden is administered under the direction of the Governor of Bombay. The Bahrein Islands, off the coast of Arabia, in the Persian Gulf, are ruled by a sheik under British protection. They have a population of 22,000, and export pearls worth £244,000 a year.

Labuan is an island off the coast of Borneo, formerly a Crown colony, which in 1889 was placed under the administration of the North Borneo Company. British North Borneo, a protectorate placed under the jurisdiction of the same company by a royal charter, occupies territories ceded by the Sultan of Brunei and the Sultan of Sarawak. The area is 31,106 square miles and the population 175,000, including the Mohammedan settlers on the coast, the Chinese traders and workmen, and the aboriginal tribes of the forests and mountains. About 1,000,000 acres have been sold to 13 private individuals

VALETTA, MALTA.

and companies for the growing of tobacco of the Sumatra variety, and to 30 others for coffee, cocoanuts, ramie, and gutta-percha. The total value of imports in 1897 was \$1,887,498; of exports, \$2,942,293. The revenue is derived from opium, spirits, an export duty on birds' nests, law-court fees, stamps, trading licenses, import duties, and sales of land. Besides the cultivated products, pearls, trepang, and other sea products are exported, and forest and jungle products, such as timber, sago, guma, pepper, gambier, and rattan. Timber is exported to China. The exports of leaf tobacco were \$1,686,173 in 1897. The tonnage entered was 95,300; cleared, 94,168 tons, mostly British. There is a military force of 350 men, composed of natives with British officers. The revenue for 1897 was \$436,062, besides \$904 from land sales; expenditure, \$341,124.

Brunei, a protected country bordering on British Borneo, produces tobacco, etc., as far as cultivation has been introduced. The area is about 15,000 square miles, with 45,000 inhabitants. Sarawak, the other neighboring sultanate, has an area of 50,000 square miles, with 500,000 inhabitants, part Malays, part Dyaks, Kayans, and Muruts, with Chinese immigrants as the tradesmen and merchants. Coal is mined, and was exported in 1896 to the amount of \$114,347. Gold, silver, antimony, quicksilver, and diamonds are found. Tobacco, sago, gambier, pepper, dried fish, rattan, gutta-percha, India rubber, camphor, beeswax, tea, coffee, and cutch are exported. The Tambunans, who are the most numerous and warlike tribe in the interior of North Borneo, as the result of the influence of Mat Salleh, the notorious rebel who submitted to the Government in 1898, petitioned the British North Borneo Company to annex their country, and accordingly a resident European officer was appointed in

1899 to take charge of the district, which has an area of 500 square miles and 25,000 inhabitants.

Ceylon formerly produced excellent coffee, but now is one of the greatest tea-growing countries in the world. The planters are Englishmen, who use the latest mechanical appliances in curing and preparing tea for the European and American markets. The laborers on the plantations are Tamils, imported on time contracts from southern India. The total population in 1897 comprised 6,545 Europeans, 23,663 burghers or descendants from European settlers, 2,174,200 Singhalese, 10,980 Malays, 800 Veddahs, 205,588 Moors or Mohammedans of aboriginal races, 960,745 Tamils, and 8,862 others. The birth rate is 36.9, the death rate 23.2 per thousand. The number of agricultural laborers arriving in 1897 was 153,075; departures, 109,213. The public revenue for 1897 was 24,006,522 rupees; expenditure, 21,634,378 rupees. The revenue from customs was 5,973,785 rupees; from land sales, 498,970 rupees; from spirits, 2,812,324 rupees; from stamps, 2,075,876 rupees; from Government timber and salt, 1,553,110 rupees; from harbor dues, 971,429 rupees; from Government railroads, 7,318,683 rupees. The expenditure on civil establishment, etc., was 5,696,234 rupees; military contribution, including the cost of the volunteer force, 1,824,002 rupees, of which 1,702,165 rupees were paid over to the Imperial Government; pensions and retiring allowances, 1,013,966 rupees; interest on debt, 2,460,295 rupees; public works, 2,872,921 rupees. The public debt amounted to £3,494,905, not including a rupee debt of 3,278,672 rupees, all of it incurred for public works. The strength of the British garrison in 1898 was 1,663; of the volunteer force, 1,074. The port of Colombo, which has 127,836 inhabitants, is protected by modern forts erected at the expense of the colony. Of

a total area of 16,233,000 acres in the island, only 2,159,698 acres are tilled and 763,850 acres pasture. Rice and cereals were grown on 728,112 acres in 1897, coffee on 19,477 acres, tea on 404,574 acres, cinchona on 891 acres, cocoanuts on 878,909 acres, cinnamon on 42,289 acres, tobacco on 10,122 acres, and cacao on 32,354 acres. There were 4,007 horses and 1,289,536 cattle. The most important mineral product is plumbago, 584 mines of which were in operation in 1894. The total value of imports in 1897 was 98,027,474 rupees; of exports, 85,099,803 rupees. The exports of tea were valued at 46,931,190 rupees; cocoanuts and coir, 13,142,622 rupees; plumbago, 3,670,840 rupees; coffee, 1,472,346 rupees; areca nuts, 1,316,595 rupees; cinchona, 32,512 rupees. The export of cacao was 35,121 hundredweight. Disease among the coffee plants has reduced the export of coffee from 824,500 hundredweight in 1879 to 18,605 hundredweight in 1897; meanwhile that of tea has grown from 2,392,975 pounds in 1884 to 98,581,060 pounds in 1895, 110,095,193 pounds in 1896, and 114,466,318 pounds in 1897. The tonnage entered and cleared during 1897 was 6,704,747 tons. The merchant shipping of the colony in 1898 comprised 187 sailing vessels, of 13,458 tons, and 4 steamers, of 629 tons. There were

tion. Land ordinances recently enacted denying the communal rights of the natives in wild lands by presuming that all waste land is the property of the Crown until the contrary is proved have been criticised as an enactment for taking the lands away from the natives in order that they may be disposed of to planters. The Government replies that the intention of the ordinances is to check and regulate the sales of forest and other lands, which speculators are in the habit of getting the natives to deed to them for a trifling consideration, and also to provide an easy way of settling disputes as to whether lands belonged to the Government or to native villages. The Ceylon teas, which have long been popular in Great Britain, now find a demand in the United States and Australasia and in Russia and Germany. The disturbance of exchange caused by the interference of the Indian Government with the currency checked the too rapid growth of the tea-planting industry and of other enterprises that were stimulated by the falling rupee, and has even led to the contraction of cultivation by the abandonment of poor fields, so that in Ceylon, as well as in India, there is no immediate prospect of an increase of crops. A graving dock to accommodate first-class battle ships was begun

CINNAMON PACKING IN CEYLON.

297 miles of Government railroads in operation in 1897, and 215 miles more were authorized. The telegraphs had 1,733 miles of wire. The Maldivé Islands, west of Ceylon, are ruled by the native *fandari*, or chief judge and priest, under British protection. The inhabitants, all Mohammedans, number 30,000, noted as sailors and traders. Expenditure has been authorized in Ceylon to open up new districts by building railroads and to carry out large schemes of irriga-

at Colombo in 1899, and will take five years to complete.

The Straits Settlements form a Crown colony embracing Singapore, Penang, with Province Wellesley and the Dingdings, and Malacca. The total population is 512,342, of whom 6,589 are Europeans and Americans, 213,073 Malays, 227,989 Chinese, and 53,927 natives of India. The revenue in 1897 was \$4,320,207; expenditure, \$4,429,693. The imports were \$219,910,296 in

value; exports, \$193,136,377. The chief exports are tin for \$27,524,804, spices for \$9,206,289, gums for \$8,139,283, gambier for \$6,711,822, tapioca and sago for \$4,816,486, rattan for \$4,337,770, and copra for \$3,616,721. Sir C. B. H. Mitchell, the Governor, is also High Commissioner for the federated Malay states of Perak, Selangor, Negri Sembilan, and Pahang, while Sir F. A. Swettenham is Resident General. Perak has an area of 10,000 square miles, a population of 214,254, a revenue in 1897 of \$3,837,558, with \$4,178,238 of expenditures; Selangor has an area of 3,500 square miles, a population of 81,592, a revenue of \$3,688,390, with \$3,567,845 of expenditures; Negri Sembilan, with Sungei Ujong, has an area of 3,000 square miles, a population of 65,219, a revenue of \$572,546, with \$607,313 of expenditures, and a debt of \$503,119; Pahang has an area of 10,000 square miles, a population of 57,462, a revenue of \$198,193, with \$266,491 of expenditures, and a debt of \$2,103,739. The Straits Settlements produce gambier, pepper, tapioca, rice, and sugar. These articles are also produced in the protected states, as well as Liberian coffee, and gold is found in several of them, 26,420 ounces having been exported from Pahang alone in 1897; but their chief source of prosperity and of revenue to the native governments and that of the Straits Settlements is the tin mines. The export of tin from Perak in 1897 was 20,702 tons; from Sungei Ujong and Jelebu, 3,522 tons; from Selangor, 20,606 tons. Perak and Selangor have in fifteen years built out of their surplus revenues 175 miles of railroad, at a cost of £850,000. The British Parliament in 1899 authorized a loan of £500,000, and the protected states will provide from their revenues £500,000 more to complete the railroad system by the construction of 200 miles more. The lines already built earn an average profit of 8 per cent. on the capital expenditure. Perak and Selangor have to a great extent been reorganized by English administrators, with a sound system of finance, justice, and administration. In Negri Sembilan the abuses of native misrule still exist, and in Pahang to a still greater extent. Since 1880 the revenue of the federated states has grown from \$882,000 to \$7,000,000.

Hong-Kong, the chief naval and military station of Great Britain in the China seas and a free port, having the largest commerce of any place in the East, is a Crown colony. The present Governor is Sir Henry A. Blake. Besides the island of Hong-Kong, which was ceded to Great Britain in 1841, the opposite peninsula of Kaulung became British territory by a treaty made with China in 1861. On June 9, 1898, an area of nearly 400 square miles was leased to Great Britain for ninety-nine years, running back to Mirs Bay and Deep Bay, including those waters and the island of Lantau. The leased district includes the city of Kaulung, where the Chinese authorities continue to exercise jurisdiction in native matters, and contains numerous villages, having a population of about 100,000. Of the population of Hong-Kong in 1898 the estimated number of British and foreigners was 13,700, nearly half of them Portuguese, about one third British, and the rest Germans, Americans, French, Spanish, Italians, Turks, etc. The number of births in 1897 was 1,368; of deaths, 4,688. The Chinese immigration in 1897 was 115,207; emigration to China, 62,831. The British garrison numbers 2,800 officers and men. The colony contributed £476,869 toward imperial defense in 1897, including the cost of the volunteer artillery, numbering 176 men. The British naval

squadron on the China station consists of 34 men-of-war. The police force of Hong-Kong numbers 661 men, of whom 122 are British, 210 Sikhs, and 329 Chinese. The ordinary revenue for 1897 was \$3,352,366; ordinary expenditure, \$2,513,693. The revenue is derived from lands, taxes, licenses, and the opium monopoly. Hong-Kong is the port where the opium from India is received and shipped to the various ports of China, and is the distributing point for a great part of the European trade with the Chinese Empire. The tea trade and the silk trade are largely controlled by Hong-Kong merchants. Among the commercial staples of which it is the center are raw cotton, cotton manufactures, flour, salt, china-ware, oil, sandalwood, betel, live animals, ivory, and vegetables. The imports are estimated at £4,000,000 sterling, and exports at half that amount. The shipping registered in the colony in 1898 consisted of 25 sailing vessels, of 6,441 tons, and 38 steamers, of 20,705 tons. There were 4,974 vessels, of 6,063,640 tons, entered during 1897, not including 28,989 junks, of 1,718,739 tons.

Wei-Hai-Wei, a naval harbor on the peninsula of Shantung, was on July 1, 1898, leased to Great Britain for so long a period as Russia shall remain in possession of Port Arthur. The lease includes the port and bay, with the island of Liu-Kung and all the islands in the bay, and a coast strip 10 miles wide around the bay. In a neutral zone beyond Great Britain has the right to station a military force and erect fortifications, but the jurisdiction remains Chinese. Parliament has voted £130,000 for fortifications, and has authorized the recruiting of a Chinese regiment at Wei-Hai-Wei.

Ascension, an island off the coast of Africa, 700 miles northwest of St. Helena, is a coaling station and store depot for the British West African squadron and a sanitarium for officers and seamen debilitated by coast fever.

St. Helena, 1,200 miles from the west coast of Africa, is a coaling station for vessels of the British navy and merchantmen going to the Cape of Good Hope. The tonnage entered and cleared in 1897 was 81,948 tons, almost all British. The revenue in 1898 was £9,152; expenditure, £12,349, partly extraordinary. Imports amounted to £62,985, nearly double as much as in the previous year, owing to an increase in the garrison; exports, £4,391.

Tristan da Cunha, midway between the Cape of Good Hope and South America, is the home of shipwrecked British sailors and their families, numbering 64 persons in 1897.

The Falkland Islands, 300 miles east of the Straits of Magellan, are peopled by British immigrants, who raise sheep and export wool and mutton to England. The number of horses in 1897 was 2,758; of cattle, 7,343; of sheep, 732,010. There are 2,325,000 acres of pasture land. The imports in 1897 were £63,286; exports, £125,123; revenue, £12,970; expenditure, £13,636. The number of vessels that called during the year was 42, of 54,144 tons.

The Bermudas, a group of small islands in the North Atlantic, 580 miles from the coast of North Carolina, possess representative government. The Governor is Lieut.-Gen. G. Digby Barker. The number of marriages in 1897 was 124; of births, 572; of deaths, 385. The revenue for 1897 was £35,965; expenditure, £35,704. The British Government contributed £2,200. The public debt is £46,100. The value of imports was £323,148. The islands are a winter resort for Americans, and import most of the food supply from the

United States and Canada. The principal exports were onions for £81,463, lily bulbs for £8,080, and potatoes for £18,052, nearly all to the port of New York. The shipping of the colony consisted in 1898 of 23 sailing vessels, of 5,469 tons burden, and 2 steamers, of 6,120 tons. The tonnage entered and cleared in 1897 was 346,538 tons. There are 36 miles of telegraph, 15 of cable, and 700 of telephone wires. Bermuda is connected with Halifax, Nova Scotia, by cable, and is a coaling and victualing station and naval base for British vessels in North America.

Mauritius, 500 miles east of Madagascar, is peopled by creole French planters, descendants of liberated African slaves, mixed races, Indian coolies, etc. There were 260,542 Indians and 3,389 Chinamen at the end of 1897. The birth rate is 35.5, the death rate 29.5 per thousand. The Governor of the colony is Sir Charles Bruce. The revenue for 1897 was 7,996,705 rupees; expenditure, 8,626,798 rupees. The debt amounted to £1,230,489. The chief items of revenue were 2,769,889 rupees from customs, 2,377,961 rupees from licenses, and 1,712,322 rupees from railroads. The total value of the imports in 1897 was 18,948,233 rupees; exports, 28,192,675 rupees. The export of raw sugar was 22,327,650 rupees in value; rum, 67,370 rupees; vanilla, 136,620 rupees; aloe fiber, 242,507 rupees; cocoanut oil, 33,760 rupees. The acreage of sugar declined after a rapid increase in 1893 and 1894, but in 1897 began to recover. The British Government is assisting Mauritius with a new loan of £32,820 for reforestation, drainage, and water-works needed for the health of the community. The shipping of the colony in 1897 comprised 64 sailing vessels, of 7,159 tons, and 4 steamers, of 131 tons burden. There were 332 vessels, of 328,702 tons, entered and 342, of 338,683 tons, cleared at Port Louis during 1897. The British garrison in 1898 numbered 1,078 officers and men. The colony has 105 miles of railroad and a system of telegraph connecting all points on the island, with a cable to Seychelles and Zanzibar.

The Seychelles are a group of small islands, having a population of 16,440 inhabitants, who exported cocoanut oil, soap, vanilla, tortoise shell, coffee, and cacao of the value of 127,687 rupees in 1897. (See AUSTRALASIA, CANADA, CAPE COLONY AND SOUTH AFRICA, EAST AFRICA, INDIA, NEWFOUNDLAND, WEST AFRICA, WEST INDIES.)

GREECE, a monarchy in southeastern Europe. The legislative authority is vested in a single chamber, called the Boule, consisting of 207 members elected for four years by universal manhood suffrage. The reigning King is Georgios I, born Dec. 24, 1845, the second son of King Christian of Denmark, elected King of the Hellenes on March 18, 1863, after the deposition of King Otto, with the assent of the protecting powers, France, Great Britain, and Russia, under whose auspices the Hellenic Kingdom was first established in 1830 after the overthrow of Turkish rule. The heir apparent is Prince Konstantinos, Duke of Sparta, born Aug. 2, 1868.

The Cabinet formed on Nov. 10, 1898, was composed as follows: President of the Council and Minister of Foreign Affairs, M. Zaimis; Minister of the Interior and of Worship and Instruction, M. Triantaphylakos; Minister of Marine, Capt. Miaoulis; Minister of War, Col. Karpas; Minister of Finance, M. Negris; Minister of Justice, M. Monferatos.

Area and Population.—Greece has an area of 25,014 square miles, with a population of 2,433,906 at the census of 1896, consisting of

1,266,816 males and 1,166,990 females. Education is compulsory, but the law is not enforced. About 70 per cent. of the recruits for the army can read and 85 per cent. can read and write.

Finances.—As the price of the intermediation of the great powers to secure better terms for Greece after the defeat of the Greek army by the Turks in 1897, the Hellenic Government was compelled to an international control of the finances, which had for several years been urged in the interests of the foreign creditors of Greece, but had been obstinately resisted by the Government and people. A commission of financial delegates, representing Germany, Austria-Hungary, France, Great Britain, Italy, and Russia, was constituted in accordance with the law of control enacted in March, 1898, and in the month following they made their report. The average annual receipts of the Government for five years anterior to the war had been 91,651,000 drachmai in currency, and the average expenses of the administration 81,951,000 drachmai. The revenue was expected to fall in consequence of the war to 85,556,500 drachmai in 1898, increasing to 89,639,640 drachmai in 1899, 92,598,780 drachmai in 1900, 95,557 drachmai in 1901, 98,103,504 drachmai in 1902, and 99,750,056 drachmai in 1903. The administrative expenses, on the other hand, were placed at a higher figure than the recent budgets, notwithstanding the curtailment of military expenditure and economies in all branches of the administration, because for the rehabilitation of the finances on a permanent basis it was necessary to reorganize the police in order to put an end to the lawlessness that interferes with industry, while the existing laws of primary education required a larger expenditure on the schools than the Government had been allowing. The administrative expenses for 1898 were estimated at 65,501,326 drachmai, for 1899 at 64,051,326 drachmai, for 1900 at 63,851,326 drachmai, for 1901 at 64,151,326 drachmai, for 1902 at 64,451,326 drachmai, and for 1903 at 64,751,326 drachmai. The foreign debts of Greece, due in gold, consisted of the loan of 1833, guaranteed by England, France, and Russia, of the nominal amount of 100,932,833 drachmai, on which the annual charge was 900,000 drachmai, and the consolidated debt of 551,716,500 drachmai, in addition to which a floating debt of 31,375,093 drachmai had accumulated, making the total liabilities to foreign creditors, aside from the old guaranteed debt, 583,091,593. The currency debts amounted to 177,213,795 drachmai, consisting of a debt of 1,800,000 drachmai due to the heirs of King Otto, the patriotic loan of 2,345,000 drachmai, 60,723,795 drachmai of consolidated loans, and 112,345,000 drachmai of floating liabilities. In addition to these debts, the Bank of Greece had 137,500,000 drachmai of paper currency in circulation, not more than 1 per cent. of it covered by a metallic reserve. The powers agreed to guarantee a new loan of £8,800,000 sterling at 2½ per cent., the first issue of £5,004,900 to be applied to the payment of the Turkish war indemnity of £ T. 4,000,000 and of £ T. 100,000 damages to private individuals, the balance being applied to the relief of the financial stress of the Government. The commissioners planned to convert 78,881,295 drachmai of internal debt into a new loan of 76,353,575 drachmai. The revenues from monopolies, stamps, tobacco, and customs were assigned to the commission for the service of the external debt. The annual charge for the old debt, including the consolidated loans and the guaranteed debt of 1833, is 15,658,750 drachmai, reckoning the gold drachma equal to 1.60

drachma in currency, increasing to 16,065,000 drachmai in 1903, when the rate of interest will be increased. In addition to the interest, the old creditors insisted on special payments on arrears, for which the sum of 6,580,000 drachmai was to be provided in 1898, then 1,780,000 drachmai for each of the next three years, and 500,000 drachmai in 1902, when these special payments cease. The annual charge of the internal debt was calculated at 5,545,610 drachmai for 1898 and 5,145,610 drachmai for succeeding years, which will be increased in 1900 and after to 7,145,610 drachmai by the appropriation each year of 2,000,000 drachmai to the gradual withdrawal of the forced paper currency. These estimates make the total expenditure 93,285,686 drachmai for 1898, which is 7,729,186 drachmai more than the total estimated receipts. The application of 4,425,000 drachmai from the new loan, reduced, however, by 3,000,000 drachmai for a half year's interest and 200,000 drachmai for commissions, leaves a deficit of 6,504,186 drachmai for 1898. For 1899 the total ordinary expenditure, as estimated, amounts to 86,635,686 drachmai, leaving a surplus of 3,003,954 drachmai, to which is added 8,000,000 drachmai from the new loan, but after paying the interest of 6,050,000 drachmai on the new loan, with 250,000 drachmai for commissions and 250,000 drachmai for temporary debt charges, there still remains a deficit of 2,050,232 drachmai at the end of the second year. For 1900 the estimated expenditures foot up 88,435,686 drachmai, showing a surplus of 4,163,094 drachmai in the year's ordinary budget; but there are no more funds to be applied from the loan to the aid of the treasury, while the sinking fund of 1.1 per cent. being added to the interest increases the annual charge of the new loan to 6,200,000 drachmai, the additional expense of 500,000 drachmai for commissions and temporary loan charges remaining the same. The estimated deficit at the end of the third year is therefore 4,587,138 drachmai, and at the end of 1901, with expenditures for the administration and the service of the old debts footing up 88,735,686 drachmai, leaving a balance of 6,821,834 drachmai, it is 4,465,304 drachmai; but this is reduced in 1902, with expenses figured at 87,755,686 drachmai, to 817,486 drachmai, and in 1903, with expenditures figured at 87,961,936 drachmai, an equilibrium is expected to be reached and a surplus of 1,542,634 drachmai is counted on, notwithstanding the increase in the charges of the new loan to 8,928,000 drachmai. The revenue from monopolies was reckoned at 10,250,000 drachmai for 1898, rising to 12,975,700 drachmai in 1903, less an expenditure in each year of about 3,000,000 drachmai for the purchase of matches, playing cards, cigarette papers, and also of stamps; the revenue from stamps was estimated at 9,000,000 drachmai, rising to 10,000,000 drachmai; revenue from customs, 10,700,000 drachmai for each year; revenue from tobacco, 5,470,000 drachmai in 1898, rising to 7,025,000 drachmai. The total net yield of the assigned revenues was estimated at 32,420,000 drachmai in 1898, 33,476,140 drachmai in 1899, 34,532,280 drachmai in 1900, 35,588,420 drachmai in 1901, 36,231,004 drachmai in 1902, and 37,183,756 drachmai in 1903, after deducting the share of the old creditors in the plus values, which are the surplus of the gross proceeds of the monopolies and tobacco and stamp duties over 28,900,000 drachmai. Such a surplus is expected to arise in 1902, and from it 18 per cent. is to be deducted for expenses, and of the remainder 60 per cent. is to be applied to the service of the old debt and 40 per cent. to the expenses of the Government. The share of the

creditors for 1902 is estimated at 413,556 drachmai, and for 1903 at 516,944 drachmai.

The Army and Navy.—The army, which is recruited by general conscription, had in 1896 a nominal strength of 1,880 officers and 23,453 men, with 3,294 horses and 180 guns. The term of active service is two years, but leave of absence is frequently granted after a short training. The war strength is about 82,000 men, excluding the territorial army, estimated at 90,000 men.

The armor-clad navy consists of 5 vessels—the antiquated *Basileus Georgios*, of 1,770 tons, and *Basilissa Olga*, of 2,060 tons, carrying 6.6-inch guns, and the steel vessels *Hydra*, *Spetsai*, and *Psara*, of 4,885 tons, built in France in 1889 and 1890, each protected by a belt of 11.8-inch armor at the water line and armed with 3 10.6-inch and 4 5.9-inch Canet guns, besides 7 6-pounder and 16 smaller quick-firing and machine guns. The torpedo flotilla comprises 17 first-class craft and 2 submarine Nordenfriesland torpedo boats.

Navigation.—The number of vessels entered at Greek ports during 1897 was 4,560, of 2,491,522 tons; cleared, 4,487, of 2,444,618 tons. The merchant marine on Jan. 1, 1898, comprised 1,152 sailing vessels, of 238,196 tons, and 118 steamers, of 87,845 tons.

Commerce and Production.—The soil of Greece is owned mainly by the farmers, but their methods of agriculture are generally behind the age. The crop of wheat is about 7,000,000 bushels a year; barley, 3,000,000 bushels; corn, 3,000,000 bushels; and other grains, 7,000,000 bushels. About 16,000,000 pounds of tobacco are raised, much of which is exported to Egypt and Turkey. The wine product is 66,000,000 gallons, and of olives 15,000,000 pounds are gathered annually; of figs, 60,000,000 pounds. The quantity of dried figs produced in 1897 was 10,000 tons; of valonea, 9,000 tons; of cocoons, 150,000 kilogrammes, besides which 8,000 kilogrammes of silk were produced. The quantity of olive-oil soap manufactured in 1896 was 8,240 tons. The most important crop is the Zante currant, grown only in Greece. The quantity of dried currants produced in 1896 was estimated at 150,000 tons; in 1897, 146,000 tons. Under the law first passed in 1895, and re-enacted every year since, the Government retains 15 per cent. of the crop in order to prevent the export price from falling below the cost of production. In the district of Laurium are valuable mines, yielding 192,789 tons of manganese iron ore, 136,811 tons of hematite, 24,830 tons of zinc ore, and 9,660 tons of silver lead ore, besides 6,912 tons of dressed galena, 3,084 tons of dressed lead and zinc ore, and 16,074 tons of pig lead extracted from the poorer ores. The special imports in 1897 were valued at 114,275,516 drachmai in gold, and the special exports at 80,734,074 drachmai. The imports consisted of wheat and meslin for 30,140,636 drachmai, yarns for 20,371,281 drachmai, coal and raw materials for 12,110,954 drachmai, fish and caviar for 5,166,870 drachmai, hides for 3,667,172 drachmai, sugar for 3,179,461 drachmai, metals and ores for 2,785,720 drachmai, coffee for 2,754,512 drachmai, timber for 2,618,886 drachmai, colors for 2,117,843 drachmai, rice for 2,067,324 drachmai, live animals for 1,640,540 drachmai, and other articles for 21,621,199 drachmai. The exports were dried currants for 31,841,759 drachmai, ores for 19,429,248 drachmai, wine in casks for 5,701,108 drachmai, olive oil for 4,748,023 drachmai, figs for 2,064,647 drachmai, tobacco for 1,910,515 drachmai, sponges for 1,038,300 drachmai, brandy for 979,049 drachmai, olives for 888,258 drachmai, cocoons and silk for 834,648 drachmai, soap for 319,285 drachmai.

emery for 300,675 drachmai, and leather for 288,642 drachmai.

The values in gold drachmai of the special imports from and exports of Greek produce to the various countries in 1896 are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	29,447,472	18,196,966
Russia.....	24,140,783	7,716,517
Turkey and Egypt.....	14,980,776	10,686,676
Austria-Hungary.....	11,842,079	6,941,553
France.....	8,533,420	6,504,648
Germany.....	10,208,728	5,384,304
Belgium.....	2,744,815	8,229,232
United States.....	4,501,670	2,680,488
Italy.....	2,905,776	3,968,828
Netherlands.....	939,152	3,230,200
All other countries.....	6,040,850	1,187,813
Total	116,275,516	72,477,206

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1898 was 591 miles, and 300 miles were in process of construction, including the extension of the railroad running from Athens to Larissa, which, when completed to Salonica, will afford railroad communication with the other countries of the Continent.

The post office in 1896 forwarded 4,337,000 domestic and 5,107,000 foreign letters and postal cards, and 5,666,000 domestic and 2,867,000 foreign newspapers and samples; receipts, 2,110,877 drachmai; expenses, 1,983,860 drachmai.

The telegraph lines had on Jan. 1, 1897, a total length of 5,087 miles, with 6,023 miles of wire. The number of telegrams dispatched the previous year was 981,989 in the internal service and 413,602 in the international service. The receipts were 2,514,623 drachmai.

Politics and Legislation.—In the elections that took place in February, 1899, the Zaimis Government sustained a defeat, obtaining not over 40 seats. The Delyannists obtained not so many, and there were lesser groups; but a large majority of the seats was won by the followers of the late M. Tricoupis, who had not yet settled on a new leader. Although most of them were inclined to accept M. Theotokis, M. Dragoumis had a considerable following. In the interval between the elections and the assembling of the Chamber on March 16 the ministerial party endeavored to win over enough independent, undecided, and antagonistic members to secure a majority in favor of the projected reforms in the administration. M. Zaimis and his colleagues, however patriotic their objects were, could not render these objects popular. They had taken office to carry out the ungrateful but necessary measures connected with the introduction of the foreign financial control, which was the condition exacted by the powers when they intervened in the war with Turkey. Now that the stress of that period was relaxing and the country enjoying comparative prosperity, the old party divisions began to assert themselves. The acceptance by the powers and Turkey of Prince Georgios as Governor General of Crete was a favorable circumstance for the ministry, but not favorable enough to change the current of internal politics. The chief feature of the ministerial programme was a radical scheme of civil-service reform. It was proposed to institute a supreme council of supervision, which should control the administrative offices, regulating the appointment, promotion, and removal of all public officials, even including the magistrates and judges. Specialists would be brought in from abroad for the purpose of reorganizing some branches of the public serv-

ice, especially the police. By creating a public body of control and supervision the Government hoped to do away entirely with the spoils system of public appointments and secure a permanent and efficient corps of administrative officials. Another important reform aimed at the decentralization of the administration. In furtherance of this object the Government proposed to create a ministry of agriculture, commerce, and industry. The speech from the throne promised social legislation for the benefit of the working classes. Other measures proposed to deal with the reorganization of the land and sea forces and the extension of the system of public education. The programme of legislation included a plan for the perpetuation of the Olympian games as revived in 1896. The completion of the railroad from the Piræus to Larissa was promised, also improved waterworks for Athens. The amelioration of the financial situation justified the expectation that the Government would be able to balance the budget in the future without recourse to fresh taxation. The Cabinet of M. Zaimis remained in office for some weeks after the opening of the Boule, although his own election was declared null by a committee containing a majority of Tricoupists. The Premier offered to resign on April 7 without waiting for a formal vote. By the vote of the Chamber his election was pronounced regular. The strength of the parties was shown in the election for president of the Boule on April 12, when M. Tsamados, the Tricoupist candidate, received 128 votes against 37 for the Delyannist and 28 for the Government candidate, 41 members not voting. M. Zaimis thereupon tendered the resignation of the ministry to the King, who sent for M. Theotokis.

On April 14 the new ministry was formed as follows: President of the Council and Minister of the Interior, M. Theotokis; Minister of Finance, M. Simopoulos; Minister of Foreign Affairs, M. Romanos; Minister of War, M. Koumondouros; Minister of Marine, M. Boudouris; Minister of Worship and Instruction, M. Eutaxias; Minister of Justice, M. Karapoulos. The Boule adjourned for a month to enable the new ministry to prepare its programme, and reassembled on May 24. In consequence of the satisfactory surplus anticipated by the Minister of Finance, the Government hoped to be able to carry out improvements in the administration of justice and in the system of public instruction and a reorganization of the police service, which will do away with a serious defect in the military service by relieving the army of the police duties which two fifths of the soldiers have been called upon to perform without achieving the best results in regard to the execution of the laws and the preservation of order. The provisional budget of the finance minister showed an income of 105,795,658 drachmai for 1900 and 99,347,624 drachmai of expenditure, leaving a surplus of 6,448,034 drachmai. The increase in revenue over 1898 was 18,069,053 drachmai, and the decrease in expenditure was 1,797,210 drachmai. The army estimates had been reduced 2,000,000 drachmai since 1896, the expenses of the Ministry of the Interior 1,500,000 drachmai; but the cost of the navy had grown, and a further increase was proposed in order to add to the present personnel and to give officers opportunities for instruction by sending them abroad and the fleet more practice in cruising. The burden of the debt had grown to 29,000,000 drachmai, but the cost of government had been reduced 3,359,000 drachmai since 1896, the last year in which normal conditions prevailed. The Government introduced a project of

reforms in the internal administration which encountered so much local opposition that modifications were promised. The citizens of the ancient city of Thebes were so exasperated at having their municipal rights transferred to the newly constituted administrative district of Levadia that the Government sent cavalry to prevent a disturbance. The remodeling of the provincial administrations rendered them more independent of the central Government. The Boule authorized the Government to employ foreign officers to reorganize the army and navy, although the older Greek officers protested. The gendarmery was reorganized and the military police abolished. A bill was passed prohibiting the exportation of antiquities and providing for their preservation. The Government arranged with Greek engineers to bring water to Athens from Lake Stymphalus in the Morea, but the measure met with opposition, and was postponed. The Boule separated on July 27.

GUATEMALA, a republic of Central America. The legislative power is vested in the Congress, consisting of a National Assembly of 69

and after a contest Manuel Estrada Cabrera was on Sept. 25, 1898, proclaimed President by the National Assembly for the term ending March 15, 1905. The members of the Cabinet in the beginning of 1899 were as follow: Secretary of Government, Justice, and Foreign Affairs, Dr. Francesco Anguiano; Secretary of War, Gen. Gregorio Contreras; Secretary of Fomento, Antonio Barrios; Secretary of Public Instruction, Domingo Morales; Secretary of Finance, Rafael Salazar.

Area and Population.—The area of Guatemala is estimated at 63,400 square miles. The population in 1897 was 1,535,632, of whom three fifths are of pure Indian race and the rest of mingled Indian, Spanish, and negro blood, excepting a few pure whites. There were 11,331 foreign residents in 1893. The number of marriages in 1896 was 5,504; the number of births in 1897, 71,353; of deaths, 43,892; excess of births, 27,461. Guatemala la Nueva, the capital, has 72,102 inhabitants, most of whom are of European origin or descent. Education is gratuitous and compulsory, and in 1895 there were 1,206 primary schools

RECUINTLA, GUATEMALA.

members, elected for four years by universal suffrage and a Council of State of 13 members, of whom part are elected by the Assembly and part are appointed by the President. The President of the republic is elected for a term of six years by the direct vote of the people, and is not re-eligible for the next succeeding term. José Maria Reyna Barrios, elected in 1892, was continued in the presidency by vote of the National Assembly for four years beyond his legal term of office, but was murdered shortly before his term expired;

supported by the Government, containing 39,411 male and 24,604 female pupils.

Finances. The revenue in 1896 was \$15,150,741, and expenditure \$17,437,452. In 1897 the revenue was \$12,479,741, and in 1898 it was estimated at \$11,565,000, of which \$3,926,000 came from customs, \$2,226,000 from exchange, supplementary duties, etc., and \$3,224,000 from spirits. The charges of the debt and appropriations for railroads, etc., amounted to \$4,036,000, leaving \$6,929,000 to defray all the expenses of the ad-

ministration. The external debt of 1895, bearing interest at 4 per cent., was estimated in 1898 to amount to £1,482,800, or \$18,443,600, reckoning the premium on gold at 150. The total liabilities of the Government were figured by the English council of foreign bondholders to amount to £3,215,000, or \$40,185,424 in currency, while the assets of the Government in railroads and other property were only \$17,383,513. About 10 per cent. of the Government's expenses are for the maintenance of the army, which numbered in 1896 about 7,000 men of all ranks. All Guatemalans are liable to military service in time of war, and the number of effective men below the age of thirty is about 56,900, with a reserve of 30,000 above that age.

Commerce and Production.—The soil of Guatemala is very rich in most parts of the country. The main crop is coffee, of which 824,756 quintals were exported in 1897. The export duty of \$1.50 in gold per quintal was reduced in 1898 to \$1 in currency. The yield of tobacco in 1897 was 9,900 quintals. Next to coffee, the chief crop for export is bananas. Cacao is also grown, and Indian corn is produced in abundance for domestic consumption. Cattle and horses are pastured in the elevated table-lands. Gold mining is a recent enterprise, and there are silver mines in operation. Salt is mined successfully, but the deposits of lead, tin, and copper ore have been neglected. The imports into Guatemala were valued in 1897 at \$8,584,821, or \$21,462,053 in currency; exports, \$19,775,800 in currency. The gold value of the imports of cotton goods was \$1,716,984; of wine, beer, and spirits, \$667,176; of cereals, \$659,832; of canned goods, \$350,444; of woollen goods, \$312,475; of iron manufactures, \$246,961;

of railroad and telegraph materials, \$227,267. The value in currency of the exports of coffee was \$18,875,700; of silver coin, \$473,000; of hides, \$205,965; of bananas, \$77,548. Of the exports of coffee 543,807 quintals were shipped to Germany, 137,055 quintals to the United States, and 123,277 quintals to England. The number of vessels entered at the ports of Guatemala in 1897 was 614, of 782,076 tons, mostly from the United States.

Railroads, Posts, and Telegraphs.—The railroads in operation at the end of 1898 had a length of 336 miles, and 100 miles were under construction. An American company completed 133 miles in that year, receiving a subsidy from the Government of \$480,000 a year for operating the line. The telegraph lines in 1897 had a total length of 3,093 miles. The number of messages sent during the year was 664,169. The receipts were \$293,563; expenses, \$418,304. The number of pieces of mail matter sent in 1897 was 4,038,966; the number received, 5,674,100.

Proposed Repudiation.—In consequence of its financial embarrassments the Guatemalan Government proposed to place the foreign debt on the same footing as the internal bonds, which were worth in the market only 25 per cent. of their nominal value. Various foreign governments protested, Germany most vigorously, and in July a threat was made to send a German naval force to compel the fulfillment of obligations. The Government of Guatemala at first refused all redress, but assumed a more conciliatory attitude later, and postponed the application of the law. The United States Government did not consent to take joint action with Germany and Great Britain to bring pressure on the disturbed and embarrassed republic.

H

HAWAII, a Territory of the United States, formerly an independent kingdom, the integrity of which was recognized by the United States, Great Britain, and France in the reign of Kamehameha III after he had proclaimed a constitution in 1840. In January, 1893, Queen Liliuokalani was forced to abdicate by the menace of United States marines, who were landed, ostensibly to protect American lives and property, at the request of Minister Stevens, and the leaders of the revolutionary party, most of them sons of American missionaries and advocates of annexation to the United States, proclaimed a provisional Government, which was succeeded on July 4, 1894, by a republic, in which native Hawaiians and whites who could read and write either the English or the Hawaiian language had the right to vote indirectly for Senators and members of the House of Representatives. On June 16, 1897, a treaty was signed at Washington by Secretary of State John Sherman and envoys of the Hawaiian Republic providing for the annexation of the islands to the United States as the Territory of Hawaii. The treaty stipulated that the existing land laws of the United States relative to public lands shall not apply in the Hawaiian Islands, but that Congress shall enact laws to secure all revenue from or proceeds of the public lands of Hawaii for the benefit of the inhabitants of the islands for educational or other purposes. Until Congress shall provide for the government of the islands all the civil, judicial, and military powers exercised by the officers of the existing Government were to be vested in such persons and exercised in such manner as the

President of the United States shall direct, and power was conferred on him to remove officers and fill the vacancies so occasioned. The United States assumed all lawful debts of the Hawaiian Government, not to exceed \$4,000,000, but so long as existing customs relations of the Hawaiian Government with the United States and other countries remain unchanged and the existing Government is continued. The municipal legislation of the Hawaiian Islands remains in force until Congress shall determine otherwise, so far as it is not inconsistent with the treaty or contrary to the Constitution of the United States, except such as has been enacted for the fulfillment of treaties with foreign nations, all of which forthwith cease and determine. There shall be no further immigration of Chinese into the Hawaiian Islands, except upon the conditions allowed by the laws of the United States, and no Chinese shall be allowed to enter the United States from the Hawaiian Islands by reason of their annexation to the United States. The United States Congress finally ratified the treaty on July 7, 1898, and on Aug. 12, 1898, the sovereignty over the islands was formally transferred to the United States. Five commissioners were appointed to recommend such legislation for the Hawaiian Islands as they deem necessary and proper. In accordance with their recommendations, all whites, including Portuguese, all persons of African descent, and all descendants of the Hawaiian race, either on the paternal or the maternal side, who were Hawaiian citizens prior to annexation, were declared citizens of the United States. The number of electors on the rolls in

1897 was 2,687. President Sanford B. Dole and all the administrative and judicial officers were continued in their functions. The Cabinet was composed as follows: Minister of Foreign Affairs and of Public Instruction, H. E. Cooper; Minister of the Interior, J. A. King; Minister of Finance, S. M. Damon; Attorney-General, W. O. Smith.

Area and Population.—The island of Hawaii has an area of 4,210 square miles; Maui, 760; Oahu, 600; Kauai, 590; Molokai, 270; Lanai, 150; Niihau, 97; Kahulawe, 63; total area of the islands, 6,640 square miles. The population on Sept. 27, 1896, was 109,020, comprising 72,517 males and 36,503 females. The native population at the time when Capt. Cook discovered the islands in 1778 was estimated at 200,000. In 1853 there were 70,036 natives, and since then the number has steadily declined to 49,044 in 1872, 44,088 in 1884, and 31,019 in 1896. The half-castes have increased from 983 in 1853 to 8,485 in 1896, Americans from 692 to 2,266, Hawaiian-born foreigners from 309 to 13,733, British from 435 to 1,538, Germans from 81 to 912, French from 60 to 75, Norwegians from 8 to 216, Portuguese from 86 to 8,232, other foreigners from 80 to 424, Chinese from 364 to 19,382, Polynesians from 4 to 409, and the Japanese in 1896 numbered 22,329, having come in the last twelve years, mostly as contract laborers for the sugar plantations. A large part of the Chinese and of the Portuguese population was imported in the same way. On Jan. 1, 1898, the total population was estimated at 117,281, having been increased by the immigration of 4,244 Chinese, 2,875 Japanese, 108 Portuguese, and 1,034 other foreigners. Restrictions were placed on Chinese immigration, but the Japanese immigration increased. Of the native Hawaiians about 50 per cent. are Protestants, 33 per cent. Roman Catholics, and 17 per cent. Mormons. Of the total population, 54,522 reported themselves in 1896 as Christians, 42.68 per cent. of these being Protestants, 48.36 per cent. Roman Catholics, and 8.96 per cent. Mormons; 44,306 were non-Christian Chinese and Japanese, and 10,192 declined to state their religious belief or professed no religion.

The system of primary education is one of the most complete in the world. There were 192 schools in the islands in 1897, in which 507 teachers instructed 14,522 pupils, of whom 5,530 were Hawaiians, 2,479 half-castes, 3,815 Portuguese, and 1,638 Asiatics. Of the teachers, 253 were Americans, 119 Hawaiians or part Hawaiians, and 69 British. At the last census 83.97 per cent. of the Hawaiians, 91.21 per cent. of the half-castes, 68.29 per cent. of the Hawaiian-born foreigners, 82.02 per cent. of the Americans, 95.44 per cent. of the British, 86.31 per cent. of the Germans, 92 per cent. of the French, 80.46 per cent. of the Norwegians, 27.84 per cent. of the Portuguese, 53.60 per cent. of the Japanese, 48.47 per cent. of the Chinese, 40.05 per cent. of the Polynesians, and 75.41 per cent. of the persons of other nationalities were able to read and write. Of the total population in 1896, the number of persons engaged in agriculture was 7,570; the number of laborers, 34,438; the number engaged in fishing and navigation, 2,100; in industry, 2,265; in commerce and transportation, 2,031; in liberal professions, 2,580; in the public service, 4,310; without occupation, 53,726. The number of depositors in the postal savings banks in 1897 was 10,620, having average deposits of about \$90. The population of Honolulu, the capital, in 1896 was 29,920.

Finances.—The revenue of the Hawaiian Government in 1860 was \$571,041 and the expendi-

ture \$612,410, and in 1870 the revenue was \$834,112 and the expenditure \$930,550; in the next ten years the revenue doubled, being \$1,703,736 in 1880, with \$1,495,697 of expenditure; in the decade succeeding this there was another increase of over 100 per cent. in revenue, which was \$3,632,196 in 1890, with \$3,250,510 of expenditures; in the years of the sugar crisis and political unrest there was no growth in the revenue. In 1897 the ordinary revenue amounted to \$2,282,454, and expenditure to \$1,924,385. Of the receipts in 1897, customs duties produced \$708,493; taxation, \$763,985; administrative departments, \$242,337; the post office, \$73,530; stamps, \$41,562; water supply, \$64,627; public lands, \$97,739; sales of state property, \$70,251; various sources, \$57,500; balance from preceding year, \$93,627; total receipts, \$2,282,454. Of the expenditures, \$17,060 were for the executive and legislation, \$88,450 for justice, \$57,864 for foreign affairs, \$241,138 for public works, \$195,959 for sanitary affairs, \$179,859 for the Department of Finance, \$245,492 for the public debt, \$263,814 for the Attorney-General's office, \$144,388 for public instruction, \$80,600 for the military force, and \$409,761 for various expenses. The armed force consists of a regiment of 8 companies, numbering 476 officers and men.

The Hawaiian Government borrowed \$34,200 at 6 per cent. in 1882, \$2,000,000 in 1886 at the same interest, \$190,000 in 1888 at that rate, \$124,100 in 1890 and \$119,400 in 1892 at 5 and 6 per cent., \$650,000 in 1893 at 6 per cent. again, and \$562,000 in 1896 at 5 per cent.; total funded debt, \$3,679,700. Including \$809,181 due to depositors in the postal savings bank, the total indebtedness on Jan. 1, 1898, was \$4,488,881.

Commerce and Production.—The soil of the Hawaiian Islands is of volcanic origin, and is exceedingly fertile. The main industry is sugar growing. Rice is also a staple product, and coffee is grown for export. Bananas are shipped to California, and there is considerable trade in hides and skins and in wool. The sugar estates in 1897 gave employment to 24,653 laborers, of whom 12,068 were Japanese, 8,114 Chinese, 2,218 Portuguese, 1,497 Hawaiians, 81 Polynesians, and 675 of other races and nationalities. The export of sugar in 1895 was under 7½ tons for every laborer employed, but in three years the rate of production was increased to almost 10½ tons for each laborer. The total export of sugar in 1897 was 520,158,232 pounds, valued at \$15,390,422; in 1896 it was 443,569,282 pounds, valued at \$14,932,172; in 1895 it was 294,784,819 pounds, valued at \$7,075,590; in 1890 it was 259,789,462 pounds, valued at \$12,159,585, having increased from 171,350,314 pounds, valued at \$8,356,061, in 1885, 63,584,871 pounds, valued at \$4,322,711, in 1880, and 25,080,182 pounds, valued at \$1,216,388, in 1875. The export of molasses in 1897 was 33,770 gallons, valued at \$2,892, making the total value of sugar exports \$15,393,314. The export of rice in 1897 was 5,499,499 pounds, valued at \$225,575. The coffee exported in 1897 amounted to 337,158 pounds, valued at \$99,696, having increased from 255,655 pounds, valued at \$53,650, in 1896, and 118,755 pounds, valued at \$22,823, in 1895. The number of hides exported in 1897 was 25,140, valued at \$87,545; of goat skins, 6,085, valued at \$2,055; of sheep skins, 9,907, valued at \$2,711. Of bananas, 75,835 bunches were exported, valued at \$75,412; of pineapples, the number was 149,515, valued at \$14,423. The export of wool was 249,200 pounds, valued at \$21,308. Other exports, including canned and fresh fruits, betel leaves, tallow, awa, guano, taro, and flour,

were valued at \$11,340. The total value of imports in 1897 was \$7,682,628, against \$6,063,652 in 1896, \$5,339,785 in 1895, \$6,962,201 in 1890, and \$3,673,268 in 1880. The total value of imports as given in the report of the collector general of customs for 1897 was \$8,838,203, of which \$6,502,937, or 73.58 per cent., came from Pacific ports of the United States, \$297,092, or 3.36 per cent., from Atlantic ports of the United States, \$865,781, or 9.80 per cent., from Great Britain, \$292,316, or 3.31 per cent., from Japan, \$260,417, or 2.94 per cent., from China, \$192,932, or 2.18 per cent., from Germany, \$122,453 from Australia and New Zealand, \$58,675 from Canada, \$30,997 from France, \$5,864 from islands of the Pacific, and \$208,738 from other countries and places. The total value of exports in 1897 was \$16,021,775, against \$15,515,230 in 1896, \$8,474,138 in 1895, \$13,142,829 in 1890, \$9,158,818 in 1885, and \$4,968,444 in 1880. The domestic exports in 1897 had a total value of \$15,933,393, of which \$15,910,000 went to the United States, \$11,000,000 to Australasia, and \$12,000,000 to other countries.

Navigation.—Lines of steamers run between Hawaii and the Pacific ports of America, ports of Australasia, and Chinese ports. In 1897 of the total imports 88.20 per cent. in value were landed at the port of Honolulu, 6.23 per cent. at Hilo, 3.59 per cent. at Kahului, and 1.98 per cent. at Mahukona. American vessels brought 69.41 per cent. of the total, English 13.77 per cent., Hawaiian 12.92 per cent., German 3.11 per cent., and others 0.79 per cent. The Hawaiian merchant marine consisted in 1897 of 62 vessels, of 34,066 tons, of which 29 were steamers. The total number of vessels in the foreign trade entered in 1897 was 427, of 513,826 tons; cleared, 415, of 506,967 tons.

Railroads, Posts, and Telegraphs.—There are railroads on the islands of Hawaii, Oahu, and Maui, having a total length of 100 miles. The number of letters that passed through the post office in 1897 was 5,079,872 in the internal service and 1,297,887 in the external service. The telegraph lines have a total length of 250 miles, including a cable between Hawaii and Oahu. Telephones are in nearly every house in Honolulu, and lines of telephone encircle the islands of Oahu, Kauai, Maui, and Hawaii.

HAYTI, a republic in the West Indies, occupying the western third of the island of Hayti. The legislative body is the National Assembly, consisting of a Senate of 39 members, part of them chosen by the lower house from lists submitted by the President and part elected by the people, and a House of Representatives, 95 in number, elected for three years by the votes of all adult male citizens who have regular means of livelihood. The President is elected for seven years. Gen. Tiresias Augustin Simon Sam was elected on April 1, 1896, after the death of President Hippolyte, for the term ending in May, 1902. The Cabinet in the beginning of 1899 was composed of the following members: Secretary of Foreign Affairs, Brutus San Victor; Secretary of Finance and Commerce, Stephen Lafontant; Secretary of the Interior and Police, Tancrede Auguste; Secretary of Agriculture and Public Works, C. Antoine; Secretary of War and Marine, V. Guillaume; Secretary of Public Instruction, M. Chanzy.

Area and Population.—The republic has an area of 11,070 square miles, with 1,210,625 inhabitants, according to the ecclesiastical enumeration of 1894. Port-au-Prince, the capital, has about 60,000 inhabitants. The Haytians are negroes, except about 10 per cent. of mulattoes

and a very small sprinkling of whites. They speak a dialect called creole French, and profess the Roman Catholic faith.

Finances.—The revenue in 1895 was \$7,406,321 in gold, derived mostly from customs, the export duties amounting to \$3,442,114 in gold; the import duties to \$4,107,989 in currency. The expenditure for 1895 was \$8,042,705. For 1897 the estimate of expenditure was \$8,984,539. For 1898 the revenue was estimated at \$2,968,661 in gold and \$4,625,424 in paper. The expenditures were estimated at \$2,223,717 in gold and \$5,365,198 in paper, of which \$82,950 in gold and \$7,780 in paper were for foreign affairs, \$9,423 in gold and \$620,007 in paper for finance and commerce, \$78,400 in gold and \$1,245,485 in paper for war and marine, \$3,000 in gold and \$865,869 in paper for the interior, \$56,626 in gold and \$214,888 in paper for public works, \$219,674 in paper for agriculture, \$26,640 in gold and \$777,250 in paper for public instruction, \$484,072 in paper for justice, \$51,480 in gold and \$36,600 in paper for worship, \$120,000 in paper for the national bank, and \$1,915,197 in gold and \$773,610 for the public debt.

The foreign debt in 1897 amounted to \$13,476,113, consisting of \$4,176,113 of 5-per-cent. and \$9,300,000 of 6-per-cent. bonds. The internal debt consisted of \$4,437,105 of gold and \$10,812,574 of currency bonds.

The Army and Navy.—The military forces number 6,828 men, chiefly infantry, including 4 battalions of artillery of 250 men each, 6 regiments of infantry of the line, numbering 3,200 men, 1,978 gendarmes, and the Government Guard of 650 men, which is commanded by the 10 generals who form the President's staff. Hayti has a naval force of 6 vessels, the newest of which is the *Crête-à-Pierrot*, of 940 tons, built in England in 1895, and having a speed of 15½ knots, with an armament of 1 6.3-inch, 1 4.7-inch, and 4 4-inch Du Bange guns and 6 machine guns. Other vessels are the dispatch gunboat *Capois-la-Mort*, launched at Havre in 1893; the *Toussaint L'Ouverture*, built in 1886; the *Deasallines*, of 1,200 tons, built in 1893; the sloop gunboat *1804* and *St. Michael*; and the gun vessel *22 de Decembre*, of 900 tons.

Commerce and Production.—The value of the imports in 1897 was \$6,363,798, against \$6,053,835 in 1896 and \$6,232,335 in 1895; the value of the exports in 1897 were \$12,549,848, against \$9,463,903 in 1896 and \$13,788,562 in 1895. The exports of coffee for the year ending Sept. 30, 1897, were 73,057,397 pounds; of cacao, 2,120,242 pounds; of logwood, 112,756,225 pounds. The minor exports are cotton, mahogany, hides and skins, and honey. The chief imports are cotton goods, breadstuffs, provisions, hardware. Of the total imports in 1897, the United States furnished \$4,379,000, France \$943,000, Germany \$529,000, England \$309,000, and other countries \$204,000. Port-au-Prince was visited in 1897 by 234 vessels, of 323,611 tons; Cape Haitien by 203, of 274,609 tons; Les Cayes by 144, of 163,842 tons; Jacmel by 212, of 371,468 tons.

The violation of the United States legation by Haytian soldiers, who entered the building to arrest a fugitive political suspect named Duvivier, the Haytian Government atoned for in the summer of 1899 by making an apology and granting reparation.

HOLLAND. (See NETHERLANDS.)

HONDURAS, a republic of Central America. The legislative body is the Congress, or Chamber, of Deputies, containing 46 members, elected by direct universal suffrage, which meets biennially for two months. The President is also elected

by the direct popular vote. Dr. Policarpo Bonilla was elected constitutionally for the term of four years beginning Jan. 1, 1895. Gen. Manuel Bonilla was Vice-President for the same term. The Cabinet in the beginning of 1899 consisted of the following members: Minister of Foreign Affairs and Acting Minister of Justice and Public Instruction, Dr. C. Bonilla; Minister of Public Works, Dr. E. C. Fiallos; Minister of the Interior, Gen. D. Gutierrez; Minister of War, Gen. J. M. Reina.

Area and Population.—The area of Honduras is estimated at 45,250 square miles, with a population in 1897 of 398,877, consisting mainly of pure Indians, with a small proportion of whites of Spanish descent. Tegucigalpa, the capital, has 14,000 inhabitants.

Finances.—The foreign debt, contracted before 1870, amounted with arrears of interest to £17,371,529 on July 1, 1898, no interest having been paid from the beginning. There is an internal debt of \$6,000,000.

Commerce and Production.—The chief commercial product at present is bananas, which are exported to the United States. Tobacco, sugar cane, Indian corn, and coffee are cultivated, and

to a less extent rice, coffee, and wheat. Cattle are raised in large numbers in the elevated parts of the country. The mineral resources of Honduras are enormous, but they are even less developed than agriculture, owing to a scarcity both of capital and labor. From \$150,000 to \$250,000 worth of gold is annually washed from the beds of rivers. Platinum, silver, copper, lead, zinc, iron, antimony, and nickel are also found, besides coal. The Government encourages the investment of foreign capital, granting facilities for the acquisition of land for agricultural or mining purposes to either individuals or companies.

The total value of imports in 1897 was \$3,260,575, against \$1,322,418 in 1896; the value of exports, \$2,647,248, against \$3,125,000. The exports of precious metals in 1897 were \$1,075,000 in value; of cattle, \$705,000; of bananas and other produce, \$839,000.

Railroads and Telegraphs.—A railroad, of which 60 miles have been built, runs from Puerto Cortez, the principal harbor on the Atlantic coast, and under contracts that have been concluded it will be carried through to the Pacific coast, and one built from Puerto Cortez to Trujillo. The length of telegraph lines in 1897 was 2,732 miles.

I

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population, according to the census of 1890, 84,385. Capital, Boise City.

Government.—The following were the State officers during the year: Governor, Frank Steunenberg; Lieutenant Governor, J. H. Hutchinson; Secretary of State, Mart Patrie; Auditor, Bartlett Sinclair; Treasurer, Lucius C. Rice; Attorney-General, S. H. Hays; Superintendent of Schools, Permeal French; Mine Inspector, Jay A. Cizek—all fusionists; Chief Justice of the Supreme Court, I. N. Sullivan; Associate Justices, J. W. Huston and Ralph P. Quarles; Clerk, Solomon Hasbrouck.

Finances.—The Auditor reported the total receipts of the treasury for 1897-'98 as \$718,992.26, derived from the following sources: Revenue, \$454,909.63; wagon-road taxes, \$28,450.67; university taxes, \$2,021.84; licenses, \$27,479.20; poll taxes, \$21,304.77; insurance, \$4,543.43; attorneys' fees, \$1,400; docket fees, \$3,228.90; interest on school lands, \$24,014.79; principal on school lands, \$12,092.47; rental of school lands, \$14,308.42; interest on school-fund loans, \$12,014.84; principal on school-fund loans, \$37,770.10; university lands, \$3,360.49; Soldiers' Home endowment fund, \$11,943.75; fees of Secretary of State, \$5,769.85; fees of Supreme Court, \$2,191.65; university endowment fund, \$47,000; 5-per-cent. sale of Federal lands, \$3,750.63; miscellaneous items, \$1,376.83. In his biennial message, at the beginning of 1899, the Governor reported that there had been no increase of the bonded debt of the State in the two preceding years, as no bonds had fallen due or become payable within that period, leaving the debt as follows: Refunding bonds, drawing 6 per cent., \$108,000; wagon-road bonds, 1889, 6 per cent., \$50,000; wagon-road bonds, 1893, 5 per cent., \$135,000; asylum improvement bonds, 5 per cent., \$25,000; normal-school bonds, 5 per cent., \$75,000; total, \$339,000. The warrant indebtedness of the State on Dec. 31, 1898, amounted to \$204,469.64; the appropriation accounts for the different departments showed an unexpended balance of \$31,854.17. In only one department—that

of the Land Board—was any material expense in excess of the appropriation incurred, and that resulted from a protection of the State's interest in the timber districts of Latah and Shoshone Counties, a controversy with certain alleged settlers having resulted in expensive litigation.

Valuation.—The assessed valuation by counties, exclusive of railroad, telegraph, and telephone property, exceeded that of 1898 by \$12,857,757.91, and was as follows: Ada, \$4,836,136; Bannock, \$2,188,102; Bear Lake, \$959,035; Bingham, \$2,360,003; Blaine, \$1,081,740; Boise, \$654,867; Canyon, \$2,792,102; Cassia, \$1,601,748; Custer, \$632,003; Elmore, \$890,116.61; Frémont, \$1,092,310; Idaho, \$1,737,251.80; Kootenai, \$1,160,406; Latah, \$3,213,396; Lemhi, \$1,200,238; Lincoln, \$469,715; Nez Percés, \$2,834,155; Oneida, \$1,516,088; Owyhee, \$1,522,837; Shoshone, \$1,782,382; Washington, \$1,772,449.50. The railroad, telegraph, and telephone assessment amounted to \$46,548,413.33, as against \$30,423,671.95 in 1898.

Mineral Yield.—The total mineral production for 1898 was \$13,591,278, showing a decrease, compared with 1897, of \$138,607. The decrease in the gold production amounted to \$229,767, while the increase in silver production was \$306,780; the increase in lead amounted to \$397,940.

The report of gold shipments from the assay office in Boise City for the fiscal year ending in 1899 shows an increase of about \$175,000 over that of 1898; it also shows that the business done in 1899 was nearly double that of 1894 and nearly treble that of 1890. The latter half of the fiscal year shows an extraordinary increase over the first part. The total regular deposits for 1899 amounted to \$1,549,002.45, while \$82,962.26 was taken in "buttons," or amounts less than 5 ounces, only deposits of more than 5 ounces being counted in the government's statement for publication. The amount shipped to the mint July 1, covering deposits for the last ten days in June, was \$68,024.21, an increase of about \$14,000 over the same period in 1898. The shipments of gold by years since 1890 are interesting as showing the rapid growth of Idaho as a gold-producing State, and are as follow: 1890, \$607,669.60; 1891,

\$608,596.06; 1892, \$641,414.81; 1893, \$787,041.63; 1894, \$801,138.37; 1895, \$1,198,149.91; 1896, \$1,166,251.68; 1897, \$1,394,351.23; 1898, \$1,366,457.95; 1899, \$1,549,902.45.

Land Surveys.—The Northern Pacific Railroad applied for the survey of 7 full and 8 fractional townships in Kootenai County, and deposited \$23,366 to cover expenses. Sixty-two whole and fractional townships were surveyed during the year, the whole embracing 1,070,936.69 acres. There were reported 55,000,000 acres in the State, with only 17,429,391 acres surveyed, leaving yet to be surveyed 37,798,769 acres. Eighty-one lode-mining claims, 33 placers, and 3 mill sites were surveyed for patents, and application was made for the survey of 165 mining claims and mill sites. Besides that of the Northern Pacific Railroad, applications were received for the survey of 109 townships, a small portion only of which are fractional, and contracts were awarded for the survey of 64 townships. The Surveyor-General estimated that the State had increased fully 25,000 in population during the year, and says that "the larger number of newcomers are not miners, but veritable home seekers and home builders." He further says: "In Idaho there are no surveyed districts lying idle and unoccupied. Wherever the government lines have been run the land has at once been appropriated and utilized. The districts and areas which appeared to the first comers to be hopelessly arid and sterile have been made to blossom as the rose and to bear fruit like the garden of the Hesperides."

Education.—In his message to the Legislature the Governor says: "Careful observation leads to the conclusion that the standard of education in the State is surely and rapidly advancing, and much of this advancement is justly attributable to the work of our normal schools, which are maintained solely by State appropriation."

Penal.—The warrants drawn on the Penitentiary appropriation for the fiscal year last reported amount to \$36,711.08; disbursements from the State cash fund raise the total expenditure for the fiscal year to \$40,759.93. The actual cost of maintenance for the year was \$30,698.98. The average cost per capita was 56½ cents; largest number of prisoners during the period, 147; lowest number, 143. Forty-three prisoners were received, 33 were discharged, 13 were pardoned, and 1 died; 20 per cent. were moderate drinkers, 23 per cent. were intemperate, and 20 per cent. were total abstainers; 40 were married and 103 single; 98 attended Sunday school before conviction and 45 did not, while 108 were religiously trained and 35 had no religious training; 7 were well educated, 77 had common schooling, 52 were poorly educated, and 7 were wholly illiterate.

Insane Asylum.—The Legislature made an appropriation for the two years ending Jan. 2, 1899, of \$75,000 for current expenses and transportation of patients and \$25,000 for improvements; from the \$75,000 there had been expended up to Dec. 1, 1898, \$61,297.53; from the \$25,000 had been expended \$14,861.35. There were 189 patients, of whom 119 were males and 70 females; cost of provisions per patient a day, 8.1 cents; cost of fuel, 3.9 cents per capita; cost of clothing, 2.6 cents a day for males and 2.5 cents a day for females. There were 24 officers and attendants in addition to the superintendent, receiving from \$300 to \$800 a year and their living expenses.

Labor Troubles.—In April serious labor troubles began in the Cœur d'Alene mines, growing out of the employment of nonunion miners, and Wardner became the scene of the worst riot since

the labor war of 1892. Damage to the amount of \$250,000 was done by striking union men to mining property through the use of explosives. On the 29th about 1,000 union men seized a train at Burke and proceeded to the Bunker Hill and Sullivan mills, which they completely wrecked. The 230 nonunion employees had received warning, and fled to the hills. This act was soon followed by others of a similar nature. The sheriff, who was unable to quell the riot, telegraphed the situation of affairs to the Governor, who in turn called upon President McKinley for 500 troops, saying that all the available National Guard of Idaho were in service in the Philippines. Troops soon began to arrive, and Gen. Merriam, commander of the Departments of the Colorado and the Platte, took command. Martial law was declared by the Governor in Shoshone County, and about 900 arrests were made, but a large number of the prisoners subsequently escaped. The State built a stockade for the detention of prisoners. By order of the Governor the Auditor issued a proclamation to the Cœur d'Alene mine owners, notifying them against the employment of men belonging to "criminal organizations," and announcing that all persons applying for work in the mines would be required to obtain from the appointed agent for the State a permit to seek for and obtain employment; that mine owners must refuse employment to all applicants not presenting such certificate; and that all persons then under employment in the mines would be required within ten days to obtain such certificates.

The trial of the arrested persons having been delayed by various complications, in September the United States Secretary of War wrote to the Governor, protesting against the further employment of Federal troops to guard the prisoners, saying: "I am informed that they are now being used by the civil authorities of the State and county as a guard for certain prisoners—upward of 100 in number—who have been arrested by the civil authorities upon warrants issued by the civil courts, and are held under such warrants or indictments found by the Grand Jury of the county; that these prisoners, or most of them, have been held for a number of months, and that during the period of their detention the district court of Shoshone County, which is the court having jurisdiction to try indictments found by the Grand Jury, has twice convened and adjourned without bringing these prisoners to trial; that the next regular term of court will not be held until January of next year, and in the meantime, unless something is done to prevent it, these prisoners would remain in prison under guard of the troops of the United States. I do not wish in any way to make any suggestion relating to the administration of justice in your State, or to imply that the failure to bring these prisoners to trial has not been for perfectly good reasons in accordance with the law and practice of the courts of Idaho, but I am much disinclined to have the troops of the United States continued longer in the attitude of retaining in custody the citizens of a State who have remained so long without being tried, and I feel bound to urge that if it is not convenient to bring the prisoners to speedy trial you will substitute civil guards as their custodians, and relieve the troops of the United States from further performance of that duty."

In his reply to the Secretary of War the Governor asserted that the withdrawal of the troops would surely result in great loss of property and life in the Cœur d'Alene region, but said that by Nov. 1 the State would relieve the Federal troops

of guard duty. He took occasion to declare that the State authorities were not in conflict with organized labor, as such, in any manner whatever.

A "story illustrating the viciousness of the Shoshone County dynamiters" was published by the Idaho Statesman, of which the following is a summary: Soon after Gov. Steunenberg entered upon his official duties, in 1897, he was confronted by the Cœur d'Alene question. Under the preceding administration some militia companies had been organized in that section in order that a force might be at hand with which the State could preserve order. These companies were recruited from among the ranks of nonunion men, and their presence greatly disturbed the miners' unions. As soon as Gov. Steunenberg had been installed in office a movement was begun to have these military organizations disbanded, and one of the first steps in this movement was taken by the Shoshone County delegation in the Legislature, all the members of which were elected on the miners' union ticket. This delegation requested the Governor to disband the militia, but the request was not then acceded to.

Only two lives were lost during the Cœur d'Alene riots of April. In November 10 of the prisoners were convicted of destroying mining property, and each was sentenced to serve twenty-two months in the Government prison at San Quentin, Cal.

Legislative Session.—The General Assembly, which met at the beginning of the year, was composed of 9 Republicans, 3 straight Democrats, 2 straight Populists, 2 fusion Democrats, and 5 fusion Silver Republicans in the Senate, and 12 Republicans, 14 straight Democrats, 6 straight Populists, 7 fusion Democrats, 7 fusion Silver Republicans, and 3 fusion Populists in the House. Two of the members of the House were women.

Among the acts passed by the General Assembly were the following:

Authorizing an issue of \$49,000 of State bonds for the purpose of finishing the university and improving other buildings. Of the money raised by sale of the bonds, \$14,000 is to go to the university improvement fund, \$26,000 to the Penitentiary fund, \$3,000 to the Soldiers' Home fund, and \$6,000 to the Capitol building fund. If the bonds sell above par, the premium is to be divided *pro rata*.

Establishing a bureau of immigration, labor, and statistics. The salary provided for the commissioner is \$1,800 a year, with traveling expenses of \$600 a year, and he is also allowed not to exceed \$2,000 a year for printing.

Providing for an enlarged system of irrigation.

Providing that lands acquired by the State by escheat, foreclosure, or relinquishment shall be school lands.

To suppress gambling.

To provide free text-books for the schools.

Requiring kindness to animals to be taught in the public schools.

Decisions.—The Supreme Court reversed the judgment of the lower court in favor of the plaintiff in the case of Bingham County vs. W. A. Woodin, treasurer, and his bondsmen, for money lost in the Bunting Bank failure. In this case the complaint alleged as the first cause of action that the assessor Crowley had called and sought to pay to the treasurer the sum of \$48,719.03; that Woodin did not demand the money, but did receive worthless checks and credits on the Bunting Bank. For a second cause of action it was alleged that Woodin received from Crowley money belonging to Bingham County in the sum of \$48,

719.03; that he failed to keep it safely, depositing it in general deposit in the Bunting Bank.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; and 3,826,351 in 1890. Capital, Springfield.

Government.—The following were the State officers during the year: Governor, John R. Tanner; Lieutenant Governor, William A. Northcott; Secretary of State, James A. Rose; Auditor, James S. McCullough; Treasurer, Floyd K. Whittemore; Attorney-General, Edward C. Akin; Superintendent of Public Instruction, Alfred Bayliss; Adjutant General, J. N. Reece; Superintendent of Insurance, James R. B. Van Cleave; Printer Expert, John H. Barton; Chief Justice, James H. Cartwright—all Republicans; President of Board of Agriculture, W. H. Fulkerson; Board of Arbitration, H. R. Calef, D. J. Keefe, and W. S. Forman; President of Board of Health, C. B. Johnson; Justices of Supreme Court, C. C. Boggs, J. J. Phillips, J. W. Wilkin, J. N. Carter, A. M. Craig, J. H. Cartwright, and B. D. Magruder. The following additional State officers were created by act of April 24, 1899: Food Commissioner, A. H. Jones; Game Commissioner, Henry W. Loveday; Supervising Architect, R. Bruce Watson; Board of Inspectors of Commission Merchants, W. H. Whitcomb, J. W. Stanton, A. M. Crawford, Joseph Newman, and A. M. Smith.

Finances.—The rate of taxation for 1899 was much lower than for several years previous, being 3.08 mills on the dollar for revenue fund or general State purposes, and 1.12 mill for State school fund or State school purposes, thus aggregating 4.2 mills on each dollar of taxable property, against 5.6 last year and 6.6 two years ago.

The total assessment for the counties of the State for 1899, as given by the Auditor, was \$895,869,090, an increase of \$202,425,384 over 1898. The total assessment on 395 corporations was \$2,348,203, against \$2,433,425 on 320 corporations last year. The total equalized value of the tangible property of the corporations was computed at \$26,575,125, against \$14,694,000 in 1898.

The total amount of appropriations passed by the forty-first General Assembly was \$12,557,655.27, of which \$93,341.33 was appropriated to the courts, \$4,418,461.12 to charitable institutions, \$21,480 to libraries, \$106,700 to Lincoln home-stead and monument, \$2,114,000 to the school fund, \$1,027,898 to the military, etc.

Banks.—The records of the State Banking Department in the Auditor's office show 17 State banks organized since Dec. 12, 1898, 2 consolidated, 5 gone into voluntary liquidation, and 1 State bank organized as a national bank. There were 142 State banks in operation Dec. 12, 1898, and there are now 152. The total resources are shown to be: Loans and discounts, \$117,674,519.79; gold coin, \$5,159,508.55; gold-coin Treasury certificates, \$5,416,120; silver coin, \$355,050.04; silver Treasury certificates, \$903,657; national bank currency, \$4,051,624; legal tender and Treasury notes, \$3,135,252; fractional currency, \$82,439.90. Liabilities: Time deposits (savings), \$55,370,508.43; certificates, \$12,969,561.30; demand deposits (individual), \$74,559,354.04; demand certificates, \$5,400,937.33; certified checks, \$658,042.63; cashier's checks, \$635,830.10. The report on building and loan associations showed receipts for examinations and filing fees as \$22,975, and expenses as \$22,817. During the year

custodians were placed in charge of 5 associations; in 3 instances the shareholders went into voluntary liquidation, and in four cases receivers were appointed. The Peoria Savings Loan and Trust Company changed its name to the Bank of Illinois on March 20, 1899.

Board of Agriculture.—The report of the State board showed the corn area, June 30, as 7,126,786 acres, and an average crop yield of 88 per cent. in the northern division, 79 in the central, and 86 in the southern; the spring wheat acreage as 5 per cent. smaller than last year in the northern section, no spring wheat in the central and southern; oats, 4 per cent. larger in the northern division, 3 per cent. larger in the central, and 14 per cent. less in the southern; the acreage of broom corn as last year, but bringing from \$100 to \$122.50 a ton for choice crops; sorghum 9 per cent. less, and millet 9 per cent. more in the northern part and 11 per cent. less in the southern section; total yield of Irish potatoes, about 2,500,000 bushels; the wool clip, about the same as last year.

Board of Arbitration.—By amendments to the arbitration law the board is now able to compel attendance and testimony of witnesses and to demand the production of all necessary papers and books, thus ascertaining all the facts in each case, and it can also enforce its decision by a rule of the circuit or the county court. In the Pana coal case the board fixed the mining rate, May 30, at 30½ cents a ton; for 8-foot entry, \$1.53½ a yard; for 10-foot entry, \$1.38 a yard; for 12-foot entry, \$1.23 a yard; and for all entries over 12 feet and up to 18 feet the price shall decrease at the rate of 7.5 cents a foot; "for turning a room, in addition to the mining price, the miner shall be paid \$4 for the first 15 feet if the width be not less than 9 feet." The scale of wages was fixed as follows: Blacksmiths, \$2.25 a day; dumpers, firemen, and head car trimmers, \$1.75; blacksmiths' helpers, \$1.65; engine coalers, empty cagers, and self-dumping cagers, \$1.60; band pickers, boys, 85 cents; all work not specified, \$1.55.

Board of Health.—The number of cattle visited by this board between May and July was 3,061; herds tested, 62, ranging from 5 to 136 animals in each herd; animals condemned, about 1 to each 100 examined. Of the 62 herds examined, 26 were found free from tuberculosis, and 42 of 45 individual cows examined were pronounced healthy.

Board of Pardons.—In the year the State board considered 123 applications for pardon, and recommended to the Governor a full and free pardon in 1 case and a commutation of sentence in 19 other cases. There were 2,032 examinations of prisoners for parole; 741 convicts were paroled and 352 received final discharge. The rules of the pardon board require that every application for pardon shall be accompanied by a statement from the trial judge and the State's attorney, as well as the full particulars of the crime. Notice of intention to make application for pardon is sent to each newspaper in the county where the crime was committed, so that a protest against it or a petition approving it may be sent to the board.

Board of Pharmacy.—The number of applicants examined by the board during 1898 was 602, of whom 114 were registered as pharmacists, 94 being already registered as assistant pharmacists. The number of assistant pharmacists registered in the year was 145. Of the 66 applications made for registration as assistant pharmacists, 22 were granted certificates, while only 50 of the entire number registered as assistant pharma-

cists were registered apprentices. The total number of registered pharmacists was 4,548, or 22 fewer than in the previous year; assistant pharmacists, 1,256; permits issued to retail domestic remedies and proprietary medicines, 1,659, of which 412 were original permits in localities remote from drug stores.

Canal.—The drainage canal of Chicago, dug to change the direction of the flow of Chicago river, and thus furnish an outlet for the drainage of the city, was completed Dec. 31, after seven years of hard work, at a cost of \$33,000,000. The collateral channel had been finished some time, from a branch of the river in the western part of the city to a point near the main channel. The canal is intended to carry 300,000 cubic feet of water a minute.

Charities.—The fifteenth biennial report of the State Board of Charities, covering the two years ending July 1, 1898, gave the cash disbursements as \$3,504,749.64; amount on hand, \$189,390.69; amount of appropriations undrawn, \$1,877,430.34; average number of inmates in all institutions, 8,775; days' board furnished, 6,405,519; average cost per capita, \$162.57 per annum. The Western Insane Hospital, at Watertown, has been completed, and has a capacity of 650 patients. For the two years beginning July 1, 1898, there was appropriated by the forty-first Assembly to the several charitable institutions the sum of \$3,153,520 for ordinary expenses and \$1,193,755 for special purposes. The surplus, March 31, for all the institutions was \$170,285.87; number of inmates at beginning of quarter, 9,833; at close of quarter, 9,942; per capita cost of maintenance (gross), \$39.46; net per capita cost, \$36.12. The net average cost per capita of the various institutions: Northern Insane Hospital, \$39.83; Eastern, \$37.93; Central, \$28.10; Southern, \$33.56; Western, \$37.13; Asylum for Criminals, \$55.53; Deaf and Dumb Institution, \$54.60; Institution for Blind, \$54.65; Institution for Feeble-minded, \$34.19; Soldiers' and Sailors' Home, \$27.84; Soldiers' Orphans' Home, \$35.12; Soldiers' Widows' Home, \$58.64; Charitable Eye and Ear Infirmary, \$54.08; Home of Juvenile Female Offenders, \$35.05. The amount of undrawn appropriations in the State treasury Jan. 1 was \$957,610.77; March 31, \$576,861.59; Sept. 30, \$1,420,484.35.

Coal.—According to reports received by the Bureau of Labor Statistics, the total coal production for the year was 18,599,299 tons; aggregate home value of the product, \$14,567,598; number of coal-producing counties, 52; of mines and openings, 881; machines employed in mines, 392; mines using machines, 55; tons undercut by machines, 3,415,635; underground workers, 31,602; total number employees, 35,026; new mines or old mines reopened, 120; mines closed or abandoned, 92; number of fatal accidents, 75, or 6 more than last year. Sangamon County ranked first among the coal-producing counties of the State, with its output of 2,083,572 tons; men employed, 2,507; average working days, 210; total wages paid, \$1,174,120; number of kegs of powder used, 73,294, at a retail price to miners of \$1.75 per keg.

Education.—During the past ten years there has been paid for school purposes, outside of teachers' wages, the sum of \$14,015,231.59; for salary of teachers, \$44,731,919.54. The State pays annually for the support of common schools the sum of \$1,000,000, and in ten years there has been raised by voluntary taxation the sum of \$61,000,000. There are about 26,000 public-school teachers in the State.

Fish and Game.—By the new law, which went into effect July 1, no person will be allowed to

seine with a net the meshes of which are less than 2 inches square, and in fish traps the openings must be 2 inches wide. "It shall be unlawful for any person or persons or corporation to take, catch, or kill in any manner or by any means whatsoever, in the waters of Lake Michigan, any whitefish or lake trout between the fourteenth day of October in each year and the succeeding thirtieth day of November. All packages containing fish shall be labeled in plain letters on the address side of the package, so as to disclose the fact that said package contains fish and the nature of said fish in said package." In 1896 the output of coarse fish from 32 points on Illinois river was more than 7,000,000 pounds, bringing \$207,000. In 1897 a marked increase in aggregate sales was shown, amounting to \$249,000. In 1898 there was an aggregate of \$500,000, a business interest made possible by enforcing the proper protective laws and rescuing the fish from overflowed lands in bottoms along the rivers where fish left by the receding tide would otherwise perish.

Food Commissioner.—An act to provide for the appointment of a State Food Commissioner, to define his duties and powers and fix his compensation, and to prohibit and prevent adulteration, fraud, and deception in the manufacture and sale of articles of food, was approved April 24, 1899, and in force July 1. It is the duty of the commissioner to enforce all laws regarding the production, manufacture, or sale of dairy products or the adulteration of any article of food, and personally or by his assistants to inspect any article of food made or offered for sale within the State if for any reason he may have a suspicion that said food is impure, unwholesome, adulterated, or counterfeit. He shall carefully inquire into the quality of the dairy and food products manufactured for sale or sold or exposed for sale in the State, procure samples of the same, and have them submitted to examination or analysis. When food is found adulterated, impure, or unwholesome it shall be his duty to make complaint against the manufacturer or vender thereof in the proper county, and to furnish the prosecuting attorney with evidence to convict thereon. In the term "food" is included all articles—simple, mixed, or compound—which are used for food, candy, drink, or condiment by man or by domestic animals.

Insurance.—The statement of the Insurance Superintendent, issued in February, showed the number of companies doing a general fire and marine insurance business to be 201, with an aggregate paid-up capital of \$79,158,449.57; admitted assets, \$300,318,565.25; liabilities, \$198,926,073.25; surplus, \$101,412,310.12; total income, \$151,491,565.39; total expenditures, \$142,864,813.44; losses incurred, \$8,211,282.31; premiums received, \$13,006,528.30; risks written, \$1,306,478,149.10; 125 companies received \$10,552,277.55 more than they disbursed, and 76 companies disbursed \$1,925,525.60 more than they received, leaving a net excess of receipts of \$8,626,751.95.

The number of life insurance companies doing business in the State, as reported April 10, was 208, of which 42 were legal reserve, 40 assessment, 34 accident, and 82 fraternal societies. The 42 legal-reserve companies reported the number of policies issued, restored, and increased since last report as 496,021, amounting to \$1,039,479,383.58; policies terminated, 294,452, amounting to \$681,565,777.24; total policies in force at close of year 2,406,977, amounting to \$5,715,772,665.88; total assets, \$1,460,563,472.02; total liabilities, \$1,243,264,989.66. The 34 fidelity, surety, and casualty

companies showed a capital of \$14,720,000; admitted assets, \$95,910,775.15; liabilities, including capital, \$79,323,944.03; risks in force Dec. 31, \$3,648,280,393.17. The 40 assessment companies reported the number of certificates in force Dec. 31 as 423,015, amounting to \$885,514,531.92; assets, \$17,068,274.77; liabilities, \$5,069,543.43. The 10 accident associations showed total assets, \$637,281.54; liabilities, \$136,783.39; certificates in force, 67,021, insuring \$239,271,498; written during the year, 51,284, insuring \$138,447,700. The 82 fraternal societies reported the number of policies in force as 1,800,056; total admitted assets, \$11,780,013.90; liabilities, \$4,191,141.91.

Military.—The cost to the State for the military forces on duty at Pana and Virden during the riot was reported by Adjutant-General Reece as \$60,386.28, the National Guard having received about \$53,000 direct and the remainder for transportation and supplies.

"During the past two years the following additional flags have been deposited in the cases in Memorial Hall: The colors of the First Illinois Infantry of the Mexican War; of the Fourth and Sixth Regiments of cavalry; and Company A, Thirteenth Cavalry, civil war." The visitors' book shows the average attendance in this hall for the past year to have been 105 a day, and that every State in the Union was represented on the list, as well as England, Nova Scotia, Japan, Mexico, Cuba, and Ontario.

In the war with Spain 9 regiments of Illinois infantry, 1 of cavalry, 3 divisions of the naval militia, and the signal troop were mustered into the Federal service.

Railroads.—The Chicago and Alton was the first railroad in the world to use the Pullman sleeping and dining car. It has a total length of 834 miles in trunk line and branches, with 1,186 miles of double tracks and sidings. The Illinois and Mississippi Valley Terminal Railroad Company was incorporated on June 26, with a capital stock of \$100,000.

State Institutions.—The Eastern Normal School, at Charleston, was formally turned over to the trustees Aug. 29. This school was established by an act of the General Assembly that went into effect July 1, 1895. On Sept. 7, 1895, the school was located at Charleston, and in December following a contract for building was signed. The appropriations made by the General Assembly for building and furnishing have amounted to \$171,000, and Charleston has given \$56,216.72. The General Assembly made an annual appropriation of \$33,000 for defraying the ordinary expenses of the school. The University of Illinois in 1896-'97 had a total enrollment of 1,075; in 1897-'98 a total of 1,582, of which number 245 were women. On June 30, 1898, there was a balance on hand of \$9,140.69; receipts for the year, \$406,622.94, made up of a balance from 1897 of \$51,640.70; fees from students, \$26,630.95; State appropriations, \$210,000; United States Government, \$41,419.92; departments and laboratories, \$5,162.55; School of Pharmacy, \$10,516.94; of medicine, \$41,390.25; miscellaneous, \$213,366.95; total expenditures for the year, \$397,482.25. The report of the College of Agriculture showed the number of students enrolled to be 69, as follows: Farm mechanics, 34; farm crops, 29; history of agriculture, 14; soil physics, 3; bacteriology, 3; stock judging, 58; stock management, 20; milk production, 10; testing, 10; horticulture, 25; orcharding, 3; commercial horticulture, 3; veterinary, 22; clinic, 21; thesis for graduation, 2. From the agricultural experiment station of the University of Illinois has come a

pamphlet giving a history of the experiments with sugar beets. It obtained from Washington a quantity of the best imported seeds, which were distributed to more than 600 farmers in different sections of the State, with directions for sowing and care. The station also grew a quantity of beets on its own soil. The results proved that Illinois can grow large yields of beets of excellent quality. The results of the analysis of 400 samples of beets was published and 19,000 copies were distributed. At Peoria and Pekin a strong company has been organized with a 700-ton factory, and beet growing has now become one of the great commercial questions of the State.

Treasurers' and Assessors' Association.—A permanent organization of the county treasurers has been formed, for the purpose of carrying out the provisions of the revenue laws of the State and to consider any questions of mutual interest to members of the association.

Legislative Session.—Among the bills that became laws were the following:

To enable cities and villages to buy or construct waterworks and to levy taxes for the same.

To empower the city board of education to examine teachers for certificates in cities of more than 30,000 and less than 100,000 population.

To insure the better education and compel registration of opticians.

To provide for the appointment of a pure-food commissioner.

To require corporations to report to the Secretary of the State annually, empowering the Secretary to cancel the charters in case of failure to comply with the law.

To allow counties to erect monuments and memorial buildings in memory of their soldiers and sailors.

To prohibit the use of the national flag for advertising.

To tax all corporations 2 per cent. of their gross earnings.

The aggregate amount appropriated by the Assembly for the next two years was \$11,500,000, an increase over the last appropriation due to the \$600,000 appropriated on account of the Spanish-American War, \$200,000 for a new asylum at Peoria, and \$100,000 for the Lincoln monument.

IMMIGRATION BUREAU. This is one of the latest wheels added to the great machinery of the United States Government. Only during the past twenty years have attempts been made to check the flood of foreign arrivals. The law of 1875, forbidding the landing of criminals and the importation of women for immoral purposes, was the first prohibitory legislation. As the population of the country became more dense and the question of subsistence more anxious a decided jealousy of cheap labor spread throughout the United States, and appeals were made to Congress in behalf of American workmen who were being driven out of employment by the alien influx. In 1882 a bill was passed which imposed a duty of 50 cents for each passenger not a citizen of the United States, to be paid to the collectors of customs by vessels arriving at the different ports. This tax was afterward increased to \$1, and constituted the immigration fund, which, under the direction of the Secretary of the Treasury, was employed in regulating immigration and in caring for such helpless foreigners as through accident or failing health became a burden upon public charity. The fears of American workmen were further allayed by the act of 1885 and its amendatory act of 1887, which forbade importation of foreign labor, imposing a fine of \$1,000 upon every employer who should

continue to import workmen, and a penalty of \$500 upon any steamship company that should connive at such violation of law. It was also provided that the offending immigrant who, allured by the promise of definite work, should arrive at any port was to be promptly carried back at the expense of the steamship company to the place from which he embarked.

On April 19, 1890, Col. John H. Weber, a Federal officer, was sent to New York to take charge of the famous immigrant station at Castle Garden, and administer the restrictive regulations of the General Government. Soon after this movement the Immigration Bureau was recognized as a distinct branch of the Treasury Department, and the entire management of immigration was placed under national control. Hon. W. D. Owen (father of the bill that is known by his name), at the close of his term in Congress, was appointed superintendent of the new bureau. The Owen law, approved March 3, 1891, excluded from admission to the United States all idiots, insane persons, paupers, or persons likely to become a public charge, persons afflicted with any loathsome or contagious disease, persons who had been convicted of felony or infamous crime, and all persons whose ticket or passage was paid for by others, unless it could be satisfactorily proved that such persons did not belong to any of the excluded classes and that they were not contract laborers. This section of the law, however, did not prevent persons living in the United States from sending for a relative at their own expense. Neither were foreigners convicted of political crimes abroad debarred admission.

In 1893 the Marine-Hospital Service began a practice which had important results to the Immigration Bureau. It sent medical inspectors to the principal ports of embarkation in Europe to examine physically all emigrants bound for the United States, and insist upon the strictest precautionary measures of quarantine while America was threatened by an invasion of cholera. Taking this action as an initial movement, the Hon. Herman Stump, member of Congress from Maryland, chairman of the Committee on Immigration, effected the passage of a bill that provided for a complete examination of immigrants abroad prior to their going on board ship. The operation of the Stump law at the present day requires that each master or commanding officer of a vessel intending to bring immigrants to the United States shall furnish to the proper inspectors of immigration lists containing 30 names each, which he has duly signed and certified by oath before the American consul, and which shall state, in answer to the questions at the top of such lists, the full name, age, and sex of each immigrant, whether married or single, the calling or occupation, whether able to read or write, the nationality, the last residence, the seaport for landing in the United States, the final destination, whether having a ticket through to such destination, whether the immigrant has paid for his passage or whether it has been paid by some other person or corporation or society, whether he is in possession of money, and if so whether more than \$30 or less than that amount, whether going to join a relative, what relative, his name and address, whether ever before in the United States, whether ever in prison or almshouse or supported by charity, whether a polygamist, whether under contract, express or implied, to perform labor in the United States, and what is the condition of health, mental and physical. This last statement is required to be verified by the ship's surgeon under oath. This method of in-

vestigation, conducted at the home of the immigrant, with its thorough probing of hereditary and local conditions, has transmitted a widely diffused knowledge of the classes debarred admission to the United States, and the information thus disseminated deters many from making a fruitless attempt to come to the New World. From motives of self-interest the steamship companies exert themselves zealously to aid in the enforcement of these regulations. Their ticket agents are instructed to be scrupulously careful in the sale of tickets, under penalty of paying the price of deporting rejected persons, and their zealous co-operation with the Government has been further stimulated by recent enactments in Italy and Sweden which give the deported immigrant the right to sue for damages the company that sold him his passage.

It was easily anticipated that immigrants, in order to escape the varied obstacles of the law of 1893, would seek to enter the United States by way of Canada. To counteract this tendency an agreement was promptly entered into with the Canadian transportation companies by land and water, by which it was determined that all immigrants bound for the United States should be landed at five ports—viz., Halifax, Quebec, Point Levis, St. John, and Vancouver—and that at these points United States inspectors should be given every accommodation and facility for segregating the objects of examination, on condition that the duty should be executed as speedily

of the Immigration Bureau, with the title of commissioner general, and in 1896 he was sent by the Secretary of the Treasury to Italy to confer with the ministers of that kingdom in relation to immigration. As a result of this conference the Italian Prime Minister issued a proclamation directing the royal prefects to refuse passports to all applicants included in the classes prohibited by law from entering the United States. That the rules of this edict are being rigorously enforced is convincingly proved by the fact that the bureau constantly receives information of the conviction of ticket sellers for violation of its immigration law in Italy.

The United States maintain 38 immigrant stations, at the following-named ports: Ellis island, New York; Halifax, Nova Scotia; Cincinnati, Ohio; Rouse's Point, N. Y.; Toledo, Ohio; Buffalo, N. Y.; Ogdensburg, N. Y.; Baltimore, Md.; Pittsburg, Pa.; Springfield, Ill.; Port Huron, Mich.; Pembina, N. Dak.; Concord, N. H.; Tacoma, Wash.; San Francisco, Cal.; Suspension Bridge, New York; Portland, Me.; Laredo, Texas; Galveston, Texas; New Orleans, La.; Savannah, Ga.; Boston, Mass.; Chicago, Ill.; Sault Ste. Marie, Mich.; El Paso, Texas; Quebec, Canada; Sumas, Wash.; Philadelphia, Pa.; Eastport, Me.; Cleveland, Ohio; Burlington, Vt.; Key West, Fla.; Norfolk, Va.; Detroit, Mich.; Vanceboro, Me.; West Superior, Wis.; Newport, Vt.; Eagle Pass, Texas.

There are 5 immigration commissioner's sta-

THE NEW IMMIGRANT STATION, ELLIS ISLAND, NEW YORK HARBOR.

as possible and a passport be given to each admitted immigrant identifying him and enabling him to cross the Canadian frontier. To defray these expenses the Canadian transportation companies pay to the United States \$1 for every immigrant landed whose destination is the United States.

As a result of its vigorous policy, the Immigration Bureau receives indirect assistance from the German Empire, since the population of many countries in the interior of Europe are obliged to cross this empire in order to reach a seaport, and those immigrants who are rejected by the American officials are liable to become burdens upon the charity of German institutions for the poor. To defend these asylums from being crowded with paupers of other countries, the German minister promulgated an order on Oct. 8, 1893, directing the police on the frontiers of the empire to challenge all emigrants on their way to the seaboard, subject them to examination, and refuse to allow those to proceed who are likely to be rejected by the American authorities. In 1893 Herman Stump was placed in charge

tioned respectively at New York, Boston, Philadelphia, Baltimore, and San Francisco. The number of inspectors employed depends upon the size and importance of the port. The finest immigrant station in the United States (and in the world) was the one maintained for the port of New York at Ellis island, which was destroyed by fire in June, 1897. Since the great wave of foreign elements breaks principally upon the wharf of New York city, as many as 25 inspectors are employed for this port during the busy season. The selection of Ellis island as the site for the immigrant station of New York was made soon after Col. Weber assumed charge at Castle Garden, when it was found necessary to have a more secluded spot for the proper management of applicants for admission to the country. Improvements upon the island were begun at once, and its size was doubled by means of piling and filling until its area was 5½ acres. Then a fine plant gradually rose, nearly a million dollars being expended in its construction and equipment. It was first occupied in January, 1891, but additions and improvements were made continually,

so that it was not pronounced completed until a few days before its total destruction. The last work was that of laying the cables to New York for telegraph and telephone communication by way of Governor's island, and the disinfection plant for the washing of immigrants and fumigation of their clothing. Immigrants were transferred from the Barge Office, where they first arrived, to Ellis island by means of a ferryboat, that no other persons were allowed to use except by special permit from the authorities in charge. For the protection of ignorant foreigners from the wiles of land sharks all visits to the station were forbidden except those made upon legitimate business known to the commissioner. Every courtesy was extended to the representatives of charitable societies and to the friends and relatives who came to meet immigrants. In 1893 Dr. Joseph H. Senner succeeded Col. Weber as Commissioner of Immigration for the port of New York. The terrible fire, which was discovered shortly after midnight on June 14, 1897, and which within an hour reduced the Ellis island station to ashes, was not, as it first appeared to be, an unmitigated calamity. A serious mistake had been made in constructing all the buildings of wood, and awful risks were constantly incurred during the six years of the station's existence. Although the whole force of employees was organized into a fire drill, its guardianship extended only over the hours of daylight; by night the cluster of buildings was unprotected. According to the statement of Dr. Senner, the efforts of the fire brigade, had it been there, would have availed nothing against the rapid conflagration of the pine structures. How the fire originated remains a mystery. Some nights there have been as many as 2,000 immigrants on the island, but, fortunately, on the date in question only 170 persons were in the detention house and 44 patients in the hospital. No life was lost. The loss of Government property amounted to about \$570,000, since the electric and steam-heating plants were saved, as well as a small fireproof house where records were kept. Dr. Senner removed his quarters immediately to the Barge Office, and the agents of the various steamship lines tendered the use of their piers for inspection of immigrants.

As a temporary expedient, the steamboat *Naragansett*, of the Providence and Stonington line, was chartered and moored to the wharf, its interior being fitted up as a detention house. This steamer can accommodate 800 persons, besides furnishing rooms for a physician, matron, and other attendants; but the work is greatly hampered by such cramped quarters, awaiting the completion of the new buildings now under construction at Ellis island.

Immigrants are not legally recognized as landed until they have passed satisfactorily the inspection at the immigrant stations. This consists of a second physical examination before a marine-hospital surgeon and repetition of statements contained on the lists before the registration clerks, when any discrepancy between the answers and the written testimony is carefully noted. Interpreters are at hand to facilitate the work, and it is accomplished as rapidly as possible. The clerks are experts in dealing with human nature, and readily distinguish between the hesitation of nervousness and that of cunning or evasion. Those who are honest and straightforward in their conduct are promptly discharged, while all suspected individuals are removed to detention compartments to await special examination. The investigation of special cases is

conducted before four officials, and the law requires that a favorable decision must be rendered by three of these before an immigrant can be admitted. The dissenting inspector has the right to appeal the case to the commissioner general, who in turn can submit it to the Secretary of the Treasury for consideration. The immigrant is entitled to a speedy hearing, and is either ordered to be deported or granted admission without delay. Representatives of charitable societies are present at his trial, and agents of the steamboat companies are also near by from interested motives. Italy sends officials to watch over the interests of her nationality and see that no Italian is unjustly debarred. If the immigrant asks for an appeal from an adverse decision a record of proceedings is transmitted to headquarters at Washington, and the expense of his board and lodging is charged to the steamship company that transported him. Such immigrants as are ill at the time of arrival are placed in hospitals until sufficiently recovered to travel, where they are maintained at the expense of the steamship company until their examination can be held and judgment rendered.

The operation of the immigration laws extends over the period of a year from date of arrival, and if during such period it is discovered that an immigrant has entered the United States in violation of its express regulations the offending individual can be arrested and returned to his home, the transportation company being forced to defray the expense of his maintenance from the time that the attention of the bureau was called to his case, as well as the cost of his deportation. If from accident or disease an immigrant becomes unable to earn his livelihood within a year after date of arrival, he is removed to a hospital until it is clearly proved that his failing health will make him a permanent burden upon charity, when he is deported, all expenses incurred thereby to be charged to the immigration fund. If his illness is the result of hereditary causes, the cost of his maintenance and return home is paid by the transportation company. The charge for food, lodging, and hospital care is not in excess of the actual cost of furnishing them, since it is desired to make the service self-supporting without profit.

The duties of inspectors specially assigned to the execution of the alien-contract-labor law require them to investigate all complaints of alleged violation and, if necessary, report the offenders to the Immigration Bureau for prosecution. They are even sent to places where labor strikes growing out of the employment of foreign workmen are pending, and they are instructed to keep in touch with the labor organizations throughout the country as a means of securing information concerning infractions of the law.

Recent experience has shown that the best means of discovering those individuals violating the alien-contract-labor laws is to conduct the inquiry at their place of ultimate destination. During the past year several suspected aliens were followed to Iowa, Illinois, and Pennsylvania, where industrial disputes were in progress between employers and laborers, and were there arrested for violation of law and deported. Strong presumptive evidence also exists of the successful importation of foreign labor under contract into other States, native workmen being displaced. The Immigration Bureau acknowledges its incapacity to deal with these fraudulent enterprises, the qualifications for such work not being those of an ordinary inspector at our immigrant stations, but belonging to a trained po-

lice inspector or detective. Recommendation is made that a detective force be placed at the disposal of the Commissioner of Immigration to act at the great centers of mining, manufacture, and other industries and report upon their investigations to headquarters at Washington. One definite reform has resulted, however, from the measures adopted to enforce the alien-contract law—a check has been given to the padrone system, and many Armenians, Syrians, and Italians of the lower classes have been freed from a servile obedience to the padrones who have clandestinely landed them within our country to serve as peddlers, mendicants, fruit sellers, or street musicians.

No official records were kept of the influx of foreign population prior to 1820, but it is estimated by good authorities that the number of immigrants arrived in the United States from the close of the Revolutionary War up to 1820 was 250,000. The number in each year from 1820 to 1855 was as follows, some slight discrepancies being produced in the figures by change of the official end of the year from Sept. 30 to Dec. 31 and back again: 1820, 8,385; 1821, 9,127; 1822, 6,911; 1823, 6,354; 1824, 7,912; 1825, 10,199; 1826, 10,837; 1827, 18,875; 1828, 27,382; 1829, 22,520; 1830, 23,322; 1831, 22,633; 1832, 60,482; 1833, 58,640; 1834, 65,365; 1835, 45,374; 1836, 76,242; 1837, 79,340; 1838, 38,914; 1839, 68,069; 1840, 84,066; 1841, 80,289; 1842, 104,565; 1843, 52,496; 1844, 78,615; 1845, 114,371; 1846, 154,416; 1847, 234,968; 1848, 226,527; 1849, 297,024; 1850, 369,980; 1851, 379,466; 1852, 371,603; 1853, 368,645; 1854, 427,833; 1855, 200,877; total, 4,212,624.

Before 1856 the official statistics of the arrivals of passengers from foreign countries do not distinguish those intending to make their permanent residence in this country from merely transient sojourners, but there were during that time comparatively few of the latter. It has been estimated that 98 per cent. of the alien arrivals prior to 1856 were immigrants.

The arrivals of immigrants in the United States from 1856 to 1899 were as follow: 1856, 195,857; 1857, 246,945; 1858, 119,501; 1859, 118,616; 1860, 150,237; 1861, 89,724; 1862, 89,007; 1863, 174,524; 1864, 193,195; 1865, 247,453; for the six months ending June 30, 1866, 163,594; for the fiscal year ending June 30, 1867, 208,967; 1868, 282,189; 1869, 352,768; 1870, 387,203; 1871, 321,350; 1872, 404,806; 1873, 459,803; 1874, 313,339; 1875, 227,498; 1876, 169,986; 1877, 141,857; 1878, 138,469; 1879, 177,826; 1880, 457,257; 1881, 669,431; 1882, 788,992; 1883, 603,322; 1884, 518,592; 1885, 395,346; 1886, 334,203; 1887, 490,109; 1888, 546,889; 1889, 444,427; 1890, 455,302; 1891, 560,319; 1892, 623,084; 1893, 502,917; 1894, 314,467; 1895, 279,948; 1896, 343,267; 1897, 230,832; 1898, 229,299; 1899, 311,715.

From these figures it may be seen that the year of the largest immigration was 1892, when the number of arrivals at our ports aggregated 788,992. The next largest volume was in 1881, when the number was 669,431. The arrivals for 1892 numbered 623,084, showing an increase in volume over every year since 1883. The marked decrease in immigration during the past six years has been attributed to the unpropitious conditions of trade and business, but there can be no doubt that the migratory disposition of European peasantry toward this country has been restrained by the unsuccessful attempts of so many of the prohibited classes to gain admission. This is especially noticeable in the marked decrease of immigrants from Russia and Austria until 1899, when the figures representing arrivals from these countries increased. Other causes are at work.

Canada and the South American republics are offering substantial inducements to newcomers, such as bounties and land grants. Large numbers of persons are leaving the ports of Genoa and Marseilles for Brazil and the Argentine Republic, where they immediately become producers of the staples that come into direct competition with our own.

Another fact is worthy of consideration in contemplating the large number of arrivals in the United States. Only about half of those who come remain in the country as permanent residents. Some aliens come and go so often that old officials at the immigrant stations recognize them, yet they are each year listed as new arrivals. For example, out of the 230,832 arrivals during the fiscal year 1897 as many as 1,880 were debarred admission on account of belonging to the prohibited classes. Deducting from the remainder those who came to join families and those who had been here before, only 88,666 were left, representing those who came to seek a new home in the United States.

Th arrivals of immigrants by decennial periods furnishes the following interesting table:

PERIODS.	Aggregate arrivals.	Annual average.
Decade ending with 1880.....	143,439	14,343
" " 1840.....	599,125	59,912
" " 1850.....	1,713,251	171,325
" " 1860.....	2,598,314	259,831
" " 1870.....	2,314,694	231,469
" " 1880.....	2,812,191	281,219
" " 1890.....	5,246,613	524,661
From 1891 to 1899 inclusive.....	3,395,848	377,316

During the decade 1881 to 1890 an aggregate of 5,246,613 immigrants arrived, which number is 34 per cent. of the entire arrivals during the period of six decades comprised between 1820 and 1890.

In the early history of the immigration movement, from 1821 to 1860, more than half of the influx to this country was from England and Ireland, but there has been since 1820 almost a constant increase of immigration from nearly all countries. France is an exception to this rule. During the decade 1871 to 1880 the total immigration from France to the United States was 72,206, and in the ten years from 1881 to 1890 it was 50,464. The increase in the number of immigrants from Italy, Austria, Hungary, Poland, Russia, Germany, Norway, and Sweden has been very marked. During the past year the arrivals from Italy—viz., 77,419—constitute nearly one fourth of the entire immigration. It is interesting to note the proportion of each of the leading nationalities in the grand aggregate of 16,611,060 arrivals from 1821 to 1892 inclusive:

Germany.....	4,748,440	Scotland.....	347,900
Ireland.....	3,592,347	China.....	296,219
England.....	2,534,965	Switzerland.....	186,488
Norway and Sweden.....	1,092,198	Denmark.....	163,769
Austria-Hungary.....	888,668	All other countries.....	2,700,296
Italy.....	526,749		
Russia and Poland.....	517,507	Total.....	16,611,060
France.....	379,687		

The aggregate arrivals, by nationalities, in the period 1893 to 1899 inclusive, the seven years since decided measures were taken to regulate immigration, have been:

Italy.....	417,367	Scotland.....	34,166
Austria-Hungary.....	319,369	France.....	30,976
Russia and Finland.....	284,863	Denmark.....	25,492
Poland.....	37,478	Switzerland.....	17,778
Germany.....	281,108	All other countries.....	166,808
Ireland.....	257,212		
Norway and Sweden.....	190,591	Total.....	2,312,445
England.....	160,816		

A new system of tabulation has been adopted in the statistical statement of 1899, which shows the race to which immigrants belong distinct from the country whence they embark for the United States. In dealing with large figures this distinction of races makes a vast change in the reports of immigration, for out of the 60,982 supposed Russians that entered our country in 1899 about 5,383 were Germans, 15,517 were Poles, 1,012 were Scandinavians, 24,275 were Hebrews, 120 were Bohemians, and 14 were English. As great discrepancies regarding the real nationalities of immigrants no doubt exist in the reports of former years.

Immigrants of all nations come under the jurisdiction of the Immigration Bureau, with the exception of those from China, who are dealt with by the Chinese Bureau. Immigration from that country reached its maximum in the years from 1869 to 1882 inclusive. During the decade ending 1880 it amounted to 123,201, and in the two years 1881 and 1882 it aggregated 51,460. The law excluding Chinese laborers went into effect Aug. 6, 1882, and subsequent years show a decrease annually from thousands to fewer than a hundred. The large figures registered by the Chinese Bureau recently indicate that Chinese of other occupations than laborers are seeking our shores. Since 1891 the arrivals from China have averaged 2,000 a year.

On the Pacific coast the Japanese arrivals are exciting general interest and attracting the same prejudice which led to the Chinese-exclusion act. The Japanese immigrant has no family, and he works for wages that would scarcely keep a white laborer from starvation. He is steadily lowering the standard of living in California and other States, and the immigration laws can not check his progress, since he can not be included within any of the prohibited classes. He is not a beggar, he always brings money enough with him to last until he can secure employment, and it can not be proved that he had entered into any contract to perform labor prior to coming to the United States, because he knows that the lowest rate of wages in America is higher than what he can obtain in his own country. The Japanese movement to the United States began in 1861 with a single arrival, and after a total cessation for four years 7 more arrived in 1866. During the first decade, 1861 to 1870, the total immigration of Japanese was 218; during the second decade, 1871 to 1880, it was 149. In 1892 the number of arrivals was 1,498, of which 41 were females; in 1899 they aggregated 2,844.

Immigrants who are citizens of and come from foreign contiguous territory are inspected the same as other aliens; but they are expressly exempted from payment of the head tax, and therefore derive no benefits from the immigration fund. Along our northern frontier large numbers arrive and depart after finding temporary employment ranging from six months to a few days. No statistics are prepared in relation to these transitory aliens. They are principally thrifty, industrious people, and their presence for the express purpose of obtaining work has excited bitter jealousy on the part of the trades unions. Urgent protests have been sent to the Immigration Bureau and to Congress requesting that laws be enacted excluding Canadians from seeking employment in the United States. Canada threatens to retaliate and assume a similar unfriendly attitude toward United States citizens who desire to engage in business within her territory, and the legislative bodies of both countries have the subject under consideration. The same condi-

tion exists, but in a much less degree, along the Mexican border.

The proportion of the sexes of immigrants for the past seven years is given as follows:

YEARS.	Males.	Females.	Totals.
1893.....	290,844	159,896	450,740
1894.....	169,274	116,367	285,641
1895.....	149,016	109,580	258,596
1896.....	212,406	130,801	343,207
1897.....	135,107	85,735	220,842
1898.....	185,776	95,534	281,310
1899.....	195,377	116,488	311,865

By comparison of the ages of immigrants from different nationalities the following general statement has been reached: Ireland, Hungary, and Italy furnish the largest percentages of immigrants between the ages of fifteen and forty, being respectively 78, 74, and 69 per cent. Italy at the same time furnishes much the largest percentage of immigrants more than forty years of age—namely, about 15 per cent.—while the average percentage of all other countries is about 10. The next largest percentage of immigrants who have passed the prime of life is furnished by Austria, this proportion being about 11 per cent. The lowest percentage of those above the age of forty years is in the immigration from Ireland—namely, about 7 per cent. of the whole. The highest percentage of children under fifteen years of age comes from Germany, and is about 26 per cent; the lowest from Ireland, being about 14 per cent.

The occupations of immigrants are classed as "professional," which embraces musicians, teachers, clergymen, artists, lawyers, physicians, etc.; "skilled occupations," embracing those engaged in forty or more different trades, such as blacksmiths, carpenters, machinists, printers, miners, tailors, dressmakers, etc.; "miscellaneous," which includes farmers, merchants, laborers, servants, etc.; and "without occupation." From consideration of the character of the foreign population which sought the United States during the decade from 1881 to 1890 (which comprises the largest number of arrivals of any decade), a fair estimate of the whole may be obtained. The professional class forms a very inconsiderable proportion, or 0.51 per cent. of the total immigration. The skilled also make up a very small proportion—in fact, but 10.30 per cent. of the whole number. The class denominated "miscellaneous" constitutes 39.63 per cent. of the whole. The largest class, which represents 47.34 per cent. of all, is made up of those who have no occupations.

Since the immigration law of 1893 went into operation this condition of affairs has been ameliorated. The number of immigrants having no occupation has greatly diminished.

On Aug. 3, 1897, the Hon. Terence V. Powderly, who for fifteen years had been grand master workman of the Knights of Labor, was appointed by President McKinley Commissioner General of Immigration. The recommendations made by Mr. Powderly in the annual reports of his bureau for 1898 and 1899 show a comprehensive grasp of the immigrant subject, and prove him to be still an energetic friend of the American workingman. He calls attention to the decided tendency of immigrants to crowd into our great cities, and suggests that concerted measures be adopted by the States in which these large centers of population are located to distribute foreign arrivals in such a manner as to utilize their labor where it is needed, and avoid those disturbances of the peace which result from aggregation of strangers

in any community. The rigor of our immigration laws has resulted in many ingenious devices on the part of foreigners to avoid their operation. Some of the most objectionable classes are securing cabin transportation to escape the vigilant inspection exercised over the steerage—a fact which points to the necessity of requiring from steamship companies complete manifests of all foreign passengers, whether traveling first or second class or in the steerage. Others gain admission by booking on board ships as seamen merely to be discharged at American ports and landed by foreign consuls, in accordance with the laws of navigation and treaty agreements between the United States and their respective countries. A more flagrant abuse is the fraudulent securing of naturalization papers by persons who then claim the custody of their alleged families, such action being taken after the latter had been refused a landing because they belonged to some class expressly excluded by law. Instances of this kind caused trouble repeatedly during the past year.

It is recommended by the Commissioner of Immigration that an alien on landing be required to state whether it is his ultimate intention to renounce allegiance to his own country; his affirmative answer to this question to be entered of record and used at the expiration of five years' residence in verifying his asserted right to naturalization. Canada continues to present an open door for the return of aliens who have been excluded from the United States. Contract laborers enter our ports alleging that their destination is Canada, travel thither, and immediately return across the boundary. In addition to this fraudulent practice, our people are subjected to still more injurious foreign contact, for there is practically no rejection of diseased persons at Canadian ports. The only remedy for these evils appears to be the withdrawal of our officials from these ports, to locate them at certain selected points along our northern boundary, through which border stations alone should aliens be admitted. A similar carelessness or incompetence in the medical inspection maintained at transatlantic ports has resulted in the embarkation for the United States of a number of diseased immigrants (most notably those afflicted with contagious trachoma or granulated eyelids), and request has been made that surgeons of the United States Marine-Hospital Service, whose ability and energy in maintaining a strict quarantine have been thoroughly tested during seasons of dangerous epidemics, be sent abroad to examine into the physical condition of foreigners desiring to come to this country.

The annexation of Hawaii without a previous change in the municipal legislation of those islands except the extension thereto of the Chinese-exclusion act threatens to complicate further the work of regulating immigration to this country. It has been ascertained that since July 7, 1898, 25,000 Japanese have been brought to Hawaii under contract to work on the sugar plantations; and it is asserted that members of the Territorial Government have been making arrangements with the officials of Italy for an unlimited importation of Italian peasants. This indiscriminate introduction of the lowest class of aliens into a Territory of the United States is a menace to our people which fills the Immigration Bureau with grave apprehension, and it asks to be authorized to examine and reject, at its discretion, all foreigners coming to our shores from Hawaii, although they may claim to be residents of that Territory. Cuba, Puerto Rico,

and the Philippines are already subjected to immigration regulations under military authority, and it is believed that no embarrassment will arise in the handling of immigrants therefrom when civil governments have been established in those islands.

INDIA, an empire in southern Asia, under the sovereignty of the Queen of Great Britain and Ireland on the basis of a personal union, and governed under general acts of the British Parliament by a Governor General in consultation with and under instructions from the Secretary of State for India in the British Cabinet. The Governor General, or Viceroy, is advised by a Council of 5 ordinary members, besides the commander in chief of the forces, who are appointed for five years. The Legislative Council, which is composed of the members of the Governor General's Council and 16 additional members appointed by the Governor General on the recommendation of certain public bodies, has power to make laws, subject to the approval of the Governor General and the Secretary of State, for all persons within British India, for all British subjects in the native states, and for native Indian subjects of the Queen in all parts of the world. British India is divided for purposes of administration into the presidencies of Madras and Bombay, each of which has a Governor, the lieutenant governorships of Bengal, the Northwest Provinces and Oudh, the Punjab, and Burmah, and the chief commissionerships of Assam and the Central Provinces. Each of the governors and lieutenant governors has his Legislative Council, those for the Punjab and Burmah having been established in 1898.

The Governor General is George Nathaniel Curzon, created Baron Curzon of Kedleston, who was appointed to succeed the Earl of Elgin in September, 1898. The members of the Supreme Council in the beginning of 1899 were Sir James Westland, M. D. Chalmers, Major-Gen. Sir E. H. Collen, Sir A. C. Trevor, C. M. Rivaz, and C. E. Dawkins. The commander in chief of the forces was Gen. W. G. S. Lockhart. Sir A. E. Havelock was Governor of Madras, Lord Sandhurst Governor of Bombay, Sir John Woodburn Lieutenant Governor of Bengal, Sir A. P. MacDonnell Lieutenant Governor of the Northwest Provinces and Oudh, Sir W. M. Young Lieutenant Governor of the Punjab, and Sir F. W. R. Fryer Lieutenant Governor of Burmah.

Area and Population.—British India comprises Bengal, with Orissa, Behar, and Chota Nagpur; Bombay and Sind, with Aden; Madras; the Northwest Provinces and Oudh; the Punjab; Lower and Upper Burmah; the Central Provinces; Assam; the minor provinces of Ajmere-Merwara, Coorg, British Baluchistan, and the Andaman Islands; and the Berars, temporarily under British administration. The total area is 964,993 square miles, and the population in 1891 was 221,172,952, of whom 112,542,739 were males and 108,630,213 females. The native states under British control are Hyderabad; Baroda; Mysore, restored to native rule in 1881; Kashmir; the Rajputana states, chief of which are Udaipur, Jodhpur, Bikaner, Jaipur and its feudatories, Bhartpur, Dholpur, Alwar, Jhalawar, Tonk, and Kotah; the Bombay states, of which the principal ones are Cutch, Kholhapur and dependencies, and Khairpur in Sind; the Madras states of Travancore and Cochin; Bastar and other states in the Central Provinces; the Central India states of Indore, Rewa, Bhopal, Gwalior, and minor states; Kuch Behar, Hill Tipperah, and numerous other Bengal states; Rampur, Garhwal, and other

states in the Northwest Provinces; the Punjab states of Patiala, Bahawalpur, Jind, Nabha, Kapurthala, Mandi, Sirmur, Maler Kotla, Faridkot, Chamba, Suket, Kalsia, and others; Sikkim; and the Shan States of Burmah. The total area of the native or feudatory states is 594,610 square miles, and their population in 1891 was 65,950,398, of whom 34,184,557 were males and 31,865,922 females. This does not include tribes on the frontiers of Sikkim, Burmah, the Shan States, Rajputana, and British Baluchistan, among which a population of 607,710 was enumerated. Nepaul, where the Gurkha troops are enlisted for the Indian army, is an independent state in which the British refrain from interfering, having an area of 54,000 square miles and a

different languages and dialects are spoken, is ethnically divided into 195,460,000 Aryo-Indians, 52,960,000 Dravidians, 7,290,000 Tibeto-Burmans, 2,960,000 Kolarians, 1,330,000 Iranians, and 27,000,000 others, including 400,000 gypsies, 710,000 Sinites, 230,000 Annamites, 180,000 Khasis, 180,000 Shans, 50,000 Semites, and 250,000 Europeans. The principal languages are Hindu, spoken by 85,680,000 persons; Bengali, spoken by 41,340,000; Telugu, spoken by 19,800,000; Marathi, spoken by 18,890,000; Punjabi, spoken by 17,720,000; Tamil, spoken by 15,230,000; Gujarati, spoken by 10,620,000; Kanarese, spoken by 9,750,000; Uriya, spoken by 9,010,000; Burmese, spoken by 5,560,000; Malayalam, spoken by 5,430,000; Urdu, spoken by 3,670,000; Sindhi, spoken by

GATEWAY OF THE GREAT MOSQUE AT AHMEDABAD.

population variously estimated between 2,000,000 and 5,000,000. Bhutan is another of the Himalayan states which are politically independent, although subsidized and controlled by the Indian Government. The Ameer of Afghanistan also receives a subsidy and is controlled by the British as to his foreign relations. The total area of India, officially so designated, comprising the territories directly or indirectly under British rule, is 1,559,603 square miles; the total population, 287,123,350. This population, among which 118

2,590,000; and the Pahari, Santali, Assamese, Gondi, Marwadi, Pushtu, Karen, Kol, Tulu, Kachhi, gypsy, Oraon, Arrakanese, and Kond. The English-speaking population was 238,499, of whom 100,551 were British born. As to religion, the Indian populations comprised 207,732,000 Hindus, 57,321,000 Mohammedans, 9,280,000 Animists, 7,131,000 Buddhists, 2,284,000 Christians, 1,908,000 Sikhs, 1,417,000 Jains, 90,000 Parsees, 17,000 Jews, and 43,000 others. The classification of the population of India according to occupa-

tions showed that 171,735,000 were dependent on agriculture, 25,468,000 on earth work and general labor, 14,576,000 on the preparation and sale of food, drink, and stimulants, 12,611,000 on making textile fabrics and dress, 11,220,000 on personal, household, and sanitary services, 5,672,000 on the learned and artistic professions, 5,600,000 on service in the state and local administrations, 4,686,000 on commerce, 4,293,000 on working in wood, cane, and matting, 3,953,000 on transportation and storage, 3,821,000 on working in metals and precious stones, 3,646,000 on provision and care of cattle, 3,522,000 on light, firing, and forage, 3,285,000 on working in leather and horn, making boxes, etc., 2,361,000 on making glass, pottery, and stoneware, 1,438,000 on building trades, 1,155,000 on producing articles of supplementary requirement, 664,000 on military and naval defense, 500,000 on the service of foreign states, 392,000 on the gathering and preparation of drugs, dyes, gums, etc., 147,000 on vehicles and vessels, 141,000 on sport and amusements, 1,563,000 on undefined and disreputable callings, and 4,774,000 on their independent means. The registration of vital statistics is attempted throughout British India, though in some of the provinces the records are very imperfect. The official reports for 1896 show a birth rate per 1,000 of 43 in the Punjab, 38.03 in Bengal, 36.76 in Bombay, 34.5 in the Northwest Provinces and Oudh, 33.69 in Assam, 32.27 in Lower Burmah, 31.72 in the Central Provinces, and 29.9 in Madras. The death rate was 49.31 in the Central Provinces, 36.33 in Assam, 34.17 in Bengal, 33.32 in the Northwest Provinces and Oudh, 31.69 in Bombay, 31.5 in the Punjab, 23.63 in Lower Burmah, and 20.6 in Madras. The number of coolie emigrants in 1896 was 12,390, most of them bound for Demerara, Trinidad, Mauritius, and other British tropical colonies. The population of the principal cities of India in 1891 was as follows: Calcutta, 861,764; Bombay, 821,764; Madras, 452,518; Hyderabad, 415,039; Lucknow, 273,028; Benares, 219,467; Delhi 192,579; Mandalay, 188,815; Cawnpur, 188,712; Bangalore, 180,366; Rangoon, 180,324; Lahore, 176,854; Allahabad, 175,246.

Finances.—The revenue in 1897 was Rx 94,129,741, and the expenditure was Rx 95,834,763, of which Rx 69,600,508 were expended in India and Rx 26,234,255 in Great Britain. The loss by exchange was Rx 10,438,419, making the sterling expenditures in England £15,795,836, offset to the extent of £327,107 of receipts in England, on which the gain by exchange was Rx 216,163. The revenue collected by the Government of India was Rx 17,131,376, and expenses of the General Government were Rx 22,241,456; revenue of the Central Provinces Rx 2,178,831, and expenses Rx 1,768,753; revenue of Burmah Rx 5,883,624, and expenses Rx 4,222,271; revenue of Assam Rx 1,322,549, and expenses Rx 899,538; revenue of Bengal Rx 20,957,055, and expenses Rx 9,794,785; revenue of the Northwest Provinces and Oudh Rx 10,165,235, and expenses Rx 6,281,637; revenue of the Punjab Rx 8,042,650, and expenses Rx 4,874,948; revenue of Madras Rx 13,563,169, and expenses Rx 9,549,378; revenue of Bombay Rx 14,341,982, and expenses Rx 9,967,742. The land revenue, which was Rx 26,200,955 in 1896, declined, in consequence of famine, to Rx 23,974,489 in 1897, but recovered in 1898, in which year it was Rx 25,932,300, according to the revised estimates. The opium revenue has fallen, as a result of the extension of the poppy culture in China, from Rx 8,515,462 in 1888 to Rx 5,179,700 in 1898. The salt tax produced Rx 8,592,400 in 1898. The expenditure for the army has doubled since the

Indian mutiny, amounting in 1898 to Rx 27,073,000. Railroads, which cost Rx 22,801,300 to operate in 1898, yielded a revenue of Rx 22,167,300. The revenue of the post office, telegraphs, and mint was Rx 3,348,300, and the expense was Rx 2,878,000; the revenue of irrigation works was Rx 3,591,100, and the expense Rx 3,138,200. Civil salaries in 1898 amounted to Rx 15,721,300, and miscellaneous civil charges to Rx 5,724,500. The charges of collection were Rx 8,991,000. For famine relief and insurance Rx 5,414,200 were charged to that year. The result of the widespread famine and scarcity and of military operations on the northwest frontier was a deficit in the year's accounts of Rx 5,283,100. The cost of the famine to the Government, adding the loss of revenue to Rx 7,470,000 spent on famine relief in 1897 and 1898, is estimated at Rx 14,240,000, not including Rx 1,850,000 of suspended revenue and Rx 1,370,000 lent to cultivators for the purchase of seed. The budget estimate of revenue for 1899 was Rx 99,085,400, and of expenditure Rx 98,194,000. The land revenue was estimated at Rx 27,568,200; opium, Rx 5,329,800; salt, Rx 8,728,000; stamps, Rx 4,855,900; excise, Rx 5,717,300; provincial rates, Rx 3,860,000; customs, Rx 4,590,500; assessed taxes, Rx 1,892,900; forests, Rx 1,735,600; registration, Rx 462,200; tribute, Rx 919,400; interest, Rx 929,800; post office, telegraphs, and mint, Rx 3,203,900; civil departments, Rx 1,733,000; miscellaneous, Rx 918,600; railroads, Rx 21,823,600; irrigation, Rx 3,228,100; buildings and roads, Rx 678,700; military departments, Rx 909,900. The expenditures for interest on the debt were set down as Rx 3,378,600; refunds and compensations, Rx 1,880,100; charges of collection, Rx 9,330,800; post office, telegraphs, and mint, Rx 2,932,000; civil salaries, Rx 15,694,800; miscellaneous civil charges, Rx 5,777,600; famine relief and insurance, Rx 1,099,200; railroad construction, Rx 5,800; railroad revenue account, Rx 23,921,400; irrigation, Rx 3,213,100; buildings and roads, Rx 6,021,500; the army, Rx 25,055,900. The sum total is Rx 98,310,800, from which are deducted Rx 116,800 of expenditures from provincial balances. The famine grant of Rx 1,500,000 a year, to obtain which the salt duties and other taxes were increased, was diverted for many years to strategical railroads and other military purposes. The estimates for 1899 provide for the expenditure of the full amount under the head of famine relief and insurance and on railroads for the transportation of food supplies in times of scarcity. Extraordinary expenditures on railroads and irrigation not charged against revenue amounted to Rx 4,604,600 in 1898 and Rx 5,749,300 in 1899.

In the financial year ending March 31, 1899, the gold liabilities to England were reduced £2,695,000. There was a reduction of Rx 1,973,000 in the annual expenditure, and an increase of Rx 1,658,200 in the revenue. The year closed with the surplus of Rx 4,759,400, the largest ever realized. The land revenue, opium, the salt duty, customs, and other branches of revenue showed an unexpected and, after a famine, a remarkable improvement. For 1900 the revenue was estimated at Rx 62,477,000, and expenditure at Rx 58,544,400. The unremunerative debt of India at the end of 1899 amounted to only £31,689,000. The total public debt of British India on March 31, 1897, amounted to Rx 237,325,160, of which Rx 113,883,233 represent the permanent debt in England, Rx 109,115,053 the permanent debt in India, and Rx 14,326,874 the unfunded debt in India. The accounts for 1898 closed with a deficit of Rx 5,630,000, which was Rx 350,000 more than

was estimated at the beginning of the year. The ordinary revenue has improved in twenty years by Rx 13,800,000; the accounts for debt services, irrigation, and railway earnings by Rx 3,720,000, making the total improvement Rx 17,520,000, which has been absorbed by the loss of opium revenue, amounting to Rx 3,680,000; the loss by exchange, amounting to Rx 4,730,000; the army services, which cost Rx 5,470,000 more; the administration of Upper Burmah, costing Rx 450,000; and the charges of provincial administration, amounting to Rx 3,770,000. The drawings of the Secretary of State on India for 1899 were £10,000,000, the largest ever made. In 1900 he expected to draw £17,000,000. During 1899 the treasury received Rx 2,620,000 of gold in exchange for silver and placed in the reserve kept for the protection of the paper currency. The final estimate of the cost of the famine to the revenue of the Government, including both expenditure for relief and loss of revenue, was Rx 16,649,399, of which Rx 9,313,987 fell upon the year 1898. The cost of the frontier military operations was Rx 3,887,000.

The Army.—The European army in India in 1899 had an established strength of 3,616 officers and 70,672 noncommissioned officers and men, comprising 9 cavalry and 52 infantry general officers, 29 general officers unemployed, 914 officers in the staff corps, 5 officers and 9 men in the invalid and veteran establishments, 491 officers and 12,916 men of the Royal Artillery, 261 officers and 5,409 men of the cavalry, 347 officers and 158 men of the Royal Engineers, and 1,508 officers and 52,180 men of the infantry. The native army of British India had an established strength of 1,578 European officers, 3,209 native officers, and 135,853 noncommissioned officers and men, comprising 33 European and 54 native officers and 2,001 men in the artillery, 358 European and 619 native officers and 21,955 men in the cavalry, 65 European and 488 native officers and 3,142 men in the sappers and miners, and 1,122 European and 2,048 native officers and 108,755 men in the infantry. The total effective force was 219,369 officers and men, of whom 56,889 were in Bengal, 66,806 in the Punjab, 47,022 in Bombay, and 46,652 in Madras. The European and Eurasian volunteers in India numbered 29,570 on March 31, 1898. The imperial service troops, maintained by native princes and trained under the inspection of British officers, numbered 16,618 in 1898, consisting of 7,553 cavalry, 8,754 infantry, and 311 artillery. The coasts are defended by fortifications at Aden, Karachi, Bombay, the Hugli, and Rangoon, mounting modern breech-loading guns, built at a cost of Rx 4,500,000, and by the iron-clads *Magdala*, of 3,340 tons, and *Abyssinia*, of 2,900 tons, each carrying 4 8-inch guns in turrets, the *Lawrence*, of 1,154 tons, the torpedo gunboats *Assaye* and *Plassey*, of 735 tons, and 7 90-ton torpedo boats. A vast sum has been expended on the defenses on the northwest frontier, including the fortified camp at Quetta and the advanced position covering it, strategic railroads and wagon roads, protective works for bridges and tunnels on the Sind and Pishin Railroad and various other defenses for railroad bridges, the fortification of the passages over the Indus at Attok and Sukkur, an entrenched position at Rawal Pindi, a defensible post at Multan, an arsenal at Ferozepore, and other works.

Commerce and Production.—For the improvement of agriculture the Government has established in each of the provinces a public department which collects and publishes information concerning crops, conducts experimental stations

and model farms, imparts advice to private individuals who essay improved methods, introduces new cultures, processes, and appliances, organizes agricultural schools and colleges, and sends Indian students to the agricultural colleges of Europe. Experiments in the use of fertilizers, rotation of crops, the raising and storing of fodder, the cultivation of new products, the introduction of superior breeds of cattle, and the grading up of the native breeds of horses are beginning to bear fruit. Out of a total area of 732,506,734 acres shown by the survey department reports were made in 1897 respecting 537,346,026 acres, of which 153,895,056 acres were not available for cultivation, 63,969,955 acres were covered by forest, 95,080,728 acres were waste lands suitable for tillage, 46,943,358 acres were fallow land, and 177,456,929 acres were under crops. The area devoted to rice was 66,234,485; to wheat, 16,183,987; to other grains, 78,237,544; to sugar cane, 2,651,721; to tea, 423,932; to cotton, 9,458,942; to oil seeds, 10,531,864; to indigo, 1,583,808; to tobacco, 1,000,230; to jute, 2,215,105; to other fibers, 591,996; to various food crops, 6,017,127; to coffee, 147,158 acres. Double crops were grown on 22,904,618 acres, making the total area cropped 199,862,373 acres, of which 29,365,493 were irrigated by canals, tanks, wells, etc., counting twice the lands irrigated for both crops. The area served by the major irrigation works was 10,172,493 acres, paying Rx 3,386,183 for irrigation dues; the area served by minor works, 6,706,531 acres, paying Rx 1,786,658. The irrigation works paid 6.4 per cent. on their capital cost, and enabled crops to be grown of the estimated value of Rx 46,000,000.

The forests demarcated and reserved by the Government in 1897 had an extent of 19,259 square miles in the Central Provinces, 12,986 in Bombay, 14,068 in Burmah, 5,876 in Bengal, 13,138 in Madras, 3,822 in the Northwest Provinces and Oudh, 3,681 in Assam, 1,681 in the Punjab, and 4,179 in the Berars.

The number of cotton mills in operation in 1897 was 154, with 37,303 looms and 3,975,719 spindles, employing the average number of 148,997 persons. The jute mills numbered 31, with 12,784 looms and 258,154 spindles, employing 91,389 persons. There were also 5 woolen mills, with 548 looms and 19,856 spindles. The coal mines numbered 145, producing 4,063,127 tons in 1897, and giving employment to 59,859 persons.

The foreign trade of India has increased from Rx 14,342,290 in 1835 to Rx 198,972,505 in 1898, although, owing to famine and plague, exports, which in 1896 reached Rx 111,295,697, having doubled in twenty years, fell off 8.16 per cent. in 1897 and 3.80 per cent. in 1898. The value of imports in 1898 was Rx 94,191,077; of exports, Rx 104,781,428. The merchandise imports were Rx 73,660,460; imports of treasure, Rx 20,530,617; merchandise exports, Rx 97,632,781; exports of treasure, Rx 7,148,647. The imports of treasure consisted of Rx 7,281,222 of gold and Rx 13,249,395 of silver; exports of treasure, Rx 2,372,733 of gold and Rx 4,775,914 of silver. Excluding Government stores and treasure, the total value of imports was Rx 89,896,406, consisting of Rx 69,420,120 of merchandise and Rx 20,476,286 of treasure; exports, Rx 104,671,442, consisting of Rx 97,537,273 of merchandise and Rx 7,134,169 of treasure. Of the merchandise exports Rx 93,786,101 were domestic products and Rx 3,751,172 were re-exports of foreign merchandise. The share of Bengal in the trade, excluding Government stores, was Rx 31,301,745 of imports and Rx 46,312,032 of exports; of Burmah, Rx 5,866,397 of imports and Rx 6,006,

980 of exports; of Madras, Rx 6,745,010 of imports and Rx 11,468,961 of exports; of Bombay, Rx 40,972,117 of imports and Rx 33,262,251 of exports; of Sind, Rx 5,011,137 of imports and Rx 4,621,218 of exports.

The imports of live animals in 1898 were Rx 227,631 in value, and exports Rx 141,422; imports of articles of food and drink Rx 10,740,816, and exports Rx 25,068,456; imports of hardware and cutlery Rx 1,477,811, and exports Rx 18,070; imports of metals Rx 6,189,912, and exports Rx 120,595; imports of machinery Rx 2,861,108, and exports Rx 119; imports of railroad material Rx 2,876,451, and exports Rx 4,561; imports of chemicals, drugs, etc., Rx 2,060,544, and exports Rx 10,366,802; imports of oils Rx 4,148,566, and exports Rx 651,675; imports of raw materials Rx 2,828,688, and exports Rx 37,101,481; imports of textile yarns and fabrics Rx 28,950,314, and exports Rx 14,433,400; imports of clothing Rx 1,226,629, and exports Rx 164,136; imports of all other articles Rx 5,833,650, and exports Rx 5,715,384. The principal imports of private merchandise were cotton manufactures for Rx 26,395,008, metals, hardware, and cutlery for Rx 7,667,722, sugar for Rx 4,784,479, oils for Rx 4,146,566, railroad plant and rolling stock for Rx 2,876,451, machinery and mill plant for Rx 2,861,108, silk and silk manufactures for Rx 1,819,032, provisions for Rx 1,705,721, liquors for Rx 1,568,494, drugs and chemicals for Rx 1,292,938, woolen goods for Rx 1,148,427, salt for Rx 868,718, dyes and tans for Rx 767,606, spices for Rx 744,773, grain and pulse for Rx 610,792, glass for Rx 576,671, coal for Rx 537,352, umbrellas for Rx 335,374, and paper for Rx 332,047. The principal exports of private merchandise, the produce of India, were rice for Rx 11,705,842, raw jute for Rx 10,129,992, raw cotton for Rx 8,871,313, seeds (mainly oil seeds) for Rx 8,594,100, hides and skins for Rx 8,317,534, cotton manufactures for Rx 8,151,338, tea for Rx 8,058,623, opium for Rx 6,097,563, jute manufactures for Rx 5,930,856, indigo for Rx 3,057,402, coffee for Rx 1,519,130, wool for Rx 1,356,537, wheat for Rx 1,341,151, timber for Rx 1,079,061, lac for Rx 1,070,920, oils for Rx 651,675, provisions for Rx 531,667, raw silk and cocoons for Rx 514,850, dyes and tans for Rx 482,047, spices for Rx 471,628, saltpeter for Rx 398,745, sugar for Rx 292,453, wool manufactures for Rx 223,899, and silk manufactures for Rx 126,041. Of the rice exports Rx 6,950,861 came from Burmah, Rx 3,001,664 from Bengal, Rx 1,277,260 from Madras, and the rest from Bombay and Sind. Of the wheat exports Rx 1,091,284 came from Sind and the rest mainly from Bombay. Of the exports of opium Rx 3,893,956 came from Bengal and Rx 2,203,607 from Bombay. Of indigo Rx 1,755,104 came from Bengal, Rx 1,066,445 from Madras, and the rest from Bombay and Sind. Of the cotton Rx 6,321,196 came from Bombay, and the rest from Sind, Madras, and Bengal, except a small quantity from Burmah. Of seeds Rx 4,671,395 came from Bombay, Rx 2,964,179 from Bengal, and the rest from Sind and Madras. On rice Rx 723,731 export duties were paid in 1897. The import duties amounted to Rx 6,302,983, of which salt produced Rx 2,556,073. Of the total imports in 1898 the value of Rx 57,820,879 came through the Suez Canal, and of the exports Rx 57,186,788 in value passed through the canal. The share of Calcutta in the import and export trade of 1898 was Rx 71,994,608; that of Bombay, Rx 52,063,062; that of Rangoon, Rx 12,346,725; that of Madras, Rx 10,161,018; that of Karachi, Rx 9,228,432. The coasting trade amounted in 1898 to Rx 75,850,238

for imports and exports combined, exclusive of Government stores and Government treasure.

The values of the merchandise imports from and exports of Indian produce to the various countries in 1898 were as follow:

COUNTRIES.	Imports.	Exports.
Great Britain.....	Rx 46,608,323	Rx 29,196,201
China.....	1,691,012	12,092,642
Germany.....	2,434,519	7,181,595
United States.....	1,431,075	5,855,060
Straits Settlements.....	2,408,828	4,313,238
France.....	882,796	5,627,199
Belgium.....	2,284,839	3,027,958
Ceylon.....	1,071,143	3,997,789
Japan.....	534,519	4,157,961
Austria-Hungary.....	2,146,793	2,101,359
Egypt.....	190,828	3,947,389
Italy.....	499,163	2,674,156

East Africa.....	198,908	755,390
Netherlands.....	286,089	298,934
Spain.....	14,020	250,908

The overland trade, which is not included in the statistics already given, is considerable, and is growing in importance. The value of the imports of merchandise by the land frontiers in 1898 was returned as Rx 5,022,500, and that of the exports by land as Rx 9,101,400. The largest trade is with Nepal, amounting to Rx 1,914,200 of imports and Rx 1,491,400 of exports, after which come Kashmir, with Rx 769,700 of imports and Rx 560,100 of exports, and then the Shan States, Kandahar, Kabul, Bajaur, China, Tibet, Karenni, Zimme, Khelat, Lus Bela, Sewestan, Ladakh, and Siam.

The foreign trade of India in 1899 showed a remarkable recovery from the depression of the preceding two years. The exports, including treasure, exceeded Rx 120,000,000, the largest figure ever attained, and the imports amounted to Rx 90,000,000, which had only been twice exceeded. The surplus of Rx 30,000,000 had only been exceeded in three previous years. The net imports of treasure were Rx 10,484,192, of which Rx 6,500,000 represented gold, the highest amount of this metal ever absorbed by India in a year.

A bill imposing a duty on bounty-fed sugar imported into India was introduced in the Legislative Council on March 10, 1899. The sugar industry of India, in which 2,000,000 people are engaged, and which has yielded a crop worth £20,000,000, has declined in consequence of the unrestricted importation of beet sugar from Europe, which has been sold at a lower price than the normal cost of production of the Indian cane sugar. The Legislative Council unanimously passed the bill on March 20. In the British House of Commons a motion calling upon the Imperial Government to disallow the act was lost by a majority of 293 to 152. Numerous refineries had already been closed, and the area of production reduced 9 per cent. in the two years immediately preceding the recent increase of the bounties in France and Germany, which threatened to have a still more disastrous effect on the industry. Imports of beet sugar into India increased between 1895 and 1898 from 250,000 to 8,000,000 hundredweight as the result of doubling the bounties in 1896. Mauritius had felt the effect of the action of the Continental governments even more severely than the sugar-growing districts of Madras, northern India, and Bengal. The bill was framed on the lines of the United States tariff act of July, 1897, imposing a countervailing duty on sugar coming

from countries granting bounties. The Indian Government urged its claims for consideration on the Brussels sugar conference of 1898, where its views were opposed by the representatives of Russia and France. The new duty, unlike the salt tax, will fall mainly on the well-to-do, who are the only consumers of refined sugar in India. The agriculturists prepare their sugar for their own use, and the poorer classes everywhere prefer to use the cheap raw sugar to which they have been accustomed from time immemorial. The duty is imposed on all sugar from countries giving bounties, whether imported directly from the country of production or through other countries, and even when changed in condition by manufacture in another country. The Austrian Government protested against the Indian countervailing duty as opposed to the provisions of the most-favored-nation treaties, inasmuch as the duty would vary in proportion to the bounty, and thus cause unequal duties to be imposed on imports from different countries. Lord Salisbury, while admitting that the right of imposing countervailing duties was a matter of controversy, pointed out that when the American Government took similar action none of the states affected maintained their opposition, and pleaded that India was specially justified in the circumstances in which the industry of that country was placed.

After one season of good crops, a failure of the rainfall in 1899 again caused great scarcity of food in many parts of India, and actual famine in an area containing about half as large a population as was affected by the failure of the monsoon in the autumn of 1866. The famine-stricken districts in 1897 comprised 260,000 square miles, containing a population of 70,000,000, though in about half of this area, with two thirds of the population, the famine was not severe. The deficiency in the food crops was about 18,000,000 tons of grain, the value of which was estimated at Rx 90,000,000. The losses of other crops amounted to about Rx 20,000,000 more. The expenditure of the Government for relief was Rx 19,000,000. The failure of crops in 1899 extended over 100,000 square miles in British territory, with a population of 15,000,000, and 250,000 square miles of native territory, containing 15,000,000 population. This area included five sixths of the Central Provinces and the southeastern part of the Punjab—districts where the agricultural population was still suffering from the depression caused by the previous famine. Bengal, half of the Northwest Provinces and Oudh, and the Burmah, Madras, and Mysore regions, including the most densely inhabited and highly cultivated tracts in India, suffered from no shortage of crops, although the pressure of high prices bore upon the laboring and city populations. The southern Mahratta districts, the south of the Deccan, the greater part of Hyderabad, the main districts in Central India, the western half of the Northwest Provinces, and the northern part of the Punjab suffered a marked deficiency, though nowhere was there a complete failure of crops. The total area affected seriously was half as large in British dominions, and the population only a third as great as in 1897. In the native states, however, the area of grave distress was more than three times as great, with more than twice the population. In Rajputana the people were threatened with a more serious situation than any that had occurred since the famine year 1860. The food stocks in all India were estimated to be sufficient for the requirements of the country until the rains should be due in July, 1900, and considerable quantities of foreign wheat were

delivered at Calcutta as soon as the prices reached the scarcity stage. The Government took more timely precautions than in 1896. The system of relief by means of poorhouses, doles, famine works, etc., was promptly set in operation. The Government promised also advances to agriculturists and remission of rent.

Navigation.—The total number of vessels in the foreign trade entered at British Indian ports during the year ending March 31, 1898, was 4,975, of 3,917,761 tons, of which 1,984, of 3,127,061 tons, were British, 946, of 142,882 tons, British Indian, 1,419, of 75,772 tons, native, and 626, of 572,046 tons, foreign. The total number cleared was 4,784, of 3,866,869 tons, of which 1,964, of 3,087,527 tons, were British, 923, of 138,500 tons, British Indian, 1,332, of 74,919 tons, native, and 565, of 565,923 tons, foreign. The total number of steamers entered was 578, of 1,454,321 tons; cleared, 758, of 1,790,223 tons. The number of vessels entered with cargoes in the interportal trade was 91,522, of 10,479,527 tons; cleared, 86,660, of 10,523,910 tons.

Railroads, Posts, and Telegraphs.—The total length of railroads in India on March 31, 1898, was 21,157 miles, of which the Indian Government owned 15,584 miles, native states 2,018 miles, foreign governments 73 miles, guaranteed companies 2,588 miles, and assisted companies 894. The State Railway Agency operated 5,307 miles, of which 5,161 miles belonged to the Government and 146 miles to native states; and the states operated 954 miles of their lines, while companies operated 10,422 miles of the lines belonging to the Indian Government and 919 miles belonging to the native states, besides 3,483 miles of their own, making 14,824 miles in all. The capital expenditure, including unfinished lines, surveys, and coal mines, was Rx 285,211,784, of which total the Indian state railways represent Rx 170,421,746, the state lines leased to companies Rx 38,224,662, guaranteed railways Rx 50,709,764, assisted companies Rx 10,921,414, native state lines Rx 12,385,252, foreign lines Rx 1,750,179, surveys Rx 491,196, and collieries Rx 307,571. The gross receipts of all the railroads for 1897 were Rx 25,595,169, of which Rx 8,858,875 came from 151,263,816 passengers and Rx 15,875,883 from 33,698,617 tons of freight carried. The working expenses were Rx 12,511,163, being 48.88 per cent. of the gross earnings, leaving Rx 13,084,006 for the net earnings, which gave an average return of 5.04 per cent. on the capital expended on lines in operation.

The number of letters, postal cards, and money orders that passed through the post offices of British India during 1897 was 397,897,840; the number of newspapers, 20,778,291; of parcels, 2,708,709; of packets, 19,341,398. The receipts were Rx 1,783,473; expenses, Rx 1,698,156.

The Government telegraph lines on March 31, 1897, had a total length of 48,584 miles, with 148,136 miles of wire. The number of messages sent during the year was 5,077,584. The receipts were Rx 1,071,524; expenses, Rx 946,759.

Adoption of the Gold Standard.—The Indian Currency Committee appointed in 1898 gave in its report to the Secretary of State early in July. Gold was accepted by the Government in payment for public dues, but the rupee was by law the only legal tender. There was no legal relation between rupees and gold, although the Government had declared until further notice a rate at which rupees could be purchased for gold coin or bullion, and this rate of 1s. 4d. for the rupee served to determine the maximum limit to which under that arrangement sterling exchange could

rise. The committee concurred in the decision of the Government of India not to revert to the silver standard. The policy of declaring in favor of the reopening of the mints to silver when circumstances indicate it as advisable, continuing meanwhile the existing arrangements, would rest on the hope of a rise in the gold price of silver or a fall in the rate of sterling exchange; but its adoption could only be justified by a belief that it would be advisable to return to silver monometallism. As to the possibility of an international agreement on a ratio, the governments concerned had made no fresh proposals since the negotiations of the United States and France with Great Britain in 1897 proved fruitless. The numerous persons in India who desired a lower rate of exchange than 1s. 4d., and would fix the rupee at 1s. 3d. or 1s. 2d., base their opinion on a belief that such lower rate would stimulate production and the export trade. Any stimulus derived from a falling rate of exchange would, however, prove but transitory, and could only continue until circumstances brought about the inevitable adjustment. A steady exchange is indeed more favorable to the export trade than a rapidly falling exchange. The committee found no statistical support for the theory that exports are largely and permanently stimulated by a depreciation in the standard of value, resulting in a fall in exchange. Robert Campbell and Sir John Muir dissented from the other members of the committee in so far as they believed that the experience of six years had not sufficiently justified the adoption of the 1s. 4d. rate of exchange, which represents the ratio of 22 to 1. The only practical alternative at the present time to silver monometallism the committee found to be the gold standard—that is, gold as the measure of value in India, either with a gold currency or a gold reserve. Over 80 per cent. of the foreign trade of India is with countries having the gold standard. A further important consideration for a country like India is that a gold standard is the simplest and most efficacious means of attracting foreign capital. India needs capital from abroad for the purpose of developing her productive resources, and she needs also a periodic inflow of money every year for the purpose of moving the crops, the want of which is seen from the fluctuations of discount rates at different seasons, the variations reaching 7 per cent. or more every year. A gold standard is the only means, in the opinion of the committee, by which these benefits can be obtained in present conditions, but its effective establishment would not preclude India hereafter from considering responsible proposals for an international agreement. The undertaking of the Government to give rupees for gold at the rate of 16d. had practically the result of making gold a legal tender, and of fixing a stable rate of exchange and attracting a stock of gold amounting already to over £2,000,000, which was held as a reserve against the paper currency. A growth of confidence resulting from the definite adoption of the gold standard would tend to produce greater results in the future. Unless the Government was empowered to pay out gold in cashing its notes or meeting other liabilities, it could not go on receiving it into the paper-currency reserve or the treasury. It seemed urgent to the committee that steps should be taken to avoid all possibility of doubt as to the determination not to revert to a silver standard, but to proceed with measures for the effective establishment of a gold standard. The proposals of the Indian Government did not commend themselves to the committee. The danger

of the withdrawal of gold by the natives for hoarding did not appear to the committee to present such practical difficulties as to justify a permanent refusal to allow India to possess the normal accompaniment of a gold standard—namely, a gold currency. The committee was in favor of making the British sovereign a legal tender and current coin in India and of throwing open at the same time the mints of India to the unrestricted coinage of gold on the same terms and conditions as those governing the Australian branches of the royal mint. The result would be that the sovereign would be coined and would circulate both in Great Britain and India, and there would be an effective gold standard and a free inflow and outflow of gold. The committee did not recommend these measures for immediate adoption, and considered that for some time to come it would not be advisable to limit the legal tender of rupees in discharge of debt. The gold reserve should be freely used for remittances when exchange falls below specie par, as this is its principal use; and the Government of India should make its gold available for this purpose whenever the necessity arises, under such conditions as circumstances may render desirable. If exchange shows a tendency to fall below the specie point, the Government might remit gold to England, the India bills of the Secretary of State being correspondingly reduced; and when it has accumulated a sufficient reserve it might discharge obligations in India in gold. The exclusive right to coin rupees must remain vested in the Government of India, which should continue to give rupees for gold, but should not coin fresh rupees until the proportion of gold in the currency is found to exceed the requirements of the public. The committee recommended also that the profit on the coinage of rupees should not be credited to the revenue or held as an ordinary balance, but should be kept in gold as a special reserve apart from the paper-currency reserve. The committee recommended the retention of the 16d. rate instead of a lower one or a higher one, not because it is indicated on any theoretical grounds, but because the business world has accepted this provisional rate as the permanent rate at which the Indian monetary standard is to be transferred from a silver to a gold basis, and because prices have adjusted themselves to that ratio and it is the one on which debts have been contracted. For the speedy attainment of an effective gold standard it is considered desirable that the Government of India shall husband its resources, exercise strict economy, and restrict the growth of its gold obligations. E. A. Hambro thought that the establishment of a Government bank would facilitate the carrying out of the policy recommended. W. H. Holland advised making no change until the provisional arrangement had been tested further. Robert Campbell and Sir John Muir joined him in appending to the report a warning against borrowing in sterling either for the establishment or the maintenance of a gold standard, and incurring a load of debt and its consequent addition to the home charges, only to find, perhaps, that an impracticable scheme had been pursued which, when left to its own merits, must break down.

The Government adopted most of the recommendations of the committee. The bill introduced in the Legislative Council on Sept. 8 made the sovereign legal tender in India, and provided for the striking of gold coins in the Indian mints, which were proclaimed a branch of the royal mint of Great Britain. The rupee was fixed at

1s. 4d. Clinton Dawkins, the financial member of the Viceroy's Council, disclaimed any hostility to silver, and the Viceroy argued that only with a gold standard could India enter upon a discussion of international bimetalism upon equal terms with foreign powers. The Government accepted no obligation to exchange gold for rupees. The rupee currency should expand in response to trade demands, as the exchange of rupees for gold would render the currency more elastic and could have no tendency to produce a monetary stringency, although there might be a stringency of loanable capital. The Secretary of State, in accepting generally the committee's recommendations and communicating the decision of the British Government in favor of acting on the principles recommended, impressed upon the Indian Government the advisability of making the gold reserve freely available for foreign remittances whenever circumstances render it desirable.

The people of India of all classes and the English who are engaged in tea planting or other productive industries opposed the closing of the mints in 1893 to silver, the adoption of the rate of 1s. 4d., and the final adoption of the gold standard. The gold-standard party in India consisted of the foreign merchants, who were exasperated by the fluctuations in exchange, and the Anglo-Indian officials, who receive their salaries or part of them in rupees. When the value of the rupee began to deviate considerably from the old rate of 2s. the Government decreed that the salaries and pensions of the higher officials should continue to be paid at that rate in gold; those of the intermediate officials half in gold, representing their savings and remittances to their families in England, and half in silver, answering for their expenses in India; while the lower grades of officials, Anglo-Indian, Eurasian, and native, whose expenditures were confined to the country, received their salaries in silver rupees, which came to be worth half as much in gold as they had formerly been. The Government itself became most anxious to arrest the fall of the rupee, because its downward movement disturbed all financial calculations by the constantly growing item of loss by exchange on the remittance of £15,000,000 to £18,000,000 sterling to England every year. These home charges represented partly the pensions, civil and military, that had been made payable in pounds sterling instead of in tens of rupees, but to a greater extent the debts contracted in England to cover budget deficits, to build railroads, and for other purposes, all of which are payable in gold. The India of the Indians, on the other hand, prospered on the cheap rupee, and built up a grain-export trade, a cotton industry, and many other thriving branches of commerce and enterprise. The royal commission that was appointed in 1895 to inquire into the expenditure of the Government of India, owing to a hopeless disagreement among its members or to some other cause, adjourned its proceedings in July, 1897, and neither made a report nor gave any other sign of existence.

New Frontier Policy.—The Mad Fakir, whose followers caused serious disturbances in the upper Swat valley, occupied in December, 1898, the crest of the watershed overlooking the valley of the Panjkora. He came in contact there with the forces of the Nawab of Dir, which were barring his advance into the valley. The Azi Khel *Jirgah*, an influential clan inhabiting the extreme eastern portion of the upper Swat valley, gave pledges to support the Government and to exert influence on the other clans in the upper valley to help in expelling the Fakir from the country.

Fighting occurred in the Sebuji valley, where the Fakir was besieged by the men of the Dir tribe, who attacked his fort, which he abandoned, crossing into the upper Swat valley again and returning to his former stronghold at Pitai, where he had between 300 and 400 men who remained true to him. Gen. A. Reid's movable column was then encamped at Chakdora. It moved 7 miles up the valley, and made a camp near Landikai. To reassure the inhabitants, a regiment of Bengal lancers patrolled the upper Swat valley. The Fakir also made visits to the different tribes of the valley, and endeavored to get them to join his standard so as to preserve their country from British occupation. The Azi Khels, however, were kept loyal by the exertions of the British officers, and they not only refused to allow him to enter their country, but marched out against him and pursued his force into the Jinki Khel territory, where his fortress of Pitai was situated. They even induced a section of the Jinki Khels to withdraw their support from the cause of the Mad Fakir. This reduced his influence to insignificance. The Khani Khels of the Chamkanni tribe made a raid in the Kurram valley in February, 1899. A detachment of troops under the political officer inflicted reprisals by destroying villages and seizing cattle. The fortification of the Khaibar pass was not proceeded with on the original extensive plan, because Lord Curzon's Government decided to withdraw the garrison of British troops and leave the Khaibar rifles to defend the pass, keeping troops in readiness at Peshawur to march up if these should be faithless or prove insufficient to hold it against outside foes. The usual reliefs were not sent to the forts at Chitral in the spring. The Government decided to reduce the garrison and the defensive works to be held. The incursions of the Waziris and of Afghans into the Kurram valley led to a punitive column being sent in May. The new frontier scheme adopted by Lord Curzon relative to the Khaibar involved the abandonment of the projected railroad through the pass. On the Samana and in the Kurram the new frontier policy was adopted also. English garrisons were withdrawn, and the defense of the frontier was left to native militia under British officers. The Indian press praised the new policy not only as immediately reducing frontier expenses, but as calculated to conciliate the tribes and avert the dangers that had resulted before from irritating the independent hill peoples. When Lord Curzon arrived in India the Government was committed to a policy involving the construction of large fortifications and the maintenance of the existing garrison in Chitral; to making a new fort at Landi Kotral and fortifying other positions in the Khaibar, and building a railroad into Afghanistan through this pass; to considerable expenditure on forts and garrisons on the Samana range; to maintaining a large garrison of regular troops in the Tochi valley; to establishing a central station at Miran-shah and placing garrisons in fortified posts at various points in this section of the border; and to maintaining a regular garrison at Wana for the purpose of guarding the Gomal route and Waziristan. The measures adopted after Lord Curzon had examined the situation involved a wide departure from the plans of his predecessor. It was decided to maintain only the escort of the political officer in the fort at Chitral, and, instead of extending the fortifications there, to remove the garrison to Drosh, building a fort there to dominate the Dir country. By securing the co-operation of the Mehtar of Chitral, his levies

would be trusted to guard the posts and bridges from the Lowari to Chitral, while an alternative line of communication is obtained by improving the road leading into Chitral from Gilgit. The Nowshera Railroad is being completed from the left bank of the Kabul river to Dargai, and the gauge of this and of all the light railroads to the frontier has been changed from 2 feet to 2 feet 6 inches. These light railroads are expected to give the troops sufficient mobility to protect the frontier without locking them up in detached garrisons far from their base, as the other plan involved. In the Tochi valley a Waziri militia will be employed, which can be controlled by movable columns at Bannu and Dera Ismail Khan. Waziri militia will also hold all the posts occupied hitherto by regulars in northern Waziristan. A standard-gauge railroad is being built up to the base at Jamrud. Railroad communication with Kohat will be established as soon as practicable. All the cantonments still retained among the frontier tribes will be connected by railways as far as possible with their military bases. An old feud between the Khan of Nawagai and the Mamunds of Bajaur, supported by the Khan of Dir, was composed in July by the intervention of the British political agent.

Internal Affairs.—The secret society that incited the Poona murders in 1897 gave evidence of its vitality by murderous attacks on police officers early in 1899. Fresh prosecutions of Maharashtra newspapers under the new press law were undertaken in consequence of their unabated seditious tone. The most serious and inflammatory attacks on the Government were disguised in allegorical and poetical forms or in ethical disquisitions as to how rulers with the guilt of murder on their souls could mete out justice to others, or what allegiance is due to robbers turned kings or to kings who have usurped the dominion of others, or pointing out the fate of former usurpers and conquerors.

In Tinneveli and Madura differences between Hindu castes led in June to riots, in which villages were burned and many persons murdered. It arose from the attempt of the Maravars, a Dravidian caste of warriors and husbandmen, to exclude the Shanars, whom they held to be unclean, from the temples. When the deputy magistrate, a Mohammedan, decided in favor of the Shanars, the Maravars and Kullars attacked their villages in the two districts and in British Travancore, and were not stopped in their pillage, destruction, and violence until the troops arrived and took about 1,000 prisoners. The Shanars, whose chief occupation is making toddy from palm juice, have aspired, since many of them have been converted to Christianity and educated, to the same privileges accorded to other classes, which were therefore incited to suppress their social insubordination with the barbarity natural to them. After the disturbances were over a large number of the Shanars adopted the Mohammedan religion.

The feelings of the Burmese community were outraged by the mildness of the punishment inflicted by regimental officers on British soldiers who had committed a dastardly crime upon a respectable native woman. The Government rectified the error by revising the sentence and court-martialing the officers who were responsible.

The policy of stamping out the bubonic plague by segregation, sanitary cordons, and violent repressive measures that arrested trade and industry and wrought up the Hindu and Mohammedan communities to the point of insurrection by violating their family privacy and social and re-

ligious customs was not even successful from a sanitary point of view. The deaths in Bombay city from the epidemic during the second outbreak in 1898, when these thorough methods were applied, rose to 28,000, while during the outbreak of 1897, when the municipality and the health officials were allowed to employ the usual precautions against the spread of epidemics, such as cleansing and disinfection, the number of deaths was 22,700. The special plague commission which took control in 1898, having found the thorough policy of no avail, reverted to milder plague measures in 1899 when the third outbreak occurred, and the deaths in Bombay fell to 21,000. In Calcutta the Government prepared for the coming of the epidemic by flushing the sewers and cleansing the most unwholesome and overcrowded quarters. Inspection stations on the railroad lines prevented the entrance of the disease through infected persons as long as possible, but at last the disease made its appearance in the capital. The rigorous measures employed at Bombay were not adopted, and yet the epidemic was kept within moderate limits. Attention was given to preventing its dissemination among the villages, though without recourse to the wholesale detentions and inspections that produced panic and riot in Bombay province. Persons suffering from plague were not allowed to leave Calcutta by railroad or steamer, but no one was detained without distinct proof. The study of the disease has led to the conclusion that rats are a common vehicle for the incubation and communication of the germs. The removal of persons exposed to infection to camps in the open country is the precaution that has been found to be most efficacious, and it has been applied on an enormous scale in Bombay. The evacuation of villages after the plague had entered was the most efficacious measure, and in every instance it proved successful in Bombay and the Punjab at every season of the year. The Indian authorities have concluded that the plague can not be eradicated by forcible sanitary measures, but will continue in India, with the usual decline in the hot season. The means of protection can only be partial, and they must be evolved, as in the case of cholera, from experience.

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission, was 147,178 in 1820; 343,031 in 1830; 685,866 in 1840; 988,416 in 1850; 1,350,428 in 1860; 1,680,637 in 1870; 1,978,301 in 1880; and 2,192,404 in 1890; estimated from the school enumeration of 1899 it is 2,645,138. Capital, Indianapolis.

Government.—The following were the State officers in 1899: Governor, James A. Mount; Lieutenant Governor, W. S. Haggard; Secretary of State, Union B. Hunt; Treasurer, Leopold Levy; Auditor, William H. Hart; Attorney-General, William L. Taylor; Superintendent of Instruction, F. L. Jones; Adjutant General, J. K. Gore; Statistician, John B. Conner; Geologist, Willis S. Blatchley; Commissioner of Insurance, C. W. Neal; Commissioner of Public Lands, L. G. Rothschild; Labor Commission, B. F. Schmid; L. McCormack; Factory Inspector, D. F. McAbee; Fish and Game Commissioner, Z. T. McSweeney; Tax Commissioners, T. B. Buskirk, J. C. Wingate; Supervisor of Natural Gas, J. C. Leach; Mine Inspector, Robert Fisher; Chief Justice of the Supreme Court, Leander J. Monks; Associate Justices, James H. Jordan, Alexander Dowling, J. V. Hadley, Francis E. Baker; Clerk, Robert A. Brown—all Republicans.

Finances.—The total receipts of the State treasury in the year ending Oct. 31 are shown by the annual report to have been from all sources \$7,121,149.31, and the total disbursements \$6,976,599.41. There was a balance in the treasury Nov. 1, 1898, of \$550,775.75, the balance this year being \$695,335.65. In June the receipts amounted to \$2,329,885.19, the largest of any month in the year. The State debt was reduced by \$612,000.

The valuation of real estate for assessment was placed by the county boards at \$1,175,906,247, and was increased by the State board \$6,224,432. The assessment valuation of railroads was \$153,693,506; of telegraph and telephone companies, \$4,382,047; of sleeping-car companies, \$393,084; of express companies, \$1,811,395.

Education.—The school enumeration for 1899 gave a total of 755,698, of whom 14,703 were colored. The enrollment was 556,551, and the attendance average 424,725. The number of teachers was 15,486; the number of schoolhouses, 9,983. The amount of the common-school fund held by counties in June was \$7,842,032.77; the congressional township fund held by counties was \$2,469,982.50; total fund, \$10,312,015.27, making a net increase during the year of \$104,811.68. The tuition revenue distributed in January was \$2,435,603.66, and in July \$2,854,613.95; the special revenue distributed in January was \$554,682.66, and in July \$689,398.47; total revenue for the year, \$6,534,298.74.

Statistics gathered by a committee of the Town and City Superintendents' Association appointed to plan a uniform course of study for the public high schools show that the whole number of teachers devoting full time to high-school work is 270, of whom 118 are women. It is shown also that the average of high-school students, compared with the school population, increases from the larger to the smaller towns, those with more than 10,000 population having but 7.71 per cent. of the enumeration, while those below 2,000 have an average of 19.30 per cent.

The attendance at the State University, at Bloomington, in 1898-'99 was 1,050, every county being represented. The attendance in 1893 was but 572.

The Eastern Indiana Normal University was opened Aug. 29 at Normal City, a suburb of Muncie. A building affording accommodations for 1,000 students has been put up at a cost of \$75,000, and a faculty of 23 instructors appointed.

The enrollment for the spring term at the Central Normal College, at Danville, was more than 1,200. At the Northern Indiana Normal School, at Valparaiso, 3,247 were enrolled during the year, and the average attendance was 2,231. Diplomas have been given during the year to 1,255 students in the various courses.

At the sixty-first commencement of Wabash College, at Crawfordsville, in June, degrees were conferred on 17 seniors. The president resigned on account of disagreement with the board in regard to the management. He believes that girls should be admitted to the college privileges, and that their admission would give new life to the institution. In all, the college has graduated 784 students.

Charities and Corrections.—The statistics of the State institutions given in April were as follows: Daily average attendance in the insane hospitals: Central, 1,530; Northern, 603.77; Eastern, 530.6; Southern, 473; total, 3,137.37. At the other charitable institutions the daily average attendance was as follows: Soldiers' Home, 476; Soldiers' and Sailors' Orphans' Home, 611; Institution for the Deaf and Dumb, 320.8; Institu-

tion for the Blind, 121.27; Institution for the Feeble-minded, 556. The average attendance at the correctional institutions was as follows: State Prison, 779.73; Reformatory, 938.33; Industrial School for Girls and Women's Prison—women 46.1, girls 192.3, total 238.4; Reform School for Boys, 538. Total for correctional institutions, 2,504.46.

The net total expenditures for the one quarter at these institutions were: Central Insane, \$56,725.39; Northern Insane, \$24,451.09; Eastern Insane, \$21,176.81; Southern Insane, \$22,583.72; total, \$124,937.01. Soldiers' Home, \$17,504.74; Soldiers' and Sailors' Orphans' Home, \$23,766.09; Institution for the Deaf and Dumb, \$19,262.07; Blind Institute, \$9,149.65; School for Feeble-minded, \$32,894.54; State Prison, \$20,160.38; Reformatory, \$29,885.54; Women's Prison and Industrial School for Girls, \$9,317.84; Reform School for Boys, \$19,006.12. Grand total for all, \$305,883.98. For the same quarter in 1898, \$315,673.61.

At the Soldiers' Home five new cottages were built this year, with a capacity of 16 to 22 persons each, and a new administration building. The funds were given by counties and individuals. The cost of maintenance for the year was \$87,387.54. There still remain 75 applicants who can not be accommodated.

Militia.—The annual report of the Adjutant General shows that at the beginning of the Spanish-American War there were 4 regiments and 2 batteries. As many of the companies of the State militia were completely dismembered during the Spanish-American War, most of the men enlisting in the regular service, Adjutant-General Gore, acting under instructions of the Governor, has reorganized companies in 12 of the large cities.

Labor.—According to reports received at the State Statistician's office, 33,404 men are employed on farms in the State, who receive an average of \$13.89 a month and board. Of women employed in families, 11,714 are reported, and their average weekly pay is \$1.55 with board.

Strikes among miners in two districts were caused by controversies over the price of powder, which, as was asserted, was sold to the miners by the companies for 50 cents a keg more than the lowest price at which it could be obtained elsewhere, and they were compelled to buy of the companies. Another strike was caused by the discharge of a workman for intoxication, according to a rule of the company. At Evansville, in June, the importation of negroes to take the places of striking miners resulted in rioting and bloodshed.

Products.—From the annual agricultural report of the Bureau of Statistics for 1899 it is learned that the leading products of the farm, and their value for the year, taking the current prices at Indianapolis and including the live stock on hand, are as follows: Wheat, \$21,014,256; corn, \$45,374,041; oats, \$9,300,296; rye, \$299,450; barley and buckwheat, \$157,988; timothy and clover hay, \$40,600,830; flaxseed, \$13,880; Irish and sweet potatoes, \$3,255,340; sorghum, \$245,350; wool clip, \$1,140,400; tobacco, \$590,400; tame grasses, \$6,500,000; milk, butter, and cheese, \$17,180,000; poultry and eggs, \$6,980,000; slaughtered animals on farm, \$4,795,639; fruit and garden products, estimated, \$9,840,000; honey, \$680,000; milk cows, \$15,210,000; other cattle, \$19,964,340; sheep and lambs, \$4,680,600; swine and pigs, \$20,210,124; horses and mules, \$25,120,100.

The State Mine Inspector shows that 5,177,044 tons of coal were mined in 1898, an increase of 948,958 tons over the output of 1897 and an increase of 628,233 tons over that of any previous

year. In 1898 9,325 miners were employed in the State. The total production of petroleum in 1898 was 3,751,307 barrels, compared with 4,353,138 barrels in 1897, a loss of 601,831 barrels. The cause of the decrease is said to have been due to the low price of the fuel and the consequent falling off in the discovery of new fields.

There has been a gradual decrease in the pressure of the natural gas; the State Supervisor is quoted as saying in November that he had just examined 128 gas wells in western Grant County that showed an average pressure of 154 pounds, while a year ago the same wells showed a pressure of 183 pounds; and that, although there are a few points where only a few wells have been drilled, yet the gas field in general has been fairly well developed. He says that in the corner where Madison, Grant, and Delaware Counties join there is some good territory still. But he believes there is no reason to fear that the gas will entirely give out in the near future; indications are that there will be plenty for manufacturing for four or five years yet, and after that for an indefinite term for domestic purposes.

Banks and Trust Companies.—The report of the banking department of the Auditor's office indicates that in 1899 the assets of the trust companies increased \$3,700,000 over last year, while the State banks have increased their assets \$3,600,000 and the savings banks have increased their deposits \$650,000.

The law passed by the last General Assembly authorizing the incorporation of trust companies in cities formerly considered too small to support such institutions, and allowing a capitalization of less than \$100,000, has been the means of bringing out 12 new companies, all but 2 of which reported their condition to the Auditor. These two were not actively in business at the time the call was sent out. The aggregate holdings of the companies are given at \$1,250,000 in bonds and stocks, \$520,000 in trust funds, and \$825,000 in their own funds.

The reports from the State banks indicate that they are in better condition than at any time since 1893, and that the farmers and working people are patronizing them more liberally. The fact that the loans and discounts show an increase of \$2,000,000 indicates to the Auditor that there is an unusual amount of money on hand. The loans and discounts have increased \$2,000,000, while the time and demand deposits have increased \$4,600,000 over last year. The surplus of \$650,000 is \$40,000 larger than last year. This year 2 State banks went out of business, and 5 new banks were opened.

Building and Loan Associations.—The business of these associations has fallen off materially. It is estimated that fully \$3,000,000 less has been held by them than in the year next preceding. The withdrawals have amounted to a much larger sum, and the membership has decreased by more than 18,000. Six associations have gone to receivers and 2 to assignees, while 13 have gone into liquidation. Seven new associations have been organized.

Insurance.—For the last six months of 1899 the State treasury received from the insurance department \$106,389.19. Of this amount \$74,605.69 was collected as taxes from insurance companies doing business in the State, and the remaining \$31,783.50 are from the collection of fees of the agents of the companies. The first six months of the year the Auditor collected in taxes and fees \$117,202.30, making the total in revenues arising from insurance companies \$223,591.49, which is about \$15,000 more than has ever before

been received from this source in any one year. There are 250 companies authorized to do business in the State. Six Indiana fire companies report, and 8 life and accident companies have retired during the year. The taxes and fees for the past five years have amounted to \$986,335.

Railroads.—The total gross earnings of the passenger departments of 40 leading railroads of the State in 1898 were \$35,931,676, and of the freight departments \$89,471,757. The total operating expense was \$93,804,760.

The Order of the Iron Hall.—The final report of the receiver of this organization was filed in July, and the trust, which dates from Aug. 23, 1892, has been closed. Since the creation of the receivership \$1,976,776 has been distributed among 45,000 claimants and creditors, whose claims aggregated \$5,100,000. The cost of the receivership was 7 per cent. of the whole amount of money secured, and of this 2 per cent. went to the receiver.

The Scottsburg Lynching.—Suit was brought against the sheriff in Scott County, who allowed his prisoner to be taken by lynchers (see Annual Cyclopædia for 1898, page 337), by the father of Tyler, the victim, which resulted in a verdict of \$5 damages against the sheriff. A suit for damages was brought in September by the widow of one of the five men lynched at Versailles.

Legislative Session.—The General Assembly was in session from Jan. 5 to March 9.

The Governor gave in the message a statement of the condition of the State debt, showing a reduction of \$1,320,000 in two years, and a decrease of \$25,150 in the yearly interest. He recommended legislation to reform the methods of the administration of county and township government. The average of taxes for county, township, and city purposes is \$1.47 on the \$100, while the State calls for but 17 cents on the \$100. He advised a law to suppress lynching by making the counties responsible for damages. He recommended revision of the judiciary system; making the science of agriculture a part of the public-school curriculum; establishment of a court of arbitration for adjustment of differences between employers and employed; some means of check upon trusts; reconstruction of the State Board of Education so as to make its membership include more educational interests; taxation of insurance policies; an appropriation to complete the soldiers' monument; provision for separate keeping of the criminal insane; enactment of a strict primary-election law; creation of the office of State entomologist; and provision for the appointment of a nonpartisan committee of men and women in each county to visit its penal and charitable institutions at least as often as once in three months and report their condition to the State Board of Charities.

The term of United States Senator David Turpie expired this year, and Albert J. Beveridge was elected to succeed him. Other names before the Republican caucus were those of Messrs. Hanly, Taylor, Posey, and Steele. Mr. Turpie was the candidate of the Democrats. The vote in both houses showed 87 for Mr. Beveridge, 56 for Mr. Turpie, and 1 for Mr. Burkhardt.

Nearly 100 laws were made at the session, and most of the recommendations of the message were carried out.

Among the most important acts were those for the reform of county and township government. It is provided that there shall be an advisory board of three members in each township and a county council of seven members in each

county. They will eventually be chosen at general elections, but at first appointed by the judges of the various judicial circuits. Each county is to be divided into four districts, and there will be one councilman for each district and three at large. They must be divided in politics, and must be resident freeholders and taxpayers. The council is to fix the tax levy and make all appropriations. County officers and clerks of courts are required to submit estimates of the amounts that will be needed during the year for expenses of the offices, courts, county institutions, etc. These estimates must be itemized, published, and kept on file in the county auditor's office, subject to inspection by taxpayers. The council has exclusive power to buy and sell real estate for the county.

It is believed that this law will do away with many abuses and extravagances, and greatly reduce the cost of local government. It is made unlawful for county commissioners at a special meeting to transact any business that is not mentioned in the call. Commissioners may not build courthouses in counties of more than 25,000 inhabitants except on petition of 500 resident freeholders.

The law prohibiting councils in cities of 50,000 to 100,000 from altering or extending franchises of street-railway, gas, steam-heating, or electric-lighting companies was repealed. Within thirty days after an ordinance is passed to grant a franchise or buy a water or light plant 40 per cent. of the voters may demand that the question be submitted to vote, and if it is defeated no similar ordinance may be passed within three years.

An important law concerns mortgaged property, providing that it may be exempt from taxation up to \$700 mortgage indebtedness, with the condition that no one is entitled to exemption greater than half the appraised value of the land. By the operation of this law the State will lose a large amount of income, as the school fund (about \$6,000,000) is loaned and secured by mortgages. Assignments of mortgages must be properly recorded, in order that the owner may be taxed.

Several measures affecting insurance were passed. Certain life insurance was exempted from all claims of creditors. Suits against Masonic, Odd Fellow, and other charitable societies must be brought in the county where the principal office is or a subordinate branch to which the insured belonged at the time of his death, and may be served only on the subordinate branch. It is provided that stock life insurance companies must have at least \$100,000 subscribed, 50 per cent. of which must be paid up and invested in safe securities, \$25,000 of which securities are to be deposited with the Auditor of State, and evidence furnished that \$100,000 is all subscribed in good faith. The remainder must be paid in eighteen months. No part of the 50 per cent. required to be invested can be loaned to any officer or stockholder. To incorporate on the mutual plan, companies must have at least 250 applications for policies of not less than \$1,000, and a list of such applicants has to be filed with the Auditor of State, with a deposit equal to three fifths of the first annual premiums on such list. Insurance companies or trust and deposit companies are forbidden to loan funds to directors or officers. Insurance companies organized under special charters must file statements with the Auditor. Fraternal beneficiary organizations must make reports.

Building and loan associations may go into liquidation at any regular meeting of the directors.

The election law was so amended that any political party may have one challenger and one poll-book holder at each voting place. Any man who sells or offers to sell his vote may be disfranchised for ten to twenty years. The use of voting machines was authorized.

In the interest of labor several measures were enacted. Unskilled labor employed on public work is to receive not less than 15 cents an hour. Wages must be paid weekly, to within six days of pay day, and an agreement to the contrary is not binding. Assignment of future wages is prohibited. Written notice of a change in wages must be given twenty-four hours in advance. The office of factory inspector was abolished, and a State department of inspection created, with greater scope to insure safety of employees, regulate the hours of labor of women and children, etc. The term of a labor commissioner is advanced from two to four years, and his salary is placed at \$1,800. Mediation is to be offered in all strikes, instead of only those affecting as many as 50 persons. Acts were passed regulating blasting in mines and establishing tests for miners' oil.

Any firm or corporation doing the business of bankers, brokers, savings institutions, etc., is prohibited from using the word "trust" as part of the name of the business unless it is organized under the law of March 4, 1893, which authorizes the incorporation of loan, trust, and safe-deposit companies.

Aliens may foreclose mortgages and acquire property in the State on condition that they dispose of it within five years.

Several acts were passed in the interest of education. Traveling and township libraries are provided for, and \$3,000 was appropriated for collecting books. Five or more citizens may organize a library association and be entitled to the use of the traveling libraries without other payment than the cost of transportation. A majority of voters in a township may authorize a tax of one fifth mill for a township library. An appropriation of \$1,000 was made for the State Schoolbook Commissioners to advertise for books for use in public schools. Township trustees are required to furnish high-school education to pupils desiring it, either by building high schools, joining with other townships to build, or paying tuition for the pupils in high schools of neighboring towns. Incorporated towns of fewer than 1,500 inhabitants may turn over the control of their public schools to the township trustees. The State Superintendent may make life certificates issued by other States to teachers good in Indiana. Three additional members of the State Board of Education are to be chosen from among the county superintendents. Cities and towns are to be liable for debts on school property in annexed territory. Directors of colleges elected by stockholders may, prior to 1902, prescribe religious or denominational qualifications for membership in the board.

Regarding the employment of convicts in the State Prison, the Board of Control is required to institute instructions of an educational and technical nature, and is authorized to contract for the labor of 400 convicts and 50 per cent. of the number of convicts in excess of 800. The prisoners are to be employed at such trades as the board may direct, not more than 100 at any one trade. The piece-price system is authorized, and the board is to have full control of convicts' labor. The board may lease lands for farm products to be used in the prison, the surplus raised to be sold in open market. All prisoners not engaged in the prison may be employed on the farms.

No contracts for prison labor can run longer than Oct. 1, 1904. Contracts are to be let to the highest bidders. Not more than eight hours shall constitute a day's work. It is the intention of this act that all work done by the prisoners of the Indiana State Prison under the State-account system shall be hand work as far as practicable and remunerative to the State. Each discharged convict is to be provided with a ticket to any place he chooses not farther away than the one from which he was sentenced, besides \$10 in money, a suit worth not more than \$6, and a \$5 overcoat.

The Reform School for Girls and Women's Prison was separated into two institutions, the one to be known as the Indiana Industrial School for Girls, and the other as the Indiana Women's Prison.

The operation of the parole law was extended to prisoners in the State and in the women's prisons and those sentenced to the Reformatory for stated terms. An appropriation of \$10,000 was made for clothing for paroled Reformatory prisoners.

Acts were passed regulating the administration of relief to the poor. Overseers are to satisfy themselves that applicants for help, if able to work, are doing all they can to find employment, and to assist them in finding it. They are to co-operate with voluntary charitable societies, and see that relief is not unnecessarily duplicated. County boards of charity are provided for. Dependent children may not be brought into the State unless bond is given for their maintenance during their minority. This is to encourage the placing of Indiana children in Indiana homes. But residents may offer homes to children related to them without giving bonds. A nonpartisan committee to visit State institutions and report the amount of funds necessary was provided for, and an act was passed to regulate the management of county almshouses.

A general fish and game law was enacted. The Commissioner of Fisheries is to have jurisdiction over game.

The office of State Entomologist was created, and inspection of nurseries and nursery stock coming into the State was provided for.

If a judgment against a railroad company remain unpaid a year, the court may order any employee having money of the company on hand or coming due to pay it into court until the judgment and costs are satisfied.

In suits for damages for personal injuries or death the want of contributory negligence need not be proved by plaintiff. Contributory negligence is a matter of defense.

In cases of change of venue in criminal trials the judge of the court granting the venue has sole power to appoint counsel on either side.

When an amount tendered in payment and refused is brought into court and found to be more than is due, only the sum due shall be paid.

A judge may not try a penal case if he is related to the defendant within the sixth degree of consanguinity or if he has acted as counsel on either side in the case.

The salary of a justice in a city of 100,000 inhabitants was fixed at \$2,000, in place of fees, and of justices in townships having cities of 35,000 to 60,000 at \$1,000.

Notice of appeal served on nonresident co-parties must be published three weeks, and unless they decline to join they shall be regarded as joined.

Other acts were:

Creating a State Board of Pharmacy.

A general pure food and drugs law.

Providing fire-escape regulations, to be enforced by the chief of the department of inspection of the State.

Providing for a field inspection of commercial fertilizers, instead of allowing them to be sold on the analysis of a sample from the factory.

Making it a misdemeanor to injure or tamper with electric apparatus or divert the current.

Appropriating \$100,000 to finish the State monument to soldiers and sailors.

Directing the Adjutant General to prepare records of volunteers of the State in the Spanish war and distribute them.

Appropriating \$400 to pay expenses incident to the presentation of Spanish-American War relics to the State, including battle flag of the battle ship Indiana and the machine gun captured in Santiago harbor, and providing means for the care and preservation of the relics.

Appropriating \$40,000 to reimburse soldiers for the amounts withheld to pay for their uniforms.

Granting a pension of \$100 a month to the widow of Gov. O. P. Morton.

Accepting jurisdiction to lands in Grant County ceded by Congress for the purpose of a branch home of the National Home for Disabled Volunteer Soldiers.

Pensioning Indianapolis policemen.

Granting peddlers' licenses free to ex-United States soldiers.

Requiring a transaction in patent rights to be recorded with the county clerk.

Requiring a fine of \$20 from any person allowing Canada thistles to grow 4 inches high or higher on his land.

Regulating the practice of medicine.

Making it larceny to steal a dog listed for taxation at its true cash value, unless it has killed or worried sheep.

Making it a felony to use explosives or poisons, under penalty of a year's imprisonment.

Defining a mob and the crime of lynching, and making the penalty for participation death or imprisonment for life.

To amend an act defining fraudulent marriages.

To cede to the Federal Government any lands chosen by it for the establishment of military posts.

To provide for the survey and sale of swamp lands.

To amend the law so that damages recovered by reason of the death of a person shall inure to the exclusive benefit of a widower as well as to a widow or children.

Providing that street cars must be comfortably heated, November to March, under penalty of \$25 to \$100 a day for each car.

A bill making an appropriation for a hospital for the criminal insane at the Jeffersonville Reformatory was defeated in the Senate by a vote of 21 for to 24 against it; but by some mistake it was signed by the President of the Senate, the Speaker of the House, and the Governor, and, according to court decisions in similar cases, became a law. It appropriates \$25,000 for a building and \$13,000 for maintenance for two years. The trustees have, however, announced that they will not take advantage of the mistake to draw the appropriation.

A State Fee and Salary Commission was created to serve two years and investigate the subject of official fees and salaries.

A constitutional amendment will be voted upon in November, 1900, fixing the number of justices of the Supreme Court at not fewer than 5 nor more than 11, instead of 3 to 5, as now; also one

authorizing the Legislature to prescribe qualifications for admission to the bar.

The Fee and Salary Laws.—The laws on these subjects passed in 1891 and 1895 were held to be constitutional by the Supreme Court in June in a suit brought to recover fees from a county recorder, who claimed that the laws were invalid and that he was entitled to the fees under the law of 1879. A bill prepared by the County Officers' Association to revise the law was defeated in the Legislature.

INDUSTRIAL MISSIONARY ASSOCIATION OF ALABAMA. This society was incorporated at Selma, Ala., in October, 1888, to operate in the black belt of that and other States. Its first and most important objects of labor were plantation negroes. Like all freedmen, these had lost by emancipation the accustomed care of their masters, and in rural isolation and dependence that loss fell upon them most damagingly. They were free, indeed, but terribly impoverished and untrained. Great masses of them used their freedom simply for license and degradation. Judge Tourgée says the average head gear of the Northern people was a richer possession than the dowry which this race received with their freedom after two and a half centuries of bondage. Their home was a one-room cabin without glass or plaster, lighted by the open door or yawning crack and chink; their daily fare chiefly "po'k and co'n cake," with an occasional chicken whose antecedents would best not be too closely questioned; their attire a tatterdemalion rig of cast-offs and misfits; and their business chance the advance-mortgage system, working probably as well in the South as it would anywhere, and, indeed, the only chance possible immediately after the war for either planter or tenant, yet with the net outcome in most cases of making the planter a schemer and the tenant a hand-to-mouth toiler, with the wolf always at the door. Such was the situation in the black belt. As for education, the South did generously according to her means. The statutes provided for the black boy his full share of a fund that was almost wholly paid by the white boy's father. But funds were low at best, black schools had to be short and far apart, and teachers were a wonder for incapacity. Hence for actual education the country school was a practical nullity.

The Rev. Charles B. Curtis and his wife, laboring ten years at Selma, were deeply impressed with these conditions, and, after studying the problem all those years, they finally organized the above-named society. The commissioners—Charles B. Curtis, George M. Elliott, and Asher W. Curtis—filed a declaration providing for \$10,000 in capital stock at \$10 a share, no profits or dividends ever to be declared to stockholders. Later, in April, 1890, the authorized capital was increased to \$1,000,000.

The association aims to give plantation people a business chance with a fair account, duly enforced responsibility, and practical daily teaching. Gratuity is expressly avoided. The planter's lien, taken for advances and rent, is duly enforced if need be. Patient but firm is the ideal. The renter has a true friend in authority, but the rent must be paid. This lesson needs to be learned not only by the black-belt negro tenant, but by a large share of tenants of every kind in every section.

The association began with 400 acres at Beloit, Ala., 10 miles from Selma. This has been increased to 4,000 acres. In October, 1899, there were on the lands actually renting 65 families, with many others in the vicinity under mission-

ary care. The secured debt has been reduced from \$30,000 to about half that sum. For several years the business profits from lands, store, and mills have sustained the teaching, preaching, visitation, and superintendence in homes and industries. Some of the renters are beginning to purchase lands on small payments. Shareholders are widely scattered throughout the country, and financial assistance has come from 39 American States and 5 foreign countries.

The Northern office of the association is at Oberlin, Ohio, where the Plantation Missionary and other publications are issued. The principles in force at Beloit have worked so well and are so thoroughly in accord with the recent conclusions of improved charity that the association has definitely entered upon the advocacy of its views and principles as a means for uplifting the unfortunate in every section.

The officers are as follow: President and General Manager, Rev. Charles B. Curtis, Beloit, Ala.; Vice-President, Rev. S. Kingston, Selma, Ala.; Secretary, Miss S. A. Calhoun, Beloit, Ala.; Treasurer, Mrs. M. V. Curtis, Ithaca, N. Y.; Northern secretary and editor of the Plantation Missionary, Rev. Chauncey N. Pond, Oberlin, Ohio. The directors are C. B. Curtis, M. V. Curtis, S. Kingston, D. Echols, S. A. Calhoun, R. J. McIsaac, C. N. Pond, Mrs. H. B. Sullivan, and Prof. C. L. Fisher, centering at Selma, Ala. The Prudential Committee is a purely advisory body, as follows: Rev. H. M. Tenney, D.D., and Rev. C. N. Pond, Oberlin, Ohio; President Charles F. Thwing, D.D., and Rev. H. C. Haydn, D.D., Cleveland, Ohio; Rev. W. F. Gunsaulus, D.D., Chicago, Ill.; Rev. R. T. Hall, D.D., New Britain, Conn.

The scope of the society is not mainly in the people who will, as generations pass, be personally benefited, but in the extension of the principles involved. The philanthropic use of capital in actual business, with a profit therefrom devoted to practical, everyday teaching, and with a corollary favoring the considerate treatment of tenants and laborers everywhere, constitutes the real scope of the association.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,193 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; 1,911,896 in 1890. By the State census of 1895 it was 2,058,069. Capital, Des Moines.

Government.—The following were the State officers during the year: Governor, Leslie M. Shaw; Lieutenant Governor, J. C. Milliman; Secretary of State, George L. Dobson; Treasurer, John Herriott; Auditor, Frank F. Merriam; Attorney-General, Milton Remley; Superintendent of Instruction, R. C. Barrett; Adjutant General, M. H. Byers; Railroad Commissioners, E. A. Dawson, Welcome Mowry, David J. Palmer; Labor Commissioner, W. E. O'Bleness; Librarian, John-son Brigham; Board of Control for State Institutions, William Larrabee, L. G. Kinne, John Cownie; Fish Commissioner, George E. Delevan; Chief Justice of the Supreme Court, G. S. Robinson; Associate Justices, Scott M. Ladd, C. T. Granger, Josiah Given, C. M. Waterman, H. E. Deemer; Clerk, C. T. Jones—all Republicans.

Finances.—At the beginning of the last fiscal biennial period there was a deficit in the treasury of \$412,000. At its close, July 1, 1899, there was a balance on hand of \$445,002.37, besides \$51,000 due from the Government. The following statement is from an address by the Treasurer in October: "During the two years ending July 1, 1899,

there was received at the State treasury from all sources \$5,079,403.29. This amount was derived from the following sources: From the counties, \$4,055,767.75, which was inclusive of the taxes paid by railroads; from corporations, such as insurance, express, telegraph, and telephone companies, \$375,596.57; from fees collected by State officers, \$222,399.34; from taxes on collateral inheritances, \$52,799.52; from the Federal Government, \$192,328.62; from the State institutions, \$133,503.96; and from various sources, \$46,507.64.

"The expenses of the State government during the biennial period closing June 30, 1899, were \$4,190,994.93. These expenses were divided as follow: For the judiciary, \$342,839.96; for the Legislature, \$120,516.50; for the executive department, \$188,616.28; for the institutions maintained by the State government of Iowa the total expenditures were \$3,141,008. This is inclusive of the disbursements of the special tax for the State University. For educational institutions, \$400,262.57 was appropriated; for charitable institutions, \$1,933,200.38; for penal institutions, \$396,140.09; for reformatory, \$167,061.93. The incidental expenses of the State government amounted to \$478,515.52. In this latter sum is included \$141,000 disbursed from the treasury on account of the late war with Spain."

The total assessed valuation of property in 1899 was \$525,391,741, about \$20,000,000 less than that of 1898. A new law went into operation Jan. 1 which requires that all property be assessed at 25 per cent. of its actual value. The valuation of real estate under this law is \$390,297,578; of railroads, \$44,736,070; of live stock, \$36,063,244; of money and credits, \$25,650,027; of merchandise, \$14,230,944.

The tax levy in 1898 was 3.2 mills; in 1899 it was 2.9 mills.

The total revenue from the mullet tax and saloon licenses for the year ending July 1 was \$1,120,544.

The State recovered \$1,219 in May in a suit against ex-Secretary of State W. M. McFarland, who was convicted of having withheld that amount from the salaries paid by the State in 1895, and supposed to have been received by the census clerks.

Banks.—The condition of the 204 savings and the 209 State banks at the close of business Sept. 7 is reported as follows: Savings banks—liabilities: capital stock, \$7,942,100; due depositors, \$50,497,926.72; due banks, \$59,715.02; surplus, \$696,508.05; undivided profits, \$1,062,669.58; total liabilities, \$60,258,819.37; assets: bills receivable, \$45,036,674.92; cash and cash items, \$2,129,940.09; credits subject to sight draft, \$10,836,678.28; overdrafts, \$398,514.31; real and personal property, \$1,857,111.77; total assets, \$60,258,819.37. State banks—liabilities: capital stock, \$9,098,170; due depositors, \$30,209,722.27; due banks and bankers, \$550,631.66; surplus, \$1,030,786.52; undivided profits, \$879,485.91; total liabilities, \$41,768,796.36; assets: bills receivable, \$28,634,705.91; cash and cash items, \$2,114,332.95; credits subject to sight drafts, \$8,187,426.43; overdrafts, \$768,581.47; real and personal property, \$2,063,689.60; total assets, \$41,768,796.36.

Between Jan. 6, 1898, and Sept. 7, 1899, the deposits in all these banks increased \$28,500,000. The deposits in national banks were \$42,238,769, and those in private banks were estimated at \$40,000,000.

Failures.—Bradstreet's reports 111 failures in Iowa during the first nine months of 1899, with liabilities of \$389,610 and assets of \$213,235, against 159 failures during the first nine months

of 1898, which had \$1,161,799 liabilities and assets of \$794,613.

Railroads.—During the year 582.66 miles of new track were laid in the State; this seems to be a larger amount than is reported from any other State. The report of the Railroad Commission shows the number of railroad employees this year to be 32,385, against 30,009 in 1898; their total compensation was \$18,406,383.76 in 1899, while in 1898 it was \$17,280,215.01; and the average daily compensation was \$1.82 in 1899 and \$1.83 the preceding year. The report says that the railroad managements have become thoroughly aroused to the public necessity of bettering their roads in Iowa, and the trunk lines alone have expended hundreds of thousands of dollars on improvements. In the year ending June 30, 1898, the railroads paid in State, county, and municipal taxes \$1,399,090.79.

Insurance.—An opinion by the Supreme Court, given in November, declares unconstitutional that portion of the State law which exempts insurance corporations from paying taxes other than the 1-per-cent. tax levied by the State and collected by the Treasurer. It holds that insurance and kindred corporations are subject to State, county, city, and school taxes, just as individuals are. Their capital stock and personality by this holding are placed on a footing with their real estate, all being subject to the local tax levies, which formerly they escaped.

It was also decided that the State tax against foreign insurance companies is constitutional and valid. It holds that the tax is not a tax upon property but upon business—that is, the privilege of doing business in Iowa—which is determined wholly by this State. The tax on foreign insurance companies is 3½ per cent. on premiums. The principle is applicable to all companies in the United States outside of the State which do business in Iowa. The tax on this class is 2½ per cent. The State collects about \$35,000 annually from the foreign companies, and much more from the domestic companies.

The clause of the State Constitution prohibiting the granting of privileges and immunities to any citizen or class of citizens not granted to others, it is held, has reference only to citizens residing in the State. It is held that a foreign corporation has no absolute right of recognition in other States. It depends on their assent for recognition and enforcement of its contract, and a State is not prohibited from discriminating in the privileges it may grant to foreign corporations as a condition of their doing business within its limits.

Education.—The superintendent's report gives the whole number of enumerated school population as 727,775; enrolled in schools, 554,992; whole number of schools, 18,177; of teachers, 28,437; value of schoolhouses, \$16,908,076. The men teaching in public schools receive an average monthly salary of \$38.31; the women, \$30.30. The total cost of the schools for the year was \$8,583,416.

The high schools of the State graduated 1,839 young women in 1899, and 954 young men.

The State Normal School is greatly overcrowded, having had in all departments this year about 1,900, and 300 in the graduating class. The establishment of more normal schools is urged upon the Legislature.

The State College of Agriculture and Mechanic Arts, at Ames, has a constantly increasing attendance, requiring this year the services of 67 teachers, while ten years ago there were but 25. Decrease in the rate of interest obtained on the en-

dowment fund has straitened the college in its resources, and it therefore asks of the State a tax of one tenth of a mill for five years.

The State University is receiving this amount from special tax, ordered by the twenty-sixth General Assembly for five years, and continued a year longer by the twenty-seventh. The corner stone of a new building was laid in connection with the exercises of the commencement in June. President Charles A. Schaeffer died in September, 1898, and George E. MacLean, of the University of Nebraska, was elected to succeed him.

A large class was graduated at Drake University in June. Ex-Gov. Drake has added more than \$30,000 to his gifts to the institution, and a new auditorium is to be built soon.

A somewhat bitter controversy in connection with Iowa College, at Grinnell, was ended in November by the resignation of Prof. George D. Herron. He has held for six years the chair of Applied Christianity, which was endowed by Mrs. C. A. Rand on the condition that it be filled by Prof. Herron. The socialistic theories taught by the professor have been a source of constant criticism, and finally led to his resignation. Mrs. Rand withdrew the condition in regard to him, and gave the endowment to the college, stipulating that the income shall be paid as salary to one man, and that the department shall be for the original purpose—the interpretation of the teachings of Christ and their application to the problems of society.

Charities and Corrections.—The State institutions, not including those purely educational, were placed in the care of a State board of control by the twenty-seventh General Assembly. Its first report was filed in November. Fourteen institutions are under the care of the board.

The total cost of the institutions under the trustee system the last year was \$1,440,117.77, and under the board \$1,060,627.04.

The Treasurer says that other payments made by the Board of Control were on contracts entered into by the trustees, and therefore chargeable to the year the contracts were made; this and an undrawn balance would make the difference still greater, and show a decrease of more than 30 per cent.

The number of inmates of these institutions in November was: Anamosa, 499; Fort Madison, 510; Clarinda, 872; Independence, 993; Mount Pleasant, 911; Council Bluffs, 274; Vinton, 160; Davenport, 453; Marshalltown, 563; Knoxville, 43; Glenwood, 835; Eldora, 446; Mitchellville, 158; total, 6,717. The Cherokee Hospital for the Insane is not finished.

The board introduced an innovation by stopping the supplying of tobacco to convicts. Butter will be furnished instead.

A riot broke out in October at the Girls' Reform School, at Mitchellville. About 100 of the inmates appear to have been involved. Some escaped and more than 70 were put into jail, most of whom were returned to the school. The damage to the building was repaired for about \$200.

Military.—The report of the Adjutant General gives the casualties of the 4 State regiments of infantry in the Spanish war as 163. Only 1 was reported killed, 1 missing, and 38 wounded; 1 died by suicide and 1 by accident, and 127 from typhoid fever.

The amount of money drawn from the \$500,000 war appropriation by the State was \$148,168.18. There has been refunded to the State Treasurer from the General Government \$91,483.78. Those liable to military duty in Iowa at this time number 302,270.

Court Decisions.—The Supreme Court decided in January that the building and loan enabling act of the last Legislature is valid and the building and loan law of the State constitutional. It also holds that premiums charged arbitrarily without actual competition in securing loans from these concerns are interest. The same court decided that receivers appointed by courts in other States can not recover in the courts of Iowa.

One of the lower courts declared in July that the medical-practice act is unconstitutional, and in December the paving law was held to be invalid.

State Historical Building.—The corner stone of a State historical building was laid, May 17, on the site chosen, about a quarter block northeast of the Capitol. The cost will be \$300,000, and the building, besides reading rooms, parlors, and offices, will have rooms for a museum, an art gallery, an aquarium, and an auditorium. Historical collections illustrating the history and development of the State will form an important part of the museum.

Products.—The following summary of the products of the State is taken from Gov. Shaw's second inaugural:

"Iowa, during several of recent years, could have annually furnished every man, woman, and child in the United States a pound of cereals per day for three hundred and sixty-five days. This is a larger ration than the average people of the world consume. In addition, we would have potatoes and other vegetables, grapes by the car load, apples some years by the train load, and other fruits, \$1,000,000 worth of canned goods per annum, 2,500,000 eggs a day, 25 car loads of honey, and all the beef and pork and mutton and butter and cheese that can be produced on 8,500,000 acres of pasture and with 4,000,000 tons of hay. By feeding some of this grain we are able annually to slaughter 1,000,000 hogs and cattle worth \$15,000,000, and export 5,000,000 more, worth \$65,000,000, and \$500,000 worth of fat sheep. We can keep our people from freezing with a product from Iowa mines of 2½ tons of coal per capita. Not only is Iowa an agricultural State, but she is making a very creditable showing in manufactures. She ships woolen goods, spun and woven in this State, by the car load to the best-known wholesale firms in Philadelphia and New York, shoes by the car load beyond State lines, manufactured lumber into several, and her cast-iron wheels are used in more than half of the States of the Union. She produces annually 1,000,000 dozen pearl buttons, and gloves and mittens by the car load. Besides these, all over the State small factories of different kinds are springing up, relatively of little importance, and yet in the aggregate worthy of consideration. Her facilities for producing beet sugar are unsurpassed. The beet-producing lands of Europe cost per annum, in rent and fertilization, from \$15 to \$20 per acre. Most of the cane-sugar lands cost, including water, quite as much. Iowa lands require no expenses of this kind, and produce beets of unexcelled quality, and the pulp, after the saccharine matter is extracted, is claimed to be as good food for dairy cows as before their reduction. Shall we have sugar factories? The question must be speedily decided. What though it requires \$400,000 or \$500,000 for each plant? There is on deposit in the banks of Iowa to-day over \$160,000,000, of which more than one third is owned by farmers themselves, and in many counties of the State the farmers own 75 per cent. of the bank capital also. I should be pleased to see beet-sugar factories exempted from taxa-

tion for ten years. It is probable that if they are built considerable of the capital required will come from other States. Will we lose anything by inviting it to come?"

The official crop report for 1899 shows a total of farm products of the value of \$194,605,706, to which, the director says, should be added the increment gained by consumption of crops in the production of beef, pork, mutton, wool, dairy and poultry products, horses, etc. This would make the aggregate value of all soil products for the year not less than \$230,000,000.

Public Lands.—A statement of the business of the Bureau of Public Lands for the two years ending in October shows that 1 lot and 14,327 acres have been patented. There still remain 44,925 acres in the various grants, exclusive of swamp and railroad lands, which can not be estimated.

Fisheries.—The biennial report of the Fish Commissioner shows that 650,000 adult fish have been put into Lake Okoboji during the period, 475,000 into Spirit lake, and 2,844,000 into the rivers and smaller lakes of the State, making a total of over 4,000,000 with which all the waters of the State have been stocked. The receipts of the department amounted to \$9,000, the expenditures \$6,724.47, leaving a balance of \$2,275.53.

Political.—Six tickets were before the people for the State election in November—Republican, Democratic, Prohibitionist, Populist, Socialist-Labor, and United Christian.

The Republicans in convention, Aug. 2, adopted resolutions approving the national and State administrations; they also approved the candidacy of D. B. Henderson for Speaker of the House of Representatives, denounced the Chicago platform and its declaration in favor of free trade and free-silver coinage at the ratio of 16 to 1, and its attacks upon the courts; favored legislation to up-build American commerce; said of trusts: "Industry and commerce should be left free to pursue their method according to the natural laws of the world, but when the business aggregations known as trusts prove hurtful to the people they must be restrained by natural laws, and, if need be, abolished"; and declared that "there shall be no division among us until all in arms against the flag shall confess its supreme rights and power, and shall know that even in the farthest East it is the sign and promise of equal law, of justice, and liberty throughout the land and to all the inhabitants thereof."

The nominations were: For Governor, Leslie M. Shaw; Lieutenant Governor, J. C. Milliman; Supreme Judge, J. C. Sherwin; Railroad Commissioner, E. A. Dawson; Superintendent, R. C. Barrett.

The Democratic State Convention was held Aug. 16. A Populist convention was held at the same time, and a ticket was agreed upon. The resolutions of the Democrats approved the Chicago platform, favored the nomination of William J. Bryan in 1900, approved the Spanish war, and said further: "The attempt, unauthorized by Congress, to conquer the natives of Oriental islands is a repudiation of the American doctrine of consent affirmed in the Declaration of Independence, and in conflict with the principles which George Washington and his fellow-patriots of the Revolution made sacrifices to establish.

"We also condemn the war against the Filipinos, believing it to have been inspired by Great Britain for the purpose of producing conditions that will force an Anglo-American alliance, and we not only protest against the war and demand its termination by extension to the Filipinos of the same assurance given to the Cubans, but we

record our deep-seated antagonism to an alliance with Great Britain or any other European power, and express our detestation of the attempt made in British interests to disrupt the friendly relations which have uniformly existed between the United States and Germany. We oppose conquest of the Philippines because imperialism means militarism, because militarism means government by force, and because government by force means death of government by consent, destruction of political and industrial freedom, and the obliteration of equality of rights and association of democratic institutions.

"It is our solemn conviction that the trusts must be destroyed or they will destroy free government. And we demand that they be suppressed by the repeal of the protective tariff and other privilege-conferring legislation responsible for them by enactment of such legislation, State and national, as will aid in their destruction."

Other resolutions condemned contract convict labor and the policy of the State administration. The platform of the Populists was of similar import. The ticket follows: For Governor, Fred E. White; Lieutenant Governor, M. L. Bevis; Supreme Judge, A. Van Wagenen; Railroad Commissioner, W. H. Calhoun; Superintendent of Public Instruction, B. P. Holst. Mr. Calhoun is a Populist.

The other wing of the People's party held a convention at Des Moines Aug. 30. The Omaha platform was approved; free coinage of silver at 16 to 1 was advocated; direct legislation and proportional representation were demanded; it was declared that the evil of trusts can be done away with not by restrictive legislation, but only by public ownership of natural and economic monopolies; and the resolutions concluded: "The declaration of Congress 'that the people of Cuba are and of right ought to be free and independent' should apply with equal force and effect to the Filipino and his native land, and that the same rights and liberties so guaranteed to one by the United States should also immediately be guaranteed the other and tendered to both."

The following nominations were made: For Governor, Charles A. Lloyd; Lieutenant Governor, S. M. Harvey; Judge of Supreme Court, L. H. Weller; Superintendent of Public Instruction, C. Wirth; Railroad Commissioner, R. L. Dunning.

A new party, the United Christian, was organized this year, and held its State convention early in July. It aims to unite all Christian voters at the ballot box. Following is a part of the platform:

"We declare for the adoption of the system of direct legislation known as the 'initiative and referendum,' together with proportionate representation and the 'imperative mandate,' that the power of the people may be justly and effectually exercised, being governed in all things, law making included, by the standard, 'What would Jesus do?'"

"We advocate this system of government, and present it to the people as the only practical method of securing State and national reform.

"We will not cast our ballots in any other than the name of Jesus Christ, and we will endeavor to be guided by God, the Father, Son, and Holy Ghost. Amen."

The ticket was: For Governor, C. C. Heacock; for Lieutenant Governor, J. R. Leonard; for Judge of the Supreme Court, John M. Helmick; for Superintendent of Public Instruction, W. C. Pidgeon; for Railroad Commissioner, C. Z. Lindley. F. W. Darner was afterward made the candidate for Justice of the Supreme Court.

The Prohibitionists nominated Mr. Atwood for Governor, Mr. Pugsley for Lieutenant Governor, D. S. Dunlavy for Superintendent of Instruction, H. F. Johns for Justice of the Supreme Court, and A. B. Wray for Railroad Commissioner.

The candidates of the Socialist-Labor party for the State offices were: For Governor, Mr. Kremer; Lieutenant Governor, Mr. Bronner; Superintendent, Mrs. E. P. Travis; Railroad Commissioner, N. Heisel.

The Republicans elected their entire ticket, the vote for Governor standing as follows: Shaw, Republican, 239,543; White, Democrat, 183,326; Atwood, Prohibitionist, 7,650; Lloyd, Populist, 1,694; Kremer, Socialist-Labor, 763; Heacock, United Christian, 483.

The returns show that there will be in the State Senate 35 Republicans and 15 Democrats, and in the House 81 Republicans and 19 Democrats.

ITALY, a kingdom in southern Europe. The throne is hereditary in the line of Savoy by male descent in the order of primogeniture. The reigning King is Umberto I, born March 14, 1844, the eldest son of Vittorio Emmanuele II of Sardinia, the first King of United Italy. The heir apparent is Vittorio Emmanuele, Prince of Naples, born Nov. 11, 1869. The legislative power is vested in a Parliament, composed of a Senate containing at present 372 members, nominated for life by reason of services in public or eminence in science, literature, or other pursuit tending to the benefit of the nation, and a Chamber of Deputies, containing 508 members, 1 to 57,000 of population, elected under the law of 1895 by all adult male citizens who can read and write and pay 20 lire of direct taxes or occupy a farm renting for 500 lire, or occupy a tenement or a place of business in towns at a certain minimum rent. Soldiers are disqualified while in active service. Princes of the royal house have seats in the Senate. No priest filling a clerical charge nor any salaried official, except ministers and certain others holding responsible positions, can be elected a Deputy. Neither Senators nor Deputies are paid.

The ministry formed on June 29, 1898, was composed of the following members: President of the Council and Minister of the Interior, Gen. Luigi Pelloux; Minister of Foreign Affairs, Admiral Felice Napoleone Canevaro; Minister of the Treasury, Pietro Vacchelli; Minister of Finance, Paolo Carcano; Minister of Justice and of Ecclesiastical Affairs, Camillo Finocchiaro Aprile; Minister of War, Gen. Alessandro Asinari di San Marzano; Minister of Marine, Admiral Giuseppe Palumbo; Minister of Commerce, Industry, and Agriculture, Alessandro Fortis; Minister of Public Instruction, Prof. Guido Bacelli; Minister of Public Works, Pietro Lacava; Minister of Posts and Telegraphs, Nunzio Nasi.

Area and Population.—Italy has an area of 110,646 square miles, according to the latest surveys. The population, which increased from 18,124,000 in 1800 to 28,460,000 in 1881, on Dec. 31, 1898, was estimated at 31,667,946. The number of marriages in 1898 was 219,597; of births, 1,115,166; of deaths, 777,357; excess of births, 337,809. The number of emigrants who departed in 1898 with the declared intention of settling abroad was 126,787; temporary emigrants, 155,945. The number of Italian immigrants that arrived in the United States in 1898 was 58,613, compared with 59,431 in 1897, and 68,060 in 1896. The Italian immigration into the Argentine Republic in 1898 was 39,135.

The estimated population of the chief cities on Dec. 31, 1898, was: Naples, 540,393; Rome, 500,610; Milan, 481,297; Turin, 365,800; Palermo,

200,951; Genoa, 232,774; Florence, 212,898; Venice, 157,099; Bologna, 155,797; Messina, 154,436.

Finances.—The budget estimate of revenue for the year ending June 30, 1900, was 1,700,645,823 lire. The ordinary receipts were estimated at 1,681,307,326 lire, and extraordinary receipts at 19,338,497 lire. The ordinary expenditures were estimated at 1,605,316,241 lire, and the extraordinary at 96,475,634 lire; total, 1,701,791,875 lire. The revenue from railroads and state property was reckoned at 96,491,264 lire, of which railroads produce 82,022,200 lire, state property 12,920,735 lire, and various sources 1,548,329 lire; direct taxation, 482,025,900 lire, made up of 286,275,900 lire from income tax, 106,650,000 lire from the land tax, and 89,100,000 lire from the tax on buildings; taxes on transactions, 286,275,900 lire, including 67,900,000 lire from stamps, 60,000,000 lire from registration, 20,280,000 lire from the tax on railroad receipts, 37,000,000 lire from succession duties, 11,800,000 lire from the tax on the operations of banks and commercial companies, 7,400,000 lire from the duty on mortgages, 7,550,000 lire from various concessions, 6,400,000 lire from mortmain revenues, and 675,000 lire from consular fees; customs, monopolies, and excise, 678,665,000 lire, of which 194,000,000 lire come from the tobacco monopoly, 74,000,000 lire from salt, 51,865,000 lire from octrois, 52,800,000 lire from duties on the manufacture of beer, spirits, mineral waters, gunpowder, and sugar, 66,000,000 lire from the lottery, and 240,000,000 lire from customs; public services, 94,443,800 lire, of which 59,200,000 lire come from the post office, 14,300,000 lire from telegraphs, 7,200,000 lire from school fees, 5,408,200 lire from prisons, 1,460,000 lire from fines, 3,000,000 lire from assays, 1,700,000 lire from land registry, and 2,175,600 lire from various services; repayments, 22,870,283 lire; various departmental receipts, 23,303,500 lire; domains, 15,510,555 lire; interest on invested funds, 18,475,401 lire; communal contributions of Rome and Naples, 27,951,876 lire; miscellaneous receipts, 2,584,647 lire. Of the extraordinary receipts 4,580,487 lire come from recovery of debts, 698,490 lire from various effective sources, 377,576 lire from railroad-construction account, 13,681,944 lire from movement of capital, 4,673,840 lire from sales of state property, and 9,008,104 lire from various other sources.

The expenditures are 476,982,128 lire for interest on the consolidated debt, 60,435,593 lire for extinguishable debts, and 26,635,920 lire for the annuity for the purchase of railroads in northern Italy; 121,683,317 lire for interest on floating debt, including 17,351,350 lire on treasury bonds, 15,414,000 lire due to railroad companies, 80,416,752 lire on railroad guarantees, and 4,271,000 lire on accounts current; 18,050,000 lire for the civil list and appanages; 6,088,000 lire for pensions; 2,155,000 lire for the Senate and Chamber of Deputies; 9,894,521 lire for general expenses of the Ministry of the Treasury; 953,385 lire for various services; 3,500,000 lire for a reserve for unforeseen expenses; 18,475,501 lire for the service of the amortizable debt; 2,074,647 lire for interest; 509,827 lire for domains; 26,817,882 lire for extraordinary expenditure of the Ministry of the Treasury; 29,339,630 lire for general expenses of the Ministry of Finance, including 9,019,626 lire for general administration, 12,837,000 lire for pensions, 1,505,300 lire for various services, and 5,977,704 lire for the cadastral survey; 154,330,377 lire for the cost of collecting revenues, monopolies, lotteries, etc.; 29,734,216 lire for expenditure *d'ordre*; 4,848,922 lire for extraordinary expenditure of the Ministry of Finance; 16,207,565 lire

for the Ministry of Foreign Affairs, 16,184,565 lire being for ordinary and 23,000 lire for extraordinary expenses; 40,782,445 lire for the Ministry of Grace and Justice, 40,759,375 lire being for ordinary and 23,070 lire for extraordinary expenses; 46,546,164 lire for the Ministry of Education, 45,535,100 lire being for ordinary and 1,011,064 lire for extraordinary expenses; 70,773,115 lire for the Ministry of the Interior, 11,987,656 lire being for general administration, 7,635,000 lire for pensions, 1,061,480 lire for sanitary service, 16,034,188 lire for police, 27,403,388 lire for prisons, 945,520 lire for various services, and 4,344,258 lire for extraordinary expenses; 28,163,738 lire for ordinary and 50,327,017 lire for extraordinary expenditure of the Ministry of Public Works; 64,380,819 lire for the Ministry of Posts and Telegraphs, 64,308,303 lire being for ordinary and 81,516 lire for extraordinary expenses; 265,915,283 lire for the Ministry of War, 264,445,283 lire being for ordinary and 1,470,000 lire for extraordinary expenses; 115,425,848 lire for the Ministry of Marine, 111,039,848 lire being for ordinary and 4,386,000 lire for extraordinary expenses; 12,752,015 lire for the Ministry of Agriculture, Commerce, and Industry, 9,609,110 lire being for ordinary and 3,142,905 lire for extraordinary expenses.

The estimated ordinary revenue for 1899 was 1,661,456,980 lire, and the extraordinary expenditure was estimated at 35,334,375 lire; total, 1,696,791,355 lire. The estimated ordinary expenditure for 1899 was 1,573,235,729 lire, and the extraordinary expenditure 113,557,680 lire; total, 1,686,793,409 lire, showing 37,264,164 lire of surplus effective revenue, offset by 18,080,518 lire of deficit in the construction of railroads account and 9,185,700 lire in movement of capital, leaving a net surplus of 9,997,946 lire. The total receipts for 1898 were 1,731,728,371 lire, and the expenditures 1,732,833,944 lire, leaving a deficit of 1,105,573 lire, compared with a surplus of 126,932 lire in 1897 and 409,078 lire in 1896 and a deficit of 58,855,904 lire in 1895. The total interest paid on the national debt in 1899 was 590,562,883 lire, and amortization 1,182,759 lire.

The Army.—The Italian army under the law of June 28, 1897, is composed of the permanent army, the mobile militia, and the territorial militia. Service in the permanent army begins at the age of twenty, and lasts for carabinieri and all noncommissioned officers five years with the colors and four years on leave; for others, two or three years with the colors and five to seven years on leave; then three or four years in the mobile and seven years in the territorial militia. Those not drawn for active service are attached to the permanent army for eight or nine years, to the mobile militia for three or four years, and to the territorial militia for seven years, and in the first two years they undergo a training that lasts from two to six months. Men of a third category are enrolled in the territorial army for the whole of their nineteen years of service, and are required to undergo a month's instruction and serve in time of war on garrison duty or as the last reserve of the army. Out of 396,824 recruits examined in 1896 there were 108,326 rejected, 90,849 put back for a year, 94,695 drawn for active service, 1,681 assigned to the permanent army on leave, and 92,273 enrolled in the territorial militia. Young men of education may serve as volunteers for a year on payment of a certain sum. The army consists of 12 corps, with headquarters at Turin, Alessandria, Milan, Placentia, Verona, Bologna, Ancona, Florence, Rome, Naples, Bari, and Palermo.

The peace effectives in 1899 were 141 officers of the general staff; 237 staff officers in the army corps; 7,110 officers and 163,017 men in 346 infantry battalions and 88 district companies; 889 officers and 24,217 men in 144 squadrons and 24 depots of cavalry; 1,600 officers and 18,202 men in 204 field batteries, 78 artillery companies, and 40 companies of train; 524 officers and 9,039 men in 66 companies of engineers and 10 of train; 661 officers and 2,655 men in 12 sanitary companies; 166 officers and 2,134 men in 12 commissariat companies; 1,165 administrative officers; 611 officers and 24,190 men in 12 legions of carabinieri; 327 officers and 547 men in the military schools; and 183 officers in the veterinary corps; total effectives, 13,614 officers and 244,001 men, with 47,006 horses.

In time of war armies will be formed of 3 or 4 *corps d'armée* and a division of cavalry. The war strength of the land forces in 1899, comprising only men who have received military instruction, was 36,225 officers, 244,001 men of the active army, 545,340 men of the permanent army on leave of absence, 355,250 men of the mobile militia, and 298,730 men of the territorial militia; total, 1,479,546 men of all ranks in the first category. In the second category there were 339,170 men, and in the third category, composed mostly of men without any military instruction, there were 1,683,490.

The Navy.—The Italian navy in 1899 contained the Andrea Doria, Dandolo, Duilio, Italia, Ruggiero de Lauria, Lepanto, Francesco Morosini, Re Umberto, Sardegna, Sicilia, Ammiraglio Saint-Bon, and Emmanuele Filiberto—all battle ships of the first class, built between 1876 and 1897, ranging from 9,800 to 15,900 tons, the first two and oldest turret ships carrying 4 10-inch guns; the next five armed with 4 17-inch guns in barbettes, and having 10-inch or 18-inch armor on the sides; the three next carrying 4 13½-inch guns, and having 14-inch armor; and the last two carrying 10-inch guns and plated with 10-inch armor. There were under construction the Regina Margherita, Benedetto Brin, and Principessa Elena, of 13,500 tons. The Vettor Pisani and Carlo Alberto, of 6,500 tons, are armored cruisers, carrying 12 6-inch and 6 4.7-inch quick-firing guns, and engined to steam 20 knots. The Marco Polo, displacing 4,600 tons, has a speed of 19 knots. The Varese, Giuseppe Garibaldi, and Francesco Ferruccio are new armored cruisers being built, the two former to replace others of the same name that were sold to the Argentine Republic and Spain, each having a displacement of 7,400 tons, with a quick-firing armament of 4 8-inch, 10 6-inch, and 6 4.7-inch guns, and a speed of 20 knots. Of third-class squadron vessels there are the Affondatore, Ancona, Castelfidardo, Maria Pia, and San Martino, ironclads of earlier types, having less than 6 inches of armor, a light armament, and a speed of 12 or 13 knots. There are 30 other fighting ships inferior to these, but still classed as effective. The torpedo fleet consists of 6 boats of the first, 94 of the second, 38 of the third, and 6 of the fourth class. The personnel of the navy in 1899 consisted of 1,546 officers, 18,174 seamen, and 5,455 marines, gunners, torpedists, mechanics, telegraphists, etc., on shore.

Navigation.—The total number of vessels entered at Italian ports during 1898 was 104,254, of 29,739,348 tons, of which 37,673 were steamers, of 26,861,724 tons, and 66,581 were sailing vessels, of 2,877,624 tons. Of the steamers 15,122, of 16,708,462 tons, were engaged in ocean commerce, 7,014 of them, of 7,260,259 tons, under the Italian flag, and 8,108, of 9,448,203 tons, under for-

eign flags. Of the sailing vessels 9,080, of 632,915 tons, were engaged in ocean commerce, 7,824 of them, of 514,552 tons, under the Italian flag, and 1,256, of 118,363 tons, under foreign flags. The coasting steamers numbered 22,551, of 10,153,202 tons, of which 20,895, of 8,271,076 tons, were Italian and 1,656, of 1,882,126 tons, foreign. Of sailing vessels in the coasting trade the entries numbered 57,501, of 2,244,709 tons, of which 57,304, of 2,215,070 tons, were Italian and 197, of 29,639 tons, foreign. The total number of vessels cleared during 1898 was 104,009, of 29,743,734 tons, of which 15,148, of 16,799,768 tons, were steamers engaged in long voyages and 9,062, of 640,473 tons, sailing vessels engaged in long voyages, 22,531, of 10,008,505 tons, were coasting steamers, and 57,268, of 2,234,958 tons, were sailing vessels in the coasting trade.

The Italian commercial marine on Jan. 1, 1899, numbered 5,872 sailing vessels, of 526,827 tons, and 366 steamers, of 259,817 tons.

Commerce and Production.—Over 70 per cent. of the total area of Italy—20,238,000 hectares out of 28,658,900—is productive, and 3,773,449 hectares more are utilized to some extent, while 4,647,451 hectares, a little over 16 per cent. of the whole, is totally unproductive. Agriculture, however, is in a backward condition. Farms are usually small, and a large proportion of them are cultivated on shares. The production of wheat in 1897 was 30,630,000 hectolitres; of Indian corn, 21,074,000 hectolitres; of rice, 6,430,000 hectolitres; of wine, 25,959,000 hectolitres; of olive oil, 1,290,000 hectolitres; of tobacco, 6,210,000 kilogrammes; of cocoons, 36,726,000 kilogrammes. The production of wheat in 1898 was 47,000,000 hectolitres. There were 550,048 persons employed in raising silkworms in 1895, and 172,000 in the preparation and manufacture of the product. The production of silk in 1897 was 2,916,000 kilogrammes. The forests are generally under the control of the Government. They cover 4,093,000 hectares, and produce firewood, charcoal, timber, and other products worth 88,000,000 lire per annum, not including chestnuts, which are cultivated in orchards covering 412,000 hectares. The area of the vineyards is 3,462,000 hectares; of olive plantations, 1,034,000 hectares. The number of lemon and orange trees is 17,085,000. The value of cereals, pulse, hemp, flax, wine, fruits, and other agricultural products is 2,639,000,000 lire a year; and of animals, wool, milk, cocoons, and other animal products 1,424,000,000 lire, making with the forest produce a total of 4,151,000,000 lire, not counting minor and accessory products, such as vegetables, mushrooms, poultry, eggs, and the like, of which about 88,000,000 lire worth are exported every year.

The special imports of merchandise in 1897 were valued at 1,192,138,168 lire, and the exports of articles of Italian produce and manufacture at 1,092,719,241 lire. The principal imports were raw cotton of the value of 110,628,804 lire; coal, 97,971,789 lire; wheat, 78,680,520 lire; raw silk and unbleached twisted silk, 68,318,100 lire; hides, 42,290,140 lire; timber, 35,090,513 lire; machinery, 33,519,782 lire; fish, 31,556,200 lire; wool, 31,151,090 lire; horses, 29,121,300 lire; leaf tobacco, 21,404,740 lire; raw sugar, 21,038,836 lire; coffee, 19,481,353 lire; linen and hemp yarn, 11,660,760 lire; pig iron, 11,103,885 lire; refined petroleum, 11,035,696 lire; cheese, 7,864,990 lire; indigo, 5,797,200 lire; printed cotton cloth, 3,558,060 lire; olive oil, 3,098,050 lire; cotton yarn, 2,982,343 lire; rice, 2,889,085 lire; silkworm eggs, 2,050,500 lire; dyed cottons, 1,513,266 lire; railroad materials, 1,467,648 lire; bleached cotton cloth, 1,212,

530 lire; unbleached cotton cloth, 791,594 lire. The exports of raw and thrown silk were 270,376,300 lire in value; wine in casks, 58,479,100 lire; olive oil, 57,859,944 lire; raw hemp and flax, 44,156,233 lire; fresh fruit, 39,761,242 lire; sulphur, 34,098,568 lire; eggs, 32,558,900 lire; silk waste, 24,200,050 lire; coral manufactures, 23,849,160 lire; fresh and salted meat, 15,398,440 lire; skins, 15,095,280 lire; cattle, 14,816,940 lire; dyes and tans, 12,191,043 lire; zinc ore, 10,650,000 lire; cereals, 8,390,520 lire; rice, 7,639,045 lire; plaited straw, 6,179,640 lire; hogs, 3,672,389 lire; cocoons, 3,027,030 lire; cotton, 1,698,680 lire; horses, 1,184,150 lire; lead ore, 806,990 lire.

The total value of merchandise imports in 1898 in the special commerce was 1,413,300,000 lire, and of the exports 1,203,600,000 lire. The imports of precious metals were 3,500,000 lire, and exports 19,600,000 lire. The transit trade amounted to 127,900,000 lire. The special commerce was divided among the different countries as follows, values being given in lire:

COUNTRIES.	Imports.	Exports.
Great Britain	00	116,600,000
Germany	00	191,900,000
Austria-Hungary	00	148,900,000
United States	00	107,200,000
France	00	146,000,000
Switzerland	00	186,800,000
Russia	00	10,800,000
Argentine Republic	00	28,800,000
British India	00	20,000,000
Roumania	00	2,800,000
Belgium	00	28,900,000
China	00	1,300,000
Turkey in Europe	00	28,500,000
Spain	00	8,800,000
Egypt	00	25,000,000
Brazil	00	16,800,000
Netherlands	00	12,700,000
Greece	00	6,800,000

Rest of Africa	00	11,800,000
Rest of Asia	00	1,700,000
Rest of Europe	00	2,900,000
Total ..	1,413,300,000	1,203,600,000

Communications.—The railroads of Italy had a total length of 15,643 kilometres on Jan. 1, 1898. The length of telegraphs was 43,376 kilometres, with 162,831 kilometres of wires. The number of internal dispatches in 1897 was 8,181,987; of international dispatches, 2,044,776; of service dispatches, 106,258; total, 10,671,388. The number of letters sent through the post office was 171,703,000 in the internal, 42,617,000 in the external, and 3,825,000 in the transit service; of postal cards, 67,502,000 internal, 6,646,000 foreign, and 310,000 transit; of newspapers and circulars, 261,310,000 internal, 24,844,000 foreign, and 2,168,000 transit; of domestic money letters and postal orders, 12,108,000, remitting 1,179,680,000 lire; of foreign, 1,024,000, remitting 117,153,000 lire; in transit, 3,000, remitting 965,000 lire.

Politics and Legislation.—Gen. Pelloux, a Liberal of the moderate type in his political affiliations, but not a party man, was selected by the King to be Minister of the Interior and chief of the Cabinet when the Marchese di Rudini was forced to retire and a Republican and Socialist agitation had to be dealt with that threatened the existence of the dynasty, supported secretly as it was by the great irreconcilable nonvoting Clerical party, that strives for the restoration of the temporal power of the papacy. Gen. Pelloux was an energetic soldier, who had no experience in political or parliamentary management.

He had no party majority behind him, and was obliged to construct one, as Depretis and Rudini had done, by holding out inducements to the political chiefs who use their following in the Chamber for the purpose of securing advantages for themselves or for their adherents or section. When the Marchese di Rudini retired at the end of June, 1898, he had in preparation a bill to arm the Minister of the Interior with extraordinary powers for the purpose of combating the revolutionary forces at work in the land which had stirred up the recent sanguinary riots at Milan. Gen. Pelloux took up the task of carrying through this repressive legislation, but the ministers postponed its introduction, hoping to win the confidence of the Left by a successful foreign policy. The French commercial convention was generally approved by their supporters and by the independent and hostile factions of the Left. It was the first measure taken up when the Chamber met on Jan. 25, 1899, and was ratified by a vote of 226 to 34 on Jan. 28. The Republicans and Socialists voted for it as constituting a step toward a political reconciliation and alliance with France, and for that reason they and their Radical allies renewed their attacks on the triple alliance, and watched with jealous distrust the developments of the Mediterranean naval understanding or agreement with England.

The Chamber authorized the putting into circulation of the silver coins that had been locked up in the vaults of the state banks and the retirement of the one and two lira notes issued to supply their place, precautions having already been taken to prevent the exodus of the Italian coins by an international agreement depriving them of their legal-tender quality in other states of the Latin Union, and restricting their circulation to Italy alone. The reissue of the silver pieces in the place of the small treasury notes was equivalent to the abolition of forced currency, since the bank notes of five lire and upward were already by law convertible into metallic money on demand, although this law could not be enforced so long as the amount in circulation was so redundant as to expel gold by forcing it up to a premium. The Government would not promise to accept the remobilized silver currency in payment of customs dues except in very limited sums. The Chamber debated for several days in the early part of February the question of declaring vacant the seats of Deputies De Andreis and Turati, who in the summer of 1898 had been sentenced by military tribunals to imprisonment with loss of civil rights. The groups of the Left endeavored to extract from the Premier a pledge in favor of a general political amnesty, and, insisting on retaining full freedom of action in regard to the exercise of royal clemency, he had to rely on the support of the Conservatives, now united under the lead of Baron Sonnino, rather than on that of the normal majority. The vote declaring the seats of the convicted Socialist Deputies vacant was 220 to 50. A monster petition was presented in favor of amnesty, but the Chamber by 197 votes to 77 declined to force the hand of the Government. Many of the followers of Zanardelli separated themselves from the ministerial majority, and the groups of Giolitti, Rudini, and Crispi offered only a conditional support. Gen. Pelloux found that to carry a public-safety bill he must sever himself from his former supporters and accept the alliance of the Conservatives. The new taxes proposed by the Government were unpopular among the people, and were opposed by Radicals and Conservatives alike, especially in the north

of Italy. The Right and the Center opposed the financial policy of the Government generally. The Senate manifested hostility to the Government, and especially to Signor Fortis, the Minister of Agriculture, by rejecting the latter's bill to establish municipal grain stores from which peasants could borrow at seed time, repaying the loan in kind with interest after the harvest. The King declined to accept the resignation of Signor Fortis, which he tendered after this affront. A bill exempting salaries of officials from taxation was so altered by Senate amendments that the Government withdrew the measure. The discussion of the public-safety bill began in the Chamber in the middle of February. After a debate lasting three weeks it was accepted in principle, although with qualifications from Giolitti and other leaders that rendered the ultimate fate of the bill extremely doubtful.

The sale of the cruisers Varese and Garibaldi to the Argentine Government in 1898 had evoked strictures upon the previous Minister of Marine, and when Admiral Palumbo announced that 10,200,000 lire of the proceeds of that sale would be applied to the purchase of the protected cruiser Hai-Chi, built by the Armstrongs for the Chinese Government, and capable of steaming 24 knots an hour, he was even more severely criticised, on account of his departure from the policy of constructing the Italian navy entirely in Italian shipyards. The rejection by the Chinese Government of Italy's peremptory demand for a naval station in San-Mun Bay created an awkward dilemma for the Government, and the situation was aggravated by the fact that Great Britain formally supported the Italian demand. The disavowal and recall of the Italian minister at Peking, who had conducted the negotiations maladroitly, saved the diplomatic situation, but it did not help the ministry; and when Admiral Canevaro attempted to justify his action by divulging confidential communications that passed between members of the preceding Government on the subject of Chinese enterprise, he committed a fresh offense. The followers of Zanardelli, Giolitti, and Rudini were hostile to all Chinese expansion, and all parties showed disapproval of the methods pursued by the Government.

Without waiting for a vote from the Chamber, Gen. Pelloux and his colleagues tendered their resignation on May 2, deeming it more patriotic to acknowledge a rebuke affecting their political conduct rather than allow the future policy of the Government in China to be compromised by a vote of the Chamber. The Republicans and Socialists protested strongly against the action of the ministry in resigning without a hostile vote, as they had before when ministers resorted to the same expedient. In their eyes it was only a device for prolonging extraparlimentary government, and preventing the formation of a ministry supported by a constitutional majority. Admiral Canevaro was willing to resign his portfolio in order to leave the Chinese question unprejudiced, but Gen. Pelloux insisted on the collective responsibility of the Cabinet. Gen. Pelloux, whose services King Umberto was unwilling to lose while the danger of revolution still existed, was commissioned to organize a new Cabinet. He consulted with Baron Sonnino, and, as the latter was unwilling to enter a ministry in which he did not himself have the responsible direction of the Interior Department, a new combination independent of the Left was not easy to bring about. The Conservative leader at last persuaded the Marchese Visconti Venosta to take the portfolio of Foreign Affairs, and on May 14

a new Cabinet was constituted as follows: Premier and Minister of the Interior, Lieut.-Gen. Luigi Pelloux; Minister of Foreign Affairs, Marchese Emilio Visconti Venosta; Minister of Justice, Conte Bonasi; Minister of the Treasury, Prof. Paolo Boselli; Minister of Finance, Pietro Carmine; Minister of War, Lieut.-Gen. G. Mirri; Minister of Marine, Rear-Admiral G. B. Bettolo; Minister of Public Instruction, Prof. Guido Bacelli; Minister of Public Works, Pietro Lacava; Minister of Agriculture, Commerce, and Industry, Antonio Salandra; Minister of Posts and Telegraphs, Marchese di San Giuliano. This Cabinet was the opposite of its predecessor in political principles. Besides the Premier, two Moderate Liberals were retained from the outgoing Cabinet, Prof. Bacelli and Signor Lacava. All the new ministers were either Extreme or Moderate Conservatives. The Liberals and Radicals of all shades were indignant at the disregard of parliamentary principles shown in the formation of a ministry opposed to the indicated majority, although the Conservative Cabinet of the Marchese di Rudini had furnished a precedent in 1896 by allowing the Radicals who followed Cavallotti to shape its policy.

The Chamber, which had adjourned during the ministerial interregnum, reassembled on May 25. Signor Zanardelli insisted on resigning the presidency of the Chamber, and on May 30 the Government, with the support of the Moderate Left and the entire Right, elected its candidate, Signor Chinaglia, by 223 votes against 193 cast for Signor Zanardelli. The Rudinians rallied to the support of the Government when the Marchese Visconti Venosta gave a pledge not to undertake any steps in China without consulting Parliament. The accounts for the year showed a small surplus, and Signor Boselli promised economies sufficient to avoid the imposition of new fiscal burdens. The condition of industry and agriculture was unusually prosperous, and therefore the usual incentives to revolutionary disturbances were absent. In the municipal elections that took place in June the Socialists and the irreconcilable Clericals were victorious, owing partly to the determination of the Government to push through the public-safety bill, which the Socialists and Radicals obstructed at every stage of its progress. The Government amnestied political prisoners, but only partially, leaving the political and civil disabilities of the liberated prisoners still in force.

The obstructive tactics of the Extreme Left in opposing the public-safety bill led to scenes of violence and turmoil. Proposals to amend the rules could no more be discussed than the public-safety bill. The Prime Minister made scarce an attempt to check the turbulent disorder, but waited until the extremists had demonstrated completely the impossibility of proceeding with parliamentary discussion. Then, on June 22, the Government prorogued Parliament for six days, and on the following day promulgated the public-safety bill by royal decree, announcing that it would have the force of law on July 20, thus leaving a sufficient interval to secure a vote of indemnity from Parliament. The bill empowered the police to forbid public meetings for reasons of public order. A month's imprisonment or a fine is the penalty for infraction of the police orders, and a similar penalty is prescribed for those who carry or show seditious emblems in public. Associations tending to subvert by force the Constitution of the state or social order may be dissolved by ministerial decree, against which appeal may be taken. Persons who reorganize dissolved societies, though under another name,

are liable to three months' imprisonment. Public servants who by previous agreement strike work are liable to three months' imprisonment, and ringleaders in strikes of railroad, post-office, telegraph, gas, or electric-light employees are punishable with six months' imprisonment. The press law was altered so as to make the writer of an incriminating article and his collaborators amenable to the law as well as the responsible editor, who has often proved a man of straw, and when the authors are brought to punishment the nominal editor escapes. Proprietors and printers of newspapers are made jointly liable with writers and editors for damages, costs, and fines inflicted in connection with publications contained in their newspapers. The law of libel is mitigated in case retraction is made in the press prior to prosecution, the maximum penalty being reduced for such cases to 2,000 lire fine or imprisonment for six months. The publication of libel proceedings is forbidden except in cases affecting public officials or members of Parliament in the exercise of their public functions. Proceedings for *lèse-majesté* affecting foreign sovereigns can only be undertaken by authority from the Minister of Justice, and the penalties shall only be inflicted at the request of the foreign sovereigns themselves, and proceedings for defamation of foreign diplomatic representatives accredited to the Quirinal shall only be undertaken on the initiative of the diplomatists affected.

The clauses in the new law relating to the suppression of public meetings and seditious emblems and the dissolution of subversive societies embody the rules of action that ministers have followed in recent years; the one dealing with strikes of public servants is copied from the English law on the subject. The new law was submitted to the Chamber on June 28, with the explanation from the Premier that it was still subject to modification or amendment. He declared that the Government would interpret compliance with his request to refer it to a committee as equivalent to a bill of indemnity. Many members who censured the conduct of the Government and considered the promulgation of the law by royal decree a violation of the Constitution nevertheless were willing to grant a bill of indemnity, in order to avoid a ministerial crisis on a grave constitutional question. After a spirited debate, the motion to refer the decree to a committee was carried by 208 votes to 138. The opponents of the act, who regarded it as a blow at representative institutions and a denial of guaranteed popular liberties, were determined to prevent it from obtaining the sanction of Parliament. On June 30, when President Chinaglia declined to call the roll on the adoption of the minutes, the Socialists protested against his violation of the standing orders, and seized the voting urns to prevent further proceedings. The Conservatives rushed down to the floor to stop them, and the sitting ended in a physical combat. The Government issued a royal decree closing the parliamentary session. The public-safety bill was thus left to acquire the force of law without parliamentary sanction, although the Court of Cassation on former occasions had refused to recognize legislation by decree. Decrees enacting urgent financial legislation have been allowed, but not decrees affecting the liberty and property of citizens. The Government refrained from putting the law into execution, and thus gave the Court of Cassation no occasion to examine and pronounce upon the constitutionality of the decree.

The people of Italy were inclined to view the

acts of the Government with different eyes when agriculture was profitable and industry developing and flourishing than they were in the previous year, when dear bread and lack of employment caused distress and despair among the working classes everywhere. Parliament has come to be regarded as the arena of personal ambitions, and the people regarded the mistakes of the bluff and honest soldier at the head of the Government more leniently than they did the artifices and evasions of the subtle politicians. The vigorous crusade against abuses that have been the canker of Italian political life and the disgrace of former administrations won the secret approval of the Premier's bitterest opponents. The shielding of lawbreakers and criminal associations, the suspicion of corruption and bribery and the participation in dishonest speculations, the prostitution of the powers of the Government to purposes of private gain, and especially connivance in lawlessness and crime for the sake of votes, are charges that have been brought against Deputies and ministers, and they have not been able to clear themselves. Gen. Pelloux let the prefects and local officials understand that they were expected to discharge their duties without fear or favor and without interference from the Deputy of the district or regard to electoral consequences. In Sardinia, where black-mailing brigands have long subverted the law and filled the public offices with their accomplices, Gen. Pelloux, after first accompanying the King on a visit to the island, set the public forces in motion, and by a single well-planned and rapidly executed stroke crushed the criminal organization. Besides leaders and members of the bands, the mayors of six communes and several noblemen and landowners were among the 300 persons arrested, all in the night of May 14 in 20 communes of the province of Sassari. Some were charged with being members of illegal associations, others with being accomplices and harborers of criminals. Several commercial associations in league with the criminals were dissolved. The bandit chiefs and assassins who at first escaped were caught with the aid of the honest people whom they had terrorized, and were brought to justice for their crimes. In proceeding against the Mafia in Sicily the Minister of the Interior had a more intricate and difficult task. The more flagrant excesses of Sicilian lawlessness had been abated by other premiers, Sicilians themselves, who had risen to power by means of the personal ascendancy that the conditions of the island enable a skillful leader to gain over the mass of the people. When Crispi was Premier, and before the bank scandals were revealed to the public, the director of the Bank of Sicily, Signor Notarbartolo, made a report accusing officials of the bank and Palizzolo, Deputy for Palermo, of dishonest use of the bank funds. This confidential report disappeared from the ministry and was transmitted to the persons implicated. Upon discovering this Notarbartolo resigned, and was succeeded by the Duke della Verdura, a friend of Crispi and of Palizzolo. The mismanagement of the new director occasioned an outcry, and when a demand arose for the reinstatement of Notarbartolo the latter was murdered. One Fontana was arrested for the murder; but police, witnesses, and the judicial authorities showed such anxiety to free him and to screen Palizzolo, the supposed instigator of the crime, that Gen. Mirri, who was then commander of the Sicilian army corps, believed that they were all guilty or afraid. When the Marchese di Rudini, another Sicilian, succeeded Crispi as Premier and Minister of the

Interior, the case was not allowed to come to trial. Gen. Pelloux ordered the investigation to be resumed, in consequence of which Fontana was rearrested and railroad officials suspected of abetting him were arrested also. Palizzolo, whom the previous Government had decorated, was denounced and taken into custody on the charges of instigating murder and receiving stolen funds of the bank, 15 Sicilian witnesses at the former police inquiry were charged with perjury, and all were removed and brought to trial in Milan, remote from the influence and terrorism of the Sicilian Mafia.

When Parliament reassembled on Nov. 14 Signor Boselli was able to present the most satisfactory statement of the finances of the Government that had ever been made. The cost of the Government of Italy as a first-class power has been such a crushing burden as to make the people sometimes almost regret unification. In spite of grinding taxation, the national debt has grown by the accretion of annual deficits. Baron Sonnino, who became Minister of the Treasury in 1893, was able to maintain a financial equilibrium for two years, and his successors for two years longer. Minister Vachelli in 1898 gave up the struggle, and for 1899 predicted a deficit of 15,000,000 lire, to be followed in 1900 by one of double that amount. Signor Boselli's economies and the improvement of trade altered the situation. The closed accounts for 1899 showed that the revenue had exceeded the estimates by 42,000,000 lire and the receipts of the preceding year by 30,000,000 lire, so that, notwithstanding 26,000,000 lire of unforeseen expenditure, there was a surplus of 15,000,000 lire on June 30, 1899. Receipts in subsequent months reduced the estimated deficit for 1900 by one half, and promised, if the same rate of increase should be maintained, to turn it into a surplus of 12,000,000 lire. The improved receipts were of the most gratifying kind, coming from railroad traffic, posts and telegraphs, stamps, salt, and tobacco, showing increased activity of business and greater spending power among the masses of the people. Warrants were issued for the arrest of the Socialist Deputies who had overturned and carried off the urns on the last day of the spring session. They were liable to penal servitude for interfering with the legislative proceedings by force, but just as they were about to be tried the decree summoning Parliament was published, restoring their parliamentary immunity and quashing the proceedings. The King's speech at the opening of Parliament, promising a bill for the alleviation of taxes weighing on the poor, was a shrewd and stirring appeal to all parties to restore the normal working of representative government in the face of dangers on which all were agreed and in furtherance of prosperity in which the whole people participated.

Colonies.—The colony of Eritrea, on the Red Sea coast of Africa, has an area of about 88,500 square miles and 450,000 inhabitants. It is administered by a civil governor under instructions from the Minister of Foreign Affairs. The expenditures for 1898 were estimated at 18,130,000 lire, of which 2,630,000 lire were raised by customs duties and local taxation and 15,500,000 lire were contributed from the Italian treasury. The total expenditure of the Italian Government on its African possessions from the occupation of Massowah in 1882 to the end of 1897 was 352,353,786 lire. The nomadic tribes raise camels, cattle, sheep, and goats, and supply meat, butter, and hides for export. Pearls and pearl shells of the value of more than 1,000,000 lire a year

are obtained from the waters near Massowah and in the Dahlak archipelago. Most of the foreign trade is carried on by Banyan merchants from Bombay. The imports by sea and land were valued at 28,442,551 lire in 1896. The colonial budget for 1899 amounted to 10,622,400 lire, of which 7,757,900 lire were for the colonial troops and 2,864,500 lire for administrative and other expenses. The revenue collected in the colonies was 2,491,600 lire according to the estimates, and the difference of 8,130,800 lire was supplied from the Italian treasury.

By the treaty made with the Negus of Abyssinia at Adis Abeba on Oct. 26, 1896, Italy restored Tigre to Abyssinia, renouncing all claims to a protectorate over that empire and the sover-

eighty asserted over Somaliland, except a strip of coast 180 miles wide. The Italian territory, including the sultanate of Obbia, has an area of about 100,000 square miles, with a population estimated at 400,000. The administration of the Benadir coast has been intrusted to a commercial company for the term of fifty years. There were 3,764 vessels, of 166,129 tons, entered at Massowah in 1898, and 3,758 vessels, of 166,009 tons, cleared. The length of telegraphs was 1,229 kilometres; of railroad, 24 kilometres. The colonial troops consist of 222 carabinieri, 600 chasseurs, 300 artillerymen, 297 engineers, and 304 train, with 6 battalions of native infantry, 2 native batteries, and 1 native squadron; total strength, 185 officers and 6,547 men in 1899.

J

JAPAN, an island empire, east of the continent of Asia, between the possessions of Russia and those of the United States, extending from north latitude $21^{\circ} 48'$, near the Philippines, to $50^{\circ} 56'$, near the Kuriles, and from east longitude $156^{\circ} 32'$ to $119^{\circ} 20'$. Of the 4,000 islands known, with an area calculated at 161,401 square miles, about 500 are inhabited, the majority of the people living on Hondo or the main island. Minami-tori-shima, or Southern Bird island (possibly Marcus island), 600 nautical miles east of the Bonin group, discovered in October, 1897, has been claimed and occupied by the Japanese Government.

Politically, the empire is divided into 47 districts and 705 subdistricts. There are 44 large cities and 14,782 cities and villages. The Emperor, Mutsuhito, is the one hundred and twenty-second in the traditional line of Mikados, which has a historic basis of about fifteen centuries. The heir apparent, Yoshihito, born Aug. 31, 1879, was proclaimed heir to the throne Aug. 31, 1887, and received the title of Crown Prince Nov. 3, 1889. He is betrothed to the Princess Sada, fifteen years old, his cousin, the third daughter of Prince Kujo.

Besides the imperial residence, there are 4 detached palaces in Tokio—3 in Kioto and 1 in Hakone—10 imperial places of sojourn, and 2 imperial gardens. Only male descendants, born either of the Empress or of the imperial concubines, can succeed to the throne. The Emperor shares legislative power with the Imperial Diet, which consists of two houses, the upper house having 316 peers and imperial nominees and the lower house 300 members elected by male voters, who must pay a land tax to the value of 5 yen annually or an income tax of 3 yen. (A yen is worth 50 cents.) The former number of 510,000 franchise holders is thus increased to more than 2,000,000. The fourteenth annual meeting of the Diet took place on Nov. 22, 1899. Since 1870 40 ministries have come into existence, the average duration being about seven months, none surviving more than twenty months. The first session of the Diet under the Constitution began Nov. 29, 1890. The Diet was dissolved by the Government five times, and there have been six suspensions because of "unreasonable opposition" to the Government. No House of Representatives has yet served out its full term of four years. Nevertheless there has been, on the whole, steady progress. Most of the work in the Diet is done in committees, and government by party is now practically the rule. In the three months' session closed March 10, 1899, the lower house dealt with 284 measures, of which 174 were pre-

sented by the Government, and 230 were passed. The Emperor's Cabinet consists of the 10 heads of departments. In addition, he has his Privy Council of 20 veteran statesmen, practically a body of great importance, especially in the formation of new cabinets. Below this central administration, and directly under the control of the Emperor, are the four provincial governments—the prefecture of the police of Tokio, department of colonization for Hokkaido, or the Northern Islands, the Fu and Ken (prefectures and districts), and the government of the island of Formosa. In 1897 65,502 public functionaries received salaries amounting to 17,104,226 yen, the number of officials since 1886 increasing 52 per cent. and the total of the yearly salaries 78 per cent. More than 15,000 officers in the army and navy make the total personnel 80,000, and the total of salaries 24,000,000 yen, or a cost to the people of about 57 sen (100 sen make a yen) per head for official service. The number of officials has increased 40 per cent. and the amount of salaries 50 per cent. since the war with China. The total population of the empire is more than 46,000,000.

Finances.—Japan adopted the gold standard Oct. 1, 1897. By the end of 1898 all silver yen had been withdrawn from circulation, amounting to 45,580,000. The loss incurred in connection with the rates of silver had been 5,500,000 yen, but the profits resulting from the subsidiary coin (27,560,000 chiefly in Japan and Korea, and 47,520,000 sold in Shanghai and Hong-Kong) were 5,650,000. The Minister of Finance reported in November, 1899, that the gold monetary system has worked excellently. The accounts for the year 1897-'98, now settled, show an ordinary revenue of 124,222,879 yen, of which 98,047,487 was for ordinary expenditure and 9,647,640 used for payment of the public debt, leaving a surplus of 16,527,752. In 1898-'99 the figures for these four items were as follow: 132,508,434, 11,327,183, 7,622,717, and 13,618,534. For the years 1899-1900 the figures are: 178,558,944, 134,495,192, 6,467,609, and 37,596,143. The items of the last two years given above are still in the budgetary stage. The budget for 1900-1901, submitted to the House of Representatives Nov. 25, 1899, show: Ordinary revenue, 192,230,000; extraordinary revenue, 44,480,000, making a total of 236,710,000. For ordinary expenditure, 148,950,000; extraordinary expenditure, 85,390,000; total, 234,340,000—the surplus of 2,360,000 to be applied to prison improvement and educational purposes. Of the extraordinary revenue, 23,750,000 come from the Chinese indemnity and 17,330,000 by loan. On

June 1 a foreign loan of 10,000,000, at 90 per 100, at 4 per cent. interest, was floated in London, and the money has been paid. The work of reassessing taxable value of land was completed in August, 1899, making a reduction of 148,500,000 yen. The total expenses of the Chino-Japanese War of 1894 were 200,475,508 yen, of which 164,520,371 yen were for the army and 35,955,137 for the navy. The war revenue raised amounted to 225,230,127 yen, among the items of which are: Domestic loans, 116,804,926; taken from indemnity, 78,957,165; from accumulations of revenue surplus, 23,439,086; revenue from occupied territory, including Formosa, 1,550,104. The actual expense for arms and ammunition was 21,250,000, or 10 per cent. of the total outlay, and for rewards 7,182,194, the Japanese receiving from the Chinese 100,000,000 more than was spent in direct outlay.

In the banks of Japan, Dec. 31, 1898, the deposits amounted to 324,570,418 yen; loans, 321,149,058; bonds and securities, 106,214,857; securities on loans, 321,149,085. In 1898 there were 1,700 banks, having a total paid-up capital of 223,000,000 yen, the sum for the disposal of business averaging to each about 265,000. In August, 1899, 188,709,749 of paper currency was in circulation. In ten years, since 1877, the price of 40 commodities has risen from 100 sen to 170 sen.

Resources.—The estimated total resources of Japan are 7,898,000,000 yen, based on statistics for 1894 and 1895. On the latest statistics the estimate is 15,093,000,000. Of the total area of the land, 103,300,272 acres, 669,536 belong to the Government and 34,630,736 to the people. The gross annual product of the land, no account being taken of Government property, is 28 yen, and the net produce 14 yen per acre. Only 13,730,706 acres of arable land, yielding 36 yen net per acre, are owned by the people. The number of horned cattle is 1,091,360, and of horses 1,477,021, the value of both kinds being 75,000,000 yen. Railways, telegraphs, and aqueducts are valued at 90,000,000 yen, shipping at 98,000,000, mines at 405,000,000, and marine products at 272,000,000. Personal property, reckoned at 24 yen per head, is appraised at 1,028,000,000. The average rice crop is 200,000,000 bushels, the crop for 1899 falling 800,000 bushels below the average. The annual consumption is about 5,000,000 bushels greater than the average yield, and rice is still a delicacy rather than a necessity to most of the rural population. Much of Japan's food supply has to be imported, as population increases faster than the food capacity. In 1899 fresh oil fields were discovered and worked in Echigo, and new and profitable gold fields have been opened in Yezo. In Italy the public burden for each person is 21 yen; in Japan it is 4.

The Army.—At the end of 1898, when the recruits for that year had been drafted into the ranks, there were in the active army of Japan 11,726 officers and 80,013 rank and file. The figures for the infantry were 8,266 and 51,208; for the artillery, 1,635 and 12,811; for the cavalry, 646 and 2,532; for the engineers, 583 and 1,089; for land transport train, 596 and 1,473. There are in the first reserve 8,894 officers and 105,104 men; in the second reserve, 8,583 officers and 62,537 men; in the supernumeraries, 64,303 men; a total of 17,477 officers and 231,944 men. The total enrollment of soldiery is 341,160, distributed in the 7 divisions and depots, the Imperial Guard of more than 12,000 men being in Tokio. Heretofore the artillery and cavalry have not been brigaded, but 2 brigades of 3 regiments of cavalry and 2 brigades of 4 regiments of field artillery each have

been formed. The garrison artillery now occupy the forts which, at 9 great centers, guard the coast. The building and equipment of these are in the most approved modern style. Col. Arisaka has greatly improved the field artillery, which uses a smokeless powder of native invention. Only 15 per cent. of the soldiers are illiterate, 40 per cent. have a common-school education, and 27 per cent. are fairly able to read and write and know some arithmetic. In small arms the Japanese formerly used Enfields and Sniders, but since 1883 they have had the Murata rifle, a clever adaptation by a Japanese colonel of several systems. In 1886 the Murata rifle was improved. In 1890 it was converted into a repeater, but the troops in the Chinese war, with the exception of the Guards and the Fourth Division, used the 1-round rifle. In 1897 the Arisaka rifle was adopted, and the Japanese claim that this arm is better than any used in Europe. Half the army is now equipped with this light, simple, 5-round magazine gun.

The Navy.—In September, 1899, the Japanese navy consisted of 8 first-class battle ships, 5 afloat and 3 building, 2 second-class battle ships or armored cruisers, 20 cruisers, 10 coast-defense ships in three classes, 4 dispatch vessels, 10 torpedo destroyers, and 30 torpedo boats. The *Hatsute*, launched on June 27, and contracted to be ready for sea by March, 1899, has a displacement of 15,240 tons, the guaranteed speed being 18 knots. The navy yards at Yokosuka, Kure, and Sasebo have dry docks and first-class equipment, and on the new ships are the fullest resources known to modern naval science. In September, 1899, there were in the active Japanese navy more than 20,000 men, of whom 701 were officers, from admiral to cadet midshipmen, 212 engineers, 175 medical officers, 15 pharmacutists, 187 paymasters, 61 officers in the construction department, and 6 in the pilot, making a total of 1,413 officers.

Trade.—The old order of low customs tariff, established June 25, 1886, gave place at the beginning of 1899 to the new system of higher duties. The customs duties in 1894 amounted to 5,881,024 yen, and in 1898 to 8,360,689 yen. The total foreign trade for the year 1898 amounted to \$216,245,195, of which \$141,041,725 were imports and \$84,603,470 for exports. From January to July, 1899, the exports amounted to 106,630,021 and the imports to 11,522,342 yen, the first half of the year being always the principal time for imports and the second half for exports. The estimates of the total export for 1899 aggregate 200,000,000 yen, or double the volume of six years ago. The trade between the United States and Japan in 1873 was: Exports from Japan, 4,200,000 yen; imports to Japan, 1,000,000 yen; and in 1898, exports, 47,000,000; imports, 40,000,000 yen. Japanese articles sent to us are raw silk (25,000,000 yen in 1898), tea, *habutai* (light, summer silk), silk fabric, and fancy matting. The staples of American imports are machinery, iron, petroleum, cotton, flour, and tobacco. The imports from the United States in 1898 amounted to 6,874,531, and in 1898 to 40,001,092 yen, the increase being due largely to cotton, 7,500,000 yen; flour, 1,000,000 yen; tobacco, cigarettes, and electric equipment making up the rest of the increase. In 1899, of 3,147,855 boxes of Wakayama oranges, 150,000 were sent to the United States. The tonnage of Japanese vessels in October, 1899, was 734,622, or five times more than the tonnage in 1885. More than half of the vessels of over 1,000 tons (149 in number) belong to the Nippon Yusen Kaisha, or Japanese Ocean Navigation Company. Twenty-two new ports were opened

on the day the new treaties came in force, and the trade in August and September amounted to 3,257,100 yen. At the end of 1898 the number of spindles in the cotton factories of Japan was 1,108,404, or 200 per cent. more than six years ago; but the competition of spinning mills in Shanghai and other causes have depressed the industry in Japan.

The purpose of the Japanese is to gain the markets of China. The trade between the two countries, which in 1893 amounted to 48,707,540 yen, increased until at the end of 1898 it reached a total of 95,440,348. Exhibitors to the Paris Exposition send goods valued at 2,217,352 yen.

Communications.—Emigration from Japan continues to be active. About 75,000 Japanese live abroad—10,000 in America, 2,000 in Russian Siberia, 28,000 in Hawaii, 30,000 in Korea, and 1,000 in China. At home the building of railways, telegraphs, and telephones continues brisk. Nearly 500 miles of railway were opened in the fiscal year 1898-'99, and in October, 1899, there were 3,534 miles opened for travel, the development in Yezo being remarkable. In 1895 there were 2,272 miles opened, showing an increase in three years of 33 per cent. On the Government lines (860 miles) the accidents during the year ending March 31, 1897, were 148 killed and 94 wounded; on private lines (1,340 miles), 204 killed and 169 wounded. On the water, at the end of 1897, there were 1,684 steamers, of 486,459 tons; of sailing ships on foreign models there were 171, of 27,412 tons. Fifty-seven steamers, aggregating 10,698 tons, and 18 sailing vessels, aggregating 2,422 tons, were built in Japan in 1897. The number of telegraphic messages to every 100 of the population is 26, and the use of telephones is increasing. There are 5 electric trolley lines in the empire.

Formosa.—The past year was signalized by many outbreaks of rebellion and raids of the head-hunting savages. In 1898 303 attacks were made by the aborigines, and 635 peaceful people lost their lives. The great demand for heads, to supply the offerings to their gods made at religious festivals by the hill tribes, is the cause of the raids being more numerous in March and September. The bandits and rebel leaders were unusually active in 1898, but in April, 1899, the famous chief Ko Ti-at, on the advice of former rebel Liu, made his submission. Between Jan. 1 and April 1 2,297 surrendered. In 1898 vessels entering the ports of Formosa numbered 4,140, with a tonnage of 254,330. Of these, 3,943 were Chinese, 135 British, 18 Japanese, 30 German, 6 Norwegian, and 4 American, the trade being in exports 12,827,189 and the imports 16,879,190 yen. The Formosa-Amoy cable has been bought from China by Japan for 100,000 yen. The revenues in 1897-'98 aggregated 8,000,000 yen; but the estimate for 1899 was 10,000,000, nearly balancing the normal expenditures. The income is derived from the opium, tobacco, and land tax. Though the pest has been very destructive to the natives, the health of the Japanese garrison has been excellent, the sick not exceeding 5 per cent., and the Third Division not losing a man in their sojourn of many months. The total revenues from 1895 to the end of the fiscal year 1899-1900 were 33,000,000 yen, and the expenditures 116,000,000, the extraordinary expenses being for fortifications and garrisons, the troops and gendarmes costing 8,500,000 yen annually, the military expenses for the rest of the empire being 28,500,000 yen. For the survey and reassessment of the land 15,000,000 yen are to be paid.

Education and Religion.—There are 12 Shinto, 41 Buddhist, and more than 30 Christian sects

in Japan. The Shintoists claim about 15,000,000 believers, the Christians 40,000, and the remainder are Buddhists, Confucianists, or agnostics. The Government forbids the teaching of religion in any school under its care, and discriminates against all private schools by exempting from military conscription the students in the Government schools. Against this policy, which tends to kill all private instruction or rivalry, the Christian educators have made formal protest. In 1893 there were 2,021 private schools; in 1899 the number was 1,677; but the number of pupils in those remaining increased from 139,595 to 152,714 in 1897. In 1893 there were 23,573 schools of all kinds, and in 1897 there were 26,776. The number of instructors increased in the same time from 62,850 to 82,545, and the number of students from 3,316,200 to 4,016,003. Eighty-one per cent. of the school-age male children and 51 per cent. of the female children attended in 1897. In 1897 the expenditure for public schools was 18,669,049 yen, for which the people were taxed 12,545,243 yen, the difference being obtained from the income of the schools. The General Government appropriated 1,522,509 yen to support 2 universities, 2 higher normal, 6 high, 5 technical, 1 school for the blind and dumb, 1 school for training technical teachers, and 1 library. Literary activity is chiefly noticeable in the translation of serious foreign literature and of the new codes of law into foreign languages, and in periodical literature, but there is little of original production. Of the 100 Chinese students studying in Japan, half have been sent by the Government.

Statistics show that crime and immorality, especially by females, is on the increase. In 1896, of 184,062 criminals, 53,896 were incarcerated for gambling, the practice being widely extended and the corruption of the police being secured on a regular plan. A careful study of the social evil shows that of every 80 Japanese females between the ages of fifteen and thirty-five 1 is dissolute, there being in Japan proper: *Geisha* (artists, singing girls), 30,000; licensed prostitutes, 50,000; concubines, 10,000; unlicensed public women, 80,000; total, 170,000. The extra-marriage relations of the Japanese were strongly discussed in 1899.

Politics and Events.—The deaths during the year included the Princess Sada, youngest daughter of the Emperor, Jan. 11; Count Katsu Awa, Jan. 21; Baron Nobuyuki, an eminent diplomatist and Christian, March 27; Prof. Yatabe and Prof. Burton; besides 8,977 natives from dysentery out of the 45,996 attacked. The discovery by Dr. Kitasato of the bacillus causing the disease and the successful treatment of many patients are events of note. On May 14 207 miners in Fukuoka were killed by an explosion of gas. The thirteenth session of the imperial Diet ended March 14. Japanese judges were sent abroad to study foreign judicial systems. The new treaties went into effect July 17, and great rejoicing marked the advent of Japan to political equality with the nations of Christendom. The city of Sendai, founded by Date Masamune, celebrated its three hundredth anniversary May 23. The historic Uruga of Perry days is again made famous by the building of two great docks for steamers and sailing vessels, one being 451 feet long. The excavation was begun in 1896 and finished in November, 1898. The other, 500 feet long, is nearly finished. The dedication of the granite memorial to the late Guido F. Verbeck, erected by the Japanese and raised by public subscription, took place Nov. 13. Under the new treaties 20 foreigners at once applied for diplomas

to practice as physicians, 16 being Americans and 4 British, and 8 British and 1 German have asked for pharmacist licenses, all of which were at once granted. In the old "three cities and five ports," 43 foreigners have practiced medicine. One of the most destructive storms known for years visited the country on Aug. 28 and 29, the number of killed and wounded being in the hundreds, and the houses and vessels injured in the tens of thousands. The first murder case under the new treaties, the judges being three Japanese, was that of an American named Miller, who killed one man and two Japanese women. The court dismissed the plea of inherited insanity and the argument of brain deterioration through drinking Japanese whisky, and sentenced the prisoner to capital punishment. Mr. H. W. Denison, for many years in the service of the Foreign Office of Tokio, in September received audience of the Emperor and investment with the First Class Order of the Rising Sun, the first ever given to any one not of the diplomatic corps.

JEWS. The final act of the Dreyfus drama was played at Rennes, Aug. 7, where the new trial was held. On July 1 the prisoner had returned to France from the Devil's isle, a revision of his trial having been decided upon early in June. The proceedings aroused international interest, heightened on Aug. 14 by the attempted assassination of M. Labori, Dreyfus's counsel. The verdict given by five of the seven military judges was, "Guilty of treason." It was added that they did not desire him to be obliged to undergo again the ceremony of degradation before the army, that there were "extenuating circumstances," and that he should be pardoned, on the ground that his years of solitary confinement in consequence of his first sentence had sufficed as punishment. On Sept. 19 he was pardoned by President Loubet on the recommendation of the ministry, he and his friends agreeing not to appeal. He and his family then took up their residence at Carpentras, in southern France. The result of the trial aroused considerable indignation; meetings were held in the chief cities of the globe, and representatives of all classes and creeds protested, while the press was unanimous in its condemnation of the verdict. But it was soon felt that peace with or without honor was best for France, and with the rehabilitation of Lieut.-Col. Picquart and the quashing of the trials against Émile Zola the rest of the world had to be satisfied.

The profound regret expressed at the death of Baroness Clara de Hirsch de Gereuth in Paris, on April 1, proved the universal reverence felt for her, which was intensified when it was known that by the provisions of her will she had not only maintained her husband's benevolent projects, but devoted practically her whole private fortune to philanthropy, not restricted to those of her own creed. Several million dollars were given to strengthen the Hirsch colonies in Canada and New Jersey and for the erection of workingmen's homes in upper New York, while charities and educational societies in France, England, and Austria-Hungary were richly endowed.

The third Basle Zionist Congress, Aug. 15, was well attended, the greater number of delegates representing Russian, Roumanian, and Galician Jews. It was said that the movement was making satisfactory progress. The chief aim appears to have shifted to colonization of Palestine, the idea of a Jewish state being less emphasized.

The subscriptions to the Colonial Bank were announced as meeting expectations, and the

Sultan of Turkey was to be sounded as to the purchase price for a tract in Palestine to be a home of refuge for persecuted Jews. At the same time the Sultan excludes Jewish immigrants from right of residence beyond thirty days unless they become Turkish subjects, the decree being intended to prevent any immigration *en masse* of destitute aliens. The outrages in Moravia and Bohemia, due to political causes, culminated in the arrest of a half-witted Jewish lad at Polna, Bohemia, on the charge of killing a Christian girl for ritual purposes. The trial resulted in a verdict of guilty, but there is every indication that it will be appealed and the prisoner declared innocent. Such accusations are rare—the latest occurred in Hungary in the early eighties—but on an inflammable population, grossly ignorant and bigoted, the tools of designing demagogues and Jew baiters, the blood accusation is always a pretext for mob law and plunder. It has stirred the flames of anti-Semitism in Austria, despite the public protest of Emperor Francis Joseph, and has been made the subject of Government inquiry that has not allayed but increased the agitation. With Czech and German at each other's throat, the village Jew is a convenient scapegoat, and many wealthy Jewish landowners and manufacturers have removed to Vienna and Buda-Pesth. Spirited protests against the verdict and the charge in general were made by eminent Christians—priests, professors, advocates—and papal decrees of the Middle Ages denouncing the blood accusation as baseless were spread in all directions. The issue is still in doubt, and the political uncertainty and confusion add to the perplexities of the situation. In Germany there has been a gratifying lull in anti-Semitism. In England the presence of delegates of the American Council of Jewish Women at the International Congress of Women in London made a significant incident. In Roumania the Government has sought to check educational progress among the Jews by continued limitation of the number of Jewish children who are permitted to attend the schools of the land.

Among the honors received, T. C. Asser, the Dutch jurist, was one of Holland's representatives at The Hague conference. Prof. S. Schechter was appointed Professor of Hebrew at the University of London, while Dr. A. Neubauer retired as librarian of the Bodleian with a pension for life. Louis S. Cohen was elected mayor of Liverpool. Rev. Dr. Adler, chief rabbi of the Jews of England, received the degree of LL. D. from the University of St. Andrew's. The year closed with marked amelioration of the condition of the Jews of Algiers, anti-Semitism meeting with a decisive check.

In America Temple Sinai, of Chicago, celebrated on Jan. 15 the twenty-fifth anniversary of the establishment of Sunday services, which have been adopted in a few congregations, but as yet have not met with very pronounced success. On March 14 the eightieth birthday of the Rev. Dr. I. M. Wise, of Cincinnati, was celebrated, and on May 13 the seventieth birthday of the Rev. Dr. M. Jastrow, of Philadelphia. On Nov. 12 the Rev. Dr. B. Szold had a public celebration of his seventieth birthday. On April 23 the Chicago Home for Jewish Orphans was dedicated: on May 18 the New York Hebrew Charities Building, the gift of Solomon Loeb. On May 7 the San Francisco Mount Zion Hospital was opened, and on Dec. 10 the Denver Home for Consumptives. On May 19 a National Conference of Jewish Charities was organized in Cincinnati, and in December 24 constituent societies joined

the conference. The third summer assembly of the Jewish Chautauqua began on July 14 at Atlantic City, and a varied programme of lectures and debates was followed. Synagogues were dedicated in New York, Chicago, Brooklyn, El Paso and Dallas, Texas, Peoria, Huntsville, Ala., Atlantic City, Newark, and New Brunswick, N. J., Denver, and Cleveland.

Among new books issued were Israel Abraham's Jewish Literature, Dembitz's Jewish Services in Synagogue and Home, Rev. Dr. B. Drachman's translation of S. R. Hirsch's Letters of Ben Uziel, Mr. Zangwill's They that Walk in Darkness, and Mrs. A. Cohnfeldt Lust's A Tent of Grace.

In Philadelphia work was begun on the new building of the Young Women's Union and the Lucien Moss Home for Incurables. In New York ground was broken for the new Young Men's Hebrew Association building, the new Mount Sinai Hospital, the Beth-Israel Hospital, and the Emanu-El Sisterhood Home, while the new Baron De Hirsch Trade School and the Clara de Hirsch Working Girls' Home were opened, the Hebrew Infant Asylum entered new quarters, and the Newark (N. J.) Hebrew Orphan Asylum opened its new edifice. The National Farm School, at Doylestown, Pa., added appreciably to its accommodations. The Agricultural School, at Woodbine, N. J., under the auspices of the Baron De Hirsch Trust, made rapid advance. Agricultural work is being steadily promoted, and neat homes are being erected in East Orange, N. J., with a view of settling families from the New York ghetto. At the same time a beginning has been made in building improved tenements in the upper part of New York city. The beneficent work of the Hirsch Trust is thus developing every year.

An organization of Hebrew veterans of the Spanish war was formed in New York, and about 150 attended the initial meeting.

The receipts of the Educational Alliance of New York were \$34,961.19; expenses, \$39,320.16. During the year the aggregate attendance was 1,602,104.

The statistics furnished by the United Hebrew Charities of New York, whose twenty-fifth anni-

versary was celebrated in November, throw full light on Jewish immigration since the Russian exodus began, as well as the work of the largest organization of its kind in the United States. During the year ending Oct. 1 the sum of \$136,332 was disbursed and \$149,859.53 received; 29,088 immigrants were registered, making a total of 430,470 since the records were begun in 1885. Out of 5,515 applicants for work, 5,183 found employment. According to the annual report of the Commissioner General of Immigration for the year ending June 30, 1899, 37,415 Jewish immigrants arrived, only 519 being excluded under the law. Russia and Austria-Hungary furnished nearly all of the number admitted. Of these, 12,276 were skilled workmen, 197 were professional men, while 5,253 were of various occupations (laborers, farmers, servants, etc.); 5,637 could neither read nor write—not a very large proportion considering that 8,987 were under fourteen years of age.

In December Prof. Schechter, of Cambridge, England, signified his acceptance of the call to be director of the Jewish Theological Seminary of New York.

At the eighth annual meeting of the American Jewish Historical Society, held in New York on Dec. 26, among the papers presented were Dr. Cyrus Adler's, on Further Documents relating to the Inquisition in Mexico; Prof. Hollander's, Additional Information respecting Haym Solomon; Prof. Gottheil's, Early Settlement of the Jews in the Island of Barbadoes; Leon Hiltner's, The Jews of South Carolina prior to 1800, A Prominent Jewish Patriot of Revolutionary Times, and Notes on American Jewish History; Max J. Kohler's, The German-Jewish Migration to America, The Jews and the American Antislavery Movement, II; Miss Annette Kohn's, Jewish Topography of New York; Rev. George A. Kohut's, New Documentary Materials for the History of the Marranos in Mexico; Rev. Dr. H. P. Mendes's, Notes on the Early Newport Jews; Some Early Jewish Printers in America, and A Frankist Petition addressed to Archbishop Lubinski in 1759, published in Mexico.

K

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,206 in 1860; 364,399 in 1870; 996,096 in 1880; and 1,427,096 in 1890. By the State census of 1895 it was 1,334,688; in 1899 it was estimated at 1,425,112. Capital, Topeka.

Government.—The following were the State officers in 1899: Governor, William E. Stanley; Lieutenant Governor, Harry E. Richter; Secretary of State, George A. Clark; Treasurer, Frank Grimes; Auditor, George E. Cole; Attorney-General, A. A. Godard; Superintendent of Education, Frank Nelson; Commissioner of Agriculture, F. D. Coburn; Adjutant General, Hiram Allen, succeeded on Feb. 23 by S. M. Fox; Superintendent of Insurance, Webb McNall, succeeded on March 17 by W. V. Church; Oil Inspector, E. V. Wharton, succeeded on April 1 by S. O. Spencer; Grain Inspector, W. W. Culver, succeeded on April 1 by A. E. McKenzie; State Printer, W. Y. Morgan; Board of Charities, P. H. Dolan, G. W. Kanavel, Reuben Vincent, Grant Hornaday, Edwin Snyder; Bank Commissioner, J. W. Breidenthal; Labor Commissioner, W. L. A. Johnson.

All the elected officers are Republicans. Chief Justice of the Supreme Court, Frank Doster, Populist; Associate Justices, W. A. Johnston and W. R. Smith, Republicans.

Population.—The compilations from returns of assessors and county clerks show that in 1899 the State had 109 cities and towns with 1,000 or more inhabitants, while in 1898 it had but 103. The whole gain in population was 35,335. The largest gain among cities was in Topeka, which increased 2,714. There are 1,682 Indians in the State, of whom 736 are not on reservations, are self-supporting and taxed. Four small tribes live on Government reservations.

Finances.—The following, from the statement of the chairman of the House Ways and Means Committee, shows the estimated income and expenses of the current biennial period:

"The total amount appropriated by the Legislature was \$3,873,090. Of this sum \$444,000 was for deficiencies which should have been met by the Legislature of 1897. This brings the appropriation for the two fiscal years beginning June 1 down to \$3,429,090. The receipts from the various departments, exclusive of taxes, for the two

years beginning June 1 will be \$537,485. This sum deducted from the total appropriations leaves \$3,335,605, the amount to be raised by taxation.

"The Legislature appropriated \$444,500 for new buildings and repairs, as follow: New insane asylum, \$100,000; Topeka Insane Asylum, \$30,000; Winfield Imbecile Asylum, \$40,000; State University (chemistry), \$55,000; Topeka Reform School, \$21,500; Osawatimie Insane Asylum, \$50,000; Beloit Girls' School, \$25,000; Agricultural College, \$25,000; Hutchinson Reformatory, \$72,000; Olathe Deaf and Dumb School, \$1,000; normal school, \$20,500; Penitentiary brick plant, \$4,500.

"To ascertain the appropriations for the current expenses of the State for the next two years the item for new buildings should be added to the item of deficiencies and the sum of the two items (\$888,500) deducted from the total appropriations, leaving \$2,984,590, which is less than the amount appropriated two years ago.

"The last valuation of taxable property was \$330,000,000. It is estimated that the valuation of the State this year will be raised to \$350,000,000. The 5-mill levy fixed by the Legislature on this valuation will raise \$3,500,000. The total appropriations deducted from the amount of revenues leaves a surplus of \$164,395.

"The levy of 1897 was 4.2 mills. The Legislature of 1899 found it necessary to increase the levy four fifths of a mill in order to meet the deficiencies.

"This does not include, of course, the quarter-mill special levy for the completion of the state-house."

Following are the appropriations for the several State institutions for 1900: Blind Institute, \$23,694; Deaf and Dumb Institute, \$49,090; Forestry Station, \$3,820; Winfield Imbecile Youth, \$52,460; Girls' Industrial School, \$34,410; Soldiers' Orphans' Home, \$34,890; Hutchinson Reformatory, \$102,315; Emporia Normal School, \$45,500; Osawatimie Asylum, \$186,494; Penitentiary, \$236,791; State boards, \$45,000; State Soldiers' Home, Dodge City, \$44,400; executive and judicial, \$330,000; Topeka Insane Asylum, \$179,360; Topeka Reform School, \$64,754; University of Kansas, \$140,000; Manhattan Agricultural College, \$59,000.

The valuation of property for assessment in 1899 aggregated \$327,175,107, of which about \$218,000,000 was real and about \$58,000,000 personal.

The claims of the State against the Government for recruiting, equipping, and maintaining soldiers for the Spanish war amount to \$37,784.84.

There are claims against the State on account of the Quantrell raid during the civil war; those acknowledged as legitimate amount to \$77,000. The House voted to pay them during the last session, but the bill failed in the Senate.

Education.—The enrollment for the year at the State University was 1,087. The graduating classes of 1898 and 1899 numbered each about 200. The institution has graduated in all 1,545 students, and has had 7,085 enrolled. A department of mechanical engineering has been established. The necessary yearly expenses of a student vary from \$140 to \$320.

Two of the regents of the Agricultural College were removed in May by the Governor on recommendation of an investigating committee. The charges that were held to be sustained were that by their order the college soup house was operated in violation of law; that they had transacted business without a quorum; that they had

spent more than the amount specified by law and had misappropriated \$200 given for a special use, and had overpaid certain officers. Appeal was taken to the appellate court by the regents who were removed, and the court decided in their favor and against the right of the committee to hear and consider any other charges but those submitted to them by the Governor; furthermore, the lower court decided that the committee must determine the guilt or innocence of the officer, and that it must file the evidence with the Governor. The case was then appealed to the Supreme Court.

The income of the college is about \$80,000 a year, of which only about \$18,000 comes from the State. The class of 1899 numbered 54.

The College of Emporia graduated 14 in June. This institution is to have a new library building, the gift of Andrew Carnegie.

Baker University received more than \$20,000 in gifts the last year. At the annual commencement 91 degrees and diplomas were conferred.

The class at the State Normal School had 85 members.

The school population in 1899 was 496,776. The interest on the permanent school fund for the first half of the year was \$203,678.

The State Board of Education has decided that colleges to be "accredited" so that their graduates may receive certificates to teach must maintain departments of pedagogy.

Charities and Corrections.—A new asylum for the insane was provided for by the Legislature, and a committee appointed to select a site chose one at Parsons, but considerable opposition has arisen to that location.

The Institute for the Deaf, at Olathe, had 230 pupils in 1898-'99. About half are taught articulation, with some degree of success. At the School for the Blind there were 85. The Topeka Insane Asylum had 828 patients, of whom 588 were men.

At the Orphans' Home there were 178 children.

The inmates of the Beloit Industrial School were 119 in number.

There are about 220 boys at the Reform School, at Topeka. A committee appointed to investigate the school reported necessity for radical changes, especially in regard to facilities for training the boys. One of the buildings was burned in June, with a loss of about \$5,000.

The State Industrial Reformatory, at Hutchinson, has about 200 inmates. The building is not yet finished.

The binding-twine plant at the State Penitentiary began operation Dec. 19. It requires a force of 80 men. There are about 920 convicts in all.

Military.—The return of the Twentieth Kansas Regiment from service in the Philippines was celebrated at Topeka, Nov. 2, with great rejoicing. The exercises included a procession, a banquet, and ceremonies at the statehouse, with music, addresses, the presentation of a sword to Gen. Funston, and the return of the battle flags.

The National Guard was reorganized in January, but a new law necessitated another reorganization. Under the present law no one can be mustered in without having passed a physical examination.

Products.—From the biennial report of the secretary of the Board of Agriculture it appears that the home value of the farm products of the two years was \$288,259,096, which was a gain of \$43,465,301, or but slightly less than 18 per cent., over the biennial period immediately preceding. The value of live stock (additional to the farm products) on hand averaged for each

of the two years on March 1 \$207,302,818, being an increase of \$60,797,660, or 41½ per cent. Although no prices were extraordinarily high, the value of the farm and stock products for 1897-'98 exceeded by \$104,262,961 those of 1895-'96.

For 1899 it is shown by reports from townships and official returns of assessors that the value of the year's crops and products aggregates \$169,747,037; the value of live stock is \$133,057,092, making a grand total of \$302,804,129. This counts winter and spring wheat at 43,687,013 bushels, valued at \$22,406,410.34, while the corn crop is given at 225,183,432 bushels, worth more than \$55,000,000. Excepting that of 1889 (273,888,321 bushels), this is the largest crop the State has yet produced, and exceeds in value any preceding crop by \$1,134,627.54. The combined value of the three grains—wheat, corn, and oats—is \$80,888,622.93, or a total increase over the 1898 value of the same crops of \$13,384,621.62.

The value of the mineral products, according to the report for 1898 of the University Geological Survey, was \$10,225,944, and of the smelting products \$16,943,956. The largest items of the former total are coal (\$4,193,160) and zinc ore (\$3,822,769). In 1880 only three minerals—coal, building stone, and zinc—were mined in the State; now there are in addition salt, oil, gas, gypsum, cement rock, and clay.

Banks.—A tabulation of reports from 320 State and 66 private banks of their condition at the close of business on Dec. 2 shows: Loans and discounts, \$21,641,729.45; total deposits, \$26,143,335.81; cash and sight exchange, legal reserve, \$10,744,485.81; rediscounts, \$262,249.58; bills payable, \$147,029.46.

A comparison with the statement of the last report, Sept. 7, shows an increase in loans of \$1,182,930.64; increase in deposits, \$187,065.81; increase in rediscounts, \$71,254; and an increase in bills payable, \$33,120. The legal reserve shows a decrease of \$1,329,737. Reports also show an increase in the investments in bonds and warrants of about \$400,000. The decrease in reserve is due to the large demand for loans from cattle feeders. The banks now hold \$5,500,000 available funds in excess of the legal requirement. Compared with the statement of Dec. 31, 1898, this report shows an increase of deposits of \$3,250,000 and an increase of \$800,000 in cash and sight exchange.

Twenty-two banks were chartered in the first six months of 1899.

Building and Loan Associations.—There are 43 of these associations in the State. Their condition is summed up as follows: Loans on real estate, \$2,766,435.17; loans on stock and other security, \$142,668.41; real estate owned, \$99,854.63; cash due from banks, \$142,105.64. Twenty-five of the 43 associations own no real estate. The total real estate owned by the 43 associations is a fraction over 3 per cent. of total assets.

Railroads.—From statistics of the Railroad Commissioners' office it appears that in 1898 the total mileage operated was 8,889.38 miles, a decrease of 63.17 miles. The gross earnings from operation were \$32,017,240.54; the operating expenses, \$21,600,121.96. The total number of employees, including general officers, was 24,094, and the average daily compensation \$1.92. In 1899 there were 25,185 employees, at an average yearly salary of \$596.58. In a suit where county commissioners raised the valuation of a railroad 30 per cent. above that fixed by the State assessors a district court sustained the commissioners, but the appellate court reversed the decision.

Lawlessness.—A negro charged with the murder of two white men was taken from the sheriff

at Alma, July 9, by a mob and hanged from a telegraph pole. After he had been left for dead the town marshal cut him down and he was taken to the jail, where he recovered consciousness.

Another lynching took place at Weir City, Oct. 30. A negro miner supposed to be the murderer of a bartender with whom he had quarreled was taken from jail by a mob and hanged. The Governor offered a reward for the arrest and conviction of the leaders of the mob.

Foreclosure of Mortgages.—It has been the custom in many cases for persons purchasing land upon which was a mortgage to pay the interest on the mortgage, and the mortgagee would allow the mortgage to run many years, relying upon such payments being sufficient not to bar the right of the holder of the mortgage to foreclose.

The district court of Clay County and the Court of Appeals held that such payments did not keep the mortgage in force, and that the mortgage could not be foreclosed.

The Supreme Court in April unanimously reverses this ruling, holding that where the owner of land, who is in no way liable for the payment of the debt, and did not even take the title expressly subject to the mortgage, pays the interest on the mortgage until just before foreclosure suit is brought, the mortgage may be foreclosed, although all right of action on the note is barred by the statute of limitation.

Legislative Session.—There was a special session of the Legislature from Dec. 21, 1898, to Jan. 9, 1899 (see Annual Cyclopædia for 1898, page 354), and the regular session, extending from Jan. 10 to March 8.

The Auditor refused to pay the bills for the expenses of the special session until its constitutionality should have been passed upon by the courts. The Supreme Court decided that it lies with the Governor to decide when an extraordinary occasion has arisen of sufficient gravity to justify him in convening the Legislature in special session, and that his action is not subject to review by the courts unless the reasons given are obviously frivolous or irrelevant. In the present case it was conceded that the occasion assigned—the demand of the people for legislation regarding freight rates—was sufficient to justify the call.

Among the acts passed at the special session was the "Boyle railroad" bill. This provides for a "court of visitation," consisting of three elective judges, a marshal, a clerk, and a solicitor general. The court was to have original jurisdiction in all difficulties arising in connection with railroad, express, and telegraph companies, to establish rates and classifications, and decide complaints, and it might appoint a receiver for any road that fails to comply with its decrees. The validity of this act was called in question in the United State District Court in November in connection with an application by the Western Union Telegraph Company for an injunction to restrain the Court of Visitation from enforcing an act of the special session reducing the tolls of telegraph companies 40 per cent. This act was declared unconstitutional, because the rates were held to be confiscatory. The constitutionality of the act creating the Court of Visitation was not necessarily involved, but the judge said that in his opinion the court could not exercise judicial powers, and he doubted if it could exercise administrative powers. The Court of Visitation, which consists of L. C. Crum, J. C. Postlethwaite, and W. A. Johnston, were taking measures to appeal the telegraph case at the close of the year.

The law creating the Board of Railroad Commissioners was repealed.

The Australian ballot law was so amended that only one local ticket may be placed on the official ballot under one party appellation.

It was provided that hereafter the office of superintendent of insurance shall be elective, to be filled at the general election of 1900, and each second year thereafter.

Other acts of the special session were:

To tax foreign insurance companies 4 per cent. on Kansas premiums, and American companies not organized under the Kansas laws 2 per cent. on Kansas premiums.

To create a State society of labor and industry, with a secretary who shall perform the duties now devolving upon the Labor Commissioner.

To create a State association of miners, with a secretary who shall perform the duties now devolving upon the Mine Inspector.

To perpetuate the State Schoolbook Commission.

To determine ties in elections in cities of the second class, to be decided by lot in the council, except in cases of ties in elections of councilmen.

To provide for the organizations of associations for the purpose of insuring growing crops against damage and destruction from hail.

To require that 500 members shall be necessary to secure a charter for a grand lodge of any fraternal beneficiary society, and to place all such societies under the control of the State Superintendent of Insurance.

At the regular session the Republicans were in a majority in the House, 93 to 32, and the fusionists in the Senate, 28 to 12. M. A. Householder was President *pro tem.* of the Senate. S. J. Osburn was Speaker of the House and F. M. Benefiel Speaker *pro tem.*

Gov. Stanley was inaugurated Jan. 9. In his first message to the Legislature he made the following recommendations: Establishment of an additional insane asylum; abolition of the Board of Pardons and the offices of State accountant and forestry and labor commissioners; establishment of plants for the employment of convict labor; more liberal appropriations for the Department of Agriculture; payment of costs of mine inspection by mine operators; provision for road improvement; raising of assessments in order to secure the larger revenue demanded by the growing interests of the State; education of neglected children; State aid to industrial schools for negro youth; uniform courses of study in schools; the placing of building and loan associations under the control of the Bank Department, and of all orders and societies doing insurance business under the Insurance Department; honest enforcement of the prohibition law.

A constitutional amendment will be submitted to vote of the people in 1900. It provides that the Supreme Court, which now consists of 3 justices, shall consist of 7. The term of office is to be six years, and the justices are to be elected by the people, except that at the first the Governor is to appoint enough to make up the number to 7.

The antitrust law was strengthened by the prohibition of combination among certain specified interests. Those mentioned in the law who are forbidden to combine to control prices are live-stock men, hay dealers, seed and grain dealers, warehouse men, and railroads. While the meaning of one section is rather vague, attorneys are of the opinion that it even prohibits the dockage of hogs at the stock yards. The penalty for violation of this provision is a fine of \$100 to \$1,000. The second provision of the law prac-

tically declares the stock exchange a trust, and legislates against it. The penalty in this case is a fine of \$1,000 to \$5,000. The third section prohibits any agreement, expressed or implied, by which it is stipulated that grain, seeds, or hay shall not be shipped by the producer or local buyer unless accompanied with warehouse receipts, or that the same shall in any manner be under the control of any warehouse men or agent as a condition precedent to the marketing of said grain. The penalty is the same as that prescribed in the second section. Provision is also made for the enforcement of the law by injunction proceedings. It is made the duty of the Attorney-General to institute both criminal and injunction proceedings against a violator of the act when complaint is made to him by an aggrieved shipper. If any person, company, or corporation can show that its business has been injured by reason of anything declared unlawful or in restraint of trade in this act he shall have a right of action against the person, company, or corporation causing such damage to the amount of three times the original damage.

A committee appointed to visit the Minnesota Penitentiary and examine into the manufacture of binding twine by convict labor, with a view to ascertaining the advisability of establishing such an industry in the Kansas Penitentiary, reported in favor of the plan, and accordingly provision was made for the establishment of a hard-fiber-twine plant, and \$150,000 was appropriated for a revolving fund to be used in the purchase of raw material and for marketing the product, and to receive the proceeds of sale. It was also provided that a plant should be established at the Penitentiary for making bricks for the use of the State. The coal mined by convicts is to be limited in amount to the needs of State institutions. Convict labor may be used for repairing and macadamizing roads.

Several measures were enacted in the interest of education. Provision was made for the disorganization of depopulated school districts and the consolidation of their territory with that of adjacent districts.

A county superintendent must be a holder of a State certificate, or of a first- or second-grade county certificate, or a graduate of an accredited college or normal school, and must have had at least eighteen months' actual experience in teaching.

Boards of education in cities of the first or second class may employ persons holding normal-school diplomas to teach in the schools of said cities without examination by the examining committee of said boards.

Another act provides for the issuing of three years' State certificates to graduates of the School of Arts of the State University, including the course required for the teacher's diploma, or the arts course of any other university or college incorporated under the laws of this State whose course of study shall be approved by the State Board of Education, and which shall maintain the same or equivalent requirements for admission to the freshman class as the University of Kansas, and requiring and maintaining a regular four years' course thereafter for graduation, and which shall maintain a pedagogical department equal to the course for the teacher's diploma at the State University. A life certificate is issued to the holder of such certificate provided he shall have taught two years out of the three.

The uniform text-book law was extended so as to take in books on more subjects than before. Cities of the first class may levy a tax of 8 to 12

mills for teachers' wages and other school expenses.

The political disabilities of ex-Confederate soldiers were removed. Inmates of the Soldiers' Home will be permitted to vote at Dodge City.

The completion of the statehouse was provided for, and the office of statehouse custodian was created.

Canal or irrigation companies are to have the same right as railroad companies to take land by condemnation.

The office of commissioner of fisheries was abolished, and that of fish warden was created.

Townships in counties of fewer than 5,000 inhabitants may maintain fire guards to prevent spread of prairie fires. The poll tax may be paid by work on the guards.

A new law was made for oil inspection. The chief inspector is to be appointed as before by the Governor, and to receive \$1,500. He may have not more than six assistants at \$50 a month and expenses. The fire test of burning fluids is to be not less than 110° F.

It was provided that a commission should be appointed to establish traveling libraries after the plan of New York and other States.

A dairy school is to be established at the Agricultural College; \$25,000 was appropriated for the building and \$9,000 for the equipment and a small dairy herd.

The State University was authorized to make geological surveys of such portions of the State as have deposits of commercial importance.

A general law for corporations was enacted. Dealing in futures was prohibited and the operation of bucket shops.

One of the new laws provided that a tax of 10 per cent. of the premium should be collected from holders of fire-insurance policies issued by companies not incorporated under Kansas laws and not authorized to do business in the State. It gave the Insurance Commissioner the right to demand the privilege of inspecting the policies held under such organizations. In case the policy holder refused to allow such inspection, he rendered himself liable to arrest and a fine of \$100. Three fifths of the tax was to go to the State and two fifths to the city fire department. On a test case the Supreme Court declared the law invalid, as it did not impose a license or privilege or franchise fee, but a tax, and as such violated the constitutional requirement of a "uniform and equal rate of taxation."

The appropriations made by the Legislature are noted under the head of Finances.

Other measures were:

Providing that a deed made by a sheriff under order of court shall be sufficient evidence of legality of sale until the contrary is proved.

Providing for the leasing of unoccupied school lands.

Authorizing county commissioners to pay bounties for scalps of wolves and coyotes.

Providing that a guardian under the laws of any other State or country may sue or be sued in Kansas.

Providing that wills may be probated without testimony of witnesses in case they are insane, dead, or removed to parts unknown.

Making it larceny for a mortgagor of personal property to injure it or sell it without the consent of the mortgagee.

There was a contest in regard to the election of judge in the Twenty-second Judicial District—James Falloon, the fusion candidate, charging that W. I. Stuart, the Republican nominee, was elected by fraud. The contest came to the Sen-

ate, but was not taken up in the regular session. An appropriation of \$15,000 was asked for a special session, and the item was placed in the miscellaneous appropriation bill, from which it was afterward withdrawn and attached as a rider to the executive and judicial appropriation bill. After a deadlock of two days between the Senate and the House, a compromise was effected and an act was passed appropriating \$10,000 for the purpose. The Governor vetoed the bill on the ground that the Senate had had sufficient time and leisure to settle the contest at the regular session. But the extra session was held, the Senate sitting as a contest court with three more than a quorum in attendance, though no Republican members were present. Witnesses were examined and a verdict was rendered against Stuart on the ground that bribery had been used in the election. The office of judge of the Twenty-second District was declared vacant. Mr. Falloon was nominated for it in September, but the Secretary of State refused to file the nomination, and was upheld by the Supreme Court.

Political.—At the county elections in November the Republicans elected 404 of their candidates for county offices, the fusionists 215, the Democrats 5, and 2 independent candidates were elected. Of the 8 district judges elected, 4 were Republicans and 4 fusionists. The general Republican majority was 15,858.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 44,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 408,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,684 in 1860; 1,321,011 in 1870; 1,649,690 in 1880; and 1,858,635 in 1890. Capital, Frankfort.

Government.—The following were the State officers during the year: Governor, William O. Bradley; Lieutenant Governor, W. J. Worthington; Secretary of State, Charles Finley; Treasurer, G. W. Long; Auditor, Samuel H. Stone; Superintendent of Public Instruction, W. J. Davidson; Commissioner of Agriculture, Lucas Moore; Attorney-General, William S. Taylor; Adjutant General, D. R. Collier—all Republicans; Election Commissioners, William T. Ellis, W. S. Pryor, and Charles B. Poyntz; Prison Commissioners, Henry George and Messrs. Fennell and Richardson; Librarian, Pauline Hardin; Mine Inspector, George W. Stone; Chief Justice of the Court of Appeals, James H. Hazelrigg, Democrat; Associate Justices, J. D. White, T. H. Paynter, and J. P. Hobson, Democrats, and B. L. D. Guffy, George Du Relle, and A. Rollins Burnam, Republicans; Clerk, S. J. Shackelford, Democrat.

Finances.—At the close of the year the cash in the treasury amounted to \$1,060,425, and in addition was \$100,000 turnpike stock to the credit of the sinking fund.

The bonded indebtedness amounted to \$3,483,991. Of this \$6,394 is in old issues supposed to be lost, and \$2,477,597 is in educational and normal-school bonds, leaving \$1,000,000 that is payable in 1905 and 1907. Of the floating indebtedness of \$1,572,126 remaining in March, 1898, only \$23,276 remains.

A decision in the Court of Appeals in February was in favor of the State against the Kentucky Chair Company, and involved \$60,000.

Education.—The Auditor's report shows \$1,984,122.35 to the credit of the school fund for the present year. There are 719,654 pupil children as shown by the reports of the school officers, and at \$2.70 each there will be apportioned \$1,943,065.80. The amount to be distributed to

counties, as interest on county bonds, is \$22,918.85; balance to meet expenses of the office and possible corrections in the census, \$18,137.70. The larger resources of the school fund are as follow: To the credit of the school fund for the year ending June 30, 1899, \$265,232.09; sheriffs' revenue, \$1,140,047.46; licenses, \$143,443; annual interest on old and new school bonds, \$138,755.80; tax on railroads, \$101,000; tax on railroad franchises, \$21,000; tax on banks, \$90,000; distilled spirits, \$18,900. The school term in the rural districts is hardly five months of the twelve.

Charities and Corrections.—The expenses of the Eastern Asylum for the fiscal year ending Sept. 30, 1899, exceeded its income by \$2,682.30. This deficit was caused by expending considerable money for repairs of buildings. The report of the treasurer of the Western Asylum, covering the period from Oct. 1, 1898, to Sept. 30, 1899, showed that that institution lived within its income, and had to its credit \$8,860.19. Its expense account embraced about \$11,000, which sum was used for buildings and repairs. The expenses of the Central Asylum have been kept within the per capita allowance, and a surplus of about \$10,000 remains.

The buildings of the Feeble-minded Institute were destroyed by fire during the last administration, but the money realized on the insurance policies was sufficient to construct new ones superior to those burned. Until the present year there has been no separate State institution for juvenile offenders. But the Legislature of 1896 appropriated \$100,000 for building houses of reform for this class. A site was bought near Lexington, and, though the buildings can not be finished till further appropriation is made, they were dedicated in November, and prisoners have been received.

The expenditures for the Frankfort Penitentiary for the sixteen months ending Nov. 30 exceeded its income by \$87,773, and those of the Eddyville Penitentiary for the same period exceeded its income by \$57,076. The three prison commissioners receive under the present law salaries of \$2,000 each.

Railroads.—The report of the Railroad Commission, filed Dec. 1, shows that the railroads have had an exceedingly prosperous year. Two short narrow-gauge roads were built—the Red River Valley, 9 miles, and the Indian Run Railroad, 4½ miles. The Licking Valley Railroad was extended 6½ miles, making the total mileage in the State 3,065. The total valuation of railroad property is \$43,403,918, an increase of \$368,305 over the last assessment. Reports to the board show that 109 persons were killed on the railroads this year, against 125 the previous year.

Insurance.—In January 86 insurance companies doing business in the State were fined \$250 each for alleged conspiracy to combine and control and fix insurance rates.

Several large companies have withdrawn from the State on account of prosecutions in various counties.

A suit apparently involving a new issue was on trial this year, and seems not to have been finally decided. Richard Tate fled from Frankfort in 1888, after robbing the State treasury. As seven years' absence is presumption of death, heirs of the defaulting Treasurer called on the insurance companies to pay the policies he carried. Several of them paid, but the Mutual Benefit Life, of Newark, N. J., refused to do so. It lost in the lower court, and appealed to the Court of Appeals. The company is making its fight on the ground that seven years' absence does not war-

rant presumption of death in the case of a man who is a fugitive from justice.

Decisions.—The laws affecting the taxation of banks were the subject of decisions in the United States Supreme Court in April. The question at issue was the right to levy taxes upon the valuation of franchises or the property of the bank which had been certified by the State board appointed to perform this service. This board was created by an act of the Legislature in 1892, and this legislation was in conflict with the act of 1886, known as the Hewitt act, providing for the taxation of bank stock at the rate of 75 cents on each share of \$100, in full for all State, county, and municipal taxes. The State banks claimed the Hewitt act to be in the nature of a contract, and also attacked the newer law on various grounds. The opinion rendered sustains the act of 1892, thus affirming the opinion of the Kentucky Court of Appeals.

The case of the national bank—the Owensboro National Bank *vs.* the City of Owensboro—involved other points, and in this case the Kentucky Court of Appeals was reversed. The State court had held the law applicable to national as well as State banks, but its holding was upset in this case because of the violation of the Federal statute requiring that the tax upon national banks shall be levied upon the shares of stock in the name of the stockholders.

In a suit to test the constitutionality of the Goebel election law, the majority of the Court of Appeals decided in favor of it, while Judges Guffy, Du Relle, and Burnam dissented.

In April the law under which vagrants were sold on the block for a term of years was declared unconstitutional.

In the State Fiscal Court, April 25, the "convict-parole law," passed in 1884, was pronounced unconstitutional.

Laundries in Louisville resisted the license tax, and were sustained by a local court, but the Court of Appeals reversed the decision. The same court held, in January, that private corporations are subject to the franchise tax. There are nearly 6,000 private corporations in the State which will be compelled to make annual reports and pay a franchise tax.

Lawlessness.—For the past year and a half Clay County has been disturbed by feuds that have broken out in deadly encounters. In quarrels of the White and Baker factions 7 men were killed. In July, 1899, a fight between the Philpots and the Griffins—allies respectively of the Bakers and the Whites—resulted in the death of 5 men and the wounding of others. The Governor issued a statement, Aug. 2, in which, after explaining the course of the trials in local courts and the uselessness of sending militia, he said: "The whole fault in Clay County is a vitiated public sentiment and a failure of the civil authorities to do their duty. The laws are insufficient to enable the Governor to apply a remedy. Such feuds have been in progress more or less for years, and no governor of the State has ever been able to quell them. They have terminated only when their force was spent by one side or the other being killed or moving out of the county."

Under date of Sept. 8 it was reported from London: "News reaches here from Clay County, near the line of Leslie County, that Henry Marcum was ambushed and murdered yesterday, and James Roberts suffered the same fate to-day. In Perry County, farther back in the mountains, there has been a renewal of the French-Eversole feud, resulting in the killing of Phil McComb, a member of the former family."

After the election, Nov. 7, a Louisville paper said: "Following closely upon a series of wholesale murders in the State's 'feud district,' where a man's life is not safe, we are now shown the sickening spectacle of 15 American citizens murdered outright at the polls while attempting to exercise their right of suffrage. That number were instantly killed in election rows and riots in different parts of the State, and the news comes that a dozen more are likely to die."

On Dec. 6 a young negro, Richard Coleman, the confessed murderer of the wife of his employer, was burned at the stake in Maysville, after suffering frightful torture at the hands of a mob. The report said the husband and the brother of his victim fired the pile of wood and kept up the fire, and that none of the crowd was masked, the lynching having taken place in daylight.

The Kentucky Monument at Chickamauga.—This was dedicated with appropriate ceremonies on May 3. In accepting the monument and transferring it to the Government Gov. Bradley made an address, in which he said: "This shaft is dedicated not alone to those who died on this and surrounding fields, but to the gallant survivors who, when the frowning clouds of war were dispelled by the bright sunshine of peace, returned to their homes to repair broken fortunes and are to-day numbered among the best and most distinguished sons of the Commonwealth. Kentucky has evinced no partiality in this evidence of loving remembrance. It carries with it no heartburning, no jealousy, no invidious distinction. It is not an emblem of honor to the victor and reproach to the vanquished, but an equal tribute to the worth of all."

Political.—The campaign for the election of State officers this year was the bitterest probably in the history of the State, and, although the Republican candidates were declared elected on count of the returns, and were inaugurated, contests were entered, on the claim that fraud had been used, which were still unsettled far into the year 1900, after the excitement of the campaign and the subsequent struggles had culminated in the tragic death of Senator Goebel, the candidate of the Democratic party.

The Democratic convention was held in Louisville in June. The contest between the partisans of William Goebel and those opposed to his candidacy was long and determined. A permanent organization was not effected until the third or fourth day, and the nomination for Governor was not made until the sixth day. The principal candidates were William Goebel, ex-Gov. P. Wat Hardin, and William J. Stone. After many ballots had been taken Senator Goebel succeeded in securing the adoption of a resolution declaring that after the twenty-fifth ballot and each one following the candidate showing the least strength should be dropped. This resulted in the elimination of Mr. Stone's name, and on the twenty-sixth ballot, June 27, Goebel was nominated by 560½, against 530½ for Hardin. The completed ticket was: For Governor, William Goebel; Lieutenant Governor, J. O. W. Beckham; Secretary of State, Breck Hill; Attorney-General, R. J. Breckenridge; Treasurer, S. W. Haeger; Auditor, Gus Coulter; Commissioner of Agriculture, J. B. Nall; Superintendent of Public Instruction, H. V. McChesney.

The platform reaffirmed the principles of the party as formulated at Chicago in 1896, favored the nomination of William J. Bryan and the election of J. S. C. Blackburn to the United States Senate, and approved the Cuban war, but de-

nounced the Philippine policy of the Administration. Further the resolutions said:

"We call attention to the incompetency of the present Republican administration in Kentucky; to the abuses and scandals in the management of penitentiaries and asylums while under Republican control, and we commend the wisdom of the last General Assembly of Kentucky in the enactment of laws which secure the wise and economical administration of the penitentiaries and other public institutions of the State under Democratic control; to the increase in the rate of taxation; to the vetoing of all Democratic legislation favorable to the interests of the people and hostile to the oppressions and extortions of organized wealth. We declare that after four years of trial it is well established that the Republican administration is incapable of upholding and maintaining the laws and of preserving peace and order in the Commonwealth, and we especially condemn the present Republican Governor for surrounding the State capital with the military arm of the government in time of profound peace, thus attempting to influence and terrorize the General Assembly, pending the election of a United States Senator.

"We indorse the amendment to the State election law passed by the last Democratic General Assembly of Kentucky over the veto of a Republican Governor. We declare the amendment to be in the interest of fair and honest elections."

A conference was called of the Democrats opposed to Goebel for the purpose of organizing the opposition. It met at Lexington, Aug. 2, and called a State convention, which assembled there Aug. 16. The resolutions that were adopted declare the Louisville nominees not nominees of the Democratic party; demand the enactment of a law giving force and effect to section 151 of the State Constitution, which provides for deprivation of office of any person who to secure his nomination or election has been guilty of the unlawful use of money or other things of value, or has been guilty of fraud or intimidation, bribery or corrupt practice; approve the principles and platform of the Chicago convention of 1896, and Bryan for President in 1900; denounce the Goebel election law; favor the regulation of railroads so as to prevent extortion; demand the abolition of the Chinn book bill; and condemn President McKinley for alleged advancement of the trusts.

The party was called "The Honest-election Democratic party," and the ticket was: For Governor, John Young Brown; Lieutenant Governor, P. P. Johnston; Secretary of State, E. L. Hines; Attorney-General, Lawrence E. Tanner; Treasurer, John Droege; Commissioner of Agriculture, G. W. Vandever; Superintendent of Public Instruction, Rev. E. C. Overstreet; Auditor, Frank A. Pasteur.

The Republican State Convention was held in Lexington, July 12-14. Candidates for the gubernatorial nomination were Attorney-General W. S. Taylor, Auditor Samuel H. Stone, and Judge Clifton J. Pratt. The two latter withdrew, and Taylor was nominated by acclamation.

The ticket was: For Governor, William S. Taylor; Lieutenant Governor, John Marshall; Secretary of State, Caleb Powers; Attorney-General, Clifton J. Pratt; Auditor, John S. Sweeney; Treasurer, Walter R. Day; Superintendent of Instruction, John Burke; Commissioner of Agriculture, J. W. Throckmorton. Candidates for Railroad Commissioners were H. S. Irwin and John C. Wood in two of the districts. In the First District the Republicans made no nomination.

The resolutions declared: "We affirm that the existing election law in Kentucky, enacted by a Democratic General Assembly in 1898 over the objection of our Republican Governor, is viciously partisan, subversive of fairness and honesty in elections, hostile to the principles of free government, removes safeguards which have heretofore protected and guaranteed the right of suffrage, denies to our courts the power to protect voters in this State against the perpetration of fraud at elections, commits broad power to irresponsible commissioners not chosen by or accountable to the people for their acts, and imperils the sacredness, efficiency, and power of the ballot. We therefore set forth as the supreme issue before the people of this State the repeal of this revolutionary law, and the Republican party pledges itself to its repeal and to the restoration of the system under which free and fair elections have heretofore been the rule in Kentucky. We cite the election law, the Penitentiary bill, the McChord railway bill, and many other measures introduced and attempted to be passed by the last Legislature of Kentucky as proof of the type of legislation to which the people of the State will be subjected should the Democratic party come into power under its present leadership, legislation alike hostile to political honesty and purity, and to the material prosperity and advancement of our Commonwealth."

The State administration and the conduct of United States Senator Deboe were commended, trusts were denounced, and the Republican party was congratulated on its legislation for their suppression. The national administration and its policy were approved, and further it was said:

"We believe in popular education and the fostering and improvement of our public-school system, and we favor a just and equitable law by which the cost of books shall be reduced to the lowest price consistent with due regard for their merit. But we are opposed to the school-book law passed last year by the lower house of the Legislature, because under its provisions desired relief will not be secured, but a more complete monopoly will be established."

The convention of the People's party was held in Frankfort, July 27. Some effort was made toward fusion with the Democrats opposed to Goebel, but the sentiment for independent action was too strong, and an entire party ticket was nominated. John Y. Blair was named for Governor; for Lieutenant Governor, W. R. Browder; Auditor, Samuel R. Graham; Treasurer, A. H. Cardin; Secretary of State, Benjamin Keys; Superintendent of Instruction, John C. Sullivan; Commissioner of Agriculture, W. J. Hanna; Attorney-General, John T. Bashaw; Railroad Commissioners, R. H. McMullen, John H. Reed, and W. G. Patrick.

The resolutions declared in favor of Wharton Barker and Ignatius Donnelly as candidates for the presidency and vice-presidency in 1900, and said:

"We heartily sympathize with those honest Democrats and Republicans of Kentucky who refuse to submit to bossism in their several parties; especially do we approve of all efforts to rid Kentucky of the odium of the unfair and disreputable law known as the 'Goebel election law' passed by the recent Democratic Legislature, indorsed by the Democratic convention at Louisville, and to the retention of which the Democratic party of Kentucky stands committed, now on the statute books of this Commonwealth; and we regret to see that Hon. William J. Bryan, for whom the Populists of Kentucky voted in

1896 for President of the United States, by his public indorsement of the ticket nominated at Louisville and the platform there adopted, assumes the responsibility of indorsing the criminal attempts of the corrupt element of Kentucky politics to subvert the ballot.

"We denounce the infamous Goebel election law as a revolutionary and undemocratic attempt to subvert the ballot, to en throne in Kentucky a corrupt political ring, and to practically destroy popular government. Therefore we demand its speedy repeal and the enactment of a law which will preserve inviolate in this Commonwealth of Kentucky the right of a free, untrammelled ballot and a fair and honest count."

The convention named G. W. Reeves for United States Senator.

The Prohibitionists held a convention at Louisville, Aug. 2, declaring for complete legal prohibition of the liquor traffic, demanding the repeal of the Goebel election law, denouncing the State administration, and favoring woman suffrage. Their ticket was: For Governor, O. T. Wallace; Lieutenant Governor, William H. Zeigler; Secretary of State, W. M. Likens; Attorney-General, Gen. James H. Beauchamp; Treasurer, J. R. Pile; Auditor, Rev. Samuel M. Bernard; Commissioner of Agriculture, A. W. Carpenter; Superintendent of Public Instruction, G. E. Hancock.

The Socialist-Labor party made nominations for some of the State offices, as follows: For Governor, Albert Schmutz; Treasurer, James Delaney; Auditor, R. P. Caldwell; Commissioner of Agriculture, Jassem O. Hearn.

As it was feared that the day of election would be marked by rioting, and possibly by bloodshed, so strong was party feeling and so highly wrought the excitement, the State troops were ordered to be prepared for an emergency, and were in attendance in Louisville. The result of the election was for a long time in doubt, and notice was served upon the commissioners in Jefferson County before the official count was finished, Nov. 17, as follows: "For the Democratic candidates we now give notice that at the close of the count and before any certificates be issued we will move the board and all other authorities that may consider this election to declare null and void the election held in the city of Louisville on the seventh day of November, 1899.

"1. Because of the usurpation of William O. Bradley in calling out and illegally using the militia and overawing and intimidating the voters and officers of and at said election and interfering with the progress of said election and with the duties of the officers of said election.

"2. Because S. B. Toney unlawfully usurped power in requesting said William O. Bradley to call out and use said militia for said purpose when said call was entirely unnecessary, and the civil authorities were able and willing to execute any order made by said court.

"3. Because said militia was used for the unlawful purpose aforesaid.

"4. Because said election was not a civil election, but a military election.

"5. Because the said militia was unlawful in every respect and a criminal usurpation of power by said named persons, and thereby the civil power was subordinated to the military power, and an overt act of a treasonable nature against the Constitution of the State of Kentucky was committed."

With the vote of Louisville thrown out, there would have been a plurality for Goebel. It was charged also that ballots cast in some of the strongly Republican counties were on tissue

paper, and the assertion was made that the election should be declared void in those counties. On the other hand, it was declared that the returning boards had thrown out every vote for rejecting which the slightest pretext could be found, and that 25,000 anti-Goebel votes were lost by their rulings.

The official count gave the election to the Republicans, the vote for Governor being reported: Taylor, 193,714; Goebel, 191,331; Brown, 12,140; Blair, 3,038; Wallace, 2,346; Schmutz, 510.

One member of the Board of Commissioners prepared a minority statement, in which he declared his belief that the Democratic candidates were legally elected, and that the use of tissue ballots should have rendered void the election in several counties. He denounced the use of militia on election day as reprehensible and intolerable in an Anglo-Saxon community.

The Railroad Commissioners elected were J. Fletcher Dempsey and C. C. McChord, Democrats, and John C. Wood, Republican.

The Legislature of 1900 stands: In the Senate, 26 Democrats and 12 Republicans; in the House, 59 Democrats and 41 Republicans.

The inauguration of the new State officers took place Dec. 12. Notices of contest were served. It was expected that while those for the two higher offices would come before the Legislature, those for the minor offices would be decided by the election board sitting as a board of contest. Two members of this board having resigned, the State Election Board, or some other Democratic authority, appointed two Goebel Democrats to succeed them, while Gov. Taylor appointed a Republican and an anti-Goebel Democrat, thus further complicating matters.

Meantime, in December, a suit was brought to have a local-option election in Ohio County declared void. One of the minor grounds of contest was the use of very thin or tissue-paper ballots, and it was supposed that the decision in regard to their acceptance would be used in the election contests that were to come. The county election on the local-option question was held to be valid.

An address was issued to the Democrats of the State, Dec. 21, signed by former Senator Blackburn, chairman of the State Campaign Committee, Chairman Young, of the State Central and Executive Committees, and all of the members of those committees, in which they said:

"The Democratic party of Kentucky, through its several State committees, has unanimously declared that the best interests of the party, as well as justice, demand that contests shall be made by all the candidates on the Democratic ticket for the respective offices for which they were nominated."

The contest for the offices of Governor and Lieutenant Governor before the Legislature belongs to the history of 1900.

KOREA, or Cho-sen ("Morning Radiance"), a country in eastern continental Asia. Seaward it fronts Japan, and it lies between China and Russia, separated from the former by Yalu river and the Ever-White mountains, and from the latter along a frontier of 11 miles by Tumen river. No exact census of the population has been taken, but, estimating from the number of houses, there are 13,000,000 to 15,000,000 souls in the empire. Females are in the minority. The three social classes are the *yang-ban* (civil and military), who live by Government employ in idleness or by evading taxes and tolls; the mass of the people, mostly agricultural; and the seven degraded classes. The peddlers and butchers form powerful guilds,

which, though now abolished in form, are very influential, and almost all industry is organized into powerful societies. Buddhism, under ban from 1392 to 1895, and its priests and monks during that period disallowed entrance into cities, is the popular religion, and is now unrestrained. Confucianism is the cult of the literary and official classes. Sorcery and superstitions abound, influencing every action of life. There are many grotesque expressions of these in the sculpture fronting the royal palace, besides the colossal monolith *mir-ycks* (distance posts) near every village, tablets, and stone work of various kinds throughout the country.

Government.—Succession to the throne of the Korean Empire is hereditary, and the edict of the sovereign is law. The written Constitution, in 9 articles—issued in August, 1899—declares the independence of the country, and that for five hundred years Korea has been an absolute monarchy, and that it shall remain so for all time. The other 7 articles asserts in detail his prerogatives of absolutism. Historically, Ki-ja, an ancestor of Confucius, was the founder of Cho-sen (1122 B. C. to 9 A. D.), which gave way to the Three Kingdoms (9-960 A. D.), and these to united Korea, or Korai (960-1392), and this again to Cho-sen, founded by the present ruling dynasty, which in 1864 failed of direct heirs, when the present King, then a minor, was nominated, his father, the Tai-Wen-Kun, practically ruling the country for twenty years. From early ages Korea was China's vassal, and paid tribute, while Japan also claimed her as a tributary. Through the Chino-Japanese War of 1894-'95, and by the treaty of Shimonoseki in 1895, Korea was declared free. On Oct. 14, 1897, at 3 A. M., before the altars of the spirits of the land, the King assumed the title of Emperor and named his realm Dai-Han ("Great Han," in distinction from the ancient San-Han, or "Three Kingdoms"). In administration he is assisted by a Council of State and 9 ministers, presided over by a Premier. The ministers are: Royal Household, Finance, Home Affairs, Foreign Affairs, War, Justice, Agriculture, and Education. In each of the 14 provinces there is a governor, and in each of the 360 districts a magistrate. There is no navy apart from revenue vessels, but 5,000 men are armed and drilled in modern style. Nine ports are open to foreign trade and residence.

Open Ports.—Chemulpo, near the capital, Fusan, in the southeast, and Wonsan, in the northeast, have hitherto been open to foreign commerce and residence, and aliens, mostly nontrading, also have lived in the capital. Mokpo and Chenampo were opened in 1895. On May 1, 1899, 4 new ports, after due survey of the land, were formally opened—Kunsan, on the west coast, south of Chemulpo; Masampo, in the southeast, near Fusan; Sungchin, on the east coast; and the city of Ping-Yang, in the north, as a trade mart. The Russians and Japanese have at Masampo especially taken up land so eagerly and so largely that a collision between these rivals seemed for a while imminent. There are now about 20,000 Japanese in Korea, 2,000 being in Seoul and the majority at Fusan. In the new treaty, published in October, 1899, in which China is called the Middle Kingdom, Korean subjects in China have the full rights of the most-favored-nation subjects, while in Korea no Chinaman can do stationary trade outside the treaty ports. A handsome new bund or sea wall and avenue fronting the water in Chemulpo was opened with a grand celebration in June, 1899, by the Japanese residents, who number 6,000.

Foreign Trade.—The total trade for 1897 was \$11,755,625 in gold, and for 1898 \$8,763,932 in gold. The short crop of 1897, though succeeded by a better one in 1898, made the natives timid about parting with their food supplies, and hindered trade. American imports have increased. In 1897 they amounted to \$400,000 in gold. In 1898 railroad material, \$297,861, and petroleum, \$189,380, were the chief items in the total of \$655,037. In textiles the import of Japanese yarn, used by the native women on their hand looms, increases, while that of shirting decreases, that for 1898 being 500,000 pieces. The Korean's commercial instinct is feeble. He runs easily into debt, and permanently overdraws his account at the bank. Hence the Chinese trader is steadily replacing the native. Japanese and Chinese have acquired so much land, through the foreclosure of mortgages, that the Korean Government fears lest whole cities get into the hands of these aliens. Concessions are granted to American, German, and English syndicates to work gold mines on condition that one fourth the net product be paid to the Korean Government, and these enterprises are doing well. Forty Americans and 1,200 Koreans are employed on the 60 stamps that treat the auriferous rock in the region of Wonsan (or Gensan), including 1,000 square miles. Coal is not yet mined by foreigners, but the surface fuel is bagged at \$90 a ton, mixed with red clay and used in balls, which burn well but are costly. Japanese and Russian companies are licensed to catch whales off the coast. The whales are shot from small steamers, and their carcasses are towed ashore, cut up, and salted, to be sent to Japan as whale beef, which is bought at good prices and eaten. This Japanese interest amounted in 1898 to \$1,750,000, and into Nagasaki alone 2,030,912 pounds of whale meat, worth \$56,470, were imported. The whalebone, being inferior, is sent to Japan for manure. Various minor concessions have been granted to Russians (lumbering, lease of land for whale curing, etc.), Germans, and Americans, native workers having the privilege of steamer service on the Ta-tong river, the Seoul-Gensan telegraph, and the working of coal mines.

Railways.—Surveys for the Seoul-Fusan Railway have been completed by the Japanese, but since the change in the programme of the Russian Manchurian lines nothing beyond survey has as yet been done by the French syndicate. The Seoul-Chemulpo Railway, 25 miles long, standard American gauge, built by Messrs. Colbran & James for James R. Morse, the concessionaire—all Americans—at a cost of \$1,500,000 in gold, is running 4 trains daily between port and capital. The concession and materials were sold, Dec. 31, 1898, to a Japanese syndicate. It was opened for traffic Sept. 1, 1899. In Seoul Mr. Colbran built an electric trolley railway 6 miles long for a Korean company, of which Ye-Cha-Yun, formerly in Washington, is president. It runs from outside the new west gate through the city to the east gate, and thence to the imperial tomb. It was at first injured by the mob, because they supposed it hindered rain, but it is now popular and pays well.

Politics and Events.—The year has been characterized by an intense conservative reaction in the Government and an absence of important diplomatic or political events, except the chronic local rebellions in the provinces and the plots of rivals and partisans in the capital. Though the solar calendar was adopted in 1895, and is officially observed, yet the people still celebrate, with a fortnight of rejoicings and old-time customs, the lunar calendar and the Chinese New

Year's Day and season. After riots between the reform and the conservative elements, the peddlers' and butchers' guilds were abolished and the Independence Club and the popular movement were reduced to nullity. In March a school for girls was opened in Seoul by Korean ladies, the first in the country under native auspices. After much excitement between the anti-Russian party and their few opponents, during which Kim-Hong-Niuk, a powerful pro-Russian, was murdered and his body mutilated by the mob, Russia and Japan, on April 25, agreed on a *modus vivendi*, both recognizing the sovereignty of Korea and engaging to refrain from direct interference in her internal affairs. No military or financial advisers will be nominated by either without mutual agreement. Russia agrees not to impede the commercial relations between Japan and Korea. On June 8 Prince Henry of Prussia arrived at Chemulpo, and on the 11th he had audience of the King, with a review of 3,000 troops. On the same day there were attacks with dynamite bombs on five Korean ministers. On Oct. 21 the King's adviser, Mr. G. R. Greathouse, an American of great legal ability, followed in death Gen. Charles Le Gendre, who for several years held the same office, and Gen. William McE. Dye, the American military instructor and Vice-Minister of War. The year was one of notable activity in Christian missionary work at the ports and the capital, and of steady progress in education, with a revival of Confucianism among the *yang-ban*.

KRUGER, STEPHANUS JOHANNES PAUL, President of the South African Republic. He was born in Rastenburg, Cape Colony, in 1825. His father was not of the old Afrikaner stock, but an immigrant from Germany, one of the many that came from the Rhine country in the eighteenth century and merged readily in the Dutch population, to which in language and race they were closely related. When the Boers of the eastern parts of the colony, rendered desperate by the decision of the British Government that the Kaffirs who had murdered their neighbors, stolen their cattle, and burned their homesteads were in the right, aggrieved too by the policy of the colonial Government to uproot the Dutch language and laws, determined to abandon their homes and their fixed property and to go far into the wilderness to seek a promised land where the English scepter could not reach, the Krugers were as ready as the old Cape families to leave their roof tree and encounter the dangers of the great trek. Paul Kruger was only a boy of twelve, but so strong and bold that when a leopard seized his little sister he rescued her and killed the beast with his knife. They were with one of the commandos, all neighbors and relatives, that trekked all the way over the Orange, over the Vaal, up the valley of the Caledon, over the Drakensberg, and from their laager on the Tugela sent their wisest farmers out to view the land; and they found it fair, the rich terrace country of Natal, truly the promised land of Canaan. Then came the negotiation with Dingaan, then his treacherous massacre of their leaders, then the deep cry for vengeance, the vengeance of the Lord, and the long, crafty war, that strange war of 200 or 300 men against 30,000; but their faith gave them strength, and they won the final victory. Then came a British detachment, and the officer told them that they were British subjects; and when re-enforcements arrived the British flag was raised over the land of the Amorites that they had taken with the sword. Back over the steep pass of the Drakens-

S. J. Schuyler

S. J. P. Künig

berg trundled the long caravans of great Cape wagons, each drawn by a dozen yoke of oxen. The Transvaal was the land of Canaan after all, for there the Philistines could not oppress them.

The elder Kruger took up a farm as large as a county, and when the boys grew up and married they made locations for themselves. Paul was known throughout the Transvaal for his strength, skill, courage, and resource. He hunted over the whole country, and killed more lions than any one else. No Kaffir could match him in fleetness of foot or endurance. Sound and shrewd of judgment, keen in practical affairs, convincing in argument, eloquent, masterful, he asserted himself among the young burghers, and soon held a place in the councils of the young nation of which he was the product and the type. He became field cornet, a member of the Volksraad, an active and diligent member who shaped legislation because he was grounded in the principles on which the republic was based and a thorough believer in them. He became a member of the Executive Council under President Burgers in 1872. When dissatisfaction at the liberal religious views of President Burgers threatened to disrupt the republic, when the failure of the expedition against the Bapedi rebels and the financial embarrassment caused by the President's ambitious policy of internal improvements seemed to justify the opinion of the pious Doppers that the Lord had deserted the republic, an English commissioner appeared and raised the British flag over the Transvaal, and a strong body of troops marched in straightway. Paul Kruger, Piet Joubert, all the Boers, all the Boer wives still more, were determined that the republic should not go under, that the Englander should not rule them and their children. All signed a memorial declaring that they did not desire British annexation—all the Boers, not the British and German traders and artisans who had invited the occupation. Kruger, Joubert, and Pretorius went to London to protest against the action of Sir Theophilus Shepstone, went again with this document to disprove the statement that the people had asked for annexation, and were informed that the British flag, once raised, would not be hauled down. The Boer deputation returned home discomfited, but not entirely disheartened. They knew their people's patience, persistence, unity, courage. The case was not worse than when they warred against Dingaan and his Zulus. They did as they had done in that dire time of tribulation. They came together quietly to discuss and plan. They prayed and sang the Transvaal hymn of deliverance from the British yoke. They quietly acquired more firearms and stored up provisions. When the British had reduced their garrisons they suddenly raised the flag of independence. The British sent troops up from Natal, and the Boers trapped them and beat them. When a rude farming community of about 6,000 men bade defiance to the British Empire, and when 800 British regulars were put to flight on ground selected by an English general by 156 of these farmers, there seemed to be political and military grounds for vindicating British prestige, and therefore an army was sent to subjugate the Transvaalers. When, on the other hand, every Dutch Afrikaner felt his blood boil when he saw what England had done and intended to do to his kindred in the Transvaal there were political and military grounds for the British Government to stay its hand. Mr. Gladstone appreciated these grounds, and he understood that it would be more ignominious for Great Britain to impose a tyrannical yoke on a

race of white freemen than it was to have British soldiers worsted in a few skirmishes. Therefore the convention of 1881 was signed, giving back self-government to the Transvaal, Great Britain retaining suzerainty. The military successes that brought about this result were due to Joubert, who was elected commandant general. The political and diplomatic success was achieved by Kruger, and for that reason the burghers chose him in 1882 to be President of the Transvaal Republic, and in 1883, when the regular electoral period came round, he was re-elected for five years, and in each successive election since, in 1888, in 1893, and in 1898. The convention of 1881 did not secure to the Transvaal that full measure of independence to which President Kruger and the burghers aspired. When they had organized the republic on a new and lasting basis, and were strong again because they were united, the President set himself to work to secure a revision of the convention. He was willing to concede commercial and territorial advantages if the Queen's Government would yield rights that were scarcely exercised or had little value. It was a question of names rather than actualities, but names that fastened the badge of dependence on the republic were harder to bear than material sacrifices. There was the right to march troops through Transvaal territory, the right to represent the republic in its external relations, the right to appoint a resident; there was the suzerainty, an invidious word, having no modern legal meaning, only defined as meaning here those specified rights. Paul Kruger went to London again in order to negotiate a new convention with Lord Derby, who had to consider, as before, the opinion of the Cape Afrikaners, which was altogether propitious, for Kruger always knew what ground he was walking on. To renounce any one of the thousand shadowy rights built out of words that rest unheeded in the British archives would not enter into the head of a British minister. The Liberal Secretary of State for the Colonies was willing to make a new convention, to let the Transvaal resume the old name of South African Republic, to expunge the word suzerainty from the preamble, to strike out the right to march troops into the Transvaal, to send a diplomatic agent instead of a resident to Pretoria, and to let the republic have its own diplomacy, subject to the condition that the Queen's Government should have six months in which to disapprove any treaty made with a foreign power. That veto power was all that stood between the Transvaal and absolute independence. The state President was willing to give a substantial *quid pro quo* in order to take back to Pretoria this convention of 1884.

The national development of the South African Republic was rapid after Kruger had secured this convention. With their own railroad to the non-British port of Delagoa Bay the Boers were independent of the railroad and customs tariffs of the Cape and Natal. They secured a title to a port of their own, the Bay of St. Lucia, in Zululand, but the British Government intervened and took it away from them. The discovery of gold in the Transvaal opened the prospect of a national revenue, a thing almost impossible to obtain from farmers alone, and Kruger permitted miners to come in, and gave them a code of mining laws as liberal as those of California. He had controversies with the Foreign Office, of course. His life has been spent in these controversies. The British settlers objected to being commandeered to fight Kaffir rebels. He excused

them from being commandeered. Afterward they wanted franchise privileges. He gave them franchise privileges in matters affecting the mines and the Uitlander community. Eventually they raised a factitious clamor for full burgher rights. Here he had to deal not with the bungling impersonality in Downing Street, with its pigeonholed official knowledge which would make out the Transvaal Boers to be British subjects who had gone beyond the pale of the law to gratify their criminal propensities among savages, but with a man, a practical politician, who could bend multitudes to his will, who was crafty, ingenious, resourceful, careless of the means he used if they only served his end, and that end involved first of all the extinction of the South African Republic. The history of South Africa subsequent to the conclusion of the last London convention is a narrative of the struggle between Paul Kruger and Cecil Rhodes. As Premier of Cape Colony and the accepted leader of the Afrikaner party, pretending to pursue the good of all South Africa, but nursing the local jealousies springing from separate material interests, Rhodes sought to win the Cape Dutch and the Free Staters to his side, and actually secured their quiescence and consent when he threw a strangling band of British territory round the Transvaal, checking all expansion to the west or the north. Kruger had established friendship with Lobengula; but Rhodes unearthed a dormant mining concession, given by Lobengula for a supply of firearms to fight the Boers, and on the strength of this obtained a royal charter. The Cape Dutch had now lost faith in Rhodes, so he took the opposite party into his train, and nursed the jealousies of the British in South Africa, especially the rapidly increasing mining community on the Rand, which grew to outnumber the Boers of the Transvaal. He plotted the revolutionary uprising of 1895 and the invasion of the Transvaal by the Chartered Company's troops. This proved a lamentable failure, owing to the watchfulness of Kruger and the unwillingness of the American conspirators and of the workmen to abolish the republic and accept British rule. If Rhodes had been on hand there would have been no abortive rising, but he had to suffer an eclipse in consequence of the fiasco. To Kruger it gave the opportunity he desired. He armed and fortified the Transvaal. It was four years before the Uitlander agitation could be renewed with the prospect of British official support. In 1899 Mr. Chamberlain and Sir Alfred Milner determined to curb the growing military power and national spirit of the South African Republic, even at the cost of war. Asserting the suzerainty of Great Britain, they assumed the right of the British subjects in the Transvaal to the franchise on a theory that Englishmen are a masterful race,

who will not suffer others to rule them, and that such a condition constituted a danger to the peace of South Africa. The policy of President Kruger in regard to the franchise was always clear and simple. He wanted as many new burghers as he could get that would stand by the republic and uphold its laws and institutions. Strangers who came to get money and return after a few years to their own country he did not want; still less Britishers who desired to upset the republic and convert it into a British colony. When the strangers began to flock in the naturalization period was made longer and longer, so as to exclude the elements that could not be assimilated, though all who showed their loyalty to the republic by going out with the burgher commandos to fight native rebels or the Jameson raiders were naturalized immediately by special legislation. The state President offered to prove to Sir Alfred Milner that Englishmen with few exceptions would not renounce their nationality to become Transvaal burghers, and that the majority of the Uitlanders were satisfied with the laws and their administration. The High Commissioner persisted in his demand for a five years' retrospective franchise as an irreducible minimum. The state President offered this if the newly revived claim to suzerainty were abandoned; but Sir Alfred Milner could not agree to retract or even ignore the absurd assumption of Mr. Chamberlain that the preamble of the convention of 1881 was still in force. President Kruger said he would not consent to give his country away to strangers. Thus war resulted between Great Britain and the allied Boer republics—a war that he predicted would stagger humanity.

Ohm Paul, or Uncle Paul, as his people sometimes call him, is vigorous in body and intellect in his old age. He is a typical Boer patriarch, the father of eleven children, who have large families too. He has sold gold-bearing land and other property enough to make him very wealthy—a millionaire in pounds sterling, it is said—yet he lives in the utmost simplicity in a modest house. He shares the common Boer disdain for luxury and elegance, as well as for ceremony and formality. The Bible is his constant guide, and from its perusal he has acquired the habit of quoting scriptural texts in support of his political arguments. From the Bible, too, he has learned the graceful art of illustrating his meaning by means of parables and forcible similes. He often mounts the pulpit, and has the reputation of being the best preacher in Pretoria. Tobacco and coffee are his only indulgences. Coffee is indeed the only regale that is usually set before visitors in the President's house, and to keep a plentiful supply ready an annual sum is allotted from the state treasury.

L

LAWTON, HENRY WARE, American soldier, born in Manhattan, Lucas County, Ohio, March 17, 1843; fell in the battle of San Mateo, Luzon, Philippine Islands, Dec. 19, 1899. He was a student in the Methodist Episcopal College in Fort Wayne, Ind., when the civil war broke out, enlisted in the Ninth Indiana Volunteers April 18, 1861, and was appointed a sergeant. On Aug. 20 he was commissioned first lieutenant in the Thirtieth Indiana Regiment, May 17, 1862, was promoted captain, and Nov. 15, 1864, lieutenant colonel. He was mustered out of the service Nov.

25, 1865, with the brevet rank of colonel. In 1864 Capt. Lawton commanded his regiment. Its service was at the West, and he received the official commendation of his superior officers on several occasions, especially for the manner in which he handled his men in the battle of Nashville. The brigade to which his regiment belonged captured on the two days of battle 7 of the 13 guns secured by the entire division, and 641, or more than half, of the prisoners. The Thirtieth Indiana was very much reduced in strength about this time, and Capt. Lawton car-

ried into action in the 7 companies composing it probably not more than 250 men. In his official report of the part taken by his regiment in the battle of Franklin (Nov. 30, 1864), which preceded that of Nashville and was a part of the same general movement, he says:

"After a very irregular march all night I arrived with the brigade (Third) at Franklin at about 8 A.M. of the 30th inst.; was formed in irregular order, and with arms stacked remained long enough to prepare breakfast. About 11 A.M. we were moved to the right, near the western portion of the city, and were formed by Gen. Grose, commanding brigade, in line of battle. My position was in the front line, joined on the right by the Seventy-fifth Illinois and on the left by the Eighty-fourth Indiana. Skirmishing had already begun on the left of the line, and was now commencing in our front. A line of works was now being rapidly constructed, and by 4 P.M. was completed.

"My regiment being composed mostly of new levies and drafted men, and entirely ignorant of the use of arms, I deemed it necessary to have all spare time given to drill; consequently when the works were finished I was forming for that purpose when the pickets in my front commenced firing very rapidly, and by the time I had formed behind the works were driven in by a charge of the enemy. They fell back immediately in my front and compelled me to hold my fire for the purpose of saving my own men. The enemy received an oblique and very destructive fire from the Ninth Indiana on the right of the line, which checked him until the pickets got under cover of the works, when I immediately opened upon him. The two fires soon became too hot, and he was compelled to fall back, which he did in considerable disorder. Pickets were again sent out in my front and kept up a slow fire, but were not again driven in. Heavy fighting, however, was done on the left, but my command had no part, and nothing further occurred until twelve o'clock that night, when our line was withdrawn and I moved with the brigade across the river without further molestation.

"The conduct of both officers and men was good, without exception, and they have my warmest thanks for the promptness with which they did their part."

After the war Col. Lawton began the study of law at Harvard, but he soon gave it up and accepted an appointment as second lieutenant in the Forty-first United States Infantry, July 28, 1866. He was promoted first lieutenant July 31, 1867, and served as regimental quartermaster from June 1, 1868, to Nov. 11, 1869, when he was transferred to the Twenty-fourth Infantry, with which he served in the same capacity till Jan. 1, 1871. He was then transferred to the Fourth Cavalry, of which he was quartermaster most of the time till March 20, 1879. At that date he was promoted captain, Sept. 17, 1888, was made major and inspector general, and Feb. 12, 1889, lieutenant colonel.

He was commissioned brigadier general May 4, 1898, and placed in command of the Second Division of the Fifth Corps. In the Cuban campaign he led the advance, and his division was the first to land at Daiquiri. He commanded in the action at El Caney, exhibiting great skill and gallantry. After the capture of Santiago he was promoted major general (July 8) and placed in command of the district. In the autumn of that year he returned to the United States, and accompanied President McKinley on his tour of the Southern States. In December he was as-

signed to the command of a corps in the Philippines, and he was in active service there through the year 1899 till he was shot dead in battle. A popular subscription for the relief of his widow and children aggregated almost \$100,000, which was made over to Mrs. Lawton early in March, 1900.

LIBERIA, a republic on the west coast of Africa, founded by emancipated American slaves, with a Constitution copied after that of the United States. The Senators are elected for four years, and members of the House of Representatives for two years. The President is elected also for two years. The Senate has 8, the House of Representatives 13 members. The President is W. D. Coleman; Vice-President, J. J. Ross. The Government receipts, coming mostly from customs, amount to \$158,000 a year. The debt consists of a loan of £100,000 raised in 1871, which with arrears of interest since 1874 amounted in 1897 to £204,500.

The area of Liberia is estimated at 14,360 square miles, with a population of 18,000 Afro-Americans and 1,050,000 Africans of native stock. The Kru and Wey tribes of Liberia supply crews and stokers for many of the steamers engaged in the West African trade, and also fighting men and porters for all expeditions sent into the interior and laborers for plantations in Cameroons and other places along the coast. Monrovia, the capital, has about 5,000 inhabitants.

The coffee grown in Liberia ranks among the best sorts. Other exports are palm oil and palm kernels, rubber, of which a monopoly has been granted to a commercial syndicate, cacao, sugar, arrowroot, ivory, hides, and piassava. The rubber company is composed of Englishmen. England has saved the republic from bankruptcy by financial support, yet has no other commercial interests in the country. Two thirds of the foreign trade is in the hands of Germans. France has advanced the frontier of the Ivory Coast possessions to the Cavally river, which Liberia claimed. Recently a permanent French agent has been sent to Monrovia.

LITERATURE, AMERICAN, IN 1899. A considerable increase was shown in the number of books published during this year compared with 1898. Four hundred and thirty-five more volumes were recorded, the totals standing 5,321 to 4,886. The comparison is favorable with the year 1897 also, when 4,928 books were sent out; but when we consider the records of 1895 and 1896 there is a decided falling away, the figures for those years being respectively 5,469 and 5,703 volumes. A most encouraging fact is that, while in 1898 the books by American authors numbered 2,908, in 1899 3,626 were the production of native writers. But 571 books by English and foreign writers were manufactured in this country (new editions being included in the estimates), as compared with 834 of last year. The importations of books by English authors, bound or in sheets, were 1,124, as against 1,144 in 1898. The most marked increase was in the department of biography and memoirs, where 116 new titles were recorded in excess of those of last year. Seventy-eight more juvenile books were also sent out, and 50 more books on the fine arts and illustrated books, than were published in 1898. The largest decrease was in books on theology and religion. These fell to the fifth place in point of numbers, formerly occupied by books for young people. There were also fewer books in medicine, in literary history and miscellany, and in political and social science. History showed no variation to speak of, and more books of travel were written.

The complexion of the literature of the year was much colored by the disputed questions of the conquest and retention of the Philippine Islands.

Biography.—Much of the biographical literature of the year was ephemeral in character. *American Naval Heroes*, by J. Howard Brown, led naturally to *Dewey and Other Great Naval Commanders*, by William Henry Davenport Adams; *A Life of Admiral George Dewey*, and *Dewey Family History*, edited by Adelbert Milton Dewey, filled a sumptuous volume; *Admiral George Dewey: A Sketch of the Man* came from John Barrett; *The Hero of Manila: Dewey on the Mississippi and the Pacific*, by Rossiter Johnson, in the *Young Heroes of the Navy Series*, was illustrated by B. West Clinedinst and others; *Admiral Dewey, the Hero of Manila*, was from the pen of Thomas W. Handford, who also portrayed for us Theodore Roosevelt, the *Pride of the Rough Riders*, as an ideal American; and Will M. Clemens, in addition to his *Life of Admiral George Dewey*, gave a brief portrayal of Theodore Roosevelt, the American. From Reefer to Rear Admiral was the title of reminiscences and journal jottings of nearly half a century of naval life (1827-'74), vouchsafed by Benjamin F. Sands, while a still longer period was covered in the autobiographical *Life of Charles Henry Davis, Rear Admiral, 1807-1877*. David G. Farragut, by James Barnes, belonged to the *Beacon Biographies*, edited by M. A. De Wolfe Howe, other issues of which were Robert E. Lee, by William P. Trent; Daniel Webster, by Norman Hapgood; Aaron Burr, by Henry Childs Merwin; John Brown, by Joseph Edgar Chamberlain; and Frederick Douglass, by Charles W. Chesnut. Abraham Lincoln: *The Man of the People* was the subject of a special study by Norman Hapgood; *Truth is Stranger than Fiction*, by James H. Cathey, contained a North Carolina tradition relative to the ancestry of Lincoln; Nancy Hanks, by Mrs. Caroline Hanks Hitchcock, told the story of his mother, also revived in *The Sorrows of Nancy*, by L. Boyd. Two volumes contained the *Life and Public Services of Edwin M. Stanton*, by George C. Gorham. *General Sherman*, by Manning Ferguson Force, in the *Great Commander Series*, contained the most accurate and complete account of the battle of Shiloh said to have been yet published; the *Life of Nathan Bedford Forrest*, by John Allan Wyeth, M. D., contained much history in addition to the career of the brilliant Confederate cavalry leader, and was profusely illustrated; and from John G. Gittings came *Personal Recollections of Stonewall Jackson*. The *Reminiscences of Neal Dow* (born 1804; died 1897) contained the recollections of eighty years, and to James F. Rusing we owe an account of *Men and Things I saw in Civil War Days*. *The Life and Times of Hannibal Hamlin* was from the pen of Charles Eugene Hamlin, and *The Life of Oliver P. Morton*, by William Dudley Foulke, in two volumes, included his important speeches. *The Life of Henry A. Wise, of Virginia, 1806-1876*, was written by his grandson, Barton H. Wise. *Salmon Portland Chase*, by Albert Bushnell Hart, and *Thaddeus Stevens*, by Samuel W. McCall, appeared in the *American Statesmen Series*. John Murray Forbes's *Letters and Recollections*, edited by his daughter, Sarah Forbes Hughes, contained the life of a man who played no small part in New England during the civil war, and in this connection may be mentioned the interesting *Reminiscences, 1819-1899*, of Mrs. Julia Ward Howe. John Hooker gave *Some Reminiscences of a Long Life*, and especially delightful were *The Reminiscences of a very Old Man, 1808-*

1897, by John Sartain, containing personal phases of the development of American art and letters for over sixty years. *Recollections of my Mother (Mrs. Anne Jean Lyman)*, by Mrs. Susan Inches Lesley, gave a picture of domestic and social life in New England in the first half of the nineteenth century. Of present-day interest was *The Life of Prince Otto von Bismarck*, by Frank Preston Stearns. *Dreyfus, the Prisoner of Devil's Island*, was from the pen of William Harding, and *Lettres d'un Innocent* was the title of letters of Capt. Dreyfus to his wife, translated by L. G. Moreau and published for his vindication in the United States. *The Memoirs of a Revolutionist*, by Prince Kropotkin, was also a book of American manufacture. R. W. Hale also told briefly *The Dreyfus Story*. *Maximilian in Mexico*, by Mrs. Sara Yorke Stevenson, contained a woman's reminiscences of the French intervention, 1862-'67. Returning to the Revolutionary period, we have a presentation of *Washington the Soldier*, by Henry B. Carrington, with chronological index and appendices, and a second volume of *Letters to Washington*, edited by Stanislaus Murray Hamilton, covering the period 1756-'58, while Washington's Farewell Address was again given to the reading public, this time with a prefatory note by Worthington Chauncey Ford. Paul Leicester Ford presented views of *The Many-sided Franklin* in an entertaining volume, in addition to completing his edition of the *Writings of Thomas Jefferson* with the tenth and final volume, and *Franklin with his friends* is the theme of a most readable collection of *Historic Side Lights*, made by Howard Payson Arnold. Stanislaus Murray Hamilton sent out the second volume of *The Writings of James Monroe*, being a collection of public and private papers and correspondence, now for the first time printed, which he has undertaken the task of editing in six or seven volumes. Edward Field gave us *Ezek Hopkins, Commander in Chief of the Continental Navy, 1775-1778, Master Mariner, Politician, Brigadier General, Naval Officer, and Philanthropist*, while from Augustine Jones we had *The Life and Work of Thomas Dudley, Second Governor of Massachusetts*. Sydney George Fisher, the author of *The True Benjamin Franklin*, proved *The True William Penn* widely different from the accepted ideal of the first proprietor of Pennsylvania. *The True Story of Lafayette*, called *The Friend of America*, was written for the series of *Children's Lives of Great Men* by Elbridge Streeter Brooks; Herbert B. Adams edited a brief collection of letters anent Jared Sparks and Alexis de Tocqueville. An edition limited to 290 copies was made of the *Journal; or, Historical Recollections of American Events during the Revolutionary War*, by Elias Boudinot, President of the Continental Congress and commissary general of prisoners during the war of independence. *La Salle in the Valley of the St. Joseph* was the theme of Charles H. Bartlett and Richard H. Lyon. To literary biography belong *Letters from Ralph Waldo Emerson to a Friend, 1838-1853*, edited by Charles Eliot Norton, and *Letters of Sidney Lanier*, selections from his correspondence, 1866-'81. James Russell Lowell and his *Friends*, by Edward Everett Hale, was supplemented by Edward Everett Hale, Jr.'s, sketch of James Russell Lowell in the *Beacon Biographies*, to which Mrs. Annie Adams Fields contributed Nathaniel Hawthorne. A gentle and gracious personality was that of John Sullivan Dwight, Brook Farmer. Editor, and Critic of Music, as portrayed by George Willis Cooke: *Recollections of an Old Musician* came from

Thomas Ryan, of the Mendelssohn Quintette Club, Boston. Prof. Daniel Coit Gilman wrote *The Life of James Dwight Dana*; E. P. Roe: *Reminiscences of his Life*, by his sister, Mary A. Roe, found favor with the many admirers of that popular writer of fiction; Novelists in the Warner Classics were sympathetically treated by Henry James, W. T. Trent, and others; Kate Field: *A Record*, was from Lillian Whiting; and from Thomas Wentworth Higginson we had a collection of portraits of his Contemporaries, including many well-known names. Mrs. Mary Virginia Hawes Terhune (Marion Harland) gave a glimpse of Charlotte Brontë at Home in the series of *Literary Hearthstones*, following her volume on William Cowper, which initiated the series. Anton Seidl was a costly memorial by his friends, in an edition limited to 1,000 copies; an *Autobiographical Sketch of Mrs. John Drew*, covering nearly seventy years of American dramatic history, had an introduction by her son, John Drew, with biographical notes by Douglas Taylor; and in the *Sock and Buskin Biographies* we had Julia Marlowe, by John D. Barry. *Little Journeys to the Homes of Eminent Painters* were, of course, conducted by Elbert Hubbard. *Lights and Shadows of a Long Episcopate* was the title of reminiscences and recollections by Bishop Henry B. Whipple, the venerable missionary to the Indians of Minnesota, and from John B. Adger we had the record of *My Life and Times, 1810-1899*, while *Under Three Flags*, by Rev. George Wharton Pepper, told the story of his life as preacher, captain in the army, chaplain, and consul. Horace Bushnell, Preacher and Theologian, by Theodore Thornton Munger, was the first full and connected account of the work of the eminent Congregational clergyman of Connecticut. *A Discourse in Memory of H. Leavitt Goodwin*, pronounced in parish church of East Hartford, April 16, 1899, by Dr. Leonard Woolsey Bacon, was published in pamphlet form; *The Apostle of the North*, Rev. James Evans, with his work among the red men of the Hudson Bay territories, was sympathetically treated by Egerton Ryerson Young; and a *Life of Father Hecker*, Founder of the Paulists, by Rev. Walter Elliott, had an introduction by Rev. John Ireland. C. F. B. Miel, D. D., in *A Soul's Pilgrimage* confided his personal and religious experiences. *Desiderius Erasmus of Rotterdam* was contributed by Prof. Ephraim Emerton to the *Heroes of the Reformation Series*; *A Life of the Pope (Leo the Thirteenth)* was compiled and translated from the most authentic sources by Arthur D. Hall; *The College Warden*, by Henry A. Fairbairn, M. D., was a biography of his father, Robert Brinckerhoff Fairbairn, warden of St. Stephen's College, Annandale, N. Y.; and Henry D. Stevens sketched *A Boy's Life* in its spiritual ministry—that of his son. *Ingersollia* was the title of gems of thought from the lectures, speeches, and conversation of the late Col. Robert G. Ingersoll, which contained a biographical sketch by Thomas W. Handford, and *A Vision of War*, a patriotic address by Col. Ingersoll, was published with illustrations by H. A. Ogden. *A Life for Liberty*, a collection of antislavery and other letters of Sallie Holley, edited with introductory chapters by John White Chadwick, was far enough removed in spirit from White and Black under the Old Régime largely biographical, by Mrs. Victoria V. Clayton, widow of Major-Gen. Henry D. Clayton, C. S. A., late President of the University of Alabama. Henry Harisse was the subject of a biographical and bibliographical sketch by Adolf Growoll, in a limited edition. *The Last of the Great Scouts* con-

tained the life story of Col. William F. Cody (Buffalo Bill) as told by his sister, Mrs. Helen Cody Wetmore, in line with which was *Buffalo Jones' Forty Years of Adventure*, a volume of facts gathered from the experience of C. J. Jones, compiled by Henry Inman. *Throne Makers* was the suggestive title of a volume by William Roscoe Thayer, the author of *The Dawn of Italian Independence*, and *True Stories of Heroic Lives* were told of courageous men and women of the nineteenth century by personal acquaintances and eyewitnesses. Vols. VI, VII, and VIII were issued of the *National Cyclopædia of American Biography*, and *Who's Who in America*, a biographical dictionary of living men and women of the United States in 1899-1900, was edited by John W. Leonard, proving an exceedingly useful handbook.

Criticism and General Literature.—The first of two volumes which will contain *An Introduction to the Methods and Materials of Literary Criticism*, by Prof. Charles Mills Gayley and Frederick Newton Scott, was issued during the year and was devoted to *The Bases in Aesthetics and Poetics*; *The Authority of Criticism*, and *Other Essays*, came from Prof. William P. Trent; and *Some Principles of Literary Criticism* were set forth by C. T. Winchester. *A General Survey of American Literature* was made by Mary Fisher, author of *A Group of French Critics*, and Blanche Wilder Bellamy reprinted in book form her sketches of *Twelve English Poets*, with selections from their works, taken as representatives from Chaucer to Tennyson. Wilbur Lucius Cross traced *The Development of the English Novel*. *The Treatment of Nature in the Poetry of the Roman Republic (exclusive of Comedy)* was the subject of a thesis submitted by Katharine Allen for the degree of doctor of philosophy in the University of Wisconsin, and published as a *Bulletin of that university*; Joel Elias Spingarn contributed *A History of Literary Criticism in the Renaissance*, with special reference to the influence of Italy in the formation and development of modern classicism, to the Columbia University Studies in Literature; while Prof. Albert Elmer Hancock was responsible for an excellent study in historical criticism entitled *The French Revolution and the English Poets*. *A History of English Romanticism in the Eighteenth Century* was delivered in the form of lectures by Prof. Henry A. Beers before Yale University, while *The Troubadours at Home: Their Lives and Personalities, their Songs and their World*, were the theme of two volumes by Justin H. Smith, containing 178 illustrations. *French Portraits*, by Vance Thompson, bore as subtitle *Appreciations of the Writers of Young France*. Part I of *Romances of Roguery: An Episode in the History of the Novel*, by Frank Wadleigh Chandler, was devoted to *The Picaresque Novel in Spain*, and *Contemporary Spain* as shown by her Novelists, compiled by Mary Wright Plummer, had an introduction by Edward Everett Hale. Henry Budd published *St. Mary's Hall Lectures, and Other Papers*. Leo Wiener wrote *The History of Yiddish Literature in the Nineteenth Century*, and from Israel Abrahams we had *Chapters on Jewish Literature*, extending over more than seventeen centuries. Richard Burton proffered his *Literary Likings*. An exceptionally artistic work, both in its subject-matter and manner of presentation, was *Fisherman's Luck* and some *Other Uncertain Things*, by Henry Jackson Van Dyke, Jr.; *Stories of Lake, Field, and Forest*, by Frank A. Bates, recorded the rambles of a sportsman-naturalist; Robert R. McLeod commemorated Nature

studies In the Acadian Land; while from Ernest Seton Thompson was welcomed another of his exquisite studies of animal life and Nature, entitled *The Trail of the Sandhill Stag*, in connection with which may be here mentioned *Bob: The Story of our Mocking-bird*, by Sidney Lanier, made into book form, with 16 illustrations in color, and a new edition of *Diomed*, by John Sergeant Wise, with 100 illustrations by J. Linton Chapman. A collection of descriptive and historical essays by Sidney Lanier was also published under the title of *Retrospects and Prospects*. What is Good English? and Other Essays, came from Prof. Harry Thurston Peck; *American Lands and Letters: Leather Stocking to Poe's Raven*, by Donald Grant Mitchell (Ik Marvel), included some of the most eminent men and women of American letters; *A Group of Old Authors* were selected by Clyde Furst for his theme; while *Great Books as Life's Teachers* were the theme of lectures delivered by Newell Dwight Hillis in Plymouth Church as studies of character, real and ideal, and from the same author we had *Right Living as a Fine Art*, a study of Channing's *Symphony* as an outline of the ideal life and character. Browning, Poet and Man; *A Survey*, by Elizabeth Luther Cary, was a companion volume to her *Tennyson* of last year, and one of the choicest books of the holiday season, while Lillian Whiting made *A Study of Elizabeth Barrett Browning*. The *Mind and Art of Poe's Poetry* was explored by John Phelps Fruit, and Joel Benton published *In the Poe Circle*, with some account of the Poe-Chivers controversy and other Poe *memorabilia*, a new issue being also made of his work on Emerson as a Poet. Vol. I of *Pioneers of Southern Literature* was sent out by Samuel Albert Ling. Dante interpreted, by Epiphanius Wilson, contained a brief summary of the life, times, and character of Dante, with an analysis of the Divine Comedy and original translations in the Spenserian stanza. *In re Shakespeare's Legal Acquirements*; Notes by an Unbeliever therein, by William C. Devecmon, formed No. 12 of the publications of the Shakespeare Society of New York, and *Testimony of the Sonnets* as to the Authorship of the Shakespearean Plays and Poems was advanced by Jesse Johnson. Series 2 of *How to Study Shakespeare*, by William H. Fleming, had an introduction by W. J. Rolfe, and William Winter edited *The Shakespearean Plays of Edwin Booth*, in two volumes, in addition to *The Miscellaneous Plays of the same actor*. An Introduction to the Works of John Milton came from Hiram Corson, and Milton's Shorter Poems and Sonnets, were arranged in chronological order and edited with an introduction and notes by Frederick Day Nichols in Appleton's series of Twentieth Century Text-books, and to John Lesslie Hall we were indebted for *Old English Idyls*. English Meditative Lyrics were studied by Theodore Whitefield Hunt. *Masque and Mummings* was the title of essays on the theater of here and now, by Charles F. Nirdlinger, and Wotan, Siegfried, and Brünhilde were sympathetically studied by Anna Alice Chapin. W. B. Parker exploited *The Religion of Mr. Kipling*. Stories of Great National Songs were told by Nicholas Smith. *Dionysos and Immortality*, by Benjamin Ide Wheeler, was the theme of the third Ingersoll lecture delivered at Harvard University, following those of Dr. Gordon and Prof. James, respectively upon *Immortality* and the *New Theodicy* and *Human Immortality*, and dwell upon Greek faith in immortality as affected by the rise of individualism. *Bluebeard*, by Thomas Wilson, of the United States National Museum, was a con-

tribution at once to history and folklore, being the history of Gilles de Retz, of Brittany, France, executed at Nantes in 1440 A. D., who was the original of Bluebeard in the tales of Mother Goose. Charles M. Skinner related *Myths and Legends of our New Possessions and Protectorate*, and also sent out *Flowers in the Pave*. *Fireside Fancies of Beulah C. Garrison* ranged over a wide field of subjects, and from Prof. George Edward Woodberry we had a volume of essays entitled *Heart of Man*. Things as they are, by Bolton Hall, the author of *Even as You and I*, had an introduction by George D. Heron; Robert Grant made public *Search-light Letters*; and *Character and Conduct* were the theme of talks to young people by George McEndree Steele. Outlooks and Insights in Behalf of Larger and More Hopeful Views of Life were proffered by Humphrey S. Desmond. *Modern Daughters* were engaging subjects of Alexander Black's pen and camera, and a new issue was made of Mrs. Julia Ward Howe's query, *Is Polite Society polite?* with which other essays were incorporated. Vol. II of *Some Colonial Mansions* and those who Lived in Them, edited by Thomas Allen Glenn, continued that entertaining work, and from Mrs. Mary V. H. Terhune (Marion Harland) we had *More Colonial Homesteads and their Stories*, with 80 illustrations. *Salons Colonial and Republican* were reproduced in Anne H. Wharton's new book, exquisitely illustrated. *Child Life in Colonial Days* was admirably handled by Mrs. Alice Morse Earle, Ezra Hoyt Byington discoursed of *The Puritan as a Colonist and Reformer*, and *The Quaker Colony* was penned and pictured for the series of *Colonial Monographs* by Blanche McManus. Useful handbooks of the literary art published during the year included an Introduction to Rhetoric, by Prof. William B. Cairns; *A Course of Expository Writing* and *A Course of Argumentative Writing*, by Gertrude Buck, who also contributed *The Metaphor*, a study in the psychology of rhetoric, to the *Contributions to Rhetorical Theory*; *A Critique of some Recent Subjunctive Theories*, by Charles Edwin Bennett, in the *Cornell Studies in Classical Philology*; and *Principles of Public Speaking*, laid down by Guy Carleton Lee. The *Free Library: Its History and Present Condition*, by John J. Ogle, appeared in the Library Series, and to John Cotton Dana we were indebted for *A Library Primer*, while *Library Construction, Architecture, Fittings, and Furniture*, by Frank J. Burgoyne, apparently exhausted the subject of libraries in their externals. A General Index to the Library Journal, the official organ of the American Library Association, chiefly devoted to library economy and bibliography, covered Vols. I-XXII (September, 1876, to December, 1897), and to William I. Fletcher and Richard Rogers Bowker we owed, as usual, *The Annual Literary Index, 1898*. A Provisional List of the Publications of American Scientific, Literary, and Other Societies from their Organization" was compiled under the editorial direction of R. R. Bowker, covering more than 1,000 societies issuing publications, and Vol. V appeared of *American Book Prices Current*, by Luther S. Livingston, in a limited edition.

In the *What is Worth While* Series of booklets we had *The Artistic Ordering of Life*, by Albert Stanburrough Cook; *Character, the Grandest Thing in the World and Cheerfulness as a Life Power*, by Orison Swett Marden; *To whom Much is Given*, by Mrs. Lucia Ames Mead; *Every Living Creature*, by Ralph Waldo Trine; and *Opportunities for Culture*, by Jeannette M. Dougherty.

Education.—There was an increase in the number of educational works published during the year over those of 1898. Essays on the Higher Education, four in number, by Prof. George Trumbull Ladd, discussed questions of importance, and from Levi Seeley we had a History of Education. Prof. William James published Talks to Teachers on Psychology and to Students on some of Life's Ideals, and Discussions in Education, by the late Gen. Francis A. Walker, were edited by James Phinney Munroe; E. C. Branson performed a similar service for David Perkins Page's Theory and Practice of Teaching. Common Sense in Education and Teaching was recommended by P. A. Barnett as an introduction to practice, and Paul H. Hanus defined Educational Aims and Educational Values. Charles C. Boyer suggested Principles and Methods of Teaching. Method in Education was intended as a text-book for teachers by Ruric N. Roark; Joseph Landon supplied A Manual of the Art of Questioning for Training Classes; Harriet M. Scott and Gertrude Buck collaborated upon a manual for teachers in primary and grammar grades, entitled Organic Education; and in the International Education Series we had Montaigne on The Education of Children, translated by L. E. Rector, and Letters to a Mother on the Philosophy of Froebel, by Susan E. Blow. Notes on the Development of a Child were continued in Parts III and IV, contributed to the University of California Studies by Milicent Washburn Shian, and From the Child's Standpoint was a collection of views of child life and Nature by Florence Hull Winterburn. Kate Upson Clark made a study of Bringing up Boys. Two small handbooks were The Kindergarten in a Nutshell, by Nora Archibald Smith, and a Bibliography of Child Study, by L. N. Wilson. The Report of the Proceedings of the Second Annual Convention of the National Congress of Mothers, held in the city of Washington, D. C., May 2-7, 1898, was issued; Stuart H. Rowe explained The Physical Nature of the Child and how to Study it; H. Rippon Seymour advocated Physical Training in a handbook for teacher or pupil, which had an introduction by William Taylor, M. D.; and Wilbur P. Bowen prepared A Teacher's Course in Physical Training. Suggestions for Primary and Intermediate Lessons on the Human Body, by Mrs. Ella B. Hallock, may be mentioned also in this connection, and The Story of the Living Machine, by Herbert W. Conn, in Appletons' Library of Useful Studies. A report on The Study of History in Schools made to the American Historical Association by the Committee of Seven was printed in pamphlet form; Helps to the Study of Classical Mythology, for the lower grades and secondary schools, were offered by Prof. Benjamin L. D'Ooge; Historic Art Studies were made by Ruth Janette Warner as an aid for teachers of public schools and colleges in interesting young students in the study of historic art; Geographical Outlines and History, by Isaac N. Miner, was practical in its nature; from Henry McCormick came Suggestions on Teaching Geography; and Object Lessons in Geography for Standards 1, 2, and 3 were the work of T. F. G. Dexter and A. H. Garlick. Part I of Composition, by Arthur Wesley Dow, was issued, being a series of exercises selected from a new system of art education. Elements of Rhetoric, by Alphonso G. Newcomer, was intended as a course in plain prose composition; Composition and Rhetoric for Schools was the result of collaboration by Profs. Robert Herrick and Lindsay Todd Damon; Horace S. and Martha Tarbell presented Lessons in Language and Grammar; E. Oram Lyte, an Ad-

vanced Grammar and Composition; and G. R. Carpenter, Elements of Rhetoric and English Composition, for a first high-school course. The Dictator was a collection of graded dictation exercises for the use of teachers and students of shorthand by Mina Ward. Webster Wells published a New Higher Algebra and The Essentials of Geometry; William J. Milne, a Plane and Solid Geometry, a Key to the work, and a Grammar-school Algebra; and L. A. Blanchard and J. L. André offered The Algebraic Solution of Equations of any Degree by a novel, simple, and direct method. Clay Modeling for Schools, by Anna M. Holland, contained a progressive course for primary schools and grammar grades, and K. Breul treated briefly of The Teaching of Modern Foreign Languages in Secondary Schools. Illustrations of Logic were supplied by Paul T. Lafleur. Wilbur S. Jackman was the author of manual of Nature Study for Grammar-school Grades; Seed Dispersal, by W. J. Beal, was intended as an elementary botany; while an elementary zoölogy by Charles F. Holder was entitled Stories of Animal Life, and appeared in Eclectic School Readings. The same author also contributed Our Country's Flag and the Flags of Foreign Countries to Appletons' Series of Home Readers. The Story of the British Race was written for Appletons' Library of Useful Stories by John Munro. Colonial Life in New Hampshire was described for children by James H. Fassett, Sophie Swett told Stories of Maine for their benefit, and Ella Reeve Ware published Talks about Authors and their Work. Tales told out of School, by E. S. Ellis, belonged to the Standard Teachers' Library, another issue of which was Commissioner Hume: A Story of New York Schools, by C. W. Bardeen, a sequel to his Roderick Hume. Educational Nuggets were gathered for the Nugget Series from the works of Plato, Aristotle, Rousseau, Herbert Spencer, Harris, Butler, and Eliot by John R. Howard. F. R. Clow discussed Economics as a School Study, F. H. Clark drew up Outlines of Civics, and Charles Fletcher Dole sketched briefly the future duties of The Young Citizen. Some Unrecognized Functions of our State Universities were the subject of the inaugural address of John Butler Johnson as dean of the College of Mechanics and Engineering, University of Wisconsin; Prof. James E. Russell made a study of the history, organization, and methods of German Higher Schools; Vol. I appeared of Universities and their Sons, edited by Joshua Chamberlain, to be followed by four more volumes; Yale: Her Campus, Classrooms, and Athletics were exhaustively treated by Louis Sheldon Welch and Walter Camp, Samuel J. Elder contributing an introduction to the work; Where to Educate, 1898-1899, was a guide to the best private schools, higher institutions of learning, etc., in the United States, edited by Grace Power Thomas; and from Flavel S. Thomas, M. D., came A Dictionary of University Degrees. To educational history belong Emma Willard and her Pupils; or, Fifty Years of Troy Female Seminary, 1822-1872, and A Beautiful Life and its Associations, by Anna Howell Clarkson (Mrs. James S. Clarkson), being that of Mrs. Drusilla Allen Stoddard. Webster's Collegiate Dictionary was abridged from Noah Webster's International Dictionary; the American Educational Catalogue for 1899 was compiled as usual; and for the tiny tots we had a collection of Stick and Pea Plays, by Charles Stuart Pratt, with 70 working designs by the author. Songs of the Tree Top and Meadow, compiled by Lida B. McMurphy and Agnes S. Cook, and Songs in Season for Primary and Intermediate Grades,

by Marian M. George, Lydia Avery Coonley, Mary S. Conrade, and others. Harold's Quests were recorded for Appletons' Home Reading Books by John W. Troeger. In the little What is Worth While Series we had two practical papers, on Rational Education for Girls, by Elizabeth Hutchinson Murdock, and The Choice of a College for a Boy, by Charles Franklin Thwing, D. D.

Fiction.—Twenty-five more new novels were published in 1899 than in 1898, the total being 749 as against 724 the preceding year, while the new editions were about the same. Of the total number of works of fiction recorded during the year, inclusive of new editions, 457 were by American authors, as compared with 358 last year and the year previous. Two books sprang into special prominence, Janice Meredith, by Paul Leicester Ford, the author of The Honorable Peter Stirling, and many other notable works of history, biography, and fiction, and Richard Carvel, by Winston Churchill, who was last year heard from for the first time as the author of The Celebrity. Both were stories of the Revolution. The book which had the greatest sale during the year, however, and which went through the greatest number of editions, was Westcott's David Harum, published the year previous, which reached its three hundred and thirtieth thousand. William Dean Howells published Ragged Lady and Their Silver Wedding Journey, the last in two volumes; Henry James satirized The Awkward Age of a young English girl in social life; Mrs. Frances Hodgson Burnett gave to the world information In Connection with the De Willoughby Claim before Congress; That Fortune, by Charles Dudley Warner, completes the trilogy of which the preceding numbers were A Little Journey in the World and The Golden House; The Jamesons was the sole contribution by Mary Eleanor Wilkins; Francis Hopkinson Smith published 11 short stories under the title of The Other Fellow; Via Crucis, by Francis Marion Crawford, was a romance of the second crusade; Active Service came, of course, from Stephen Crane; Richard Harding Davis collected short stories under the title of The Lion and the Unicorn; A Confident To-morrow, by James Brander Matthews, purported to be a novel of New York; Henry Worthington, Idealist, was the second effort of Margaret Sherwood (Elizabeth Hastings), who gave us in 1896 An Experiment in Altruism; The Lively Adventures of Gavin Hamilton, detailed by Molly Elliot Seawell, were illustrated by H. C. Edwards; Sarah Barnwell Elliott described An Incident, and Other Happenings; Dionysius, the Weaver's Heart's Dearest, by Blanche Willis Howard (Mrs. Teuffel), was published posthumously, as was Maria Louise Pool's Sand 'n' Bushes and a collection of short stories, entitled A Widower and Some Spinsters. Julia Magruder wrote A Beautiful Alien and A Heaven-kissing Hill; Sarah Orne Jewett, The Queen's Twins, and Other Stories; Capt. Charles King, A Trooper Galahad; and Mrs. Mary Hartwell Catherwood, Spanish Peggy: A Story of Young Illinois, The Queen of the Swamp, and Other Plain Americans, and Mackinac and Lake Stories. Mrs. Constance Cary Harrison (Mrs. Burton Harrison) was no less prolific, sending out A Triple Entanglement, The Circle of a Century, and The Carcellini Emerald, with which last other tales were included. Loveliness: A Story, by Elizabeth Stuart Phelps Ward (Mrs. Herbert Dickinson Ward), was put forward as a plea against vivisection; from Mrs. Harriet Elizabeth Prescott Spofford we had Old Madame, and Other Tragedies, and The Maid he Married; Mrs. Amelia Edith

Barr propounded a difficult question in Was it Right to Forgive? a domestic romance, and from the same author we had Trinity Bells, a tale of old New York, and I, Thou, and the Other One, a love story pure and simple. The Price of Blood was an extravaganza of New York life in 1807, written in five chapters and also illustrated by Howard Pyle; Frank R. Stockton proved amusing as ever in The Vizier of the Two-horned Alexander; A Prince of Georgia, and Other Tales, were from the pen of Julian Ralph; The Bushwhackers, and Other Stories, from that of Charles Egbert Craddock (Mary Noailles Murfree), who also told The Story of Old Fort Loudon; three stories of strong local flavor by George Washington Cable bore the title of Strong Hearts, while from Joel Chandler Harris (Uncle Remus) we had Plantation Pageants, illustrated by E. Boyd Smith, and The Chronicles of Aunt Minervy Ann, with illustrations by A. B. Frost. Santa Claus's Partner was a Christmas story by Thomas Nelson Page; Averages, a story of New York, by Eleanor Stuart, the author of Stonepastures; John Kendrick Bangs recounted the antics of The Enchanted Typewriter, and also reported the literary exercises of the first regular meeting of The Dreamers: A Club; James L. Ford's Cupid and the Footlights was illustrated by Archie Gunn; Mistress Content Craddock was the heroine of Annie Eliot Trumbull; and yet another posthumous novel of Harold Frederic saw the light, entitled The Market Place. The Gentleman from Indiana, by Booth Tarkington, created an excellent impression as the first attempt of its author, and Arthur Stanwood Pier also made a hit with The Pedagogues, a story of the Harvard Summer School. The Confounding of Camelia, by Anne Douglas Sedgwick, did not fall behind her novel of last year, The Dull Miss Archinard; The Mormon Prophet (Joseph Smith) was chosen for a hero by Lily Dougall; A Daughter of the Vine, by Mrs. Gertrude Franklin Atherton (Frank Lin), was a painful study in heredity; and from Mrs. Anna Katharine Green Rohlf's we had another thrilling detective story, Agatha Webb. To historical fiction belong In Castle and Colony, by Emma Rayner, the author of Free to Serve; The Fight for Dominion, a romance of our first war with Spain, by Gay Parker; The Sword of Justice, by Sheppard Stevens, who last year contributed I am the King; Loyal Blue and Royal Scarlet, a story of '76, by Marion Ames Taggart; A Pretty Tory, by Mrs. Jennie Gould Lincoln; The Tory Maid, by Herbert Baird Stimpson; Westchester: A Tale of the Revolution, by Henry Austin Adams; Smith Brunt, a story of the old navy, by Waldron Kintzing Post; For the Freedom of the Sea, a romance of the War of 1812, by Cyrus Townsend Brady; Sons of Strength, dealing with the Kansas border wars, by William R. Lighton; In Hampton Roads, a dramatic romance of the civil war, by Charles Eugene Banks and George Cram Cook; The Rebel's Daughter, by J. G. Werner; The Last Rebel, by Joseph A. Altsheler; The Legionaries, a story of Morgan's raid, by Henry Scott Clark; and, coming to the late war with Spain, A Lost American, a tale of Cuba, by Archibald Claverling Gunter, who also published Jack Curzon, with its scene in the Orient; A Cosmopolitan Comedy, by Anna Roberson Brown; The High Commission, a romance of the Spanish-American War, by Fredericka Spangler Cantwell; The Wreck of the Conemaugh, by T. Jenkins Hains, purporting to be a record of some events set down from the notes of an English baronet during the American war with Spain, and Don Fernandez, the Spanish Spy. A

Daughter of France was a story of Acadia by Eliza Frances Pollard; *Span o' Life*, a tale of Louisbourg and Quebec, by William McLennan and J. N. McLlwraith; *The True Story of Master Gerard*, as told by Anna T. Sadlier, carried us back to the days of Leisler's government in New York; *The House of the Wizard* was from the pen of M. Imlay Taylor, and maintains the reputation won by *On the Red Staircase* and *An Imperial Lover*; *King or Knave: which Wins?* was an old tale of Huguenot days by William H. Johnson; *The Black Wolf's Breed*, a story of France in the Old World and the New, happening in the time of Louis XIV, by Harris Dickson, illustrated by C. M. Relyea; and *The Man who Dared*, an historical romance of the time of Robespierre, by John P. Ritter. Hugh Gwyeth was a Roundhead cavalier according to Beulah Marie Dix; *The Signors of the Night*, by Max Pemberton, had the scene laid in Venice, and from the same author we had *The Garden of Swords*, a story of the Franco-Prussian War. Robert W. Chambers wrote but one book, *Outsiders*, an outline of New York life in all its phases; Luther Strong, by Thomas J. Vivian, was essentially of New England origin; Harriet Prescott Spofford contributed a foreword to Mary Cameron, a romance of Fisherman's island, by Edith A. Sawyer; and the Rhode Island coast witnessed the wooing of *The Professor's Daughter*, as described by Anna Farquhar. Opie P. Read (*Arkansas Traveler*) wrote Judge Elbridge and, in collaboration with Frank Pixley, *The Carpet-bagger*; Don Cosme: *A Romance of the South*, came from Troilus Hilgard Tyndale; Mrs. Martha S. Gielow published *Mammy's Reminiscences*, and *Other Sketches*; *The Ides of March*, by Florie Williamson Pickard, and *A Texas Ranger*, by N. A. Jennings, as well as *Bobbie*, by Kate Cairns, were also Southern in theme; *A Mountain Europa* was discovered by John Fox, Jr., in the mining regions of Kentucky; *Madrine Doucet*, by Walter Leigh, and *How Hindsight met Provincialis*, by Louise Clarkson Whitelock, related to the strained conditions of feeling between the North and South; Frank Norris, the author of *Moran of the Lady Letty*, published *McTeague* and *Blix*, both stories of San Francisco, and the same city is the scene of *The Shadow of Quong Lung*, by C. W. Doyle; Horace Annesley Vachell carried us to southern California in *The Procession of Life*; and Z. Z. chronicled the success of *A Business Venture in Los Angeles*. The Ladder of Fortune was successfully climbed by the hero of Frances Courtenay Baylor; *The Treasure of Mushroom Rock* was a story of prospecting in the Rocky mountains, by Sidford F. Hamp; and the same scenery was traversed by Jack Crews, in a story of railroad life by Martha Frye Boggs. Denver was the scene of *Windy Creek*, by Helen Stuart Thompson, and *The Helpers*, by Francis Lynde. Under the Cactus Flag was, of course, a story of life in Mexico, by Nora Archibald Smith; and the same country is the background for *San Isidro*, by Mrs. Mary Bradford Crowninshield; *Jesus Delaney*, by Joseph Gordon Donnelly; and *Priestess and Queen*, by Emily E. Reader. *Long Pine*, by R. B. Townshend, was the story of a lost mine among the Pueblo Indians of New Mexico, whose life is vividly pictured; *The Lady of the Flag Flowers*, by Florence Wilkinson, revives an Algonquin legend; *Balloon*, by Le Roy Hooker, portrayed Canadian life; and that of the West Indies was revealed in *The House of the Sorcerer*, by Haldame MacFall. George Horton went to Greece for *A Fair Brigand* as heroine; *The Fox-Woman*, by John

Luther Long, showed the same deep and sympathetic insight into Japanese life as his *Miss Cherry Blossom of Tokyo*; and from Onoto Watanna we had *Miss Numé of Japan*, a Japanese-American romance. *Red, White, and Blue Days*, by Ruth Louise Sheldon, was distinctively a novel of woman's life, and from the same pen we had a study of *Flexible Morals*; Kate Jordan (Mrs. F. M. Vermilye) described *A Circle in the Sand*; Louise F. P. Hamilton recalled the Romance of *Graylock Manor*; and Anna Chapin Ray pronounced *Each Life Unfulfilled* in her story of American aspirants. Jessie Macgregor Shaw's characters were bound by the Closest Ties, and *Cape of Storms* was the title of a novel by Percival Pollard. If I were a Man, by Harrison Robertson, told the story of a new Southerner aroused to a sense of responsibility, somewhat akin in theme to *The Launching of a Man*, by Stanley Waterloo, who published also *The Wolf's Long Howl*. E. Livingston Prescott took *The Measure of a Man*, and Helen F. Potter portrayed *A Man of Honor*. A Man and his Mark, by W. C. Morrow, dealt also with the theme of true manhood and womanhood. Music was the leading motif of *Esprit Santo*, by Henriette Dana Skinner, and *Love Letters of a Musician*, by Myrtle Reed; ocean voyages gave rise alike to *The Kinship of Souls*, by Reuben Thomas, and *My Smoking-room Companions*, by William Harvey King; *A Civilian Attaché*, by Helen Dawes Brown, was a story of a frontier army post, and *Sweethearts and Wives* a collection of stories of life in the navy, by Anna A. Rogers. *My Lady and Allan Darke* was by Charles Donnell Gibson, and *That Duel at the Château Marsanac* by Walter Pulitzer; *Jennie Baxter, Journalist*, and *The Strong Arm* came from the Canadian pen of Robert Barr (Luke Sharp); Lloyd Bryce proffered *Lady Blanche's Salon: A Story of Some Souls*; Merwin Webster in *The Short Line War* exposed methods of railroad manipulation; tenement-house life was successfully studied by Walter Leon Sawyer in *A Local Habitation*; Arthur H. Veysey wrote *The Two White Elephants and Hats Off!* the latter a comedy of American social life; politics entered into the complications caused by *The Broken Locket of Will A. Garland*; from John Henton Carter we had *Ozark Post Office*; and from Algernon Sydney Logan *Not on the Chart*. To Mrs. Kate Chopin we were indebted for *The Awakening*. Novels of a religious character include *When Shiloh came*, illustrated by the author, Ambrose Lester Jackson; *The Larger Faith*, by James W. Coulter; *How they kept the Faith*, a tale of the Huguenots of Languedoc, by Grace Raymond; *A Wind-blown Flower*, by Caroline Atwater Mason, the author of *The Minister of the World and The Minister of Carthage*; *Jess: Bits of Wayside Gospel*, by Jenkin Lloyd Jones; *The Ladder of Promise*, by Mrs. Susan M. Griffith; *Father Jerome*, a story of the Spanish Inquisition, by Mrs. Hattie Arnold Clark; *The Cry Heard*, a missionary story, by Ella Perry Price; *Uncle Nathan's Farm*, advocating the virtue of tolerance, by Mrs. M. A. Cornelius; *Deficient Saints*, by Miss Marshall Saunders; *Shem: A Story of the Captivity*, by I. Breckenridge Ellis; *A Daughter of Israel*, by Rose Porter; and *A Tent of Grace*, by Adeline Cohnfeldt Lust. John King's *Question Class*, by Rev. Charles M. Sheldon, the author of *In his Steps* and *The Crucifixion of Philip Strong*; *Sabbath Nights at Pitcoonans*, by the author of *Sandy Scott's Bible Class*; and *The Gawktown Revival Club*, by J. Walter Davis, may be classed together. Social questions are the theme of *Leo Dayne*, by Mar-

garet Augusta Kellogg; E. H. Cooper traced the successive steps of a man Resolved to be Rich; Hervey White entered into the Differences of life and station; Ella Napier Lefroy proposed one standard of morality for men and women in *The Man's Cause*; *The Décadents* was a story of Blackwell's island and Newport, by Charles W. De Lyon Nichols (Shelton Chauncey); Mormonism was proclaimed *The False Star* by A. D. Gash; temperance was advocated in *The Whistle in the Alley*, by E. A. Rand; and miscegenation was discussed in *Stephen the Black*, by Caroline H. Pemberton. *The Bondwoman*, by Mrs. Marah Ellis Ryan, related to the days of slavery, as did *The Fugitive*, a tale of adventure in the days of clipper ships and slavers. *The Yarn of a Bucko Mate*, by Herbert E. Hamblen (F. Benton Williams), recounted his adventures in two oceans; *The Voyage of the Pulo Way*, by W. Carlton Dawe, contained a record of some strange doings at sea; from Cy Warman we had *Snow on the Headlight*, a story of the great Burlington strike, and *The White Mail*; and Mrs. Mollie E. Moore Davis, the author of *Under the Man-Fig*, sent out a new Texas story, *The Wire Cutters*. Oliver Iverson, by Ann Devoore, dealt largely in the mysterious and exciting; Charlotte Perkins Stetson was ghoulish and uncanny in detailing the baneful effect of *The Yellow Wall Paper*; Héloïse Durant Rose unveiled *A Ducal Skeleton*; Miss Carmichael's *Conscience*, according to Baroness Von Hutten, was a study in fluctuations; Morton Grinnell, M. D., described *An Eclipse of Memory*; Teresa Dean confided the *Reveries of a Widow* to the public; Alfred J. Cohen (Alan Dale) published *His Own Image*; Mrs. Mary J. Holmes, *The Tracy Diamonds*; Charles L. Marsh, *A Gentleman Juror*; Edgar Morette, *The Sturgis Wager*, a detective story; Josephine Bontecue Steffens, *Letitia Berkeley*, A. M.; H. S. Irwin, *Helena*; Hanson Penn Diltz, *Hollow Bracken*; N. B. Winston, *Waters that Pass Away*; and Linn Boyd Porter (Albert Ross) two novels, *The Naked Truth* and *That Gay Deceiver*. Roy L. McCardell gave his attention to *The Wage Slaves of New York*; Herbert G. Wells ransacked the realm of the improbable for the adventures contained in his story of the future, *When the Sleeper Wakes* and his *Tales of Space and Time*; H. E. Orcutt invaded *The Empire of the Invisibles*; Matthew Phipps Shiel alarmed us with *The Yellow Danger*; or, *What might happen if the Division of the Chinese Empire should estrange all European Countries*; *The Trembling of Borealis* occurred in the year 5000 (Anno Mundi) according to Paul d'Argenteuil; Leon Lewis gave details of *Andrée at the North Pole*; Matthew J. Royal invaded *The Isle of the Virgins*, as Edgar C. Blum did *Satan's Realm*; Richard Slee and Cornelia Atwood Pratt chronicled *Dr. Berkeley's Discovery*; *In Quest of Life*, by Thad W. Williams, M. D., contained the revelations of the *Wiyatao of Xipantl*, the last high priest of the Aztecs; *The Bronze Buddha*, by Cora Linn Daniels, was professedly a mystery; *A Queen of Atlantis*, by Frank Aubrey, carried on the romance begun in *The Devil Tree of Eldorado*; *A Married Man*, by Frances Aymar Mathews, recorded serious improbabilities. To spiritualistic influence were to be attributed *The Grail Brothers*, by Sarah Helen Gale, and *Behind the Veil*, anonymous, while *Fate or Law?* chronicled the results of mental healing.

Volumes of short stories not heretofore included were: *A West Point Wooing*, and *Other Stories*, by Mrs. Clara Louise Root Burnham; *Short Rations*, sketches of army life, by G. Williston Fish,

and *Trooper Tales*, by Will Levington Comfort; *Holly and Pizen*, suggestive of Ruth McEnery Stuart; *The Backward Trail*, stories of the Indians and pioneers, by Will L. Hale; *The Archbishop's Unguarded Moment*, and *Other Stories*, by Oscar Fay Adams; *The Powers at Play*, by Bliss Perry; *Sundown Leflare*, by Frederick Remington; *Tales of the Malayan Coast*, from Penang to the Philippines, by Rounseville Wildman; *Colonial Massachusetts Stories of the Old Bay State*, by Mrs. S. E. Dawes; *Pennsylvania Stories*, by Arthur Hobson Quinn; *In Old France and New*, by William McLennan; *The Goodness of St. Rocque*, and *Other Stories*, by Mrs. Alice Dunbar (Mrs. Paul Laurence Dunbar); *The Conjure Woman and The Wife of his Youth*, and *Other Stories of the Color Line*, by Charles W. Chestnutt; *The Four-masted Catboat*, and *Other Truthful Tales*, by Charles Battell Loomis; *A Daughter of Neptune*, by William Winslow; *The Loom of Destiny*, by Arthur J. Stringer; *Montezuma's Castle*, and *Other Weird Tales*, by Charles D. Cory; *Fur and Feather Tales of sporting life*, by Hamblen Sears; *Doc Horne*, a story of the streets and town, by George Ade; *Mr., Miss, and Mrs.*, by Charles Bloomingdale, Jr. (Karl); *The Greater Inclination*, by Edith Wharton; *The Eye of a God*, and *Other Tales of East and West*, by W. A. Fraser; *Adobeland Stories*, by Verner Z. Reed, the author of *Tales of the Sun Land*; *A Silent Singer*, by Clara Morris (Mrs. Clara Morris Harriott); *Men's Tragedies*, by R. V. Risley; *Transatlantics*, by Frederick W. Wendt; *Where Angels Fear to Tread*, and *Other Tales of the Sea*, by Morgan A. Robertson; *Sand and Cactus*, by Wolcott Le Clear Beard; *A Matter of Business*, and *Other Stories*, by William Curtis Stiles; *The Gam*, by C. H. Robbins, a group of whaling stories; *Lasca*, and *Other Stories*, by Mary F. Nixon; *Tiverton Tales*, by Alice Brown; *She of the West*, by Bailey Millard; *Mr. Jack Hamlin's Meditation*, and *Other Stories*, by Francis Bret Harte; *The Sixth Sense*, and *Other Stories*, by Margaret Sutton Briscoe; *The River Syndicate*, and *Other Stories*, by Charles E. Carryl; *A Village Ophelia*, by Anne Reeve Aldrich; *Of Necessity*, by H. M. Gilbert; *Ridan the Devil*, and *Other Stories*, by Louis Becke; *Tales of the Telegraph*, by Jasper Ewing Brady; *Vassar Studies*, by Julia Augusta Schwartz; *Vacation Incidents*, by A. Paul Gardiner; *The Adventures of a Freshman and The Stolen Story*, and *Other Newspaper Stories*, by Jesse Lynch Williams; *His Defense*, and *Other Stories*, by Harry Stillwell Edwards; *Tales told in a Country Store*, and *Accompanying Verse*, by Rev. Alvin Lincoln Snow; *Autumn Leaves*, verse and story, by Mary Agnes Tincker; *One of those Coincidences*, and *Ten Other Stories*, by Julian Hawthorne; *Count Lyof Nikolaievich Tolstoi*, Charles George Douglas Roberts, and others; *Annancy Stories*, of Jamaica folklore, by Pamela Colman Smith, to which Thomas Nelson Page contributed an introduction; *Fables in Slang*, by George Ade, illustrated by Claude J. Newman; *Mr. Milo Bush and Other Worthies*; *Their Recollections*, by Hayden Carruth; and *Ernest Jarrold's Mickey Finn Idylls*, with an introduction by Charles A. Dana. A new edition of George F. Pardon's *Tales from the Operas* was issued, and Nos. 30, 31, and 32 of *Tales from Town Topics*. The Library Edition of the Works of Edward Everett Hale, in ten volumes, of which the first was issued last year, was continued, Vols. II-VI being sent out.

Fine Arts.—George Lansing Raymond entitled his work upon *Proportion and Harmony of Line and Color in Painting, Sculpture, and Architect-*

ture an essay in comparative æsthetics; Esther Singleton edited and translated *Great Pictures as seen and described by Famous Writers*; from Deristhe L. Hoyt came a study of *The World's Painters and their Pictures*; while *Religio Pictoris* was set forth sympathetically by Helen Bigelow Merriman. Two valuable works on art of distinctively American type were *The Art Life of William Morris Hunt*, by Helen M. Knowles, with illustrations from his works, and *Life and Character: Drawings by W. T. Smedley*, 50 in number, with accompanying text by A. V. S. Anthony. Raphael was the title of a collection of 15 pictures and a portrait of the painter, with an introduction and interpretation, edited by Estelle M. Hurl for the *Riverside Art Series*. *Anglo-American Pottery: Old English China with American Views* purported to be a manual for collectors by Edwin A. Barber, in line with which was *Old New York on Staffordshire Pottery*, by R. F. Halsey. By the Way, a collection of short essays on music and art in general, taken from the programme books of the Boston Symphony Orchestra, by William Foster Aphthorp, filled two volumes; Hugh A. Clarke traced the relation between Music and the Comrade Arts; William J. Henderson told *How Music Developed*, tracing in critical and explanatory fashion the growth of modern music, and also contributed a volume upon *The Orchestra and Orchestral Music to the Music Lovers' Library*. Esther Singleton prepared *A Guide to the Operas*, giving a description and interpretation of the words and music of the most celebrated; and Charles Annesley in *The Standard Opera Glass* gave the detailed plots of 123 celebrated operas, with critical and biographical remarks, dates, etc., James Huneker contributing a prelude to the work. The last-named authority published *Mezzotints in Modern Music*, devoted to Brahms, Tschaiakowsky, Chopin, Richard Strauss, Liszt, and Wagner. L. C. Elson devoted a volume to *The National Music of America and its Sources*. *Stars of the Opera*, by Mabel Wagner, contained a description of 12 operas and a series of personal sketches, with interviews, of leading prima donnas, and Louis C. Strang was heard from on *Famous Actors of the Day in America and Famous Actresses of the Day in America*. The *Madonna in Legend and History*, by Elizabeth C. Vincent, had an introduction by Rev. Boyd Vincent, and was intended to give a key to many pictures otherwise meaningless. Joseph L. French treated of *Christ in Art*. Sumptuous gift books of the holiday season included also *Outdoor Pictures*, by Thure de Thulstrup; *Nature Studies in Berkshire*, by John Coleman Adams, with illustrations in photogravure from original photographs by Arthur Scott; *Plantation Sketches: Drawings of Negro Life*, by J. Campbell Phillips; *The Education of Mr. Pipp*, by Charles Dana Gibson; *Picturesque Bits of New York*, by Alfred Stieglitz; *Sketches of Lowly Life in a Great City*, by Michael Angelo Woolf, edited by Joseph Henius; *Funny Folks*, by F. M. Howarth; *Treasures of the Metropolitan Museum of Art*, described by Arthur Hoeber; and *The American Art Annual, 1898*, edited by Florence N. Levy. *Form and Color*, by Charles Behrens, containing new motives for wall and ceiling painting, with 30 colored plates, was begun with the issue of Part I. *Moments with Art* consisted of short selections in prose and verse for lovers of art, compiled by J. E. P. D. Arizona, by Augustus Thomas, was published with 12 half-tone reproductions from the play, making an attractive volume, and Peter Newell's *Pictures and Rhymes* delighted the admirers of his humorous vein.

General Science.—The popularization of science goes on apace, and a number of books interesting to young people are published yearly, in addition to a few works of standard value. From John Fiske came *A Century of Science, and Other Essays*, while D. Kerfoot Shute, M. D., supplied *A First Book in Organic Evolution*. *Outlines of General Physics* were supplied by Prof. James Stacy Stevens, and *A Text-book of General Physics* was written for the use of colleges and scientific schools by Charles S. Hastings and Frederick E. Beach. *Elements of Physics for Use in High Schools* came from Henry Crew, *A Text-book of Physics* from W. Watson, and Vol. II of *A Text-book of Physics*, by John H. Poynting and Joseph J. Thomson, was devoted to Sound. *Stars and Telescopes* was a handbook of popular astronomy, by Prof. David P. Todd, founded on the ninth edition of Lynn's *Celestial Motions*; Mary E. Byrd prepared *A Laboratory Manual in Astronomy*; Richard Hinkley Allen wrote at length of *Star Names and their Meanings*; *The Wilderness of Worlds*, by George W. Morehouse, gave a popular sketch of the evolution of matter from nebula to man and return; and *The Family of the Sun* was the title given by Edward S. Holden to a collection of conversations with a child. *Minerals in Rock Sections*, by Lea McIlvaine Luquer, set forth the practical methods of identifying minerals in rock sections with the microscope, especially arranged for students in technical and scientific schools; *The Characters of Crystals*, by Alfred J. Moses, was intended as an introduction to crystallography; and *The Geology of Point Reyes Peninsula* was contributed to the *Bulletins of the Department of Geology, University of California*, by F. M. Anderson. *The Foundations of Zoölogy*, by William Keith Brooks, formed Vol. V of the *Columbia University Biological Series*; John Stirling Kingsley was the author of a *Text-book of Vertebrate Zoölogy*; and Oliver Davie, the author of *Nests and Eggs of North American Birds*, published *Reveries and Recollections of a Naturalist* in an edition limited to 200 copies. *A Field Key to the Land Birds* was supplied by Edward Knobel, 150 figures of the birds of the United States being distributed on 9 colored plates and arranged according to size. F. H. Yorke, M. D., was heard from on *Our Ducks*; D. Lange in *Our Native Birds* told how to protect them and attract them to our homes; Mrs. Harriet Mann Miller (*Olive Thorne*) was an undoubted authority in *The First Book of Birds*, which had 8 colored and 12 plain plates, as well as 20 figures in the text; while Reginald Heber Howe proved himself at home on *The Birds' Highway*, illustrating his own work with the assistance of Louis Agassiz Fuertes. *Our Feathered Friends* was a little book for young people, and Charles A. Keeler caught *A First Glance at the Birds*. William Everett Cram wrote attractively of *Little Beasts of Field and Wood*; William J. Long published a first series of *Ways of Wood Folk*; James Newton Baskett told *The Story of the Fishes in Appleton's Home Reading Books*; Belle S. Cragin gave instructions how to collect, preserve, and study *Our Insect Friends and Foes*; Henry Meade Bland sent out *Studies in Entomology*; and a second series of *Stories of Insect Life*, devoted to summer and autumn, came from Mary E. Murtfeldt and Clarence Moores Weed. The last-named author also compiled and edited *The Insect World*, another of Appleton's *Home Reading Books*. Margaret Warner Morley contributed two volumes, akin in theme, entitled respectively *The Honey Makers* and *The Bee Peo-*

ple, illustrating them herself, as well as a brief sketch of Little Wanderers of the plant world. Sherman F. Denton followed the first section of Moths and Butterflies of the United States East of the Rocky Mountains, issued last year, with Sections 2-6, and *Everyday Butterflies: A Group of Biographies*, was from the pen of Samuel Hubbard Scudder. *Animal and Plant Lore*, collected from the oral tradition of English-speaking folk by Mrs. Fanny D. Bergen, formed Vol. VII of the *Memoirs of the Animal Folklore Society*. Vol. XII of *The Silva of North America*, by Charles Sprague Sargent, was devoted to *Coniferae*; *Plant Relations*, by John M. Coulter, belonged to the series of *Appletons' Twentieth Century Text-books*; *The Teaching Botanist*, by William F. Ganong, was intended as a manual of information upon botanical instruction; *Field, Forest, and Wayside Flowers*, by Maud Goings (E. M. Hardinge), contained also chapters on grasses, sedges, and ferns; Frances Theodora Parsons told *How to Know the Ferns* in a tasteful volume, illustrated by Marion Satterlee and Alice Josephine Smith; while Alice Lounsberry was the author of *A Guide to the Wild Flowers*, to which Dr. N. L. Britton contributed an introduction, and which was illustrated with 64 colored and 100 black-and-white plates and 54 diagrams. Edward Knobel was again heard from on *The Grasses, Sedges, and Rushes of the Northern United States*, providing an easy method of identification; Thomas H. Macbride wrote on *The North American Slime Moulds*, giving a list of all species of myxomycetes hitherto described from North America, including Central America; and Lucien Marcus Underwood discoursed of *Molds, Mildews, and Mushrooms*. Mark Walrod Harrington wrote *About the Weather for the Appletons' Home Reading Books* in a highly instructive manner. A. S. Percival drew up a manual of *Optics for students*, and *A Treatise on Photographic Optics*, by R. S. Cole, was an acceptable addition to the literature of the art which has proved so popular of recent years. Joseph Torrey, Jr., arranged *Elementary Studies in Chemistry*; Profs. H. H. Nicholson and Samuel Avery, *Laboratory Exercises for the same study*, to accompany any elementary text; and John F. Woodhull and M. B. Van Arsdale, *Chemical Experiments*. *The Spirit of Organic Chemistry*, by Arthur Lachman, intended as an introduction to the current literature of the subject, had an introduction by Paul C. Freer, M. D.; William A. Tilden wrote *A Short History of the Progress of Scientific Chemistry in our Own Times*; *The Arithmetic of Chemistry* was a useful handbook by John Waddell; *Indicators and Test Papers* had their source, preparation, application, and tests for sensitiveness investigated by Alfred I. Cohn; and James Walker was the author of a general *Introduction to Physical Chemistry*. *The Rise and Development of the Liquefaction of Gases* was traced by Willett L. Hardin, and *Liquid Air and the Liquefaction of Gases* was the absorbing theme of Thomas O'Connor Sloane. H. E. Hadley treated of *Magnetism and Electricity for Beginners*; *Electric Wiring, Fittings, Switches, and Lamps*, a practical book for electric-light engineers, etc., by W. Perren Maycock, contained 360 illustrations; Maurice A. Oudin described *Standard Polyphase Apparatus and Systems*; W. S. Franklin and R. B. Williamson examined *The Elements of the Alternating Currents*. *Mensuration*, with Special Application of the Prismoidal Formula, was briefly gone into by S. W. Furst, and John S. Barr explained the *Kinematics of Machinery*. *The Indians of To-day*

were the subject of a sumptuous volume by George Bird Grinnel, with 50 full-page portraits of the most famous chiefs and 4 pictures in color, and American Indians were also the theme of Frederick Starr in the series of *Ethno-geographic Readers for schools*. *Creation Myths of Primitive America in Relation to the Religious History and Mental Development of Mankind* were studied by Jeremiah Curtin, and from Henry T. Finck we had a volume on *Primitive Love and Love Stories*, in connection with which may be mentioned *The Kiss and its History*, by Christopher Nyrop, written in all seriousness. *Duality of Voice* claimed to be an outline of original research by Emil Sutro.

To intellectual science belong *A Theory of Reality*, by George Trumbull Ladd, an essay in metaphysical system upon the basis of human cognitive experience; *Social and Ethical Interpretations in Mental Development*, by James Mark Baldwin, whose work upon *Mental Development in the Child and the Race* went through a second corrected edition; *A Syllabus of Psychology*, by James Hervey Hyslop, and *A Syllabus of an Introduction to Philosophy*, by Walter T. Marvin, both in the series of *Columbia University Contributions to Philosophy, Psychology, etc.*; *Psychology and Life*, by Prof. Hugo Munsterberg; *A Brief Introduction to Modern Philosophy*, by Arthur Kenyon Rogers; *A History of Modern Philosophy in France*, by Lucien Levy Bruhl; a new issue of *The Perceptualist*, by Edward J. Hamilton, D.D.; *The Will and its World: Psychical and Ethical*, by Denton J. Snider; and *Harmonica of Evolution*, by Florence Huntley.

History.—*The History of the United States under the Constitution*, by James Schouler, was completed by the issue of the sixth volume during 1899, eight years after the appearance of the fifth volume. It was devoted to a *History of the Civil War, 1861-1865*. Very nearly the same period was covered by the fourth volume of James Ford Rhodes's *History of the United States from the Compromise of 1850*, which brings the work to its midway point. The *Greater Republic* was the title of a history of the United States from the earliest days to the present time by Charles Morris, and Julian Hawthorne published a *History of the United States from the Landing of Columbus to the Signing of the Peace Protocol with Spain*, in three volumes. A *History of the American Nation* was contributed by Prof. Andrew Cunningham McLaughlin to the *Twentieth Century Series*. *Sidelights on American History*, by Henry W. Elson, were confined to the national period before the civil war; *The Growth of the Constitution in the Federal Convention of 1787* was followed by William Montgomery Meigs in an effort to trace the origin and development of each separate clause from its first suggestion in that body to the form finally approved; and from Hamilton P. Richardson we had a work similar in scope, *The Journal of the Federal Convention of 1787, Analyzed*. *The Jacksonian Epoch*, by Charles H. Peck, was an interesting sketch of a formative period in our political life; *The End of an Era*, by John Sergeant Wise, a son of Gov. Wise, of Virginia, pictured antebellum life in that State and the stirring times following John Brown's raid: *East Tennessee and the Civil War*, by Oliver Perry Temple, may be mentioned in connection with *The Civil War on the Border*, by Wiley Britton, a narrative of military operations in Missouri, Kansas, Arkansas, and the Indian Territory during the years 1863-'65; Vol. II of *The Story of the Civil War*, by John Codman Ropes, covered

The Campaigns of 1862; and two other volumes are to be noted belonging to the momentous period, When and Where we met Each Other on Shore and Afloat, by Theodore D. Strickler, and The Song of the Rappahannock, by Ira Seymour Dodd. A Source Book of American History was edited for schools and readers by Prof. Albert Bushnell Hart, John W. Gibson wrote A School History of the United States of America, H. A. Guerber told The Story of the Great Republic in the Series of Eclectic School Readings, and The Story of Our Flag was written by Addie Guthrie Weaver. A History of American Privateers, by Edgar Stanton MacLay, was an able companion volume to his History of the United States Navy, and was got up in attractive guise; it presented the first comprehensive account of one of the most picturesque and absorbing phases of our maritime warfare prior to the declaration of Paris in 1856. Some Account of the Capture of the Ship Aurora, written by Peter Freneau in 1780, was published for the first time during the year by the consent of the heirs of Jane Leadbetter, the poet's granddaughter, to whom he bequeathed it. The Crisis of the Revolution, by William Abbott, was pronounced the handsomest book of the autumn season, and contained the story of Arnold and André, now for the first time collected from all sources, and illustrated with views of all places identified with it. The Dutch and Quaker Colonies in America came next in order to the master hand of John Fiske; Edward McCrady published the second volume of his able History of South Carolina under the Royal Government, carrying us through the period 1719-'76; in The Puritan Republic Dan Wait Howe gave a history of the Puritan Commonwealth of Massachusetts; Vol. II of A History of the Quaker Government in Pennsylvania, by Isaac Sharpless, completed that work, and portrayed for us The Quakers in the Revolution; The German Emigration to America, 1709-1740, formed Part III of a narrative and critical history prepared at the request of the Pennsylvania German Society by Henry Eyster Jacobs, D. D., and was published in an edition limited to 100 copies; a new edition was made of The Social History of Flatbush and Manners and Customs of the Dutch Settlers in Kings County by Gertrude Lefferts Vanderbilt; Rhode Island and the Formation of the Union, by Frank Greene Bates, formed Vol. X of Columbia University Studies in History, Economics, and Public Law; and The Narragansett Friends' Meeting in the XVIII Century, by Caroline Hazard, contained also a chapter on Quaker beginnings in Rhode Island. The Old Northwest: The Beginnings of our Colonial System, was from the pen of Rev. Burke Aaron Hinsdale; Vols. XXXIII to LVIII were issued of The Jesuit Relations and Allied Documents; and in the Johns Hopkins University Studies we had Slavery in the State of North Carolina, by John Spencer Bassett; The Financial History of Baltimore, by J. H. Hollander; The Labadist Colony in Maryland, by Bartlett B. James; and a History of the Know-nothing Party in Maryland, by Laurence F. Schmeckebier. Stories of the Old Bay State were told by Elbridge Streeter Brooks for young readers, for whom he also provided The Story of our War with Spain. This theme proved no less fruitful this year than last. Hon. Henry Cabot Lodge based on official reports his work upon The War with Spain; Henry B. Russell, Redfield Proctor, and John M. Thurston collaborated upon An Illustrated History of our War with Spain, giving its causes, incidents, and results; Parts I-XVI of Harper's Pictorial History

of the War with Spain, to which Gen. Nelson A. Miles contributed an introduction, appeared during the year; The Story of the War of 1898, by W. N. King, Jr., had introductions by Gen. O. O. Howard and Capt. Robley D. Evans; Lessons of the War with Spain were drawn by Capt. Alfred Thayer Mahan; Under Three Flags in Cuba, by George Clarke Musgrave, gave a personal account of the Cuban insurrection and the Spanish-American War from the standpoint of a sufferer therein; George Kennan was heard from in Campaigning in Cuba; John D. Miley proved himself to have been in Cuba with Shafter; and John Bigelow, Jr., published Reminiscences of the Santiago Campaign. The Fight for Santiago, by Stephen Bonsal, told the story of the soldier in the Cuban campaign from Tampa to the surrender; The Story of the Rough Riders, 1st U. S. Volunteer Cavalry, by Edward Marshall, was illustrated from photographs taken on the field and with drawings by Richard F. Outcault; The Fun and Fighting of the Rough Riders was given briefly by Tom Hall; Andrew S. Draper treated The Rescue of Cuba as an episode in the growth of free government; The Maine was the title of an account of the destruction of the battle ship by her captain, Charles Dwight Sigsbee; and from Richmond Pearson Hobson we had another personal narrative, that of The Sinking of the Merrimac in the harbor of Santiago de Cuba, June 3, 1898. With Sampson through the War, by W. A. M. Goode, contained chapters contributed by the rear admiral, Capt. Robley D. Evans, and Commander C. C. Todd; From Yanco to Las Marias, by K. Stephen Herrman, told the story of the campaign in western Puerto Rico; The Spanish-American War was the title of a book of the events of the war described by eyewitnesses, akin to which was the volume of Reminiscences and Thrilling Stories of the War, by Returned Heroes, for which we were indebted to James Rankin Young and J. Hampton Moore. Henry Christopher McCook, D. D., devoted a volume to The Martial Graves of our Fallen Heroes in Santiago de Cuba; Blue Jackets of '98 was a history of the Spanish-American War for boys, by Willis J. Abbot, in the Blue Jacket Series. Amos Kidder Fiske contributed The West Indies to the Story of the Nations Series, and also published The Story of the Philippines, a popular account of the islands from their discovery by Magellan to the capture of Dewey; The Friars in the Philippines were apologized for by Rev. Ambrose Coleman; The Expedition to the Philippines was described by Francis Davis Millet, the artist-correspondent; The History and Conquest of the Philippines and our Other Island Possessions came from Alden March; and Oscar King Davis reviewed Our Conquests in the Pacific. Pike and Cutlass: Hero Tales of our Navy, were illustrated by the author, G. Gibbs, and from Edward Kirk Rawson we had Twenty Famous Naval Battles: Salamis to Santiago, in two volumes, illustrated with a remarkable series of maps, plans, and cuts. To military history belong The Ninth New York Heavy Artillery, by Alfred Seelye Roe; The '98 Campaign of the 6th Massachusetts, U. S. V., by Frank E. Edwards; The History of the One Hundred and Sixty-first Regiment Indiana Volunteer Infantry, by Rev. W. E. Biederwolf; and Glimpses of the Nation's Struggle, Fourth Series, a collection of papers read before the Minnesota Commandery, Military Order of the Loyal Legion of the United States, in 1892-'97. The Great Company was the title of a history of the honorable company of merchant adventurers trading in Hudson Bay, by Beckles

Willson, to which Lord Strathcona and Mount Royal contributed an introduction, and which was illustrated with original drawings by Arthur Heming. Another Canadian work, of far greater compass and consequence, was *The United Kingdom: A Political History*, by Prof. Goldwin Smith, in two volumes. Prof. George Burton Adams gave an outline of the development of European History; Hon. Thomas E. Watson undertook to condense *The Story of France* from the earliest times to the consulate of Napoleon Bonaparte into two volumes, the first of which extended to the end of the reign of Louis Fifteenth; Germany: *Her People and their Story*, was a popular history of the beginnings, rise and development, and progress of the German Empire from Arminius to William II, told for Americans by Mrs. Augusta Hale Gifford; Frederick Albion Ober contributed *Spain to Appletons' series of History for Young Readers*; Leonard Williams wrote *A Child's History of Spain*; and from Mrs. Mary Platt Parmele we had *A Short History of Spain*. Elizabeth Wormeley Latimer wrote of Judea from Cyrus to Titus, 537 B.C.—70 A.D. The first of eight volumes destined to contain *The Library of Universal History*, by Israel Smith Clare, was devoted to Ancient Oriental Nations; eight volumes also contained *Ridpath's History of the World*, by John Clark Ridpath; Orlando P. Schmidt was the author of *A Self-verifying Chronological History of Ancient Egypt*, from the Foundation of the Kingdom to the Beginning of the Persian Dynasty; *A Book of Startling Discoveries*; *Outlines of General History* were prepared by Frank Moore Colby; and from Edwin A. Grosvenor we had a *Contemporary History of the World. The Battles of All Nations, from the Earliest Times to the Present Day*, according to Edgar Saltus, filled two volumes. How the Black St. Domingo Legion saved the Patriot Army in the Siege of Savannah, 1779, was the subject of one of the brief *Occasional Papers of the American Negro Academy*, contributed by T. G. Steward. Leslie's *History of the Greater New York* was an important undertaking, and from Charles Burr Todd we had *A Brief History of the City of New York*.

Jurisprudence.—More books were published in this department during 1899 than in any other, excepting fiction. Four hundred and fifty-four new books and 35 new editions were recorded, and of the total of 489, 482 were by American authors.

The second volume of Austin Abbott's *Forms of Pleading for Legal or Equitable Relief* was completed after the author's decease by Charles G. Alden and given to the public, thus completing a work of standard value, prepared with especial reference to the codes of procedure of the various States and adapted to the present practice in many common-law States; *A Treatise on the Practice and Procedure of the United States Supreme Court* was written by Heber J. May; Vol. I initiated a series of *American Practice Reports* of official leading cases in all State and Federal courts, edited by Charles A. Ray; *A Manual of Practice in the Courts of the United States*, by Robert Desty, went through a ninth edition, revised and brought to date, etc., by M. A. Folsom; and a second edition was sent out of Edwin Baylies's *Trial Practice*. Joseph H. Budd was the author of *A Treatise on the Law of Civil Remedies*; J. H. Levy edited *The Necessity for Criminal Appeal*, as illustrated by the Maybrick Case and the *Jurisprudence of Various Countries*; *A Summary of Torts* was made by Prof. Frank Alexander Erwin; and W. L. Williams set

forth *Statutory Torts in Massachusetts*. Two volumes contained Woolen's *Trial Procedure*, William Watson Woolen's treatise on the law of Indiana, and Kentucky Criminal Law and Procedure came from James M. Roberson. A sixth edition was sent out of George Tucker Bispham's *Principles of Equity*, and a second edition of *The Law of Pleading in Civil Actions and Defenses under the Code*, by Edgar B. Kinkead, in two volumes. Shepard's Citations to the American and English Encyclopædia of Law were compiled under the personal supervision of Frank Shepard; Vols. XIII, XIV, XV, XVI, and XVII were issued of the *Encyclopædia of Pleading and Practice*, edited by William M. McKinney; and Vols. VIII, IX, and X of the *Encyclopædia of Forms and Precedents for Pleading and Practice*, edited by William Mack and Howard P. Nash, under the supervision of James Cockcroft. A volume of *Hornbook Monographs* appeared anonymously, and a second revised and enlarged edition was made of *The Law of Presumptive Evidence*, by John D. Lawson. W. C. Rogers published *A Treatise on the Law of Domestic Relations*; Jeremiah Smith, *Cases on Selected Topics in the Law of Persons*; Charles E. Chadman wrote for the *Home Law School Series* on *Personal Rights and the Domestic Relations* and on *Principles of the Law of Contract and of Partnership*; Francis M. Burdick expounded *The Law of Partnership*; David T. Corbin set forth *The Law of Personal Injuries in the State of Illinois*, and the *Remedies and Defenses of Litigants*; Stewart Chaplin drew up *A Treatise on the Law of Landlord and Tenant as it Exists in the State of New York*; and Edwin W. De Leon and Sidney N. Moon collaborated upon *The Law of Liability. Vol. III of The Law of Negligence*, by William Hardcastle Brown, completed that work; John M. Gardner edited Vols. IV and V of *American Negligence Reports, Current Series*, and T. F. Hamilton Vol. IX of *American Negligence Cases*; a second revised and enlarged edition was made of *The Civil Liability for Personal Injuries arising out of Negligence*, by Henry F. Buswell, and a second edition of *Cases on the Law of Damages compiled by Floyd R. Mechem*; and John J. Crawford prepared a third edition of *A Treatise on the Law of Contributory Negligence*, by Charles Fisk Beach, Jr. Edward W. Spencer arranged *The Elements of Commercial Law as a practical text-book for use in schools*, and a work of similar character was O. B. Parkinson's *Outlines of Commercial Law. A Treatise on the Law of Commercial Paper*, by Joseph F. Randolph, in three volumes, went through a second edition; Montgomery Rollins compiled *The Laws regulating the Investment of Bank Funds*; Vol. XI of *The Digest of Insurance Cases*, edited by John A. Finch, was issued, as was *The Indicator's Digest of Insurance Decisions*. Three volumes contained *The Annotated Corporation Laws of all the States*, compiled and edited by Robert C. Cumming, Frank B. Gilbert, and Henry L. Woodward. Vol. VII completed Seymour Dwight Thompson's *Commentaries on the Law of Private Corporations*, and Vol. VII was issued of the *American Corporation Legal Manual*, edited by Charles L. Borgmeyer. Frank H. Sommer prepared citations, extracts, and cases on *Property in Land for use in the New York University Law School*; Vol. V was issued of *The Law of Real Property*, edited by Tilghman Ballard and E. Emerson; Jaspar C. Gates compiled *Cases on the Law of Real Property*; J. T. Donly offered *A Concise Summary of the Principles and Decisions relating to Realty Practice in Pennsylvania and*

Adjoining States; John J. Post drew up an Index of Wills proved in the Supreme Court, Courts of Common Pleas, etc., of New York; and Questions and Answers on Probate Law were arranged by William W. Stewart and Michael J. Keane. John J. Crandall edited *Leading Cases, American and English, on the Law of Legal Tender and Money*, Frank O. Loveland published *A Treatise on the Law and Proceedings in Bankruptcy*, and yet another *Treatise on Bankruptcy* came from John and James Arnold Lowell. Edwin C. Brandenburgh published an *Index Digest of Bankruptcy Decisions and The Law of Bankruptcy*, including the National Bankruptcy Law of 1898; from William Miller Collier we had *The Law of Bankruptcy and the National Bankruptcy Act of 1898*, as well as *The Official Rules, Forms, and General Orders in Bankruptcy* prescribed by the Supreme Court of the United States under this act; Williamson's *Complete Code of Practice in Bankruptcy*, now in Force, was sent out, as was Johnson's *Handy Reference Book of Law and Fact*, by Walter Johnson, also containing the national bankruptcy act of 1898. George W. Kirchwey was responsible for *A Partial Collection of Cases and Other Authorities on the Law of Mortgage*, as was James Avery Webb for *A Treatise on the Law of Usury* and, incidentally, of Interest, and John C. Kleber for *Void Judicial and Execution Sales. A Treatise on the American Law of Replevin* came from Roswell Shinn, *A Selection of Cases on the Law of Suretyship* from James Barr Ames, and *A Treatise on the Modern Law of Municipal Securities* from Bayard T. Hainer. *The Jurisdiction of Federal Courts*, as limited by the citizenship and residence of the parties, was shown by Howard M. Carter; *Cases on Private International Law* were the work of John W. Dwyer; William D. Guthrie delivered *Lectures on the Fourteenth Article of Amendment Law*; *The United States Internal Revenue Laws now in Force* were published with an appendix, etc., by Mark and William Ash; *The United States War Revenue Law of June 13, 1898*, was set forth with annotations and references compiled by T. F. Carmody and F. M. Peasley; *Foreign Patent and Trade-mark Laws* were codified by Arthur P. Greeley; and a *Digest of Decisions in the Patent Office and the United States Courts in Patents, Trade-marks, Copyrights, and Labels*, the annual volume for 1898, by Amos W. Hart, was intended as a supplement to Hart's *Digest, 1896-1898*. Louis M. Saunders also published an *Annual Digest of the Decisions of the Supreme Court of United States, the Federal Courts, and of the Commissioner of Patents in Matters relating to Patents*. Vol. VII was issued of *United States Interstate Commerce Reports*; Vol. I of *A Handbook of the Decisions of the Supreme Court of the United States*, by Henry De Forest Clarke, covered the period from the date of its organization to the October term of 1891, and Vol. II covered October terms, 1891-'98; Books 1, 2, and 3 of *Notes on United States Reports*, a brief chronological digest of points determined in decisions of the Supreme Court, by Walter Malins Rose, were published, as were the *Index Digest: Supplement of the United States Supreme Court*; Vols. CLXXI to CLXXIV inclusive of *United States Supreme Court Reports*, by J. C. Bancroft Davis; Book 43 of the complete edition of the same Reports as contained in these volumes, with headlines, headnotes, etc., by Stephen K. Williams; and Vols. XVIII and XIX of the permanent edition of *The United States Supreme Court Reporter*; Vols. XXX to XXXVI inclusive of *United States Circuit Courts of Appeals Re-*

ports; and nine volumes of *United States Courts of Appeal Reports*, as well as Vols. LXXXVII to XCVI inclusive of the *United States Federal Reporter*, permanent edition. Vols. VI, VII, VIII, IX, X, XII, and XIII of the *American Digest* (Century edition), a complete digest of all reported American cases from the earliest times to 1896, appeared. Vol. XIII, bringing the work to *Costs-Courtyard*, and the *American Digest Annual*, continuing the Century edition, was sent out for 1899. *American and English Corporation Cases*, edited by Thomas J. Michie, were continued with the issue of Vol. VIII, new series, and *American and English Railroad Cases*, for which we are indebted to the same editor, with Vols. X, XI, XII, XIII, and XIV. He also made a *Digest to cases reported in Vols. I to X inclusive*, and began a series of *Municipal Corporation Cases* with the issue of the first volume. Vol. V was reached of *American and English Decisions in Equity*, annotated by Ardemus Stewart, and Vols. X, XI, XII, and XIII of the second edition of the *American and English Encyclopædia of Law*, by David S. Garland and Lucius P. McGehee, under the supervision of James Cockcroft, brought the work to *Feud to Forwardness*. Vol. VI of *The General Digest, American and English*, annotated, new series, remains to be mentioned, as do Vols. LXIV to LXIX inclusive of *American State Reports*, reported and annotated by A. C. Freeman, and a brief digest to Vols. LXI to LXVI, with index to the notes and a table of cases reported, by J. M. Ross. The permanent editions of the *United States Federal Reporter*, *Atlantic Reporter*, and *Pacific Reporter* were increased with the issue of several new volumes respectively, and the Reports of the several States were too numerous to be included. *The Lawyers' Reports Annotated*, by B. A. Rich and Henry P. Farnham, in addition to the issue of Books 41 to 44 inclusive, contained a *Digest of the cases*, Vols. XXI to XL, with table of cases and index to annotations and briefs, Vols. I to XL. Vols. III and IV of *A Digest of Decisions and Encyclopædia of Pennsylvania Law, 1754-1898*, by George Wharton Pepper and William Draper Lewis, covered respectively *Constitutions to Corporations and Costs to Deeds*; *A Treatise on the Poor Laws of Pennsylvania* was written by Calvin G. Beitel; *Salem Dutcher collected Expressions of Law and Fact construed by the Courts of Georgia*; *Indiana Municipal Law* was handled by John E. Scott; and W. H. Whittaker drew up *The Ohio Justices' Code*. Arthur English was the author of *A Dictionary of Words and Phrases used in Ancient and Modern Law*; A. H. Garland imparted his Experience in the Supreme Court of the United States, with *Some Reflections and Suggestions as to that Tribunal*; *Natural Law and Legal Practice* were the theme of lectures delivered at the Law School of Georgetown University by René I. Holand; *Questions and Answers for Bar Examination and Review* were prepared by Charles S. Haight and Arthur M. Marsh; and J. W. Donovan wrote on *Skill in Trials*. *Questions and Answers on Twenty of the most Important Legal Subjects* were designed especially for the use of law students by Wilber A. Owen, and Paschal H. Coggins discoursed in brief compass on *Law and How to Keep Out of It*. J. H. Hubbell and Joseph A. Boyer edited respectively *Hubbell's Legal Directory* and *Boyer's Legal Directory* as usual.

Juvenile.—Books for young people were more numerous than ever, and ranked third in the list of publications, yielding precedence only to the departments of fiction and law. The total showed

434 new books sent out in 1899, as compared with 356 in 1898, when they occupied the fifth place in point of numbers. The familiar names of authors are found. Marguerite Bouvet told Tales of an Old Château; Mrs. Adeline Dutton Train Whitney, notwithstanding her seventy-five years, proved as interesting as ever in her adaptation of Square Pegs to the traditionally unreceptive round holes; Prof. David Starr Jordan entered a new field with The Book of Knight and Barbara, a series of stories told to children and corrected and illustrated by children. The Queen's Rangers, by Charles Ledyard Norton, was a story of Revolutionary times, as were When Boston braved the King, by W. E. Barton; The Young Minuteman, by William P. Chipman, in the Young Patriot Series; The Minute Boys of Bunker Hill, by Edward Stratemeyer; An Unknown Patriot, by Frank S. Child; A Jersey Boy in the Revolution, by Everett T. Tomlinson; A Revolutionary Maid, by Amy Ella Blanchard; and A Little Daughter of the Revolution, by Agnes Carr Sage. Lucy Foster Madison chronicled A Maid of the First Century; Mary Devereux wrote of the passage from Kingdom to Colony; Mrs. Elizabeth Williams Champney contributed A Daughter of the Mayflower to the series of Dames and Daughters of Colonial Days; Soldier Rigdale, by Beulah Marie Dix, told how he sailed in the same ship and how he served Miles Standish; The Young Puritans in Captivity, by Mary Prudence Wells Smith, appeared in the Young Puritan Series; The Boys of Serooby came from Ruth Hall, the author of In the Brave Days of Old; Camping on the St. Lawrence, by Everett T. Tomlinson, carried us on the trail of the early discoverers; Fire and Drum at Louisburg, by J. Macdonald Oxley, tells its own story; Ben Comee was a tale of Rogers's Rangers, 1758-'59, by M. J. Canavan; and from Hezekiah Butterworth we had The Treasure Ship, a tale of Sir William Phipps, the regicides, and the intercharter period of Massachusetts, and The Story of Magellan and the Discovery of the Philippines. F. H. Costello was heard from On Fighting Decks in 1812. James Otis Kaler was more prolific than ever, sending out With Perry on Lake Erie; Captain Tom, the Privateersman of the Armed Brig Chasseur; Christmas at Deacon Hackett's, a sequel to How Tommy saved the Barn; The Life Savers; Messenger No. 48; Telegraph Tom's Adventure; Off Santiago with Sampson and When Dewey came to Manila, both in the Stories of American History Series; At the Siege of Havana (in 1762); and The Swamp Fox. William O. Stoddard published Running the Cuban Blockade, The Dispatch Boat of the Whistle (a story of Santiago), and Ulric the Jarl, purporting to be a story of the penitent thief. Cadet Standish of the St. Louis came from William Drysdale; When Santiago Fell, by Ralph Bonehill, appeared in the Flag of Freedom Series, and from the same author we had A Sailor Boy with Dewey; Loyal Hearts and True, by Ruth Ogden, recalled our navy in the war with Spain, as did Cleared for Action, by Willis Boyd Allen, a sequel to Navy Blue; Edward Stratemeyer was again heard from with Fighting in Cuban Waters; or, Under Schley on the Brooklyn, in the Old Glory Series, and Under Otis in the Philippines; he also went To Alaska for Gold, and completed the skeleton left by William Taylor Adams (Oliver Optic) of An Undivided Union for the Blue and Gray—On Land Series. Forward March, by Kirk Munroe, was yet another story of the Spanish-American War, and from the same pen we had Shine Terrill and Midshipman Stuart. Henry in the War, by Gen. Oliver Otis Howard,

and Uncle Sam's Soldiers, by Oscar Phelps Austin, found favor with young readers. G. Waldo Browne described the doings of Two American Boys in Hawaii, as did Egerton Ryerson Young The Winter Adventures of Three Boys in the Great Lone Land; George Bird Grinnell followed Jack, the Young Ranchman; and Russell Doubleday in Cattle Ranch to College recited the true tale of a boy's adventures in the far West. The Delahoydes, a story of boy life on the old Santa Fé trail, was, of course, by Henry Inman, and from the same pen we had also A Pioneer from Kentucky. The Making of Zimri Bunker, by William J. Long, appeared in the Cosy Corner Series; Osceola, Chief of the Seminoles, by H. R. Gordon, presented accurately the Seminole war of 1835-'42; and from Edward S. Ellis we had Iron Heart, War Chief of the Iroquois, in the War Chief Series, in addition to The Young Gold Seekers of the Klondike, The Secret of Coffin Island, The Land of Wonders, Dorsey, the Young Inventor, Lost in the Rockies, and Through Jungle and Wilderness. Frank R. Stockton republished in book form, and under the title of The Young Master of Hyson Hall, a story contributed to a paper for boys several years ago; Elizabeth Harrison illustrated in Two Children of the Foothills the principles set forth in A Study of Child Nature; Hamlin Garland's account of Boy Life on the Prairie was illustrated by E. W. Deming; Walter S. Phillips (El Comanche) told Just about a Boy; Gertrude Smith gave her attention to The Boys at Marmiton Prairie; Harry Castlemon (C. Austin Fosdick) wrote The White Beaver; Horatio Alger, Rupert's Ambition; Herbert Elliott Hamblen (F. Benton Williams), We Win: The Life and Adventures of a Young Railroad; and Albert Bigelow Paine, The Beacon Prize Medals, and Other Stories. For boys we had Jack Chumleigh at Boarding School, by Maurice Francis Egan; Character Chiseling; or, Some Hours with the Oregon Quartette, by Mrs. Mary Anderson Hawkins; Professor Pin, by Mrs. Frank Lee; Across the Campus, by Caroline M. Fuller; A College Boy, by Anthony Yorke; Grant Burton, the Runaway, written and illustrated by W. Gordon Parker; Ward Hill at College, by Everett T. Tomlinson, a sequel to Ward Hill at Weston and Ward Hill, Senior; and The Half Back, a story of school, football, and golf, by Ralph Henry Barbour, illustrated by B. West Clinedinst. Two Chums, by Minerva Thorpe, was the story of a boy and his dog; Mrs. I. T. Thurston published three books, The Captain of the Cadets, A Village Contest; or, No Surrender, a sequel to A Bachelor Maid and her Brother, and The Bishop's Shadow, the bishop in the case being the late Rev. Phillips Brooks. Indian Child Life was the subject of a handsome color book by the artist Edwin Willard Deming, with black-and-white designs included in the text, and new stories by Therese O. Deming. Tatong, the Little Slave, was a story of Korea by Annie Maria Barnes; Lobo, Rag, and Vixen, by Ernest Seton Thompson, contained the personal histories of his animal favorites; Wabeno the Magician, by Mabel Osgood Wright, was intended as a sequel to Tommy Anne and the Three Hearts; Among the Farmyard People, by Clara Dillingham Pierson, was in line with her previous work, Among the Forest People and Among the Meadow People; Captain Kodak, by Alexander Black, was a camera story; Ray Stannard Baker in The Boy's Book of Inventions told stories of the wonders of modern science; William Drysdale supplied Helps for Ambitious Boys; The Iron Star and what it saw on its Journey through the Ages

from Myth to History, by John Preston True, presented a series of historical stories; Edward Brooks told *The Story of the Æneid* for boys and girls; Charles J. Bellamy celebrated the Return of the Fairies; and *The Island Impossible*, by Harriet Morgan, was illustrated by Katharine Fyle. *Wheat and Huckleberries* contained the adventures of Dr. Northmore's daughters, recorded by Charlotte M. Vaile, and Felix J. O'Neil described *More Fun than Huckleberries*. A Bonnie Boy was a story of happy days by Mrs. Julia MacNair Wright; Lily Foster Wesselhoeft was heard from in *Madam Mary of the Zoo*; A. G. Plympton illustrated her own account of *A Flower of the Wilderness*; and Lucy Randolph Fleming found a heroine in *Alice Withrow*. The *Stories Polly Pepper* told to the *Five Little Peppers* in the *Little Brown House*, according to Mrs. Harriet Mulford Lothrop (Margaret Sidney), were illustrated by Jessie McDermott and Ethelred B. Barry; Mrs. Ellen Olney Kirk wrote for girls of *Dorothy and her Friends*; and another writer for older people, Mrs. Mary Hallock Foote, was heard from in *The Little Fig Tree Stories*, illustrated by herself. Amanda Minnie Douglas wrote *A Little Girl in Old Philadelphia* and *The Heir of Sherburne*; Wee Lucy's Secret was revealed by Rebecca Sophia Clarke (Sophie May); *The House with Sixty Closets*, by Frank S. Child, was a Christmas story for young folks; Laura Elizabeth Richards wrote *Quicksilver Sue and Peggy*; and Mrs. Mary H. Henry (Howe Benning) *Jean's Opportunity and At Opening Doors*. Will Allen Dromgoole wrote but one story, *Harum-scarum Joe*; from Sarah Orne Jewett came *Betty Leicester's Christmas*; from Mrs. Evelyn Raymond, *A Daughter of the West and My Lady Barefoot*; and from Mrs. Mary Virginia Hawes Terhune (Marion Harland), *When Grandmamma was Young*, the story of a Virginia childhood. Mrs. S. K. Reeves wrote *Gladys Lindsay*; Floy Campbell, *Camp Arcady*; Eleanor Hooper Coryell, *Out of the Past*; Mrs. Herbert Bland (E. Nesbit), *The Story of the Treasure Seekers*; Mrs. Carrie L. Marshall, *Two Wyoming Girls and their Homestead Claims*; and Mrs. Isabella M. Alden (Pansy), *A Modern Sacrifice: The Story of Kissie Gordon's Experiment*. The *Ferry Maid of the Chattahoochee*, by Annie M. Barnes; *Margaret Thorpe's Trial*, by Mrs. Lucy Cecil White Lillie; *Barbara's Heritage*, by Deristhe L. Hoyt; *The Triangle*, by Lena Tomlinson; *We Four Girls*, by Mary Greenleaf Darling; *Beck's Fortune*, by Adèle E. Thompson; *The Story of Betty*, by Carolyn Wells; *The Court of Boyville*, by William Allen White; and *A Young Savage*, by Lyda Farrington Krausé (Barbara Yechton), found interested readers, and from the last author we had *A Cycle of Stories* also. Martha F. Finley (Martha Farquharson) carried on the *Elsie* books with *Elsie in the South*; Mrs. Caroline Leslie Field described *Nannie's Happy Childhood*; *The Two Legacies* came from Georgina Lowell Putnam; *The Golden Talisman* from H. Phelps Whitmarsh; and *Told under the Cherry Trees* from Grace Le Baron (Mrs. Grace Le Baron Upham). Dickey Downy purported to be the autobiography of a bird, by Virginia Sharpe Patterson; *Friends and Helpers* was the title of a compilation by Sarah J. Eddy; Ethelred Breeze Barry contributed *Little Tong's Mission to the Young of Heart Series*; Mrs. S. O'H. Dickson published *The Grangers, and Other Stories and Guessing at Heroes*; and Orville Elder, *Pickey: A Romance*. *Little Folks at Brookside*, by Mrs. D. P. Sanford, contained easy reading for the young. Anna Burnham Bryant prepared the *Sunday Hour*

Series in six volumes, and from Josephine Pollard came several volumes of a religious character, *The Boyhood of Jesus*, *God made the World*, *The Good Samaritan*, *Ruth: A Bible Heroine*, and *The Story of Jesus told in Pictures*. The Century Company issued the *St. Nicholas Christmas Book*; *Outside of Things: A Sky Book*, contained verses for children by Alice Ward Bailey and pictures by Annetta Lyman Paine; the verses by L. Frank Baum on *Father Goose* were illustrated by W. W. Denslow; Katharine Pyle wrote and illustrated *Prose and Verse for Children* in the *Eclectic School Readings Series*; *Songs of the Shining Way* was a book of child verse by Sarah Noble Ives; Arthur M. Lewis contributed "*The Rag Tags*" and their *Adventures*; L. D. Bradley, *Our Indians and Wonderful Willie*, for very little folks; *Gallant Little Patriots*, by Maud and Mabel Humphrey, contained colored plates after paintings in water color; from Florence K. and Bertha Upton we had *The Golliwogg in War*; *Of Such is the Kingdom* was a book of stories and rhymes by Clara Vawter; and *The Listening Child*, a selection from the stores of English verse made for the youngest readers and hearers by Mrs. Lucy W. Thacher, had an introductory note by Thomas Wentworth Higginson. *Boys and Girls of the Philippines and Around the World* were described by Stella W. Carroll and Harriet L. Jerome. On *Wood Cove Island*, by Elbridge Streeter Brooks, described a summer with Longfellow on the New England coast, and from the same indefatigable writer we had a volume of *Historic Americans*.

Medicine and Surgery.—There was a decrease in the number of new books and new editions of books falling under this department. George M. Gould, M.D., edited the *American Yearbook of Medicine and Surgery*; Charles Warrenne Allen, M.D., and Jacob Sobel, M.D., collaborated upon a *Handbook of Medical Progress*; Vols. VI and VII appeared of *A System of Medicine* by Many Writers, edited by Thomas Clifford Allbutt, M.D., covering *Diseases of the Circulatory and Nervous Systems and Diseases of the Nervous System* (continued); George E. Malsbary, M.D., prepared a manual of the *Practice of Medicine* for students and practitioners; *A Text-book of the Practice of Medicine*, by James M. Anders, M.D., went through a third revised edition; and a second edition was also sent out of *An Epitome of the History of Medicine*, by Roswell Park, M.D. *A Pocket Text-book of Materia Medica, Therapeutics, etc.*, was the work of William Schleif, M.D., and Warren Coleman, M.D., compiled *A Syllabus of Materia Medica*. *Practical Materia Medica for Nurses* came from Emily A. M. Stoney. *A Systematic Treatise on Materia Medica, Therapeutics, and Pharmacognosy*, by Finley Ellingwood, M.D., was an important contribution, and from Arthur R. Cushny, M.D., we had a volume of *Pharmacology and Therapeutics*. Frederick J. Smith, M.D., offered an *Introduction to the Outlines of the Principles of Differential Diagnosis*, with clinical memoranda, and *Keynotes and Characteristics*, by H. C. Allen, M.D., were accompanied with comparisons of some of the leading remedies of the *materia medica*. *A Text-book of Anatomy*, by American authors, was edited by Frederick H. Gerrish, M.D.; E. Franklin Smith, M.D., was the author of a *Text-book of Anatomy, Physiology, and Hygiene*; De Burgh Birch, M.D., of *A Class-book of (Elementary) Practical Physiology*; and a sixth edition of the *Essentials of Anatomy*, by Charles B. Nancrede, M.D., revised by Frederick J. Brockway, M.D., appeared in the *Saunders's*

Question Compend. A third edition of Maurice N. Miller, M.D.'s, Student's Histology was revised by Herbert U. Williams, M.D., and John Clement Heisler, M.D., wrote A Text-book of Embryology for Students of Medicine. A Manual of Modern Gastric Methods (chemical, physical, and therapeutical) came from A. Lockhart Gillespie, M.D.; Herman Partsch, M.D., investigated The Ills of Indigestion: Their Causes and their Cures, in three essays; and A. Symons Eccles, Difficult Digestion due to Displacements. A new revised edition was sent out of Intestinal Obstruction: Its Varieties, with their Pathology, Diagnosis, and Treatment, by Frederick Treves, M.D.; Clifford Mitchell, M.D., wrote on Renal Therapeutics; Louis Heitzmann, M.D., on Urinary Analysis and Diagnosis; The Surgical Diseases of the Genito-urinary Tract: Venereal and Sexual Diseases were gone over by Prof. G. Frank Lydston, M.D.; Charles Jewett, M.D., edited The Practice of Obstetrics by American Authors; a second, revised and enlarged, edition was sent out of A Text-book on Practical Obstetrics, by Egbert H. Grandin, M.D., and George W. Jarman, M.D.; and James Compton Burnett, M.D., devoted his attention to The Change of Life in Women and the Ills and Ailings Incident Thereto. George M. Tuttle, M.D., was the author of a Pocket Text-book of Diseases of Children. Hare on Typhoid Fever gave the views of Hobart Amory Hare, M.D., on the medical complications, accidents, and sequelæ of that disease, and a fourth edition was also made of the same author's work on Practical Diagnosis. F. H. Lutz, M.D., supplied the Therapeutics of Facial and Sciatic Neuralgia; Pulmonary Tuberculosis was the theme of the Alverenga prize essay of the College of Physicians of Philadelphia in 1898, revised and enlarged into a volume, by S. A. Knopf, M.D.; and Acromegaly of an essay by Guy Hinsdale, M.D., to which was awarded the Boylston prize of Harvard University for the same year. Interstitial Gingivitis; or, So-called Pyorrhœa Alveolaris, was investigated by Eugene S. Talbot, M.D., and from Arthur P. Luff came Gout: Its Pathology and Treatment. Louis A. Stimson, M.D., was the author of A Treatise on Fractures and Dislocations, Lewis Stephen Pilcher, M.D., wrote on The Treatment of Wounds, and John B. Roberts, M.D., made Notes on the Modern Treatment of Fractures. A Text-book of Diseases of the Nose and Throat was by D. Braden Kyle, M.D.; Seth Scott Bishop, M.D., sent out a second edition, thoroughly revised and enlarged, of his work on Diseases of the Ear, Nose, and Throat, and their Accessory Cavities; and a third revised edition was made of a Treatise on Diseases of the Ear, by Albert H. Buck, M.D. Edward Allen Fay made an inquiry into the results of Marriages of the Deaf in America. Edward Jackson was an authority upon Diseases of the Eye; An American Text-book of Diseases of the Eye, Ear, Nose, and Throat came from George E. de Schweinitz, M.D., and B. Alexander Randall, M.D.; Alexander W. Stirling, M.D., discoursed of Glaucoma: Its Symptoms, Varieties, Pathology, and Treatment; and William Norwood Suter was the author of a Handbook of Optics for Students of Ophthalmology. Dan Bennett St. John Roosa, M.D., went into the principles of the relief of Defective Eyesight by glasses. The Nervous System and its Constituent Neurons were treated of by Lewellys F. Barker, M.D.; H. Campbell Thomson, M.D., prepared An Introduction to Diseases of the Nervous System; Nervous and Mental Diseases were the theme of a volume by Archibald Church, M.D., and Frederick Peterson,

M.D.; Mental Affections: An Introduction to the Study of Insanity came from John Macpherson, M.D.; and Mind and Body, by A. C. Halphide, considered hypnotism and suggestion applied in therapeutics and education. J. Sanderson Christison, M.D., discoursed of Brain in Relation to Mind. Bacteria Especially as they are Related to the Economy of Nature, to Industrial Processes, and to the Public Health was the contribution of George Newman, M.D., to the Science Series; Thomas Bowhill published A Manual of Bacteriological Technique and Special Bacteriology; and A. C. Abbott, M.D., was heard from on The Hygiene of Transmissible Diseases. Harry Campbell, M.D., advised Respiratory Exercises in the Treatment of Disease, notably of the Heart, Lungs, Nervous and Digestive Systems; Thomas Stretch Dowse, M.D., edited The Treatment of Disease by Physical Methods; and Anders Wide provided a Handbook of Medical Gymnastics. A fifth edition of Essentials of Medical Chemistry, Organic and Inorganic, by Lawrence Wolfe, M.D., was thoroughly revised by Smith Ely Jelliffe, M.D., and a fifth revised edition of Saunders's Pocket Formulary was the work of William M. Powell, M.D. Thomas Lindsley Bradford wrote the History of the Homœopathic Medical College of Pennsylvania. Shall we Drink Wine? by John Madden, M.D., was a physician's study of the alcohol question, and from James K. Crook, M.D., we had a review of The Mineral Waters of the United States, and their Therapeutic Uses.

Surgical works included Surgery: A Treatise for Students and Practitioners, by Thomas Pickering Pick, M.D.; Outlines of Practical Surgery, by Walter G. Spencer; Surgical Treatment, the first of six volumes which will contain the entire work, by W. Watson Cheyne and F. F. Burchard, M.D.; a Manual of Surgery, by William Rose and Albert Carless; Lectures upon the Principles of Surgery, delivered at the University of Michigan by Charles B. Nancrede, M.D., with an appendix containing a *résumé* of the principal views held concerning inflammation by William A. Spitzley, M.D.; Railway Surgery, by Clinton B. Herrick, M.D.; Orthopædic Surgery, by J. Jackson Clarke; a Manual of Orthopædic Surgery, by Stewart L. McCurdy; a second edition of The Surgery of the Head and Neck, by Levi Cooper Lane; Electro-hæmostasis in Operative Surgery, by Alexander J. C. Skene, M.D., supplementary to his Treatise on the Diseases of Women; An Experimental Research into Surgical Shock, by George W. Crile, M.D.; a students' one-volume edition of Surgery, by Roswell Park, M.D.; and An American Text-book of Surgery for Practitioners, edited by William W. Keen, M.D., and J. W. White, M.D., in a third revised edition. Anna M. Fullerton, M.D., gave a small volume to Surgical Nursing. Vol. IV of the Index-Catalogue of the Library of the Surgeon General's Office, United States Army, second series, was sent out during the year, covering D-Emulsions.

Poetry.—There were 14 more books of poetry published in 1899 than in the previous prolific year. The poem which aroused most comment, The Man with the Hoe, by Edwin Markham, was given to the public in book form with other poems by the same author. Several well-known names were represented: Louise Chandler Moulton, by a book of sonnets and lyrics, entitled At the Wind's Will; Robert Cameron Rogers, by For the King, and Other Poems; Madison Julius Cawein, by Myth and Romance, a book of verses; Edward Rowland Sill, by Hermione, and Other Poems; Louise Imogen Guiney, by The Martyr's Idyl, and Shorter Poems; Arlo Bates, by Under

the Beech Tree; Bliss Carman, by *A Winter Holiday*; and Richard Hovey, by *Along the Trail*, a book of lyrics. *Sea Drift*: Poems were by Grace Ellery Channing, and *Wild Eden* by George Edward Woodberry. George Cabot Lodge sang *The Song of the Wave*, with which other poems were included; *Songs of American Destiny* came from William Norman Guthrie; *War is Kind*, by Stephen Crane, had drawings by Will Bradley; and *Wartime Echoes of the Spanish-American War* were selected and arranged by James Henry Brownlee. A volume of Poems by Richard Realf were sent out with a memoir of the poet by Richard J. Hinton, and Poems of Nature and Life, by John Witt Randall, were edited by Francis Ellingwood Abbot, with an introduction on the Randall family. Thomas Bailey Aldrich contributed an introductory note to the reprint of William Young's *Wishmaker's Town*; Wallace Rice edited the Poems of Francis Brooks, with a prefatory memoir; and William B. Dyer accompanied Riley Love Lyrics of James Whitcomb Riley with life pictures. Paul Laurence Dunbar published Lyrics of the Hearthside and Poems of Cabin and Field; Little Leather Breeches, and Other Southern Rhymes of Francis P. Wightman were illustrated by the author; and Joel Chandler Harris contributed an introduction to Howard Weeden's *Bandanna Ballads*, with which were included his *Shadows on the Wall*. Uncle Isaac, by William Dudley Powers, was intended as a remembrance of old days in the South; Howard S. England contributed *Shots at Random*; Mrs. Katharine Parkman Coolidge, a daughter of the historian Francis Parkman, *Voices*; Ridley Husted Bell, *Ada Deene*, and Other Poems; and Gertrude Hall, *Age of Fairygold*. Mary McNeil Fenellosa sent a flight of verses *Out of the Nest*; Will T. Hale published *An Autumn Lane*, and Other Poems; Alice Archer Sewall accompanied *An Ode to Girlhood*, with other poems also; and John Myers O'Hara worshipped *At Erato's Fane*. *Beneath Blue Skies and Gray* was the title of poems by Ingram Crockett; *The Dust of Dreams* of others by J. A. Coll; Clara Pearce Boss was the author of *After Life*, and Other Poems; S. M. Herrick, of *Thoughtful Hours*; Sparks and Flames, by Henry Wilson Stratton, had a preface by Ezekiah Butterworth; *A Season's Sowing* was written by Charles Keeler and decorated by Louise Keeler; Richard Burton published *Lyrics of Brotherhood*; Martha Gilbert Dickinson, *Within the Hedge*; W. Wilfred Campbell, *Beyond the Hills of Dream*; and Elva Irene McMillan, *Lyrics of the West*. Herbert Bashford was heard from in *Songs from Puget Sound*; *Hell's Canyon* purported to be a poem of the camps by N. K. Griggs; Coates Kinney entitled "a trilogy and some eclogs" *Mists of Fire*; *Sense and Satire*, based upon nineteenth-century philosophy by William L. Breyfogle, consisted of 700 quatrains, mostly pessimistic in tone, illustrated by John W. Breyfogle; while hopefulness was the keynote of *The Loom of Life*, by William Harper Rider, D.D. Poems of a religious cast included an anonymous *Epic of the Soul*; *Christus Victor*, a student's reverie, by Henry Nehemiah Dodge; *Omega et Alpha*, and Other Poems, by Greville d'Arville; and *The Apistophilon*, subtitled *A Nemesis of Faith*, by Frank D. Bullard, M.D. *Living in the World*, with Other Ballads and Lyrics, came from Frank Putnam. *Songs of the Child World* for the Kindergarten were put together by Mrs. Jessie L. Gaynor, and from John B. Tabb we had *Child Verse: Poems Grave and Gay*. Charles Edmund Merrill compiled *Yale Verse*, and Harvard Lyrics and Other Verses were

selected from the best verse written by Harvard undergraduates within the last ten years. Annie Russell Marble selected and edited *Nature Pictures by American Poets*; *Birds of the Poets* we owe to Lucy F. Sanderson; *For Thee Alone* was the title of a selection of poems on love by Grace Hartshorne; poems on *The Memory of Lincoln* were compiled and accompanied with an introduction by Mark Anthony De Wolfe Howe; *Northland Lyrics* were selected and arranged by William C. and Theodore Roberts, with the assistance of Elizabeth Roberts Macdonald, and accompanied by a prologue by C. G. D. Roberts and an epilogue by Bliss Carman. Lloyd Mifflin, the author of *The Slopes of Helicon* and *At the Gates of Song*, contributed *Echoes of Greek Idyls*, renderings into English of selections from Bion, Moschus, and Bacchylides. R. L. Paget compiled *The Poetry of American Wit and Humor*, and from Charles Battell Loomis we had *Just Rhymes*. The King's Jester, and Other Short Plays for Small Stages were from the pen of Caroline Atherton Dugan, and from George Stanislaus Connell we had *The Old Patroon*, and Other Plays.

Political, Social, and Moral Science.—The abstract questions of government were discussed in a *Review of the Constitution of the United States*, including *Changes by Interpretation and Amendment for lawyers and those not learned in the law*, by W. G. Bullitt; *The Magna Charta and other Great Charters of England*, by Boyd C. Barrington, accompanied with an historical treatise and copious explanatory notes; *Democracy: A Study in Government*, by Prof. James Hervey Hyslop; *The Lessons of Popular Government*, in two volumes, by Gamaliel Bradford; and *The Philosophy of History: An Introduction to the Philosophical Study of Politics*, by Alfred H. Lloyd. *Liberty in the Nineteenth Century* was reviewed from 1776 to 1899 by Frederick May Holland. The literature bearing upon questions of the present day, when we stand, as is claimed, at the parting of the ways politically, was characterized by an intense earnestness and vehemence similar to that called forth by the opposition to the institution of slavery. *Imperial Democracy*, by Prof. David Starr Jordan, was a study of the relation of government by the people, equality before the law, and other tenets of democracy to the demands of a vigorous foreign policy and other demands of imperial dominion. On the other hand, we have *The Romance of Conquest*, the story of American expansion through arms and diplomacy, by William Elliot Griffis, D.D., from whom came also *America in the East*, a glance at our history, prospects, problems, and duties in the Pacific Ocean; C. Waldstein dwelt upon *The Expansion of Western Ideals and the World's Peace*; Murat Halstead wrote *The History of American Expansion and our Four New Possessions*; James C. Fernald exalted *The Imperial Republic*; and Alleyne Ireland volunteered suggestions for *Tropical Colonization*. Edward Bicknell gave a historical review of *The Territorial Acquisitions of the United States*, and Charles A. Gardiner discussed *Our Right to Acquire and Hold Foreign Territory* in an address delivered before the New York State Bar Association, republished in the *Questions of the Day Series*; James M. King pictured us *Facing the Twentieth Century*, and T. Bruce edited *Views of the American Press on the Philippines*. Lewis G. Janes proclaimed *Our Nation's Peril*; *Imperialism and the Tracks of our Fathers* was the title of a paper read before the Lexington (Mass.) Historical Society by Charles Francis Adams,

Tuesday, Dec. 20, 1898; Edwin D. Mead reviewed *The Present Crisis* briefly; *The Spanish War: A Prophecy or an Exception* was the subject of an address by the Hon. David J. Brewer, Associate Justice of the Supreme Court of the United States; and two addresses of Hon. Carl Schurz on *American Imperialism* and *The Policy of Imperialism* are to be recorded. England in 1776: America in 1899 was from the pen of William J. Salter, and *The Conquest of the United States* by Spain was the subject of an address to the Yale students by Prof. William G. Sumner. *Imperialism and Anti-Imperialism* was the text of several published addresses by Hon. George S. Boutwell, and the *Anti-imperialist Series* of Edward Atkinson is not to be omitted, having been brought into special prominence by the order of the Post Office Department removing them from the mails going to Manila. Ex-Senator John B. Henderson printed a Speech delivered before the Pike County Colony of St. Louis at its annual dinner on Feb. 25, 1899, in reply to the toast *Our Nation, State, and County*, and *An Open Letter*, in which the situation of the country was reviewed. Prof. William James denounced briefly but emphatically *The Philippine Piracy*, and Hon. George Frisbie Hoar set forth *Our Duty to the Philippines*. Private Smith at the Philippines came from Marion Leonidas, and *Oriental America* presented a chronological array of facts connected with the war. Closely allied to our own difficulties were those of Briton and Boer during the year, and both sides of the South African question were presented in a collection of articles by James Brooks Bryce, Sydney Brooks, F. V. Engelenburg, and others, while from Howard C. Hillegas we had *Oom Paul's People*, also a review of British-Boer troubles in South Africa. *The Federation of the World* was advocated by Benjamin F. Trueblood, doubtless in consequence of the congress at The Hague looking to that eventual end of disagreements among nations. *Cuba and International Relations* were gone into extensively by James Morton Callahan, and Charles M. Pepper prophesied of To-morrow in Cuba. *The Making of Hawaii* was a study in social evolution by William Fremont Blackman, and Edmund Janes Carpenter was heard from on America in Hawaiian Islands. *Centralized Administration of Liquor Laws in the American Commonwealths*, by Clement Moore Lacey Sites, appeared in the *Columbia University Studies*, and *Economic Aspects of the Liquor Problem*, by John Koren, was the result of an investigation made for the Committee of Fifty under the direction of Henry W. Farnam. *Thirty Years of New York Politics up to Date* were reviewed by Matthew P. Breen, Henry Wallace wrote briefly of *Trusts*, and how to Deal with Them, and F. Hammesfahr dealt with *The Corn Trade and Options*. *The Shellback*, by Alexander J. Boyd, edited by Archie Campbell, had an introduction by Morgan Robertson, and was a terrible arraignment of American ships. *Elementary Principles of Economics* were set forth by Charles H. Chase, and from Charles W. Macfarlane we had *Value, Price, and Distribution*, an historical, critical, and constructive study in economic theory adapted for advanced and post-graduate work. A third, revised and enlarged, edition was sent out of *Monopolies and the People*, by Charles Whiting Baker; Allen Ripley Foote examined *Municipal Public-service Industries*; and Edward Webster Bemis edited a collection of papers by American economists and specialists on *Municipal Monopolies* in the *Library of Economics and Politics*. Adna Ferrin Weber contributed *The Growth of*

Cities in the Nineteenth Century, a study in statistics, to the *Columbia University Studies*, and Part II appeared of Prof. Edmund Janes James's work on *The Charters of the City of Chicago*, covering *The City Charters, 1838-1851*. *The True Basis of Economics* was gone into in a correspondence between Prof. David Starr Jordan and J. H. Stallard on the merits of the doctrine of Henry George, *The Economic Policy of Colbert* was reviewed by A. J. Sargent in the series of *Studies in Economics and Political Science*, and *Discussions in Economics and Statistics* of the late Gen. Francis Amasa Walker were edited by Davis R. Dewey. *The Elements of Public Finance*, by Winthrop More Daniels, included the monetary system of the United States; David K. Watson wrote a *History of American Coinage*; and Alfred Cookman Bryan a *History of State Banking in Maryland*, the last appearing in the *Johns Hopkins University Studies*. *Financial New York*, by William Ten Eyck Hardenbrook, was carried on by the issue of Sections 3 and 4. *A Dividend to Labor*, by Nicholas Paine Gilman, was a study of employers' welfare institutions; Charles H. Cooley treated of *Personal Competition*, with regard to its place in the social order and effect upon individuals; F. W. Lawrence went into *Local Variations in Wages*; and William Maxwell Burke into the *History and Functions of Central Labor Unions*. *Pauperizing the Rich* was an inquiry into the value and significance of unearned wealth to its owners and to society by Alfred J. Ferris. *Railway Economics* were the theme of H. T. Newcomb, and *Congressional Grants of Land in Aid of Railways* were the subject of a thesis submitted for the degree of doctor of philosophy, University of Wisconsin, by John Bell Sanborn. *The Cost of Living as Modified by Sanitary Science* was considered by Mrs. Ellen Henrietta Richards; *Social Settlements*, by C. R. Henderson, was one of the *Handbooks for Practical Workers in Church and Philanthropy*; and from Josiah Flynt (Frank Willard) we had a collection of studies and sketches of vagabond life, entitled *Tramping with Tramps*. Rev. C. H. Vail set forth the *Principles of Scientific Socialism*; Hon. Carroll Davidson Wright presented an *Outline of Practical Sociology*, with *Special Reference to American Conditions*; *The Races of Europe* were the theme of an exhaustive sociological study by Prof. William Z. Ripley, which as the *Lowell Institute Lectures* filled two volumes; and a *History of the Zoar Society* from its Commencement to its Conclusion, by E. O. Randall, was intended as a sociological study in communism. Booker T. Washington wrote ably and comprehensively of *The Future of the American Negro*, and Samuel Creed Cross published a lecture upon *The Negro and the Sunny South*. Madison C. Peters made a plea for Justice to the Jew, telling the story of what he had done for the world; Maurice Fluegel also wrote of Israel, the Biblical People; and Cyrus Adler edited *The American Jewish Yearbook*, 5660, September 5, 1899, to September 23, 1900. *Heralds of the Morning*, by Asa Oscar Tait, considered the meaning of the social and political problems of to-day and the significance of the great phenomena in Nature, and *The End of the Ages*, by William Fishbough, was accompanied with forecasts of the approaching political, social, and religious construction of America and the world. *Uncle Sam's Bible*, according to James B. Converse, contained Bible teachings about politics. L. O. Curow pronounced Chicago, *Satan's Sanctum*. *Parliamentary Lessons* based on Reed's Rules, by Mrs. Mary Urquhart Lee, was offered as a hand-

book of common parliamentary law. Helen Marot compiled *A Handbook of Labor Literature*, giving a classified and annotated list of the more important books and pamphlets in the English language, and Part I appeared of *State Publications*, a provisional list of the several States of the United States from their organization, compiled under the editorial direction of R. R. Bowker. The New England States were covered by this first issue. The *Handbook of the American Economical Association* was sent out as usual with the report of the eleventh annual meeting at New Haven, Conn., Dec. 27-29, 1898, and No. 2 of the new series of its publications was devoted to a collection of critical essays on The Federal Census by members of the association, made and edited by a special committee. The annual address of the president of the association, A. T. Hadley, on *The Relation between Economics and Politics*, was also printed and given to the public. The *Foreign Policy of the United States*, Political and Commercial, was the subject of the addresses and discussion at the annual meeting of the American Academy of Political and Social Science, April 7 and 8, 1899, collected into a volume, and publications sent out by the academy during the year included *Wealth and Welfare*, by H. H. Powers; *Sociology and Economics*, by Prof. Lester F. Ward; *Outlines of Sociology*, by Louis Gumplowicz; *Economic Aspects of British Agriculture*, by John F. Crowell; *Political and Municipal Legislation in 1898*, by Edward Dana Durand; *Recent Production of Silver and its Probable Future and Relative Stability of Gold and Silver*, by Edward Sherwood Meade; *The Final Report of the Monetary Commission*, by Frederick A. Cleveland; *Securities as a Means of Payment*, by Charles A. Conant; *The Philadelphia Nominating System*, by Walter J. Branson; *Taxation of Quasi-public Corporations in the State of Ohio and the Franchise Tax*, by Frederick J. Howe; *The Growth of Great Cities in Area and Population*, by Edmund James James; *The Function of the Social Settlement*, by Jane Addams; *The Economic Aspects of Charity Organization*, by C. E. Prevey; *The Regulation and Nationalization of the Swiss Railways*, by Hans Dietler; and *The Constitutional Position of the German Emperor*, by Philip Zorn. The *Trend of the Century* was discussed by Seth Low in the *What is Worth While Series*.

Theology.—The book of the year falling under this classification which aroused most comment was undoubtedly *A General Introduction to the Study of the Holy Scripture*, by Dr. Charles A. Briggs. Dr. Robert Verrell Foster sent out a volume of *Systematic Theology*, and *The Foundations of the Christian Faith*, by Charles W. Rishell, appeared in the Library of Biblical and Theological Literature. The *Theology of the New Testament* was contributed by George Barker Stevens, D.D., to the *International Theological Library*; *The Revelation of Jesus*, by George Holley Gilbert, was a study of the primary sources of Christianity; and from Rev. E. W. Cook we had *The Origin of Sin and its Relations to the Universe*. The *Gospel of a World of Sin*, by Dr. Henry Jackson Van Dyke, Jr., was intended as a companion volume to his *Gospel of an Age of Doubt*; *The Kingdom (Basileia)* was an exegetical study by George Dana Boardman, D.D.; Robert Cameron considered *The First Epistle of John*; or, *God revealed in Life, Light, and Love*; *The Doctrine of Saint John* was the title of an essay in biblical theology by Walter Lowrie; *The Bible: Is it the Word of God?* was the theme of the Bennett Lectures for 1898, delivered by

James Reed, Jacob E. Warren, John C. Ager, and others; *Can I believe in God the Father?* of lectures delivered at the Summer School of Theology of Harvard University by William Newton Clarke, D.D., who also delivered the *Levering Lectures* before the Johns Hopkins University in 1899 upon *What shall we think of Christianity?* The *Lowell Institute Lectures* were by Dr. Alexander McKenzie, on *The Divine Force in the Life of the World*. *Through Nature to God*, by John Fiske, was in line with his previous books, *The Idea of God and The Destiny of Man*. Bishop J. C. Keener was the author of *Studies of Bible Truths*; *The Institutional Church*, by Edward Judson, intended as a primer in pastoral theology, had an introductory word by Bishop Potter; John Duncan Quackenbos contributed thoughts on questions of the hour under the title of *Enemies and Evidences of Christianity*; *The Four Gospels from a Lawyer's Standpoint* came from Judge Edmund Henry Bennett; and *The Apostles' Creed in the Light of Modern Discussion* from Henry A. Stimson, D.D. *Miracles: Were they or were they not Performed by Jesus?* was declared a question of fact, not of science or theology, by Thomas J. Dodd, D.D.; *Washington Gladden asked How much is Left of the Old Doctrines?* William Henry Green, D.D., was the author of a *General Introduction to the Old Testament: The Text; A History of the Textual Criticism of the New Testament* was added by Marvin Richardson Vincent, D.D., to the *Series of New Testament Handbooks*; and a new series of *International Handbooks to the New Testament*, edited by Orello Cone, D.D., was initiated with *The Epistles of Paul the Apostle to the Thessalonians, Corinthians, Galatians, Romans, and Philippians*, by James Drummond. A new translation, direct from the Greek text, of *The Four Gospels*, by Rev. Francis Aloysius Spencer, had a preface by Cardinal Gibbons. *The Religion of Israel to the Exile* was the addition of Karl Budde, D.D., to the series of *American Lectures on the History of Religions*; *A Critical and Exegetical Commentary on the Book of Proverbs*, by Prof. Crawford Howell Toy, belonged to the *International Critical Commentary Series*, another issue of which was *A Critical and Exegetical Commentary on the Books of Samuel*, by Henry Preserved Smith. *The Messages of the Later Prophets*, by Frank Knight Sanders and Charles Foster Kent, appeared in the *Messages of the Bible Series*, and a second edition was made of their previous work on *The Messages of the Earlier Prophets*. *Songs from the Psalter* was the title of poetical renderings by Richard Arnold Greene. *Solomon and Solomonic Literature* were the theme of Moncure D. Conway; *Richard Green Moulton's Literary Study of the Bible* was revised and partly rewritten by him in its new edition; *Jonah in Fact and Fancy*, by James Edgar Banks, had an introduction by Rev. Lyman Abbott, D.D.; *Stories from the Old Testament for Children* came from Harriet S. B. Beale; and *A Life of St. Paul for the Young* from George Ludington Weed. Charles Fletcher Dole examined *The Theology of Civilization*; *With God in the World* was the title of a series of papers by Rev. Charles H. Brent; *The Son of Man*, by Gross Alexander, consisted of studies in his life and teachings; and from Charles Caverno, D.D., came *The Ten Words*, a study, of course, of the Commandments. *The Life that Really Is* was the title of a volume of sermons by Dr. Lyman Abbott, *The Battles of Peace* came from George Hodges, and *External Religion: Its Use and Abuse*, from George Tyrrell. Hamilton Wright Mabie dis-

coursed of *The Life of the Spirit*; sermons of Timothy Dwight were entitled *Thoughts of and for the Inner Life*; *Individuality*; or, *The Apostolic Twelve before and after Pentecost*, came from J. L. Sooy, D.D.; *God and the People*, and *Other Sermons*, from David James Burrell, D.D.; *The Master Idea*, from Raymond L. Bridgman; *Heaven*; or, *That Better Country*, from Bishop Jonathan Weaver; and *Life beyond Death*, from Minot Judson Savage, D.D. *The Heavenly City* was edited by Dr. Edwin Wilbur Rice. In his *Steps: What would Jesus do?* by Rev. Charles M. Sheldon, attained a wide popularity, more than 3,000,000 copies having been sold. William Reed Huntington, D.D., published *Four Key Words of Religion* contained in as many brief addresses; *God's Education of Man* was reviewed by William De Witt Hyde; *Between Cæsar and Jesus* was the title of lectures by George D. Herron; and *John and his Friends* of a series of revival sermons by Louis Albert Banks, D.D., from whom we had also *My Young Man*, a series of addresses to young men, as well as volumes devoted respectively to *The Great Sinners of the Bible*, *Anecdotes and Morals*, and *A Year's Prayer-meeting Talks*. *The Religion of To-morrow* was foretold by Frank Crane; *The Pure Causeway* was recommended by Evelyn Harvey Roberts; *Christian Perfection* was contributed by Peter Taylor Forsyth, D.D., to the series of *Little Books on Religion*, another issue of which was *The Art of Living Alone*, by Amory Howe Bradford; *John Monroe Dana* collected and edited *The Wider View*, a search for truth; *Border Lines in the Field of Doubtful Practices* were explored by Henry Clay Trumbull; Rev. James Tait denounced Christianity without Conscience; and from Rev. James J. Fox we had the nature and mutual relations of Religion and Morality historically and doctrinally considered. Cortland Myers gave reasons *Why Men do not go to Church*. *Ecce Clerus*; or, *The Christian Minister in Many Lights*, claimed to be by an anonymous student of the times. Bishop Henry Yates Satterlee wrote upon *New Testament Churchmanship and the Principles upon which it was Founded*; Papias and his Contemporaries was a study of religious thought in the second century by Rev. Edward Henry Hale; *A Manual of Patrology* was contributed by Wallace Nelson Stearns; and Vol. III of *A General History of the Christian Era* (for Catholic colleges and reading circles), by Augustus Guggenberger, completed that work, and was devoted to *The Social Revolution*. *The Fundamental Ideas of the Roman Catholic Church* were explained and discussed for Protestants and Catholics by Frank Hugh Foster; *Leading Persons and Periods in English Church History* came to us anonymously; Arthur Kenyon Rogers discussed *Men and Movements in the English Church*; a *Supplementary History of American Methodism* was offered as a continuation of his abridged *History of Methodism* by Abel Stevens; *An Exposition of the Form of Government and the Rules of Discipline of the Presbyterian Church in the United States* was made by Rev. F. P. Ramsay; Calvinism was the theme of the L. P. Stone Lectures for 1898-'99 by Abraham Kuyper, D.D.; a *History of the Swedish Baptists in Sweden and America* was written by Gustavus W. Schroeder; and *The History of the General Conference of the Mennonites of North America*, by H. P. Krehbiel. J. M. Hanson, D.D., proclaimed Universalism the prevailing doctrine of the Christian Church during the first five hundred Years, *Baptist History Vindicated* came from John T. Christian, D.D., and *A History of New*

England Theology from George Nye Boardman. The sketch of *The Garrison Church of Baltimore County, Maryland*, by Ethan Allen, D.D., and *Our Church and our Village*, by George W. F. Birch, D.D. (Claysville, Pa.), may be mentioned together. Vol. II was issued of *Christian Missions and Social Progress*, by James S. Dennis, D.D.; *The Christian Conquest of Asia* was the title of the Morse Lectures of 1898, delivered by John H. Barrows, D.D.; *Questions and Phases of Modern Missions* were set forth by Frank Fields Ellinwood; and *The Miracles of Missions* were commemorated by Arthur Tappan Pierson. *The Foreign Missionary and his Work*, by W. G. E. Cunyngham, had an introduction by W. R. Lambuth. *The Transformation of Hawaii*, by Belle M. Brain, told how American missionaries gave a Christian nation to the world. *Lights and Shadows of Mission Work in the Far East* came from S. H. Chester, D.D., and *Islam in Africa* had its effects—religious, ethical, and social—upon the people of the country explained by Anson P. Atterbury. *The Dragon, Image, and Demon*, by Rev. Hampden C. Du Bose, gave an account of the three religions of China—Confucianism, Buddhism, and Taoism. *Yesterday Framed in To-day* was a story of the Christ and how to-day received him by Mrs. Isabella M. Alden; and from Mrs. Ellen G. Harmon White we had a life of Christ handsomely printed and illustrated, entitled *The Desire of Ages*. Howard W. Tilton published *Lay Sermons*; Amos R. Wells, *Sermons in Stones and in Other Things*; George T. Lemmon, *The Eternal Building*; or, *The Making of Man*; Rev. H. T. Davis discoursed of *Perfect Happiness*; and Rev. A. W. Snyder of *The Chief Things and The Chief Days*. Rev. Thomas E. Green published addresses for Good Friday under the title *The Hill called Calvary*, Edward A. Larrabee compiled *Prayers at Mass*, etc., and J. B. Hogan, D.D., arranged *Daily Thoughts for Priests*. *The Holy Family* was the subject of a Christmas meditation by Amory Howe Bradford. *A History of the Jewish People during the Babylonian, Persian, and Greek Periods* was written by Charles Foster Kent for the *Historical Series for Bible Students*; Addison Pinneo Foster was responsible for *A Manual of Sunday-school Methods*; Jesse Lyman Hurlbut and Robert Remington Doherty collaborated upon the *Illustrative Notes on the International Sunday-school Lessons for 1900*; and *Select Notes on the same* by Rev. Francis N. and Mary A. Peloubet completed the twenty-sixth annual issue of the publication. *The Best Church Hymns* were edited with an introduction and notes by Louis F. Benson, D.D.; William E. Ketcham compiled and edited *Funeral Sermons and Outline Addresses as an aid to pastors*; *Christian Science* was examined by Rev. Reginald Heber Newton; and again by Rev. William Short, Bishop Hugh Miller Thompson contributing an introduction to this collection of addresses. Buddhism and its Christian Critics came from Paul Carus, and a second edition was made of his three lectures on *The Ethical Problem*.

Unclassified.—Books not falling properly under any of the classifications of this article included *The United States Army and Navy*, by A. L. Wagner and J. D. Jerrold Kelley, which traced the history of both from the era of the Revolution to the close of the Spanish-American War; *Our Navy in Time of War, 1861-1898*, by Franklin Matthews; *Tactical Organization and Uses of Machine Guns in the Field*, by John H. Parker; *Customs of the Service*, compiled from authentic sources by James W. Powell; a *Text-*

book of Practical Solid Geometry for the use of military students, by E. H. de V. Atkinson; and The Resistance and Propulsion of Ships, by W. F. Durand. Vol. VII appeared of The Mineral Industry, giving its statistics, technology, and trade in the United States and other countries to the end of 1898, edited by Richard P. Rothwell; J. H. Fisk was the author of an Assayers' and Miners' Text-book; E. B. Wilson went into Hydraulic and Placer Mining; Francis L. Bosqui made Practical Notes on the Cyanide Process; and a fifth, rewritten and enlarged, edition was sent out of The Metallurgy of Lead and the Desilverization of Base Bullion, by H. O. Hofman. Part I of Advanced Metal Work, by Alfred G. Compton and James H. De Grodt was devoted to The Speed Lathe; Note Taking, Dimensioning, and Lettering, by Frederick Newton Willson, formed Part I of his Descriptive Geometry and Mechanical Drawing Series; Part III of his Theoretical and Practical Graphics was issued, covering Some Mathematical Curves, and Part V, devoted to Shades, Shadows, and Linear Perspective, and he also sent out a volume on Practical Engineering, Drawing, and Third-angle Projection. Austin T. Byrne wrote on Inspection of the Materials and Workmanship employed in Construction; Gardner D. Hiscox, on Mechanical Movements, Powers, Devices, and Appliances used in Constructive and Operative Machinery and the Mechanical Arts; J. K. Freitag handled The Fireproofing of Steel Buildings; and H. M. Leaf, The Internal Wiring of Buildings. Chimney Design and Theory was a book for engineers and architects by William Wallace Christie; D. B. Butler gave directions for the manufacture, testing, and use of Portland Cement; Warren R. Briggs was the author of a treatise upon Modern American School Buildings, accompanied with designs; and Oliver Coleman planned the interior decoration of Successful Houses. Estate Fences: Their Choice, Construction, and Cost came from A. Vernon. Frederick T. Hodgson supplied the Practical Stonecutter and Mason's Assistant, as well as directions for Estimating Frame and Brick Houses. Heat and Heat Engines were the theme of Frederick Remson Hutton; Walter B. Snow wrote on Steam-boiler Practice in its Relation to Fuels and their Combustion; J. Pennycook proved himself The Engineer's Friend; Robert H. Blackall drew up the Air-brake Catechism; and William Frank Pettigrew prepared A Manual of Locomotive Engineering. Railway Curves and Earthwork was intended as a pocket book for civil engineers by C. Frank Allen; William Henry Cole was heard from on Light Railways at Home and Abroad; Part II of Machine Design, by Forrest R. Jones, was given to Form, Strength, and Proportions of Parts; Standard Wiring for Electric Light and Power came from H. C. Cushing, Jr.; and P. Marshall was responsible for Small Accumulators: How Made and how Used. William Fox and Charles W. Thomas were the joint authors of A Practical Course in Mechanical Drawing. Sanitary Engineering was the subject of an exhaustive practical treatise by E. C. S. Moore, and Mansfield Merriman was also heard from on Elements of Sanitary Engineering, as well as Elements of Precise Surveying and Geodesy. The Microscopy of Drinking Water was gone into by George Chandler Whipple; William P. Mason wrote on Examination of Water (Chemical and Bacteriological); Potable Water and Methods of Detecting Impurities, by M. N. Baker, belonged to Van Nostrand's Science Series; while Sewage Analysis was the theme of J. Alfred Wanklyn and William J. Cooper. Frederick Hutton Getman

supplied Elements of Blowpipe Analysis, and Frederick H. Hitchcock was the author of the Book-builders' Handbook of Types, Scales, Bulks, Equivalents, etc. Howard Patterson was an authority on Yacht Etiquette, and Yachting Wrinkles were vouchsafed by A. J. Kenealy. Davis Dalton edited How to Swim; The Book of Golf and Golfers came from Horace G. Hutchinson, Amy B. Pascoe, H. H. Hilton, and others; and E. Freeborough edited Select Chess and Games. Principles of Agriculture were edited by Liberty Hyde Bailey as a text-book for schools and rural societies; Frederick Leroy Sargent described Corn Plants: Their Uses and Ways of Life; Herbert Myrick prepared a manual of American Sugar Industry; The Modern Farmer in his Business Relations, by Edward F. Adams, supplied a want. Lucius D. Davis gave his attention to Ornamental Shrubs for Garden, Lawn, and Park Planting; Samuel T. Maynard wrote on Landscape Gardening as applied to Home Decoration; Landscape Gardening, by F. A. Waugh, was a brief treatise on the general principles governing outdoor art; F. Wilkinson told The Story of the Cotton Plant; and James F. Meegan supplied The Cotton Buyers' Ready Reckoner, Cotton Pickers and Cotton Seed Table. The occupations of women and their compensation were reviewed in What Women can Earn, by Grace H. Dodge, Thomas Hunter, Mary J. Lincoln, and others. W. B. Hutchinson and J. A. E. Creswell discussed Patents and how to Make Money out of Them, Francis E. Leupp gave directions How to Prepare for a Civil-service Examination, and Friendly Visiting among the Poor was a handbook for charity workers by Mary E. Richmond. John J. Daly gave attention to Window Dressing. Modern Photography in Theory and Practice was a handbook for the amateur by Henry G. Abbott. Crude Rubber and Compounding Ingredients, by Henry C. Pearson, and Nida's Compendium of Information for the Liquor Interests, by William Nida, met special demands. Gillette's Cook Book contained the experience of forty years of practical housekeeping of Mrs. F. L. Gillette; Janet Mackenzie Hill suggested Salads, Sandwiches, and Chafing-dish Dainties; Mrs. Olive A. Cotton, Chafing-dish Recipes for soups, sauces, oysters, clams, meats, fish, *menus*, etc.; Kate R. Sargeant recorded One Hundred Mushroom Receipts; and Mrs. Sarah Tyson Rorer told how to transfer Leftovers into palatable and wholesome dishes. Henrietta Latham Dwight was the author of The Golden Age Cook-book; Gesine Lemcke, of Preserving and Pickling; Mrs. Anna L. Colcord proclaimed herself A Friend of the Kitchen; and The Hostess of To-day, by Linda Hull Larned, was illustrated by Mary Cowles Clarke. Mrs. C. E. Humphry (Madge) told How to be Pretty though Plain. Hervey J. Seaman conveyed practical information for The Expert Cleaner. In The Art of Memory Henry H. Fuller outlined a comprehensive and practical system of memory culture; Descriptive Mentality from the Head, Face, and Hand came from Holmes Whittier Merton, and contained 600 original drawings; as Yarmo Vedra he was also responsible for Heliocentric Astrology; or, Essentials of Astronomy and Solar Mentality, with tables of ephemeris to 1910. The Gospel of the Stars, as revealed by James Hingston as Gabriel, had an introduction by George H. Hepworth, D. D. Methods and Problems of Spiritual Healing came from Horatio Willis Dresser. George J. Becker was the author of Ornamental Penmanship: Analytical and Finished Alphabets and Draughtsman's Letter Book. Mr. Dooley in the Hearts of his Countrymen, by Martin Dooley (Finley P.

Dunne), followed Mr. Dooley in Peace and in War of last year; George S. Hilton also saw The Funny Side of Politics; He, She, and They, by Albert Lee, contained a faithful record of the woeful enjoyments and joyful woes of him and her; Elizabeth Strong Worthington told How to Cook Husbands; Lizzie P. Evans Hansell was responsible for Aunt Nabby: Her Rambles, her Adventures, and her Notions; as was Edwin Emerson, Jr., for Peppys's Ghost and his wanderings in Greater Gotham; Oliver Herford for An Alphabet of Celebrities; and Ralph Bergengren for In Case of Need, These may Come Handy, a book of pictorial and versified admonition. The Publishers' Trade List Annual, 1899, completed its twenty-seventh year of issue, and, in conclusion, we had Appletons' Annual Cyclopædia, 1898.

Voyages and Travels.—There was an increase of 50 new books in this department over those of 1898, arising in great part from the interest excited by the Spanish war. The Newborn Cuba, by Franklin Matthews; Industrial Cuba, by Hon. Robert P. Porter; Cuba: Its Past, Present, and Future, by Arthur D. Hall; The Little I saw of Cuba, by Burr W. McIntosh; The Puerto Rico of To-day, by Albert Gardner Robinson; Puerto Rico and its Resources, by Frederick Albion Ober; Puerto Rico: Its Conditions and its Possibilities, by William Dinwiddie, illustrated from photographs by himself; Porto Rico and the West Indies, by Margherita Arlina Hamm; and The Cruise of the Scythian in the West Indies, by Susan De Forest Day, met all conceivable requirements for information concerning these islands, which were again referred to, however, in Our Island Empire, by Charles Morris, claiming to be a handbook of Cuba, Puerto Rico, Hawaii, and the Philippine Islands. Everything about our New Possessions was vouchsafed in a similar though smaller book by Thomas J. Vivian and Ruel P. Smith. The Philippine Islands, by Ramon Reyes Lala, had a novel interest in that the author, while a native of Manila, is a citizen of the United States. The Philippines, (also) Hawaii was the second contribution of Arthur D. Hall to the literature of the year; Hawaiian America came from Caspar Whitney; Hawaii and its People: The Land of the Rainbow and Palm, from Alexander Stevenson Twombly; The Real Hawaii, from Lieut. Lucien Young, a revised and enlarged edition of The Boston at Hawaii; and Hawaii Nei, from Mabel Clare Craft. The New Pacific was the subject of a volume by Hubert Howe Bancroft; Alaska and the Klondike, by Angelo Heilprin, recorded a journey to the new Eldorado, with hints to the traveler and observations on the physical history and geology of the gold regions; Frederick Palmer's In the Klondike included an account of a winter's journey to Dawson; De B. Randolph Keim contributed Our Alaskan Wonderland and Klondike Neighborhood to the American Destiny Series; Robert C. Kirk described Twelve Months in Klondike; and Two Women in the Klondike was the story of a journey to the gold fields of Alaska by Mary E. Hitchcock (Mrs. Roswell D. Hitchcock). A second, revised and enlarged, edition was sent out of Miner W. Bruce's Alaska, presenting its history and resources, gold fields, routes, and scenery. Crossing the water, we find Mary H. Krout A Looker-on in London; Charles M. Taylor, Jr., saw The British Isles through an Opera Glass; Howard Crosby Butler's work on Scotland's Ruined Abbeys was illustrated by himself; as were Clifton Johnson's wanderings Among English Hedgerows, to which Hamilton Wright Mabe contributed an introduction. The American in Holland was Dr.

William Elliot Griffis, who recorded sentimental rambles in the eleven provinces of the Netherlands; Mrs. Grace Carew Sheldon went From Pluckemin to Paris by the way of Touraine, the Midi, Provence, the Rhone, and eastern France; Bohemian Paris of To-day was written by W. C. Morrow from notes by Edward Cucuel, and illustrated by that artist; Benjamin E. and Charlotte M. Martin devoted two volumes to The Stones of Paris, in History and Letters; Plains and Uplands of Old France was a book of verse and prose by Henry Copley Greene; Mrs. Elizabeth W. Champney recalled the Romance of the Feudal Chateaux; Impressions of Spain were compiled from James Russell Lowell by Joseph B. Gilder, and had an introduction by A. A. Ade; Cities and Sights of Spain, by E. Main, was a handbook for tourists, illustrated from photographs by the author; and a new issue was made of With a Peasimist in Spain, by Mary F. Nixon. From Plotzk (Poland) to Boston, by a young immigrant, Mary Antin, had a foreword by Israel Zangwill. Charles Dana Gibson's Sketches in Egypt with pen and pencil found numerous admirers; Present-day Egypt was the theme of Frederick Courtland Penfield, for four years United States consul at Cairo; William Bement Lent saw The Holy Land from Landau, Saddle, and Palanquin; Quaint Corners of Ancient Empires, according to Michael Meyers Shoemaker, are to be found in southern India, Burma, and Manila; John L. Stoddard in Sunny Lands of the Eastern Continent made a pictorial journey through the tropical countries contained therein; In Ghostly Japan came from Lafcadio Hearn; and John W. Bookwalter illustrated his account of a journey through Siberia and Central Asia from photographs taken by himself. Of special interest at the present time was William Harvey Brown's account of his adventures and observations On the South African Frontier, first as a naturalist sent out by the United States National Museum, and later as a settler in Rhodesia. A Green Mariner, by Howard Ireland, gave a landsman's account of a deep-sea voyage, and from Paul Belloni du Chailly came a book for young people, The Land of the Long Night. A Thousand Days in the Arctic, by Frederick G. Jackson, related the adventures of the Jackson-Harmsworth expedition sent out in 1894 to ascertain the importance of Franz Joseph Land as a

way to the pole. Returning to our own country, we have *Fifty-two Years in Florida*, by John C. Ley; *Colorado in Color and Song*, from various hands; *Nooks and Corners of Old New York*, by Charles Hemstreet, illustrated by Edward C. Peixotto; *New York's Chinatown*, by Louis J. Beck; *Old Cambridge*, by Thomas Wentworth Higginson; *Historical Mansions and Highways around Boston*, by Samuel Adams Drake, a new and revised edition of *Old Landmarks and Historic Fields of Middlesex*; *History Towns of the Middle States*, edited by Lyman P. Powell, in the series of *American Historical Towns*; and *Famous Parks and Public Buildings of America*, by John L. Stoddard.

The table on page 436 gives the statistics of book production during the year, compared with those of 1898, from the columns of the *Publishers' Weekly*.

LITERATURE, BRITISH, IN 1899. Notwithstanding the outbreak of war during the year, the production of books in England during 1899 showed a slight increase over those of 1898, the figures standing respectively 7,567 and 7,516. The decrease from 1897, it will be remembered, was 410 last year. Of the total number of volumes issued from the press, 5,971 were new books and 1,596 new editions, as compared with 6,008 new books in 1898 and 1,508 new editions. As these last are held a better indication of the value of trade than new works, satisfaction was expressed by the publishing world, especially as the largest increase was shown in new editions of novels, which reached 92, while 67 new books of fiction were also recorded. There was an increase of 102 in essays and monographs, 44 in the department of art and science, 32 in books of travel, and 23 in poetry. In political and kindred books there was a falling off of 70 from last year, and 177 from 1897. Books of history and biography were less numerous, while theological, educational, and serial works showed nearly the same numbers as last year. Of miscellaneous works there were 200 less. The honors of the year remained with biography, in which several volumes of importance are to be noted.

Biography.—In an embarrassment of riches it is difficult to choose, but *The Letters of Robert Browning and Elizabeth Barrett Barrett, 1845-6*, in two volumes, given to the public with questionable taste by the writers' son, were welcomed most eagerly by the literary world and enjoyed, albeit with a sense of guilt and stealthiness. *The Letters of Robert Louis Stevenson to his Family and Friends* were edited with notes and an introduction by Sidney Colvin, and filled two volumes also, as did *The Life and Letters of Sir John Everett Millais, President of the Royal Academy*, by his son, John Guille Millais. A. Lys Baldry also wrote on Sir John Everett Millais: *His Art and Influence*. *The Life of William Morris*, by J. W. Mackail, in two volumes, was superbly illustrated, and one of the most important books of the year. *Ruskin, Rossetti, Pre-Raphaelitism: Papers, 1864 to 1862*, arranged and edited by William Michael Rossetti, were full of the most delicious gossip and detail of that remarkable fraternity; *Pre-Raphaelite Diaries and Letters* were also edited by him; and in this connection may be mentioned *Pictures and Poems of Dante Gabriel Rossetti*, with an introduction by Fitz Roy Carrington. *Letters of Benjamin Jowett* were edited by Evelyn Abbott and Lewis Campbell, and *The Autobiography and Letters of Mrs. M. O. W. Oliphant* were arranged and edited by Mrs. Harry Coghill. *Fragments of an Autobiography*, by Felix Stone Moscheles, were full of artistic

and literary interest; from Max Müller came a second series of *Auld Langsyne*, devoted to *My Indian Friends*; and two volumes contained *Notes from a Diary kept chiefly in Southern India, 1881-86*, by Sir Mountstuart E. Grant Duff. Two volumes of *Recollections, 1832 to 1886*, came from Sir Algernon West, and Sir Edward Russell reviewed the same events and personages from the point of view of a newspaper editor in *That Reminds Me*. *Memories of C. Kegan Paul* contained the confessions of a publisher; *Reminiscences of Justin McCarthy* filled two volumes; and three contained *A Sailor's Life under Four Sovereigns*, by Admiral Sir Henry Keppel. *Sketches from Memory*, by George Adolphus Storey, was a characteristically pleasant volume of anecdotes, as was *Memories of Half a Century*, by Rev. R. W. Hiley. *The Life of William Ewart Gladstone*, edited by Sir Wemyss Reid, with contributions by F. W. Hirst, Canon MacColl, Rev. W. Tuckwell, G. W. E. Russell, and others, was completed and issued in book form; Vols. II and III of *Sir Robert Peel: From his Private Papers*, edited by Charles Stuart Parker, completed that valuable work; Hubert Hervey: *Student and Imperialist*, was the title of a memoir by Earl Grey of the late administrator of Rhodesia; and from James Milne came *The Romance of a Great Pro-consul*, Sir George Grey. *John Hookham Frere and his Friends*, by Gabrielle Festing, contained much interesting information of the times of that "brilliant trifler"; Francis Turner Palgrave: *His Journals and Memories of his Life* were edited by his daughter, Gwennlian F. Palgrave; and *Letters of Walter Savage Landor, Private and Public*, came to us edited by Stephen Wheeler. *Letters of Thomas Carlyle to his Youngest Sister* were edited with an introductory essay by Charles Townsend Copeland. To Arthur H. Beavan we were indebted for *James and Horace Smith, Joint Authors of Rejected Addresses*, a family narrative based upon hitherto unpublished diaries, letters, and other documents; Vols. II and III were sent out of the new edition of *Byron's works*, containing his *Letters and Journals*, edited by Rowland E. Prothero; *Lamb and Hazlitt* was the latest batch of *Eliana* by W. Carew Hazlitt; *Unpublished Letters of Dean Swift* were edited by George Birbeck Hill, who contributed an introduction to one of the two volumes of *Eighteenth Century Letters* edited by R. Brimley Johnson, sent out during the year, devoted to Johnson—Lord Chesterfield. That covering Swift—Addison—Steele had an introduction by Stanley Lane-Poole. Two volumes contained *The Life, Writings, and Correspondence of George Borrow, 1803-1881*, by William J. Knapp, accompanied with a portrait and illustrations; *Hood in Scotland* was the title of reminiscences collected and arranged by Alexander Elliot in this the centenary year of the poet; John A. Doyle edited a *Memoir of Susan Ferrier*; and from Walter Herries Pollock we had an essay in criticism of Jane Austen: *Her Contemporaries and Herself*. *The Life and Letters of John Donne, Deane of St. Paul's, 1573-1631*, by Edmund Gosse, was reckoned one of the important contributions of the year. Ellis Yarnall contributed *Wordsworth and the Coleridges*; a *Life of William Makepeace Thackeray*, in two volumes, was written by Lewis Melville; and the *Biographical Edition of Thackeray's works* was completed with the issue of the four remaining volumes, the biographical introductions being by his daughter, Mrs. Anne Ritchie. Stephen Gwynn contributed *Tennyson: A Critical Study*, to the Victorian Era Series, and from George Edward Bateman

Saintsbury we had a similar study of Matthew Arnold. Rudyard Kipling: *An Attempt at Appreciation*, came from G. F. Monkshood (W. J. Clarke), and Aubrey Beardsley was commemorated by Arthur Symons. The tenth and concluding volume of the new edition of *The Diary of Samuel Pepys*, by Henry B. Wheatley, was devoted to *Pepysiana*. Oliver Cromwell and his Times, by Godfrey Holden Pike; Cromwell as a Soldier, by Lieut.-Col. T. S. Baldock, in the *Wolseley Military Series*; Oliver Cromwell, by Samuel Rawson Gardiner, superbly illustrated; and *The Two Protectors*, Oliver and Richard Cromwell, by Sir Richard Tangye, owed their existence doubtless to the fact that the tercentenary of the birth of Cromwell occurred during the year; and from Eva Scott we had *Rupert, Prince Palatine*, illustrated from contemporary portraits and engravings. *The Life and Campaigns of Alexander Leslie, First Earl of Leven*, by Charles Sanford Terry, portrayed that Goliath of the Covenant, and *A Life of Richard Badiley, Vice Admiral of the Fleet*, was welcomed from Thomas Alfred Spalding, recalling a forgotten hero. From Cromwell to Wellington: *Twelve Soldiers*, was edited by Spenser Wilkinson, with portraits and plans, and had an introduction by Lord Roberts, and *From Howard to Nelson: Twelve Sailors*, by John Knox Laughton. Louis Becke and Walter Jeffery collaborated upon a volume devoted to *The Naval Pioneers of Australia* and also upon *Admiral Phillip: The Founding of New South Wales, in the Builders of Greater Britain Series*; another issue of which was *Lord Clive: The Foundation of British Rule in India*, by Sir Alexander John Arbuthnot. Sir John Cope and the Rebellion of 1745 were handled by the late Gen. Sir Robert Cadell, and Walter Evelyn Manners gave *Some Account of the Military, Political, and Social Life of the Right Hon. John Manners, Marquis of Granby*. *The Life of Wellington*, by Sir Herbert Maxwell, in two volumes, recorded the restoration of the martial power of Great Britain. *Nelson's Friendships*, by the late Mrs. Hilda Gamlin, author of *Emma Lady Hamilton and Romney and his Art*, filled two volumes and contained 60 illustrations. *A British Rifleman* was the title given the journals and correspondence of Major George Simmons, Rifle Brigade, during the Peninsular War and the campaign of Waterloo, edited with an introduction by Willoughby Verner, and *A Boy in the Peninsular War* recorded the services, adventures, and experiences of Robert Blakeney, edited by Julian Sturgis. To military biography belong also *Lumsden of the Guards*, a sketch of the life of Lieut.-Gen. Sir Harry Burnett Lumsden by his brother, Sir Peter S. Lumsden, and *George R. Elsmie*; *The Life of Sir George Pomeroy-Colley, 1835-'81*, including services in Kaffraria, in China, in Ashanti, in India, and in Natal, by Lieut.-Gen. Sir William F. Butler; and *The Shervintons, Soldiers of Fortune: Shervinton of Madagascar, Shervinton of Salvador, and Tom Shervinton, N.N.C.*, by their sister, Kathleen Shervinton. *A Life of Admiral Sir William Robert Mends, Late Director of Transports*, was written by his son, Bowen Stilon Mends. *A Prisoner of the Khaleefa*, by Charles Neufeld, describes his twelve years' captivity at Omdurman, with the terrible sufferings endured, while he was the subject of misrepresentation and slander in England. *The Life of Charles Sturt, Sometime Capt. 39th Foot and Australian Explorer*, was written by Mrs. Napier George Sturt. *The Log of a Sea Waif* was the title of Frank T. Bullen's recollections of the first four years of his sea life. A memoir of Wil-

liam F. Moulton, Late Head Master of the Leys School, Cambridge, came from W. Fiddian Moulton. Additions to the *Famous Scots Series* included Adam Smith, by Hector C. Macpherson; James Hogg, by Sir G. Douglas, which included notices of the poets Tannahill, Motherwell, and Thorn; James Frederick Ferrier, by E. S. Haldane; Andrew Melville, by William Morison; and King Robert the Bruce, by A. F. Murison. The *Foreign Statesmen Series* received two additions—Cavour, by Countess Evelyn Martinengo Cesaresco, and Cosimo de' Medici, by K. Dorothea Ewart—and the *Masters of Medicine* were re-enforced with Claude Bernard, by Sir Michael Foster, M.D.; Hermann Ludwig Ferdinand von Helmholtz, by John Gray McKendrick; and *Disciples of Æsculapius*, by the late Sir Benjamin Ward Richardson. Michael Faraday: *His Life and Work*, was the contribution of Silvanus P. Thompson to the *Century Science Series*. *Memoirs and Correspondence of Lyon Playfair, First Lord Playfair of St. Andrew's*, was an important scientific biography, for which we are indebted to Sir Wemyss Reid; the *Life and Letters of Sir Joseph Prestwich* were written and edited by his wife; and *The Life Story of Sir Charles Tullston Bright, Civil Engineer*, was told in two volumes by Edward B. and Charles Bright, brother and son of the great pioneer in Atlantic cable laying. William Harvey was the subject of an admirable biography by D'Arcy Power, and *George Harley: The Life of a London Physician*, was edited by his daughter, Mrs. Alec Tweedie. Yet another loving tribute was Dr. Southwood Smith: *A Retrospect*, by his granddaughter, Mrs. C. L. Lewes, which records his labors in the interest of sanitary legislation for the poor. *A History of the Charities of William Jones at Monmouth and Newland*, by William Meyer Warlow, belongs to an earlier period. *James Hack Tuke* was compiled by Sir Edward Fry. Vol. IV of *The Memoirs of the Verney Family*, compiled from the letters and illustrated by the portraits of Claydon House, reached us from Margaret M. Verney, and covered the period *From the Restoration to the Revolution, 1660-1696*. Entertaining *Passages from the Diaries of Mrs. Philip Lybbe Powys, 1756-1808*, were edited by Emily J. Climen-son, and Mrs. Ambrose Rathborne performed a similar service for *Letters from Lady Jane Coke to her Friend Mrs. Eyre at Derby, 1747-1758*; *The Early Married Life of Maria Josepha, Lady Stanley*, edited by Jane H. Adeane, one of her grandchildren, proved no less welcome than *The Girlhood of Maria Josepha Holroyd*; and from A. M. Crawley-Boevey we had *The "Perverse Widow"; or, Memorials of the Boevey Family*, the "widow" in question being the one who refused Sir Roger de Coverley. Lady Louisa Stuart: *Selections from her Manuscripts*, edited by James Home, recalled a striking personality and an interesting period. From Percy Fitzgerald we had *The Good Queen Charlotte and Florizel's Folly*, which last gave glimpses of the life of the Prince Regent at Brighton and his connection with Mrs. Fitzherbert; *Famous Ladies of the English Court* were chronicled by Mrs. Aubrey Richardson; Thibaw's Queen was the subject of a handsomely illustrated volume by H. Fielding; *The Story of the Princess des Ursins in Spain (Camarera-Mayor)* came from Constance Hill; and Mary J. Hill commemorated Margaret of Denmark. *The Life of Madame De Longueville (Anne Genevieve de Bourbon)* was written by Mrs. Alfred Cock, Danton was the subject of a study by Hilaire Belloc, and from A. H. Beesly we had *A Life of Danton*. Twelve Notable Good

Women of the Nineteenth Century were eulogized by Rosa Nouchette Carey. The Romance of Ludwig II of Bavaria was the theme of Frances A. Gerard. The Tragedy of Dreyfus was ably handled by the late brilliant George W. Steevens, and Trooper 3809, by Lionel Deale, has special interest as tending to throw light on the methods pursued in that famous or rather infamous case. With Zola in England told the story of his exile, and was from the pen of Ernest A. Vizetelly. Haunts and Hobbies of an Indian Official, by Mark Thornhill, supplemented his previous Adventures of a Magistrate in the Indian Mutiny, and Sir Spenser St. John portrayed Rajah Brooke: The Englishman as Ruler of an Eastern State, in the series of Rulers of India, another issue of which was Babar, by Stanley Lane-Poole. Things I have seen in War were described by Irving Montagu, the war correspondent. To James Stillman we were indebted for a biography of Francesco Crispi, and James Headlam contributed Bismarck to the Heroes of the Nations Series. In religious biography we had The Life of Edward White Benson, sometime Bishop of Canterbury, by his son, Arthur Christopher Benson, in two volumes; Henry George Liddell, D.D.: A Memoir, by Rev. Henry L. Thompson; A Preacher's Life, at once an autobiography and an album, by Dr. Joseph Parker; Vols. II and III of The Autobiography of Charles H. Spurgeon, compiled from his diary, letters, and records by his wife and private secretary, covering the periods respectively 1854-'60 and 1861-'78; Robert Grosseteste, Bishop of Lincoln, a contribution to the religious, political, and intellectual history of the thirteenth century, by Francis Seymour Stevenson; a Life of Bishop Latimer, by Rev. A. J. Carlyle, in the series of English Religious Leaders; Lives of the Elizabethan Bishops, by Rev. F. O. White; Fra Girolamo Savonarola, a biographical study based on contemporary documents, by Herbert Lucas, S. J.; Charles Kingsley and the Christian Social Movement, by Rev. Charles W. Stubbs, Dean of Ely, in the Victorian Era Series; George Müller of Bristol and his Witness to a Prayer-hearing God, by Arthur Tappan Pierson; Bishop John Selwyn: A Memoir, by Frederick Douglas How, the author of Bishop Walsham How; and The Autobiography and Diary of Samuel Davidson, D.D., edited by his daughter. The Life and Remains of the Rev. R. H. Quick were edited by F. Storr. Eden *versus* Whistler, the Baronet and the Butterfly, styled in subtitle A Valentine with a Verdict, was the unique contribution of James McNeil Whistler. Sir Arthur Sullivan had his life story, letters, and reminiscences given to the public by Arthur Lawrence. Frederick J. Crowest contributed a Life of Beethoven to the Master Musician Series. Vols. LVII to LX of the Dictionary of National Biography, edited by Sidney Lee, brought the work to Watson-Whewell.

Essays.—There was a considerable increase in the number of new books falling under this department. From Mrs. Alice Meynell we had The Spirit of Place, and Other Essays, which preserved the high tone and delicacy of her previous volumes; A Paladin of Philanthropy and other papers were by Austin Dobson, in which he gives us more eighteenth-century vignettes; Essays in Modernity, by the late Francis Adams; Essays, by Wray Hunt; Appreciations and Addresses, delivered by Lord Rosebery and edited by Charles Geake; The Etchingham Letters, by Sir Frederick Pollock and Mrs. Charlotte Fuller-Maitland; On Books and Art, by Frederick Wedmore; Study and Stage, by William Archer; More, from Max

Beerbohm; Genius Loci, by Vernon Lee; the Johnson Club Papers, by various hands; The Backwater of Life; or, Essays of a Literary Veteran, by the late James Payn; The Decay of Sensibility, and Other Essays and Sketches, by Stephen Gwynn; The Human Interest, a study in incompatibility, by Violet Hunt; and The Art of Thinking, an earnest plea by T. Sharper Knowlson, found interested readers, while from William Edward Hartpole Lecky came The Map of Life: Conduct and Character. A History of Japanese Literature was written by William G. Aston for the Literatures of the World Series, another issue of which was A History of Bohemian Literature, by Count Francis Litzow; A Literary History of Ireland, from earliest times to the present day, was added by Douglas Hyde to the Library of Literary History; and Literary Ideals in Ireland were studied by John Eglinton, W. B. Yeats, and W. Larminie. Scottish Vernacular Literature was the theme of T. F. Henderson, while The Social Life of Scotland in the Eighteenth Century, by Henry Grey Graham, filled two volumes. Thomas Newbigging defended The Scottish Jacobites. Three volumes contained the new edition of A History of English Dramatic Literature to the Death of Queen Anne, by Adolphus William Ward; The Augustan Ages, by Oliver Elton, and The Fourteenth Century, by F. J. Snell, belonged to the Periods of European Literature Series; Prof. F. Max Müller reviewed The Six Systems of Indian Philosophy; and from A. W. Benn we had The Philosophy of Greece considered in Relation to the Character and History of its People. Lewis Campbell contributed a sketch in outline of Religion in Greek Literature, and from Andrew Lang we had a new prose translation of The Homeric Hymns, with essays, literary and mythological. Roman Festivals of the Period of the Republic, by William Warde Fowler, was intended as an introduction to the study of the religion of the Romans. Rev. S. Law Wilson considered The Theology of Modern Literature. Essays on Robert Browning came from Marion Little; Tennyson, Ruskin, Mill, and Other Literary Estimates from Frederic Harrison; and a second series of Studies in Dante from E. Moore. Rev. H. S. Bowden investigated The Religion of Shakespeare, Roscoe Addison Small found interest in The Stage Quarrel between Ben Jonson and the So-called Poetasters, and David Irvine expounded Parsifal and Wagner's Christianity. The Solitary Summer came from the pen of the author of Elizabeth and her German Garden, and More Potpourri from a Surrey Garden was welcomed from Mrs. C. W. Earle. Wild Life in Hampshire Highlands was the theme of G. A. B. Dewar, and Life and Nature at the English Lakes of Rev. H. D. Rawnsley. Richard Garnett supplied Essays in Librarianship and Bibliography, The Romance of Book Collecting fascinated John Herbert Slater, and John Lawler made a study of Book Auctions in England in the Seventeenth Century. R. H. Forster proved himself The Amateur Antiquary. Famous Homes of Great Britain and their Stories, edited by A. H. Malan, were handsomely illustrated; Vol. II of Records of Lincoln's Inn: Black Books, appeared, privately printed, covering the period 1588-1660; Sarah Wilson dwelt upon The Romance of our Ancient Churches; The Municipal Parks, Gardens, and Open Spaces of London had their history and associations revived by J. J. Sexby; and from A. E. Daniell we had London City Churches and London Riverside Churches. Part I of the second volume of a Dictionary of British Folklore, covering the traditional games of England, Scotland,

and Ireland, by Alice Bertha Gomme, was issued; Richard Blakeborough wrote of the Wit, Character, Folklore, and Customs of the North Riding of Yorkshire, incorporating a glossary of over 4,000 words and idioms now in use; and *Aradia*; or, *The Gospel of the Witches*, came from Charles Godfrey Leland (Hans Breitmann). A Summary Catalogue of Western Manuscripts in the Bodleian Library at Oxford, by Falconer Madan, reached Vol. IV; F. G. Kenyon wrote on *The Palæography of Greek Papyri*; and Facsimiles of the Papyri of Hunefer, Anhai, etc., by E. A. Wallis Budge, reproductions of four of the finest examples of the Book of the Dead, formed, with his previous edition of *The Papyrus of Ani* in 1895, a series extending from 1500 B.C. to one of the last centuries before our era. Our National Education was the theme of Hon. E. Lyulph Stanley, Richard Claverhouse Jebb delivered the Romanes Lecture for 1899 upon Humanism in Education, and H. T. Mark discussed Educational Theories in England. Little Folks of Many Lands were described, chiefly from personal observation, by Mrs. Louise Jordan Miln, author of *When we were Strolling Players in the East*. Vols. IV and V were sent out of *A New English Dictionary on Historical Principles*, edited by Dr. J. A. H. Murray and H. Bradley, bringing the work down to H-Hod.

Fiction.—The number of novels, tales, and juvenile works sent from the British press during the year reached a total of 1,825 new books and 736 new editions. While few masterpieces were recorded, yet novel writing was declared to be in a tolerably healthy and vigorous condition. Several books achieved a high degree of popularity, notably *A Double Thread*, by Ellen Thornycroft Fowler, who last year scored such a success with *Concerning Isabel Carnaby*. It appeared toward the opening of the year, and was followed by No. 5, John Street, the work of Richard Whiteing, which made a decided *furor*. Later he sent out also *The Island*; or, *The Adventures of a Person of Quality*. Notwithstanding the South African agitation, *Red Pottage*, by Mary Cholmondeley, sold at the rate of a hundred copies or so a day. She had previously been known as the author of *Sir Charles Danvers*, *The Danvers Jewels*, and *Diana Tempest*. On *Trial*, by Zack (Gwendoline Kears), was regarded by some as the finest novel of the year; it consisted of a collection of sketches of Devonshire life, which was again portrayed in *Children of the Mist*, by Eden Phillpotts, and *Postle Farm*, by George Ford. *Sir Walter Besant* published but one book, *The Orange Girl*; *Young April*, by Egerton Castle, was warmly welcomed; *The Colossus of Morley Roberts* was presumed to be the Hon. Cecil Rhodes, and he also wrote *A Son of Empire*. From Edward F. Benson we had *Mammon & Co.* and *The Capsina*, the last a sequel to *The Vintage*; Bernard Capes was heard from in *Our Lady of Darkness* and *At a Winter's Fire*; Neil Munro published *Gillian the Dreamer*; John Buchan, *A Lost Lady of Old Years* and *Grey Weather Moorland Tales of my Own People*; Hugh S. Scott (Henry Seton Merriman) located his Prisoners and Captives amid the horrors of Siberia; Beatrice Harraden failed to reach the level of Ships that Pass in the Night with *The Fowler*; Grant Allen apologized for what he termed *A Splendid Sin*, and also narrated *Miss Cayley's Adventures*; Benjamin Swift (W. R. Paterson) did excellent work in *Siren City*, and also published *Dartnell*; Maurice Hewlett entertained with *Little Novels of Italy*; Alfred Edward Woodley Mason, with *Miranda of the Balcony*

and *The Watchers*, while in collaboration with Andrew Lang he wrote also *Parson Kelly*, an historical novel; Halliwell Sutcliffe, the author of *A Man of the Moors*, offered *Ricroft of Withens*; Hilda: *A Tale of Calcutta and The Path of a Star* came from Mrs. Sara Jeannette Duncan Cotes; and *The Taming of the Jungle* from C. W. Doyle. Richard Le Gallienne wrote *The Worshiper of the Image* and *Young Lives*; Mrs. Emily Sharp Cameron (Mrs. H. Lovett Cameron), *A Man's Undoing*, *A Fair Fraud*, and *A Difficult Matter*; *Love among the Lions*, by F. Anstey (F. Anstey Guthrie), chronicled a matrimonial experience; John Oxenham in *Rising Fortunes* gave the story of a man's beginnings; while *A Princess of Vascovy* belonged to the realm of the imagination wholly, as did *The King's Mirror*, by Anthony Hope; *The Princess Xenia*, by H. B. Marriott Watson; *A Dash for a Throne*, by Arthur W. Marchmont; and *A Modern Mercenary*, by Mrs. K. and Hesketh Pritchard. *The Passing of Prince Rozan* was a romance of the sea by John Bickerdyke, from S. R. Keightley came *Heronford*, and from Mrs. Katharine S. Macquoid *A Ward of the King*. O. V. Caine published *In the Year of Waterloo*; Allen Raine, the author of *Mifanwy and Torn Sails*, by Berwin Banks; Arthur Conan Doyle sent out but one book, *A Duet*, with an *Occasional Chorus*; Mary L. Pender described *Michael Rolf*, Englishman; *Dead Oppressors* was a strong story by Thomas Pinkerton, who also published *Sun Beetles: A Comedy of Nickname Land*; while Tom Gallon wrote *The Idol of the Blind*. William Clark Russell chronicled *A Voyage at Anchor* and told a tale of two tunnels in *Captain Jackman*. To London Town showed us Arthur Morrison in an optimistic mood. In *Chimney Corners* was the title of merry tales of Irish folklore told by Seumas MacManus, who contributed more of the love, lore, and laughter of old Ireland seen *Through the Turf Smoke*. *The Talking Thrush*, and *Other Tales from India*, were collected by W. Crooke and retold by W. H. D. Rouse. They that Walk in Darkness contained more ghetto stories by Israel Zangwill, Mrs. Wilfrid Ward recorded the fate of *One Poor Scruple*, and *The Passion of Rosamund Keith* was portrayed by Martin J. Pritchard (Mrs. Augustus Moore). *The Strange Story of Hester Wynne* as told by herself came to us through George Colmore (Mrs. Georgina Dunn), and Anne Mauleverer was the heroine of Mrs. Kathleen Caffyn (*Iota*). *The Custom of the Country* was the title of tales of new Japan by Mrs. Hugh Fraser, who also glorified *The Splendid Porsenna*. Samuel Rutherford Crockett wrote the stirring story of *Black Douglas*, as well as the simpler adventures of *Kit Kennedy*, *Country Boy*, and he also found an American heroine in *Ione March*. *The Heiress of the Season* was by Sir William Magnay, Bart.; *My Lady Frivol*, by Rosa Nouchette Carey; *The Two Standards*, by William Barry; Mrs. Bertha M. Croker gave a sketch of *The Real Lady Hilda* and a story of *Infatuation*; *Cromwell's Own* was a story of the great civil war by Arthur Paterson; *Defender of the Faith*, by Frank Mathew, contained three portraits after Holbein; *The Favor of Princes*, by Mark Lee Luther, belonged to the days of Louis XV; and *A Fight for the Green and Gold*; or, *Gerald Desmond*, was a romantic dream of Irish liberty by John J. Hagarty. Like another Helen, by Sydney C. Grier, recalled the days of the Indian Mutiny and the Black Hole of Calcutta. *Crown of Life* came from George Robert Gissing; *Well, After All*, from Frankfort Moore, the author of *The Jessamy Bride*; Giles Ingilby, from W. E. Norris;

Rachel, from Jane Helen Findlater; Pabo, the Priest, from S. Baring-Gould; The Dominion of Dreams, from Fiona Macleod; A Rogue's Conscience, from David Christopher Murray; Hagar of the Pawn Shop, from Fergus W. Hume; Daughters of Babylon, from Wilson Barrett and Robert S. Hichens, working in collaboration; and The Slave, from the last-named author on his own account. Dracula was by Bram Stoker; Love made Manifest and Dr. Nikola's Experiment, by Guy Boothby; and Ernest W. Hornung sent out The Amateur Cracksmen and Dead Men tell no Tales. The Individualist suggests W. H. Mallock. J. Maclaren Cobban was responsible for Pursued by the Law and The Angel of the Covenant, as W. Pett Ridge was for A Son of the State and Walter Raymond for Two Men o' Mendip and No Soul above Money. Swallow, a Tale of the Great Trek, was the latest from H. Rider Haggard; Mrs. Annie French Hector, as Mrs. Alexander, made us acquainted with Brown, V. C., and The Step-Mother of a most exalted type; while John Strange Winter (Mrs. H. E. V. Stannard) gave us A Name to Conjure With and Heart and Sword, and Rhoda Broughton, The Game and the Candle. A Girl of Grit, by Arthur Griffiths, was a story of the intelligence department, and The Hooligan Nights were spent by Clarence Rook with a young criminal. Mrs. Florence Alice Price James (Florence Warden) sent out no less than three books, The House in the Hills, Joan the Curate, and Love that Lasts; George Bernard Shaw selected Cashel Byron's Profession; Rob and Kit came from the author of Miss Toosey's Mission; and from Charlotte M. Yonge we had The Herd Boy and his Hermit. Stalky & Co., by Rudyard Kipling, gave rise to much comment and criticism, inasmuch as the pictures it presents of English military school life and character open deeper problems. Another book of more human interest was The Human Boy, by Eden Phillpotts, and from Q we had a study of boyhood, entitled The Ship of Stars. A new Haworth Edition of the Life and Works of the Sisters Brontë was begun during the year, the introductions to the works being written by Mrs. Humphry Ward, and the introduction and notes to Mrs. Gaskell's Life of Charlotte Brontë by Clement K. Shorter. Gerald Fitzgerald, by Charles Lever, was published in book form for the first time during the year, having been rescued from an old magazine. Austin Dobson contributed an introduction to an edition of Charles Reade's Peg Woffington, illustrated by Hugh Thomson.

Fine Arts.—Two superb volumes contained Architecture of the Renaissance in England, illustrated by a series of views and details from buildings erected between the years 1500-1635, with historical and critical text, by J. Alfred Gough and W. Talbot Brown. Another magnificent work was Dante Gabriel Rossetti: An Illustrated Memorial of his Life and Art, by H. C. Marillier; The English Pre-Raphaelite Painters, their associations and successors, were the subject of Percy H. Bate, as British Contemporary Artists were of Cosmo Monkhouse; A. Whitman commemorated The Masters of Mezzotint; and J. J. Foster, British Miniature Painters and their Works. D. Croal Thomson edited Fifty Years of Art, 1849-1899; Pictures in the National Gallery, London, with descriptive and critical notes by C. L. Eastlake, was completed, and with its original design for the cover by Walter Crane and its elegant typography was said to be unsurpassed among works of the sort published in England. A History of French Art, 1100-1899,

was written by Rose Kingsley, and French Painters of the XVIII Century were the theme of Lady Dilke. Ashton Rollins Willard was the author of a History of Modern Italian Art; Andrea del Sarto, by H. Guinness, and Bernardino Luini, by George C. Williamson, were added to the series of Great Masters in Painting and Sculpture; Representative Painters of the Nineteenth Century came from Mrs. Nancy M. Bell (N. D'Anvers); Max Rooses edited Dutch Painters of the Nineteenth Century; and Parts III and IV were sent out of Masterpieces of Dutch Art in English Collections. No. IV also appeared of The Annual of the British School at Athens, covering the session 1897-98. A. C. R. Carter compiled The Year's Art, 1899. John Ruskin's Lectures on Landscape delivered at Oxford in Lent Term, 1871, were made into a handsome and copiously illustrated volume. The Cathedral Builders, by Leader Scott, told the story of a great guild. Greek Sculpture with Song and Story, by Albinia Wherry, was intended to interest young people, and from Clara Erskine Clement Waters we had a volume on Saints in Art in the Art Lovers' Series. Examples of Greek and Pompeian Decorative Work were measured and drawn by James Cromer Watt, H. Wallis illustrated his own work on Persian Luster Vases, and from Marcus B. Hush came the first adequate account for English readers of the Greek Terra-cotta Statuettes discovered at Tanagra twenty-five years ago. Worcester China, by R. W. Binns, the author of A Century of Potting in the City of Worcester, was an illustrated record of the work he has directed for nearly half a century. George Macdonald sent out the first volume of a Catalogue of Greek Coins in the Hunterian Collection, University of Glasgow, and a volume of the British Museum Catalogue of Greek Coins, by Warwick Wroth, covered Galatia, Cappadocia, Syria. Antiquities from the City of Benin and from Other Parts of West Africa in the British Museum came from Charles H. Read and Ormonde M. Dalton. Modern Book Plates and their Designers were the subject of a volume by the late Gleeson White, and English Embroidered Bindings, by Cyril Davenport, was the first of a series of monographs on English books. Richard Glazier drew up A Manual of Historic Ornament for the use of students and craftsmen, and Montague Marks compiled and edited The Cyclopædia of Home Arts; Blackboard Drawing, by W. E. Sparkes, contained hints on sketching natural forms; and a facsimile was made of Beautiful and Quaint Designs in Leaden Glass, printed in 1615. Practical Hints for the Protection and Preservation of Paintings and Drawings were offered by Sir P. Burne-Jones. Among handsome gift volumes may be mentioned Pen and Pencil Sketches of Shipping and Craft all Round the World, by R. T. Pritchett, marine painter to the Royal Thames Yacht Club, with more than 50 full-page illustrations from sketches; Sights and Scenes in Oxford City and University, by Thomas Whittaker, which had an introduction by George Saintsbury; two volumes of The Queen's Empire; Royal Academy Pictures, 1899; The Temple, London, a collection of 12 etchings by P. Thomas, with descriptive letterpress by the master of the temple, Canon Ainger; Twelve Portraits, by William Nicholson; Dickens and his Illustrators, by F. G. Kitton; The Early Work of Aubrey Beardsley, with a prefatory note by H. C. Marillier; Beatrice d'Este, Duchess of Milan, by Julia Cartwright; Sandro Botticelli, by H. P. Horne; and Rembrandt, by Malcolm Bell. Lithography and Lithographers, by Joseph and Elizabeth Robins Pennell, was an exhaustive

work. Music was the subject of several volumes. The Musician's Pilgrimage, by J. A. Fuller-Maitland, was a study in artistic development; J. F. Runciman gave discussions on musical subjects under the title of Old Scores and New Readings; The Perfect Wagnerite, by George Bernard Shaw, was intended as a commentary on the Ring of the Nibelungs; Ernest Newman made A Study of Wagner, and also wrote of Gluck and the Opera; True Principles of the Art of Violin Playing were set forth by George Lehmann; and H. C. Lahee gave us a volume of Famous Violinists of To-day and Yesterday. Chats to 'Cello Students were vouchsafed by Arthur Broadley, and Canon H. C. Shuttleworth defined The Place of Music in Public Worship. Hermann Smith explained The Art of Tuning the Pianoforte, and A. C. R. Carter edited The Year's Music, 1899. The Drama of Yesterday and To-day was reviewed by Clement W. Scott, and from Charles Hiatt we had a record and review of Sir Henry Irving, with 74 illustrations, and Ellen Terry and her Impersonations. The Actor and his Art, by Stanley Jones, presented some considerations of the present condition of the stage.

History.—The event of the year in this department was Sir George Otto Trevelyan's history of The American Revolution, Part I of which appeared, covering the period 1766-76. In it he virtually continued his Early History of Charles James Fox, sent out eighteen years ago, but the chief value of the work lies in the application which is patent to the foreign policy of our own country at the present time. Vol. II was at last issued of Edward John Payne's History of the New World called America, devoted to Aboriginal America, and The History of Trade between the United Kingdom and the United States, by Sydney J. Chapman, had special reference to the effect of tariffs. Vols. III and IV appeared of The Royal Navy, a history from the earliest times to the present, edited by W. Laird Clowes, as did Vol. I of Logs of the Great Sea Fights, 1794-1805, edited by Rear-Admiral T. Sturges Jackson, and J. W. Fortescue wrote A History of the British Army in two volumes. How England saved Europe, the story of the great war, 1793-1815, by W. H. Fitchett, which will fill four volumes, was begun with the issue of the first, covering From the Low Countries to Egypt. George Townsend was responsible for Landmarks in English Industrial History. England in the Age of Wycliffe was a valuable study by George Macaulay Trevelyan, to which The Peasants' Rising and the Lollards, a collection of unpublished documents edited by Edgar Powell and Mr. Trevelyan, formed an appendix. Piers Gaveston, by Walter Phelps Dodge, was a chapter of early constitutional history. Historical Sketches of Notable Persons and Events in the Reigns of James I and Charles I, by Thomas Carlyle, were edited by Alexander Carlyle, and proved full of dramatic imagination and picturesqueness; England in the Nineteenth Century came from Charles W. C. Oman; and from Justin McCarthy we had the Story of the People of England in the Nineteenth Century, in two parts, the first covering Modern England before the Reform Bill, and the second Modern England under Queen Victoria. Great Britain and Hanover: Some Aspects of the Personal Union, were the theme of the Ford Lectures at Oxford, by A. W. Ward. Prehistoric Scotland and its Place in European Civilization, by Robert Munro, was intended as a general introduction to the County Histories of Scotland, and Scotland and the Protectorate, by C. H. Firth, was a continuation of Scotland and the Com-

monwealth. In the Cambridge Historical Series we had also Vol. I of A History of Scotland, by P. Hume Brown, covering To the Accession of Mary Stewart. No. 1 of the British Empire Series contained India, Ceylon, Straits Settlement, British North Borneo, Hong-Kong, by various hands, and No. 2 was similarly devoted to British Africa. The Story of the West Indies was contributed to the Story of the Empire Series by Arnold Kennedy. Vol. I was issued of A History of British India, by Sir William Wilson Hunter, as was Vol. III of Letters received by the East India Company from its Servants in the East, edited by William Foster, covering the year 1615. The Rise of Portuguese Power in India was traced by R. S. Whiteway. Lady Betty Balfour compiled The History of Lord Lytton's Indian Administration, 1876 to 1880, from letters and official papers; Col. H. B. Hanna reviewed the causes, conduct, and consequences of The Second Afghan War, 1878-'79-'80; and Col. Algernon Durand described The Making of a Frontier under his direction in the wild countries in and about the Kara Koram and Hindu Kush mountains. The Heart of Asia, a history of Russian Turkestan and the central Asian khanates from the earliest times, was the important contribution of F. H. Skrine and E. D. Ross. The River War, by Winston Spencer Churchill, gave an historical account of the reconquest of the Soudan in two volumes; Bennet Burleigh followed his Sirdar and Khalifa of the year previous with The Khartoum Campaign, 1898; and again we had The Sudan Campaign, 1896-1899, from the pen of "an officer." W. Basil Worsfold dwelt at length on The Redemption of Egypt, and from George Birbeck Hill came Gordon in Central Africa, 1874-1879. An historical epitome of The Moorish Empire, by Budgett Meakin, contained 115 fine illustrations, in addition to maps and charts, and a third edition of The Caliphate, by Sir William Muir, was sent out. A History of the Colonization of Africa by Alien Races was written by Sir Harry H. Johnston; Fifty Years of the History of the Republic in South Africa, 1795-1845, by J. C. Voigt, M.D., filled two volumes; and The Story of the Great Boer Trek and the Origin of the South African Republics, by the late Hon. Henry Cloete, High Commissioner for Natal, was edited by his grandson, W. Broderick Cloete. H. Rider Haggard wrote A History of the Transvaal; in The Transvaal from Within J. P. Fitzpatrick, author of The Outspan, published what he termed a private record of public affairs; The Transvaal Trouble, by John Martineau, extracted from the Life of Sir Bartle Frere, went through a new and cheaper edition; and Richard Proctor in Boers and Little Englishers told the story of the conventions of 1881 and 1884. The Story of the Australian Bushrangers was written by G. E. Boxall, and A Sketch of the New Zealand War by Morgan S. Grace. Returning to earlier times, we have A History of Egypt under the Ptolemaic Dynasty, by J. P. Mahaffy, and A History of Egypt under Roman Rule, by J. G. Milne, forming respectively Vols. III and IV of A History of Egypt from the Earliest Times to the Present Day, edited by W. M. Flinders Petrie, and in Egyptian Chronology Rev. Frederick Gard Fleay made an attempt to conciliate the ancient schemes and to educe a rational system. T. M. Taylor wrote A Constitutional and Political History of Rome, from the Earliest Times to the Reign of Domitian, and C. W. C. Oman an Elementary History of Greece. Two volumes were given by Herbert Fisher to The Mediæval Empire; Vols. VII and

VIII of Italy and her Invaders, by Thomas Hodgkin, were issued, covering respectively 744-774, Frankish Invasions, and 774-814, Frankish Empire. A History of Italian Unity, in two volumes, was by Bolton King, and from H. Remsen Whitehouse we had The Collapse of the Kingdom of Naples. The Real French Revolutionist, by Henry Jephson, pictured vividly the Vendean uprising of 1793, and Napoleon's Invasion of Russia was the theme of Hereford B. George. In the Story of the Nations Series we had China, by Robert K. Douglas; Austria, by Sidney Whitman, working in collaboration with J. R. McIlraith; and Modern Spain, 1788-1898, from the pen of Major A. S. Hume. Finland and the Tsars, 1809-1899, came opportunely from Joseph R. Fisher. A timely new edition was also made of South Africa, written for the same series by George McCall Theal, which was thoroughly revised and brought up to date. In the Series of Mediæval Towns we had The Story of Rouen, by Theodore Andrea Cook; The Story of Nuremberg, by Cecil Headlam; and Toledo: The Story of an Old Spanish Capital, by Hannah Lynch. The Historical Atlas of Modern Europe from the Decline of the Roman Empire was edited by R. Lane-Poole. The Commune of London, and Other Studies, by J. H. Round, had a prefatory letter by Sir Walter Besant; Records of the Borough of Leicester, 1103-1327, were edited by Mary Bateson; The History of the Castle, Town, and Port of Dover was written by S. P. H. Statham; to Thomas Kemp we were indebted for The Black Book of Warwick; Hawkshead had its history, archaeology, etc., investigated by Henry Swainson Cowper; and Alexander George Reid in The Annals of Auchterarder and Memorials of Strathearn contributed 22 curious papers dealing largely with witchcraft and the two Jacobite rebellions. G. Grant Robertson added All Souls' College to the University of Oxford: College Histories, Annals of Westminster School came from John Sargeant, and Annals of Shrewsbury School were supplied by G. W. Fisher, late assistant master. A History of Eton College, by Lionel Cust, and A History of Winchester College, by Arthur F. Leach, appeared in the series of English Public Schools. A ninth series of Cameos from English History, by Charlotte M. Yonge, 40 in all, belonged to the eighteenth century.

Poetry.—Rosamund, Queen of the Lombards, a tragedy, by Algernon Charles Swinburne, was marked by a new element of "resolute simplicity" hitherto lacking to that author's work, and from Stephen Phillips we had Paolo and Francesca, also a tragedy, full of poetry, albeit lacking in dramatic movement. John Oliver Hobbes published Osbern and Ursyne, poetical in form, which received favorable notice, and here as well as anywhere may be mentioned Heather Field and Maeve, prose plays, by Edward Martyn, much controverted in the newspapers. New Poems were added to the Collected Works of Robert Bridges; Wessex Poems of Thomas Hardy were accompanied with other verses and adorned with 30 drawings and designs from his own pencils, both new attempts at expression being decidedly uneven in character; *Fatan Absolved*, entitled also *A Victorian Mystery*, by Wilfrid Scawen Blunt, was an effort at verse founded upon the philosophy of Herbert Spencer, far from successful; from which we turn to *The Wind among the Reeds*, by W. B. Yeats; *The Field Floridus*, and Other Poems, by Eugene Mason; *The Alhambra*, and Other Poems, by F. B. Money-Coutts, and *The Silence of Love*, by Edmond Holmes, a col-

lection of Shakespearean sonnets. *Points of View*, and Other Poems came from George Colmore (Mrs. Georgina Dunn); *Lyra Frivola*, from A. D. Godley; *The Living Past*, and Other Poems, from Thomas Seton Jevons; *Pastorals*, from Miss Elinor Sweetman; *Fugitives*, from Winifred Lucas; and Poems, from A. B. Miall. Laurence Binyon sent out a Second Book of London Visions, performing the difficult task of idealizing common things; *The Vine Dresser*, by Sturge Moore, fell short of absolute excellence; Laurence Housman led the way into *The Little Land*; and Edward Willmore heralded *The Soul's Departure*. *The City of the Soul* was anonymous; Sir Edwin Arnold translated *The Gulistan*, or *Rose Garden*, of Sadi; W. Laird Clowes sent out *Eclogues*; James Williams, *Ventures in Verse*; Rev. T. E. Bridgett, *Sonnets and Epigrams on Sacred Subjects*; F. A. Homfray, *Idyls of Thought and Lyrical Pieces*; Robert Wilson, *Laurel Leaves*; and E. and H. Lee Hamilton, *Forest Notes*. The *Island Race* came from Henry Newbolt, the author of *Admirals All*, and *In Cap and Bell* from Owen Seaman, who chronicled *The Battle of the Bays* a few years ago. There yet remain for mention *Vagrant Verses*, by Rosa Mulholland; *Selected Poems*, Old and New, and *Love Triumphant*, by Annie Matheson; *In a Village*, by J. A. Bridges; *Poems*, by Oliver Orchard; *Verses*, by Maud Holland; *Ballads and Poems*, by Mrs. Clement Shorter; a third series of *Interludes*, by Horace Smith; *A Jester's Jingles*, by Raymond Coulson; *Betwixt Two Seas*, by Violet Fane; *Roses and Rue*, by Alice Furlong; *The Apostle of the Ardennes*, by Lady Lindsay; *The Forest Chapel*, by Maxwell Gray (M. G. Tuttielt); Buchanan's *The New Rome*; and *Ballads of Evolution*, by Herbert Thomas. Two volumes of George Meredith's Poems were collected, containing for the most part his later work. Bertram Dobell edited *The City of Dreadful Night*, and Other Poems, of James Thompson (B. V.); A Facsimile Reproduction of the Proofs and MSS. of some of the Poems of Coleridge, edited by the late J. Dykes Campbell, had a preface and notes by W. Hale White; Prof. Edward Arber opened his *British Anthology* with the first of the ten volumes which will contain it; and Robert Ford sent out *Vagabond Songs and Ballads of Scotland*. *The Open Road* was a little book for wayfarers compiled by E. V. Lucas. Hamlet opened the new edition of Shakespeare by Edward Dowden.

Physical, Moral, and Intellectual Science.—Vol. II of the four which will contain *The Scientific Memoirs of Thomas Henry Huxley*, edited by Prof. Sir Michael Foster and E. Ray Lankester, was sent out near the close of the year, and a new revised and enlarged edition of Herbert Spencer's *Principles of Biology* was begun with the issue of the first volume. Frederick Wollaston Hutton published four lectures on Darwinism and Lamarckism, *Old and New*; Lectures on the Evolution of Plants were delivered by Douglas Houghton Campbell; and Sir John Lubbock wrote *On Buds and Stipules*. No. 51 of Vol. VIII of the *Annals of Botany* was sent out, and Edward Step contributed *The Romance of Wild Flowers to the Library of Natural History: Romance*. An *Elementary Text-book of Botany*, by Sydney H. Vines, contained 397 illustrations, and *The Making of a Daisy*, *Wheat out of Lilies*, and Other Studies in Plant Life and Evolution, by Eleanor Hughes-Gibbs, was intended as a popular introduction to botany; *Flora of County Donegal*, etc., were studied by Henry Chichester Hart; and *A Text-book of Plant Diseases caused by Cryptogamic Parasites* came from George Massee.

The Soluble Ferments and Fermentations, by J. Reynolds Green, belonged to the Cambridge Natural Science Manuals, Biological Series. Earth Sculpture; or, The Origin of Land Forms, was the theme of James Geikie, and from Thomas G. Bonney we had a volume on Volcanoes, their Structure and Significance, in the Science Series. William Carmichael McIntosh, M.D., made a study of The Resources of the Sea. Arthur Berry wrote A Short History of Astronomy, and W. H. S. Monck An Introduction to Stellar Astronomy. Curiosities of Light and Shade were collected by Shelford Bidwell, Marion I. Newbigin wrote on Colour in Nature, and A Treatise on Crystallography came from W. J. Lewis. A History of Wireless Telegraphy, 1838-1899, was written by J. J. Fahie. Early Chapters in Science, by Mrs. W. Awdry, were edited by W. F. Barrett, and Mrs. Brightwen published Rambles with Nature Students. Wonders of the Bird World were revealed by R. Bowdler Sharpe; Vol. IX of The Cambridge Natural History, edited by S. F. Harmer, was devoted to Birds; and Vol. VI was also issued, being Part II of Insects, by David Sharp, and including Bees, Wasps, Ants, Beetles, Butterflies, and Moths. Richard Kearton wrote on Our Rarer British Breeding Birds, their nests, eggs, and summer haunts, accompanying the work with 70 illustrations taken direct from Nature; A Book of Birds, by Carton Moore Park, covered 26 varieties; and W. T. Greene, M.D., drew up a handbook of British Birds for Cages. True Tales of the Insects, by L. N. Badenoch, were illustrated by Margaret J. D. Badenoch, and Insects had their structure and life explained by George H. Carpenter. The Tailless Batrachians of Europe were the subject of a volume by G. A. Boulenger. Fauna Hawaiiensis; or, The Zoölogy of the Sandwich Islands, destined to contain results of the explorations instituted by the Royal Society of London, was begun with the issue of Volume I. In the Cambridge Geographical Series we had Man Past and Present, by A. H. Keane, and John Deniker reviewed The Races of Man. Eaglehawk and Crow, by John Mathew, attempted to solve the problem, Who are the Australians? and the manner of life and archaic rites of The Natives of Central Australia were investigated by Baldwin Spencer and F. J. Gillen. The inaugural Address to the British Association for the Advancement of Science, by the president, Sir Michael Foster, delivered at Dover, reviewed the progress of science during the century in a reverend, almost episcopal manner.

The United States of Europe on the Eve of the Parliament of Peace, by William T. Stead, sounded almost ironical in the face of subsequent events, which decided the question, Can we Disarm? propounded by Joseph McCabe and Georges Darien. The South African Question was vigorously reviewed by Olive Schreiner (Ralph Iron), who claimed to be an English South African, and opposed strenuously its settlement by war; Spenser Wilkinson also outlined British Policy in South Africa; and South African questions were discussed in Collectanea: Essays, Addresses, and Reviews, by Perceval M. Laurence. First Principles in Politics were set forth by William Samuel Lilly, and English Political Philosophy from Hobbes to Maine was passed in review by William Graham. C. B. Roylance Kent presented an historical sketch of The English Radicals, and Sir Richard Temple devoted his attention to The House of Commons. Sir Charles Dilke published a handbook of The British Empire, and The British Empire and Alliances were the theme of Theophilus Scholes, while Theodore Morison was

heard from on Imperial Rule in India. Lord Charles Beresford prophesied The Break-up of China, giving an account of the present commerce, currency, water ways, armies, railways, politics, and future prospects of that unhappy country. The Modern Jew claimed the attention of Arnold White. Vol. I of The Anglo-Saxon Review, edited by Lady Randolph Spencer Churchill, was remarkable for its sumptuous make-up and binding. Local Government and State Aid was added to the Social Science Series by Sydney J. Chapman; Higher Life of Working People had its hindrances discussed by W. Walker Stephens; The Economic Writings of Sir William Petty were edited in two volumes by C. H. Hull; William Smart discussed The Distribution of Income; The Theory of the Leisure Class was an economic study by Thorstein Veblen in the evolution of institutions; Allen Clarke touched upon The Effects of the Factory System; and Prince Kropotkin in Fields, Factories, and Workshops considered the two sister arts, industry and agriculture. The Revival of English Agriculture was predicted by P. Anderson Graham. Questions for Women and Men, propounded by Honnor Morten, had an introduction by Mrs. Henry Fawcett. Our Foes at Home, by Hugh H. Lusk, a former member of the Parliament of New Zealand, discussed American problems.

Among the most striking books on religious subjects are to be mentioned Naturalism and Agnosticism, the Gifford Lectures delivered by Prof. James Ward during 1896-'98, in two volumes; Vol. II of Elements of the Science of Religion (Ontological), the same lectures for 1896, by C. P. Tiele; the Bampton Lectures for 1899, by W. Ralph Inge, on Christian Mysticism; R. H. Hutton's Aspects of Religious and Scientific Thought; The Great Law, a study of religious origins and of the unity underlying them, by William Williamson; Lectures and Essays on Natural Theology and Ethics, by William Wallace, edited, with a biographical introduction, by Edward Caird; Texts Explained, by Dean Frederick W. Farrar; Sermons: Biographical and Miscellaneous, of Benjamin Jowett, edited by W. H. Fremantle; The Eve of the Reformation, studies in the religious life and thought of the English people in the period preceding the rejection of the Roman jurisdiction by Henry VIII, by Francis Aidan Gasquet, D.D.; Vol. II of The Archpriest Controversy, documents relating to the dissensions of the Roman Catholic clergy, 1597-1602, edited by T. G. Law for the Royal Historical Society; Undercurrents of Church Life in the Eighteenth Century, by Canon Thomas Thelsson Carter, who published also The Spirit of Watchfulness, and Other Sermons; Neglected Factors in the Study of the Early Progress of Christianity, by James Orr, D.D.; and A Critical History of the Doctrine of a Future Life in Israel, in Judaism, and in Christianity, etc., the Jowett Lectures for 1898-'99, by Rev. B. H. Charles. The Moral Order of the World in Ancient and Modern Thought was the theme of the Gifford Lectures for 1897-'98, by Dr. Alexander Balmain Bruce, who also supplied an exegetical study of The Epistle to the Hebrews; Dr. James Stalker supplied The Christology of Jesus; Church and Faith was the title of essays on the teaching of the Church of England, by numerous authorities; Canon Charles Gore followed his practical exposition of St. Paul's Epistle to the Ephesians with St. Paul's Epistle to the Romans, Vol. I covering chaps. i-viii; Dr. Francis Paget contributed an Introduction to the Fifth Book of Hooker's Treatise on the Laws of Ecclesiastical Polity;

Helps to Godly Living was the title of devotional extracts from the writings and addresses of Archbishop Frederick Temple, selected and arranged by J. H. Burn; The Trial of Jesus Christ was the subject of a legal monograph by Alexander Taylor Innes; Andrew Martin Fairbairn, D.D., wrote on Catholicism, Roman and Anglican; and George Cusack waved The Red Rag of Ritual in a witty and caustic satire. The Quest of Faith was pursued by T. Bailey Saunders; The Teachings of the Books proved to be a work of collaboration by Herbert L. Willett and James M. Campbell on the literary structure and spiritual interpretation of the books of the New Testament; Edgar C. S. Gibson edited The Book of Job with an introduction and notes; and to E. A. Wallis Budge we were indebted for The Earliest Known Coptic Psalter, edited from the Unique Papyrus Codex, Oriental 5,000 in the British Museum, the text being in the dialect of upper Egypt. Authority and Archæology, Sacred and Profane, was the title of essays on the relation of monuments to biblical and classical literature, by Samuel Rolles Driver, D.D., E. A. Gardner, and others, and the same theme was pursued in Light from the East; or, The Witness of the Monuments, an introduction to the study of biblical archæology, by Rev. C. J. Ball. The life and customs of Babylonians and Assyrians were described by Rev. Archibald H. Sayce in the Semitic Series, and from E. A. Wallis Budge we had two books upon Egyptian Ideas of the Future Life and Egyptian Magic. Canon W. C. E. Newbolt added Religion to the Oxford Library of Practical Theology; Public-school Sermons of Dr. Henry Montagu Butler were collected into a volume; S. A. Alexander outlined The Christianity of St. Paul; and James Drummond was the author of the second number of International Handbooks to the New Testament upon the Epistles of Paul the Apostle. Stones Rolled Away and The New Evangelism were two collections of sermons and addresses by the late Henry Drummond. The Conversion of the Maoris was described by Rev. Donald MacDougall. Vol. I of A Dictionary of the Bible, edited by James Hastings, D.D., covered A—Feasts, and Vol. II, Feign—Kinsman. A Short History of Free Thought, Ancient and Modern, came from John M. Robertson, and From Comte to Benjamin Kidd, by Robert Mackintosh, D.D., presented the appeal to biology or evolution for human guidance. Faith Healing and Christian Science were discussed by Alice Feilding. Roman Canon Law in the Church of England was the subject of six essays by Frederic William Maitland.

Books of a miscellaneous character worth mentioning include Field Artillery with the Other Arms, by Major E. S. May, and a Text-book of Theoretical Naval Architecture, by E. L. Atwood, assistant constructor in the English royal navy, both technical in character; The Ship: Her Story, by William Clark Russell; Idylls of the Sea and The Way they have in the Navy, by Frank T. Bullen; Naval Yarns, by W. H. Long; Medical Works of the Fourteenth Century, by Dean George Henslow, with a list of plants recorded in contemporary writings, with their identifications; a work on Tropical Diseases, by Patrick Mason, M.D.; A Book about Bells, by Rev. G. S. Tyack; Old Clocks and Watches, and their Makers, by Frederick James Britten; The Right to bear Arms, a work on heraldry, by X; Dancing in All Ages, by Edward Scott; Wood and Garden, by Gertrude Jekyll; Our Gardens, by Dean Samuel Reynolds Hole, in the Haddon Hall Library; My Roses and How I Grew Them, by Helen Milman

(Mrs. Caldwell Crofton); Fruit Culture for Amateurs, by P. T. Wright; and The Illustrated Dictionary of Gardening, by George Nicholson, in four volumes. Vol. III was issued of Modern Opera Houses and Theaters, by Edwin O. Sachs, with supplement; Arthur Shadwell dwelt upon The London Water Supply; and Sidney Barwise wrote on The Purification of Sewage. Rev. G. C. Bateman and R. A. R. Bennett were joint authors of The Book of Aquaria, and W. A. S. Westoby sent out Vol. I of The Adhesive Postage Stamps of Europe. Railway Block Signaling, by James Pigg, explained the principles of train signaling and apparatus for insuring safety. The Alleged Haunting of B— House, including a journal kept during the tenancy by Col. Lemesurier Taylor, was edited by A. Goodrich Freer (Miss X) and John, Marquess of Bute. Solo Whist had its whys and wherefores explained by C. J. Melrose. A History of Steeple Chasing came from William C. A. Blew, the author of The Quorn Hunt and its Masters; T. F. Dale wrote The History of the Belvoir Hunt, and also contributed the first volume of a new series of the Library of Sports, devoted to Riding, Driving, and Kindred Sports. G. A. B. Dewar wrote on The South Country Trout Streams for the Angler's Library, Fly Fishing in the Haddon Hall Library was by Sir E. Grey, and The Rabbit was added by J. E. Harting to the Fur, Feather, and Fin Series. Seven Lectures on the Law and History of Copyright in Books, by Augustine Birrell, were collected into a volume, and from Sir Sherston Baker we had First Steps in International Law.

Voyages and Travels.—Owing to the outbreak of the war in South Africa a third edition was sent out of Hon. James Bryce's Impressions of South Africa, with a new prefatory chapter dealing with the events which have induced the present crisis, and a new edition of Capt. Young-husband's South Africa of To-day; Canon W. J. Knox published Sketches and Studies in South Africa; Mrs. Lionel Phillips, South African Recollections; Roy Devereaux threw Side Lights on South Africa; while The Transvaal and the Queen, by Lieut.-Col. N. Newnham-Davis contained reminiscences of his service as a free lance in the republic twenty years ago. Montague George Jessett pronounced The Key to South Africa: Delagoa Bay. Under the African Sun, by Dr. W. J. Anson, gave a description of native races in Uganda, sporting adventures, and other experiences, illustrated from photographs; Harold Bindloss spent some time in The Niger Country; Among the Wild Ngoni, by W. A. Elmslie, contained some chapters in the history of the Livingstonia Mission in British Central Africa; a record of travel and discovery In Dwarf Land and Cannibal Country, by A. B. Lloyd, was supplemented by Sport in East Central Africa, by F. Vaughan Kirby; British West Africa was from the pen of A. F. Mockler Ferryman; and from Mary H. Kingsley we had a collection of West African Studies. Somaliland was visited by C. V. A. Peel. Travels in Southern Arabia and the Soudan, by the late Theodore Bent and Mrs. Bent, were illustrated; Parts I–III of The Temple of Deir el Bahari, by E. Naville, were sent out, being one of the publications of the Egypt Exploration Fund; the results of three years' work by the first female explorers in Egypt, Margaret Benson and Jane Gourlay, were given to the world in The Temple of Mut in Asher. Mogreb-El-Acksa: A Journey in Morocco, by R. B. Cunningham-Graham, was followed by The Ipané in the Overseas Library, and Tunisia and the

Modern Barbary Pirates were the subjects of a handsome volume by Herbert Vivian. George W. Stevens described the reception of Lord Curzon as viceroy in his brilliant book *In India*; Lucy E. Guinness went *Across India at the Dawn of the Twentieth Century*; the same country is the scene of *Ivory, Apes, and Peacocks*, by Israel; a *Second Series of Asiatic Studies, Religious and Social*, came from Sir Alfred C. Lyall; Capt. F. E. S. Adair spent *A Summer in High Asia*; William Jameson Reid traveled *Through Unexplored Asia*; R. L. Jefferson took *A New Ride to Khiva on a bicycle*; Hugh Clifford found himself *In a Corner of Asia*; and Sir Frank Athelstane Swettenham gave us pen pictures of *The Real Malay*. *Russia in Asia*, by Alexis Krausse, was at once a record and a study; Isabella Mary Phipps paid *A Visit to the Russians in Central Asia*; and Henry J. Pearson went *Beyond Petsora Eastward*. The *Philippines and Round About*, by Capt. G. J. Younghusband, and a second edition of *The Philippine Islands*, by John Foreman, revised and enlarged and brought down to the present time, were of interest to Americans, as was also *The Caroline Islands*, termed in subtitle *Travel in the Sea of the Little Lands*, by F. W. Christian. *Intimate China*, by Mrs. Archibald Little, told of the Chinese as she saw them, and from James Johnston we had *China and its Future in the Light of the Antecedents of the Empire, its People, and their Institutions*. Mrs. J. F. Bishop visited *The Yangtze Valley and Beyond*. Stafford Ransome portrayed for us *Japan in Transition*; Mrs. Hugh Fraser as *A Diplomatist's Wife in Japan* published two volumes of letters beautifully illustrated and luxuriously equipped; and *The New Far East*, by Arthur Diósy, dealt with the same country. Margaret Thomas, the author of *A Scamper through Spain and Tangier*, made a record of *Two Years in Palestine and Syria*. *Spinifex and Sand*, by David W. Carnegie, was a narrative of five years' pioneering and exploration in western Australia; H. Cayley Webster went *Through New Guinea and Other Cannibal Countries*; and *Tunafuti*, by Mrs. Edgeworth David, described three months on a coral island, giving an unscientific account of a scientific expedition. *Tangweera*, by C. Napier Bell, pictured life and adventure among gentle savages of Central America; *The Highest Andes*, by Edward Arthur Fitz Gerald, was a record of the first ascent of Aconcagua and Tupungato in Argentina, and the explorations of the surrounding valleys, which contained chapters by Stuart Vines and contributions by Prof. Bonney and others. James Rodway, the author of *In the Guiana Forest*, was at home *In Guiana Wilds*, and W. Anderson Smith declared *Temperate Chile: A Progressive Spain*. From *Sea to Sea* was a record of travel, in two volumes, by Rudyard Kipling; William Archer volunteered observations and reflections on *America To-day*; and T. C. Porter gave out *Impressions of America*. Grant Allen instanced the advantages to be derived from *The European Tour*; Tighe Hopkins was *An Idler in Old France* to good purpose; David Storrar Meldrum was heard from upon *Holland and the Hollanders*; Byzantine Constantinople was the subject of a superb volume by Alexander Van Millingen; *The Annals of Mont Blanc* were written by C. E. Mathews; Francis Gribble chronicled *The Early Mountaineers*. *Peaks and Pines* was another *Norway* book, by J. A. Lees. Two volumes of *A Book of the West*, by S. Baring-Gould, were devoted respectively to *Devon and Cornwall*; By *Moor and Fell*, by Halliwell Sutcliffe, dealt with an unhackneyed corner

of Yorkshire; Shropshire was described by J. C. Augustus Hare; *Highways and Byways in Donegal and Antrim*, by Stephen Gwynn, had illustrations by Hugh Thompson; Shakespeare's *Country* was added to the series of *Little Guides*; and *Emeralds chased in Gold* were, of course, the islands of the Forth, which had their story, ancient and modern, told by John Dickson.

The following are the statistics of book production in England in 1899, compared with those of 1898, from the London Publishers' Circular:

DIVISIONS.	1898.		1899.	
	New books.	New editions.	New books.	New editions.
Theology, sermons, biblical, etc.	535	153	590	108
Educational, classical, and philological	732	189	790	300
Novels, tales, and juvenile works.	1,758	644	1,835	736
Law, jurisprudence, etc.	117	46	97	63
Political and social economy, trade, etc.	437	97	350	114
Arts, sciences, and illustrated works.	263	32	306	33
Voyages, travels, geographical research	133	39	169	35
History, biography, etc.	618	125	528	126
Poetry and the drama	290	81	317	77
Yearbooks and serials in vols.	347	..	367	..
Medicine, surgery, etc.	160	36	155	73
Belles-lettres, essays, monographs, etc.	182	36	290	30
Miscellaneous, including pamphlets, not sermons.	436	30	187	6
Totals	6,008	1,508	5,971	1,596
	6,008	7,516		5,971

LITERATURE, CONTINENTAL, IN 1899.

While the annotations in these classified lists are necessarily concise, they are intended to indicate the minor as well as the greater movements in literature.

Belgium.—Beginning with history, as is usual in these annual reports, there are noted A. Gailard's *Histoire du Conseil de Brabant*; J. Lammeere's *Ordonnances de Charles V* (Vol. II); Baron J. de Chestret de Hanef's fine *La Maison de La Marck* (a bit of mediæval history); a monograph on Daniel de Borchgrave, first Secretary of State of the United Provinces (1550-'90), by one of his descendants; A. Hansay's *La Formation et l'Organisation du Domaine de l'Abbaye de Saint-Trond* (a "curious study of economic history"); Baron C. G. de Pélichy's interesting *L'Organisation du Travail dans les Ports Flamands*; and Henri Pirenne's history of Belgium to the fourteenth century (a noteworthy success), published in German as one of Lamprecht's series before appearing in French. Vol. III of *Correspondance de Rubens* has been issued by Max Rooses and the late C. Ruelens, and F. Vander Haeghen is continuing his noted *Bibliotheca Belgica*. Belgium's African interests are well discussed in F. Cattier's *Droit et Administration du Congo*; *L'État indépendant du Congo*, by A. J. Wauters; A. de Haulleville's *Les Aptitudes colonisatrices des Belges*; and V. Collin's *La Question du Haut Nil au Point de Vue belge*. E. Carton de Wiart's *Les grandes Compagnies coloniales anglaises du XIX^e Siècle* and H. Martel's *Les Colonies anciennes et modernes et les grandes Compagnies commerciales* illustrate an interesting subject. The charming *Un Séjour à Patmos*, by J. Bidez and L. Parmentier, deals especially with the life of Greek monks. Works on military science include M. De Maere d'Aertrycke's history of cavalry among the ancients, and Gen. Brial-

mont's *Progrès de la Défense des États et de la Fortification permanente depuis Vauban*. In economics and sociology we have *Recherches sur l'Histoire de l'Economie politique*, by Ernest Nys (1898); *L'Évolution de la Neutralité en Droit International*, by Chevalier Descamps; *Science pénale et Droit positif*, by A. Prins; *Synthèse sociologique*, by R. Simons; *La Vie sociale moderne*, by M. Heins; *Parasitisme organique et Parasitisme social*, by J. Massart and E. Vander Velde; G. Legrand's *Le Régime successoral*; G. Cornil's *L'Assurance municipale contre le Chômage involontaire*; W. J. Kerby's *Le Socialisme aux États-Unis*; and a masterly study on the Socialist party of Ghent and the Vooruit, by L. Varlez. Religious and philosophical works are A. de Potter's *La Justice et la Sanction religieuse*; *Le Catholicisme américain*, by the Jesuit A. D. Delattre; and Mgr. Mercier's *Les Origines de la Psychologie contemporaine*. Maurice Maeterlinck, in *La Sagesse et la Destinée* ("patient, resigned philosophy"), renounces his former views of the world and art, and becomes an enthusiastic prophet of realism. Fierens-Gevaert's curious *La Tristesse contemporaine* is a study of moral and intellectual influences in the literature of our day and of the "causes of the melancholy views of life taken by the present generation." J. Garson's *Les Créateurs de la Légende Napoléonienne* (Barthélemy et Méry) deals with another interesting literary question. Escal-Vigor is a new novel by Georges Eekhoud (style quite Flemish), and *Le Miroir du Ciel Natal* and *L'Arbre* are posthumous works by Georges Rodenbach. Further progress includes Tonnelles, by M. Des Ombiaux, C. Lemonnier's *Adam et Eve* and *Une Femme*, and Pol Demade's *Contes inquiets*. New verse of note is found in V. Gille's *Le Collier d'Opales* and Les Vignes de ma Muraille and E. Verhaeren's *Les Visages de la Vie*.

While French literature in Belgium is the "richest and most varied," the Flemish is also a "living force." The study of national history has been earnestly cultivated by writers such as E. Vlietinck (history of Ostend and its siege, 1601-1604), J. Opdebrinck (a "declamatory, but useful" work on the Protestants of the sixteenth century at Poperinghe), J. F. Pallemmaerts and Aug. Rees (history of the Boerenkrijg of 1798, the revolt of the peasants against France), and M. De Decker (careful monograph on J. F. Van de Velde, 1743-1823). Pol Anri's interesting *Schemas en Wenschen* deals with the pedagogy of Herbart. F. Van Duyse has issued a delightful collection of old religious songs in *Dit is een suyverlijck Boecxken*, and K. Heynderickx has written a *Studenten-Liederboek* for the students of the Catholic University of Louvain. J. Vercoillie ("head of the young school of philology") has remodeled his noted *Etymologisch Woordenboek der nederlandsche Taal*. The late Willem Rogghé's *Gedenkbladen* tells the "curious history of the Flemish movement at Ghent." Pol de Mont offers an *Inleiding tot de Poëzie*. H. Meert and W. de Vreese have each written on the Gallicisms of contemporary French writers. A. Vermeylen's doctor's dissertation on Jonker Jan Vander Noot, a Brabantine poet of the sixteenth century, is a fresh though elaborate study, and especially noteworthy. A. de Cock and Pol de Mont have edited Vol. IV of their collection of Flemish folk tales. Fiction to be mentioned is the posthumous work of Mme. Cogen, daughter of the poet Ledeganck; *Licht en Bruin*, two novels by G. Seggers; the realistic *Lenteleven*, by the talented S. Streuvels; *Uit Vlaanderen*, by C. Buyasse; historical novels by Noterdaeme and

others; and books by P. Danco, G. Lefevre, J. Leroy, and other newcomers. In poetry are noted the veteran Karel Bogaerd's *Wilde Rozen*; *Mijn Herte weet*, by H. de Marez; Miss Hilda Ram's *Wat zei, wat zong dat Kwezelken*; Helene Lapidoth-Swarth's *Stille Dalen* (marks a change; contemplates the past instead of yielding to new sensations; "exquisite diction . . . unaltered"); and the queer complaints of K. Waeri, of Ghent, described as a singer of the streets. In the drama Flemish authors do not appear to succeed as well as in the novel and in poetry. We are told that, "although . . . Antwerp and Brussels have opened sumptuous Flemish theaters, . . . the Flemish stage is more abundantly than brilliantly supplied."

The German movement along the frontier of the Rhine provinces and Luxembourg continues. It is headed by G. Kurth, who edits its organ, *Deutsch Belgien*; and a review, half Flemish, half German (*Germania*), has been started in Brussels. Ph. Bourg, a German Belgian, has published *Pabst und Fürst*, a five-act play.

Bohemia.—Among new publications are noted A. Srb's *Political History of the Bohemian Nation, 1861-'95 (1897-'99)*; J. Svatek's *History of the Bohemian Nation, 1705-1780*; *Monument in Celebration of the Fiftieth Anniversary of the Reign of the Emperor and King Francis Joseph: Scientific and Artistic Development of the Bohemian Nation, 1848-'98*; A. Bráf's *Letters on the Study of National Economy*; and two German works, J. Lippert's *Sozial-Geschichte Böhmens in vorhussitischer Zeit* (Vol. II, 1898) and *Forschungen zur Kunstgeschichte Böhmens: Veröffentlicht von der Gesellschaft zur Förderung deutscher Wissenschaft, Kunst und Litteratur in Böhmen* (Vol. III).

Denmark.—National history of special note includes Major-Gen. Holten's posthumous memoirs, scrupulously sincere (created a sensation, especially by the unfavorable account of Frederick VII); Kr. Erslev's *Valdemarernes Storhedstid. Studier og Omrids*; and H. C. Bering-Liisberg's topographical investigations in Copenhagen, particularly the *Gamle Torv. Regesta diplomatice historice danicæ cura Societatis Scientiarum Danicæ, Series II, Tomus posterior IV*, has been issued. Georg Brandes, in *Danskheden i Sønderjylland*, condemns the German administration in Sleswick, and writes unfavorably of German as compared with Danish culture. P. Scavenius offers *Indiske Dage. Fra Bombay til Madras samt Rejser i det sydlige Dekan*. Some noteworthy monographs on individuals have appeared: P. A. Rosenberg's *Søren Kierkegaard, hans Liv, hans Personlighed og hans Forfatterskab* (1898); Julius Lange. *Breve fra hans Ungdom med en Inledning og en Ramme* (1898), a warm tribute by G. Brandes; Vilh. Andersen's *Adam Oehlenschläger, et Livs Poesie. Ungdom, a study of the poet's literary evolution in youth*; Holberg og hans Scene (1898), by E. Brandes, who has published also *Det unge Blod and Smaa Skuespil* (1898); Chr. Bruun's *Peter Frederik Suhm, 18 Oktober, 1728-7 September, 1798: En Levnedsbetærelse* (1898), a eulogistic character picture by a not remarkable historian; and E. Hannover's *Maleren C. W. Eckersberg. En Studie i dansk Kunsthistorie* (1898).

The realistic novel of psychological or physiological aspect, scientifically objective, has been in vogue in recent years; critics like A. Ipsen now tell us of a reaction, after a "general perfection of style and expression has been reached." New titles in fiction are H. Bang's *Det hvide Hus* (nervous, fervent style) and Liv og Død; K. Larsen's

continuation of his *Danske Mænd* (humorous description of a jail bird; characterization toned down; dialect excellent); P. Nansen's *Troskabsprøven*: Smaa-historier (second edition); S. Schandorph's *Fortællinger* (1898); A. Ipsen's *Turisten og andre Fortællinger* (1898); works such as Mathilda Malling's *Doña Ysabel* (a story of the Napoleonic wars in Spain) and M. Henckel's *Lolotte. En Roman fra den gustavianske Periode* (1898), produced by the tendency toward the historical novel; P. Fr. Rist's *Pagebreve* (imitates the affected style of the period of Christian VI and Frederick V in pictures of the Danish court of that time); H. Höfding's *Mindre Arbejder*; and H. Pontoppidan's *Lykke-Per hans Kærlighed*. There is much poetry of merit: V. Rørdam's clever retelling of the tale of Beowulf; S. Michælis's *Sirener* and translations from Baudelaire's *Fleurs de Mal*; J. Jørgensen's serene and perfect *Digte*; Aage Matthison-Hansen's *Venusspeilet og andre Digte*; S. Schandorph's *Lyriske Portrætter* (1898); Erik Waage's *Bachelor*; and new work by S. Clausen (a poet "of Arcadia"), O. Hansen (imitates old folk songs), etc.

Finland.—See Sweden.

France.—Again have the French assiduously studied those interesting periods of their country's history, the Revolution and the empire, as witness Ph. Sagnac's *La Législation civile de la Révolution Française* (emphasizes the "relation between social phenomena and legal changes"); André Lichtenberger's *Le Socialisme et la Révolution Française* (finds the Revolution an epoch in the development of socialism; "practically an unworked field"); *Les Colonies pendant la Révolution, la Constituante et la Réforme Coloniale*, by Léon Deschamps (continuation of his *Histoire de la Question Coloniale en France*, 1891); P. Cottin's *Toulon et les Anglais en 1793* (1898); H. Zivy's *Le treize Vendémiaire an IV* (1898); E. Noël's *Brumaire, Scènes historiques* ("dramatic presentation of Bonaparte's seizure of the supreme power"); E. Gachot's noteworthy *La deuxième Campagne d'Italie, 1800*; F. Masson's *Joséphine de Beauharnais, 1763-'96* (1898; her life before her marriage to Napoleon; "profound knowledge of smallest details") and *Joséphine Impératrice et Reine* (1898), giving minute details concerning her improvements and additions to Malmaison; *Mémoires de Gen. Desvernois*, edited by A. Dufourcq (1898); C. Scheffer's excellent *Bernadotte Roi; Murat's correspondence* (preface by H. Houssaye); and Henry Houssaye's *1815—Waterloo* (forms the third and last volume of his history of the fall of the First Empire, based on original documents, including English material; infinite details concerning the army; clear style). Other periods and phases of French history are dealt with in R. Parisot's prolix *Le Royaume de Lorraine sous les Carolingiens, 843-923*; C. Schmidt's *Les Seigneurs, les Paysans et la Propriété rurale en Alsace en Moyen-Âge* (1898; important account of economic conditions); A. Lefranc's *Les Idées religieuses de Marguerite de Navarre: La Campagne de Minorque*, by Raoul de Cisternes (much new material on the Maréchal De Richelieu, eighteenth century); G. Lacour-Gayet's original researches into *L'Éducation politique de Louis XIV* (1898; "abounds in skillful analyses and appreciations of contemporary authorship"); *Du Cause de Nazelle's Mémoires du Temps de Louis XIV*, with introduction and notes by E. Daudet (a valuable addition to memoir literature; throws strong light on the practically forgotten conspiracy of Vanden Enden, Latreaumont, and De Rohan); *Correspondance du général de Martange*, brought out by C.

Bréard (deals chiefly with European politics between 1761 and 1779); Pierre de Ségur's *La Dernière des Condé* (dealing with the Princess Louise Adélaïde de Condé and Mme. De Monaco; many unpublished letters of the prince); P. de Nolhac's animated, succinct *La Reine Marie Antoinette*; E. Daudet's interesting *Louis XVIII et le Duc Decazes* (based on inedited documents); Marquis Philippe de Massa's *Souvenirs et Impressions, 1840-'71*; S. Blot's *Napoléon III*; and the memoirs of Mme. de la Ferronnays ("making a great sensation"). It is asserted that the "document" is to-day of paramount importance; facts and not the philosophy of history are asked for. The stream of Dreyfus literature includes *Gonse-Pilate* and *Le petit Bleu* (valuable additions), and *Karl et Quesney de Beaupaire*. *Le Malaise de la Démocratie*, by Gaston Deschamps, is a thoughtful work on contemporary France and its afflictions; and Arnold's *A quoi tient la Supériorité des Français sur les Anglo-Saxons*, an answer to Demolins. Emile Faguet discusses *Questions politiques*, and Léon Poincard reviews the political, financial, and social situation in *Vers la Ruine*. Noteworthy works on the history and description of other lands are R. Waddington's important *La Guerre de sept Ans: Histoire diplomatique et militaire. Les Débuts; Diderot et Catherine II*, by M. Tourneux (much unpublished material regarding Diderot's sojourn in Russia); Pierre Boyé's *Stanislas Leszczyński et le troisième Traité de Vienne d'après les Archives d'État, les Papiers du Roi de Pologne et autres Documents inédits*. [*Un Roi de Pologne et la Couronne ducal de Lorraine*] (1898; a thorough study; a "noteworthy fruit of present historical studies in France"); Horn's learned *Saint Étienne, Roi de Hongrie*; Charles Andler's *Le Prince de Bismarck* (fairly temperate; masterly style); books by E. Lardy, P. Mille, and H. Turol on *La Guerre Gréco-Turque*; Y. Guyot's *L'Évolution politique et Sociale de l'Espagne*; C. Bride's *La Guerre hispano-américaine de 1898*; Th. Bentzon's interesting impressions of *Nouvelle France et Nouvelle Angleterre*; the exhaustive *La Vie américaine: Ranches, Fermes et Usines*, by Paul de Rousiers; L. Boillot's *Aux Mines d'Or du Klondike: Du Lac Bennett à Dawson City* (various other books on America, including several novels); *Le Soulèvement des Travailleurs d'Angleterre en 1381* (peasants' revolt), by the late André Réville; Homelle's *Hommes et Choses d'Outremer* (includes eulogies on Gladstone and Cecil Rhodes); R. de Caix's valuable *Fashoda: La France et l'Angleterre* (a careful statement; much light thrown on hitherto shadowy points); E. Aubin's *Les Anglais aux Indes et en Égypte* (describes success in colonization and invites France to imitate English methods); A. Bordeaux's *Rhodésie et Transvaal: Impressions de Voyage* (1898); P. Mille's *Au Congo belge*; M. E. Bard's *Les Chinois chez Eux*; and M. Monnier's *Tour d'Asie*. Among the many additions to the broad divisions "sociology" and "economics" are *L'Éducation nouvelle*, by E. Demolins (interesting; commends school system of England and the United States); *Nos Fils, que feront-ils? Nos Filles, qu'en feront-elles?* by Hugues le Roux, who, like Demolins, eloquently urges the advantage of energy, activity, initiative; A. Fouille's *Les Études classiques et la Démocratie* (advocates dropping of Greek in secondary schools; favors liberal education); Gustave Le Bon's *Psychologie du Socialisme* (antisocialistic; considers men not equal; regards socialism as a religion); an eloquent and earnest exposition of the *Action socialiste*, by J. Jaurès; A. Lichtenberger's *Le Socialisme utopique: Études*

sur quelques Précurseurs du Socialisme (1898); E. Fournière's L'Idéalisme social (extols socialism); M. Hauser's Ouvriers du Temps passé (traces the labor question to the fifteenth century); A. Lichtenberger's Socialisme historique (dealing with the idea in France in 1789 and 1796); Les Industries monopolisées aux États-Unis, by Paul de Rosiers (suggestive, though not profound); Mme. Anna Lapérière's Le Rôle social de la Femme (directed against one-sided "feministic" efforts; a plea for woman in the home); J. Hocart's La Question juive (defends the Jews); and Jules Lemaitre's La Franc-Maçonnerie, directed against the order, as is also G. Goyau's book of the same title. Philosophical studies are H. Berr's L'Avenir de la Philosophie and L'Abbé Piat's La Destinée de l'Homme (against materialism; aims to prove an after life). H. Joly writes with analytic insight of Saint Ignace de Loyola. In art and archæology we have H. d'Arbois de Jubainville's La Civilisation des Celtes et celle de l'Épopée homérique (1898); Syracuse, ses Monnaies d'Argent et d'Or au Point de Vue artistique: la Coiffure antique et ses Développements successifs, by Comte Albéric du Chastel de la Howardries; J. Schopfer's Le Voyage idéal en Italie (a six months' itinerary based on the chronological sequence of the great periods of art in the Italian cities, instead of on a geographical order); C. Enlart's valuable L'Art gothique et la Renaissance en Chypre (clear style); Robert de Montesquiou's Autels privilégiés (plea for art for the few; shows refinement and a certain affectation of style); T. de Wyzewa Beethoven et Wagner: Essais de Critique biographique (1898); and S. Peladan's Réponse à Tolstol: La Décadence esthétique (1898). Literary criticism and biography, ever voluminous, include H. Béranger's able appreciation of L'Année intellectuelle; René Doumic's Études sur la Littérature française 3^e Série (strongly influenced by Brunetière; preference for all that is of the seventeenth century; witty, though uncompromising); Adolphe Brissot's Portraits intimes (fourth series; personal interviews, wide of range, some of permanent value); a new series of Impressions de Théâtre, by J. Lemaitre (witty, clear, and graceful as always); Lintilhac's Conférences dramatiques; Aug. Filon's De Dumas à Rostand; and Charles Recolin's L'Anarchie intellectuelle (forcible protest against short-lived literary fashions). One critic finds that there are no longer literary schools in France—only tendencies. Monographs on individual writers are L. Pinvert's Jacques Grévin, 1538-70: Étude biographique et littéraire (the first thorough account of Grévin's many-sided activity); Crouslé's La Vie et les Œuvres de Voltaire ("the most important contribution to Voltaire studies since the publication of Desnoiresterres's great work"); G. Guizot's almost completed study on Montaigne, published posthumously, with a preface by E. Faguet; Wladimir Karenine's George Sand: Sa Vie, ses Œuvres, 1804-76; E. Faguet's Flaubert (in Les grands Écrivains français); L. Séché's Jules Simon: Sa Vie, son Œuvre et son Temps, 1814-96 (1898); Charles Garriasson's complete though somewhat dislocated Théophile et Paul de Viau: Étude historique et littéraire; J. J. Jusserand's admirable Shakespeare en France sous l'Ancien Régime; and P. Lafitte's Le Faust de Goethe (a special application of the author's theory of art). J. Michelet's Lettres inédites, adressées à Mlle. Mialaret (Mme. Michelet) have been published. P. Loti's Reflets sur la sombre Route consists of essays, descriptions, and sketches. A. Daudet's Notes sur la Vie is a col-

lection of literary ideas, possible plots, etc., and lets one into the secret of the author's methods of work.

The more important titles in the long list of prose fiction are Zola's Fécondité (a tendency novel, anti-Malthusian; has called forth widely varying criticism; we are told, on the one hand, that the book shows all of the author's faults and is unworthy of his genius, has incessant repetitions and sketchy character drawing, the palatable portions lost in a maze of brutally inconsiderate description of unpleasant details; on the other hand, that the "aim . . . is to emphasize the importance of the home and its traditions" to the endurance of a great nation; "purity of domestic life the keystone of power and civilization"); Paul Bourget's La Duchesse bleue (argues for objectivity in an artist; subtle psychology); Anatole France's L'Anneau d'Améthyste (fine satire, graceful fantasy, rich thought; "a little more bitter and pessimistic than usual"); third volume of that Histoire contemporaine, of which the first two were L'Orme du Mail and the Mannequin d'Osier (these three works will remain, we are told, "the most precious testimonies and documents of an epoch anything but deficient in literary manifests"); P. and V. Margueritte's Le Poste des Neiges et Femmes nouvelles ("this novel sustains with ardor the moral *renaissance* of woman, without falling into the exaggeration of intolerant *femininists*"); E. M. de Vogüé's Les Morts qui parlent (gives author's ideas on contemporary men and questions in the form of fiction; elegant style; strong eloquence); Léon Daudet's Sébastien Gouves (ridiculing certain effete sides of the medical profession, like his Morticoles, with satirical force); René Bazin's La Terre qui meurt (a sober, forcible story of the difficulties of the peasant and of abandoned farms in the district of Marais); P. Adam's La Force (rather unvarnished picture of animal passions; author has an unusual talent for characterizing and story telling); Estaunié's Le Ferment (on the educated proletariat and its restless longings); André Couvreur's able and unpleasant Le Mal nécessaire (as hostile to surgeons as Les Morticoles, and full of indecencies); Jean Aicard's L'Ame d'un Enfant (attacks the education at the *Université*) and Méli-ta; Jean Thorel's Devant le Bonheur; Les beaux Dimanches, by Henri Lavedan (bright and mercilessly satirical as usual); H. Fèvre's Les Liens factices (naturalistic; much pathos); Ernest La Jeunesse's L'Holocauste and L'Inimitable ("fine artistic qualities"); René Boylesaye's Mlle. Cloque; Georges Ohnet's Au Fond du Gouffre ("an echo of the Dreyfus case"); O. Mirbeau's Le Jardin des Supplices (something for "lovers of the horrible"); Verger-Fleuri (affected innocence and exaggerated sentimentality), by Catulle Mendès; L'Affaire Blaireau (humorous), by Alphonse Allais; J. H. Rosny's Les Âmes perdues, La Fauve, and L'Aiguille d'Or; J. Richepin's Contes de la Décadence romaine (1898); E. Daudet's Les deux Evêques; works by A. Bonsergent, G. Dubis-Dessaulle, G. Lecomte, A. Boissière, Mlle. De Bovet ("one of the ablest living writers of short stories"); and the usual yearly product of A. Theuriot, H. Leroux, E. Delpit, L. Hennique, Th. Cahu, R. O'Monroy, and the prolific Gyp and P. Maël. Poetry is naturally less voluminous. Worth noting are La Chanson de la Bretagne, by A. Le Braz (who sings with youthful vigor and healthy realism of his native land); Maurice Magre's La Chanson des Hommes; Lebey's Les Poèmes de l'Amour et de la Mort (simplicity of style); J. Bach-Sisley's Artiste et

Poète (impressions of works of pictorial and plastic art); Montier's *L'Idéale Jeunesse* (preface by Sully-Prudhomme); *Paysages et Paysans*, by M. Rollinat ("the singer of rural splendors, of extravagances and terrors"; his poems "smell of the heather"); Phocas le Jardinier, delicate *vers libres* by the Franco-American Francis Viéle-Griffin ("of all French poets of the present day the poet who is most truly French"), published by the Société du Mercure de France (the Mercure, founded in 1672, being now "the exponent of all that is modern in thought and art"); Richepin's *La Bombarde* (*chansons*); E. de Chaillac's *Vers de Bohème*; R. de Montesquiou's *Les Perles rouges*: 93 Sonnets historiques; and André Magre's *Poèmes de la Solitude*. The first complete edition of Stéphane Mallarmé's poems has been published in Brussels. *Les Années funestes*, by Victor Hugo—manuscript verses gathered by his executors—are said to show "all his faults without any of his great qualities." In dramatic literature some successes—financial, literary, or both—and various praiseworthy works are noted: Henri Lavedan's *Le Vieux Marcheur* (refined and graceful derision of contemporary follies); Le Berceau (a "tendency drama" against divorce; rather didactic), by Brieux, who does not follow beaten paths; M. de Curel's *Nouvelle Idole* (also a play with an idea; author's talent described as rich, forceful, and bold); Mauric Donnay's *Le Torrent* ("first two acts entertaining; the rest wearisome and weak"); and Gergette Lemeunier ("powers of mocking fancy"; delightful digressions); Jean Richepin's *Les Truands* (has a certain brilliancy); G. Ancey's *L'Avenir* (bitterly pessimistic); F. Vandérem's *Le Calice*; Pierre Loti's *Judith Renaudin* ("beautiful details," "scenes of intimate poetry"); Paul Meurice's *Struensée* (a return to the romantic drama as exemplified by Hugo); the historical dramas *Plus que Reine* (the story of the Empress Josephine), by E. Bergerat; *Le Roi de Rome* (introducing Napoleon's son), by Pouvillon; *Mme. De Lavalette*, by E. Moreau; and the newcomer Romain Rolland's *Le Triomphe de la Raison* ("strongly influenced by Renan and Taine"; "well received"). J. Aicard has adapted Shakespeare's *Othello*.

The *White Terror*, by Félix Gras, finishes the trilogy of the French Revolution, *The Reds of the Midi* and *The Terror* having preceded it.

Germany.—Works on various phases of the country's history include *Hohenzollern-Jahrbuch*: *Forschungen und Abbildungen zur Geschichte der Hohenzollern in Brandenburg-Preussen*, Herausgegeben von Paul Seidel; *Zweiter Jahrgang*, 1898; M. v. Poschinger's *Kaiser Friedrich. In neuer quellenmässiger Darstellung*; H. Pigge's *Die religiöse Toleranz Friedrichs des Grossen nach ihrer theoretischen und praktischen Seite* (a thorough study, which considers also in detail the king's treatment of the Roman Catholic Church in Silesia); Julius Dieffenbacher's succinct description of *Deutsches Leben im 12. Jahrhundert*; and M. Bär's *Die deutsche Flotte von 1848-1852*. To Bismarck are devoted Hans Blum's *Fürst Bismarck und seine Zeit* (Vol. VII); *Tagebuchblätter*, by Moritz Busch; Ernst Schweininger's *Dem Andenken Bismarck's: zum 1 April, 1899*; and an interesting collection of caricatures, *Bismarck in der Karikatur*, with text by K. Walther. Further titles in history are Alfr. Dove's *Ausgewählte Schriftchen vornehmlich historischen Inhalts*; Hs. Kraemer's *Das XIX. Jahrhundert in Wort und Bild*; *Politische- und Kulturgeschichte*; P. D. Fischer's valuable and readable *Italien und die Italiener am Schlusse des 19. Jahr-*

hunderts: *Betrachtungen und Studien über die politischen, wirtschaftlichen und sozialen Zustände Italiens* (comprehensive and concise); and *Süd-Amerika*, unter besonderer Berücksichtigung Argentinien's, Nach den neuesten amtlichen Quellen und auf Grund eigener Anschauung (trustworthy), by P. Märtens. What was once the "Dark Continent" is illustrated in A. Boshart's *Zehn Jahre afrikanischen Lebens*; E. Donat's *Kreuz und Quer durch Süd-Afrika*: *Reiseskizzen und Bilder*; K. Dove's *Vom Kap zum Nil*: *Reiseerinnerungen aus Süd-, Ost-, und Nordafrika*; Ed. Wickenburg's *Wanderungen in Ost-Afrika*; K. Schwabe's *Mit Schwert und Pflug in Deutsch-Südwestafrika*; and A. Seidel's *Transvaal, die südafrikanische Republik, historisch, geographisch, politisch, wirtschaftlich dargestellt*—all published in 1898. The East is the subject of Rudolph Lindau's *Zwei Reisen in der Türkei* and E. v. Hesse-Wartegg's *Schantung und Deutsch-China*: *Von Kiautschou ins Heilige Land von China und vom Jangtsekiang nach Peking im Jahre 1898*. Noteworthy contributions to biographical and memoir literature are J. Friedrich's *Ignaz von Döllinger: sein Leben auf Grund seines schriftlichen Nachlasses dargestellt* (gives a "clear conception of the environment in which the young man grew up," and furnishes a "valuable contribution to the intellectual history of Germany"); Rudolf von Gottschall's *Aus meiner Jugend. Erinnerungen* (sympathetic; interesting character portraits of contemporaries); Malwida v. Meysenbug's *Der Lebensabend einer Idealistin: Nachtrag zu den Memoiren einer Idealistin* (shows a youthful freshness unusual in an octogenarian); and Andreas Moser's interesting *Joseph Joachim, ein Lebensbild*. P. Horn's *Die deutsche Soldatensprache* is a useful collection of colloquial phrases and terms peculiar to the German soldier. T. Ziegler characterizes *Die geistigen und sozialen Strömungen des 19. Jahrhunderts*. *Die Botschaft des Czars*, by the Austrian Freiherr von Sacken, is a plea for "no disarmament, but an ennobling reform of the defensive and military system." Trusts are studied by L. Pohle in *Die Kartelle der gewerblichen Unternehmer*. E. v. Hartmann has published Vol. I of his *Geschichte der Metaphysik*. E. Haeckel, in *Die Welträthsel: Gemeinverständliche Studien über monistische Philosophie*, offers the result of his philosophical studies. Of Heinrich Brunn's *Kleine Schriften, gesammelt von Hermann Brunn und Heinrich Bulle*, a number are published, as originally written, in Italian. B. Riehl's *Die Kunst an der Brennerstrasse* (1898) deals with the art of Tyrol. Material worthy of note in the field of literary history and criticism includes T. A. Fischer's *Leben und Werke Alfred Lord Tennysons*; Richard Weltrich's *Christian Wagner, der Bauer und Dichter zu Warmbronn: Eine ästhetisch-kritische und sozial-ethische Studie*; Klaus Groth: zu seinem 80. Geburtstag, by Adolf Bartels (exhaustive characterization) and Klaus Groth: *sein Leben und seine Werke*, by H. Siercks (fuller, less critical), both issued on occasion of the eightieth birthday of the Plattdeutsch poet, who died since then; N. Welter's comprehensive and sympathetic *Frederi Mistral, der Dichter der Provence* (discusses also the politico-literary importance of the Félibrige). Arthur Möller-Bruck's *Moderne Literatur in Gruppen- und Einzeldarstellungen und Präludien*, by Franz Servaes, are two noteworthy contributions to the history of modern German literature; A. Bettelheim's *Acta diurna: Gesammelte Aufsätze; neue Folge* ("give a fresh sense of the great wealth of literary talent and earnest spiritual endeavor stored up in

contemporary German life"); and Beiträge zur amerikanischen Litteratur- und Kulturgeschichte (1898), by E. P. Evans (written in clear, idiomatic German, and with an American's knowledge of the subject). Goethe literature has been increased by an Anderweite Folge of W. v. Biedermann, noteworthy Goethe-Forschungen; Felicie Ewart's Goethe's Vater: Eine Studie ("well meant; well written"); And. Fischer's Goethe und Napoleon; Ueber das Pathologische bei Goethe, by P. J. Möbius, a noted neuropath; and other monographs. The problems of the modern stage are discussed in Hans Sittenberger's Studien zur Dramaturgie der Gegenwart; Erste Reihe: Das dramatische Schaffen in Oesterreich (thorough, clear, and interesting); E. Zobel's Zur modernen Dramaturgie: Studien und Kritiken über das ausländische Theater (best in characterization of actors); Edgar Steiger's delicately appreciative but rather enthusiastic Das Werden des neuen Dramas; and Max Banner's Das französische Theater der Gegenwart (a trustworthy guide). In Das litterarische München, both portraits and text are by Paul Heyse. J. v. Widmann gives charming descriptions of travel in Sommerwanderungen und Winterfahrten.

The long list of fiction proves much activity on the part of the older writers, from whom we have Das Wanderbuch, a dramatic story, by the late Georg Ebers; the late Theo. Fontane's Der Stechlin (product of a ripe mind of unimpaired power; a picture of the author's beloved Brandenburg; almost no action, but "a book of the most intimate charm"); F. Spielhagen's Herrin (story of an emancipated Jewess, who strives for business and social success; the author's strongest novel, according to some; not equal to his best, according to others); Der Sohn seines Vaters und andere Novellen (not remarkable), by Paul Heyse (a subtle psychologist in the solution of his always interesting problems; maintains his dignity even when dealing with equivocal subjects); A. Wilbrandt's Vater Robinson (characterization excellent, as always; somewhat unlikely story, but well invented; didactic) and Der Sänger; W. Raabe's Hastenbeck (story of the Seven Years' War; signs of decreasing power, though the old humor and "joy in pure hearts" are still there); Wilhelm Jensen's Die Sehnsucht: Drei Novellen (remarkable inventiveness, wealth of moods; among author's best works), Eine Sommermondnacht, and Luv und See ("mood pictures" of the sea); E. Eckstein's not remarkable Die Klosterschülerin; Roman aus der Gegenwart; J. Wolff's Der Landsknecht von Cochem; E. Wichert's Vom alten Schlage (1898; old school; healthy; not exactly important); and P. Rosegger's charmingly fresh Idyllen aus einer untergehenden Welt. Further novels and short stories which have been more or less favorably received by the critical journals of Germany are Anton v. Perfall's Die Sonne (second edition; conventional, but effective through skillful construction and a certain *verve* in writing) and Das Goldherz; Arthur Schnitzler's Die Frau des Weisen: Novelletten; Paul Lindau's Agent (thrilling account of a criminal case; of no literary importance); G. v. Ompeda's Philister über dir! Das Leiden eines Künstlers; Gährungen: Aus dem Leben unserer Zeit, by F. Servaes (good modern observative art; striving after special expression often results in a wretched mannerism); Montblanc, by R. Stratz (sensational; lively description); Adalbert Meinhardt's Still-Leben ("atmosphere of hallowed meditation"); L. Jacobowski's Loki. Roman eines Gottes (fantastic fairy tale; one of the best works of re-

cent times; mature); Wald: Novelle (second edition), by W. v. Polenz (strong effect without modern *raffinement*); Karen: Eine Sylter Geschichte, by G. Mengs (plain, unconventional); Das Fräulein von Villanders: Roman aus der Zeit des Erzherzogs Ferdinand II, by Arthur von Rodank (pseudonym of Count Arthur von Wolkenstein-Rodenegg), who writes not without talent, but in a certain light, dashing manner; Rainer Marie Rilke's Am Leben hin (in a gray and chilly light); Marco Brociner's Der neue Glaube; Baron Karl Torresani's Steirische Schlösser (author more serious than usual); O. v. Leitgeb's Psyche (fine, clear, and truthful psychological delineation); A. v. Klinckowström's clever Verlorene Liebesmuth (Berlin local color); Franz Ferdinand Heitmüller's Tampete: Novellen (realistic delineation coupled with tender poetic feeling); Walther Siegfried's Um der Heimath Willen: Novelle (author abandons the standard of most modern art for the older methods of Keller); R. Bredenbrücker's Keine Sommer ohne Wetter und Warm der Hauser der Waebi nimmer zugeht (dialect; genial humor; bright); Novellen vom Genfer See, by C. E. Ries; Pater Maternus, by A. Hausrath (George Taylor); and the usual group of productions by women: Lou Andreas-Salomé's Fe-nitschka: eine Ausschweifung, und Menschenkinder (fine psychological analysis, especially of female characters); Halbtier, by H. Böhlau (Frau al Raschid Bey, an original intellect, who apparently harms the cause of woman by her immature style and exaggeration); Die Schuldnerin, by Ida Boy-Ed, who belongs to those who represent, "if not the most artistically valuable, yet, on the whole, the most satisfactory result of the new literary movement"; Ilse Frapan's Die Betrogenen (strong, but never offending realism), and Wir Frauen haben kein Vaterland (simple, pathetic story of a woman student); Goswina von Berlepsch's Bergvolk: Novellen (fresh and natural) and Heimat: schweizer Novellen; A. v. Gersdorff's Von Todes Gnaden ("smoothly and skillfully written"); Clara Viebig's Es lebe die Kunst (a "pure and pleasurable union of idea and realism"); A. G. v. Suttner's Die Tscherkessen (characters well drawn, action stirring); Bernhardine Schulze-Schmidt's Eisener Zeit: Eine Familiengeschichte aus den Befreiungskriegen ("a good family novel"); Elisabeth Gnade's Sarkoschin (a promising *début*); Marie Janitschek's Kreuzfahrer (mystical, sad); Hedwig Dohm's Schicksale einer Seele (in the service of the emancipation of woman); Emma v. Egidy's Marie-Elise (praised by W. v. Polenz; tiresome, according to Megede); Louise Schenck's Moderne Romfahrt (truth and fiction; "thin and pale"); Marie zur Megede's Liebe: Novellen (plain language, easy progress of action); and Elisabeth Dauthendey's Im Lebensdrange (a first appearance; well-told story; pictures with the warmth of life). And a few more works by authors with familiar names, selected from the lengthy records: Max Kretzer's Verbundene Augen; Jos. Joachim's Der Herrenbauer: eine schweizerische Dorfgeschichte; C. v. Dincklage's Die Erbtöchter und andere Novellen; W. Fischer's Grazer Novellen; W. Berger's Von Glück und Leid; Die Stärkere, by Hs. v. Zobeltitz; Alex Römer's Am Ziele, and new works by S. Junghans, Hm. Heiberg, H. Hoffmann, H. Schobert, K. Telmann, and A. Zapp. There is not much poetry to speak of; a tendency toward eccentricity is noticeable, and work of the first order seems rare. Mention is deserved by Friedrich Adler's Neue Gedichte (sympathetic; outpouring of a feeling heart); K. Fiescher's Das Balderspiel: Ein deutscher Weihgesang (good

introduction to Germanic mythology, not without value poetically); Anna Ritter's *Gedichte* ("modestly sensual, yet womanly and healthy in tone"); M. G. Conrad's *Salve Regina*: lyrischer Cyklus (author more "fighter than poet"; the most pleasing poems are those on family and fatherland); Phantasus, by Arno Holz (a former materialist, now among the idealists, preaching the "new romanticism, . . . that of the nerves"); *Leuchtende Tage*: Neue Gedichte, by Ludwig Jacobowski, a sympathetic personality, of healthy development (Holz and Jacobowski, once collaborators, are the "theoretical founders of German naturalism"); Hans Benzmann's *Sommersonnenglück* (a treasure of "delicately individualized nature mood"); Karl Henckell's *Gedichte* (still some superfluous pathos, but a healthy foundation; nothing decadent, weak, or artificial); J. H. Mackay's *Gesammelte Dichtungen* (poems of life, mirroring the doubts and wishes of modern man); *Hymnen—Pilgerfahrten—Algabal*, *Bücher der Hirten*, and *Jahr der Seele*, three little volumes by Stefan George (an interesting newcomer, a symbolist, who "deals with impressions of the soul"; artistic and artificial); Ferdinand von Saar's *Nachklänge* (poems and short stories); and some further poetry by beginners: W. E. Ernst's *Gedichte*, E. Berger's *Lieder des Lebens und der Liebe*, and M. v. Biehler-Buchensee's *Lebensklänge* (all 1898). A "deepening influence" is felt in German literature; the slavish copying of nature is being abandoned. A tendency toward more subjective treatment is, we are told, shown in plays such as Sudermann's *Die drei Reiherfedern*. This "fairy play" has been much criticised; it is the story of a moral visionary with a fictitious ideal which he seeks, losing the good that is near at hand. It shows "a certain forced grandeur in the heroic parts and an equally forced vulgarity in the subordinate figures." The author's symbolism is vague; nevertheless, the play "testifies to the deepening of his art." The record of the drama furthermore includes four one-act plays: *Die Frage an das Schicksal* ("too much theoretical disquisition and the fact that the principal scenes are played mutely caused the public to remain cold"), *Der grüne Kakadu* ("a fantastic caprice"), *Paracelsus* (rather uninteresting), and *Die Gefährtin* (delicate mood painting), by Arthur Schnitzler, who here abandons realism for "vague ideas of hypnosis and cabalism"; *Die Frau im Fenster—Die Hochzeit der Sobede—Der Abenteurer und die Sängerin*: Theater in Versen (dramatic structure lacking; good character drawing; "a riot in moods"; fine style), by Hugo von Hoffmannsthal, a disciple of art for art's sake, with a touch of the decadent; Joh. Schlaf's drama, *Die Feindlichen* (tragic development mainly indicated by mute play); L. Fulda's *Jugendfreunde*; Max Halbe's *Die Heimatlosen* (faithful to life); Georg Hirschfeld's *Pauline* (a "kitchen comedy"; farcical beginning, sociological speculations at the end); Max Dreyer's *Hans* (lifelike picture of a studious woman softened by love) and the one-act plays *Unter blonden Bestien* and *Liebestrüme*, both showing much healthy humor; E. v. Wildenbruch's historical tragedy *Gewitternacht* (disappointing and queer mixture of intrigue of the French school and patriotic drama; an attempt to unite historic foundation and the modern spirit); Martin Greif's *General York*: *Vaterländisches Schauspiel* ("passable"); O. E. Hartleben's *Die Befreiten*: Ein Einakter-Cyklus (four one-act plays—*Die Lore*, *Die sittliche Forderung*, *Abschied vom Regiment*, *Der Fremde*; the theme, liberation from Philistinism and the

right of individuality, is not very earnestly attacked) and *Die Erziehung zur Ehe* (pleasing and witty dialogue can not conceal faults; caricature rather than satire); *Das liebe Ich*, by Karlweiss (mixture of Raimund and Anzengruber; excess of moral "tendency"); Andreas Bockholdt (1898), an unsuccessful tragedy, by W. v. Polen; Josef Lauff's historical drama *Der Eisenzahn* (scene laid in Berlin, 1447); Hermann Bahr's comedy *Der Star* (dramatic force lost in virtuose but all too detailed delineation of secondary matters and of varying moods; author has talent, but has changed his manner with every new wind that blew in the literary atmosphere); F. v. Hindersin's *Wuotans Ende* (epic spirit outweighs the dramatic; free-thought tendency); R. Skowronnek's No. 17, a three-act village comedy (pseudo-realism); Richard Landsberger's drama *Pflicht* (places the ego above the public weal; not convincing); Anton von Perfall's *Die Krone* ("fairy drama"; laughed at and hissed at the Royal Theater of Berlin as aiming at the protection of those of "divine right," instead of striving for the applause of true friends of art); *Der junge Fritz* (a mediocre "Hohenzoller" play; forbidden by the censor), by Franz Baier (pseudonym of the actor Ferdinand Bonn); Hugo Lubliner's comedy *Das fünfte Rad* (only halfway successful); Stefan Vacano's *Mutterherz* (unsuccessful); Friedrich Fürst Wrede's *Recht auf sich selbst* (rejected by the public); H. Eulenberg's tragedy *Dogenglück* ("Shakespeare run wild"); and the usual batch of ephemera, mostly farcical, such as *Auf Strafurlaub*, by G. v. Moser and T. v. Trotha; *Mädel als Rekrut*, farce, by Kraatz and Strobitzler (piquant, improbable, and laughable); the comedy *Renaissance*, by F. v. Schönthan and Koppel-Elfeld (a graceful bit of play; no depth); *Busch und Reisenbach* (the usual wild hodgepodge of ludicrous situations), by Heinrich Lee and Wilhelm Meyer-Förster; *Als ich wiederkam . . .* (continuation of *Im Weissen Rössl*), by Blumenthal and Kadelburg; and *Die neue Richtung*, a poor farce, by Marco Brociner and Alexander Engel.

In Plattdeutsch literature we have Felix Stillfried's novel *De unverhoffte Arwtschaft*; and, as a local production, *He gut Württemberg allewege! Ein litterarisches Jahrbuch aus Schwaben* (Vol. I, 1898) is also noted.

Interesting news comes from Alsace, especially in an article by F. Curtius (*Deutsche Rundschau*, July, 1899). Political conditions and fear of material loss attending a free expression of opinion make it difficult to determine in how far the Alsatians have become Germans. The best index to the soul of the people is the nonpolitical literature. It is a pleasing symptom that poetic production has begun again, after having been silenced by the guns of the victor. This production finds expression in that dialect which survived the French period. The new Alsatian theater in Strassburg met with a success which proves that the new movement is on the right road. The most noteworthy dramatic products of this direction are G. Stoskopf's comedy *Der Herr Maire* (1898; satire on the peasantry; friendly to the French) and *Der Pfingstmondää vun hitt ze Dää*: *dramatisches Culturbild aus dem Elsass vom Ende des 19. Jahrhunderts* (lifelike picture of the process of fermentation which Alsatian society is undergoing), by Heinrich Schneegans. The latter is especially of political (or *culturgeschichtlich*) interest. It borrows its title from the Pfingstmontag of Arnold, the masterpiece of Alsatian dialect literature. Fritz Lienhard (who does not share the enthusiasm of Cur-

tius) finds a particularistic tendency in this adoption of a "neutral tongue" (a forced mixture of French and German) as a literary language, and criticises *Der Herr Maire* as not very remarkable. His own *Lieder eines Elässers* (second edition, 1897-'98) and *Wasgaufarten* (second edition, 1897) show richly colored descriptions of nature and deep feeling. Lucie and Jungfer Prinzesse, by Julius Greber, president of this Strassburg theater, are noted as the ripest fruits of the productions of "young Alsace."

Finally, two German-American productions may be referred to: Th. Kirchhoff's *Hermann, Ein Auswanderer-Leben: Episch-lyrische Dichtung* (an interesting attempt to depict the life of a German emigrant) and *Abendglocken*, narrative poetry mostly of American subjects, by Kara Giorg (pseudonym for Gustav Brühl).

Holland (Flemish authors under Belgium).—Among the books occasioned by the Queen's coronation, *Een halve Eeuw* (by various contributors) is perhaps most noteworthy. P. L. Muller's notable popular history, *Onze gouden Eeuw: De Republiek der vereenigde Nederlanden in haar Bloeitijd geschiedt*, is completed with Vol. III, and Part I of *Ons Vaderland, 1849-'98*, by G. F. J. Douwes, has appeared. H. A. Pareau's description of a trip to *Onze West* is "pleasant reading," but marked by unwarranted optimism. A. Sloos offers a little work on *De Nederlanders in de Philippijnsche Wateren vóór 1626* (1898), and Dutch ventures in another land are dealt with in two South African publications, J. F. van Oordt's *Paul Kruger en de Opkomst der Zuid-Afrikaansche Republiek* (Kaapstad, 1898) and J. A. Wormser's *Van Amsterdam naar Pretoria* (Pretoria, 1898). In travel we have *Spanje: Een Reisverhaal*, by J. Israëls. J. Prinsen's *Gerardus Geldenhauer Noviomagus: Bijdrage tot de Kennis van zijn Leven en Werken* is praised as a valuable contribution to the history of the Reformation. Prof. Bolland, who in the essays *Rome en de Geschiedenis* and *Petrus en Rome* argued scientifically against the Pope's rulership and infallibility, was attacked with bitter invective and abuse by Dr. Schaepman in *Bolland en Petrus*, and replied in *Oude Gegevens*. There has appeared a second part of the new translation of *Lao Tsze*, by H. Borel, whose *Studiën* are rather superficial. The woman question is dealt with in Mrs. Goekoop's *Hilda van Suylenburg* (fifth edition); *Het Feminisme* (a plea for the home), by S. R. Steinmetz; *Anna de Savornin Lohman's De Liefde inde Vrouwenquaestie* (a passionate insistence on the sexual impulse); and *De Liefde in het Vrouwenleven* (traces the influence of social progress), by Cornélie Huygens. The Amsterdam Exhibition has occasioned C. L. van Balen's *Rembrandt, zijn Leven en Werken* (1898; a "handy little monograph"). Literary criticism includes *Jan ten Brink's Franche Studiën* (1898; French authors and their works); M. Poelhekke's character studies of the Modernen (i.e., Kloos, Verlaine, Strindberg, Jörgensen); A. G. van Hamel's *Het letterkundig Leven van Frankrijk* ("erudite and entertaining"); Byvanck's careful study of the late Prof. Fruin; and J. van den Oude's *Litterarische Interludiën*. Vol. IV has appeared of *Verzamelde Opstellen*, by L. van Deyssel, who "enriched Dutch literature with passages of imperishable beauty and worked a revolution which will have a lasting effect." The leaders of modern literature have been violently attacked in a novel (Vincent Haman, 1898) by W. Paap, who, we are told, deals in a "venomous invective" rather unfamiliar in Dutch criticism. He upbraids the men of 1880 for producing trans-

lations instead of original work (in which reproach there seems to be some truth), and finds the generation of 1890 no better. The very youngest in the literary life join in this contempt for modern Dutch literature, yet they themselves are charged chiefly with weak imitation. Is. Querido's *Meditatiën over Literatuur en Leven* is described as a "clever defense of sentiment in opposition to intellect," but written in poor language and inaccurate metaphors. Emants and Couperus, with *Nagelaten Bekentenissen* and *Noodlot*, find imitators, it appears, in E. S., author of *Stille Wegen* (painful self-analysis), *Parvus* (Fataliteit), and J. Eigenhuis's *Eenvoudige Zielen*. The older romantic writers are apparently arousing renewed interest in the public; at least they are being republished. H. J. Schimmel has tried to be more modern in *Het Zondekind*. The late G. Keller's *Haar Buurman* (1898) lacked the spirit of his successful work. Dr. van den Bergh van Eysinga's *Book van Toevertrouwen* is an "elaborate specimen of lyric prose," of hope and faith, under "strong biblical influences." Of poetry, V. van Eden's *Enkele Verzen* ("sparkling with life"), A. Verwey's *De nieuwe Tuin* (sound, earnest, even gloomy), G. C. van 't Hoog's *Geluk* (rich in color, though at times somewhat labored), and Miss Jeanne Reyneke van Stuwé's *Impressions* (simple expression of sentiment) are noted. The play *The Ghetto*, by Herman Heyermans, Jr., is described as a fine bit of Jewish life, literary rather than dramatic, and marred only by the introduction of "certain crude philosophic and religious theories." Further additions to *belles-lettres* are *Kamertjeszonden* (a coarsely realistic picture of intellectual pauperism), by H. Heyermans, Jr.; F. van Eeden's *De kleine Johannes*; C. P. Brandt van Doorne's *Mathilde*; L. H. J. Lamberts Hurrelbrinck's *Uit de Limburgsche Ardennen*; J. Reyneke van Stuwé's *De Heer van de State*; J. ten Brink's *Brechtje Spiegheles: Eene Novelle uit de Geschiedenis der nederlandsche Letteren*; C. Busken Huet's *Robert Bruce's Leeren*; C. Buyase's *Schoppenboer* and *Uit Vlaanderen*; *Zijn Pleegkinderen*, by H. T. Chappuis; and *Vorstin en Martelares*, by L. Stratenus.

Hungary.—Historical works of importance are the tenth and last volume of the late S. Szilágyi's monumental *History of the Magyar Nation*, written by S. Márki and G. Bekscics; *History of Democracy* (Vol. IV), by G. Schvarcz (an original thinker, directly opposed to Mommsen and other writers on the history of Rome); the *Great Illustrated History of the World*, by eminent writers under the editorship of H. Marczali (to be complete in twelve volumes); and Vol. VI of the late L. Kossuth's works, edited by his son. Interesting and useful economic and sociological works are Gaál's *System of Political Economy*; *Encyclopædia of Economics*, edited by G. Mandello; and Rustem Vámbéry's *Foreign Laws relating to Conditional Sentences*. Several important books on art have appeared: A. Berzevichy's *Italia* (descriptions of the scenes of the triumphs of the Renaissance; masterly style, clear judgments); *Art Reform*, by J. Hock (who strives to bring art before the masses, and is identified with the *Nemzeti Szalon*, the "headquarters of æsthetic young Hungary"); *Hungarian Art Treasures* (to be completed in five volumes), sumptuous folios edited by E. de Radisics, director of the National Museum of Industrial Art, with a preface by Jókai; and T. Szana's *János Janko's Life and Work*, an able monograph on a popular caricaturist. Joseph Bayer won a prize from the Academy of Sciences with his valuable *History of Hungarian Dramatic Literature up to 1867*;

Dénes Szűry's *Dramatic Impressions* deals with Shakespeare, Sardou, Dumas, Duse, etc.; and Albert Popipi's study of Byron and Shelley is criticised as readable but inadequate. There is not much fiction of special excellence to record. F. Herczeg's *Story of a Girl* shows his usual characteristics—taste, a smooth style, sarcasm, and good though not thorough characterization; S. Bródy's *The Silver Goat* is praised as his ripest production and one of the best novels of recent years; the author here, we are told, abandons naturalism for realism, and offers a richly colored description of contemporary life in Buda-Pesth. I. Szomaházy's *Uneven Wednesdays* is a propitious *début* in novel writing, and A. Berczik's short stories, *Autumn Hunting*, are as gay, observant, amiable, clever, and amusing as his comedies. There are three poetical productions of note: Verses (mild melancholy; subdued colors), by Dezső Ambrozovics; A. Radó's *Songs and Stories* ("gentle moods," quiet content, warmth with a touch of sarcasm); and E. Makai's *Recent Poems* ("deep sentiment and elegant versification"). Among the plays of the year is noted especially A. Berczik's *Himfy's Songs*, a "charming literary comedy of the best type," the hero of which is S. Kisfaludy, the noted author of the "songs" which give the play its name. F. Herczeg's comedy, dramatized from his novel *The Daughters of Gyurkovics*, was well received; his drama *The First Storm* is said to lack depth. Jókai's historical dramas *Black Blood and Levente*, though romantic and patriotic, were unsuccessful, "probably because Jókai's *genre*, despite his enormous personal popularity, is deemed to be a trifle out of date."

Italy.—Various periods and phases of national history form the themes of Da Bonifazio VIII ad Arrigo VII (a dramatic account of Florentine history), by Prof. del Lungo; A. Gherardi's interesting *Consulte della Repubblica Fiorentina* ("scientific method and exemplary diligence"); Niccolò Rodolico's *Dal Comune alla Signoria: Saggia sul Governo di Taddeo Pepoli in Bologna* (1898); Lucio Fiorentini's *Le dieci Giornate di Brescia del 1849* (accurate; fills in some lacunae); Ant. Ugoletti's *Brescia nella Rivoluzione del 1848-49*; E. Bottini Massa's *La Sicilia nel 1848*; A. Maurici's *L'Indipendenza siciliana e la Poesia patriottica dell' Isola dal 1820 al 1848* (1898); *Bibliografia storica delle Cinque Giornate e degli Avvenimenti politico-militari in Lombardia nel 1848*, by Antonio Vismara (1898); F. Bertolini's *Storia del Risorgimento italiano*; N. Colajanni's *L'Italia nel 1898: Tumulti e Reazione* (1898); and the lectures on *La Vita Italiana*, which have been delivered in Florence during the last decade by the most famous authors of the country—Carducci, Villari, Serio, del Lungo, Rovetta, and many others. Among historical and descriptive works on other lands are A. Lumbroso's *Miscelanea Napoleonica*, (serie 5, 1898); *La Camicia rossa nella guerra greco-turca del 1897*, with preface by Ricciotti Garibaldi (curious and interesting account of the Italian expedition); *Fra Turchi e Arabi*, by Sandro (pseudonym), an animated and faithful picture; *In Terra Santa*, by A. de Gubernatis; G. Fano's *Il Viaggio d'un Fisiologo intorno al Mondo*; Mario Borsa's *Verso il Sole di Mezzanotte*; *L'Omo—Seconda Spedizione Böttger: Viaggio di Esplorazione nell' Africa orientale*, by L. Vannutelli and C. Citeri ("complete account of an exploration which constitutes a glory for our country," says an Italian critic); and Ugo Ojetti's *L'America vittoriosa* (description of the United States, with the story of the late war). Pt. Bertolino considers *Il Governo*

locale inglese e le sue Relazioni con la Vita nazionale. Of monographs on individuals we have Enrico Zanoni's *Carlo Cattaneo nella Vita e nelle Opere* (1898); Giacomo Dina e l'Opera sua (Vol. II), edited by L. Chiala; and E. Masi's abridgment of the curious memoirs of Ferdinando Ranalli, a linguistic purist. There have been many commemorations in recent years: Vespucci, Paolo Toscanelli, Savonarola, Leopardi, Moretto da Brescia, and Bernini have been thus honored in celebrations, with the usual attendant stream of orations and biographical and critical monographs. Here, as in the congratulatory offerings published on the occasion of weddings, the usual poetry of former days has been superseded to a great extent by learned monographs, which frequently show a pedantic and tiresome erudition without a touch of genius. The noteworthy products of these celebrations include for 1898-99: For Vespucci, an *édition de luxe* of A. M. Bandini's *Life of Amerigo Vespucci*, with notes and additions by G. Uzielli; for Savonarola, the *Cronaca di Filipepi*, the brother of Alessandro Botticelli, an important document; for Leopardi, the *Pensieri inediti di G. Leopardi* (Vols. I-III; show "the whole development of the poet's mind," the "raw material" of his work; of "inestimable value"), Fr. Ridella's *Una Sventura postuma di Giacomo Leopardi*. P. Puglisi's *Giacomo Leopardi* (a psychological study; tends to lessen Leopardi's philological fame), a large part of M. L. Patrizi's *Nell' Estetica e nella Scienza*, orations by G. Mestica and A. d'Ancona, and V. Spezioli's *Guide to Recanati*; and for Moretto da Brescia, a good monograph on the artist by P. Molmenti. Study and republication of old authors goes on, as witness *Le Rime di Francesco Petrarca*, . . . commentate da G. Carducci e S. Ferrari (the result of thirty years' study by Carducci); G. Lisis's edition of *Machiavelli's Principe*; E. Solmi's selection from *Lionardo's* prose writings; a fine edition of the *Promessi Sposi*, illustrated by Previati. Dante literature has been increased by *Con Dante e per Dante: Discorsi a Conferenze tenute a Cura del Comitato Milanese della Società Dantesca Italiana* (1898); Vol. IV of *Codice diplomatico Dantesco*, by G. L. Passerini; and G. Biagi's and Pio Rajna's masterly edition of the *De Vulgari Eloquentia* (won the philological prize of the Accademia dei Lincei). The Florentine committee of the Società Dantesca Italiana has revived the reading and commenting of the *Divine Comedy*, originally begun by Boccaccio (it appears that public readings and lectures are increasing in favor as media for the dissemination of culture). There are also such serials as the *Biblioteca Storico-critica della Letteratura Dantesca* (directed by G. L. Passerini and L. Papa), *Passerini's Giornale Dantesco*, and the excellent *Bullettino della Società Dantesca Italiana*, edited by Barbi. Good minor studies of various phases in literature appear in the *Biblioteca critica della Letteratura italiana* (directed by F. Torraca), the *Giornale storico della Letteratura italiana* (edited by F. Novati and R. Renier), the familiar *Archivio storico italiano*, and numerous other historical reviews. Other works on literary topics are F. Squillace's *Le Tendenze presenti della Letteratura italiana* ("scientific-literary criticism"; physiological and psychological aspects well considered); Arturo Graf's *Foscolo*, Manzoni, Leopardi, Saggi, aggiuntovi *Preraffaeliti*, *Simbolisti ed Esteti e Letteratura dell' Avvenire* (1898; essays; sympathetic, appreciative); Gerardo Hauptmann e l'Opera sua letteraria, by Ces. de Lollis; Giulio Pisa's fine *Studi letterari di Leonardo da Vinci, Stendhal, Whitman, Dide-*

rot, and others; and A. L. Paternostro's *Soqui . . . veri* (protest against ultra-modern novelists). E. G. Zoccoli's *Federico Nietzsche: La Filosofia religiosa—La Morale—L'Estetica* (1898) is a considerable study of sources; Nietzsche's relations with Wagner are dealt with specially in detail. Classical studies are assiduously pursued. There are G. Vitelli and G. Mazzoni's excellent *Manual of Greek and Latin Literature*; good translations of *The Knights of Aristophanes* (by A. Franchetti) and the *Hymns of Bacchylides* (in prose, by N. Festa); Giussani's studies on *Epicurus*; and a new periodical, *Atene e Roma*, published by the *Società Italiana per gli Studii Classici*. *Vox Urbis* is a new periodical, entirely in Latin, published at Rome. Art literature has been enriched by A. Venturi's iconographic study of *La Madonna* and G. Magherini-Graziani's *L'Arte a Città di Castello*.

Of fiction that is noteworthy or signed by familiar names we find A. G. Barrili's *Raggio di Dio* (last of the five novels of the Columbus cycle) and *Sorridi di Gioventù*; *La Carrozza di Tutti*, by E. de Amicis (sketches of life in the public conveyance); E. Castelnovo's *I Coniugi Varedo* (a simple story, true, without phrase or pathos) and *Natalia ed altri Racconti*; *Capuana's Il Braccioletto: Novelle* (1898; concise; naturalistic); Marchese F. Nobili Vitelleschi's *La Roma che se ne va* ("interesting and vivid picture of Roman society about 1870"); E. A. Maresciotti's *Arturo Dalgas* (fifth edition; not remarkable, though psychologically interesting) and *Clara Albiati* (a sultry orgie of sensuality; the participants psychologically explained); A. Panzini's *Moglie nuova* (offers little new in the woman question); A. Albertazzi's *Ora e sempre* (marital infelicity; dramatic material skillfully handled); Edoardo Calandra's *La Bufara*; and *Tullio Giordana's Le Greche* (three graceful and delicate stories of the Græco-Turkish War). We are told that, as on the stage, so in fiction, French influence and fashion vitiate literature; the novel of adultery is much cultivated even by the increasing number of women writers. Verse worth noting is found in A. Orvieto's *Sposa Mystica* and *The Veil of Maia* (favorably received); A. Baccelli's *L'Iride Umana*; In Umbra, by Giovanni Cena, a new poet, original and sincere, of no school (shows strong feeling, vivid imagination); Ugo Fritelli's *Primule* (graceful); and Enrico Giacobini's *Tempre* (delicacy and fine elaboration). The drama of the year includes *Sogno d'un Mattino di Primavera*, *Sogno d'una Notta d'Autunno*, *Gioconda: Tragedia* (melancholy, unpleasant, highly poetical language, fine description of scenery, says a German critic; "imperfections, due to inexperience, . . . but what poetry! what a wave of passion!" a noble attempt to replace grotesque realism by "fresh and fragrant poetry," says an Italian writer), *La Gloria: Tragedia* (declined by the public; symbolic, introducing "glory" in the extreme potentiality of a demoniac force; lacks "definite personages, definite action, and definite time"; a *spirituel* piece of work, whether we agree with the author or not)—all four by G. d'Annunzio; Roberto Bracco's drama *Tragedie dell' Anima* (triumphant success; author shows psychological depth and dramatic skill); Giovanni Bovio's *Leviatano* (first of a trilogy; for the student, not for the stage); and Giannino Antona Traversi's interesting comedy *La Scuola del Marito*.

Norway.—Local history is contributed to in D. Grönvold's *Bergen. Past and Present*, and Kaptein Abildgaard's *Christiania*. Questions of law are considered in A. Taranger's trustworthy

Retrospect of the History of Norse Law; E. Hertzberg's learned *Rights of Possession of Norse Church Properties*; and B. Morgenstjerne's *Lærebog i den norske Statsforfatningsret*. C. O. E. Arbo's *Contributions to the Anthropology of the Norwegians* is praised for absolute exactness, and O. Rygh's exhaustive *Nomenclature of Country Estates and Townships* and A. Helland's *Topographical Survey of the country districts* have also been well received. New titles in philosophy and theology are G. Fasting's *Om Samvittigheden*; O. Jensen's *Om Soning og Forsoning*; H. A. T. Dedichen's "physio-psychical" writings; Rev. M. Lae's large work on the *Deluge*; and a new edition of Pastor C. Bruun's *Folkelige Grundtanker* (made a stir two decades ago by its attack on classical education). B. Arnulf writes of *Et retfærdigere Samfund*. J. Bing's *Norske Digte og Digtere* and Nils Kjær's *Boger og Billeder: Kritiske Forsøg* (1898; "fresh, *spirituel*, and impressionistic" in style) are noteworthy contributions to literary criticism. There is no very remarkable fiction. A fair share of success fell to E. Kraemmer's *Byen's Fædre*, G. Scott's *Fugl Fenix*, H. E. Kinck's *Hugormen*, Mrs. A. Skram's *Afkom* (1898) and Sommer, P. Egge's *Trøndere*, and others. V. Krag's *Rahel Strømme*, B. Lie's *Kaspar Bugge*, and F. Viller's *Gamle Friks Diamant* also appear in the record of *belles-lettres*. Noteworthy poetry is found in *Victoria, en Kærligheds Historie* ("a love song of the finest," of a "wondrously clear and full melody," replete with big, warm feeling), by Knut Hamsun, whose poetry has undergone a "rich development"; V. Krag's *Vestlandsviser*; and the excellent *Digte* of T. Anderson. New editions of E. Storm's *Døleviser* (by H. Halvorsen, an authority on dialects), finely illustrated, and of Holberg's comedies (carefully edited by N. Kjær) are also noted. Foremost in dramatic literature stands Bjørnstjerne Björnson's *Paul Lange og Tora Parsberg*, marked by "deep, human interest, but a rather unpopular subject"; the principal character, a slightly veiled portrait of a noted politician who committed suicide, is characterized finely and with "eager sympathy"; the play "vigorous and well wrought out." Of the other plays, Mons Lie's lyrical drama *Lombardo og Agrippina* and Mrs. Anna Munch's *Sorte Svaner* are said to have a certain charm. The opening of the new Norwegian National Theater at Christiania on Sept. 1, 1899, after twenty years of effort and agitation, was a memorable event in the annals of the stage in Norway; it had, also, a political as well as an æsthetic significance.

Poland.—National history is illustrated in T. Korzon's *The Prosperity and Adversity of John Sobieski* (3 vols.); Vol. II of *History of the Polish Nation*, by W. Grabiński (Smolenski); R. Lubiński's *General Tomasz Pomian hrabia Lubiński*; Hirszberg's *The False Demetrius*; and A. Kraushar's *The Bourbons in Exile in Mittau and Warsaw*. *The Unconscious Traditions of Mankind* (*Bezwiedne Tradycje Ludskósci*), by J. Ochorowicz, is "a study of the psychology of history." The Hoëné-Wronski affair is revived again in I. Drzewiecki's pamphlet *O Filozofii Hoëné-Wróńskiego Polemika z powodu książki P. S. Dickstejna*. To the great national poet are devoted A. Belcikowski's *Adam Mickiewicz: A Psychological Study of the Poet*; P. Chmielowski's *The Æsthetics of Mickiewicz*; and a brilliant essay by Mme. Konopnicka. L. Méyet has brought out a noteworthy new edition of the letters of Juliusz Słowacki, the famous poet, and Vol. VIII of the works of W. Spasowicz has seen the light. Besides new works by well-known authors, such

as W. Los, G. Zapolska, Sewer, W. Kosiakiewicz, K. Glinski, K. Rojan, etc., the fiction list includes W. Sieroszewski's short stories, *At the Edge of the Forest* (strong, especially in descriptions of Siberia); A. Dygasinski's humorous and truthful tales of village folk; the historical novels *For the Throne* (O Tron, effective account of struggle in Poland after the abdication of John Casimir), by A. Krechowicki and Wasi ojcowie, by Z. Kaczkowski; Z. Jenike's *The Orchids* (love stories); *The Distaff*, by M. Rodzewicz, and Emma Jelenska's *The Young Lady*, both stories of personal sacrifice to hold Polish soil; Mme. Z. Kowerska's psychological *Brothers and Elective Affinity* (some good points; prolix); A. Gruszecki's *The Swindlers* (drastic description of the Hebrew stock jobbers of Warsaw) and *In the Old Mansion* (contrasts the old nobility and the country folk); W. Reymont's *The Promised Land* (vigorous description of business life in the manufacturing town of Lodz); S. Zeromski's *Works of Fiction* (studies obscure mental processes); and J. Zych's *The Labors of Sisyphus* (Sisyfowe prace), an accurate and admirable description of the mental development of a Polish student reared under Russian influence. Much new verse has appeared by Z. Dembicki, W. Lieder, J. Sten, and others. Especially noteworthy are *The Wild Rose Shrub* (pessimistic; vigorous language), by J. Kasprowick, and L. Rydel's *Poems* (agreeable form). Here, as in other lands, the "moderns" discuss "art for art's sake" and other like watchwords of new aims; an older writer, however, declares that these most recent arrivals have not yet produced any very remarkable work. On the stage, too, the "young ones" are in evidence, not yet with great success, it seems. S. Przybyszewski's *For Fortune* (a psychological analysis; no drama) was a failure. J. Kisielewski shows talent in *Caricatures* (a sketch of a decadent); poetical ability and poor stagecraft mark S. Wyspianski's *Song of Warsaw* and *Lelewe!* (historical); S. Kozlowski's latest piece is of the old romantic school and has a dash of the operatic; and L. Rydel's *The Enchanted Circle* won success with the public by its dramatic situations, good dialogue, and truthful delineation of rural life.

Portugal.—Literary news from this country is ever rare, for obvious reasons. (See Annual Cyclopædia for 1895.) Noteworthy books of the year are José de Souza Monteiro's *O Auto dos Esquecidos*; Magalhães de Azeredo's *Procellarias* (verse; a mixture of truth and fable; writer has proved his talents in various forms of literature); *Portugal e Italia: Ensaio de Dicionario bibliographico*, by Antonio de Portugal de Faria (deals with the historical, artistic, and social relations of the two countries); *Bibliographia juridica portugallensis*, by Eduardo Alves de Sá (first year, 1898); and a useful *Diccionario de las seis Lenguas* (the languages being French, German, English, Spanish, Italian, and Portuguese), issued by the publishers of the interesting illustrated periodical *Occidente*.

Roumania, etc.—The French tendencies mentioned in 1897 are accentuated in Pompiliu Eliade's interesting and careful *De l'Influence française sur l'Esprit public en Roumanie* and A. Macédonski's *Les Bronzes* (dedicated to France, "la seule patrie des intellectuels"; we are told that the verses are not as good as the author's Roumanian poems, though some of them are remarkable). Books dealing with Roumania are Ne. S. Minovici's *Tatuajurile in România* (1898); *Documente private la Istoria Românilor. X: Raportul consular prusien din Jasi si Bucuresti*

1763-1844, adunate di Neculai Jorga (1897; Prussian consular reports from the Danubian countries); and the important *Reminiscences of the King of Roumania* (which appeared in English), dealing with the remarkable rise of the country under his rule. At Leipsic was published a *Linguistischer Atlas des dacumänischen Sprachgebietes*, hrg. auf Kosten der rumänischen Akademie von Gustav Weigand, Weigand being the manager of the Institut für rumänische Sprache in Leipsic.

As to the other Danubian countries, it is noted that in Servia much translating goes on (as, *Vicar of Wakefield*, 1898), and that M. I. Spalakovitch issued *La Bosnie et l'Herzégovine: Étude d'Histoire diplomatique et de Droit international* (Paris, 1899).

Russia.—Prominent among historical works is N. K. Shilder's elaborate *Emperor Alexander I* (a "historico-psychological monograph"). Also worthy of note are N. Kutepof's interesting *Imperial Sports of the Czars Mikhail Feodorovitch and Alexei Mikhailovitch in Russia*; second edition of P. Miliukof's *Chief Tendencies of Russian Historical Thought*; Diakonof's comprehensive *Sketches of the History of the Village Population in the Muscovite Empire*; and A. Dmitrieff-Mamonof's *The Insurrection of Pugatchef in Siberia* (new information, based on original documents). The collected writings of N. S. Tikhonravov, edited by M. Speranski and V. Yakushkin, form a "valuable storehouse for Russian historiography." Books and the stage form the theme of A. Pypin's *History of Russian Literature*; P. A. Sergeyenko's *How Count L. N. Tolstoi Lives and Works* (characteristic, interesting); Shliapkin's valuable *Natalia Alexievna and the Theater of her Time* (throws light on the early history of the stage); M. Stegloff's *The National Theater in Sketches and Pictures* (on the popular theater at Moscow; second edition); *Sketches of the History of Georgian Literature*, a readable account by A. S. Khakhanof, a native Georgian; a second edition of Merezhovski's *Eternal Fellow-Travelers* (interesting character studies of Pushkin, Ibsen, Montaigne, and others); N. Kotliarevski's *Disgust with the World at the End of the Past and Beginning of the Present Century* ("a series of characteristics, vigorously described, from the domain of romanticism, of Chateaubriand, Schiller, and Nodier"); and G. Potanin's thorough investigation of *Eastern Motifs in the Mediæval European Epos*. The Pushkin centenary celebration was a memorable event. A. Borozdin's *The Protopope Avvakum* illustrates intellectual life in Russia in the seventeenth century, and A. Viazigin's *Sketches of the History of the Papacy in the Eleventh Century* is a "careful study of documents." The *Northern Messenger* (*Sievernii Viestnik*) has ceased publication, and three new periodicals have seen the light: *Life* (*Zhizn*) and *The Beginning* (*Natchalo*), both devoted to economic and sociological questions, and *The World of Art* (*Mir Iskusstva*), issued by writers and painters of the younger school. Weak critical studies on economic questions are said to be numerous.

The ethical tendency in fiction is ever apparent, and is deplored by clear-sighted critics. Thus Tolstoi's otherwise remarkable *The Resurrection* (*Voskresenie*) is said to be marred by commonplace moralizings and truisms. It should be added that others say that it is the author's plain and fundamental truth about social life that arouses opposition. Other titles in fiction are Yasinski's *The Rebellion of the Cockroaches* (draws a merciless and gloomy parallel between

the Russian peasant and the insect); Tchekhoff's short stories (delicate, sad, purely Russian); Merezhovski's *The Gods who have Ascended* (Leonardo da Vinci the principal character; "dry and colorless" language); *Where can we go?* (novel) and *At Home* (short story, dealing with the "subjection of man"), by Borboruikin, whose methods are quite French; M. Gorski's two volumes of sketches and tales (passionate, nervous manner; vivid pictures of vagabond life); three novels (*The Cherry Tree*, *Mimochka*, and *Flashes of Lightning*) by Mme. V. Mikulich, who is good at characterization and at description of nature; and T. L. Shtchepkin-Kupernik's *From the Diary of Life* (a young but strong and fine talent; deep feeling, acute observation, artistic composition; "tendency" as well). Melshin, author of *In the World of Outcasts*, publishes sketches of convict life in the periodical *Russian Wealth* (Russkoe Bogatstvo). Contributions to lyric poetry are *Under the Open Sky* (good descriptions of nature), by Ivan Bunin, a young writer who has also issued an excellent translation of Longfellow's *Hiawatha*; *Hymn to Beauty*, by Korinfaki (author of *Songs of the Heart and Black Roses*); and a second edition of V. Shuf's *Crimean Sonnets*. About Art is a well-written and interesting book by Valeri Briusof, an original "poet symbolist." There has been issued a complete, six-volume edition of the works (poetry and prose) of K. K. Slutchevski, whose original talent met with adverse criticism at first; his position is now described as peculiar, and an original style, delicate psychological analysis, a fine spirit, and the endowment of inanimate objects with a soul life are named among the important features of his poetry. Other collected writings are those of Karonin, in two volumes (pictures of popular life), Mme. Markovitch (pseudonym Marko Vovtchok), in eight volumes, and M. N. Zagoskin, in ten volumes.

Spain.—Titles in national history are always numerous. General works worthy of note are J. Balari y Jovany's very important *Orígenes históricos de Cataluña*; J. Suárez Inclán's documentary *Guerra de Anexión en Portugal durante el Reinado de Don Felipe II* (1898); *Vida de Carlos III*, by C. de Fernan Núñez, edited by Morel-Fatio and Paz; the *Genealogico-historical Tree of the Sovereigns of Spain*, by Estevan y Diaz; Costa's *Agrarian Collectivism in Spain* and P. Pujol's *History of the Social Institutions of Gothic Spain* (both important); Iglesia's *Account of the Civil Guard*; Ramón Menéndez Pidal's critical and careful catalogue of the manuscript *Crónicas generales of Spain in the Royal Library*; *Ensayo bio-bibliográfico sobre los Historiadores y Geógrafos arábigo-españoles*, by Pons; *Apuntes sobre Viajes y Viajeros por España y Portugal* (reprinted from the *Revista Crítica*), by A. Farnelli, a German, which supplements Foulché-Delbosc's work; and *documents inédits*, such as Vol. IV and last of Count de Torata's *Documents of the War of Secession in Peru*, new volumes of the *Cortes of Catalonia* (1359 to 1367) and the *Dietari of Barcelona* (Vol. VII), the *Book of the Privileges of Tarrasa*, brought out by Soler y Palet, and continuations of familiar series, such as the *Documentos inéditos de las antiguas Posesiones de Ultramar* and the *Monumenta historica Societatis Jesu*. The following are found classed as archæology: *Catálogo de las Colecciones expuestas en las Vitricas del Palacio de Liria*, edited by the Duchess of Alba; the *Conde de Valencia de Don Juan's* fine "historico-descriptive" catalogue of the Royal Armory; works on new discoveries in Santiponce and Carmona,

by Caballero-Infante and Fernández; the Catalan Jos. Brunet y Bellet's *L'Escriptura, lo Gravat, l'Imprempta, lo Llibre*; and P. de Alzola y Minondo's *Las Obras públicas en España*. In biographical literature there are Olmedilla's short *Life of the Physician, Botanist, and Author, Cristobal de Acosta*; a memoir of the late Marcos Jiménez de la Espada (a *savant* noted for his geographical investigations), by Fernandez Duro and Martinez; Carracido's study of Father José de Acosta (the famous author of the *Natural and Moral History of the Indias*); Hernando's lecture on Cardinal Cisneros and his services to Spanish culture in the University of Alcalá, etc.; Luanco's interesting monograph on Don Juan Agell and his Scientific Labors; and A. M. Fabie's excellent *Biografía del Excmo. Sr. D. Pedro Salaverria. The Most Ancient Dynasty of Printers in Europe*, by Llabrés, is a curious pamphlet on the family Guasp of Mallorca. Local history, also voluminous, includes L. Ferreiro's *History of the Church of Santiago in Galicia* (interesting, careful; many new facts); Soler's *Parish Church of Tarrasa*; Miret's *Relations between the Monasteries of Camprodon and Moissac*; Ant. Blázquez y Delgado Aguilera's *Historia de la Provincia de Ciudad-Real*; *El Franco*, by Fernandes, and Boal, by Acevedo, both in the Asturian Library; and J. C. García's important *Biblioteca de Escritores de la Provincia de Guadalupe y Bibliografía de la misma hasta el Siglo XIX*. The former colonies of Spain are the theme of numerous works, among them V. Llorens Asensio's *Historia general de Filipinas y Catálogo de los Documentos referentes á estas Islas que se Conservan en el Archivo general de Indias*; Vol. IV of W. E. Retana's *Archivo del Bibliófilo filipino*; *Descriptive Account of Maps, Plans, etc., of the Philippines in the Archives of the Indias*, by Torres-Lanzas; F. de Monteverde y Sedano's *Campaña de Filipinas: La División Lachambre, 1897* (1898); Torral's *El Sitio de Manila: Memorias de un Voluntario*; J. Caro y Mora's *Ataque de Li-Ma-Hong á Manila en 1574*; J. de Alcázar's *Historia de España en América (Isla de Cuba)*; and Pablo de Alzola's volume of magazine articles on *El Problema Cubano*. The late war is described in *La Guerra hispano-americana*, by El. C. Verdades; *La Guerra hispano-americana: Barcos, Cañones y Fusiles* and *La Guerra hispano-americana: El Bloqueo y la Defensa de las Costas*, by S. Gómez Núñez; M. Corral's *El Desastre! ó los españoles en Cuba: Memorias de un Voluntario*; Admiral P. Cervera y Topete's *Guerra hispano-americana: Colección de Documentos referentes á la Escuadra de Operaciones de las Antillas*; E. Amador y Carrandi's *La Guerra hispano-americana ante el Derecho internacional*; and pamphlets, such as C. Saavedra y Magdalena's *Algunas Observaciones sobre los Desastres de la Marina española en la Guerra con los Estados Unidos en 1898* and the anonymous *Apuntes para la Historia de la Perdida de nuestros Colonias, por un Testigo presencial*. There has been much written on "regeneration" and "reform" of the country after its sad defeat. Noteworthy are R. M. Picavea's *El Problema nacional: Hechos, Causas, Remedios*; E. Pardo Bazán's *La España de Ayer y la de Hoy* (aroused a tempest of Chauvinism); *Mesa de la Peña's España* (of "palpating present interest"; throws much light on the political causes of Spain's recent fall); and Joaquín Sánchez Toca's interesting *Del Poder naval en España y su Política económica para la Nacionalidad ibero-americana* (magazine articles on decadence of naval power). Various economic and socio-

diplomatist and *litterateur*. The daily *La Lei*, conducted by Cabrera Guerra, has a Sunday supplement, intended to collect the "most exquisite literary production of the country."

Cuba.—New works are F. J. Balmaseda's *Los Confinados á Fernando Poo é Impresiones de un Viaje á Guinea* (second edition) and *Las Islas Filipinas: Mindanao*, by B. Francia y Ponce de León and J. González Parrado.

Mexico.—Titles noted: *Biblioteca de Autores mexicanos*, Vols. XVIII, XX (*Obras de J. García Icaz Valceta*, Vols. VIII and IX), and XIX (*Obras de J. Cuevas*, Vol. I), and *Obras de Don Ignacio M. Altamirano*, Tomo 1: *Rimas, Artículos literarios*. *El primer Obispado de la Nación mejicana: Artículos publicados sobre esta Materia y sobre otros Puntos de nuestra Historia*, by J. F. Molina Solis, was published at Mérida de Yucatán in 1897.

Venezuela.—*Cuentos de Color and De mis Romerías*, by Manuel Díaz Rodríguez and Rufino Blanco Fombona's *Trovadores y Trovas*. These are both good writers, but "dominated by the mania of French modernism, which, transplanted to America, turns into a preciousness without substance."

LOUBET, ÉMILE, President of the French Republic. A thrifty farmer of Marsanne, in the department of the Drôme, having himself risen to the distinction of being chosen *maire* of the commune, was determined that his son should be a lawyer. The young peasant dutifully applied himself, and, overcoming the disadvantages of his rustic origin, completed his studies and began practice in Montélimar, the nearest market town to his father's farm. The advocate Émile Loubet did so well that at the age of twenty-eight he received in marriage Marie Denis, the daughter of one of the richest men in the town, a man who had begun in Picardy as a journeyman nailmaker, and became a manufacturer of nails and a dealer in iron goods on a considerable scale. His bride was ten years his junior. He passed through the various local offices, and won the confidence and respect of his fellow-citizens as member of the municipal council, *maire* of the commune, *arrondissement* councillor, and finally an active member in the general council of the department. He came forward in 1876 as a candidate for a seat in the Chamber of Deputies, and was elected. After serving nine years in the popular house as a conscientious and industrious legislator of no particular brilliant gifts, he was chosen Senator for his department of the Drôme. After that he was called into the Cabinet as Minister of Public Works, an office that he filled with much credit to himself. He became one of the great men in the councils of the Republican party, and in 1892 he was called upon to form a Cabinet himself. He was a Republican of advanced and decided views, of Radical tendencies, a man of extensive knowledge both of books and of affairs, and was greatly esteemed for sound judgment, capacity for business, and, above all, for sterling integrity of character and unblemished honor, although his retirement from the premiership had been occasioned by strictures on the apparent laxity of the Government in pursuing the Panama corruptionists. In the Senate he was appointed on the most important committees almost from his entrance into that body, of which he was soon chosen secretary, and in 1896, on the death of M. Challemel Lacour, he was elected its president. This is one of the offices in France from which the step to the presidency of the republic is easy. When the National Assembly met in Congress at Versailles

on Feb. 18, 1899, to elect a successor to President Félix Faure, suddenly deceased, the president of the Senate, who presided over the Congress, was chosen on the first ballot, and only the revolutionary disturbers who sought to create a turmoil in the interests of royalty or of any change that would give a chance to their unrestrained egotism ventured to decry the staunch and sound Republican who became the seventh President of the republic.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 152,923 in 1820; 215,739 in 1830; 352,411 in 1840; 517,726 in 1850; 708,002 in 1860; 726,915 in 1870; 939,946 in 1880; and 1,118,587 in 1890. Capital, Baton Rouge.

Government.—The following were the State officers in 1890: Governor, Murphy J. Foster;

MURPHY J. FOSTER, GOVERNOR OF LOUISIANA.

Lieutenant Governor, Robert H. Snyder; Secretary of State, John T. Michel; Treasurer, Alexander V. Fournet; Auditor, W. W. Heard; Attorney-General, Mr. J. Cunningham; Superintendent of Education, Joseph V. Calhoun; Adjutant General, Allen Jumel; Commissioner of Agriculture and Immigration, Jordan G. Lee; Commissioner of Insurance, J. J. McCann—all Democrats; President of the Pension Board, J. A. Chalarron; Bank Examiner, Fred G. Freret; Railroad Commission, C. L. De Fuentes, R. N. Sims, and W. L. Foster; Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, Newton C. Blanchard, Lynn B. Watkins, Joseph A. Breaux, and Henry C. Miller, who died and was succeeded in March by Frank A. Monroe; Clerk, T. McC. Hyman—all Democrats.

Education.—"Up to the beginning of 1898," the State Superintendent says, "the State assessors made every year a return to the State Auditor of the number of children in their parishes between the ages of six and eighteen years, and in obedience to the Constitution the State Superintendent of Education apportioned the current school fund among the parishes in proportion to these reports of the assessors. These annual reports were the subject of considerable comment, and it was contended that, as the assessors were not paid for this work, their returns were based upon conjecture rather than actual count. By a mandate of the Constitutional Convention of 1898 the General Assembly passed an

James M. Smith

Emile Louhe

act making it the duty of the State assessors to make a diligent canvass of their parishes, and to write the name, age, sex, residence in ward, and color of every child in the parish between six and eighteen years. This has been done, and we have now the total number of children as correctly as, we believe, it can be ascertained. The school boards of the parishes have paid the assessors for their work at the rate of 4 cents per child listed, and the correctness of the lists has been sworn to by the assessors, and examined and all finally approved by the State Board of Education. In 1897 the number of children reported was 434,750; in 1898, 445,509. The present enumeration gives 402,250, and upon this last number the present apportionment is made, and all apportionments for the next four years will be based, unless the General Assembly shall change the law of 1898. The amounts of apportionments of the school fund in 1898 were: March, \$151,963; June, \$54,343.63; September, \$30,432.50; total, \$236,739.13. In 1899: February, \$178,203.60; May, \$80,191.62; September, \$34,191.25; total, \$292,586.47."

The State University and Agricultural and Mechanical College opened in the autumn with about 300 students, the largest attendance it has ever shown at the beginning of the year.

Railroads.—A table showing the number of miles of track laid in each State credits Louisiana with 158.

The State Railroad Commission, which was provided for by the new Constitution, organized, and in March published a set of rules and regulations governing the transportation of passengers and freight, the erection and location of depots, and the posting of tariffs. Rules were also established for governing telegraph and telephone companies.

Cotton.—The cotton acreage of the State this year is given as 1,179,000 acres. The report of Secretary Hester in September gave the consumption of Louisiana mills at 18,025 bales. An estimate of the crop placed it at 507,400 bales.

Pensions.—The State Pension Board closed its session March 17, after approving 317 claims, making a total of 1,024 claims so far approved. A special dispatch says the payment of these pensions is becoming a problem, and it seems almost certain that next year the rates adopted some months ago will be reduced in order to make the money go round. There seems to be no end to the applications, more than 25 having been received during the session of the board, which, under the rules, will lie over until its next meeting. The president of the board said: "No higher duty can devolve upon the Confederates, singly or in camps, than that of seeing to it that skulkers, deserters, and those not coming under the intent and requisites of the law shall not obtain a pension, and not deprive deserving ones of the small allowance the State is able to accord them. Already the appropriation is exhausted, and the board is appalled at the steady inflow of applications. Devoting to its labors the most painstaking and conscientious scrutiny, it has felt compelled in the face of the sworn facts presented so far in 2,050 applications to grant 1,024 pensions. That there are undeserving ones among these is very probable. It is incumbent not alone on all good soldiers, but also on all good citizens, to see that the State's money is applied only as intended by the law, which says of the pensioner: 'He shall have remained true to the Confederate States until the surrender,' and 'he shall be in indigent circumstances and unable to earn a livelihood by his own labor.'"

Prevention of Crevasses.—The Atchafalaya and Lafourche levee boards held a joint meeting in May to decide upon a line of action for the protection of the Lafourche country from high water. The levee boards have made strenuous efforts to protect Bayou Lafourche. Since April, 1890, they have built 7,250,000 cubic yards of levees at an expenditure of \$1,010,000, averaging in a period of nine years \$112,000 per annum. The bulk of this money has been spent in the last three or four years. In spite of all this, results are negative. Crevasses occur on the lower bayou as the result of a flood wave even when there is no flood on the Mississippi river. Excessive flood heights are reached at Raceland and Lockport, and all of the lower bayou, when the water is still some 5 feet below the top notch at Donaldsonville, the head of the bayou. A moderate high water on the river causes a flood below on the bayou, which breaks the levees built at the above-mentioned great expenditure. The plan recommended in 1886 by Major Heuer, of the United States Engineer Corps, and adopted by Congress, consists of a system of locks at Donaldsonville, supplemented by a dredging of Bayou Lafourche, so as to render navigation sure. Congress, although adopting this plan, only gave money sufficient to carry on the dredging. It was decided at the meeting to ask Congress at the next session to appropriate money sufficient to carry out the plan of placing locks at Donaldsonville; and the boards pledged themselves to devote to this work, in co-operation with Congress, the sums that would otherwise be required, in the absence of the locks, to put the levees in condition.

Water Ways Convention.—The Louisiana Water Ways Association was formed at a meeting held in New Orleans on Dec. 18. More than 100 persons were in attendance. M. J. Sanders was elected president, S. F. Lewis secretary, and T. J. Woodward treasurer. The following resolutions were adopted:

"Whereas, Numerous points in Louisiana that in former years were open to navigation have ceased to be accessible to steamers and other craft, owing to the obstructions which have been permitted to accumulate in many streams; and whereas, the restoration of these streams to navigation would open cheap public ways of transportation for the products of the farm and the plantation and for the wares of commerce; and whereas, the value, desirability, and productions of lands bordering upon the now obstructed streams would be increased to an incalculable extent were these streams reopened for free navigation; and whereas, the streams of this State offer unrivaled advantages which it is an offense against natural laws to neglect; and whereas, the method which has been pursued by the National Government of dispersing small appropriations among these streams, which appropriations are largely absorbed by the way expenses of the dredge and snag boats employed to remove obstructions; and whereas, the work of reopening these streams should be prosecuted upon business principles; be it

"Resolved, That the Congress of the United States be and is hereby petitioned to inquire into the expediency of purchasing an adequate fleet of dredge boats, snag boats, and boats equipped to construct locks and dams, the same to be under the direction of Government engineers and officers of the army or navy; further, that for the operation of such fleet adequate appropriations should be made, so that once the work of restoring a stream to free navigation is com-

menced such work shall suffer no discontinuance until it shall have been thoroughly completed; be it further

"Resolved, That in furtherance of the preceding the police juries of the various parishes be and are hereby requested, as soon as practicable, to furnish to the president of this association information upon the water courses (the Mississippi excepted) in their respective parishes, giving the farthest point ever reached by steamers, the farthest point which, with the aid of locks and dams, it would be possible to reach with steam crafts; the lowest stage of water at the shallowest places, the nature of existing obstructions to navigation, and, approximately, the cost of opening navigation to stated points on the water courses referred to, and such other information upon this subject-matter as the said police juries may deem useful."

Land Claims.—By a decision of Commissioner Hermann, of the General Land Office, the claim of the State as to its rights under the swamp indemnity laws was allowed. "By this decision the State should receive about \$35,000 in money, besides land scrip for the swamp lands erroneously taken by the Government. The lands covered by the decision are swamp lands allowed to be located by the United States between March 2, 1849, and March 3, 1857. The State also claimed cash indemnity for lands sold by the United States and granted to the State. The contention of the clerk who drew up the first opinion, which the commissioner overruled, was that it was the intention of Congress in the passage of the act of March 2, 1857, to confirm to the State lands in places fraudulently selected in exchange and in consideration for the retention by the United States of all consideration which it had received for lands subject to the grant of 1849 and 1850, which had been sold and allowed to be located by the United States prior thereto, save those few particular tracts for which he concedes that the States are entitled to indemnity in the law in question, except that of 1849. The Government received consideration from the purchasers or locators of land located between March 2, 1849, and March 3, 1857, for lands which, though in fact swamp, had not been identified at the time of their sale or location."

New Orleans.—A State industrial fair was opened in New Orleans, May 8, with a peace jubilee, to celebrate the ending of the war with Spain and the return of the volunteers.

New Orleans is the only great city in the country without sewerage, the waste being carried off in open gutters. But in June an election was held to take the vote of the taxpayers on the question of improvements in this and other directions. The decision was overwhelmingly in favor of a special tax of 2 mills for sewerage, drainage, pure water, paving, park, and other improvements. The plan contemplates an expenditure of \$14,000,000 in the next few years. Woman property holders were allowed to vote, and were mainly instrumental in gaining the victory, having a central league and clubs in every ward.

The revised Constitution of Louisiana provides that taxpaying women shall have the right to vote in person or by proxy upon all questions submitted to taxpayers.

Suit against Texas.—In October the State, acting through its Governor and counsel, presented a petition to the United States Supreme Court praying for an injunction to restrain Texas from keeping up a quarantine against Louisiana on account of alleged danger of infection from yellow fever. On the part of Louisiana it is said

that the "health officer of Texas, who seems to be vested with absolute and dictatorial powers in the matter of declaring and establishing quarantine, has for several successive years entirely cut off and prohibited all transportation of the United States mails, of passengers, and of merchandise between the two States of Louisiana and Texas," although intercourse with other countries known to be infected was maintained. About Nov. 6 the quarantine was declared at an end, and up to that time the court had not handed down a decision.

Lawlessness.—A lynching that took place at Tallulah in July acquired international significance from the fact that the five men lynched were Italians. The trouble arose about some goats belonging to one of the Italians. The goats were in the habit of sleeping and running on the gallery of Dr. J. Ford Hodge's office and residence. The doctor on numerous occasions requested Frank Defatta to keep his goats shut up; but Defatta would not do it, and on the night of the 19th Dr. Hodge shot one of the goats on his gallery. In revenge for this Defatta with four other Italians, two of whom were his brothers, waylaid the doctor on the evening of July 20 and shot and mortally wounded him. The sheriff arrested the men, but they were taken from him by a mob and hanged to a gallows used for slaughtering beeves. A dispatch from the town said this was "the third outrage committed by this same class. About two years ago Frank Defatta shot and killed a negro for picking up a watermelon that Frank had for sale, and about one year ago Joe Defatta shot and killed Pat Mathews, landing keeper at Milliken's Bend, as he was passing his store, in cold blood about a trivial controversy they had had about some freight, and was cleared by some technicality of the law. They had frequently made their boasts that they would do as they pleased, and their money would clear them."

The evidence as to whether the men had been naturalized or were still Italian citizens appeared to be conflicting. In the absence of the Italian minister, the *chargé d'affaires*, Count Vinchi, made investigation. The report of the secretary of the embassy seems to have asserted that there were no mitigating circumstances, that Dr. Hodge first drew a weapon, and that the first shot fired by Defatta was in defense of his fallen brother, and not a wanton attack. Describing the affair in detail, the report points out that some time after the first two men were lynched the mob made a second and third visit to the jail, whence they removed and lynched the three other Italians, all of whom, it is contended, were in utter ignorance of the wounding of Dr. Hodge. Conceding some extenuating circumstances in the lynching of the two men immediately concerned, Marquis Romano contends that the lynching of the other three was a thing of particular atrocity. The Governor's report clashed with this at nearly every point.

A man suspected of cattle stealing and other offenses was hanged by a posse of men near Wilson on Oct. 15.

Of lawlessness in another parish, the Picayune said, Oct. 9: "Another shooting scrape is reported from Tangipahoa parish, and, from the accounts received, the affair was on a par with the many other such deeds which have made the parish famous for the apparent spirit of lawlessness which is believed to prevail there. It is a notorious fact that, while there have been dozens of violent crimes in the parish, not a single person has been punished."

It was only in April that four men, apparently belonging to the same clique, had been arrested in Tangipahoa on the charge of conspiracy by violence and threats of violence to compel persons to leave a place where they lawfully were.

Legislative Session.—The Legislature met in special session Aug. 8, and adjourned Aug. 18. Twenty-one members of the Senate and 72 members of the House were present at the opening.

The object of the session was, first, to authorize the city of New Orleans to organize a sewerage and water board to construct and administer great public sanitary works, and, through the aid of a constitutional amendment to that effect, to permit the issuing of bonds based on a special tax, the proceeds of which are to be used in the construction of the public works so provided for, the city having voted in favor of these improvements June 6.

The Legislature was expected also to carry into effect the article of the Constitution authorizing various cities, towns, and drainage districts to levy special taxes and issue bonds for works of improvement and protection from floods and for sanitary purposes. Also to provide for certain improvements to be made in the State Capitol and grounds and other matters pertaining thereto.

The important laws called for were enacted. The constitutional amendment to ratify the action in reference to the special tax for public improvements will be voted upon in April, 1900. The water and sewerage act was passed, after some attempts to amend by leaving out a civil-service provision, and to reduce the proportion of the fund to be spent on drainage. The so-called "country bill" was also passed, providing that "for the purpose of paving and improving streets, roads, and alleys, purchasing or constructing a system of waterworks, sewerage, drainage, lights, public parks and buildings, bridges, and other works of public improvements, the title to which shall vest in the municipal corporation, parish, or drainage district, as the case may be, municipal corporations, parishes, and drainage districts (the city of New Orleans excepted), when a majority of the town council, etc., so petitioned in writing by one third in number and amount of the property taxpayers entitled to vote on any proposition hereinafter set forth, may submit to a vote of the property taxpayers propositions to incur debt and issue negotiable bonds therefor not to exceed one tenth of the assessed valuation of the property within said municipal corporation, parish, or drainage district, as shown by the last assessment made prior to the submission of such proposition; and when a majority of the town council, etc., petitioned as aforesaid, may submit to such vote propositions to levy and assess special taxes upon the property subject to taxation in such corporation, parish, or drainage district, such taxes not to exceed 5 mills on the dollar of the assessed valuation in any one year, and not to run for a greater number of years than the number named in the propositions submitted."

Decision.—The law providing for an inheritance tax of 10 per cent. on property received by foreign heirs, for the benefit of the charity hospital in New Orleans, is declared unconstitutional, since, being an act concerning revenue, it should have originated in the House, whereas it did originate in the Senate.

Political.—An association called "the Jackson Democratic Association of Louisiana" was formed in July. A meeting and barbecue were held at Rayville July 4, with the apparent object of bringing together the opponents of Gov. Fos-

ter's administration. Speeches were made by United States Senator Caffrey, ex-Congressman Boatner, and others. A few days later the association was formed and a declaration of principles was put forth. It opposed trusts, demanded fair elections and fair counts, rigid enforcement of the franchise clauses of the new Constitution, election of United Senators without influence of Executive patronage, appointments to public office for fitness, reasonable rotation in office, and honestly conducted primaries, and said also: "We shall demand that the Governor to be elected shall confine himself to the discharge of the duties of the executive office, and shall not use as a corruption fund the power of appointment vested in him by law to coerce and influence legislative action in the election of United States Senators or otherwise."

The first election under the new Constitution was the city election at New Orleans, Nov. 7. The negro vote was almost entirely eliminated. The Jackson Democracy united on a ticket with the Citizens' League, which carried the election in 1896, when the citizens were roused to the pressing need of reform in the administration of city affairs. They were defeated by the regular Democratic organization.

The election of State officers will not take place till April, 1900. The Democratic State Nominating Convention was held in Baton Rouge, Dec. 19 and 20. There were many candidates for the first place on the ticket, among them W. W. Heard, present State Auditor; S. McC. Lawrason; R. H. Snyder, present Lieutenant Governor; and John Dymond. The ticket chosen follows: For Governor, William Wright Heard; for Lieutenant Governor, Albert Estopinal; for Secretary of State, John T. Michel; for Attorney-General, Walter Guion; for Superintendent of Education, Joseph V. Calhoun; for Treasurer, Ledoux E. Smith; for Auditor, Will S. Frazee.

The platform denounces trusts. It calls for appropriations from the Federal Government for the improvement of the Mississippi, the construction of levees, the jettifying and improvements of the southwest part of the Mississippi, and a canal connecting the Atlantic and Pacific Oceans with the isthmus. Gov. Foster's administration is praised, as well as the suffrage clause passed by the late Constitutional Convention disfranchising the negroes. No reference is made to Bryan, to the financial question, or to any issue relating to the national Democracy.

The other parties did not hold their State conventions before the close of the year.

LUTHERANS. The Lutheran Church in North America is a communion of many nationalities and many languages. It has rightly been called a polyglot Church, for its services are conducted in more than a dozen different languages. It is to be found in nearly every State and Territory of the United States and in numerous provinces of the Dominion of Canada, and has a baptized membership of about 8,000,000. But it is not a foreign Church, for a large portion of its members are native Americans, and most of its literature, apart from that of the periodicals, is published in the English language. The most important publication of this year is The Lutheran Cyclopaedia, an octavo volume of nearly 600 pages, edited by the Rev. Henry Eyster Jacobs, D. D., LL. D., and the Rev. John A. W. Haas, of New York city. During the previous year the publication of a Lutheran Commentary on the New Testament, in 12 volumes, was finished. These publications represent the different tendencies in doctrine, worship, and life, as well

as the literary standing of the leading men in the Church.

Following is a summary of statistics as published in the Lutheran Church Almanac, embracing the latest data collected with great care by the editor of this publication:

The Lutheran Church in this country is organized into 60 district synods, and these again into 4 general bodies, embracing 46 district synods, the rest being independent synods. The number of clergymen is 6,657; congregations, 11,101; and of communicant members, 1,570,134, an increase over last year of 225 clergymen, 588 congregations, and 34,582 communicant members. The parochial or Church schools number 3,085, with 3,856 teachers and 216,980 pupils, while the Sunday schools number 6,290, with 58,508 officers and teachers and 550,038 scholars. The purely benevolent contributions for the year aggregate the sum of \$1,020,520.23. The educational institutions number 115, of which 23 are theological seminaries, 47 colleges, 35 academies, and 10 colleges for women, with an aggregate value of property amounting to the sum of \$4,883,846, endowment amounting to \$1,507,812, having 299,570 volumes in their libraries, employing 657 professors and instructors, and having 13,235 students, of whom 2,662 have the ministry in view. There are 99 benevolent institutions under Church control, of which 43 are orphanages, 19 homes for the aged and afflicted, 18 hospitals, 11 immigrant and seamen's missions, and 8 deaconess institutions. The aggregate value of property of these institutions is \$3,596,302, and the endowment \$173,195, and the number of inmates is 26,161. This makes a total of 214 institutions directly or indirectly controlled by Church influences, the value of whose property amounts to \$8,480,148, with endowment amounting to \$1,681,007, or a total of \$10,161,155. Most of this money has been contributed in small amounts. Only one of these institutions has been fully established by the gift of an individual. None of the rest are sufficiently endowed, and hence must depend for their support upon the annual contributions made by the congregations. The amounts already stated, however, do not include the annual expenses necessary to carry on the diversified activities of the various institutions, and hence the record is not complete. The expenses necessary to carry on the operations of the 214 institutions would add materially to the \$10,000,000 set down as money used in connection with the work of the Church. As a proof of this statement we need refer only to one synod—the Augustana—for whose institutions the sum of \$208,248.98 was expended in 1899. The periodicals published number 165, of which 71 are English, 51 German, 17 Norwegian, 8 Swedish, 8 Danish, 3 Icelandic, 2 Finnish, 2 Slavonian, and 1 each French, Lettish, and Estonian.

General Synod.—The thirty-ninth biennial convention of this body was held in York, Pa., May 24 to June 1, 1899. Twenty-four district synods were represented by 120 clerical and 119 lay delegates. The convention was opened with divine service, at which the retiring president, the Rev. M. W. Hamma, D. D., of Washington, D. C., delivered the sermon. The Hon. Frank Geise, mayor of York, extended a welcome to the synod in behalf of the citizens, the Rev. George W. Enders, D. D., in behalf of the Lutherans of the city, and the Rev. Clinton E. Walter in behalf of the members of St. Paul's congregation. To these addresses of welcome the president responded. At the first session the following officers were elected: The Rev. Prof. Samuel F.

Breckenridge, D. D., Springfield, Ohio, President; the Rev. William E. Fischer, D. D., Shamokin, Pa., Secretary; and Louis Mauss, Cincinnati, Ohio, Treasurer.

The Board of Trustees of the National Lutheran Home for the Aged, Washington, D. C., reported that the institution has been in operation since 1895, that its property is valued at \$50,000, and that it has 25 inmates. The Hymn Book Publishing Committee reported the completion and publication of a book of worship with hymns in English, and tunes, as well as progress in the publication of a similar work in German. The Board of Trustees of the Tressler Orphans' Home, Loysville, Pa., reported that the institution is in a flourishing condition, having 150 children under its care. The body expressed its hearty approval of the Lutheran conference held in Philadelphia, Pa., in December, 1898, and reappointed the Rev. Stephen W. Owen, D. D., as its representative in arranging for a similar convention in co-operation with other Lutheran bodies. The Committee on Common Service reported that its work in so far as Luther's catechism was concerned was completed, and presented the work in connection with the report. It also presented forms for 17 ministerial acts. The Committee on Literary and Theological Institutions presented encouraging reports with reference to Hartwick Seminary, at Hartwick, N. Y.; the Theological Seminary and Pennsylvania College, at Gettysburg, Pa.; Wittenberg College and Theological Seminary, at Springfield, Ohio; Carthage College, at Carthage, Ill.; Susquehanna University, classical and theological departments, at Selinsgrove, Pa.; and Midland College and Western Theological Seminary, at Atchison, Kan. The statistical secretary presented the following report: "We have in our 24 district synods 1,545 churches, 37 more than reported two years ago; preaching stations, 188, a decrease of 18; 1,786 prayer meetings are held, a gain of 117; 281 students for the ministry, 31 less than in the previous two years; 37,808 catechumens, a gain of 4,036. The losses were: By death, 5,947; by certificate, 6,829; other losses, 12,794; while the accessions were: by infant baptism, 22,338; adult baptism, 5,995; confirmation, 18,742; certificate, 10,064; restoration, 3,273. The present reported communicant membership is 192,299, an increase of only 7,571 over the previous biennium. These figures show that many pastors do not report all their accessions, since a comparison of the reported losses and accessions shows a net gain of 12,504. Our churches own property whose estimated value is \$12,129,943.21, and congregations paid for local expenses \$2,713,300.93, or \$324,916.65 more than during the preceding two years. Our Sunday schools number 1,544, a decrease of 18. These schools have 23,625 officers and teachers and 186,695 pupils, an increase of 1,341." The benevolent contributions amounted to \$477,135.

Foreign Missions.—The General Synod has missions in India and Africa. Following is the report of the work in India: The Board of Foreign Missions employs 170 workers, who labor in 514 villages containing native Christians, in 421 organized congregations, whose baptized membership in 1898 was 17,811, of whom 6,366 were communicants. The Sunday schools number 208, with 10,538 pupils. They maintain 173 elementary schools, with 203 teachers and 4,475 pupils; 1 boarding school, with 130 pupils; and 1 college, at Guntur, East India, of which the Rev. Luther B. Wolf is president, employing 40 teachers and having 863 students. The zenana department contains 58 workers, 15 schools, and 913

pupils, and 14 Sunday schools with 705 pupils. The mission also supports a hospital and a dispensary, and employs several trained nurses. The mission in Africa is in Liberia, with Muhlenberg as its center. Its working force consists of 7 missionaries, who labor in various localities. The industrial establishment of this mission is valued at \$77,350, embracing 560 acres of land and 50,000 coffee trees, whose products are sold for the maintenance of the mission.

Home Missions.—The Board of Home Missions supports 160 missions, at an expense of \$96,533.41 in two years. These missions are thus located: California, 8; Colorado, 4; District of Columbia, 1; Illinois, 6; Indiana, 9; Iowa, 7; Kansas, 12; Kentucky, 3; Maryland, 11; Michigan, 3; Missouri, 3; Nebraska, 19; New Jersey, 3; New Mexico, 1; New York, 15; Ohio, 12; Pennsylvania, 39; Tennessee, West Virginia, Wisconsin, and Wyoming, each 1. Of these, 144 are English, 14 German, and 2 Scandinavian. The board asked for \$100,000 for the next biennium.

Church Extension.—The Board of Church Extension reported assets amounting to \$352,434.42. In the past two years loans, donations, and special appropriations were made to 205 congregations. A resolution was passed to the effect that the general body apportion among its district synods \$40,000 annually for church extension, beginning with April 1, 1900.

Board of Education.—This board reported its total receipts as \$19,770.15, which includes a small balance from the last biennium. Of this amount, \$19,595.92 was disbursed for the aid of various institutions.

Deaconess Work.—The board having this work in charge reported a large increase in the interest of the Church in this important branch of activity. The receipts from various sources for the past two years amounted to \$12,106.78. The motherhouse, in Baltimore, Md., has 12 deaconesses, 13 probationers, and 1 candidate. The course of training has been lengthened to two and a half years. The institution maintains an industrial school, averaging 32 pupils, a school for colored children, with 30 pupils, and a Christian kindergarten, with 9 pupils. Deaconesses have served parishes in New York, Washington, Cincinnati, Harrisburg, Baltimore, and Cumberland, and in hospitals in Philadelphia and Carlisle, and were engaged as nurses among the soldiers of the Spanish-American War. They made 1,203 visits to the poor, 1,699 to the sick, and 50 to various institutions.

Publication Board.—This board reported assets amounting to \$160,520.06. It publishes annually 7 periodicals, whose combined circulation is 286,250 copies. During the previous biennium it issued 11 new publications and new editions of 14 works.

The next convention of this body will be held in Des Moines, Iowa, beginning May 29, 1901.

General Council.—This general body, composed of English, English-German, and Scandinavian synods, held its twenty-seventh convention in Wicker Park Church, Chicago, Ill., Sept. 28 to Oct. 4, 1899. The opening sermon was delivered by the Rev. George C. F. Haas, of New York city. The following officers were elected: The Rev. Dr. Mattis C. Ranseen, Chicago, President; the Rev. William K. Frick, Milwaukee, Wis., English Secretary; the Rev. George C. Berke-meier, Mount Vernon, N. Y., German Secretary; the Rev. Gustaf A. Brandelle, Denver, Col., Swedish Secretary; and William H. Staake, Esq., Philadelphia, Pa., Treasurer. The 9 district synods were represented by 91 clerical and 49 lay dele-

gates. The district synods embrace 1,228 clergymen, 2,011 congregations, and 352,454 communicant members; 551 parochial schools, 673 teachers, and 26,572 pupils; 1,715 Sunday schools, 22,079 officers and teachers, and 204,648 pupils. The benevolent offerings of the congregations for two years amounted to \$554,850.48. In connection with this body there are 3 theological seminaries, 7 colleges, 2 academies, 11 orphans' homes, 5 homes for the aged and afflicted, 7 hospitals, 4 deaconess institutions, and 3 immigrant and seamen's missions.

The principal features of the work of this convention consisted in action taken on the reports of general boards and committees, of which the following is a brief summary:

Foreign Missions.—The General Council is carrying on missionary operations in East India, in the Madras presidency, with the city of Rajahmundry as its central station. The board employs 149 mission workers, who labor in 7 principal stations, and have schools in 120 villages and preaching stations in 205 villages. The number of baptized Christians is 5,343, of whom 2,415 are communicants. The number of children in the various schools is 2,469. On March 26, 1899, the Rev. T. Joseph, a native pastor, died, and on Jan. 8, 1899, another native, J. William, was ordained to the office of the ministry. The missionaries maintain a seminary and other schools for Christians and heathen at Rajahmundry, which are attended by a large number of pupils. The zenana workers maintain several schools for girls and women, as well as a hospital and dispensary. The mission also has a printing establishment, from which books and tracts are issued. The total receipts of the board for this work were \$39,476.64, and the expenditures \$36,865.96. The general body also decided to begin missionary operations in Puerto Rico, and since the convention 2 men have been sent to that island.

Home Missions.—The three boards—English, German, and Swedish—presented encouraging reports of their work in this country. The Board of English Missions has 20 stations under its direct control in various States from Massachusetts to Washington; the Board of German Missions has 58 congregations under its care, chiefly in the northwestern territory of Canada; the Board of Swedish Missions reported missions under its direct control in Utah, Idaho, and Montana. Besides these, most of the district synods carry on missionary operations on their own territories. The home missionary operations of this body, through its boards and synods, embraces 41 States and the Dominion of Canada, with 577 stations. These are located as follow: 133 in Pennsylvania, 40 in New York, 33 in Wisconsin, 31 in New Jersey, 28 in Illinois, 24 in Minnesota, 23 in Nebraska, 22 in Michigan, 24 in Ontario, 15 in Ohio, 12 each in Colorado, Iowa, South Dakota, and Texas, 10 each in Indiana, Kansas, and Massachusetts, 9 each in Montana and Utah, 41 in the Northwest Territories of Canada, and the rest in smaller numbers in various States and Territories. The receipts of the English and German boards amounted to \$40,680.00, and for the entire work \$104,175.97.

Sunday-school Work.—In conjunction with the Board of Publication the Committee on Sunday-school Work is developing the General Council graded Sunday-school system, and, in addition to Scripture-lesson quarterlies, is publishing an annual Teachers' Commentary, Bible Story for Teachers and Pupils, Bible History, and Bible Geography, in similar forms, as also suitable apparatus for the primary department. The total

issue of the series now exceeds 100,000 copies annually. Provision has been made for the publication of this series in German and in Swedish. In accordance with the recommendation of the committee, a standing committee on education was appointed.

Immigrant Missions.—The Board of Immigrant Missions, New York city, reported the death of the Rev. William Berkemeier, the founder and head of this work for more than a quarter of a century. The mission work among the emigrants during the past two years maintained its usual course. The number of guests was 12,425, and the receipts for the support of the work amounted to \$1,927.19. The location of the Emigrant House, on State Street, had to be changed, in view of the fact that the United States Government claimed the site for the erection of a new customhouse. The board received \$98,720 for its property, and purchased another for its use. Hereafter the Emigrant House will be No. 4 State Street.

Board of Publication.—This board reported a large extension of its work. A publication house has been purchased in Philadelphia, and, besides the publications already mentioned in connection with the report of the Committee on Sunday-school Work, it has issued English and German books and *The Lutheran*, the organ of the General Council, in a largely increased circulation. The receipts of the board amount to \$79,771.25.

Deaconess Work.—The Committee on Deaconess Work reported a quiet and steady progress of the work in this country. The deaconess institutions of the General Council are: Mary J. Drexel Home and Philadelphia Motherhouse of Deaconesses, Philadelphia, Pa.; Immanuel Deaconess Institute, Omaha, Neb.; and Milwaukee Deaconess Motherhouse, Milwaukee, Wis., in which there are 50 deaconesses and 72 probationers.

Church-book Committee.—This committee reported through its chairman, the Rev. Joseph A. Seiss, D.D., as follows: "In the matter of a common order of ministerial acts and hymnal, two joint meetings of the committees of these general bodies (General Council, General Synod, and United Synod, South) were held, the whole question discussed, and the conclusion reached to enter devoutly upon the work of preparing such orders and hymnal on the same general principles, as far as applicable, on which the common service was formed. Progress in the undertaking will necessarily be slow, but the indications are promising that a consummation so desirable is within reach. The translation of Luther's Small Catechism into a standard English version was completed by the joint committee at Wernersville, Pa., in September, 1898, and recommended for adoption by the three general bodies as the best that can be made. It was

printed in the *Lutheran Church Review*, and appears also in the minutes of the recent meeting of the General Synod, which has adopted it. It is now presented for adoption by the General Council also." It was adopted by this body also.

The next convention of this body will be held at Lima, Ohio, 1901.

The two general bodies, Synodical Conference and United Synod of the South, held no conventions. The former numbers 1,957 clergymen, 2,525 congregations, and 520,785 communicant members; and the latter 212 clergymen, 402 congregations, and 37,455 communicants. The 14 independent synods number 2,058 clergymen, 4,505 congregations, and 403,574 communicant members.

Conference of Deaconess Motherhouses.—The third Conference of Deaconess Motherhouses of the Evangelical Lutheran Church in America met in the Swedish Lutheran Deaconess Institute, established and directed by the Rev. Erik A. Fogelström, in connection with Immanuel Hospital, Omaha, Neb., on Oct. 4, 1899. Five motherhouses are connected with this conference—to wit, Philadelphia, Milwaukee, Omaha, Minneapolis, and Baltimore. Its officers are: The Rev. Adolph Spaeth, D.D., Professor of Theology in Mount Airy Seminary, Philadelphia, Pa., President; the Rev. Carl Goedel, pastor of Mary J. Drexel Home, Philadelphia, German Secretary; and the Rev. Frank P. Manhart, D.D., superintendent of Baltimore Motherhouse, English Secretary. The president presented the statistics of the Lutheran deaconess houses in America, showing that more than 200 sisters, not including the candidates in course of preparation, are connected with the various motherhouses in this country. A list of technical terms for uniform use in the English literature on the deaconess cause and in the reports of the different houses was fully discussed, and a unanimous agreement on all points was the result. It was decided that houses applying for admission to the conference must adopt the principles of the female diaconate as adopted at the first conference, held in Philadelphia, in 1896. Papers were read on the following subjects: The Relation of the Motherhouse to the Church, by the Rev. Dr. Adolph Spaeth; Service of Consecration of Deaconesses, by the Rev. Dr. Frank P. Manhart; How to Interest our Congregations in the Deaconess Cause, by the Rev. Simon R. Tollefson, pastor of the Norwegian Deaconess Institute in Minneapolis, Minn.; The Deaconess and the Trained Nurse, by the Rev. William A. Passavant, of the Milwaukee Motherhouse; and The Spirit of Cheerfulness among our Sisters, by the Rev. Carl Goedel, of the Philadelphia Motherhouse. The discussion of these topics was most enjoyable and profitable. The next convention will be held in the Baltimore Motherhouse.

M

MADAGASCAR, an island colony of France, near the southeast coast of Africa, formerly a kingdom, proclaimed a French protectorate in 1885, when a French force occupied Diego Suarez, and this protectorate, at first denied, was acknowledged by the Queen on Oct. 1, 1895, after another war between the French and the Hovas, and after the suppression of an insurrection and the capture of the capital by a second expedition declared a French colony on Aug. 6, 1896. Queen Ranavalona III was deposed on Feb. 27, 1897, as the result of fresh disturbances. Great Britain recognized the French protectorate in 1890

in return for the renunciation of French consular jurisdiction in Zanzibar. The French Government gave the assurance asked for that the establishment of the protectorate should not affect the rights and immunities enjoyed by British subjects in the island. By a treaty made with the Hova Queen in 1865 Great Britain secured for British commerce most-favored-nation treatment and a stipulation that the duty on imports should never exceed 10 per cent. *ad valorem*. When the hostilities of 1894 and 1895 had resulted in the annexation of the island to France, the French Government applied the special French tariff to

THE VILLAGE OF NOSSI-BÉ, IN MADAGASCAR.

Madagascar, raising the duty on the principal British imports to 45 per cent. in 1897. In 1898 it was made 10 per cent. higher. The duties on foreign goods range from 54 to 79 per cent., while those on French imports are 4 per cent. An order of Gen. Gallieni, the Governor, that the coasting trade must be carried on in French vessels after Jan. 1, 1899, was afterward rescinded, because there were not enough French ships for the needs of commerce and of the troops as well.

The budget for 1899 shows 11,136,000 francs of receipts and 11,135,000 francs of expenditure. The area of Madagascar and adjacent islands is estimated at 591,967 square kilometres. The population of the island, according to recent estimates, does not surpass 3,500,000, of whom not more than 800,000 are of the Hova race. Antananarivo, the capital, has about 50,000 inhabitants. The value of the imports in 1898 was 21,641,000 francs, compared with 18,368,918 francs in 1897 and 13,987,931 francs in 1896. The exports in 1898 were valued at 4,960,000 francs, compared with 4,342,432 francs in 1897 and 3,605,952 francs in 1896. The chief exports in 1898 were rubber, valued at 1,282,000 francs; live cattle, 654,000 francs; hides, 637,000 francs, raffia, 561,000 francs; gold, 396,000 francs; wax, 383,000 francs; preserved meat, 265,000 francs; timber, 130,000 francs; vanilla, 113,000 francs. There are 2,800 kilometres of telegraph line.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decennial census since admission, was 298,269 in 1820; 399,455 in 1830; 501,793 in 1840; 583,169 in 1850; 628,278 in 1860; 626,915 in 1870; 648,936 in 1880; 661,086 in 1890. Capital, Augusta.

Government.—The following were the State officers during the year: Governor, Llewellyn Powers; Secretary of State, Byron Boyd; Treasurer, F. M. Simpson; Attorney-General, William

T. Haines; Adjutant General, John T. Richards; Superintendent of Schools, W. W. Stetson; Bank Examiner, F. E. Timberlake; Insurance Commissioner, S. W. Carr; Liquor Commissioner, James W. Wakefield; State Librarian, Leonard D. Carver; Land Agent, Charles E. Oak; Commissioner of Fish and Game, H. O. Stanley; Railroad Commissioners, Joseph B. Peaks, Benjamin F. Chadbourne, Frederic Danforth; State Topographical Survey, Leslie A. Lee, William Engel, Charles S. Hichborn; State Board of Health, C. D. Smith, President; Inland Fish and Game, Leroy T. Carleton; Commissioner of Labor and Industrial Statistics, Samuel W. Matthews; Pension Agent, E. C. Milliken; Chief Justice, John A. Peters; Supreme Court Judges, J. A. Emery, Thomas H. Haskell, Andrew P. Wiswell, S. C. Strout, A. R. Savage, William A. Fogler; State Detective, Fred A. Porter; Clerk, W. S. Choate; Census Superintendents, Elmer P. Spofford, James A. Place—all Republicans except Justice Strout.

Banks.—The first Maine savings bank was organized in 1819, and Maine now has 100 savings institutions, with about 180,000 depositors and more than \$60,000,000 deposited, paying in taxes one fifth of the State revenue. The number of depositors with a balance less than \$1,000 is 172,634; amount of deposits, \$51,378,004.77; approximate average rate of dividend, 0.0348 cents; amount of dividends paid, \$2,091,543.94; municipal taxes paid, \$16,942.02; State taxes paid, \$402,738.13. The number of savings banks on Nov. 30 was 51, with assets of \$67,521,197.05; amount deposited during the year, \$13,867,974.87. The trust and banking companies numbered 17, with a capital of \$11,802,252.29; number of depositors, 16,808; total deposits, \$8,658,376.36; interest paid on all deposits, \$161,948.21; average rate of interest, 6.54. The loan and building associations numbered 32, with a capital of \$2,975,716.47; amount paid in interest and dividends, \$2,578,-

649.72; average rate of income, 3.45. This year, for the first time since 1892, there has been a net gain in new deposits over dividends. On Oct. 29, 1898, the amount of deposits in the trust and banking companies of Maine was \$0,182,997.50, while in April, 1899, the amount was \$10,023,364.05.

The number of school children who deposited in the savings banks of the public schools in Bangor was 1,460. From Nov. 15, 1898, when the system was inaugurated, to June 17, 1899, the sum of \$2,621.05 was received by the teachers for deposit, and of this amount only \$68 was withdrawn. The number of children in the primary department who deposited their pennies was 398, while in the ninth grade there were only 18 depositors.

Finances.—The amount of cash in the State treasury Jan. 1, 1900, was \$154,723.73; temporary loan, \$150,000; due from United States Government, \$86,000; receipts for the year, about \$1,689,210; first appropriation bill for expenses, \$1,605,799.38; regular appropriations provided for in second bill, \$143,350; bonded indebtedness, \$2,203,000.

The amount of State taxes assessed for the year was \$907,950.50, being 2½ mills on each dollar of valuation; poll tax, 1 cent per poll; express tax, \$5,213.00; savings banks' tax for six months ending April 10, 1899, \$198,574.83; ending Nov. 30, 1899, \$204,163.30; tax on building and loan associations, \$255.78; telephone and telegraph companies, \$15,605.52; railroads, \$160,118.11; for expenses of Railroad Commissioners, \$11,200; on electric-light companies, \$220,545; water companies, \$524,765; gas companies, \$314,125; railroad bonds, \$14,850; amount of school and mill tax, \$573,933. Four notes of \$25,000 each were destroyed by fire in the presence of the State Treasurer, representing the temporary loan of \$100,000 made April 1, 1897, for one year, and paid by a second temporary loan for three months, which was paid at maturity, together with a registered bond for \$5,000, a bond for \$28,000, and a registered bond for \$17,000, with coupons amounting to \$444, all paid during the year. The sale of townships on which taxes of 1897 or before had not been paid took place in October, and brought prices just sufficient to pay the taxes due. The Land Agent reported the income from stumpage sold as \$8,000, which amount goes to the support of schools in the towns and plantations where the lumber is cut.

Valuation.—The total valuation of real and personal property of the State, as gathered from the assessors' reports from 385 towns on Dec. 27, 1899, was \$287,691,790, an increase of \$2,787,444 in real estate and \$404,088 in personal property. Money at interest was taxed to the amount of \$9,754,475, and live stock at \$12,316,049. The total number of polls taxed was 181,110; number not taxed, 11,172. The total number of horses reported was 131,093, with a total value of \$6,058,567; total number of three-year-old colts 2,781, value \$107,736; two-year-old colts 2,671, value \$79,844; one-year-old colts 2,003, value \$39,605; cows 143,833, value \$3,124,379; oxen 9,444, value \$452,738; three-year-olds 28,830, value \$586,629; two-year-olds 39,745, value \$578,806; yearlings 55,454, value \$444,055; sheep 256,577, value \$641,024; swine 37,089, value \$202,626; total values \$12,316,049, against \$11,832,904 last year.

The valuation of bicycles was \$312,392; carriages, \$1,257,364; musical instruments, \$1,951,578; furniture, \$1,209,291; shipping, \$2,072,385; logs and lumber, \$1,496,704; wood and bark, \$238,491. There were 435,720 bushels of oats on

10,893 acres of land, at a value of \$209,146; oats, 5,047,812 bushels on 140,270 acres, value \$1,716,256; wheat, 35,256 bushels on 1,808 acres, value \$31,378. The valuation of Portland in 1850 was \$21,000,000, and in 1899 \$37,801,200.

State Institutions.—The Industrial School for Girls was established as a State institution by act of the Legislature approved March 17, 1899, though the history of the school dates from 1867. The first building was erected in 1875, Erskine Hall was opened in January, 1886, and Baker Hall in December, 1898. The first building—Flagg-Dummer Hall—was damaged by fire on Feb. 2. The managers obtained an appropriation to remodel instead of repairing the building, but the appropriation was not used, as funds were received from other sources enough to put the building in good condition. The number of girls in the school in December, 1899, was 75; average number during the year, 70; committed during the year, 11; married, 9; discharged to friends, 6; total number received since 1895, 547, from 128 cities and towns; now in homes, 109; dismissed as incorrigible, 9; deceased, 27; escaped, 8. The expenditures during the year were \$15,999.80; balance from 1898, \$2,650.52; State appropriation, \$10,500; in the treasury December, 1899, \$4,653.47.

The total number of students in the Madawaska Training School in the autumn term of 1899 was 84; spring term, 105. The whole number of graduates is 139, while the number graduated this year was 23, of whom 22 are teaching.

The number of insane increased in the year from 733 to 747, of whom 416 were men and 331 women. There were admitted during the year 249 patients; died, 103; discharged as cured, 48; as improved, 37; total number treated during the year, 982. The special appropriation of \$15,000 was used for the construction of a steam tramway and coal pocket. A stone crusher has also been purchased and put in operation at an expense of \$1,470, the crushed rock being used to improve the streets and driveways of the grounds. A large crop of corn fodder was raised on the farm, and 3,300 bushels of potatoes. The hay crop fell short about 100 tons. The herd of cows numbered 150. The cash on hand and the receipts during the year amounted to \$203,810.99; balance at the close of the year, \$7,047.72.

The net loss in the State Prison for the current year was \$0,092.29; gain in the carriage department, \$3,237.27; in the harness department, \$2,987.27; in the broom department, \$193.05; in the furniture, \$87.35; loss in the subsistence department, \$8,115.14. The number of commitments in the year was 60, of whom 31 were natives of Maine and 7 from Canada. Two were sentenced for life, 1 for thirty-eight years, 1 for ten years, 15 for two years, and 13 for one year. On Nov. 30, 1898, there were 213 prisoners, since which time 52 have been discharged, 59 committed, 7 have been pardoned, and 4 have died, leaving 204 in the prison, with 23 in the insane department, 8 of whom are convicts. The sanitary conditions were found nearly perfect. The jail inspectors reported the total number of prisoners in the jails of the State on Dec. 30, 1899, as 526, against 750 last year; the number arrested for drunkenness, 2,901; for selling liquor, 200; for nonpayment of fines, 1,824; number of one-month sentences, 3,253; number of prisoners escaped, 13, of whom 8 were recaptured.

In 1897 and 1898 the State Library received 4,752 volumes; spent for law reports, about \$4,000; spent for other works, \$3,000. The library already contained 12,000 law reports and text-

books, 1,000 law journals and periodicals, 9,552 Government publications, 15,827 volumes of history, literature, and science, 18,000 department reports of the various States and foreign countries, 10,000 manuscripts, maps, plans, and pamphlets, besides duplicate reports and public documents intended for exchange.

The number of free public libraries has greatly increased in the past two years. Not fewer than 300 libraries are now giving out books and periodicals. The Stewart Library building, at Corinna, was dedicated and given to the town Sept. 1, 1898, and at the close of 1899 it contained 3,000 volumes. The amount raised for free public libraries in 42 cities and towns was \$24,846.88, and \$2,000 was given for the same purpose.

Schools and School Fund.—The number of pupils reported to the educational department as drawing the school fund was 209,868, and the school fund apportioned was \$516,955.09, making the rate per pupil \$2.46½. The city of Waterville gained 265 pupils in the year; Portland had 11,623 in 1898 and 13,928 in 1899; Augusta gained 50 in the year; Lewiston, 300; Brunswick, 172; and Bangor lost 52. There were 7 summer schools, with an attendance of more than 1,000. These schools were especially distinguished for three things—that the majority of those in attendance are engaged in teaching, that they are earnest and progressive in their work, and that they were composed for the most part of graduates of college or normal or high school.

Fish and Game.—The number of deer killed in the season of 1898 and shipped through Bangor was 3,032, against 2,940 in 1897; the number killed in the Rangeley region, 217; number of moose in Bangor 159, and in Rangeley 4; caribou in Bangor 59, and in Rangeley only 2. By the laws of 1899 the close time for landlocked salmon, trout, and togue is from Oct. 1 until the ice is out of the ponds in the spring, except on the St. Croix river and its tributaries and in the waters of Kennebec County, where the close time is from Sept. 15 until the ice is out; white perch from April 1 to July 1. Ice fishing is prohibited in all the lakes, ponds, and their tributaries of Franklin, Kennebec, Oxford, and Somerset Counties.

The commissioners have power to grant permission to take eels, suckers, cusk, pickerel, and whitefish in closed waters. The open season on partridge and woodcock begins Sept. 15, and a person may send a pair of these birds without accompanying them on payment of 50 cents. The close time on muskrat is from May 1 to Oct. 15. Any person that kills or has in his possession birds known as larks, robins, swallows, sparrows, woodpeckers, or orioles forfeits not less than \$1 and not more than \$5; and not less than \$1 and not more than \$10 is the forfeit for destroying a nest, an egg, or the young of these birds. The close time on moose is from Dec. 1 to Oct. 15. The term "calf moose" is construed to mean until one year old or until they have two tines or prongs to their horns. The close time on deer is from Dec. 15 to Oct. 1, and "from Sept. 1 to Oct. 1 a person may take, catch, and kill one deer for food purposes only, to be consumed in the locality where taken, provided such persons have a license therefor." Keepers of sporting camps, lodges, or places of resort for inland hunting or fishing and those engaged in hunting or trapping fur-bearing animals must procure a license and pay the fee required. No person shall in any manner hunt, catch, take, kill, or destroy any caribou for six years from Oct. 15, 1899.

Ice.—The total ice crop along the Kennebec river during the year was 861,000 tons; shipped, 322,000 tons; carried over, 250,000 tons; crop on the Penobscot river, 203,000 tons; on the coast and interior, 216,000 tons; total ice crop, 1,322,000 tons, against 878,000 tons housed in 1898.

Indian Tribes.—The agent of the Penobscot Indians reported his appropriation overdrawn by several hundred dollars on account of the illness of the tribe during the winter of 1898-'99. The rental obtained from the shores of the islands was \$3,474.50, an increase of \$2,578 on previous rentals. The number of Indians in the tribe was 397, against 400 last year. The agent of the Passamaquoddy tribe reported many repairs to buildings during the year; number of the tribe in December, 1898, 473; births during the present year, 17; deaths, 20; present number of the tribe, 470. They raised 11,879 bushels of potatoes, 748 bushels of oats, and 110 bushels of beans and other cereals. The number of pupils at Pleasant Point was 95, and at Dana's Point 12.

Insurance.—The taxes paid to the State by insurance companies in 1898 amounted to \$26,698.04 from fire and marine companies; from life and miscellaneous companies, \$35,750.12; fees, \$12,284.50; number of fire companies admitted since last report, 13, with cash capital of \$2,900,000; withdrawn, 7; risks written by foreign fire insurance companies during the year, \$118,982,121.08; premiums received, \$1,640,351.62; losses paid, \$893,476.54; risks written by the Maine mutual fire insurance companies during the year, \$4,304,314.16; risks in force on Dec. 31, 1898, \$17,893,878.39; premiums and assessments received, \$50,912.20; losses paid, \$39,052.68; total income, \$62,177.94; total expenditures, \$55,248.81. The total number of buildings destroyed by fire during the year was 458; number partially destroyed, 934; damage to buildings, \$891,892.60; damage to contents, \$641,460.80; total insurance, \$3,944,941.43; estimated value of property burned, \$5,858,392.98; of property damaged, \$1,533,443.40. The number of policies in force at the date of the report was 60,193 life insurance, 7,439 assessment, 31,443 fraternal beneficiary, with a total amount of \$114,421,263.41; total admitted assets, \$1,350,211,955.28; total policies terminated during the year, 9,185; amount, \$4,603,005. The total assets of assessment companies was \$7,567,188.61; total liabilities, \$3,669,362.59; total number of policies in force, 193,894; written during the year, 1,312; amount, \$3,849,000.

The total income from fraternal beneficiary organizations was \$22,230,538.35; total disbursements, \$20,533,613.21; total admitted assets, \$8,482,714.58; total liabilities, \$2,584,051.07; total policies in force Dec. 31, 915,958; policies written during the year, 3,116; amount, \$3,808,000; terminated during the year, 1,787; amount, \$2,591,500.

Legislative Session.—A caucus of the Republicans of the Legislature was held, Jan. 4, to nominate a candidate to succeed Eugene Hale, and Mr. Hale was made the nominee. The Democrats met in caucus on Jan. 11 and nominated Samuel L. Lord. Mr. Hale received 27 votes in the Senate and 84 in the House, against none for Mr. Lord in the Senate and 15 in the House. Among the acts passed were the following:

For better protection of deer within the counties of Cumberland, York, and Sagadahoc.

For pensioning soldiers or sailors in the Spanish-American War who served in the quota of Maine or who were residents of the State at the time of enlistment, and who have been disabled in the service and can not provide for themselves or those dependent upon them.

For burial expenses of honorably discharged soldiers and sailors of Maine.

For the better protection of the rights of widows and widowers in the real estate of deceased husbands and wives.

For the establishment of traveling libraries and the lending of papers, books, and documents from the State Library.

Prohibiting the taking of smelts in tidal waters, except by hook and line, between April 1 and Sept. 1.

For discontinuing schools and conveying school children to other schools in certain cases.

For limiting the rate of interest on loans on personal property.

Authorizing the admission of women as attorneys.

For annexation of the city of Deering to Portland.

Liquors.—The report of the Liquor Commissioner gave the amount paid for liquors through the State agency as \$35,109.01; gallons of whisky used, 3,764; of brandy, 289; of gin, 644; of alcohol, 3,042; rum, 2,490; of wine, 538; of cherry rum, 140.

Military Affairs.—The history of the Kennebec arsenal dates from 1827, when \$15,000 was appropriated for the erection of a depot for military stores. In 1899 the military stores were valued at \$156,119.44, and the estimated value of the post was \$143,700. The expense to the State for the Spanish-American War was \$12,000, including bounties. The Legislature authorized a loan of \$100,000 to pay the bills against the State for equipments, etc., of which amount \$80,000 will be repaid by the United States Government. The total number of Maine men who died in the war was 56. The number of pensioners in the Togus Soldiers' Home on June 30 was 2,207; absent on furlough, 434; sick in hospital, 326; sleeping on floors, 141. By an act approved March 3, 1899, \$30,000 was appropriated for barracks and furniture. The contract for the new building calls for the completion of the work by June 20, 1900.

Mines.—A copper mine has been opened at Marion. The McFaul-Vose copper mine, at Smith's Mills, is the latest to yield quartz ore heavily charged with copper, 10 surface samples showing 3.97 per cent. of copper. In the Pittston gold mine, at 18 inches below the surface, the ore assayed \$17 a ton, with silver enough to pay for the work. A mine of lead and silver was discovered at Solon in the spring, and yielded \$80 in lead and \$100 in silver to the ton. A shaft 60 feet deep was sunk, and a vein of Galena ore mixed with quartz $5\frac{1}{2}$ feet wide was found.

Peddlers.—The number of registrations for 1899 was 185; number of county licenses 90, against 100 last year; State licenses 100, with 150 last year. The change in the law, allowing a taxpayer to peddle certain goods in his own town and its vicinity, has reduced the number of necessary licenses.

Pulp and Paper Mills.—There were 30 pulp mills and 28 paper mills in the State in December, 1899, comprised in 37 different plants. The operatives employed number 5,902, with an average daily wage of \$1.02. The daily output in 1895 was 2,400,000 pounds, and in 1899 it was 3,670,000 pounds; cost of wood used, \$2,500,000; amount of paper of all kinds produced daily, 600 tons; amount of ground-wood pulp, 735 tons; of sulphite pulp, 330 tons; of soda pulp, 110 tons; leather board, 60 tons; total yearly output, 550,500 tons; annual receipts, \$17,916,000; total capital invested, \$30,000,000; total amount paid for

labor yearly, \$5,000,000. Poplar wood is used by 3 companies and the rest use spruce mainly, though small quantities of fir, pine, and hemlock are also used. To make a ton of sulphite pulp requires 1,000 feet of spruce, while ground pulp requires 800 feet.

Quarries.—In the 4 slate quarries at Monson and 3 at Brownville there were many men at work in August with good wages. In the mill at Portland more than 1,000 articles are manufactured from slate. In Monson the quarry has reached 150 feet in depth, and pieces of slate have been taken out measuring 10×15 feet. The lime supply of Knox County is apparently inexhaustible, there being over 100,000 acres of limestone land in the county. Several of the quarries are putting in machines for hoisting the limestone. At one quarry a new stone wharf has been built out 50 feet from the old wooden wharf, giving 20 feet of water at medium tide. From Knox County last year 1,700,000 casks of lime were shipped.

Railroads.—The number of miles of railroads in operation Nov. 30, 1899, was 1,905.25, of which 154.17 miles were narrow gauge. There were added during the year ending June 30, 1899, 122.90 miles, and since that time 33.4 miles have been completed. The gross earnings of the steam roads operated in the State were \$8,723,218.62, and the number of passengers carried 4,908,971, a gain of 12,906 during the year; amount of freight carried, 6,539,200 tons, a gain of 892,824 tons. There were employed upon the steam railroads 7,036 persons, and the wages received were \$3,242,411.31. The mileage of street railways June 30, 1899, was 240.20, a gain of 71.48 in the year. After June 30 there were constructed 27.96 miles of road, making the total mileage of street railways on Nov. 30 268.16 miles. There were employed upon the street railways 864 persons, an increase of 139 over 1898. The wages paid amounted to \$390,250.50. The gross earnings were \$1,090,417.69, and the operating expenses \$686,419.96, to carry 18,496,374 passengers. There were 2 fatal accidents, and 7 persons were injured.

Shipping.—About 50,000 tons of new shipping were launched in Maine this year. Bath alone furnishing 40,009 tons. The fastest craft ever built in Maine was launched May 29—the torpedo boat Dahlgren. It is 147 feet long and 16 feet $4\frac{1}{2}$ inches broad, and has a displacement of about 146 tons. In the year ending June 30, 1899, there were lost at sea 78 vessels, with a total tonnage of 24,076; loss to vessels and cargo, \$3,626,235; number of persons on board, 469; number of lives lost, 204.

Lumber.—The amount of lumber cut in the winter of 1898-'99 in the Moose river region was 15,470,000 feet of saw logs and 6,150,000 feet of pulp logs; in the Moosehead lake region, 24,900 feet of saw logs and 9,400,000 feet of pulp logs; in the Dead river section, 23,050,000 feet of saw logs and 1,800,000 feet of pulp logs; in the east branch and the Kennebec, 13,850 feet of saw logs and 7,050,000 feet of pulp logs. The amount of dry pine surveyed at the port of Bangor between Jan. 1 and July 1, 1899, was 10,853,623 feet; of green pine, 708,983 feet; of spruce, 41,037,731 feet; of hemlock, 8,488,475 feet; total, 61,053,821 feet, against 48,322,706 feet in 1898 and 53,663,275 feet in 1897.

The Tramp Chair.—The town of Oakland at its spring election voted to purchase and use a peculiar chair invented for the punishment of tramps. Its chief peculiarity is in the formation of its door, which is so constructed that it follows the lines of the chair itself so closely that

when the person is seated and the door locked there is no space for change of position or rest. On the front, opposite the chin of the occupant, is a shelf for food, which can be reached through a hole in the door. When the first man to be punished was released and put into the lockup he broke out and smashed the chair before leaving town. A second chair was made and put in its place.

Topographical Survey.—The Topographical Commission began work where the United States Geological Survey had triangulated the section, near Bucksport. The sum of \$2,500 was appropriated by the State for the work of 1899, and the United States Government added a like amount. Only 432 square miles can be surveyed in a year with the present force.

Vital Statistics.—The population of Maine was 715,000 on Jan. 1, 1899, against 661,000 in 1890. The report of the Bureau of Registration gives the number of births in 1897 as 15,429; in 1896, 15,430; in 1895, 14,607; of which 7,292 were males and 7,127 females. The number of marriages in the year was 5,331. The age of the oldest groom was eighty-six; of the oldest bride, seventy-six; of the youngest bride, thirteen. There were 722 divorces, in 536 of which the wife was libellant and in 186 the husband. The deaths numbered 5,634 males and 5,606 females, 4 women and 2 men having reached the age of one hundred. The number of unmarried men in the State in 1899 was 55,976, and the number of women twenty-five years old and past unmarried was 40,907.

Political.—A special election was held June 19, 1899, for the purpose of filling the vacancy caused by the death of Nelson Dingley. It resulted in the choice of Charles E. Littlefield, Republican, against John Scott, Democrat, by a vote of 11,624 to 2,736.

MANITOBA, a western province of Canada; area, about 80,000 square miles. Population in 1897, 108,957; in 1899, 229,881. Capital, Winnipeg.

Government and Politics.—The Government met Parliament on March 16, 1899, with a large majority—two thirds of the whole house, and a popular majority in the elections of 1896 of 25,000 out of a vote of 38,000. The ministry was composed of Thomas Greenway, J. D. Cameron, Robert Watson, C. J. Mickle, and D. H. McMillan. Mr. Greenway had been in power since 1888, and had run the gantlet of three general elections. The Legislature was opened in its fourth session by Lieut.-Gov. the Hon. J. C. Patterson with a speech from the throne, of which the following were the main points:

"Never was Manitoba in as prosperous a condition as that in which she stands to-day, as is shown by the increase in the value of farm lands and of farm products generally and the steady growth of population. The province must be congratulated upon the increased immigration during the present year. It is satisfactory to note that farmers' institutes and agricultural and kindred societies have continued to be of great value to our agricultural classes, and that our great industrial fairs are attracting wide attention.

"Railway construction within the province during the past year has been carried on to a very considerable extent, and the districts affected have been very materially benefited thereby. In particular I might refer to the Swan river country, which a year ago was void of settlers, but is now a well-peopled district. A considerable portion of the railroad to the southeastern part

of the province has also been built, with great advantage to the districts through which it runs, and with a promise of great and lasting benefit to the whole province when it is completed to its objective point. The building of the Northern Pacific and Manitoba Railway branch from Belmont westward has also been highly advantageous to the farmers in that district, while the settlers along the Foxton branch of the Reston extension of the Canadian Pacific Railway have been equally benefited.

"We have reason to congratulate ourselves that so much of the land which this province is acquiring as swamp lands and otherwise is contiguous to and largely increased in value by the railroad construction of last year.

"It is gratifying to be able to refer to the fact that my Government has effected an excellent arrangement with the Dominion Government for more speedy transfer to this province of swamp lands to which it is entitled and a more economical method than heretofore. It is expected that within a very few years all these swamp lands will be under provincial control, forming an exceedingly valuable asset.

"It is, however, to be regretted that the Senate of Canada took the ground that the province was not entitled to the sum of \$300,000, for which it had made application to the Dominion Parliament to be paid out of the Manitoba school-lands funds, as we believe that such advance made in the early history and formative period of our educational system would be of far greater assistance than if given later, when our population and resources will be greater than now."

Finlay M. Young was re-elected Speaker, and the house did not adjourn until July 21. The legislation passed was not very important. The bill to amend and change the electoral divisions was the measure most discussed, in view of the coming elections and the alleged fact that certain alterations in the boundaries of constituencies made them safe for the Government candidates. The great subject of controversy during the year was the coming general election. Hugh John Macdonald, the only son of the late Conservative leader at Ottawa, Sir John Macdonald, had assumed the leadership of the oft-beaten remnant of the party in the province, and upon his personal geniality and popularity and his name the Conservatives pinned their faith and were prepared to make a strong contest. Mr. Greenway hoped to win upon his record of the establishment of an unsectarian public-school system and his personal influence as a successful farmer. On July 11 a large Conservative convention was held in Winnipeg, 85 delegates were present, and the following party platform was enthusiastically adopted:

"That the alarming condition of the finances of this province demands the introduction of such economical methods of administration as will re-establish the equilibrium between the receipts and expenditures.

"That the number of salaried ministers be reduced to three, two ministers without portfolio being added to the Cabinet for the purposes of consultation.

"That the indemnity of members be reduced to \$400.

"That the present iniquitous franchise law be repealed, and that an equitable act, based on the principle of manhood suffrage and one man one vote be enacted.

"That the alien-labor law be strictly enforced. "The encouragement of an immigration policy which will secure to the province her just pro-

portion of a desirable class of European immigrants, as well as those from the older provinces of Canada and the United States, but restrict the wholesale importation of undesirable immigrants from southern Europe.

"That the affairs of the province should be administered on ordinary business principles, without regard to political considerations, especially in so far as our educational system is concerned, which should be absolutely freed from party politics by the establishment of an independent Board of Education.

"That the province have complete control of the school lands and the proceeds of the sales of all lands that have been sold or will be sold in the future, to be used only for the purposes of supplementing the ordinary school grant as given from year to year.

"That the proper administration of justice, including the appointment of justices of the peace and other officers of justice, be from representative men independent of politics.

"That the province, provided its revenue be found sufficient for the purposes, establish and maintain an agricultural college; also a technical school, at which mechanics and others may receive a practical training.

"The adoption of the principle of Government ownership of railways, in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the Government of the province the control of rates over lines used, together with the option of purchase.

"That demand be made for the transfer of all Crown lands within the boundaries of Manitoba to the province.

"That aid be granted to municipalities by way of guarantee of interest upon debentures when required.

"Equal rights to all.

"That an act be passed providing for compensation for injuries received by workmen in their usual employment.

"That the boundaries of the province be extended northward to Hudson Bay.

"To assume control and administration of the fisheries within her boundaries.

"That a line of railway be constructed to Hudson Bay.

"That a measure be adopted to give effect to the will of the people regarding prohibition of the liquor traffic, which measure shall go as far in the direction of prohibition as the powers of the province will allow."

During the next few months Mr. Macdonald spoke in every constituency of the province. On Nov. 16 the Legislature was formally dissolved, and Mr. Greenway issued the following appeal to the electors:

"I have the utmost confidence that my appeal to the country will, as on three previous occasions, result in the return of my Government by a sweeping majority. With reference to the great prosperity of the province during late years, I think I can fairly claim that this in some measure has been due to the legislation and administration of my Government. The development of the province by construction of railways for competitive and colonization purposes has been the consistent policy on our part throughout my administration. In the last twelve years we have secured the construction of about 1,100 miles of railroad with satisfactory results. Our attention has been continuously devoted to the problem of placing our settlers in the position of hav-

ing a readily convenient market for their products, and of securing the lowest possible freight rates to the seaboard. I think I can with propriety state that our efforts in both directions have been in a great measure successful.

"In regard to the latter question, that of freight rates, I am strongly convinced that still lower rates than now prevail can be ultimately secured. Our intention is to continue our efforts, determined to place our farmers in the best possible position in this respect. I have long maintained that grain can be profitably transported to Lake Superior at a maximum rate of 10 cents per hundred pounds. If such a rate can not be obtained over existing lines, I am in favor of turning our attention elsewhere for relief.

"I need scarcely tell you that we have been greatly disappointed at the action of the Senate of Canada in defeating the bill which had passed the House of Commons authorizing the payment to the provincial treasury of a portion of the school-lands fund after the Dominion Government had agreed to make the advance requested. I am of the opinion that the province is entitled to this fund, and to have transferred to it the whole of the school-lands reservation, to be administered by it for educational purposes. Any opposition to this policy I regard as most unjust to the settlers of the present day.

"Since the last provincial general election a judgment has been rendered by the Judicial Committee of the imperial Privy Council upon the subject of the jurisdiction of the Dominion Parliament and provincial Legislature respectively with reference to the prohibition and restriction of the liquor traffic. That judgment was considered ambiguous in some respects, and we proceeded to procure opinion of eminent counsel thereon. When the question came up for consideration during the last session of the Legislature I stated it was the intention of the Government at the next session to introduce legislation prohibiting the sale of liquor to the extent of the powers of the province in that regard, and such statement still stands as our declared policy.

"When I last appealed to you the main subject then presented for your consideration was the attack menaced by the Government of that day upon our national school system. That attack was supported by those within the province who oppose us to-day, but, despite their efforts, we succeeded in preserving the system, which will continue so long as I maintain the confidence of the electors. When returned to power it is my intention to continue on the same lines of progressive policy as in the past. I shall always hold the interests of the farmers as of paramount importance. I shall always advocate their interests and the interests of the province as my first public duty. I think it needs very little impartial consideration to come to the conclusion that the opposition to my Government is not based upon any regard for the public, but solely to gratify the ambition of men who for the most part have taken positions on important questions diametrically opposed to the best and highest interests of Manitoba."

After a keenly fought contest the poll was taken, in all but two constituencies, on Dec. 7, with the result of a majority of six for the Conservatives. Sir Charles Tupper, Mr. Foster, Mr. Clarke Wallace, and other federal leaders had helped Mr. Macdonald, while the Government had been assisted by Mr. C. Sifton, Mr. D. C. Fraser, and other Liberals from Ottawa. This result involved the early accession of Mr. Macdonald to the provincial premiership.

Finances.—On April 1 Mr. D. H. McMillan, provincial treasurer, reviewed the finances in his budget speech, of which the following are the essential portions:

"The ordinary revenue for 1898 was \$936,003.31; that is the largest revenue we have ever received. The increase is mainly shown in one item of Dominion Government subsidy. We secured the settlement of an old claim against the Dominion Government; it was for the construction of the Parliament buildings and Government House, and had been in dispute since 1886. At various times efforts had been made to secure a settlement; the late Hon. Mr. Norquay pressed the claim, and Hon. Dr. Harrison went to Ottawa and pressed it as leader of the Government, but they could never get the late Dominion Government to take it up. As soon as this Government came into office we laid the claim before them; it was admitted to be just, a bill was put through the house authorizing the Government to settle, \$267,026.45 was placed to the credit of the capital account of the province, and interest for the past thirteen years was paid in cash, \$231,306.94. So the province is \$498,333.37—in round figures, half a million dollars—better off than a year ago. This is one of the benefits the province has derived from the change of government at Ottawa. The increased capital will give a yearly subsidy of \$13,351.32, as we are entitled to receive and will receive 5 per cent. interest. Another item was the advance asked for of \$200,000 on school lands; in this there was a very large disappointment. All we received from this source last year was \$7,000 or \$8,000 interest on school-lands funds. Over half a million dollars is credited to the provinces from the proceeds of sale of school lands. This is our money, and we are entitled to administer not only the money but the lands. The grants for school purposes are increasing so rapidly, while the revenue is almost stationary, that we consider the time has arrived when we should participate in the benefit from this large sum. The value of the lands is estimated at about \$15,000,000. We represented the matter to the Dominion Government, pointing out that the grants to schools since we came into office had increased from \$65,000 to \$200,000 in one year, and that it was necessary to continue the grants in order to enable the people to maintain the schools; also that all we had received from the school-lands fund was \$83,000. The Government decided that it was to the interest of the province to give a portion of the money. A bill was introduced by the Minister of Finance to advance \$300,000; it passed the House of Commons, but it was bowled out by the Senate.

"Our receipts from provincial lands were \$22,146.23. We have a regularly established land department now. Of course, we have only swamp lands. There were sold last year 25,967 acres, at prices ranging from \$2 to \$8, averaging \$3.41 per acre.

"The expenditure for 1898 was \$836,160.23. Of this, \$81,036.30 was spent for civil government, less than in any year since 1891; for administration of justice, \$68,528.04, an increase of expenditure, for the reason that the population had increased and the criminal work was also increasing. In cash grants there was expended \$293,853.52. Of course, the largest part was grants to schools, \$205,867.81; there were also agricultural grants, \$20,749.64—namely, for electoral division agricultural societies \$13,865.14, Winnipeg Industrial Exhibition Association \$3,500, Western Agricultural and Arts Association

\$2,000, farmers' institutes, dairy and other associations \$1,384.50; charitable grants, \$33,254.56; general hospitals—Winnipeg \$15,150.30, St. Boniface \$10,303.93, Brandon \$4,882.31, Morden \$1,288.12; Salvation Army Rescue Home, \$250; Women's Home, \$250; Children's Home, \$500; St. Boniface Orphanage, \$500; Prisoner's Aid Association, \$125; public works and aid to municipalities, \$26,570.76; cash grants to municipalities, \$33,281.51; expended on colonization, roads, and bridges, \$26,570.76; maintenance of public institutions, \$95,396.81; maintenance of courthouses, jails, legislative buildings, etc., \$19,303.56; total Public Works Department expenditure, \$190,236.19. Agricultural Department expenditure and dairy instruction, \$6,929.03; diseases of animals, \$3,655.65; noxious weeds inspection, \$1,619.39; other agricultural expenditure, \$2,663.99. For immigration there was expended \$20,682.40. The advantages derived from this expenditure are very evident. We see a larger immigration set in this year than we have ever had. The efforts of the department have been very successful in the past year in Ontario and in the states south of the boundary line.

"In the estimates there are only little changes. Three hundred thousand dollars is estimated on account of school lands, and something more from swamp lands. We estimate to spend \$50,000 more in grants to public schools, making \$250,000 for this year. All the other cash grants, which have always been large under this Government, will be increased again. It is certainly to be hoped that we shall succeed in securing the assistance asked for from the Federal Government—a portion of the school-lands fund. The large grants can not be continued unless we derive some benefit from the large asset set apart for this purpose. Only 15 to 20 cents per child has been received, while the grants amount to \$4 or \$5 a child."

General Progress.—On April 1 the Attorney-General, the Hon. J. D. Cameron, reported to the Legislature important figures of municipal and general progress. The following is a summary of his statement:

Population of rural municipalities, unorganized districts, etc., 161,635; cities, towns, and villages, 68,246; total population of the province, 229,881. Number of acres in rural municipalities, 13,798,750; acres under cultivation, 2,824,929; acres wooded, 1,159,806; number of horses, 98,303; number of cattle, 219,743; number of sheep, 29,566; number of pigs, 66,565. Assessment, real and personal, in rural municipalities, \$43,134,980; in cities, etc., \$31,455,619.

Taxes for municipal purposes in rural municipalities, \$289,901.44; taxes for school purposes, \$323,148.70; debenture purposes, \$42,536.62; district and county, \$48,949.58; municipal purposes, cities, etc., \$405,755.98; school purposes, cities, etc., \$158,834; debenture purposes, cities, etc., \$20,817.21; district and county purposes, cities, etc., \$15,486.05. Total taxes imposed in 1898, rural municipalities, \$704,536.43. Assets, rural municipalities, \$1,226,647.26; liabilities, rural municipalities, \$772,548.23; assets, cities, towns, and villages, \$989,600.47; liabilities, cities, towns, and villages, \$1,124,439.01; debenture indebtedness, rural municipalities, \$484,535; debenture indebtedness, cities, etc., \$4,561,023.12.

Number of rural municipalities in the province, 74; cities, 2; towns, 11; villages, 6. Rural schools in operation, 1,002; estimated number of school children in rural districts, 40,129; in cities, towns, and villages, 8,812. Amount of annual Government grant to rural schools, \$130,000; grants and

payments to schools in cities, towns, and villages in 1898 (the number of departments being 248), \$44,883.40.

Agriculture.—The official report of the year's crops, issued in December, 1898, by the provincial Department of Agriculture, contained information as to the actual yield of the various kinds of grain and the conditions generally existing during harvest and autumn. The total yield of wheat was 25,313,745 bushels, compared with 18,261,950 bushels in 1897, an increase of 7,051,795. The area sown was increased 167,350 acres, and the average yield increased from 14.14 to 17.01 bushels an acre. Of oats, 17,308,252 bushels were raised, 6,676,739 in excess of the preceding year; the average yield was 33.6 bushels, compared with 22.7. Barley, flax, rye, peas, potatoes, and other roots were in excess of 1897. The dairy industry suffered from the good prices for wheat that prevailed, as also did hog raising. Following is a summary of the yields of the chief crops of the province in 1898: Wheat, 1,488,232 acres, 25,313,745 bushels; oats, 514,824 acres, 17,308,252 bushels; barley, 158,058 acres, 4,277,927 bushels; potatoes, 19,791 acres, 3,253,038 bushels; roots, 8,448 acres, 2,471,715 bushels.

The total grain crop of the province was 47,345,664 bushels. The number of beef cattle exported was 12,525, of which more than 7,500 came from the northwestern portion tributary to the line of the Manitoba and Northwest Railway. There were 9,500 stockers shipped to the Northwest Territories to be fattened and 20,000 shipped to the United States. The number of hogs shipped to British Columbia by the Canadian Pacific Railroad was 5,100. The number received by Winnipeg butchers and packers was 18,000. Customs returns showed that 1,919,784 pounds of pork were imported to Winnipeg from the United States. The season was favorable for all engaged in the manufacture of cheese and butter. The total of dairy products sold was \$409,455. The farmers sold 31,455 turkeys, 13,010 geese, and 127,000 chickens in the year, and expended \$1,469,000 on farm buildings. There was an increase of at least 2,500 in the number of farmers in 1898.

Miscellaneous.—The post of Chief Justice of Manitoba was given to Justice A. C. Killam. The imports into the province in 1898 were \$5,391,237, an increase of \$2,000,000 over 1897. At least 300 miles of branch railways were completed in the year, and the Government reports show an immigration of 28,000 persons, including some thousands of Doukhobers from Russia—a peculiar sect of peace-loving, well-behaved people—who were assisted by various subsidies and contributions.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; and 1,042,390 in 1890. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, Lloyd Lowndes; Secretary of State, Richard Dallam; Comptroller, P. L. Goldsborough; Treasurer, T. J. Shryock; Adjutant General, A. L. Wilmer; Attorney-General, H. M. Claybaugh; Superintendent of Education, E. B. Prettyman; Commissioner of Insurance, F. Albert Kurtz—all Republicans except Prettyman, Democrat; Chief Judge of the Court of Appeals, James McSherry; Asso-

ciate Judges, David Fowler, A. Hunter Boyd, Henry Page, Charles B. Roberts, John P. Briscoe, S. D. Schmucker, and James A. Pearce; Clerk, Allan Rutherford—all Democrats except Schmucker and Rutherford, Republicans.

Finances.—According to the report of the Comptroller for the fiscal year ending Sept. 30, 1898, the total treasury receipts of the year aggregated \$3,095,314.22, adding to which sum the balance in the treasury Sept. 30, 1897, of \$707,138.58, and cash to the credit of the various funds of \$509,865.44, made the total receipts \$4,312,318.24, or a gain of \$622,220.08 over the preceding year. Exclusive of balances and the amount to the credit of the several sinking funds and the common free-school fund, the ordinary receipts were \$3,095,314.22, against \$2,772,055.40 for 1897, or a gain of \$323,258.82. In this gain was included \$125,000, the amount received from the military emergency fund, yet in the preceding year was included \$27,500, being the dividend on \$550,000 of the stock of the Washington branch of the Baltimore and Ohio Railroad Company, which sum was lost to the treasury this year; therefore the net gain in the ordinary receipts was \$225,758.82.

The amount received from collectors of State taxes during the year aggregated \$1,092,899.85, the largest in the history of the State, as against \$1,019,631.76 for the year previous, or a gain of \$73,268.09; and that notwithstanding the large increase in the gain of the preceding year of \$175,011.41, while the gain from tax on incorporated institutions and tax on Baltimore city stock was \$10,753.49 and \$1,915.23 respectively; hence the total gain during the year from direct taxes aggregated \$85,936.81, an augmentation specifically dedicated to the sinking funds, free books, and the public schools.

An increase of \$18,344.02 was shown in excess of fees of office, and of \$20,498.93 from tax on gross receipts of corporations, the total receipts from the latter amounting to \$191,638.98. The Comptroller says: "Even this large amount is not what it should and would be if it were not for special exemptions granted by the Legislature in years past to sundry corporations. It can not be denied that real estate bears the burden of taxation, and were it not for such exemptions, and all corporations were compelled to pay their just share of the burdens of taxation, our rate could soon be materially reduced." The several registers of wills paid into the treasury \$184,155.44, a gain of \$83,404.06 over the previous year.

The disbursements aggregated \$3,236,101.50, an excess of \$255,141.92 over the previous year, leaving a balance in the treasury proper of \$566,351.30. The receipts from all sources, increment from investments, cash transferred from the treasury and from the sale of securities held by the various sinking funds aggregated \$945,176.62. In this amount was included the sale of Baltimore city stock of the par value of \$501,200, being the entire holdings of the State in these securities, except the amounts held by the common free-school fund and the Agricultural College, said sale netting, clear of commissions, \$518,075.75, which amount deducted from the gross receipts left \$427,100.87 as the ordinary receipts during the year from increment on investments and cash transferred from the treasury, or a sum greater by \$42,633.47 than that of the year preceding. There was purchased for the defense redemption loan sinking fund stock of its own loan of the par value of \$439,952, costing \$447,877.98; hence at the close of the fiscal year the various sinking funds showed a total cash balance of \$497,298.64.

The receipts of the oyster fund, with balance on hand, aggregated \$58,227.34, the disbursements being \$55,083.92, leaving a balance on hand of \$3,143.42. The Comptroller said: "It is absolutely impossible to maintain the State fishery force upon such revenue. With the strictest economy and with a due regard for the efficiency of the same the navy can not be maintained for less than \$60,000 per annum."

The State debt aggregated \$9,284,986.24, the same as the year before. From this sum was to be deducted the available and productive assets of the State, aggregating \$1,587,470, as well as the amount of stocks, bonds, and cash to the credit of the sinking funds of \$4,064,488.75, making the total amount \$6,251,958.75, leaving as the net debt of the State at the close of the fiscal year \$3,033,027.49, as against \$2,949,978.13 for the corresponding period of the preceding year, or an increase of \$83,949.36.

The assessed value of property for State purposes amounted to \$603,326,096, a decrease of \$4,639,176. The counties showed a gain of \$65,960, while the shrinkage in Baltimore city was shown to be \$4,705,136; notwithstanding which shrinkage there was a gain of \$62,798,389 under the new or "Bankard" assessment over the basis of 1896, as made under the provisions of the assessment of 1876.

The gross receipts of the State tobacco warehouses during the year aggregated \$40,439.69; the disbursements were \$35,552.47, leaving net earnings of \$4,887.22, as against \$7,541.66 gross receipts and \$72,283.78 disbursements, with net earnings of \$6,257.88 for the year previous, or a loss in net earnings during the fiscal year of \$1,370.66.

Banks.—The 48 national banks of the State reported resources and liabilities amounting to \$20,960,604.68. Among the resources were: Loans and discounts, \$11,568,200.18; United States bonds to secure circulation, \$2,337,750; stocks, securities, etc., \$2,414,821.58; due from approved reserve agents, \$1,606,479.14; lawful money reserve, \$1,081,900.07. The individual deposits amounted to \$11,787,172.18.

Education.—The report of the Superintendent of Education for 1898 shows that the number of public schools in Baltimore was 192; in the counties, 2,273; making a total of 2,465. The number of pupils in the city schools was 94,708; in the counties, 141,295; a total of 236,003 and an increase of 6,056. The highest number enrolled in one term in the city was 67,192; in the counties, 134,924; a total of 202,116 and an increase of 12,220; average number of pupils in daily attendance, city and counties, 134,539; number of teachers, 4,987.

It was shown by the Secretary of the State Board of Education, reporting on the financial condition of the public schools for the year ending July 31, 1898, that receipts from all sources in the city of Baltimore amounted to \$1,484,518.55; in the counties, \$1,551,088.31—a total of \$3,035,606.86 and an increase of \$456,960.36. The amount paid for teachers' salaries in Baltimore was \$1,092,762.06; in the counties, \$874,195.34—a total of \$1,966,957.40 and an increase of \$93,785.75. There was paid for building, repairing, and furnishing schoolhouses a total of \$315,851.26; for books and stationery, \$141,226.39; for rent, fuel, and other incidentals, \$180,066.39. The amount received from State school tax appropriated to colored schools was \$97,884.17; from county tax, \$646,892.95.

Industries.—The average yearly output from the coal mines of the State in the past five years

is officially reported to have been about 4,838,169 tons. From the extensive increase in the annual output, and because of the improvements and greater facilities for mining and transportation, it is expected that the average yield will be greatly increased. Experts in coal mining estimated as early as 1854 that the three most important veins would furnish a total of at least 1,210,000,000 tons. Between that date and 1898 there had been taken from the coal region about 101,255,745 tons, and it was estimated that there remained to be mined about 1,108,744,255 tons. At the present rate of mining the veins now being worked could not be exhausted in less than two hundred and forty years.

The fisheries give employment to more than 41,000 persons, with an invested capital of about \$8,000,000, while the fishery products, including shellfish, were valued by the latest report at nearly \$7,000,000. Among the fish last reported caught in the waters are the alewife or menhaden, bluefish, sheepshead, butterfish, crocus, sea bass, squeteague, spot, tautog, harvest fish, black bass, brook trout, rainbow trout, sea trout, shad, summer herring, croaker, Spanish mackerel, striped bass, salt-water chub, white perch, yellow perch, rock, catfish, and others. The shad takes first place, in 1896 the catch having been 1,541,050, weighing 5,541,499 pounds, valued at \$166,551. In the menhaden fisheries Maryland holds first place among the States as to the number of fishermen employed, the capital invested, and the number of gill nets, boats, and traps. In 1896 17,607,315 pounds were taken, valued at \$126,050, or more than one fourth the value of the entire catch of the United States.

In the season of 1898-'99 5,447,814 bushels of oysters were inspected in the State, of which amount 4,271,726 bushels were inspected in Baltimore. These oysters were used for raw shipment by the packers and for local use.

Statistics showing inspections of tobacco at the State warehouses for 1898 give the total receipts at 36,210 hogsheds, and the shipments at 38,739 hogsheds. Shipments exceeded receipts by 2,529 hogsheds, due to a demand for considerable common tobacco remaining in the warehouses for several years past. Of the total shipments, 8,571 hogsheds were received from Ohio. Shipments were as follow, in hogsheds: To Bremen, 3,949; to Holland, 16,054; to Hamburg, 2,109; to Antwerp, 213; to northern Europe, 272; to France, 19,009; to England, 30; home consumption and coastwise, 5,674.

The value of canned goods exported from Baltimore in 1898 was \$1,136,766, as against \$941,729 in 1897. The price of tomatoes for the season of 1899 advanced to \$6.50 and \$7 per ton.

Political.—Six parties were in the field at the November election, and the contest was spirited. The nominations were as follow:

Republican party—For Governor, Lloyd Lowndes; for Comptroller, Phillips Lee Goldsborough; for Attorney-General, John V. L. Findlay.

Democratic party—For Governor, John Walter Smith; for Comptroller, Joshua W. Hering; for Attorney-General, Isador Rayner.

Prohibition party—For Governor, James Swann; for Comptroller, Phineas F. Ball; for Attorney-General, Finley C. Hendrickson.

Union Reform party—For Governor, William Nevin Hill; for Comptroller, William E. George; for Attorney-General, Robert Brent Walling.

Social-Democratic party—For Governor, Levin Thomas Jones; for Comptroller, Joseph C. Fowler; for Attorney-General, Charles B. Bachman.

Social-Labor party—For Governor, John A. Rugemer.

The Prohibitionists met at Baltimore in June. Their platform, after "acknowledging Almighty God as the Supreme Ruler of nations, to whose law all human enactments affecting our welfare should conform," made the following declaration of principles:

"We favor the absolute prohibition of the manufacture, sale, importation, exportation, and transportation of intoxicating liquors for beverage purposes.

"We believe that the practice of bribery of voters in this State, and the consequent corruption in politics, has become a menace to our free institutions, second only to that of the legalized liquor traffic, and merits the condemnation of every honest voter, and that we believe this practice ought to work the forfeiture of the offices gained by it.

"We condemn the army canteen, the cause of the debauchery and death of countless numbers of our soldiers, and we deplore the nullification of the law by the present administration in continuing the canteen in spite of the act passed by Congress prohibiting the same.

"Believing the liquor traffic is the barrier to every reform, and that its overthrow is the supreme issue now before the people, we invite the co-operation of all good citizens who agree upon this question, assuring them that a party composed of sober men, and uncontrolled by vicious elements, can be safely intrusted with the solution of all other questions."

The Democratic State Convention was held in Baltimore in August. The platform declared "unflinching allegiance to the fundamental principles of the party as formulated by Thomas Jefferson," announcing the belief that "the practical and constant application of those principles to Federal and State government is essential to the perpetuation of our free institutions," and then continued:

"We declare our unalterable opposition to the creation and maintenance of a large standing army in time of peace, and we insist upon the supremacy of the civil over the military authority, and we demand the strictest economy in the collection and disbursement of the public revenues.

"We view with alarm the multiplication over the land of such gigantic industrial and commercial trusts, the outgrowth of Republican legislation, as stifle competition, threaten popular government, increase the cost of living, and curtail the individual rights of the people, and we favor vigorous measures by the States and by Congress to repress this great and growing evil.

"We favor a nonpartisan administration of the police department of Baltimore, and such a thorough and careful revision of the laws in relation thereto as will emancipate the force from partisan control or intimidation.

"The laboring classes constitute the main part of our population. They should be protected in all orderly efforts to assert their rights, when endangered from any source, and all laws on this subject should be framed with a view to improve their condition.

"The Republican party depends almost entirely for its success upon the support of the large negro population in our midst, and relies upon them for the election of its ticket and the continuance of its supremacy. Without their votes it would be a hopeless minority.

"This fact has created the belief by large numbers of the worst elements of this class of our

population that political influence will readily be exerted to secure for them immunity from punishment for violations of law, has accordingly led to an alarming increase in many species of crime, and is a constant menace to the peace and good order of the State.

"Such a deplorable and dangerous condition of affairs can not be ignored or treated with indifference, and, while we distinctly pledge ourselves to do equal and exact justice to all, without regard to race, and to guarantee to the colored people of the State the fullest protection in all their rights, we are not insensible to the perils which such a situation involves, nor unmindful of the obligation which it imposes."

The platform adopted by the Republican party, which met in convention in Baltimore in September, primarily asserted that the return of the Republican party to national power on a gold platform, aided by the Dingley law, was followed by a return of confidence and prosperity, industrial activity thus proving that the people were wise in rejecting an unsound financial system; it charged that the Democratic party "still clings to the financial heresies which brought panic on the business of the country"; that "in many States that party has reaffirmed the Chicago platform, with its anarchistic tendencies"; that "in Maryland the Democratic platform is silent on silver, in deference to the platforms of the Democratic party in the other States"; and declared that "a victory for the Democratic party in Maryland upon a platform silent on the money question would be a victory for silver and a blow to prosperity." The platform continued with these specific declarations:

"We believe in the gold standard, and that all our currency should be made by law redeemable in gold coin at the option of the holder. To this faith we confidently pledge the influence and votes of the Maryland Republican members in each House of Congress.

"We continue to favor such a system of import duties as shall protect American industries and provide sufficient revenue for the expenses of government economically administered.

"We commend the record made by our country in the late war with Spain. We accord to the soldiers and sailors who survived that war our unqualified respect and esteem. For those who laid down their lives we hold the tenderest memories.

"While we deplore the insurrection in the Philippine Islands, wherein, by cession from Spain, we acquired the right of sovereignty, duty demands that we retain and pacify them, and safeguard the interests of commerce until the problem of their final disposition be solved in such manner that the glory of our flag be not sullied, nor the liberty it stands for restrained. We repose our trust for such a solution of the problem in our wise and patriotic President and the Republican majority in Congress.

"Legitimate business interests, fairly capitalized and honestly managed, have built up our industries at home, giving employment to labor as never before, and have enabled us to successfully compete with foreign countries in the markets of the world. Such industries must not be struck down by legislation aimed at the dishonestly organized trust, which stifles competition and oppresses labor.

"We are opposed to legislation merely for popular effect in reckless disregard of business revival after prolonged depression. We strongly favor laws to successfully suppress trusts and all combinations which create monopoly. It was the

Republican party which passed the Federal law against trusts, and which is enforcing it so far as State's rights permit.

"In this State the Republican party has redeemed every pledge made by it at Cambridge. Under its rule elections have for the first time in a generation been fair and free. It equalized the burdens of taxation by reassessing the taxable property of the State. It placed on the tax books \$500,000,000 of stocks and bonds never before assessed. It gave free schoolbooks to the children of the people. Ignoring partisan considerations, it conferred upon Baltimore city a new charter.

"All the party promised for the better management of State finances has been accomplished. Under the able direction of the Republican State Comptroller and Treasurer the State finances have been put in better condition than ever before. The public debt has been consolidated and refunded at a lower rate of interest, with the result that thousands of dollars will be saved to the taxpayers annually; nonproductive assets have been disposed of and the proceeds applied to the reduction of the State debt. If we are continued in power we promise to wipe out the entire State debt during the ensuing four years and to reduce the tax rate from 17½ cents on the \$100 of assessable property to 16 cents, this being a reduction of 10 per cent.

"We favor a nonpartisan administration of our schools, with minority representation on the school boards of the State, and point to the record of our chief executive in his retention and reappointment of competent men of different political faith on the boards of educational and eleemosynary institutions, never before done in this State.

"We declare our belief in the wisdom and justice of a reasonable increase in the salaries of the school teachers of this State, which is hereby recommended to the favorable consideration of the Legislature and to the proper State and county authorities.

"The oyster and crab industry gives employment and support to a large part of the population of Maryland, therefore we declare our opposition to all efforts to deprive the people of their independent and ancient rights to a full and unabridged use of the oyster and crab bottoms in the tide waters of this State.

"We pledge our party to a nonpartisan reorganization of the police department of Baltimore city, by passing a law embodying the essential features of the two bills prepared by the same organization which prepared the election and registration laws passed by the Republican Legislature in 1896."

The Democratic ticket was successful at the polls in November, the official announcement of the vote being as follows: For Governor—Smith, Democrat, 128,409; Lowndes, Republican, 116,280; Swann, Prohibitionist, 5,275; Jones, Social Democrat, 432; Rugemer, Social Labor, 420; Hill, Union Reform, 367. For Comptroller—Hering, Democrat, 127,604; Goldsborough, Republican, 116,043; Ball, Prohibitionist, 5,302; Fowler, Social Democrat, 452; George, Union Reform, 368. For Attorney-General—Rayner, Democrat, 126,593; Findlay, Republican, 116,273; Hendrickson, Prohibitionist, 5,649; Bachman, Social Democrat, 406; Walling, Union Reform, 454.

The proposed amendment to the Constitution was defeated by a vote of 42,927 against 12,630.

By the result of this election the State Senate is composed of 11 Republicans and 15 Democrats, and the House of Delegates of 25 Republicans and 66 Democrats.

MASSACHUSETTS, a New England State, one of the original thirteen; ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,099 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,065 in 1880; and 2,238,943 in 1890. By the State census of 1895 it was 2,500,183. Capital, Boston.

Government.—The following were the State officers in 1899: Governor, Roger Wolcott; Lieutenant Governor, William M. Crane; Secretary of State, William M. Olin; Treasurer, Edward P. Shaw; Auditor, John W. Kimball; Attorney-General, Hosea M. Knowlton; Secretary of the Board of Education, Frank A. Hill; Adjutant General, Samuel Dalton; Secretary of the Board of Agriculture, J. W. Stockwell; Insurance Commissioner, F. L. Cutting—all Republicans; Chief Justice of the Supreme Court, Walbridge A. Field, who died July 15 and was succeeded

W. MURRAY CRANE,
GOVERNOR OF MASSACHUSETTS.

by Oliver W. Holmes; Associate Justices, Marcus P. Knowlton, James M. Morton, John Lathrop, James M. Barker, John W. Hammond, and William C. Loring.

Finances.—The net debt of the State at the beginning of the year was \$13,598,964, an increase of \$1,136,585 in 1898. In four years the net debt has increased more than threefold.

Of the \$500,000 placed by the Legislature at the disposal of the Executive for war purposes, \$326,071.43 was spent in 1898. Under the act granting \$7 a month from the State to volunteers in the Spanish war \$161,103.53 was expended in that year. The Volunteer Aid Association, with the Ladies' Relief, received \$215,000 in gifts from citizens.

Banks.—In September, 1898, the national banks in the State carried loans and discounts amounting to about \$272,000,000. The deposits in savings banks were \$474,000,000.

In November Lewis Warner, who wrecked the Hampshire County National Bank and the Hampshire Savings Bank by embezzling \$500,000, was sentenced to a term in State Prison of not more than twelve nor less than nine years.

The Broadway National Bank of Boston failed on Dec. 16, and on Dec. 21 the Globe National Bank of Boston closed its doors. Ex-President Cole was arrested, charged with having embezzled \$900,000 in the course of a period covering many years.

Railroads.—Boston has now the largest railway station in the world. This is the new Southern Union Station on Summer Street, at its junction with Federal Street and Atlantic Avenue, on the west bank of Fort Point channel. The land included has an area of 1,524,000 square feet, and the buildings cover 566,280. The total length of tracks is about 15 miles, and the number of tracks entering the station 32. The whole number of trains to use the station when it is

fully opened will be 710 a day. Upon the railroad routes within 50 miles of Boston about 50,000,000 passengers are carried to and from Boston each year, nearly equally divided between the north and south stations. The close approximate population within the 50-mile limit is 2,392,000, New York only exceeding. It is probable that the total cost of the new station will be not less than \$14,000,000.

Industries.—The official report for 1898 on manufactures shows 4,700 establishments, with invested capital of more than \$413,000,000. The wages paid amount to \$2,800,000 a week. The same year there were in the State factories 7,799,872 spindles and \$110,655,603 capital invested in the manufacture of cotton goods.

In April 130,000 operatives in 120 New England cotton mills had an advance in wages averaging 10 per cent. voluntarily granted by the manufacturers.

There were strikes this year at Marlboro, Whitman, Lowell, Gloucester, Rockport, and Fall River.

Education.—Harvard had 4,860 students in all departments this year, Radcliffe had 411, and the Institute of Technology 1,171.

In regard to coeducation at Harvard the following was published in July: "President Eliot says that the recent action of the Harvard law faculty, in voting to allow women to attend Harvard Law School courses, has been misunderstood. He says the idea has obtained that both Harvard and Radcliffe are seeking what is called coeducation. He adds: 'That is not true, to the best of my knowledge and belief, with regard to either Harvard or Radcliffe. On the contrary, for what is called undergraduate work the two institutions agree in providing separate education. In arts and sciences graduates of Radcliffe are admitted to a limited extent to the instruction which Harvard provides in that department for graduates. As to professional education, neither institution has had occasion seriously to consider the subject.'"

Historical.—Marblehead celebrated its two hundred and fiftieth anniversary May 2, the Legislature having established it as an incorporated town May 2, 1649, after its separation from Salem.

Malden also celebrated its two hundred and fiftieth anniversary in May.

In December two bronze memorial tablets were placed in Doric Hall in the Statehouse. One is in memory of Charles Bulfinch, the first New England architect, and the other is commemorative of the preservation and renewal of the Massachusetts Statehouse. The tablet to Charles Bulfinch gives the dates of his chief designs, that of the Statehouse being 1795. The reconstruction was begun in 1896 and finished in 1898.

Legislative Session.—The Great and General Court assembled on Jan. 4, and on June 3 was prorogued to the first Wednesday after the first Tuesday in January, 1900. George E. Smith was President of the Senate and John L. Bates Speaker of the House.

The ballot for United States Senator, taken Jan. 17, resulted in the re-election of Senator Henry Cabot Lodge. Mr. Bruce was the candidate of the Democratic and Mr. Porter of the Socialist-Democratic members.

The Governor signed 479 bills and 103 resolutions, and vetoed 3 bills.

One of the vetoed bills exempted certain trades unions from the operation of the laws relative to fraternal beneficiary organizations, which are designed to protect the insured from unregu-

lated and irresponsible management. The bill was passed over the veto.

Another bill vetoed was one providing that in appointments under the civil-service law soldiers and sailors of the Spanish war should have preference over all others except veterans of the civil war.

A third veto, which was on a bill to restore the provision for days of grace on sight drafts and bills of exchange, abolished by the Legislature of 1898, was overridden, only 5 members in the House voting to sustain the action of the Governor, and none in the Senate.

It was enacted that all future policies of assessment companies and those previously issued that provide for payments other than stipulated premiums shall be valued and reserve be maintained upon them.

Several provisions were added to the election laws. Ballots are to be counted in view of voters, instead of within 3 feet of the rail as heretofore, and election officers may order a count according to their discretion in towns and after 2 P.M. in cities having fewer than 100,000 inhabitants. When a candidate is nominated by more than one party he may direct in what order the party designations shall be added to his name at any time within seventy-two hours after the time for filing the papers. If he does not so direct, it is left to the board to decide. Nominating conventions must be called at least forty-eight hours before the time for filing the certificates of nomination. The number of persons necessary to a caucus may be determined by the committee, and no candidate may be a caucus officer.

It was provided by amendments to the laws regarding dipsomaniacs that the applicant and witnesses for the commitment of such must be examined upon oath. The alleged dipsomaniac must be served with a summons and is entitled to a hearing, and on appeal to a superior court he may ask for submission to a jury. A dipsomaniac may not be kept in the hospital more than two years, and may be discharged sooner if the trustees regard him as cured.

Among the acts in the interest of education were: Establishing 40 scholarships at Worcester Polytechnic Institute; providing that towns may establish vacation schools, the attendance not to be compulsory and not to count on the time required by law; providing that in cities operating 450,000 spindles corporations may be organized for establishing textile schools, the mayor and city superintendent of schools must be *ex officio* members, and the city may appropriate \$25,000, to be refunded by the State.

The law relating to weekly payment of wages now applies to all engaged in building trades, public works, construction of railroads, street railways, roads, bridges, sewers, gas, water or electric-light works, pipes, or lines. Eight hours is made the limit of a day's work for city and town employees.

The limit of \$1,000,000 as the amount to which mechanical and manufacturing corporations may increase their capital is removed, and there is no restriction.

Banks are forbidden to advertise as trust companies. Savings banks may loan on the bonds of the Boston Terminal Company. Trust companies may act as fiduciaries.

A justice of the Supreme or the Superior Court may retire at the age of seventy on three fourths pay after ten years of consecutive service in either court or both courts, or, if he be incapacitated, at sixty years after fifteen years' service, on approval of the Governor and Council. A general

act was passed providing for the simplifying of criminal proceedings.

Other acts were:

Providing that one who obtains by false pretense or converts or secretes with the intention of converting the personal property of another, whether in possession or not, is guilty of larceny; but this does not apply to false pretense of ability to pay, when the payment is due after delivery, unless in signed writing.

Establishing the boundary between Massachusetts and New Hampshire and between Massachusetts and Rhode Island.

To prevent counterfeiting of trade-marks.

Making it a misdemeanor for a debt collector to wear an unusual or striking costume.

Appropriating \$50,000 additional for exhibit at the Paris Exposition.

Creating a commission for the Pan-American Exposition.

Establishing a new board of cattle commissioners, and enacting a general law for preventing spread of disease among domestic animals.

Directing that renovated butter be plainly stamped on the top, side, and bottom of original packages and on the outside of every retail package.

Requiring cities and towns to establish seals.

Providing for allowances to families of persons killed while on duty at fires, whether they are firemen, or members of a protective department, or others on duty at the request of authorities in places having no fire department.

Prescribing a fine of \$5 to \$100 against any one allowing an animal to injure a shade tree on a highway—half to go to the complainant and half to the State.

Requiring charitable corporations exempt from taxation to make annual reports to the State Board of Charities.

Requiring that illegitimate children under three years of age—instead of under one year, as heretofore—when received for board be reported to the State Board of Charities.

Making the city building-inspection law applicable to towns.

Providing that a guardian may be licensed to sell his ward's realty to pay existing mortgages.

Providing that the State Highway Commission may spend \$500,000, of which \$12,000 is to be used for machinery and \$100,000 to be reserved for use after Jan. 1, 1900; authorizing a thirty years' loan; only citizens may be employed.

Allowing commissioned militia officers in service July 1, 1897, who served in the civil war to retire with the next higher rank.

Making it unlawful to deface the United States flag or the State flag, or to use them for advertising purposes.

Making it a misdemeanor to deface a monument or tablet commemorating an historic event.

Creating a commission to publish records of soldiers and sailors in the civil war.

For purchasing for the State 500 copies of any history of State organizations in the Spanish war.

Establishing a standard for milk analysis.

Allowing the informant in cases of infraction of the fish and game laws, unless he is a paid deputy, to receive half the fines, the other half going to the State.

Providing that every Sunday shall be a close season for birds and game.

Providing for continuance of the publication of province laws.

Appropriating \$12,000 for buying portraits of State governors.

A bill requiring railroads to carry bicycles as baggage was defeated, and one requiring them to carry racing rowing shells free was reported against by the Committee on Railroads.

The Committee on Constitutional Amendments reported adversely on the resolution for woman suffrage by amendment to the Constitution, and the House rejected a bill giving to women the right to vote on the subject of liquor licenses by a vote of 94 to 51.

The following petition and resolution was introduced:

"Whereas, The General Court of Massachusetts Bay, at their session in Cambridge (Newtown), passed a sentence of banishment against Roger Williams, Oct. 19, 1635;

"Whereas, Hon. John Winthrop, Governor of Massachusetts Bay, requested that Roger Williams be recalled, his sentence revoked, and be duly honored, which was refused;

"Whereas, Roger Williams's doctrine of religious liberty, for advocating which he was banished, has become the fundamental sentiment of Christendom; be it

"Resolved, We, the citizens of Cambridge, Mass., petition the honorable Legislature at your earliest convenience to pass an act revoking said sentence of banishment, and your petitioners will ever pray God save the Commonwealth of Massachusetts."

Political.—The first party to hold a State convention this year was the Socialist-Democrat. The 58 delegates, representing 25 branches, met in Boston, May 28. The ticket named follows: For Governor, Winfield P. Porter; Lieutenant Governor, Isaac W. Skinner; Secretary of State, Charles H. Bradley; Treasurer, C. White; Auditor, A. McDonald. The principal demands in the platform were:

"Revision of our antiquated Federal Constitution in order to move the obstacles to full and complete control of the Government by all the people, irrespective of sex; public ownership of all industries controlled by monopolies, trusts, and combines; reduction of the hours of labor to eight hours per day, and further in proportion to the increasing facilities of production; labor legislation to be made national as well as local and international where possible; equal civil and political rights for women and the abolition of all laws discriminating against women; abolition of war as far as the United States are concerned, and the introduction of international arbitration instead; the right of trial by jury in case of contempt of court; a more efficient employers' liability law; self-government for cities and towns in all local affairs; the State to assume life and fire insurance."

The convention of the Prohibition party was held at Worcester, Sept. 13. The ticket was: For Governor, John W. Baer; Lieutenant Governor, James H. Roberts; Secretary of State, John B. Lewis; Treasurer, Herbert B. Griffin; Auditor, Franklin A. Palmer; Attorney-General, Sidney Perley.

The essential points of the platform were the declaration in favor of the abolition of the liquor traffic and against the saloon as the deadliest enemy of the laborer. On the issues of commerce, currency, and territorial expansion no stand was taken, the platform considering them "too important to be dealt with merely as party foot-balls, and kicked by scheming politicians backed by saloon interests." The platform favors woman's suffrage and denounces the army canteen, which, it asserts, is retained by the Government against the judgment of the superior army and

navy officers and in defiance of the laws of Congress.

The Democratic State Convention, in Boston, Sept. 21, nominated the following ticket: For Governor, Robert Treat Paine, Jr.; Lieutenant Governor, John H. Mack; Attorney-General, John H. Morrison; Auditor, W. L. Ramsdell; Secretary of State, Harry Lloyd; Treasurer, Joseph J. Flynn. Later E. Gerry Brown, a Populist, was nominated for Auditor, Mr. Ramsdell having declined.

The platform declares that the Chicago platform of 1896, "like the Declaration of Independence, stands as a part of the fundamental code of the Democratic government."

The financial plank of that instrument is particularly reiterated, and the financial ills of the five years prior to 1897 are ascribed to "a contracted currency, for which Republican financial legislation had provided no form of relief."

The Republican party is accused of planning to surrender to the banks the governmental functions of issuing paper money and controlling its volume.

"To-day our trust magnates are our bankers. They hold the bank stock, they sit on the boards of directors; they select the officials, and they will apply to their command over the supply of the nation's money the same merciless and extortionate methods which they use in turning to their own profit their present monopolies."

The war in the Philippines is characterized as criminal aggression, wanton, needless, and wasteful, and incompetently and corruptly prosecuted. It is demanded that to "the Filipinos as to the Cubans shall be said to-day that they are of right and ought to be free and independent."

The platform favors direct legislation, the initiative and referendum, the election of United States Senators by direct vote of the people, and the enforcement of an eight-hour work day, the abolition of the law granting a life tenure to members of the judiciary, the public ownership and operation of street railways, water works, and other municipal enterprises.

Delegates were chosen to the National Democratic Convention of 1900.

The People's party made no nominations, but in October the Executive Committee approved the Democratic platform. The position of the party in the State was defined as follows: "Having for three years indorsed the Democratic State Convention candidates for State offices, and having voted for them, it is well to continue doing so until the next national convention shall decide whether the national alliance of 1890 is to be continued or a new and independent departure inaugurated."

The Republican convention was held in Boston, Oct. 6. Following is the ticket: For Governor, W. Murray Crane; Lieutenant Governor, John L. Bates; Secretary of State, William M. Olin; Attorney-General, H. M. Knowlton; Auditor, John W. Kimball; Treasurer and Receiver General, Edward S. Bradford.

The platform opens with felicitation upon "the results which have followed the restoration of the Republican party to power in all the branches of the Federal Government." On the subject of national finances and the currency it says: "Bonds and notes payable in coin must be established by law to be payable in gold and provision made for supply of gold when required. The Republican party stands unreservedly pledged to maintain the existing gold standard, and we look with confidence to the Fifty-sixth Congress for the enactment of measures to so perfect our

monetary system that there shall be ample money for the expanding business of the country, and so arm and guard the Treasury that it can at all times protect the national credit."

The platform further urges the opening up of new markets for the manufactured products of the United States, the development of the merchant marine of this country, and such improvement of the principal harbors of the United States as shall make them accessible to the largest vessels afloat. On the subject of trusts the platform says:

"The Republican party of Massachusetts is unqualifiedly opposed to trusts and monopoly and the capitalization of fictitious and speculative valuations."

Confidence is expressed in the national Administration, and belief that the war in the Philippines can be brought to an early termination. Civil service reform laws are commended, and strict naturalization laws and further restriction of immigration are urged. Lynching is condemned. The resolutions close with commendation of Gov. Wolcott's administration.

The result of the election in November was the success of the Republican ticket. The vote for Governor stood: Crane, Republican, 168,902; Paine, Democrat, 100,802; Porter, Socialist-Labor, 10,778; Baer, Prohibitionist, 7,402.

In the cities, especially Haverhill, Brockton, Quincy, and Newburyport, the Socialist-Democrats made large gains on the vote of the previous State election. In the municipal elections in December also they showed strength, electing the mayor in Brockton. As a rule, the Republicans were successful in the city elections.

The Legislature of 1900 stands: Senate, 31 Republicans, 9 Democrats; House, 166 Republicans, 68 Democrats, 4 Independents, 2 Socialist-Democrats.

Following is the Executive Council: David F. Slade, William W. Davis, Oliver H. Durrell, Charles I. Quirk, George F. Harwood, S. Herbert Howe, Martin V. B. Jefferson, Parley A. Russell. Mr. Quirk is a Democrat; all the others are Republicans.

METALLURGY. At the thirtieth annual meeting of the Iron and Steel Institute Sir W. C. Roberts-Austen, referring to the present condition of practical metallurgy as compared with that at the beginning of the century, said that there were now blast furnaces which would produce 700 tons of iron daily, with a consumption of 15 hundredweight of coal per ton. The gases from blast furnaces are used as sources of heat and directly in gas engines. There are Bessemer furnaces that hold 50 tons of metal and open-hearth furnaces that also take 50 tons, while 100-ton furnaces are projected. The open-hearth furnaces are fed with one ton of material in a minute by the aid of a large spoon worked by an electro-motor. There are gigantic mixers, capable of holding 200 tons of pig iron, in which, moreover, a certain amount of preliminary purification is effected. Steel plates are rolled of more than 300 feet in area and 2 inches thick. Girders are made which justify the belief of Sir Benjamin Baker that a bridge connecting England and France might be built over the Channel in half-mile spans. We have ship plates that buckle up during a collision, but remain water tight; steel armor-piercing shot which will penetrate a thickness of steel equivalent to more than 37 inches of wrought iron, the points of the shot remaining intact, although the striking velocities are nearly 2,800 feet a second; wires that will sustain a load of 170 tons per square inch with-

out fracture. Hadfield has given us manganese steel that will not soften by annealing, while Guillaume has studied the properties of certain nickel steels that will not expand by heat, and others that contract when heated and expand when cooled. Nickel, chromium, titanium, and tungsten are freely alloyed with iron, and the use of vanadium, uranium, molybdenum, and even glucinum is suggested. Steel rails are made which will remain in use seventeen years and only lose 5 pounds per yard, though 50,500,000 tons of traffic pass over them. Huge ingots are placed in soaking pits and forged direct by 120-ton hammers or pressed into shape by 14,000-ton presses. Steel castings for parts of ships are made that weigh more than 35 tons. We electrically rivet and electrically anneal hardened ship plates that could not otherwise be drilled. Photo-micrography enables us to study the pathology of steel and to suggest remedial measures for its treatment. Ewing and Rosenhain have recognized quite recently by its aid that the plasticity of a metal is due to "slip" along the cleavage planes of crystals, and by its aid Osmond has shown that the entire structure of certain alloys can be changed by heating to so low a temperature as 225° C. The range of properties possessed by steel is wide, and by its use the efforts of a multitude of workers have been, as it were, concentrated in a few great efforts which have exerted vast influence on the progress of mankind.

Much information has been obtained regarding the structure of metals by microscopic examination. When a highly polished surface of metal is lightly etched and examined under the microscope it reveals a structure which shows that the metal is made up in general of irregularly shaped grains with well-defined bounding surfaces. The exposed face of each grain has been found to consist of a multitude of crystal facets, having a definite orientation. Seen under oblique illumination, these facets exhibit themselves reflecting the light in a uniform manner over each single grain, but in very various manners over different grains, and, by changing the angle of incidence of the light, one or another grain is made to flash out comparatively brightly over its whole exposed surface, while others become dark. The grains appear to be produced by crystallization, proceeding, more or less simultaneously, from as many centers or nuclei as there are grains, and the irregular, more or less polygonal boundaries which are seen on a polished and etched surface result from the meeting of these crystal growths. In experiments by Prof. Ewing and Walter Rosenhain to witness the behavior of the crystalline grains when the metal is subjected to strain a polished surface was watched under the microscope while the metal was gradually extended till it broke. When a piece of iron or other metal exhibiting the usual granular structure was stretched beyond its elastic limit sharp, black lines gradually appeared on the faces of the crystalline grains; of a few grains only at first, but of more as the straining was continued. On each grain they were more or less straight and parallel, but their directions were different on different grains. The appearance of each grain is so like that of a crevassed glacier that these dark lines might readily be taken for cracks. They are, however, not cracks, but slips along planes of cleavage or gliding planes. When the metal is much strained a second system of bands appears on some of the grains, crossing the first system at an angle, and in some cases showing little steps where the lines cross. These bands are considered due to

slips occurring in a second set of cleavage or gliding surfaces. Occasionally a third system of bands may be seen. When the experiment is made with a polished but unetched specimen the slip bands appear equally well. The boundaries of the grains are invisible before straining, but they can be distinguished as the strain proceeds, for the slip bands form a cross hatching that serves to mark out the surface of each grain. The slip bands are developed by compression as well as by extension. They appear, when an iron bar is twisted well beyond the elastic limit, for the most part in directions parallel and perpendicular to the axis of twist. A strip of sheet metal in the soft state when bent and unbent in the fingers shows them well developed by the extension and compression of the surface. They have been developed by the authors in iron, steel, copper, silver, gold, nickel, bismuth, tin, gun metal, and brass. They are more difficult to observe in carbon steels than in wrought iron. The experiments are believed to throw a new light on the character of plastic strain in metals and other irregular crystalline aggregates, showing that plasticity is due to slip on the part of the crystals along cleavage or gliding surfaces. It is inferred that "flow" or nonelastic deformation in metals occurs through slips within each crystalline grain of portions of the crystal on one another along surfaces of cleavage or gliding surfaces.

In a paper on the diffusion of elements in iron Prof. J. Oliver Arnold and A. M. William remarked that Sir J. Lowthian Bell and Sir Frederick Abel had shown many years ago that if steel and wrought iron were placed in close contact and heated the iron gained and the steel lost carbon. They then referred to a series of experiments made by Prof. Campbell, of Michigan, on the diffusion of sulphur through hot iron. This author's results were not concordant, but some of his data and the conclusion he deduced from them were so startling and improbable that his work was hardly deemed worthy of serious discussion by theoretical metallurgists. He had stated that pure sulphide of iron would not diffuse through hot iron, but that oxysulphide of iron diffused through it unchanged without contaminating the metal. He had therefore pointed out that the fact of a triple compound thus rapidly diffusing deprived of all its cogency the doctrine that because carbon diffused it must necessarily do so in a state of elementary solution. By experiments upon samples furnished by Prof. Campbell, illustrating each stage of his work, the authors had found that, although he seemed in error with reference to the nondiffusive power of pure sulphide of iron, the accuracy of his general conclusions was confirmed, and that he had made an important discovery in metallurgical physics. Sir W. C. Roberts-Austen had shown in 1896 that on fusing gold plates to the bases of bars of lead the gold-lead alloy interpenetrated the lead bars when they were maintained for some time at a temperature of 250° C.—a point well below the melting point of lead—and he had proved that at the end of a month the gold-lead alloy had actually traveled up to the top of the lead bars, a distance of not less than 2½ inches. These results suggested to the authors the probability of similar molecular migrations taking place in the compounds of the elements fixing in that complex metal called steel. It was necessary to conduct experiments involving the maintenance of steel at a full red heat for many hours in a vacuum, so as to avoid oxidation effects—an object for which a very simple and efficient

plan was devised. The four elements—nickel, carbon, sulphur, and phosphorus—were found capable of diffusing through solid hot iron. The authors continued describing the details of their experiments at different temperatures, and announced as their conclusion that now that it had been definitely proved that a compound could diffuse through red-hot iron the last objection to the subcarbide theory seemed to have been removed. In the discussion of the paper in the Iron and Steel Institute some doubts were expressed as to whether these investigations should be accepted as conclusive demonstrations. Mr. Hadfield thought the results would be of great value in the manufacture of armor plate.

In a communication to the British Iron and Steel Institute on the present position of the solution theory of carbonized iron Dr. A. Stansfield reached the conclusions that the carbon in molten iron is in a state of solution, and that the molecule of carbon must then contain one or two atoms, and is probably monatomic. The solidified iron is in the γ state, and contains free carbon in solution. The molecular weight of this carbon has not been discussed, but it is probably the same as that in the molten iron. The carbon in solid solution combines with iron, on cooling, to form a carbide, which is probably expressed by the formula $2(\text{Fe}_3\text{C})$. When, on further cooling, this carbide falls out of solution as cementite its formula may become more complicated—the solution theory affords no information on this point—but Sir W. Roberts-Austen stated in his presidential address that the nature of the products of its solution in acids led to the conclusion that the molecule may contain six atoms of carbon, and is at least as complex as would be indicated by the formula $6(\text{Fe}_3\text{C})$. There appears to be a belief that the solution theory is in a sense opposed and has gone far enough to supplant the older allotropic theory, but the paper shows that the solution theory of the relations of carbon and iron entirely involves the allotropic changes with which the name of Osmond is connected.

In three successive papers Baron Juptner von Jorstorff has sought to apply the laws of solution to iron and steel. He finds that carbon is dissolved as such in pure iron at a sufficiently high temperature. The molecule of the dissolved carbon between $1,600^\circ$ and $1,300^\circ$ C. consists of two atoms. It increases with decreasing temperature, and at $1,150^\circ$ C. nearly equal amounts of two-atom and three-atom molecules are present in the solution. At a still lower temperature there is in the solution, besides a certain amount of free carbon increasing with the content of carbon present, iron carbide. At first the latter remains in solution with the free carbon (austenite). If, however, its quantity increases above a certain amount, the alloy separates into two parts. In the one part the free carbon prevails; in the other the carbide of iron (martensite) prevails. With falling temperature the amount of the iron carbide increases, as does also the martensite, while the quantity of the austenite decreases until at length only martensite is present.

Iron and Steel.—The use of finely divided iron ore obtained by a concentrating process was described in a paper by Prof. J. Wiborgh, of Stockholm, read at the autumn meeting of the Iron and Steel Institute. By the introduction of the methods of separation mentioned, the power of enriching iron ores has been greatly increased, but the advantage is qualified by the circumstance that the product obtained is usually in the form of fine powder, which limits its utility to the

smelter. The paper showed how the material may be utilized by direct addition to the charges in the blast furnace, by agglomeration previous to charging in the blast furnace, as a refining or softening material in the open-hearth furnace, and for the production of sponge iron for use in the open-hearth furnace.

The "Kraft" smelting works at Stettin, Germany, are founded on a new principle, and are specially intended to produce pig iron to compete with that imported from England, Sweden, and Spain. The raw materials for producing the pig iron are iron ore, coke, air, and flux. The carbon of the coke serves three purposes in the furnaces—viz., to withdraw the oxygen from the iron ore, to char the iron thus obtained, and to produce the requisite heat. For making coke horizontal furnaces with horizontal channels are used. The finely powdered and washed British coal is put into the furnace by means of a high gangway, and the process of distillation is so conducted that it is able to stand the friction of the ore in the furnace and of the blast. The gas thus formed is used to heat the coke furnaces after the tar has been separated by cooling, and after the ammonia water has been obtained from the ammonia gas by means of suitable washing arrangements. This is manufactured into sulphate of ammonia. Considerable economies are effected by improvements in the arrangement and manipulation of the furnace. Formerly the gases which accumulated, and which consist of 75 per cent. nitrogen, 22 per cent. coal oxide, and 3 per cent. carbonic acid, were allowed to escape; now they are burned under the boiler, and the coal oxide is used to produce the steam for the blasts and the electrical machinery. Attempts have been made for some time to utilize the blast-furnace slag, which consists of calcium, aluminum, and silica. This has now been done, and the slag is used in large pieces or in cast blocks, which are as hard as granite and have a high specific weight, for streets, dikes, and bank protections. The granulated slag, which is produced by running the liquid slag in moving water, and which has a low specific weight, is used to sand the pathways and pavements and as an isolating material, etc. Bricks are made with this slag mixed with lime, which harden in from thirty-six to forty-eight hours.

The fundamental assumption of a hypothesis for the constitution of steel suggested by Prof. E. D. Campbell, of Ann Arbor, Mich., is that iron forms with carbon a series of compounds, which might properly be termed "ferrocarbons," on account of their similarity in structure to hydrocarbons. This series of ferrocarbons has the empirical formula $(\text{CFe}_3)_n$, or CnFe_3 , and should be considered as derived from the hydrocarbons of the olefine series with the general formula CnH_{2n} by the replacement of the H_2 by the bivalent groups Fe_3 . These ferrocarbons, dissolved in hydrochloric acid, yield as their primary products of solution the corresponding olefines and hydrogen.

The Demenge process of hardening steel ingots, which is in use at one of the principal steel works in France, consists in directly carburizing one of the faces of the ingot at the time of casting by lining one of the vertical sides of the mold with carburizing substances. The carburizing action is prevented from penetrating too deeply into the inside of the ingot by casting the vertical side opposite to the carburizing side. The carburization of the one face by this method is said to be quite uniform. The case-hardened surface is rather rough; but all irregularity disappears in

forging, which may be effected without special precaution and at a comparatively low temperature by the press rather than by the steam hammer.

In a paper read before the Iron and Steel Institute on the changes of structure brought about in steel by thermal and mechanical treatment Mr. A. Sauveur showed that as the smaller the grains of the metal the more ductile and tough it will be, and as the finest possible structure results from heating to Brinell's point W, the temperature at which the passage of cement carbon into hardening carbon during the heating of steel takes place—namely, from 655° to 730° C.—it is evident that every finished piece of unhardened steel should be heated to that temperature.

The difficulty of machining so hard a metal has hitherto prevented the use of manganese steel in the construction of burglar-proof safes, for which it is in other respects eminently adapted. This difficulty has been at last overcome. Experiments with gun cotton and dynamite on manganese steel plates are said to have demonstrated that the resistance of this metal to the action of explosives is unequaled by that of any other metal at present known.

In the electric welding of tram-rail joints as practiced at Buffalo, N. Y., the bar used for welding is $1 \times 3 \times 8$, and this joining of steel to steel and the increased carrying capacity owing to the bars at the joints results in a joint being a place of least resistance. The plant in operation for the purpose of welding consists of five cars. One of these is a sand-blast car that runs in advance of the welding car and prepares the joint. The other cars are the welding car, the transformer car, the motor and booster car, and a car that runs in the rear to smooth any rough places about the joint. After the welding bars are placed over the joint the jaws of the welder are applied to them, and a pressure of about 1,400 pounds is given by means of a hydraulic jack connected to the upper end. The current is then turned on, and the metal becomes brighter and brighter until the weld is completed, after which the current is turned off and the pressure is increased to about 35 tons. While under this pressure the weld is allowed to cool, after which the car is moved back about 6 inches and the jaws are applied to the other end of the bar, where the process is repeated. The other end is treated in the same manner. In other words, the center weld is made first, and then the end welds. Artificial means of cooling are used, and as the bars cool they exert a powerful influence in bringing the rail ends close, so as to make a tight joint. The current for the operation of the plant is taken from the trolley-wire service. It would be expected, from considerations of the action of heat upon metals, that rails welded in this way would buckle when they experienced a considerable rise of temperature or snap when the temperature was very low, but, as a matter of fact, welded rails neither buckle nor break. By applying immense pressure to the material during welding the length of a continuous rail made by this process is said to have no limit except the length of the line itself.

In special examinations of steel rails which had broken under traffic Mr. W. G. Kirkaldy found that the breakage resulted from failure beginning at the top, and that the deterioration was confined entirely to the top or running head. It was of the nature of a mechanical hardening of the surface under the action of the rolling load. In some cases it further developed into a species of disintegration by the formation of minute

transverse cracks, which by gradual deepening ultimately resulted in failure unless the rail was removed in time. Sir W. C. Roberts-Austen supplemented the reading of Mr. Kirkaldy's paper in the Institute of Civil Engineers with a statement of the principles that guide microphotography of steel rails. The most generally useful information regarding the structure of a steel rail is obtained by treating a highly polished surface of the section with an effusion of licorice in water, which stains the pearlite a dark tint and leaves the ferrite unacted upon. The most convenient magnification is between 100 and 150 diameters. Normal rails have thus been shown to consist of patches of pearlite set in ferrite, and, although the structure is common to all rails, the ratios of the areas differ widely, the amount of carbon increasing with the area of pearlite. If the ferrite is arranged in large, inclosed polyhedrons, the temperature to which the rail was raised before rolling was too high. The strength and intensibility increase as the size of the grain diminishes, and closely interlocking ferrite and pearlite represent the condition which most favors the prolongation of the life of the rail.

In a paper on the value of the microscope in steel working, read before the British Iron and Steel Institute, Mr. C. H. Ridsdale affirmed that the time has arrived when it should be recognized that composition only indicates such well-defined effects as are generally understood within certain narrow limits of treatment, which are termed "normal." Outside these limits the effect of the treatment far outweighs that of the composition.

It is represented that the Austrian and Russian governments print their bank notes from steel-faced electrotypes made by the electrolytic deposition of iron from a bath prepared according to the formula of Klein (ferrous and magnesium sulphates) under special conditions of temperature and current density. Herr Haber claims, in the *Zeitschrift für Elektrochemie*, that the advantage of plates prepared in this way lies in the hardness and fineness of the metal which is first deposited and in the delicacy of the copy of the original which is thus obtained.

The most remarkable magnetic effect produced by aluminum upon steel was found by Prof. Barrett to be the reduction of the hysteresis loss. The permeability of nickel steel was shown to be very much influenced by annealing. It was found that the addition of a small quantity of tungsten to iron hardly affects the maximum induction, yet increases the retentivity and coercive force. The experiments show that the best steel for making permanent magnets is one containing 7½ per cent. of tungsten.

The removal of mill scale from forgings and plates has always been a matter of considerable difficulty, as the scale is in many instances one twelfth of an inch in thickness. The usual practice is to place the iron in a solution containing 1 part of hydrochloric or sulphuric acid to 10 parts of water for from half an hour to twenty-four hours. The British Admiralty specify that all steel steam pipes, boiler and collector tubes, and all plates for boilers shall be pickled in a solution consisting of 19 parts of water and 1 of hydrochloric acid until the black oxide and scale formed during the process of manufacture are completely removed. During the process of pickling large quantities of magnetic oxide and scale become detached from the plates, which, if allowed to remain in the pickle to be further acted on by the acid, form a serious source of loss. In an invention by Mr. Sherard Cowper-Coles for

preventing or diminishing this loss a scale collector is placed within the pickling tank in any convenient position, and is connected by means of terminals to a depositing or electric-lighting dynamo. In the case of large baths two or more collectors can be employed, or only one may be used, which is moved about to different parts of the bath at suitable intervals. From time to time the scale collector is taken out and the adhering scale is removed either by breaking the circuit or by means of a suitable brush or scraper. It is claimed in behalf of this apparatus that a great saving of acid is effected when it is used; that it can be attached without any difficulty to any ordinary lead-lined pickling vat, and does not require skilled labor to look after it; that all the magnetic oxide or scale on the plate is collected almost as soon as it leaves the iron or steel, instead of being allowed to remain in the solution and be acted upon by the acid as at present; and that it opens the way to considerable economy in large works where much acid is used.

Gold and Silver.—An electrolytic apparatus recently introduced for the extraction of gold may be used, it is claimed, for freeing the metal from any auriferous material by direct chlorination and the simultaneous generation of sodium amalgam, or it may be employed as a separate generator of chlorine gas and sodium, to be used afterward in connection with gold extraction or for the electro-deposit of gold from solution.

In the assay of gold bullion at the United States Mint, as described by Alexander E. Outerbridge, the bullion is first weighed in the "deposit weigh room," and is then sent to the "deposit melting room." Here it is put into a crucible, which has been previously heated in the melting furnace, and is covered with a thin coating of borax, which forms a sort of fluid glass, and acts as a screen to protect the metal when it is molten from the oxidizing influence of the air. The fluid mass is actively stirred for the purpose of rendering it thoroughly homogeneous, and the metal is then cast into an iron mold, called a "shoe," and plunged into water to cool and to dissolve off any part of the borax glass which may have adhered to its surface. A slight loss of weight usually occurs during this process, in consequence of a partial refining out of the base metals, and the new weight is that with which the depositor is credited. In the assay or analysis the assayer first determines approximately the relative proportions of the metals existing in the alloy, and from this bases his more careful determinations. A half gramme of the alloy is weighed off and wrapped in an envelope of pure lead in the form of a bullet. The bullet is placed in a small cup made of calcined bone dust, which has been brought to a white heat. The mass melts immediately, and the lead, oxidizing rapidly by absorbing oxygen from the heated air that passes over its surface, sinks by virtue of the extreme fluidity of the oxide into the pores of the cupel, where it is absorbed rapidly, carrying with it also all the base metals that may have been originally combined with the alloy, while the precious metals, not being oxidizable, simply melt, and are not so fluid as to be capable of sinking into the cupel. A separation thus takes place, and at the moment when all the base metal is removed a beautiful "flash" is observed to take place on the surface of the metal. The "button" of purified gold and silver resulting from this operation is next weighed. The loss indicates the proportion of waste metal. Another weighing of the sample is

then made, pure silver in the form of fine granules is added in the proportion of about 2 parts of silver to 1 of gold, the alloy is inclosed in a sheet of lead and cupelled as before. The silver button remaining is laminated, coiled into a roll called a "cornet," and boiled in nitric acid. The acid dissolves the silver, leaving a little roll of nearly pure gold. This gold cornet is then annealed in the furnace to give it toughness, and is finally weighed. The weight represents the proportion of pure gold. The proportion of silver is ascertained by subtracting the weight of pure gold plus the weight of the base metal from the original weight of the assay sample.

Charcoal is used in Australia to precipitate gold on a large scale from cyanide solutions; but it appears from a paper read by Mr. J. J. Lowles at the Institute of Mining and Metallurgy, giving the details and results of the process, that the expense and inconvenience are considerably greater than in zinc or electrotpe precipitation. The chemical interaction involved in the precipitation is not understood.

The accepted theory of the chemical reactions which occur in the pan amalgamation of silver has been since the experiments of Hague that cuprous chloride is formed by the interaction of common salt, bluestone, and metallic iron, and is instrumental in reducing sulphide of silver. From a series of experiments performed by him, however, Mr. H. F. Collins finds that a chloride ore is readily treated in an iron pan without bluestone or metallic copper, the silver compounds being directly reduced by the iron. In the case of sulphide ore treatment is facilitated by the addition of sulphate of copper, which is readily reduced to metallic copper by the iron. The copper, whether amalgamated or not, acts on sulphide of silver, reducing it to metal and enabling it to be taken up by the mercury. On the other hand, cuprous chloride, a still more energetic agent in reducing sulphide of silver, never exists in the pan. In this way the comparatively bad results obtained in the treatment of sulphide ores in the presence of metallic iron are explained. The use of copper-bottomed vessels in the treatment of sulphide ores has been practiced for more than a century. In such vessels cuprous chloride is formed in considerable quantities.

Specimens of native silver accompanying matte and artificial galena, exhibited by Prof. Liveridge at the Royal Society of New South Wales, were obtained from between two courses of brickwork in the arch over the vault of an old reverberatory furnace; the upper course had been raised bodily but remained intact, and the space between became filled to a thickness of about 4 inches with a layer of clean matte. The metallic silver occurred on the surfaces in the cracks and crevices of the matte and bricks.

Among experiments reported by Mr. Breakell to the Institution of Mining Engineers as bearing upon the value of Russell's modification of the hyposulphite process is one proving that the presence of copper increases the volatilization loss of silver in chloridizing roasting. On the other hand, metallic silver and sulphide of silver, which are always present, especially in badly roasted charges, are readily dissolved by hyposulphite solutions containing copper, though not readily acted on in its absence. It follows that the presence of copper should be avoided in the furnace charges, and that it may be added with advantage in the later stages of the process.

As a cheap, simple, and practical method of desilverizing copper Preparator Joseph Girard, of the Faculty of Sciences of Paris, recommends

treatment with a mixture of sulphuric and nitric acids in the proportion of 8 parts of sulphuric to 1 of nitric acid. Sulphuric acid attacks silver very slowly in the cold, and has no action on copper; while nitric acid attacks silver instantly, forming nitrate of silver, and acts violently on copper, producing nitrate of copper and large quantities of dioxide of nitrogen, which is converted on contact with the air to the peroxide. The mixture designated gives the desired effect of dissolving the silver, while the copper is not attacked. The coating of silver is converted into the nitrate and sulphate; these salts are easily precipitated, after 8 or 10 volumes of water have been added, by a few drops of hydrochloric acid. The chloride of silver is then separated by agitation. The acid liquid is drawn away by successive siphonages, and the pure salt is obtained by filtration and washing. In case colored spangles are the objects treated, the coloring varnish is removed by immersion in a bath of caustic soda or Roman potash at a temperature of 45°-50° C. The copper, not having been acted upon, is recovered by simply withdrawing it from the bath and washing. The silver is in the state of a chloride, and is reduced to the metallic state by treating with carbonate of soda or by passing a current of hydrogen over it.

Aluminum.—Some very extensive deposits of bauxite—a hydrated oxide of aluminum used largely for the extraction of the metal—have been discovered by officers of the Department of Mines in New South Wales. Hitherto, its value not having been recognized, the ore has been used largely for road making. Three samples, however, recently analyzed were found to contain respectively 58.31, 35.28, and 39.82 per cent. of alumina, the first sample being richer than the bauxite ores of France, Austria, or the United States, which are at present the main sources of supply.

The results of experiments by M. A. Ditte on the corrosion of aluminum by saline solutions show that the metal is at first vigorously attacked, but that a coherent protective layer of alumina is soon formed. In presence of air, however, the corrosion goes on, and if an aluminum plate has been immersed in a salt solution and then only imperfectly washed the attack slowly continues, the surface becoming more and more easily affected by other reagents.

Five thousand tons of aluminum electric conductors were used on railways in the United States in 1898, representing an outlay of \$2,000,000. While the conductivity of aluminum is inferior to that of copper, its weight is very much less, and while it does not solder so well its tensile strength is much greater, so that considerably longer spans can be constructed between poles.

Several explosions having been recorded within a few years past in factories where aluminum-bronze powder is ground, M. Stockmeier has made experiments with a view to ascertaining under what circumstances explosions are possible. He has found that the powder itself is stable both to shock and while being ground. When mixed with chlorate of potash it detonates when struck or by simple rubbing. It can also be detonated by means of an electric spark when shaken up in a vessel containing air. Aluminum bronze is capable of decomposing water; the quantity of hydrogen produced varies under certain conditions, such as the nature and quantity of the grease always present. The bronze powder is hygroscopic, and, according to the author's experiments, it is capable when dry of absorbing as

high as 1.40 per cent. of atmospheric moisture. Thus in grinding up 5 or 6 kilogrammes of bronze powder at 1.4 per cent. of water we can produce from 43.4 to 52.08 litres of hydrogen. This hydrogen forms with air a detonating mixture, which may be exploded by a spark produced by the passage of a stone or other foreign body through the rollers. The most effective method of preventing these explosions would be to replace the air which comes in contact with the powder by an inert gas, but this is impracticable. All risk of explosions may, however, be avoided by observing certain precautions as to the dryness of the powder, evenness of temperature, ventilation, cleanliness, etc.

Alloys.—In a review of the results of a study of some alloys with iron carbides, mainly manganese and tungsten, M. S. de Benneville says that liquid iron does not differ as a solvent from other liquids—for example, water—except in the comparatively greater complexity of its molecular structure. On the cooling of such a mass containing in combination other elements, according to the conditions of such cooling and the volume and chemical affinity (for the solvent) of such elements, the solidified mass would present a structure homogeneous throughout, through intermediate forms, to a highly segregated and crystalline condition, in which a number of definite compounds have been produced. Such definite compounds in iron are present in two forms: (1) Those common to alloys of wide range of composition, Fe₃C, and the prismatic forms found in manganese and chromium carbides, phosphides, and sulphides; and (2) compounds varying in composition from one alloy to another, and dependent within narrow limits on the conditions of cooling, and often on the immediately surrounding magnesia from which the constituents are drawn. Such are the granular residues, differing only in degree from the ground mass of the alloy. With the ground mass of the alloy, directly comparable with vitreous structure of basalt, there is found a regular gradation in iron alloys, and they are to be classed according to the amount of differentiation undergone. Iron carbides tend to form homogeneous masses, in which definite compounds are of minor importance, the great bulk of the alloy entering into the ground mass. Rapid cooling preserves this structure. Slow cooling promotes crystallization. Owing to the tendency to form ground mass, iron carbides are more subject to control even in presence of elements with which iron forms inert compounds; if present in small quantity, limits of homogeneity are comparatively wide. To a considerable extent this is also the case with ferro-manganese, but definite compounds (of form 1) take on a more regular form, and the granular masses constitute a considerable percentage of the total mass. In carbide with the sixth family—tungsten, molybdenum, and chromium—definite crystallized compounds are an important factor, and the dominant influence of the added element is shown in the chemical inertia of the granular residues sharply differentiating them from the soluble portion to an extent not found in iron carbide or ferro-manganese, in which the separation chemically from the ground mass is not marked. Such elements, when present in large quantity, are less capable of control.

In his fifth report to the Alloys Research Committee of the Institution of Mechanical Engineers Sir William Roberts-Austen describes a long series of investigations by means of cooling curves of the carburized iron series of alloys, usually known as steel and cast iron. He shows from

their results that these alloys behave exactly as saline solutions do, and he has thus afforded a basis for much of the hitherto somewhat obscure procedure in the industrial treatment of iron and steel.

In a new method of producing a hard-faced armor plate of uniform composition the inventor, M. Werth, manager of a large iron and steel works in France, takes advantage of the fact that by suitably controlling the process of cooling it is possible to obtain some of the newer alloys of iron and steel with nickel, cobalt, and manganese in either a hard or a malleable condition. The inventor contends for a plate having the same chemical composition throughout, the hardening of the face being effected by tempering. In the working of his process he finds that when the steel is alloyed with suitable proportions of the other metal it is possible to obtain the alloy in a hard state by heating it up to a bright red and allowing it to cool in the air; whereas if it is heated only to a dull red and cooled, it will be malleable and comparatively soft.

In a paper before the American Institute of Mining Engineers Mr. E. S. Sperry has pointed out that the occurrence of cracks during the rolling of brass is often due to the presence of impurities in the copper of the alloy. In some of his investigations the author added to a brass composition, made of 60 per cent. of pure copper and 40 per cent. of zinc, quantities of antimony varying from 0.01 per cent. to 0.65 per cent., and tested in the rolling mill the behavior of the alloys thus obtained. When the percentage of antimony reached as much as 0.02 per cent., the fracture of the rolled metal indicated its presence. The author therefore believes that the presence of antimony in electrolytic copper is the cause of the unreliability of brass in rolling.

An alloy of aluminum and magnesium considerably lighter than aluminum has been obtained by Mach. With 10 per cent. of magnesium the alloy resembles zinc; with 15 per cent., a variety of brass; and with 25 per cent., a kind of bronze. All these alloys can be soldered. The alloy of from 10 to 12 per cent. of magnesium, which has been more fully studied, is nearly as white as silver, and hard enough for a sharpened piece to cut aluminum. It can be turned, bored, and tapped, and seems to be well adapted to the making of instruments of precision, as in the mounting of lenses, graduated circles, etc.

A new form of metal, denominated "copper-steel," has been brought out in Paris. It is described as possessing a very high resistance, and can be forged like iron. It is manufactured by a process during which zinc or its alloys is employed for retaining a certain proportion of iron, nickel, or chromium in the form of oxide, and reducing and incorporating it in a state of fine division in the presence of furnace gases. A number of new alloys, it is stated, are thus obtained, and among them the metal referred to under the title designated.

The leading-in wires for attaching the carbon filament and making electric connections in electric incandescent lamps have so far been made of platinum, because that was the only metal known which had the same rate of expansion and contraction as glass, and the only one which could be used without a liability to generate a leakage of air into the bulb. It has recently been found that the coefficient of expansion of iron-nickel alloys varies according to the percentages of the two metals present, and that one containing 45 per cent. of nickel has the same rate of expansion as platinum. It may therefore be pos-

sible to use this alloy instead of platinum in the lamps.

One of the more recent applications of the X-rays has been to the study of metallic alloys. When an alloy is composed of two metals having different transparencies to the rays radiographs taken of thin plates show the separation of the two during solidification. Thus it has been observed that an alloy of aluminum and gold shows on solidification the segregation of a definite compound of the two metals, which separates in well-defined crystals.

In an investigation conducted by the German Admiralty for determining the action of sea water on alloys 9 out of 12 strips each of copper, zinc, tin, aluminum, and iron-aluminum alloys were immersed in sea water, and the remaining 3 of each set were reserved as standards. The experiments were each continued for two years, while 3 strips were withdrawn from the water at the end of eight months for testing of their physical properties and comparison with the standards. The iron, tin, and aluminum bronzes deteriorated but little, and showed no marked differences in appearance, weight, or strength, even after from two to two and a half years' immersion. When iron and tin bronzes were in contact a serious alteration of the iron material was noticed. Cast and wrought bronze behaved in a similar way. The conclusion was deduced from the tests that the corrosive action between the different metals depends on their position in the electrical scale. Thus pure aluminum bronze is practically proof against the action of sea water when in contact with metals that are electro-negative toward it. In experiments on the deterioration of certain alloys under the action of the atmosphere, it was shown that iron bronze suffered practically no injury, but alloys containing a large proportion of zinc were easily corroded.

Observations for the determination of magnetic properties have been made by Dr. S. W. Richardson upon four alloys of iron and aluminum, containing respectively 3.64, 5.44, 9.89, and 18.47 per cent. of aluminum. The alloys were used in the form of anchor rings, and were wound with primary and secondary coils separated by asbestos paper. The temperature applied ranged from -83°C. to 900°C. The chief conclusions to be drawn from the experiments may be summed up as follow: 1. The alloys behave magnetically, as though they consisted of two distinct media superposed. 2. The general roundness of the curves and their lack of abruptness near the critical point seem to indicate that the alloys are heterogeneous in structure. 3. The permeability decreases with rise of temperature near the critical point until a minimum value is reached, when further rise of temperature produces very slight diminution, if any, in the permeability. 4. The experiments suggest that the maximum value of the permeability for an alloy containing 10 per cent. of aluminum is reached at about -90°C. 5. An alloy containing 18.47 per cent. of aluminum has a critical point at about 25°C. , and gives no indication of temperature hysteresis. A second maximum on the induction curve was found at high temperatures, which becomes less and less noticeable as the field is increased.

New Processes.—The Cowper-Coles electro-galvanizing process, which has been used for coating boilers of the water-tube class and a large number of torpedo-boat destroyers, has been greatly improved recently, on account of which a number of plants employing it have been remodeled. The system consists in using zinc dust

for regenerating the electrolytes, with either soluble or insoluble electrodes. The solution, which contains most free acid, and which rises to the top, flows over a wooden sill placed in one corner of the zincing tank into an overflow tank, from which it gravitates into a compressed-air tank, when air is blown in and the solution is forced up into the regenerating tanks.

Wilder's patented process for coating steel and iron consists in the use of a bath composed of zinc, tin, and aluminum. The mixture is claimed to produce a coating on iron and steel much superior to any other known. It is so firmly adherent that the sheets will stand working after it has been applied, will resist corrosion, and can be heated red hot without injury. The coating is applied by the same method as galvanizing—that is, by dipping the cleansed sheets, etc., in the melted alloy.

In the Walrand-Legeneisel steel process the castings may be made directly from the converter. The essential feature of the process is the addition of ferro-silicon containing from 10 to 12 per cent. of silicon to the charge in the converter when the flame drop takes place, and then making an after blow. The oxidation of the silicon generates a large amount of heat, which is imparted to the metal, whereby it becomes strongly superheated. The metal is very fluid, castings made with it are free from blowholes, and by the use of the process intricate castings can be made down to a fraction of a pound in weight.

An acid-blast process for etching, by Mr. Louis Edward Levy, consists essentially in the application of a powerful blast of atomized acid or other erodent in place of the customary immersion bath. Along with the means of producing the requisite blast of comminuted acid and applying it for the purpose in view is combined an arrangement for the necessary washing of the plate. The method, while primarily intended to facilitate the etching of photo-chemical-printing plates, is also applicable in all cases where the chemical erosion of metals or of glass is to be effected.

In a method of coating wood electrically with deposits of silver or copper, described by Mr. C. F. Barnes, the wooden article is first saturated with copper sulphate by immersing it in that substance; it is then removed and thoroughly dried. It is next exposed to the action of hydrogen-sulphide gas. This converts the sulphate of copper to the sulphide, which is a conductor of electricity and is insoluble in aqueous solutions. The article is then wrapped with fine copper wire and suspended in a solution of common salt at the cathode, when a current is passed. The copper sulphide is thereby speedily reduced by the action of the cathode products to metallic copper. When the reduction is supposed to be completed the article is transferred to an ordinary copper-plating bath, where a coating of copper of any desired thickness may be formed upon the surface. For silver the process is modified by immersing the object, after preliminary coppering, in the silver-plating bath.

Mr. Alexander Dick, who some time ago devised a method and a machine for forcing metals in a plastic condition through dies, has since succeeded, after many experiments, in applying his process to the making of tubes. The process is also found very suitable for the production of rods and sections of various lengths, and, owing to the pressure under which the articles are produced, they acquire, it is said, a homogeneity that can not be reached by other methods. An indication of the principle of the appli-

cation of the process is given by the statement that in the absence of atmospheric air and consequent tendencies to oxidation copper and its alloys are welded or reunited in such a manner that the structure can not be distinguished from casting.

An electrolytic process for making parabolic reflectors for search lights, described by Mr. Sherard Cowper-Coles in the British Association, consists in using a glass convex mold, on which a coating of metallic silver is chemically deposited. This coating is then polished, so as to insure the adherence of the copper backing to the silver. The mold thus prepared is placed in a suitable ring and frame and is immersed in an electrolyte of copper sulphate, where it is rotated in a horizontal position at the rate of about 15 revolutions per minute. The silver, with the firmly adhering copper, which together form the reflector, is subsequently separated from the glass mold by placing the whole in cold or lukewarm water and gradually raising the temperature of the water to 120° F., when the unequal expansion of the two substances causes a separation of the metal from the glass mold. The concave surface of the reflector obtained is an exact reproduction of the surface of the mold. It has the same brilliant polish, and requires no further treatment to answer all the purposes of a reflector, except that it must be coated with a film of some suitable metal to prevent its tarnishing. Palladium is found to answer this purpose best, as a bright coating can be deposited rapidly to any desired thickness.

Apparatus.—A paper read by Mr. A. P. Head at the annual meeting of the English Iron and Steel Institute described the tilting open-hearth furnaces that are coming into use in the United States as presenting a substantial advance in metallurgy likely to have far-reaching effects in the future of the Bessemer and open-hearth processes. It is regarded as a link between the Bessemer converter and the open-hearth furnace in that it partakes in its construction of some of the characteristics of both. The author, at the meeting of the British Iron and Steel Institute, described two forms of this furnace and an improved design. Among the advantages claimed for the tilting over the fixed furnace are that the slag can be poured off at intervals during the melting process, and that as the pouring hole of the furnace is above the level of the bath in the normal position it is never closed up, but only loosely covered to exclude the air. Consequently the time taken to open the hole before pouring and to repair and close it after pouring is saved, as well as the labor connected therewith. Further, since no injury is done to the pouring hole by opening and closing, the life of the furnace bottom is much prolonged. The cold air which enters at the end ports when the furnace is tilted is of advantage in that it chills the layer of slag on the surface of metal, thereby effectually preventing it from boiling and spurting. A considerable saving of metal is effected in the tilting furnace by the fact that every particle of metal and slag can be removed after each charge, while in the fixed furnace small pools of metal lodge in the inequalities of the bed and can not be removed. Further advantages are that in it the tapping of the charge can take place at the exact moment when the metal is of the desired composition; that in case of any hitch or accident the furnace can be instantly tilted back and the pouring stopped; that it lends itself readily to the transfer of metal from an acid to a basic furnace; that the whole body of the furnace is easy of

access for repairs or examination; and that the furnace bodies, being much stronger than those of fixed furnaces, do not become deformed. Two objections to the tilting furnace are mentioned: First, that it is somewhat more expensive than the fixed furnace; and, second, that the inlet of cold air during pouring tends to oxidize the manganese, which must be made up for by further additions in the molds.

An apparatus for casting sandless pig iron in insulated molds, so as to constitute a good crystalline fracture equal to that of the pig iron made in sand beds and at a reduced cost of production, was described by Mr. R. H. Wainford at the autumn meeting of the British Iron and Steel Institute.

A blast furnace in which gas is used instead of solid fuel, and in which it was represented that iron or steel may be produced direct from the ore, was described by the Russian metallurgist D. Tschernoff at the same meeting.

Among the methods in which electric motors are applied to the operation of machines in steel works is their use, now common, with charging and drawing machines for placing ingots and slabs in heating furnaces and of machines for charging stock into melting furnaces. A considerable development has taken place in the use of electro-magnets to lift plates, bars, and ingots. Formerly a plate was lifted by hooks catching the edges, the hooks being at the ends of chains actuated by a crane. Now the magnet is simply applied to the center of the plate, the current is switched on, and the plate is raised by the crane carrying the electro-magnet. When the plate is placed where it is wanted the switch is again turned, and the plate is released and left in position.

A new dipping needle for making magnetic surveys was described by Prof. Henry Louis at the annual meeting of the British Iron and Steel Institute. The author represented that the best points of the Swedish and American dip compass were combined in it, with a few modifications introduced by him. The instrument indicated the presence of magnetic minerals, and would be of assistance in showing the direction of prospecting operations. Prof. Bauerman, an old geological surveyor, thought it would be an admirable addition to the instruments already in use.

Miscellaneous.—The art of incrusting iron and steel with precious metals is carried on in a primitive style and by methods of considerable antiquity in Spain, at Eibar, in the province of Guipuzcoa. Very fine specimens of a great variety of patterns are turned out from the shops—jewels, umbrella handles, and trinkets of different kinds—while the designs in gold and silver are very elegant. The work is executed in four styles—*repujado*, or *repoussé*; *incrustado*, or incrusted; *damasquinado*, or damascened; and *relieve*, or relief. The *repujado* is done with the hammer and stamp, according to the workman's own taste and without any oversight, and the figures designed by him are quite original. The *incrustado* and the *damasquinado* are both executed by incrusting a gold wire in the steel; but in the *damasquinado* the surface is made absolutely smooth, while in the *incrustado* the wire projects in light relief. The relief proper is the most difficult of all to execute, and is done by only a few of the more skillful workmen. In all these styles when the work is done the object is *emparonado*, or bronzed—that is, the surface of the iron or steel is given a dark *patina*, sometimes polished and brilliant, at other times *tern*, which heightens the effect of the precious metal.

Experiments by M. Considère to test the value of iron bars when used to strengthen cement or concrete have resulted in the conclusion that material strength is added to the whole structure by such employment; and, further, that mortar when strengthened in this way can stand elongations twenty times as great as would result in breaks if no such aid was given.

An illustration of the power of galvanic action in harbors is furnished by a case recently decided in an Italian court, in which judgment was awarded against the owners of certain wooden yachts with coppered bottoms in the harbor of Leghorn on account of damage done by them to iron and steel vessels in the same harbor. The facts of the damage and of its origin in electric currents provoked by the copper-bottomed vessels were clearly established.

The composition of the new Krupp armor plate is given by Capt. O'Neill, of the Bureau of Naval Ordnance of the United States, as: Nickel, 3.5 per cent.; chromium, 1.3 per cent.; carbon, 0.2 per cent.; manganese, 0.4 per cent.; copper, 0.07 per cent.; phosphorus, 0.03 per cent.; sulphur, 0.03 per cent.; silicon, 0.15 per cent. The chromium has been added comparatively recently to assist hardening, but oil instead of water has now to be used for cooling, otherwise cracking would probably take place in the carburizing furnace.

W. Gowland opened a paper read before the Society of Antiquaries on the Early Metallurgy of Europe as illustrated by ancient remains and the primitive processes surviving in Japan by observing that few appliances of prehistoric metallurgy were simpler, either in form or construction, than the ordinary Japanese furnace. It consisted merely of a shallow hole in the ground, yet all the copper, tin, and lead required in the country had, till about thirty years ago, been extracted from their ores by means of it, and, although it was not used for iron, a skillful worker had no difficulty in producing that metal by its aid. By means of the light thrown on rudimentary smelting processes by this furnace and the method of working it, aided by the data afforded by the remains found on ancient smelting sites in Europe, by the structure of the lumps of copper found in the bronze founders' hoards, and by the characteristic features of the Roman cakes of copper found in north Wales, the evolution of the copper-smelting furnace in Europe was traced, through various stages, from the domestic fires of Neolithic man up to the low hearth of Roman times. The men of the pile dwellings in Switzerland and the upper Austrian lakes melted copper and bronze for casting by the application of heat above and to the inside, and not to the outside, of their crucibles. The development of the tin-smelting process from small, shallow trenches in the ground, in which the ore was reduced by means of wood fires, is of considerable interest, as similar trenches, with wood as fuel, continued in use in Germany for the extraction of bismuth up to the middle of the sixteenth century. The Japanese furnace for the extraction of iron from its ores, which is still in use in some districts, was in its rudeness and simplicity almost without a parallel in any region of the world. It was built of common clay, and only lasted for a single operation, when it had to be pulled down in order to extract the iron which had been produced. In Europe the early furnace seems to have been a shallow, conical hole in the ground, which at a somewhat later date took the form of a similar-shaped cavity inclosed by a wall of rough stones built on the

surface. In the Danubian basin the typical furnace, even in prehistoric times, was a small shaft furnace built in a bank of earth. Evidences were adduced by the author indicating that the introduction of the extraction of iron into Europe took place along two lines—one from Egypt to Etruria, and the other from Asia by the north of the Euxine to the Danube, and thence to central Europe. In the furnaces of either origin wrought iron, sometimes of a steely nature, was produced direct from the ores.

METEOROLOGY. Temperature.—Observations on the temperature of the free air and its variations were made every month from April, 1898, till the publication of the report by means of 90 unmanned balloons sent up from the observatory of M. Teisserenc de Bort at Trappes, France. Seven of the ascents exceeded 14,000 metres, 24 went above 13,000 metres, and 53 attained a height of 9,000 metres. The results were deduced from the discussion of the observations that the temperature at various heights presents during the course of the year important variations and greater ones than had been admitted from older series of observations made in manned balloons; that the temperature of 0° C. is found at very different altitudes, varying from the level of the ground in winter to above 4,000 metres in summer; that the isotherm of —25° C. is met with at the height of about 3,000 metres in winter and above 7,000 metres in summer—in September it was observed even above 8,000 metres; that the isotherm of —40° C. was several times found as low as 6,000 metres, and is generally met with about 9,000 metres and even higher toward the end of summer; and that the temperature of —50° C. has never been recorded below 8,000 metres. There appears to be a marked tendency to an annual variation of temperature even up to 10,000 metres, the maximum being about the end of summer and the minimum near the end of winter. The observations recorded in a table appended to M. De Bort's paper do not show such a rapid variability with height as has generally been supposed; its rate appears, further, to be modified according to the type of the weather.

In an account given in the British Association of the progress made during the preceding year at Blue Hill, Mass., in the exploration of the air with kites, Mr. A. L. Rotch said that the Hargrave kite with curved surfaces had been found more satisfactory than any other form, and that the meteorograph records temperature, humidity, height, and wind. Temperature is found to decrease at first with elevation, and afterward to increase again. The heights attained were, on the average, greater than in previous years. The United States Government had arranged for daily simultaneous observations at two heights in the case of a number of stations, using the kite for the high-level observations. The results were not quite satisfactory, because kites could not be sent up on some days, and it was suggested that on such occasions a captive balloon be employed. In the discussion of the paper Prof. Thomson said he hoped that the variation of atmospheric potential would be investigated by means of kites.

From studies of 51 mild winters experienced in Berlin during the last one hundred and eighty years Dr. C. Hellmann deduces the conclusions that such winters hardly ever occur singly, but in groups of two or three; that they are usually of long duration, from November to February or March. Severe and long late winters (till February or March) seldom occur after mild mid-

winters. In mild midwinters the greatest variations of temperature usually occur in January. After a very mild winter a warm summer is more probable than after a winter which is only moderately mild. Dr. Hellmann pleads for synoptic charts for the whole globe—at least for short intervals if longer periods can not be undertaken.

A review of extremes of temperature published in Symon's Meteorological Magazine gives the highest yearly isotherms as 85° F., a degree which is recorded in three areas—the largest in central Africa south of latitude 18° north; the other in central India, latitude 15° north; and in the northern part of South Australia. The absolute range of shade temperature in the northern hemisphere, and probably in the world, is 217.8°, a figure which is deduced from the absolute maximum of 127.4° in Algeria on July 17, 1879, and the absolute minimum of —90.4° at Werkojansk, Siberia, Jan. 15, 1885. The hottest region is on the southwestern coast of Persia, where the thermometer has not been known to fall lower than 100° F., night or day, for forty consecutive days during July and August, and often to reach 128° in the afternoon. Among the highest shade temperatures recorded are one at night during the Italian occupation of Massowah, when the thermometer is said to have recorded 122° F. Temperatures above 120° F. are occasionally met with in India; 121.5° was recorded at Dera-Ishmail-Khan (latitude 32° north) in 1882, and 126° at Bhag (latitude 29° north) in 1859. At Wilcannia, on the Darling river, New South Wales, shade temperatures varying from 107° F. to 129° F. were recorded on each day from Jan. 1 to Jan. 24 in 1896. Among the low temperatures in addition to the extremes already mentioned is —63.1° F. at Poplar river, North America. The extremes in or near London for one hundred and four years were 97.1° F. in July, 1891, and 4° in December, 1796, and January, 1841.

Clouds.—Simultaneous observations by a number of meteorological services, to continue at least one year, were begun in 1896 to determine the height and motion of the ten standard types of clouds which have been defined by the International Cloud Committee. The part of this work undertaken by the Weather Bureau of the United States has been completed, and will be published in the annual report of the bureau for 1898-'99. This work includes observations made by two theodolites placed at the ends of a long base line, giving the absolute height, velocity, and direction of motion of individual clouds at Washington, and those made with nephoscopes at 14 stations over the districts east of the Rocky mountains, giving the relative velocity and direction of motion. The discussion of the data will show the distribution and average height of each type of cloud for every day in the year, and the depth of the zone or horizontal belt in which each type may occur. Determinations have been made of the direction and velocities of the horizontal motions of the air in each of the eight principal levels on all sides of the areas of high and low pressures as they move over the United States.

The results of the measurement of cloud heights by Mr. A. W. Clayden by means of two cameras 200 feet apart show the existence of greater heights of clouds in hot weather under thunderstorm conditions. In such circumstances clouds may occur at five or six different levels, extending as high as 90,000 feet. The margins of the alto-cumulus and cirro-cumulus clouds are much higher under those conditions than the generally accepted means. A rise of cloud plains takes

place in hot weather, also during the morning and early afternoon, while the lowest altitudes are found during cyclones.

A series of cloud photographs taken by Mr. Alfred J. Henry, of the United States Weather Bureau, is valuable for giving a succession of pictures of the same clouds, showing their variations during the interval, and taken in various azimuths at different stations, so that we get the same formation viewed from different positions. They present the clouds in the form of parallel bands, resembling waves or billows, and record the slight changes in forms or groupings which they undergo from time to time as they are acted upon by slight variations in the lighter air currents, till the billowy appearance finally passes away and gives place to a sky about half covered with cirrus and cirro stratus. Nature observes concerning this method of observation that "the study of such a cloud formation as that pictured here goes a step beyond the reading of instruments, and places in our hands a powerful means by which to investigate the motion of the atmosphere. It can not have escaped general notice that this regular arrangement of streaks presents the peculiarity of covering a considerable extent of the sky almost simultaneously. On a comparatively clear sky these strips of cloud are suddenly formed, and, on the other hand, a sky uniformly covered can in a very short time break up and offer the appearance of these billow waves. This sudden origin of parallel streaks finds a complete analogy in the formation of waves over still water when a slight wind agitates the surface and it is seen to break into ripples over a considerable area. Von Helmholtz, working on this suggestion, has shown conclusively that these billow waves are due to the existence of air strata of different temperatures moving with different velocities, and are produced at the surfaces of separation of these various strata. Travelers in balloons have confirmed this theory from actual experiment, and have shown that the peculiar formation described is encountered at very various altitudes. It may be that the billow clouds are visible to us only under peculiar circumstances of moisture, but the wave motion in the invisible air is probably a most common phenomenon, and one that plays a large part in determining our weather conditions."

In a study of the amount of cloud in Europe during cyclonic and anticyclonic days Dr. C. Kessner has investigated the cloud observations at five principal stations for twenty years (1871-'90), and has followed the plan of selecting the days in each month when the readings of the barometer were lowest or highest. These days, including the days preceding and following that on which the extreme reading occurred, are those called respectively cyclonic or anticyclonic periods. The author finds that in cyclonic periods the maximum amount of cloud occurs only on the principal day in summer and autumn, while in winter and spring a large amount of cloud occurs in the evening of the preceding day as well as on the morning of the principal day. The preceding day has generally somewhat less cloud than the principal day, and almost always more than the following day. This result agrees with that deduced by the late Mr. Ley and by the Deutsche Seewarte with respect to the distribution of cloud in cyclones. In anticyclonic periods the author finds that the least cloud frequency occurs not on the principal day, but on the preceding or following day; this is especially the case at Christiania and Pavlovsk, where the least cloud occurs before the passage of the highest

barometric pressure, and then the cloudiness gradually increases. Generally speaking, however, the principal day is clearest, and next to this the preceding day; but not always, for at Buda-Pesth and Tiflis the day following that of the maximum barometric pressure has less cloud than the day preceding.

Winds.—Besides the mathematical discussions and physical researches, a considerable proportion of the labor of the International Cloud Commission in the United States in 1896 and 1897 was expended upon the determination of the stream lines and vectors of motion which occur throughout anticyclonic and cyclonic regions. An account of this work is given by Prof. Frank H. Bigelow in the *American Journal of Science*. The wind and the lower cloud circulation up to the strato-cumulus type were found to be quite the same in form, though the cloud level is rather more rounded. This movement is very independent of that of the upper cloud region, which is due eastward, or only a little sinuous over the highs and the lows. This is true of ordinary cyclones, but in the case of hurricanes for the South Atlantic States the penetration of the lower circulation into the higher is very pronounced, showing a much deeper disturbance of the air. Cyclones are very thin—only 2 or 3 miles deep—while hurricanes are certainly 5 or 6 miles deep. The anticyclonic and cyclonic areas are hardly to be considered centers of motion except in the very lowest strata, since currents of air blow across them from west to east, even in the cumulus region of the Rocky mountain districts. It is shown that remarkably long streams of air, as from the north Pacific to the lake region and from the Gulf of Mexico to the lakes, counterflow against each other to form the cyclonic circulations. We can not consider these to be due to vertical convections drawing in these masses of air by indraught, since the vertical component ceases at 2 or 3 miles high. Rather the great horizontal convections of the lower strata, caused by the interchange of air between the polar and the tropic zones, produce counter-currents at the cyclone centers, which develop vortices discharging upward into the permanent eastward drift. The fact is cited that a strong and warm current in the cumulus region blows directly from the Pacific Ocean eastward across a cold-wave area, as showing that cold waves are thin masses of air hardly 1 mile thick, produced by surface radiation on the eastern or lee side of the mountains. It is also remarkable to find that the center of the high areas formed by the isobars drawn from reductions made by the Hazen method now employed by the Weather Bureau is often 500 miles distant from that indicated by the vectors of motion.

The results of the nephoscope observations show that a slightly sinuous eastward movement prevails over the high and low areas, as in the cirrus stratum, gradually deepening as the surface is approached, till in the strato-cumulus the gyrotory movement is very marked, and in the cumulus, stratus, and wind levels it is predominant. In the cyclone the local gyrotory vectors show an inward radial component from the bottom to the top, and nothing outward in the upper strata, as Ferrel's circulation requires. They do not show a maximum velocity at a certain distance from the center with a falling off near it, as Overbeck's solution demands, but they increase from the outside up to the center. The components are strongest in the strato-cumulus region, and diminish above and below; they show a continuous inflow everywhere, together with a strong

rotation about the center, such as to cause a true vortex with discharge upward throughout. In the anticyclone on the two outer circles, 750 and 1,250 kilometres radius, there is outflow from top to bottom on all sides. Near the center there is inflow at the top, reversal at the middle, and outflow at the bottom, thus causing a reversal of gradients in the interior of the anticyclone. The entire system of high and low areas seems to be constructed by the counterflow, chiefly in the cumulus and strato-cumulus levels, of long currents, due to horizontal convection; the double action of the pressure—that is, formation of high and low pressures simultaneously in adjacent districts—being referred to the general circulation of the atmosphere, especially the deflecting and centrifugal forces, rather than to local temperature accumulations. The North American continent is the region where cyclones form in large numbers, and Europe-Asia the region where they dissipate, so that the violent general circulation over the United States in the lower strata, as compared to that of Europe, is chiefly responsible for this excess in the production near or in the United States of the local storms of the northern hemisphere. A careful study of these vectors in all strata up to 11,000 metres, or 7 miles, high shows that there is little disposition to conform to the canal theory of the circulation over the hemisphere—namely, that theory which supposes a southward movement in the lower strata from the polar zone toward the tropics, with reversal of the component from east to west at latitude 35°, together with an overflow northward in the higher strata from the tropics toward the poles. The lower strata do not move southward as a whole, and the observations do not indicate that the higher strata are vigorously moving northward; but in each stratum from the surface to the cirrus level about as much air moves north as south, for there are enormous counter-currents passing by one another at the same level, and not over one another at different elevations. This puts a new aspect on the entire problem of the general circulation.

In closing his paper on *Studies of Cyclonic and Anticyclonic Phenomena with Kites* Mr. H. Helm Clayton calls attention to the special value of kites for exploring the air up to heights of between 10,000 and 14,000 feet. "Free balloons can not serve so well, because they necessarily drift with the weather conditions by which they are surrounded, and it is impossible with them to record progressive changes and to compare them with changes recorded at a fixed point at the earth's surface beneath. Mountain stations can not serve so well, because the mountains tend to deflect currents upward, mixing air which would otherwise exist in separate strata. This upward movement might perhaps cause an adiabatic rate of cooling in the air when such a rate does not exist in free air. With captive balloons it has been impossible up to the present time (January, 1899) to reach great heights, and it seems incredible that they should ever be able to withstand such wind velocities as those encountered by the kites on Nov. 24 and 25 (1898) and yet be held safe by a cable of the necessary lightness. Captive balloons could, however, be used with great advantage as an adjunct to kites, lifting them when necessary above the light surface wind into stronger winds aloft, where they could be automatically detached. (It will be observed, in another part of this article, that M. Teisserenc de Bort reports, several months later than the date of Mr. Clayton's paper, having made observations with balloons from his observatory

at Trappes, France, to heights of from 9,000 to 14,000 metres.)

As a result of his studies with kites, Sept. 21 to 24, 1898, Mr. Clayton declares himself convinced, contrary to his previously expressed opinion, that the chief, if not all, the features of cyclones and anticyclones can be explained as having their origin within and surrounding these phenomena. In other words, he concludes that the convection theory, with certain modifications which he suggests, is the true one. Prof. W. M. Davis, on the other hand, in a paper read before the Royal Meteorological Society, Feb. 15, affirmed that it must certainly be made clear to every physical meteorologist that the conventional theory of the circulation of the atmosphere as ordinarily stated was seriously incompetent, for the most striking features in the distribution of atmospheric pressure are not accounted for by it. As long as the effect of the winds in modifying the distribution of pressure is left out of consideration no broad understanding of atmospheric processes can be reached.

Electricity.—Remarking that almost every suggestion that has ever occurred to any one as to the origin of atmospheric electricity and the part it plays in meteorology has yielded only negative results, and mentioning some of the suggestions, Prof. Cleveland Abbe concludes that the problem is too difficult for immediate solution, and must be left to another generation of physicists. On the simple question of the meteorological phenomena that are evidently associated with atmospheric electricity the best physicists do not seem as yet wholly clear as to the method of formation of lightning and auroral discharges, the phosphorescent glow of the clouds, ball lightning, and other everyday phenomena. Many questions concerning these matters crowd upon our thoughts, "but satisfactory replies can be given only after physicists have invented appropriate means of investigation. Meteorological observers may contribute to the solution of the problems by collecting both general data and special observations of exceptional phenomena, but the discussion of the data and the definitive decision by means of experimentation as to the merits of conflicting hypothetical explanations must be left to the leading physicists of the world."

M. A. B. Chauveau concludes, from comparison of curves of diurnal variations of atmospheric electricity traced at different places, (1) that the influence of the soil, which is greatest in winter, intervenes as a disturbing cause in the variation, and (2) that the general law of variation is represented by a simple oscillation having a maximum in the day and a minimum between 3.30 and 4.30 A. M. The author supposes that the principal factor in the influence of the soil is the evaporation of negatively electrified water from the surface of the earth. About thirty different theories have been proposed to explain the diurnal variations in question.

As the result of seven ascensions made for the purpose of obtaining measurements of the distribution of atmospheric electricity in clear weather and of determining whether the balloon receives electrical charges, Dr. J. Tuma finds that the potential decreases with increasing height. The positive charges are therefore accumulated in the lower strata of the atmosphere. During the last four ascents the author was unable to find that the balloons were electrically charged.

The appearance on photographs of lightning of what appeared to be dark flashes as well as

bright ones has attracted considerable attention. The phenomenon has been referred to photographic reversal, due to extreme brilliancy; to a predominance of infra-red radiations; to the existence of flashes deficient in actinic rays; to changes in the density of the air, occasioned by the spark when a dark line with a bright line within it is shown if the air is compressed and a dark line inclosing a light one if it is rarefied; and to some qualities of the photographic plate. The first real light was cast upon the subject by experiments described by Mr. A. W. Clayden, who, having photographed some electric sparks of different intensities, before developing the plates, exposed them to the diffused light of a gas flame. The brilliant sparks then yielded images which might either be called normal with a reversed margin or reversed with a normal core, while the fainter images were completely reversed—or, in other words, came out darker than the background. The "fogging" of the pictures to produce the reversal must be done after the image of the flash is impressed, for if it is done before the image appears lighter than the background. This effect, called "the Clayden effect," is accepted as a satisfactory explanation of the phenomenon by two of the authors who have most studied it—Dr. W. J. S. Lockyer and Prof. R. W. Wood, of the University of Wisconsin. Prof. Wood, on repeating Mr. Clayden's experiments, obtained dark flashes without any difficulty, but as they failed to appear when the light of an incandescent lamp was substituted for the electric spark he concludes that there is something in the spark essential to the reversal. Dr. Lockyer summarizes his conclusions by saying that dark lightning flashes "do not exist in Nature, but their appearances on photographs are due to some chemical action which takes place in the gelatin film."

A peculiar form of lightning sometimes revealed by the photograph is the ribbon flash, of which a photograph was obtained by Mr. W. H. Osborne, of Chardon, Ohio, in the summer of 1898. The picture showed three flashes, of which a distant and faint one at the right and a bright one at the left were simultaneous, while the middle one occurred a few seconds earlier. The thunder was light, yet the bright flash had come to the earth not more than 15 rods from where the observer stood. No marks of the discharge were found upon the surface of the earth. The ribbon of light (the bright flash at the left) was about 8 feet wide. It was seen to consist of 6 lines, approximately parallel, of unequal brightness, a pair of lines being at each edge and a pair near the middle. The space between these pairs was occupied by many nearly horizontal lines and a few oblique ones, while that between the right-hand pair was crossed by oblique lines only. The horizontal lines at the right of the center were curved downward; and this, with the increased brightness of the whole toward that side, suggested that the ribbon of light did not lie in a plane, but was concave toward a point at the observer's left. It was also evident that the ribbon did not stand at right angles with the line of sight, but was nearer the observer at the right-hand edge. A similar lightning flash was described and pictured in the *Electrical World* for Oct. 28, 1898, by Mr. A. F. Kennelly, who suggested a natural explanation for it based upon the condition of the air produced by the wind and by the electrical discharges passing through it. Prof. Trowbridge, of Cambridge, suggests that many apparent phenomena of lightning may be of purely optical or physiological origin.

Weather Forecasts.—The possibility of a scientific weather prediction for several days in advance has been discussed by Dr. Van Bebber, with special reference to the requirements of agriculture. Instead of dealing with the more mobile areas of barometric pressure, as is the usual way, the author keeps in view the behavior of the simpler and more persistent areas of high pressure, among which he distinguishes five principal types in Europe, according to the position of the anticyclonic lines and the direction of the depressions from them. Tables are given showing the frequency in days of the weather types during twenty years and their mean duration. The cases in which the high pressure is situated in the western half of the horizon are more frequent than those in which it lies to the eastward, especially in summer. The duration of the different types varies considerably in the twenty years' period, but the average time is about three days. Although the study refers particularly to the weather of Continental Europe, the method might be employed with advantage in other countries.

In a paper relating to polydiurnal weather types and forecasts Mr. Douglas Archibald has pointed out the existence of types of weather which persist for several days before breaking up, and for which the meteorological conditions can be definitely foreseen. These types have been discussed by Profs. Koppen and Van Bebber and the late Hon. Ralph Abercromby, who divided them into 20 specific sorts. The author shows that they may all be included as subtypes of 4 primary kinds of weather. Their average duration in England is about four days. Some of them seem to succeed other types or to recur. A science of weather types is therefore growing up by which even now the weather may, with due regard to a sudden change of type, be provisionally forecasted in general terms, and particularly for agricultural purposes, for half a week or more.

One of the great needs of the weather services of the United States and Europe, particularly with reference to forecasts, is that of stations in the oceans. The islands of the Atlantic afford sites where a few such stations might be provided, though if they were all occupied they would be long distances apart, and still have vacancies which would have to be filled before a complete service could be constituted. The Central Weather Bureau at Paris has been for several years receiving weather telegrams from the Azores, where two stations have been established by the Portuguese Government at the suggestion of the Prince of Monaco. One of these stations is on the island of San Miguel, in the eastern part of the archipelago, and the other is on the island of Flores, about 300 miles west of this. The station of San Miguel has been telegraphically connected since 1893 with several of the meteorological stations of Continental Europe, and has a supply of instruments, which are added to every year. The station at Flores, established in 1897, is about 1,200 miles from the European Continent, and, being farther advanced in the ocean, is regarded as more important than that of San Miguel. By the aid of these observations the weather stations of Europe will be able to receive notifications of important storms fifty hours in advance.

The investigations of the meteorology of the ocean by the British Meteorological Council in 1898 related to the meteorology of the southern ocean between the Cape of Good Hope and New Zealand and the meteorology of the South Atlantic and the west coast of South America. The council's report represents that the results of the

forecasts published in the morning newspapers show a complete or partial success of 81 per cent., the average for the past ten years being 81.3 per cent., while the results of the special forecasts made for the haymaking season show that 90 per cent. were useful. The success obtained for the storm warnings issued to seaports reached 91.8 per cent.

Miscellaneous.—The observations taken by the United States Weather Bureau in connection with the work of the International Cloud Commission began May 1, 1896, and ended June 30, 1897. One primary base station at Washington, D. C., and 14 nephoscopic stations distributed with an approach to uniformity throughout the territory east of the Rocky mountains were employed. The computation of the resulting data and the arrangement for the publication follow closely the prescribed forms submitted in the circulars of the commission. The possession of many new data contained in the 6,000 single theodolite observations and in the 25,000 nephoscopic observations afforded a favorable opportunity for considering several of the fundamental problems of meteorology, especially in view of the fact that they develop in the most perfect manner on the North American continent. There are still, in spite of much good work on the part of able investigators, serious gaps in the series of facts needed to construct a sound theory of the history of cyclones and anticyclones, and, furthermore, the existing theories are not in agreement either among themselves or with all the known facts. It has therefore been considered important by Prof. Frank H. Bigelow to develop the facts regarding the circulation of the air without bias at the beginning, and so far to correlate the existing mathematical analyses that their true meaning as to one another and as to the results of the observations should appear. Meteorology being sure to remain a difficult science, on account of the complications attending the physical processes and the fluid motions in the complex form presented by the atmosphere, Prof. Bigelow has attempted in the American Journal of Science to show how some of the apparent obstacles can be overcome by employing the methods used in the observations and reductions.

The height of 12,507 feet was reached at Blue Hill Meteorological Observatory on Feb. 28, 1899, by means of the Hargreave kite as improved by H. H. Clayton. The vertical height is computed by means of the formula $H = (\sin h) l / x$, in which H represents the height; h the angular altitude above the horizon, obtained by observing the kite with a surveyor's transit placed near the windlass; l the length of the line, read from the dial attached to the windlass; and x is a constant quantity, determined experimentally as a correction for the sag of the line, etc. This computation is made in about a minute, and the results are accurate within 1 per cent.

Waterspouts, according to a paper by Mr. H. C. Russell in the Royal Society of New South Wales, are frequent on the coast of that country, often occurring in groups of three or four. An unusual display was observed at Eden on May 18, 1898. In the early forenoon, during a light northwest wind, with fine weather and smooth sea, a heavy bank of cloud rose above the eastern horizon, and there was a flickering as of electrical discharges going on between the cloud and sea, but nothing to indicate what was to follow. During the morning there were 14 clear and distinct waterspouts, reaching from clouds to sea. The process of formation was a rotary motion of the waves, large quantities of broken

water being raised gradually as a white, misty-topped column, the misty part preceding the denser part by from 100 to 150 feet. This went on for three or four minutes, during which time the clouds formed an inverted cone, which seemed to be alternately dipping down and receding, with an interval of about thirty seconds between the dips, until the two cones met, and all the misty matter was absorbed. The column then remained unchanged for several minutes, while the overhanging cloud grew denser and moved slowly until the spout got out of the perpendicular and divided in the middle, the top part rising and the lower half sinking in the ocean.

By special studies of self-registering tide gauges and comparisons with the curves of self-registering barographs at points along the Atlantic coast of Canada and within the Gulf of St. Lawrence and the smaller bays Mr. F. Napier Denison finds that the minute undulations of the water are due to atmospheric waves or oscillations of barometric pressure passing over the harbors and bays. Prof. Cleveland Abbe urges the importance of the study of these oscillations directly as a meteorological problem, and then of their effects on the tides as an oceanic problem.

A discussion of the mean atmospheric pressure in Sweden for the years 1860 to 1895 by Dr. H. E. Hamberg, forming a series of papers by the Meteorological Office of Sweden in commemoration of its twenty-fifth anniversary, includes tables of monthly and yearly mean values for 34 stations and mean isobaric charts for the same periods. An examination of the annual variation shows that there are four maxima and four minima. The first maximum—that of midwinter—occurs in January and February, and is most pronounced in the south of Sweden. It is produced by the deviation of the Asiatic high pressure, which extends over parts of Europe. The second maximum occurs in spring, and is most marked in the south. It is apparently caused by the polar anticyclone, in conjunction with the high pressure over part of the north Atlantic. The subsidiary maxima occur in September and November. The first minimum occurs in March, and is very marked. It appears to be due to the low pressure over the Atlantic and to the diminution of the continental anticyclones. The second, or summer minimum, occurs in July and August. It is caused by cyclonic formations developed by the high temperature over Europe and Asia. The subsidiary minima occur in October and December.

A quantitative sunshine recorder described by Prof. Callendar differs from ordinary sunshine recorders in giving a strictly quantitative record of the amount of heat received at the earth's surface, and not merely the number of hours of bright sunshine. The instrument registers the component of sunshine in any desired direction, and gives a full record of its character and intensity. The passage of small clouds over the sun is very clearly registered, and it is found that even when the sun is obscured by clouds of sufficient thickness to prevent any trace of it burning on the ordinary cards a very considerable percentage of the sun's heat may still penetrate. The recording apparatus is identical with that required for records of temperature, pressure, voltage, etc., and may be placed in any convenient situation and at any distance from the bolometer.

METHODISTS. **Methodist Episcopal Church.**—The Methodist Yearbook for 1900 gives statistical returns from 148 conferences and other annual organizations of this body, including the

annual conferences in the United States and the domestic and foreign-mission conferences and missions, of which 124 organizations are classed as conferences, 11 as mission conferences, and 13 as missions. The aggregates are made up from the enumerations officially reported to the conferences in their annual sessions of 1899, except a small number of conferences the statistics of which, their meetings having been held late in the fall, had not become available at the time the yearbook went to press. In these cases estimates based upon the official statistics of the previous year are used: Number of ministers on trial and in full connection, including supernumeraries and superannuates, 17,583; of local preachers, 14,289; of lay members (including full members and probationers), 2,871,949, showing a decrease of 21,034; of Sunday schools, 31,836, with 346,063 officers and teachers and 2,660,339 pupils; number of churches, 26,986, having a probable value of \$116,275,007; number of parsonages, 10,931; probable value of the same, \$18,341,811.

Church Extension Society.—The General Committee of Church Extension met in Baltimore, Md., Nov. 9. The report of the treasurer of the board represented that the increase of the Conference collections over those of the preceding year had been \$1,814, and that the increase on all items of the general fund amounted to \$37,592. All the items of the Loan fund were likewise larger than in the preceding year. The total receipts for the general fund, all available for donations, had been \$214,549, and those for the Loan fund, to be used for loans only, \$246,610, making a total amount available for use under the two headings of \$461,160. Outside of a few exceptional years, the interest paid by the board had heretofore considerably exceeded the interest received. This year, however, a surplus of about \$15,000 remained after paying all annuities. Four hundred and thirteen churches had been aided during the year, making 11,301 from the beginning. Three additions had been made to the list of special Mountain fund churches and 27 to the number of special frontier churches, giving a total of 650 churches of these classes, at an average cost when dedicated exceeding \$2,000. In nearly 100 cases the board had given \$100 each on Mountain fund conditions out of the general fund, of which no accounting is made in the Mountain fund list. The entire capital of the Loan fund, including amounts received subject to life annuity, was on Nov. 1, 1899, \$1,086,856. Borrowing churches had to that date returned \$1,270,367, making an aggregate for use by loans of \$2,357,224. In this way nearly 3,450 different churches had been aided, furnishing sittings for about 1,000,000 hearers, and worth in the aggregate nearly \$12,250,000. The committee decided to ask the sum of \$308,600 from the annual conferences in aid of the church-extension work during the ensuing year.

Freedmen's Aid and Southern Education Society.—The annual meeting of the General Committee of the Freedmen's Aid and Southern Education Society was held in Philadelphia, Pa., Nov. 13. The receipts of the society for the year from all sources had been \$355,827 and the expenditures \$329,663, of which \$207,365 had been applied to the schools (\$169,404 to schools among colored people and \$37,871 to schools among whites). An indebtedness of \$178,074 was returned. The society maintained 1 theological, 12 collegiate, and 10 academic schools among the colored people and 3 collegiate and 23 academic schools among white people in the South.

Special notice was taken in the report of the development of manual training in the schools, for which enlarged facilities were greatly demanded. In view of the certainty that the great majority of the students would engage in operations for which skill in working with their hands would be required, encouragement was given them to maintain themselves by labor while in the schools. In some cases most of the work about the buildings was done by the students. The buildings themselves had in certain instances been erected by them, and even finished by them. The whole number of students in all the industrial schools was 2,640, an increase of 834 over the previous year. Of these, 677 young colored men were learning various trades, and 1,755 colored and 142 white young women were learning branches of domestic economy, sewing, and other women's trades.

Missionary Society.—The General Missionary Committee met in Washington, D. C., Nov. 15. The committee consists of the Board of Bishops, the officers of the Missionary Society, 14 representatives of General Conference districts, and the 7 ministerial and 7 lay members of the Board of Managers of the Missionary Society. Its business is to hear the financial and missionary reports for the year, make the necessary appropriations for carrying on the missionary work in the several fields during the ensuing year, and distribute the assessment of the amounts expected to be contributed during the coming year among the annual conferences. The treasurer reported that the receipts for the year (Nov. 1, 1898, to Oct. 31, 1899) had been \$1,236,544 and the expenditures \$1,232,566. The total indebtedness of the treasury at the beginning of the year was \$177,417; at the close \$99,450, showing a reduction of \$77,967.

The following appropriations were made for carrying on the missionary work in 1900:

Class I. Foreign Missions. Europe, South America, Mexico, and Africa.—Germany, \$36,918; Switzerland, \$7,390; Norway, \$12,487; Sweden, \$16,436; Denmark, \$7,490; Finland and St. Petersburg, \$5,200; Bulgaria, \$8,868; Italy, \$41,122; South America east of the Andes, \$40,384; Western South American Mission Conference, \$29,953; Mexico, \$49,742; Africa, \$24,868.

Asia.—China, \$119,376; Japan, \$49,739; Korea, \$16,911; India, \$144,241; Malaysia, \$12,500. Total for foreign missions, \$629,625.

Class II. Missions in the United States.—Conference missions north of the Potomac and Ohio and east of the Mississippi river, \$24,761; conferences in Iowa and Kansas and States north of them, including Black Hills and Oklahoma Conferences, \$81,697; work in the mountain region (Rocky mountains, etc.), \$58,110; Pacific coast, \$33,376; white work in the South, Maryland, and Delaware, \$48,376; colored work, mostly in the South, \$46,061; new English-speaking missions (Welsh, Swedish, Norwegian and Danish, German, French, Spanish, Chinese, Japanese, Bohemian and Hungarian, Italian, Portuguese, and Finnish) in the United States, \$161,530; American Indians, \$7,686; special appropriations for cities, \$11,176; total for domestic missions, \$471,773; miscellaneous appropriations, \$122,000; total appropriations, \$1,223,398. A number of contingent appropriations were made, amounting in all to \$78,000.

The reports from the mission fields summarized at the close of 1898 give as the figures for the missions in heathen and Roman Catholic countries (deducting the congregations in Protestant countries, such as Germany, Switzerland, Sweden,

Finland, Norway, and Denmark) 234 ordained missionaries, 210 wives of missionaries, 220 other women, 187 of whom are employed by the Woman's Foreign Missionary Society; 786 native women employed by the Woman's Foreign Missionary Society, 436 native ordained preachers, 961 unordained preachers, 1,006 teachers, and 1,215 local preachers and other helpers; 56,884 members and 67,967 probationers in the mission churches; 12,445 conversions during the year; 11 theological schools, with 154 students; 58 high schools, with 4,622 students; 1,139 day schools, with 31,382 pupils; and 676 churches and chapels, valued at more than \$860,000. The society further owns property in orphanages, schoolrooms, hospitals, book rooms, and other institutions appertaining to its mission work, having a total estimated valuation of \$1,320,000.

Women's Societies.—The annual meeting of the Woman's Home Missionary Society was held in Pittsburgh, Pa., in October. The society had 2,600 auxiliaries, with 70,000 annual and 8,000 life members in 52 conferences. Its total income for the year, including the regular contributions, contributions of money and clothing passing through the bureau of supplies, tuition fees, etc., had been \$278,548. Appropriations were made for the ensuing year of \$192,223, of which \$87,508 were unconditional and \$104,715 conditional.

The work of the deaconesses is in the charge of the Deaconess Bureau, under whose supervision 230 trained deaconesses are employed and \$306,725 are invested in deaconesses' homes. Three rest houses for deaconesses and missionaries have been established at Ocean Grove, N. J., Mountain Lake Park, Md., and Round Lake, N. Y. Three deaconesses' assemblies were held during the year—at San Francisco, Cal., for the Pacific coast; the anniversary at Ocean Grove, N. J.; and the Summer School of Methods, at Chautauqua, N. Y.

The thirtieth annual meeting of the Woman's Foreign Missionary Society was held in Cleveland, Ohio, Oct. 20. The statistics of the organization accounted for 5,002 auxiliary societies, with 127,139 members, showing an increase for the year of 77 societies and 5,325 members. More than 30,000 young people were members of the society and contributing to it. The German churches, in 9 conferences in the United States and in Germany and Switzerland, returned 270 auxiliary societies and 5,817 members. The receipts of the society for the year ending Oct. 1 had been \$360,338, or \$31,000 more than those of the previous year. During the thirty years of the existence of the society the sum of \$5,028,000 had been raised and disbursed. One hundred and ninety-five missionaries, 24 of whom were medical, had been in service during the year in India and Burmah, China, Malaysia, Japan, Korea, Italy, Bulgaria, South America, and Mexico. Eleven candidates for service had been accepted. The four periodicals published by the society had an aggregate circulation of 75,400 copies. Appropriations of \$347,000 were made for the year 1900. An effort is making in the society to raise a twentieth century thank-offering fund of \$200,000 in the ensuing two years.

National City Evangelization Union.—The ninth annual convention of the National City Evangelization Union was held in Philadelphia, Pa., Nov. 23 and 24. Reports of interest and progress in efforts for evangelization were received from 38 cities. A committee appointed in the previous convention to wait upon the General Missionary Committee of the Church reported upon the results of their interview with that

body that a new class of appropriations had been entered upon the schedule and named "for work in cities." A considerable number of addresses were made upon the different aspects of religious work in cities.

Methodist Episcopal Church Congress.—The second Methodist Episcopal Church Congress—the first having been held in Pittsburgh, Pa., in 1897—was held in St. Louis, Mo., Nov. 26 to Dec. 1. The object of the congress, which is voluntary and informal, is represented as being "to secure from the younger men, and especially from the younger scholars, a full expression of their thought upon the relation of the Church to modern social and intellectual conditions." Topics are selected for discussion on which differences of opinion are known to exist, and the speakers are selected with reference to their ability to present the subjects fairly. The present congress gave special attention to the problem of religious life in the cities, to the harmony of religion and science, and to the effect upon religious faith of modern biblical criticism. The meeting was opened with a sermon upon Christ the Power of God, by Bishop H. W. Warren. The subject of the Twentieth Century Fund was considered by the Hon. W. M. Day and by Dr. E. R. Mills, its secretary; The Message of the Church to Men of Culture, by Prof. M. D. Learned, of the University of Pennsylvania; The Ordering of Worship, by Dr. W. A. Shanklin and the Rev. H. G. Leonard; The Religion of Childhood, by Prof. Street, of Springfield, Mass., and the Rev. J. A. Story; The Working of the Forward Movement by English Methodists, by Prof. A. H. Briggs; The Problem of Religious Life in the City, by Dr. P. H. Swift and the Rev. Harry F. Ward; The Problem of Religious Life in the Town, by the Rev. G. A. Miller; that of Religious Life in the Rural Districts, by the Rev. Emory J. Haynes; Men in the Church, by the Rev. J. E. C. Sawyer; A Methodist Brotherhood, by the Rev. Dr. T. B. Neely; The Higher Education of the Negro, by Prof. Thirkeld, of Atlanta, Ga.; Temperance Instruction: Its Need and Method, by Mr. David D. Thompson; The Findings of Modern Science and Christian Faith, by Prof. William North Rice and the Rev. M. W. Gifford; Christian Science, by Dr. C. D. Lockwood and the Rev. M. S. Hughes; The Spiritual Element in Modern Literature, by Prof. F. C. Lockwood; Religion and Righteousness, by Dr. George Elliott; The Relation of the Church and the Municipality, by the Hon. R. F. Raymond and Dr. W. W. King; The Church and the Higher Criticism, by the Rev. W. F. Andersen and Prof. Sheldon, of Boston; Denominationalism and Catholicity, by Dr. J. A. Duncan, the Rev. Ira C. Cartwright, and Prof. Borden P. Bowne; The Ethics of Church Membership, by the Rev. T. H. Armstrong and Mr. Hanford Crawford.

Methodist Episcopal Church, South.—The estimate of the numbers of this Church at the close of the year 1899 gave it, for the United States only, 5,950 ministers, 14,190 churches, and 1,460,272 members, showing a gain during the year of 27 ministers, 30 churches, and 4,000 members.

At the annual meeting of the Book Committee, May 3, the book agents returned the total value of the business from all the departments as \$350,416, from which a gain of \$40,144 in assets had been realized. The total capital of the concern, including real estate, plant, merchandise, notes, accounts, etc., was \$902,488, against which stood an indebtedness of \$9,197.

At the annual meeting of the Sunday-school

Board, May 3, the aggregate circulation of the 6 periodicals was returned as being 1,098,700, an increase for the year of 22,200. Grants amounting in all to \$2,450 were made in sums of from \$100 to \$1,000 each to the several foreign missions of the Church. The board resolved to co-operate with the Board of Education in the twentieth century thank-offering movement provided no collections for that object were taken within the Sunday schools themselves.

Missionary Societies.—The detailed report of the foreign missions presented at the annual meeting of the Board of Missions, May 2, gives as the totals: Number of missionaries, 128; of native preachers, 87; of local helpers, 147; of members, 9,503, showing an increase of 402; of Sunday schools, 230, with 689 officers and teachers and 8,375 pupils; of Epworth Leagues, 48, with 1,660 members; of organized churches, 275, of which 10 are self-supporting; of church buildings, 102, valued at \$164,995. The schools included 8 boarding schools, with 34 teachers and 1,000 pupils, and 17 day schools, with 11 teachers and 483 pupils. The 9 school buildings were valued at \$50,853, and the 5 hospitals at \$14,440. At these hospitals 15,688 patients had been treated during the year. The total value of the mission property was \$388,639; amount of collections, \$13,404. The board made appropriations to the several missions and mission conferences as follow: To Brazil Mission Conference, \$30,400; to China Mission Conference, \$27,162; to Korea mission, \$7,650; to Japan Mission Conference, \$31,714; to Central Mexico Mission Conference, \$21,127; to the Mexican Border Mission Conference, \$13,850; to Northwest Mexican Mission Conference, \$12,650; to the Cuba mission, \$5,000; to the Indian Mission Conference, \$2,636; to the German Mission Conference, \$2,268; and to other conferences within the United States, \$25,781. The whole amount appropriated, including the sum allowed for expenses, was \$205,150.

The Woman's Home Missionary Society has undertaken a celebration of the "twentieth century movement" by raising a special fund to help its schools—viz., the Sue Bennett Memorial School, London, Ky.; the Industrial Home and School, Greenville, Tenn., for the mountain people; the Cuban schools in Florida; the Chinese and Japanese schools in California; Friendsbury Home, Baltimore, Md.; and Ann Browder Cunningham Home, Dallas, Texas, for the training of city missionaries and rescue workers. The Friendsbury estate, Baltimore, Md., has been bequeathed to the society by Miss Melissa Rankin, the founder of Protestant missions in Mexico, on condition of its raising \$10,000 for the endowment of city mission work.

The twenty-first annual report of the Woman's Board of Foreign Missions gives as the amount of the collections for the year ending March, 1899, \$83,552, showing a loss of \$3,000 from the previous year. The following statistics of missionary work in foreign lands were given: In China, 20 missionaries, 59 assistant teachers, 43 boarding and day schools, 2,500 pupils, 31 Bible women, 2 Bible schools, 2 hospitals, 86 scholarships. In Korea, 2 missionaries, 5 assistant teachers, 32 pupils. In Mexico, 17 missionaries, 57 assistants, 25 schools, 2,687 pupils, 14 scholarships, 19 Bible women. In Brazil, 11 missionaries, 28 teachers, 8 schools, 277 pupils. In the Indian mission, 10 teachers, helpers, and missionaries, more than 100 pupils, 2 schools, 1 hospital, and 1 Bible woman. In Cuba, 1 missionary and 1 helper had been sent, and 1 school, with 32 pupils, had been established.

At its annual meeting in 1899 this board made appropriations of \$99,000 for the year's work, the amount exceeding any previously voted for one year.

Epworth League.—An enumeration of the Epworth Leagues of this Church made by its secretary gives them for May 30, 1899, 5,031 chapters (4,536 senior and 495 junior), with a total of 221,445 members (204,120 senior and 17,325 junior), against 195,840 members in 1898. During the year that had passed 478 senior and 117 junior leagues had been added.

African Methodist Episcopal Church.—The statistics of this Church, published by Bishop Arnet, the Church historian, at the beginning of 1898, account for 62 annual conferences, of which 52 were in the United States, 4 in Africa, 3 in the West Indies, and 3 in British America. These returns include 9 bishops, 9 general officers, 4,825 ministers on the rolls of the annual conferences, 242 presiding elders, 8,409 local preachers, 5,250 exhorters, 556,289 members, and 57,836 probationers; 5,172 churches, valued at \$6,150,176; 1,750 parsonages, valued at \$624,423, with \$752,964 of indebtedness against church property; 11 schools, with 160 teachers, 5,257 students, 660 graduates, property valued at \$756,475, and an aggregate annual income of \$115,500; and 3,447 Sunday schools, with 21,514 officers, 37,916 teachers, and 362,421 pupils. The benevolent contributions for the year were \$29,938 for missions, \$16,745 for publication, \$17,252 for church extension, \$115,560 for education, \$753,404 for ministerial support, \$141,876 for presiding elders, and \$20,740 for the Sunday-school department. The whole amount of money raised in the Church was \$1,570,329. The total value of its property is \$8,104,886.

The Sunday School Union received for the last year for which the report is made up (ending March 31, 1898) \$21,084, and expended \$19,240. It aided 368 needy Sunday schools with literature to the value of \$852. At the annual meeting of the Board of Managers, held in Nashville, Tenn., April 6, 1899, a committee was appointed to report upon the condition of the negro in the United States. It is represented that this society was the first Sunday-school union in America established among negroes. Property was purchased for it in Nashville in 1885, on which a publication house has been built.

The publication department of the Church published in 1898 *The Bright Side of Life in Africa*, by Dr. W. H. Beard; *The Descent of the Negro*, by Bishop Tanner; *The True Christian Sabbath*, by the Rev. D. A. Graham; *How to Educate Yourself*, by Dr. W. D. Johnson; *The Negro and his Trials*, by Dr. H. T. Johnson; several booklets, two impressions of the Hymn and Tune Book, and a number of periodicals. It had a balance of \$207 in its treasury on March 30, 1899.

The Board of Bishops on June 16 approved a plan for collecting a "twentieth century thank-offering" of \$600,000, to be obtained by Jan. 1, 1901, and appointed the Rev. L. J. Coppin, D. D., commissioner to make all the necessary arrangements for carrying it out. The amount of \$600,000 is to be distributed as follows: To the Mission Board, Home and African, \$100,000; to the Church Extension fund, \$200,000; to the colleges and universities, half on the old debt, half for endowment, \$100,000; to theological seminaries, \$200,000. The commissioner, who is to be assisted by annual conference commissioners, is instructed to report to a board of directors constituted of the bishops and one person from each episcopal district. A board of five directors was

also constituted for each annual conference, and is invested with the appointment of the conference commissioner.

Colored Methodist Episcopal Church.—This Church had at the end of the year 1899 2,039 ministers, 1,427 churches, and 204,317 members, showing an increase during the year of 54 ministers, 50 churches, and 5,689 members. The bishops, after advising with leading ministers and members of the administrative boards, issued a call upon the membership of the Church for a twentieth century offering of \$25,000. The call contemplated an equal division of the money between the educational and the missionary work of the Church, all the schools to share alike in the half of the fund appropriated to educational purposes.

American Wesleyan Church.—The annual meeting of the Board of Managers of the publishing and benevolent interests of the connection was held in Syracuse, N. Y., in June. The secretary of the Missionary Society reported the receipt and expenditure during the year of \$2,238. The report referred to work in Canada, where difficulty was met in consequence of the Church not having yet secured the official recognition required to qualify its ministers to perform the services of marriage, baptism, and burial in a legal manner; mentioned an opportunity for extension which appeared to be opening in East Tennessee; and described the trouble which the mission in Africa had had to suffer in consequence of the prevalence of wars. The board adopted a code of regulations for its missionary work in Africa, the aim of which was defined to be "not to evangelize great areas of people by the maintenance of a large force of foreign workers, but rather to create and prepare through and by a lesser number of workers a regenerated and intelligent native instrumentality in the redemption of their own land from the thralldom of sin and death, and in planting the Gospel in its uttermost regions"; and the scope of the work was described as being threefold—"preaching, teaching, and commercial and business." The agent of the corporate societies of the connection reported the receipts and expenditures of the Publishing Association as having been \$21,254, and its gain in assets \$1,446, making the present total amount \$67,213; the amount of the H. T. Beese fund as \$2,385, showing a gain of \$1,551 in two years; the amounts of the Jackson and the Gracia Elmer funds as, respectively, \$3,000 and \$2,200. The receipts and expenditures of the Missionary Society had been \$2,658 for home missions and \$3,701 for foreign missions, while it had realties, notes, and cash representing \$7,338 on account of home missions and \$8,814 on that of foreign missions. The Wesleyan Education Society had received and expended \$4,222 and possessed assets valued at \$23,177, while its liabilities were \$980. The Superannuated fund received \$980.

American Methodist Church.—Articles of incorporation have been filed in North Carolina of the American Methodist Church. Instead of a formal creed this Church accepts as the basis of its doctrines the Ten Commandments, the Sermon on the Mount, the Apostles' Creed, and the Holy Scriptures. No distinctions of sex are recognized in the powers and privileges of members. Infant baptism is retained, but is left optional with parents, who may also choose the mode of administration; and adults are likewise permitted to choose the mode in which they shall be baptized.

Methodist Church in Canada.—The statistical reports of the Methodist Church in Canada

give the following numbers of members by conferences: Toronto Conference, 44,258; London, 48,289; Hamilton, 46,307; Bay of Quinte, 40,369; Montreal, 35,838; Nova Scotia, 16,079; New Brunswick and Prince Edward Island, 13,668; Newfoundland, 11,279; Manitoba and Northwest Territory, 18,741; British Columbia, 5,060; Japan, 2,339; China mission (1898), 31; total, 282,259; net increase for the year, 1,722; number of members received on trial during the year, 18,802; number of baptisms, 17,286.

The total missionary income for the year is given in the *Christian Guardian* for Sept. 27 as \$266,075; net increase, \$23,023.

The invested capital of the Superannuation fund was reported at the close of the fiscal year, Aug. 28, as \$233,698. The year's income and expenditures were balanced at \$113,537.

Epworth League International Convention.

—The fourth biennial international convention of the Epworth League was held in Indianapolis, Ind., July 20 to 23. The use of the Capitol building had been granted by the State Legislature for the general purposes of the occasion, and the special meetings were held in the two principal halls of the city and a large tent. The societies of the United States and Canada were represented in the convention, and the delegates appeared in behalf of three Church organizations—those of the Methodist Episcopal Church, the Methodist Episcopal Church, South, and the Methodist Church of Canada. Among the subjects discussed at the meetings of the three sections, each by many speakers, were The Intellectual Life, The Spiritual Life, Revivals, the special work of the league, Methodism and its Life, Social Righteousness, Good Citizenship, Temperance, and Missions. Besides the special meetings, public lectures were delivered. Resolutions were adopted favoring a continuance of the "joint prayer-meeting topics" and a federation with other young people's societies, "both locally and nationally, through suitable executive committees, for the promotion of Christian citizenship."

Wesleyan Methodist Church.—The following is a summary of the official returns of the members, probationers, and supernumerary ministers of the British and affiliated conferences of this Church as they are published in connection with the minutes of the conference of 1899: In Great Britain, 447,276 members, 1,663 ministers, 316 supernumeraries; in Ireland, 27,461 members, 172 ministers, 40 supernumeraries; in foreign missions, 46,262 members, 269 ministers, 14 supernumeraries; French Conference, 1,757 members, 27 ministers, 8 supernumeraries; South African Conference, 55,769 members, 164 ministers, 18 supernumeraries; West Indian conferences, 43,287 members, 79 ministers, 3 supernumeraries. The totals are: 621,812 members (74,305 on trial), 2,374 ministers, 372 probationers, 401 supernumeraries. The 77,780 young people meeting in junior classes are not included in the home or foreign returns. The accredited local preachers at home number 18,017.

The income of the home missions, as given in the annual report of the committee for 1899, had been £35,977 and the expenditure £36,296, showing a deficiency of about £320. The debt on the annual account of the fund now stood at £6,740. A scheme has been proposed by the Conference, to be submitted to the district synods, for the creation of a separate fund, to be called the Connectional fund, from which connectional expenses not chargeable to circuits are to be paid.

The London Wesleyan Mission consists, according to its latest report, of 7 branches, with

36 buildings. Eighteen ministers are engaged in the work, and are assisted by 25 lay agents and 70 "sisters of the people." More than 6,000 members have joined. A home of rest at Balham for the deserving poor has proved a valuable auxiliary. An extension of premises has been made in central London at a cost of £10,000. The Leysian Mission, which is connected with the Leys School, Cambridge, also reports progress.

Education.—At the meeting of the Education Committee held in February the income was reported to have been £5,877, an increase for the year. The new budget involved an estimated expenditure of £6,056. Of the £35,000 aid grant received by the newly formed school association from the Government, three fourths had gone to the teaching staff. This, however, would not be the case in the future.

Chapel Building.—The report of the Metropolitan Chapel-building fund shows that 6 new chapels had been opened during the year, and 1 chapel had been enlarged. Six new schemes had been sanctioned. Three new buildings were in progress. Temporary iron chapels or school chapels had been erected on a number of sites in and around London. The claims of 27 other localities had been submitted to the committee. The total expenditure contemplated was £140,000. The total receipts for the year had been £10,442. The grants paid amounted to £10,484.

Sunday Schools.—The report to the Conference on Sunday schools showed that there were 7,255 schools, with 972,426 pupils. While the number of registered pupils was greater by 2,942 than in the previous year, a gradual decline in the schools of catechetical instruction was remarked upon as an unhealthy sign. The adult Bible classes not connected with Sunday schools returned 48,821 members, and the "pleasant Sunday afternoon" classes 9,177 members.

Wesleyan Missionary Society.—The annual meeting of the Wesleyan Missionary Society was held in London, April 28. The regular income of the society, amounting from all sources to £130,533, showed an increase over the previous year of about £1,100, and of £4,807 as compared with that of 1896. The society was thus free from debt and paying its way. The total number of members in the foreign stations under the direction of the committee was 46,262, with 11,019 on trial. Taking the mission field as a whole, an increase was reported under almost every head, the Transvaal and Swaziland district taking the lead with an increase of 849, besides 3,500 on trial, the Canton (China) district coming next, with the largest increase (359) yet reported there. Emphasis was given in the report to the fact that increased church membership and other signs of progress were manifest throughout the entire Asiatic field, where the most ancient and highly organized forms of heathenism were encountered. Attention was invited to places where specially favorable openings were presenting themselves, as in the province of Hunan, China; Hyderabad, India; Cairo, Egypt; the region north of the Zambesi; and Lisbon, Portugal.

Conference.—The Wesleyan Methodist Conference of Great Britain and Ireland met in City Road Chapel—John Wesley's Chapel—London, July 17. The Rev. Frederick W. MacDonald was chosen president. A committee appointed by the previous Conference to revise the order of sessions presented a report suggesting changes in the method of filling up the legal conference and of electing the president and secretary of the Conference, which was adopted. (The legal con-

ference, or legal hundred, consists of 100 ministers, appointed, partly by seniority and partly by the Conference, in accordance with the statute law, to constitute the body possessing the legal functions of the Conference.) The plan provides that vacancies in the legal conference caused by death or lapse shall be declared at the first meeting of the representative session, and filled up by the legal conference by election on the ground of seniority, while the declaration of vacancies on the ground of superannuation shall be deferred until the meeting of Conference in pastoral session, when they shall be filled by election by the legal conference on the ground of nomination; that the nomination of the president and of the secretary of the Conference shall be made by ballot vote at the pastoral session of the preceding Conference; the election to be made by the legal conference, which is requested to elect the persons who were nominated. In case of the death of the person nominated to be president or secretary before the meeting of the Conference at which the election is to take place, a new nomination shall be made by the ministers in representative session, which the legal conference is requested to ratify. Other recommendations of the committee approved by the Conference provided that all ministers in full connection permitted to attend the Conference in its pastoral session shall have the right to vote in the nomination of president and secretary of the ensuing Conference, and suggest for the consideration of the representative session an increase of the number of its members so that it may consist of 300 ministers and 300 laymen, with a corresponding increase in the number of members of the representative session elected by the Conference from 18 to 48. A report concerning the Twentieth Century fund represented that the whole amount subscribed to date was 669,214 guineas, or £702,674, and the amount paid in £86,572. All the arrangements for the fund and its allocation had been well received by the Methodist people, and the principle 1 person, 1 guinea had been cordially accepted. A resolution being offered expressing the opinion of the Conference that no Christian man should manufacture or sell intoxicating liquors, an amendment was proposed declaring that "the Conference rejoices in the rapid spread of temperance convictions and practices in the Methodist Church, and urges our people everywhere to consider all well-promoted temperance reforms, and confidently hopes for their success, but it declines to pronounce an abstract and indiscriminate opinion upon the action of individual Christians." The Conference further reaffirmed its resolutions of the previous year on this subject, rejoicing in the progress of temperance sentiment and practice in the Wesleyan Church, but declining to interfere with the constitutional method of appointing its officers; advising the people to keep themselves free from complicity with the liquor traffic; declaring its reliance upon the growth of moral conviction in the community for its removal; expressing itself unable to impose disabilities upon those who sell drink which would not apply to those who buy and use it; and recording its belief that the great ends of the temperance movement can be secured without resort to methods of coercion. A protest was voted against the opening of the Crystal Palace on Sundays for concerts and public dinners. A resolution was adopted with reference to the enforcement of the "conscience clause" in the elementary schools.

Primitive Methodist Church (British).—The Primitive Methodist Yearbook in August, 1899,

gave the number of members of society as 198,300, showing an increase for the year of 1,748; of ministers, 1,102; of local preachers, 16,617; of class leaders, 10,604; of Sunday schools, 4,341, with 61,015 teachers and 467,884 pupils. Of the £50,000 raised by the Primitive Methodist Jubilee fund, £28,600 had been handed over to the treasurers of the various funds to be benefited by the movement in the following proportions: College fund, £10,550; Chapel Loan fund, £9,350; Missionary fund, £9,350; and Superannuated Preachers', Widows', and Orphans' fund, £9,350.

The Itinerant Preachers' Friendly Society reported an income of £12,827 and an expenditure of £9,139. Its capital stood at £44,481, showing an increase for the year of £1,652. It was decided at the meeting of the society, regarding the position of the Australian ministers after the consummation of Methodist union in Australia, that all members of the society of thirty-five years' standing be retained, and that the interests of those of less than thirty-five years of membership be actuarially valued, while all the widows and orphans annuitants shall be retained.

The annual meeting of the Primitive Methodist Missionary Society was held in London, May 16. The report showed that receipts had been £18,395 for the general fund and the expenditure £14,783, the income being £1,724 more than that of the previous year, and giving a balance to the credit of the treasury of £3,611. The total receipts for the African fund had been £8,205 additional, and the expenditure £5,280, leaving a credit balance of £2,924. In addition to the money which had passed through the hands of the treasurers, £15,171 had been raised and appropriated locally by the missions on the general fund and £2,545 at the African missions, making a total missionary revenue of £44,337, or £2,677 more than that of the previous year. It had been many years since so large an increase of missionary revenue had been reported. The 33 home missions returned 107 connectional chapels, 8,950 hearers, 45 ministers, 11 lay missionaries, 6 Bible women, 292 local preachers, 97 Sunday schools, with 850 teachers and 7,698 pupils, and 3,996 church members, an increase of 32. The reports from the African stations—Aliwal North, Santa Isabel, San Carlos Bay, Bottle Nose, Banni, and Archibongville—showed good conditions.

The eightieth conference of the Primitive Methodists met at Grimsby, June 14. The Rev. William Godman was chosen president. The reports presented showed that the Church had 198,915 members, with more than 600,000 hearers attending the services, 467,884 children in the Sunday schools, and church property valued at £3,919,000, and that it raised nearly £350,000 a year for its chapel property. The Connectional fund had an income of £11,190; the book room had enjoyed great prosperity, with an increase of £115 in its gross profits and a considerable advance in the circulation of the connectional magazines, while £3,250 had been applied from the profits for the support of superannuated ministers, widows, and orphans. The latter fund maintained out of its income 144 worn-out ministers, 149 widows, and 4 orphans. The Sunday School Union reported progress in every department, with a balance in hand of £394 and an increase of 36 schools, with 2,878 pupils. The Chapel Aid Association had loan accounts amounting to £216,323, and had during the few years of its work seen debts lowered to the extent of more than £63,000, while the general chapel fund had made grants during the year of £1,045, to earn

which the churches had raised locally £9,720. The orphanage was full, and returned the highest income in its history. Manchester, Elmfield, and Bourne Colleges were in a flourishing condition. Forty-eight thousand pounds sterling had been raised toward the contemplated jubilee fund of £50,000. The Central Council of Christian Endeavor returned 1,042 societies, with more than 35,000 members. The joint subcommittee on union with the Bible Christians, which had been sitting during the year, reported recommendations dealing mainly with the principle of representation in the Conference. The whole question was referred to the quarterly meetings of the circuits and to the districts. A proposition for legislation securing a seat in the Conference and a vote to the heads of all the connectional departments received no favor. Measures were adopted for bringing the connectional organization of Christian Endeavor into closer touch with the national movement. The minimum to be aimed at for the salary of ministers was ordered raised from £88 to £100 a year.

Methodist New Connection (British).—The report of the Beneficent Society, published just previous to the Conference, showed a slightly increased income, and provision was made for new claimants. This society seeks, from its capital of £29,000 and from circuit contributions and the subscriptions of ministers, to provide annuities for worn-out ministers and their widows and orphans, and by means of its auxiliary fund to help them in furnishing houses of their own when they are obliged to retire from circuit manse.

The one hundred and third Conference met in Manchester, in the Wesleyan Central Hall, June 13. The Rev. John E. Radcliffe, of Batley, was chosen president. A report on prolonged appointments of ministers to home-mission stations was adopted, by the provisions of which the station applying for a minister beyond five years is required to manifest growing liberality to Connectional institutions, encouraging increase in congregations and church membership, tendency to self-support, and actual progress in the reduction of debt or the founding of new churches. The appointment will be made by the Conference on the favorable report of the Home Missionary Committee investigating the case. Under these provisions one minister was appointed for a sixth year to a station and another for a seventh year. A system was further adopted for the visitation of home-mission stations and aided circuits by a minister and a layman, with a view of encouraging them in efforts toward self-support. In cases where a station has only one minister an occasional interchange with a minister of a neighboring circuit was recommended. A representative committee of sixteen members was appointed to review the legislation affecting appointments to Connectional departments (administration of missions, book room, etc.) during the last ten years, with a view to securing increased efficiency and economy, and to report to the next conference. The report of the book room showed diminished profits. The Conference resolved to afford exceptional help and counsel to the London association.

United Methodist Free Churches.—The book room and the London Chapel Extension fund of this body show continued advance.

The Chapel Relief fund returned a somewhat reduced income, but buildings had been erected or enlarged at a cost of £39,000, toward which £21,500 had been subscribed, and chapel debts had been reduced by £30,000. The Loan fund continued to afford substantial help.

The income for home and foreign missions had reached £10,500, besides which about £1,600 had been raised from miscellaneous and special sources and £642 on foreign districts. The home expenditure amounted to £2,439 and the foreign expenditure to £9,756, in addition to which £2,688 had been raised and expended on the foreign stations.

The annual meetings in connection with the home and foreign missions were held in London, April 24. The income for the year had been £14,028 and the expenditure £13,666. The foreign stations in East Africa and China returned 28 missionaries, 290 local preachers and native helpers, 472 leaders, 8,651 church members, with 2,702 on trial, 161 chapels and preaching rooms, and 396 teachers and 4,763 pupils in Sunday schools. Two thousand persons had been treated medically.

The annual assembly met at Sheffield, England, July 10. The Rev. J. C. Brewitt was chosen president. The Statistical Committee reported that the number of members (83,008) indicated an increase of 755 in the home circuits and a decrease of 54 in the foreign-mission stations. The number of pupils, reaching 190,000, with 24,000 teachers, was slightly less than in the previous year. The home churches returned 5,806 candidates for membership and the foreign stations 2,800. The Conference decided to appoint a representative on the Nonconformist Political Council. It having been determined three years previously that when the missionary income should have reached £10,000 the minimum ministerial salary should be raised to £140, an order to that effect was carried, although the committee suggested a postponement of a year upon the offer of individual members to make up whatever deficiency might result in the funds. A proposition to change the method of electing the Connectional Committee by introducing the system of district nomination referred by the previous annual assembly was reported upon adversely and lost. A "twentieth century fund" was instituted, the amount to be raised for which was fixed at 100,000 guineas, the books to be open for subscriptions till June, 1904. The allotment of the sum raised contemplates the appropriation of eight twentieths to the Mission fund, eight twentieths to extension work at home, and four twentieths to the London Chapel Extension fund. Contributors were given the right to allocate any portion of their gifts not larger than one half to any local effort or connectional fund they may desire. Twelve thousand guineas were pledged to this fund during the sessions of the assembly. In moving a resolution with reference to slavery in the British East Africa protectorate, charging violation of the decrees issued in 1876 and 1890, the Rev. W. G. Howe, returned from East Africa, said that, although some missionaries had under compulsion restored runaway slaves to their "so-called owners," the United Methodist missionaries, in spite of governmental warnings and in face of threatened pains and penalties, had declined to do so.

Bible Christians.—The Bible Christian Conference met at Holsworthy in August. The Rev. T. Braund was chosen president. The action of the Conference on the "new century movement" expressed satisfaction that the connection had received the proposition with so much enthusiasm and the belief that as one third and more of the sum proposed to be raised had been already promised that amount (£25,000) would be greatly exceeded, and the fact confirmed the selection of the objects of the effort. The provisional

allotment of the money approved by the meeting contemplates the allocation of ten twenty-fifths of the amount to the Chapel Free Loan fund, five twenty-fifths to the Preachers' Annuitant fund, three twenty-fifths to the Local Preachers' Aid Association hereafter to be established, and two twenty-fifths for the education of candidates for the ministry, while the remaining five twenty-fifths were reserved for appropriation to any one or more of the objects named as may be thought most expedient when the fund is closed. Any sums not exceeding £5,000 which may be raised above the contemplated £25,000 it was provided shall be devoted to the Foreign Missionary Society for aggressive work, preferably in China. The last Sunday in January, 1900, was appointed a day for general thanksgiving and prayer in connection with the movement. A history of the denomination is to be prepared by the Rev. F. W. Bourne and sold for the benefit of the New Century fund. With reference to union with the Primitive Methodist Church, the Conference decided to furnish such information concerning the Bible Christians as was asked for by that body, expecting in return such information respecting the Primitive Methodists, and to print the proposed amendments to the constitution in the minutes of the Conference; and it authorized the Connectional Committee, whenever terms of union mutually satisfactory to both parties can be arranged, to determine when the information collected on the subject shall be laid before the quarterly meetings, preparatory to their decision on the whole question being obtained. A resolution on temperance, including among its clauses a declaration that persons holding license for the sale of intoxicating drinks shall not be eligible to office in the churches, was sent down to the quarterly and district meetings for advice.

The missionary report showed a slight increase in the membership of the home-mission stations, but a decrease of 148 members in Victoria. The total income for the year had been £5,573, while the accounts showed a deficiency of £773.

The net receipts for the General Chapel fund were represented as having been £2,000 in advance of those of the previous year. The chapel income was higher by £7,604 than had ever before been reported to the Conference, and was an increase of £9,680 over the income on the same account of the previous year. The total net improvement in the chapel property of the connection during the past twenty years had been £186,254 in value.

The report of the Missionary Society showed that the total number of members in the mission stations at home and abroad was 11,323, representing an increase of 200 during the year. Of the missions abroad, mention was made of the Bush Mission in Australia, and of that in China, where 15 missionaries were employed.

Independent Methodist Churches.—The ninety-fourth annual meeting of (English) Independent Methodist Churches was held in Nelson, June 18. Nearly 200 delegates and officers were present. Mr. Richard Lee presided. The Ministers' Assistance fund showed a balance of nearly £1,000 and a year's gain of £50. The subject of a national old-age pension scheme was discussed. The claims of the connectional £5,000 scheme were urged.

Methodist Union in Australasia.—Negotiations between the Methodist churches in the Australasian colonies have been going on for several years past. The transactions are somewhat complicated, for they concern four branches of the Church, and have to be carried on severally for

each of the colonies. They were brought to a conclusion for South Australia and West Australia in August, when at a meeting of the Methodist Federal Council, representing the Wesleyan, Primitive Methodist, and Bible Christian Conferences, held in Adelaide, the plan of union was adopted clause by clause and officially signed by the presidents of the several bodies. It was understood that the union for those colonies should go into effect on the first day of January, 1900.

South African Conference.—The latest returns from the South African Conference (March, 1899) show a church membership of 51,986, with 22,544 on trial. The English missionaries numbered 127 and the native ministers 72, with nearly 200 evangelists. Six hundred and eighty-four churches and 510 Sunday schools were returned.

MEXICO, a federal republic in North America. The legislative power is vested in the Congress, consisting of a Senate of 56 members, 2 from each state and the federal district, and a House of

Representatives, containing 227 members, who are elected for two years by the votes of all respectable adult male citizens. The President is elected by colleges of electors for four years. Gen. Porfirio Diaz was elected in 1876 and again in 1884, and, the constitutional disability of a President to succeed himself having been removed in 1887, he has been re-elected three times,

PORFIRIO DIAZ,
PRESIDENT OF MEXICO.

his last term ending Nov. 30, 1900. His Cabinet at the beginning of 1899 was composed as follows: Minister of Foreign Affairs, I. Mariscal; Minister of the Interior, Gen. M. Gonzalez Cosio; Minister of Justice and Public Instruction, J. Barranda; Minister of Fomento, M. Fernandez-Leal; Minister of Finance, J. J. Limantour; Minister of Communications and Public Works, Gen. F. Z. Mena; Minister of War and Marine, Gen. F. B. Berriozabal; Treasurer, F. Espinosa.

Area and Population.—The area of Mexico is 767,005 square miles. The population on Oct. 20, 1895, was 12,619,959. About 19 per cent. of the people are white, 43 per cent. of mixed blood, and 38 per cent. pure Indian. The number of marriages registered in 1895 was 53,691; of births, 383,747; of deaths, 391,177. The educated white class numbers about 2,000,000. About an equal number of whites and half-breeds are partially educated, and are employed as foremen and overseers in mines, farms, and cattle ranches. The Indians, who do the manual labor of the country, are illiterate and have but few wants, to supply which they work hard but intermittently. American mine managers and engineers, business agents, planters, ranchers, railroad officials and employees, and skilled laborers of various kinds have emigrated to Mexico in increasing numbers.

Finances.—The total receipts of the Government in 1898 were \$52,748,712 in silver; expenditures, \$51,815,286. The budget estimates for the year ending June 30, 1900, make the revenue \$54,913,000, of which \$24,192,000 are derived from import and export duties, \$22,411,000 from internal taxes collected in the states, \$2,931,000 from internal taxes collected in the federal district and territories, \$3,907,000 from public services, and

\$1,472,000 from the mint and patent office. The total expenditure is estimated at \$54,886,756, of which \$1,019,243 are for the legislative power, \$82,469 for the executive power, \$449,451 for the judicial power, \$553,804 for foreign affairs, \$3,904,061 for the Interior Department, \$2,446,110 for justice and education, \$818,426 for agriculture, \$6,162,078 for public works, \$6,265,717 for finance, \$21,021,042 for the public debt and pensions, and \$12,164,356 for war and marine. The revenue of the states in 1896 was \$14,971,057, and expenditure \$14,472,906; the revenue of municipalities was \$11,779,976, and expenditure \$11,670,784. The federal receipts are estimated for 1900 at \$56,140,000, and expenditures at \$56,028,630.

The national debt on Jan. 1, 1899, amounted to \$201,143,121, of which \$108,555,100 represented foreign loans. The foreign gold debt, formerly paying 6 per cent. interest, was converted by arrangement with German and American bankers in July, 1899, into \$111,929,500 of 5-per-cent. bonds guaranteed by the customs, inconvertible for ten years and redeemable in forty-five years. Most of the bonds were placed in Germany, where the old debt was mainly held, and the rest in the United States and England. The 6-per-cent. silver-currency bonds had all been redeemed by the beginning of 1899 except \$186,000. There is a 3-per-cent. internal consolidated debt, which amounted at the end of 1897 to \$51,175,200, and a 5-per-cent. redeemable debt, the amount of which was \$35,781,400, issued for the conversion of railroad guarantee bonds and loans raised for harbor improvements. Of this, \$8,000,000 were placed in Germany in 1899.

The Army and Navy.—The standing army consists of 22,605 infantry, 7,249 cavalry, and 2,289 artillery and train; total, 32,143 men, including 2,068 officers. The war effective is 123,500 infantry, 20,000 cavalry, and 8,000 artillery. Besides the active army, there are the auxiliary troops, the active army reserve, and the general reserve.

The naval force consists of the steel cruiser Zaragoza, of 1,200 tons, built in France in 1891; 2 old gunboats, of 425 tons, armed with 4-ton guns; and 2 antiquated dispatch boats. An armor clad, a cruiser, 4 new gunboats, and 5 first-class torpedo boats are being added.

Commerce and Production.—The production of Indian corn in 1896 was 25,833,503 hectolitres; of wheat, 601,782 tons; of rice, 44,275 tons; of sugar, 71,429 tons; of panocha, 62,688 tons; of molasses, 52,749 tons; of brandy, 5,663,757 hectolitres; of henequen, 531,319 tons; of cotton, 29,185 tons; of logwood, 67,853 tons; of cacao, 1,313 tons; of coffee, 13,254 tons; of tobacco, 15,875 tons; of rum, 328,986 tons. Large numbers of cattle are raised in northern Mexico to be fattened and slaughtered in the United States. The mineral products include gold, silver, lead, zinc, iron, copper, quicksilver, tin, cobalt, antimony, sulphur, coal, and petroleum. About a third of the mining establishments, which numbered 3,167 in 1894, belong to foreign companies or individuals. The quantity of gold brought to the mints and assay offices in 1896 was 6,289 kilogrammes, value \$4,247,760; of silver, 1,314,849 kilogrammes, value \$58,044,820. The total value of imports in 1898 was \$43,603,492; of exports, \$75,042,332 of precious metals and \$53,930,417 of merchandise. The value of silver exported was \$35,721,275; of silver coin, \$18,214,989; of silver ore, \$11,137,996; of gold, \$6,364,308; of henequen, \$11,564,519; of coffee, \$10,649,119; of cattle, \$4,507,327; of tobacco, \$4,489,768; of timber, \$3,597,069; of hides and skins, \$3,590,477; of zacaton root, \$1,196,293; of

vanilla, \$633,270; of chick peas, \$632,651; of ixtle fiber, \$609,867. The formation of new companies in various industries, the extension of railroads, and the general prosperity of the country have stimulated the import trade, and the export trade has more than kept pace with it, owing to increased production and better transport facilities. The establishment of new banks everywhere has helped to insure a constant circulation and productive employment of money. Of the total value of the imports, 49 per cent. came from the United States, 18 per cent. from Great Britain, 12 per cent. from France, 11 per cent. from Germany, and 10 per cent. from other countries. The increase in the number of factories calls for larger imports of coal, of which about 50 per cent. comes from the United States and 30 per cent. from England. Notwithstanding the many new cotton mills that have been started, the imports of cotton goods are increasing, especially of the finer qualities not made in the country. American capital is constantly finding employment in the mines, railroads, and industries of Mexico, and American trade is growing, and German trade also, while British trade has declined. The corn and other food crops of Mexico are precarious on account of frequent droughts, which sometimes necessitate importations to supply a deficiency. The cultivation of coffee and tropical products is increasing. Attempts have been made to introduce the cultivation of the rubber tree on a large scale, but the capital raised for the purpose in financial centers has not all been honestly applied. There are about 15,000,000 sheep in the country, and probably more than 8,000,000 horned cattle. The chief wealth of Mexico, however, lies in her mines. Silver, gold, lead, antimony, zinc, and magnesia constitute two thirds in value of the exports. Gold mining is increasing in importance, because most of the ores are of low grade, such as can only be profitably worked by the modern cyanide process. Silver has been mined since the first advent of Europeans, and the Mexican silver dollar is accepted as currency in China and other Asiatic countries.

Navigation.—The number of vessels entered at Mexican ports during 1898 was 10,527, of 4,085,200 tons; cleared, 10,452, of 3,880,940 tons. These included 5,112 steamers entered, of 3,731,323 tons, and 4,953 cleared, of 3,535,898 tons.

The merchant navy in 1898 comprised 17 steamers, of 4,081 tons, and 51 sailing vessels, of 9,317 tons.

Communications.—Out of a total length in 1898 of 7,750 miles of railroads, 5,617 miles had been built by foreign capital. The receipts in 1896 were \$30,231,000, from 26,081,000 passengers and 5,084,000 tons of freight. There are 42,150 miles of telegraph and 7,459 miles of telephone. Two thirds of the telegraph lines belong to the Federal Government, and the rest to the states, railroads, and telegraph companies.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population was 212,267 in 1840; 397,654 in 1850; 749,113 in 1860; 1,184,059 in 1870; 1,636,937 in 1880; and 2,093,889 in 1890. By the State census of 1894 it was 2,241,454. Capital, Lansing.

Government.—The following were the State officers in 1899: Governor, Hazen S. Pingree; Lieutenant Governor, O. W. Robinson; Secretary of State, Justus S. Stearns; Treasurer, George A. Steel; Auditor, Roscoe D. Dix; Attorney-General, Horace M. Oren; Superintendent of Instruction, Jason E. Hammond; Insurance Commissioner, Milo D. Campbell, who accepted the office of Tax Commissioner and was succeeded

by Harry H. Stevens as acting commissioner; Land Commissioner, William A. French; Labor Commissioner, Joseph L. Cox; Food Commissioner, E. O. Grosvenor; Adjutant General, F. H. Case; Railroad Commissioner, Sybrant Wesselius, succeeded in March by C. S. Osborn; Bank Commissioner, George L. Maltz; Game Warden, Grant M. Morse; Analyst, R. E. Doolittle; State Tax Commission, Milo D. Campbell, A. F. Freeman, and Robert Oakman; Forestry Commission, Arthur Hill, C. W. Garfield, and the Land Commissioner *ex officio*; Library Commission, D. D. Aitkin, T. P. Hall, Cyrus G. Luce, and Charles H. Hackley; Chief Justice of the Supreme Court, Claudius B. Grant; Associate Justices, Robert M. Montgomery, Frank A. Hooker, Joseph B. Moore, Charles D. Long; Clerk, Charles C. Hopkins—all are Republicans.

Finances.—The Treasurer's report, published in August, shows that the cash balance on hand June 30, 1898, was \$1,216,212.61. The receipts of the year were \$4,576,874.98 and the disbursements \$4,391,031.71, leaving a balance of \$1,402,055.88 at the close of July, the fiscal year having closed the business June 30, 1899, and the balance having increased \$174,819.10 during the year.

During the year the general fund was credited with \$284,052.54 received through the Auditor General's office for redemptions, delinquent taxes, State tax lands, tax histories, etc. The sum of \$2,322,845.75 was received from county treasurers; from the United States Government in aid of the Soldiers' Home, \$95,336.05; from the United States in aid of the State Agricultural College, \$24,000.

The receipts from specific taxes aggregated \$1,415,210.22, of which \$999,185 was from railroad companies, \$134,816 from fire insurance companies, \$95,345 from life insurance companies, \$29,916 from telephone, \$18,375 from telegraph, and \$13,681 from express companies.

The disbursements from the general fund included: Soldiers' Home, \$113,066.66; Eastern Asylum, \$10,335; Kalamazoo Asylum, \$9,800.79; Northern Asylum, \$10,141.31; Newberry Asylum, \$42,627.81; Asylum for Insane Criminals, \$8,650; Home for the Feeble-minded, \$59,116.16; Fish Commissioners, \$20,175.18; University of Michigan, \$244,711.07; military account, \$50,000; factory inspection, \$12,005; Dairy and Food Commission, \$17,556.34; soldiers' aid, \$6,048.82; Board of Pardons, \$4,518.97.

The specific tax fund was credited to the several trust funds, as follows: Agricultural College interest fund, \$46,315.76; general fund, \$48,015.55; normal school, \$3,969.92; primary school interest fund, \$962,325.02; university interest fund, \$37,303.08; balance June 30, 1899, \$317,380.89; total, \$1,415,210.22.

The indebtedness of the State is summarized as follows: War loan, 1898, 34-per-cent. bonds, \$208,700; war-loan bonds, 1898, 3 per cent., \$291,300; noninterest-bearing bonds, \$10,992.83. The trust fund debt has now reached \$6,120,003.56, of which amount \$4,793,010.63 belongs to the primary school fund, \$725,843.81 to the Agricultural College fund, \$66,245.12 to the normal school fund, and \$533,904 to the university fund.

The State tax levy for 1899 amounts to \$3,725,835.

Education.—The latest school report at hand is for the school year ending Sept. 5, 1898. In that year there were 672 graded and 6,485 ungraded districts, and 111 township-unit school districts. The school population was 703,730, an increase of 2,486 over that of the year next pre-

ceding. The enrollment was 496,025. The average length of the school year was 8.12 months. There were 403 private schools, with attendance of 45,465. The aggregate wages of public-school teachers were \$4,146,450; men received on the average \$43.05 a month; women, \$35.28. The value of school property was \$18,138,589, and 3,382 libraries have 822,410 volumes.

The Legislature of 1899 appropriated funds for repairs and extensions at many of the State institutions. The following were the sums granted to educational institutions: State Library, \$4,375; College of Mines, \$64,687.50; Northern Normal School, \$27,500; Central Normal School, \$74,250; State Normal College, \$109,275; Agricultural College, \$74,000; Michigan University, \$279,275.

The State Agricultural College, at Lansing, had in attendance in October 524 students, an increase of about 75 over the number at the same date in 1898. "The addition of a course for women three years ago was followed by a remarkable increase in the attendance not only of young women, but also of young men in both courses; the addition this year of a five-year course for mechanical students has been followed by about the normal growth in the agricultural and women's courses and by an increase of over 60 per cent. in the matriculations in the mechanical course."

A building for women is about to be erected. It will cost \$83,000, with \$12,000 additional for furnishings. A farm of 676 acres is used by the college.

Charities and Corrections.—State charitable and correctional institutions receive from the State, according to the act of the Legislature of 1899, as follow: Industrial Home for Girls, \$59,764.75; Industrial School for Boys, \$126,900; Upper Peninsula Prison, \$16,989; State Reformatory, \$12,300; State Prison, \$35,500; Michigan Asylum for Insane, \$12,432; Upper Peninsula Asylum, \$62,910; Northern Asylum, \$50,550; Eastern Asylum, \$77,000; School for the Blind, \$41,143.75; School for the Deaf, \$137,362.50; State Public School, \$55,016; Home for the Feeble-minded, \$119,435; Soldiers' Home, \$162,250. Current expenses of insane asylums, \$503,350; current expenses of prisons, \$110,000.

Charges of cruel punishments at the Adrian Industrial School for Girls led to an investigation, and a change was made in the management. There were 326 girls in the school in February.

The shops of the Industrial School for Boys were struck by lightning, June 5, and burned. The institution has 650 inmates.

Banks.—The Bank Commissioner's report, coming down to Sept. 7, 1899, shows the condition of the 187 State banks and 3 trust companies. The increase in the year ending Sept. 7, 1899, is shown as follows: In loans, discounts, bonds, and mortgages, \$11,956,861.48; in deposits, \$14,742,858.67.

Building and Loan Associations.—From a bulletin concerning the associations and their business for the year ending in June it appears that there has been a decrease of over \$750,000 in the assets of the 73 associations reporting.

Railroads.—For the six months ending June 30 the total earnings of the railroads in the State were \$16,492,895.97, against \$14,896,181.88 for the corresponding period of 1898.

Three of the railroads were consolidated this year under the name "The Detroit and Père Marquette." The consolidated lines have a total of 1,769 miles, as follow: Flint and Père Marquette, 704; Chicago and West Michigan, 614; Detroit, Grand Rapids and Western, 451.

Almost every important city in the State will be reached through the one company. The total stock of the new company is \$28,000,000, an increase of \$5,000,000. The bonded indebtedness is \$25,300,000, making the total indebtedness less than \$30,000 a mile. The net earnings of the three roads in 1898 were \$1,587,000.

There are in all 10,211.78 miles of line owned by 88 companies. The wages of employees have been materially increased in the year in many instances, section men and track laborers receiving as much as \$1.75 a day. In the year 12 railroad companies, including reorganizations, and 14 electric companies filed articles of incorporation. Nearly all the latter will conduct inter-urban business and compete with steam roads.

The Copper Range Railway Company filed its articles in February. It is capitalized at \$5,000,000, and is to run through Houghton, Gogebic, and Ontonagon Counties.

Decisions.—In July the State Supreme Court decided against the validity of the so-called McLeod law, which authorized the appointment of the Detroit Street Railway Commission, whose object was the purchase and municipal ownership and operation of the street railways of Detroit. The decision is that the law is unconstitutional; that there is no such office as the "Detroit Street Railway Commission"; that Gov. Pingree and the other commissioners have no title thereto; and that judgment of ouster must be entered against them.

The law requiring railroads to sell 1,000-mile tickets for \$20 was decided unconstitutional by a majority of the United States Supreme Court in April. It was declared to be discrimination in favor of a few persons having occasion to travel much on the roads at the expense of others having less occasion to travel and unable to buy a large amount of transportation at a time.

In October the State Supreme Court gave an opinion that a woman may not hold the office of prosecuting attorney though elected to it, because not herself an elector, holding that, though the law is silent on the subject, it must be so understood. Justice Moore dissented from the opinion of the majority of the court, holding that, as the State concedes the right of women to practice law, there is no reason why it should not allow them to hold an office the duties of which pertain almost wholly to the practice of law.

Insurance.—The Insurance Commissioner in March declared against what is known as "special board agency contracts," by which a company would form a board of 200 to 400 members living in different parts of the State. They were supposed to be inactive agents, and the company agreed to set aside \$1 per \$1,000 on each annual premium every year and place it in a special fund to be divided among those holding such contracts. The commissioner directed all companies operating under the plan to abandon it.

Legislative Session.—The regular session of the Legislature extended from Jan. 4 to June 24. The Governor called a special session, which began Dec. 18 and was not finished at the close of the year.

R. B. Loomis was President of the Senate; Edgar J. Adams was Speaker of the House, and George F. Gillam Speaker *pro tempore*.

Julius C. Burrows was elected United States Senator. Albert Pack was a candidate before the Republican caucus for the nomination. D. J. Campan was the Democratic candidate.

A total of 1,789 bills and joint resolutions were introduced, and more than 500 were passed.

A State tax commission was established, to consist of three members, appointed by the Governor for terms of six years at salaries of \$2,500. Its duties are to supervise assessing officers and assessments, and advise the Legislature relative to desired changes in the tax laws and the specific rate necessary to make the railroads pay a tax equal to a tax on the cash value of their property. This commission will hear appeals and adjust unequal assessments and equalization. It must hold six regular sessions a year.

Many measures affecting taxation were proposed, but few of them passed. One of the few was that imposing a direct inheritance tax of 1 per cent. on personal property exceeding \$5,000, and a collateral inheritance tax of 5 per cent. on all property over \$500.

A bill known as the "Atkinson bill" was passed, creating a board of assessors to tax railroad, telegraph, telephone, and express companies on the total value of their property, including franchises, at the average rate of State, county, and municipal taxes. But in April the Supreme Court gave a decision in regard to an act of 1881 making similar provisions in regard to telegraph and telephone companies, declaring it unconstitutional, on the ground that it was contrary to the law for a uniform rule of taxation. As this settled the question of the validity of the Atkinson law, the Legislature passed an act taxing telephone, telegraph, and express companies on their gross receipts in lieu of all other taxes. Railroads are taxed on gross receipts.

Other measures relating to taxation were:

Making abstract books subject to levy and sale on execution.

Allowing water-power companies to pay 1 per cent. on their capital stock in lieu of real-estate general taxes.

To make lands returned delinquent for taxes for five years subject to homestead entry.

To require each assessing officer to swear each taxpayer to a statement of his assets.

A commission was established to negotiate with all specially chartered railroad companies for the surrender of their charters, in order that they may be incorporated under general laws.

Submerged and swamp lands bordering on the Great Lakes are to be set apart as public parks and hunting and fishing grounds. Changes were made in the close seasons for birds. It is made unlawful to take or kill the mourning dove.

Among the more important acts was the anti-trust law. It defines and prohibits "trusts, monopolies, and combinations of capital, skill, or arts to create or carry out restriction in trade or commerce; to limit or reduce the production or increase or reduce the price of merchandise or any commodity; to prevent competition in manufacturing, making, transportation, sale, or purchase of merchandise, produce, or any commodity; to fix at any standard or figure whereby its price to the public consumer shall be in any manner controlled or established any article or commodity of merchandise, produce, or commerce intended for sale, barter, use, or consumption." The proof of the existence of the combination and the defendant's connection are sufficient, the contracts are void, and the injured person may collect twofold damages.

Property sold on mortgage foreclosure may be redeemed wholly or in part within six months. Deeds given on such sales must be deposited with the register and become good only on the expiration of the six months without redemption. The sale must not be ordered until six months after the bill for foreclosure is filed.

Societies not incorporated are forbidden to receive minor children, and societies receiving such children must be under supervision of the Board of Charities.

Persons proving injury from mob violence may collect \$500 to \$5,000 from the county.

Acts relating to military matters were: Giving preference for public employment to soldiers of the Spanish war, as well as of the civil war; instructing the Adjutant General to compile histories of soldiers and sailors of the two wars; providing for relief of needy soldiers of the Spanish war and women who were nurses of soldiers of the civil war; providing that all able-bodied citizens—not exclusively white men, as heretofore—from eighteen to forty-five years old shall be subject to military duty unless exempt.

Appropriation was made for establishing an agricultural and horticultural experiment station on the Upper Peninsula; provision was made for farmers' institutes; \$4,000 was appropriated for printing and distributing bulletins of the experiment station; and an act was passed for the incorporation of societies for improvement of farm products and methods of marketing them.

Penalties were provided for obstructing the dairy and food inspectors in the performance of their duty, and for the adulteration of milk and of any ground grain or feed by the use of oat hulls. Process butter must be plainly labeled.

It was enacted that there shall be at each insane asylum a resident woman physician. The laws on commitment and maintenance of the insane were amended, and the name of the Asylum for Dangerous and Criminal Insane was changed to the State Asylum. The inmates of this institution are to be limited to those escaping punishment on account of insanity for murder, rape, arson, or attempt at great bodily harm, instead of, as formerly, for any crime. It was also provided that a resident woman physician be employed at the Industrial Home for Girls.

It was made unlawful for insurance companies to make false statements in reports or advertisements on penalty of forfeiture of their charters, and directors and officers were made liable to fine and imprisonment. Foreign companies are required to deposit as large a sum as their own States exact of foreign companies. Life companies of the State may transact sick and accident business.

The laws regarding reports of manufacturing companies were amended. They must give names and addresses of all officers and directors, and neglect to report makes the directors liable for debts contracted in the time of such neglect.

For regulating coal mining it was provided that the Commissioner of Labor should appoint an inspector; that escape shafts should be made in all mines 300 to 400 feet from the main shafts; that only competent engineers should be employed to operate cages and hoists, which must have catches and covers and take but 10 men at one time.

Children must not be employed in factories between 6 P.M. and 7 A.M. Except on permission of the factory inspector, wearing apparel, flowers, cigarettes, or cigars may not be manufactured in dwellings. This does not apply to the employment of seamstresses in families. Emery wheels and belts must be provided with fans on the order of the Commissioner of Labor.

The amounts of required capital for banks in places of various sizes were raised. It was made a felony for a bank to receive deposits after it is believed to be insolvent, instead of a misdemeanor, as heretofore. Loans to officers or em-

ployees must be approved by the directors. Loan associations are to report quarterly to the Bank Commissioner. Loans or deposits of insolvent associations are a lien upon the assets.

It was directed that such university and primary school lands as are still unsold shall be withdrawn from the market, newly appraised, and restored.

The principal acts relating to education were: Providing for the better support of teachers' institutes; raising the State tax for the university from one sixth to one fourth of a mill; providing for an additional normal school at Marquette; changing the name of the Michigan State Normal School to the Michigan State Normal College; repealing the uniform text-book law of 1897; providing for the incorporation of associations for establishing loan funds for the benefit of students of the State, to assist them in attending the various State educational institutions; providing for the establishment of day schools for the deaf.

For regulating the practice of medicine a board of registration was created, to be composed of 10 physicians—5 allopathic, 2 homœopathic, 2 eclectic, and 1 physio-medic. They are to enforce the law requiring registration on presentation of diplomas from approved medical schools or on examination. Foreign certificates granted under similar conditions will be received only in cases where the State or county issuing them extends the same privileges to holders of Michigan certificates. Provision was also made for the licensing of veterinarians, and an act was passed giving the bodies of Kent County paupers to the Grand Rapids Medical College for dissection.

A State board of horseshoers' examiners was created; a State board of barbers' examiners; a permanent forestry commission; a commission for the Ohio Centennial and Northwest Territory Exposition; and a State library commission of four members.

Acts were passed requiring the labeling of all gasoline, benzine, and naphtha sold at retail; providing for the inspection of illuminating oils; prohibiting the use of the products of petroleum for illuminating which have been adulterated or which will emit a combustible vapor at a temperature less than 121° F., but permitting the use of gasoline lamps approved by the State Oil Inspector.

Other measures were:

Reducing the legal rate of interest from 6 to 5 per cent., and the contract rate from 8 to 7.

For reorganizing the militia.

To protect side paths from injury.

Providing that in divorce cases courts of record may punish refusals to pay alimony.

Providing that a wife may dispose of her rights in her husband's lands at the age of eighteen, instead of at twenty-one.

Providing that private files in cases where it is deemed best by the probate judge to keep secret the date of a marriage shall be open to inspection only on the order of the circuit or Supreme Court, made on the request of the person so married or when necessary to protect property rights.

Constituting the making of false statements in advertisements a misdemeanor.

Making it a felony to advocate polygamy.

Providing for ten days' notice to pledgor before sale of collateral securities.

Making claims against railways for labor remaining unpaid ten days after being presented liens upon all property; also claims for personal injuries or death.

Limiting the time for action on account of personal injuries to three years.

Among bills vetoed was one providing a bounty of one half a cent a pound on beet sugar, on the ground that there was no limit to the amount any factory could receive; it was estimated that if the factories now built and those in process of construction should be run to their full capacity they could draw, at the rate named, \$450,000 a year from the State treasury. There is a law of 1897 under which, if its validity is sustained, manufacturers may claim a bounty of one cent a pound. In September, October, and November, according to reports of companies, 9,855,555 pounds of sugar were made.

A bill making it a misdemeanor for one not a member of the Grand Army of the Republic to wear the button of the order was vetoed, on the ground that the bill sought to make the Legislature a collection agency for army posts, that the buttons are made from captured cannon, and that all Union soldiers who risked their lives should have a right to wear them.

A bill that passed the Senate and failed in the House by the lack of only one vote was one allowing any city to adopt the single-tax plan by vote after petition of 20 per cent. of the taxpayers.

The object of the special session of the Legislature, which began Dec. 18, was stated in the call to be "to consider the submission of an amendment or amendments to the Constitution which will permit the enactment of laws that will provide for the equal taxation of all property by the assessment of the same at its cash value, and such other matters as shall be submitted by special message."

Political.—An election was held in April for a justice of the Supreme Court and two regents of the university. The Republicans nominated Claudius B. Grant for Justice and H. S. Dean and Eli R. Sutton for Regents. Thomas E. Barkworth was the Democratic candidate for Justice and E. F. Legendre and Stanley E. Parkhill for Regents. The last named is a Populist. The Populists who did not unite with the Democrats nominated John M. Harris for Justice, the Prohibitionists named Frank B. Clark, and the Socialists George A. Eastman. The Republican candidates were elected, Justice Grant having a plurality of 51,346.

Two proposed constitutional amendments were adopted by vote at this election: Providing that counties may incur road and bridge debts of half of 1 per cent. of valuation without the vote of the people, and allowing the Legislature to abolish the powers of township commissioners and overseers of highways; permitting the Legislature to provide additional circuit judges in St. Clair County. Two others that were proposed were rejected: Requiring the Legislature to provide a State printing and binding establishment at the capital; creating an intermediate court between the circuit and Supreme Courts to have such jurisdiction as might be prescribed by law.

MINNESOTA. a Western State, admitted to the Union May 11, 1858; area, 83,365 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; and 1,301,826 in 1890. By the State census of 1895 it was 1,573,350. Capital, St. Paul.

Government.—The following were the State officers in 1899: Governor, John Lind; Lieutenant Governor, Lyndon A. Smith; Secretary of State, Albert Berg; Auditor, Robert C. Dunn; Treasurer, August T. Koerner; Attorney-General,

Wallace B. Douglas—all Republicans except the Governor, who was elected on a fusion ticket of Democrats and Populists; Commissioner of Insurance, J. A. O'Shaughnessy; Adjutant General, George C. Lambert; Chief Grain Inspector, A. C. Clausen, till August, when he resigned and was succeeded by Edwin S. Reishus; Chief Justice of the Supreme Court, Charles M. Start; Associate Justices, L. W. Collins, Calvin L. Brown, John A. Lovely, and Charles L. Lewis; Clerk, Darius F. Reece. All the justices are Republicans.

Finances.—The amount in the State treasury at the beginning of the year was \$872,574.69. The appropriation bill carried \$1,883,265.28, about \$70,000 less than that of the Legislature of 1897. The tax rate is 1.5 mill.

Education.—At the June commencements of the normal schools Winona graduated 101 students, St. Cloud 74, and Mankato 65, but in the year about 100. Duluth is to have a State normal school. The Legislature refused a proposed appropriation of \$80,000 for continuous normal-school sessions.

Charities and Corrections.—There were 7 graduates at the deaf-mute school in Faribault, 2 post-graduates, and 8 others honorably discharged in June.

The hospitals for the insane have about 3,265 patients.

The annual report of the Soldiers' Home shows the following statement: Annual appropriation, \$20,000; per capita from the United States Government, \$22,376.08; pensions turned in, \$12,710.40; balance on hand from last year, \$1,600.78; from relief, by vote

of board, \$17,000; total, \$79,687.26; warrants issued till Aug. 1, 1899, \$56,086.84; balance, \$23,601.42.

For the relief of soldiers outside of the home there were receipts during the past year amounting to \$91,285.71, with expenditures amounting to \$43,465.12. The expense for repairs was \$1,553. In August 562 soldiers outside the institution were receiving aid from the relief fund.

The report of the managers of the Penitentiary, at Stillwater, shows that the results of the introduction of the binding-twine industry are most satisfactory. In the two years ending July 31, 1898, the twine factory employed 140 convicts, who produced enough twine to yield the State a net profit of \$130,000. Besides helping the men and aiding largely in the support of the institution, the factory has had a controlling influence upon the market for twine in the State.

The whole number of convicts is nearly 500. The State Training School has an average of about 367 inmates.

Products.—The State is credited with having produced 36,000 tons of sugar beets in 1898. The same year the wheat yield was about 78,000,000 bushels. In 1899 it was estimated at 86,000,000 bushels.

From reports of 673 creameries—all that are registered—it is found that \$2,700,000 capital is

invested in the industry; that milk is supplied from 400,000 cows; that 1,382,718,000 pounds of milk were received in 1898 and 62,849,000 pounds of butter were made, of which 50,000,000 pounds were shipped from the State; that the gross receipts were \$10,370,000 and the operating expenses \$1,094,500; and that \$8,546,400 was paid to the 52,320 patrons.

From the State fish hatchery 2,110,000 trout were distributed in 1899. The constant high water made it impossible to get many pike, and only about 400,000 were hatched and distributed. For the same reason only about 100,000 bass and croppies were secured. These are not hatched at the hatchery, but are caught and distributed. They are secured along the river, mostly near Hastings.

Labor.—The Labor Commissioner's report shows that 3,303 establishments were visited in the year, where were employed 73,330 persons, of whom 62,696 were men, 10,045 women, 471 boys, and 118 girls. The inspection does not include the farming industry. The largest single item of labor is found in the 70 sawmills, 9,078 persons, of whom 23 are women and 2 boys, the rest men. Next come the railroad shops, yards, and roundhouses, of which there are 153.

The nonmanufacturing industries are under three heads—department stores, retail stores, and wholesale stores. They number 370 establishments visited, 6,432 men, 2,365 women, 180 boys, and 58 girls.

Insurance.—The township mutual fire companies are described as the most economical insurance companies known. There are about 125 in the State, carrying \$98,000,000 farmers' risks, at an average cost of 15 cents on the \$100. Commissioner O'Shaughnessy estimates that they save the State \$250,000 to \$350,000 a year in premiums. The township mutual is not confined to one town, but to contiguous territory. One of them, at Eagan town, in Dakota County, reported its running expenses for the year as \$8.93. It carried \$38,000 insurance. The president is sometimes paid a stated salary, sometimes 10 cents for every policy he signs. The secretary is usually paid for his time, sometimes 50 cents for every policy he writes, sometimes both. The treasurer usually gets a percentage on the money handled. The salary list of one company that has \$187,000 insurance was \$14 for the secretary, \$5 for the treasurer, and \$22.50 for the directors. One of the largest companies so far reporting is that of Rolling Stone, Winona County, with \$2,576,000 in force. Its operating expenses were \$114 for salary and fees of the president, \$189 for secretary, \$115 for treasurer, \$94 for directors; total, \$512. The lowest rate ever made on farm risks is said to have been 45 cents per \$100 on a five-year policy. At that rate the companies agreed that it was not profitable.

Banks.—The Germania State Bank was closed by the Examiner in July. After being closed in January, 1897, it was reorganized, and it has been doing a moderate business two years.

There was an increase of more than \$9,000,000 in the individual deposits held by the national banks of Minnesota outside of the reserve cities of St. Paul and Minneapolis in the year ending in July. In July, 1898, the banks held as individual deposits \$10,181,087. According to the statement made by these banks to the Controller of the Currency at the close of business on June 30, they held \$19,996,850, or nearly double their holdings of the previous year. The loans and discounts have also increased nearly \$3,000,000, and are now quoted at \$16,991,866.

JOHN LIND,

GOVERNOR OF MINNESOTA.

Lands.—In January the Secretary of the Interior affirmed the decision of the Commissioner of the General Land Office in the case of Archbishop John Ireland, involving the title to 33,178 acres in the State. It is held that under the first contract, made with the St. Paul, Minnesota and Manitoba Railroad Company on July 17, 1880, Archbishop Ireland was not a purchaser, but that under the second contract, made on March 30, 1883, he was a purchaser. Accordingly, the lands covered by the first contracts will not go to him, while he will receive those under the second contract. The case has been pending several years, and involves the titles of a large number of settlers. The archbishop secured the lands for settlers, an Irish settlement was made, and most of the lands have passed to these settlers. There still remained, however, a good many acres not sold or only partly paid for. Most of the lands are in the vicinity of Graceville.

The trouble over the Cass lake lands appears to have been settled in July by a decision of the secretary to sell the lands to the highest bidder as timber land under the Nelson act. Although the settlers are regarded as trespassers, yet they have settled with the expectation that the lands were to come into the market, and therefore it is thought best not to press them to leave.

National Forest Organization.—At Chicago, Aug. 11, an organization was formed with the object of preserving the forests about Itasca, Leech, Cass, and other lakes in northern Minnesota. It is called the Minnesota National Park and Forestry Association. Cyrus M. Northrup, of the University of Minnesota, is president, and Gov. Roosevelt, of New York, first vice-president. The object is to preserve as a great national park, as far as practicable, the native forests, waters, and topography of an extensive tract in the northern part of Minnesota, together with the wild game in the woods; that an intelligent system of forestry may be established therein, and that citizens may have for generations to come a great region abounding in native and cultivated forests and waters, to which they can resort in search of health and enjoyment, and that the preservation and renewal of the forests may be inaugurated in the central Western States.

Court Decision.—The law of 1894 prescribing the manner of listing for taxation the property of companies other than banking, railroad, telegraph, and insurance was declared void, in so far as it provided for deducting the indebtedness of a company from the value of its stock, on the ground that the result is inequality of taxation.

Legislative Session.—The thirty-first session of the Legislature began Jan. 3 and continued till April 18. Lieut.-Gov. Smith presided over the Senate and Hon. A. N. Dare over the House.

In joint session, Jan. 18, United States Senator Cushman K. Davis was re-elected, having received 136 votes in both houses, against 42 for Charles A. Towne, candidate of the Democrats and Populists.

A constitutional amendment was passed, to be submitted to vote at the November election of 1900, for permitting permanent school and university funds to be invested in local government bonds which will not make debts exceed 15 per cent. of assessed valuation. The present limit is 7 per cent.

Resolutions were passed requesting representatives of the State in Congress to use their influence in favor of a constitutional amendment providing for the election of Senators by direct vote of the people; also asking them to oppose the seating of Mr. Roberts, of Utah.

Very soon after the opening of the session a concurrent resolution was passed calling for investigation of alleged abuses in connection with the State binding-twine plant and the administration of the grain inspection department. As a consequence of the inquiry an act was passed to regulate the sale of twine made at the Penitentiary, and a board of appeals for grain inspection disagreements was created.

Hereafter the Railroad and Warehouse Commissioners are to be elected by the people, not appointed by the Governor; and the term is lengthened from three years to four.

New State boards and commissions are: A board of forestry, a board of electricity, and a library commission. Forest reserves were designated, and the fish and game laws were amended. Electricians must be registered after evidence that they possess required qualifications, but employees of interstate telegraph and telephone companies are exempt. The Library Commission is to provide for traveling libraries. A commission was created to settle State claims when collection is unfair or doubtful.

The legal rate of interest was reduced from 7 to 6 per cent. Interest on State deposits in banks may not be less than $2\frac{1}{2}$ per cent. instead of $3\frac{1}{4}$, as heretofore.

State institutions are forbidden to exceed their appropriations except that, in cases of calamity, the Governor, Auditor, and Treasurer may authorize special necessary expenditures, and debts made before appropriations are not lawful. Cities of fewer than 10,000 population may issue bonds for not more than \$16,000 for sites for State institutions. Asylums for the insane are to be built at Anoka and at Hastings, on the cottage plan; the cottages are to be not more than two stories high; for land \$15,000 was appropriated, and for buildings \$125,000. Orphan asylums and homes for the indigent were exempted from taxation. Two or more counties with a joint population of 25,000 may establish district almshouses.

The election laws were changed in some particulars. The use of voting machines is allowed. Townships are permitted to buy voting places in incorporated villages. When townships cast fewer than 400 votes they may be consolidated to form election districts. In regard to primaries, it was provided that in counties of 200,000 the nominees of the parties must be chosen by popular vote on Tuesday, seven weeks before the election. The same election officers must act for all parties. Assessors are to be elected by the people, not the council, in villages constituting separate election districts.

Measures in reference to corporations provided that foreign corporations are to have public offices in the State and file articles and statements of property with the Secretary of State, license fees to be on proportion of capital stock. After assignment of a corporation or appointment of a receiver the court may proceed at once, after petition of creditor, assignee, or receiver, to enforce the law in regard to the liability of stockholders, and make assessments. Stockholders not already parties to suits may be assessed after final judgment. Co-operative associations that have not declared a dividend for five years may be dissolved by the court on petition of five stockholders.

One fifth of the net profit of a bank, instead of one tenth, is to go to the surplus fund.

A defendant is permitted to file an affidavit of prejudice against a court commissioner when brought before him for examination.

A law was made providing for the licensing and

regulating of commission merchants under the supervision of the Railroad and Warehouse Commission.

In cases of redemption after foreclosure the rate of interest from the time of sale shall be as on the mortgage, if that be less than 7 per cent.

An antitrust law defines and prohibits such combinations, and makes violation of the law a felony. The charter is forfeited and contracts can not be enforced.

The laws in regard to liens were revised. It was provided that, in order for a mechanic's lien, the contractor must furnish the owner on demand, within fifteen days after the work is done, statements of the amounts and persons to whom payment is due.

Changes in taxation laws made the State tax on express companies 4½ instead of 3 per cent. of gross receipts. Minerals and standing timber are to be reckoned as real estate for purposes of taxation, and their removal before payment of taxes is a crime.

Cities of more than 50,000 inhabitants may issue bonds to pay existing floating debts, and may issue certificates of indebtedness in anticipation of taxes for any use named in the estimate. Villages may bond themselves for present floating debt over \$3,000.

It was made a misdemeanor to sell baking powder containing injurious substances, and the ingredients must be named on the label. It is also a misdemeanor to add antiseptics to milk, cream, butter, or cheese.

A law was made to prevent adulteration of white lead and mixed paints.

Acts affecting railroads provided that foreign corporations in control of roads in the State are to be subject to State laws; that parallel lines must not consolidate; that on orders from the Railroad and Warehouse Commission companies must build platforms for loading cars; that they must furnish free transportation for shippers of car loads of live stock; that when live stock is delayed in a journey over two roads the owner may sue them jointly if uncertain which is responsible; that after rates on lumber, live stock, coal, flax, or grain have been established sixty days they may not be raised except with consent of the commission. The commission may require a uniform gauge. Stealing rides on railroad trains and on street cars is prohibited. The right to operate street railroads outside of cities and villages on public roads may be granted by county commissioners for terms not exceeding twenty-five years, and such roads may exercise eminent domain outside of cities.

The act providing for bounty on beet sugar was amended. The limit of \$40,000 a year was fixed, and beets containing 12 per cent. of sugar must be paid for at the rate of \$4.25 a ton. The Governor vetoed a bill appropriating \$19,975 to pay sugar bounties due under the act of 1895, but the House repassed it by a vote of 84 to 22.

The school laws were amended so as to fix State aid to rural schools at \$35,000 annually, instead of \$20,000. Not more than 30 instead of 20 per cent. of districts in a county may be aided in one year. Schools of two rooms, with one teacher holding a first-grade certificate and at least one holding a second grade, will be entitled to \$100 a year, instead of \$50. School districts of more than 50,000 inhabitants may levy an additional school tax of 1½ mill, and the special district tax in cities under 10,000 is not to exceed 15 mills instead of 9, as heretofore, for support of schools.

A university certificate is made valid two years from its date. The Governor is authorized to appoint arbor and bird days.

A compulsory school law was passed, requiring attendance of children from eight to sixteen for the entire session in all districts and cities.

Cities of 50,000 population may spend \$50,000 a year for park land of over 15 acres. Laws permitting road and bridge improvement were enacted.

The office of probation officer was created. These officers are to be appointed by the State Board of Corrections and Charities in counties of 50,000. It is their duty to attend trials of juvenile delinquents, and when sentence is suspended to have oversight of the child and make reports. Another new office is that of custodian of documents and supplies.

It is made unlawful to bring dependent children into the State without the consent of the State Board of Corrections and Charities. The inheritance of an adopted child dying a minor and unmarried must go to the heirs of the person from whom the property was received.

Several acts refer to soldiers of the Spanish war. Students enlisted for that war are entitled to free tuition at the university. The Soldiers' Home is open to indigent soldiers of the war. The will of a soldier or sailor who died in the Spanish war is valid without witnesses if it is entirely in the handwriting of the testator. The law regarding the burial of soldiers at public expense was extended so as to include soldiers of the Spanish war and all dying in the United States service and brought into the State for burial.

Provision was made for a naval reserve of eight companies.

Other provisions were:

Making records of foreign countries admissible as evidence.

Making it unlawful to deface the United States or the State flag, or to use them for advertising.

That no title to public ground may be acquired by occupancy.

Exempting bicycles and watches from execution.

To protect side paths from injury.

Making necessities furnished to a family chargeable to the property of the husband and wife, or of either.

Legalizing instruments without seals and abolishing private seals.

That all saloons shall be closed from ten to three on Decoration Day in places where memorial exercises are held.

Increasing the bounty on wolves.

Prohibiting the docking of horses' tails.

Declaring Jan. 1, Dec. 25, and Feb. 12 public holidays.

Raising the age of consent from fourteen to sixteen years.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 136,621 in 1830; 375,651 in 1840; 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,597 in 1880; and 1,289,600 in 1890. Capital, Jackson.

Government.—The following were the State officers during the year: Governor, A. J. McLaurin; Lieutenant Governor, J. H. Jones; Secretary of State, J. L. Power; Treasurer, A. Q. May; Auditor, W. D. Holder; Superintendent of Education, A. A. Kincannon; Attorney-General, W. N. Nash; Adjutant General, William Henry; Chief Justice of the Supreme Court, Thomas H.

Woods; Associate Justices, S. H. Terral and Albert H. Whitfield; Clerk, Edward H. Brown—all Democrats.

Finances.—There was cash in the treasury on Oct. 1, 1897, \$53,842.06. The receipts for the fiscal year beginning Oct. 1, 1897, and ending Sept. 30, 1898, were \$1,572,342.24, which, added to the amount in the treasury, made the revenue for the fiscal year 1897-'98 \$1,626,184.30. The disbursements on pay warrants were \$1,442,618.16, and \$115 on special warrants of 1894-'95, leaving \$183,451.14 in the treasury.

There was received in the fiscal year from Oct. 1, 1898, to Sept. 30, 1899, inclusive, \$1,603,963.78, which, added to the sum in the treasury, made the revenue \$1,787,414.92. The disbursements for the fiscal year were \$1,453,634.12 on pay warrants and \$15 on special warrants of 1894-'95, leaving \$333,765.80 on Oct. 1, 1899.

Under an act approved May 15, 1897, \$85,000 was borrowed in June and July, 1897, and obligations were given therefor, payable on or before Jan. 10, 1899. These obligations for \$85,000 have been paid, and are included in the disbursements for 1898-'99.

The payable bonded indebtedness of the State at the beginning of the year was \$1,003,000, including the \$400,000 bond issue of 1896. The nonpayable debt is \$1,635,102.50. This is the Chickasaw school fund, the university fund, and agricultural bonds. On this the interest alone is payable. The outstanding warrants were \$20,982.35, Oct. 1, 1899. The Auditor's report shows that the issue of warrants from Oct. 1, 1897, to Sept. 30, 1898, amounted to \$1,469,070.12, and \$1,425,332.12 from Oct. 1, 1898, to Sept. 30, 1899.

Banks.—The Auditor's report, published in August, shows that 91 State banks are doing business. Their resources and liabilities are each \$15,807,578.32.

Valuation.—The personalty assessments of the counties for 1899 show a total of \$48,258,651, an increase of more than \$1,000,000 over 1898. The number of polls reported for 1899 is 263,877, which is a slight decrease. The total realty and personalty valuation of the State, including railroad assessments for 1899, is \$187,416,935.

Corporations.—The biennial report of the Secretary of State shows that in the last four years 565 charters of incorporation have been recorded. Since the date of the last biennial report 285 new enterprises have been chartered. Practically all the charters for cotton mills have been granted within the past two years.

Five railroads, 6 steamboat and packet companies, and 13 oil mills have been chartered since the previous biennial report.

Education.—The State University buildings and grounds are valued at \$300,000, and the apparatus, library, and collections at \$60,000. The income consists of \$32,643 interest paid annually by the State on funds derived from sale of land granted by Congress. No tuition fees are charged except in the department of law, where the fee is \$50 a session and a matriculation fee of \$10 from all academic students. The revenues from these sources amount to about \$5,000 a session. Chancellor Fulton urges enlarged facilities, and says that a school of medicine should be established, while the schools of civil and electrical engineering, pharmacy, and dentistry are other pressing needs only awaiting funds to develop them.

The enrollment of public-school pupils in 1898-'99, exclusive of separate school districts, was as follows: White, 150,099; colored, 179,165; total, 328,264. Average attendance: White, 86,060;

colored, 94,843; total, 180,903; difference between total enrollment and total attendance, 148,361. Average salaries of teachers: White, \$30.49 a month; colored, \$19.59 a month. Total enrollment, separate school districts: White, 17,079; colored, 12,803; total, 29,882. Average attendance, separate school districts: White, 12,319; colored, 7,604; total, 19,923; difference between total enrollment and total attendance, 9,959.

Health.—From the biennial report of the State Board of Health, published in December, it is learned that in 1898 yellow fever appeared at 30 places in the State, resulting in 1,386 cases, of which 1,017 were white and 369 colored. The number of deaths was 84. The disease was more virulent this year than for the previous two years.

Penitentiary.—The reports of the Board of Control and the warden and clerk of the Penitentiary show that the convicts are humanely treated, are well fed and comfortably clothed, and have medical attention and are nursed when sick, and have such other care and provision as proper for prisoners undergoing punishment for crime, and this not only without any expense to the State treasury, but a profit is derived from the labor of convicts.

The plantations owned and rented made 1,788 bales of cotton and 35,600 bushels of corn. The 9 plantations on the share system made 4,585 bales of cotton, giving 2,292½ bales to the State and the same number to their owners. The State also made 36,200 bushels of corn, giving 18,100 to the State. The State picked 3,540 bales of its cotton, and housed the entire crop. The warden calculates an income of \$35,000 or \$40,000, which is more than the State ever has received from a crop since the organization of the present penitentiary system.

Insane.—The average number of patients under treatment for the year ending in October was 886. The number of white male inmates is given as 205; white females, 251; colored males, 200; colored females, 191. The actual increase in the number of patients in 1899 over 1898 was 18.

Deaf and Dumb.—During the session of 1897-'98 there were 97 pupils in the State institution. The year 1898-'99 showed an attendance of 96.

Blind.—The report of the Blind Institute gives an average attendance from May, 1898, to September, 1899, of 27 pupils, at a cost of \$23.46 per pupil per month.

Railways.—The total mileage in the State in 1898 was 2,653,156 miles, and in 1899 the mileage was 2,674,508. The increase of 1898 over 1897 is 80.37 miles, and of 1899 over 1897 22,352 miles.

The total valuation of all railroad property in the State for 1899 was \$25,731,165. The valuation of palace car companies was \$94,400.

Lawlessness.—In January, in charging the Hinds County Grand Jury, Judge Powell said: "Some weeks since I read in a newspaper 'that the only thing in Mississippi which was cheaper than 4-cent cotton was human life.' It was a fearful commentary upon the law and order of a great State. We are accustomed to boast that we live at the close of nineteen centuries of Christian civilization, and that Christ, and him crucified, is preached from Greenland's icy mountains to India's coral strand to a believing world. We are proud of the fact that our Anglo-Saxon forefathers wrested from the hands of a reluctant king the great Magna Charta of English liberty, in which every man, however humble, is guaranteed an open and fair trial by a jury of his peers. And yet, strange to say, hardly a week passes that we do not hear of the murderous work of some infuriated mob, until finally, to cap the

climax of our shame, a mob actually takes possession of the jail in our capital city and threatens to storm the State Penitentiary itself. Surely the time has come to call a halt or else to admit that organized murder is the supreme law of the land. Surely the time has come to strike this representative of anarchy with the mailed hand of the Law, before the law itself—yes, our very civilization—goes down in wreck and ruin. It is to you, gentlemen, clothed as you are with the majesty and power of the law, that the people look to vindicate the law and bring the guilty to punishment."

A triple lynching occurred in March in Yazoo County, in which three negroes lost their lives. They were taken from an officer of the law by an armed mob and their bodies were riddled with bullets and weighted with cotton ties and sunk in Yazoo river. None of the participants in the deed of violence are known. The crime of the negroes was taking part in a small race disturbance in an adjoining county. About two weeks ago, near Midnight, a small village in Sharkey County, several white citizens of the neighborhood were shot at from ambush, and the three negroes lynched fired on two planters who were riding along the public road. Two other citizens were fired on in a similar manner. Because of these acts a crowd of 200 whites assembled from Yazoo and Sharkey Counties to hunt down the ambushers. Two negroes, who were regarded as the leaders, made their escape. A great many others were arrested, but all were discharged except the three above mentioned, who were turned over to the sheriff of Yazoo County. He decided to hold the negroes to await the orders of the sheriff of Sharkey County. That official sent a deputy for the prisoners, and he started with them on a steamer. At Silver City the negroes were taken from the officer by an armed mob, hurried ashore, and lynched.

In September a movement was set on foot to organize a mob between Brandon and Raleigh for the purpose of lynching James McAlpin, the alleged murderer of his neighbor, Jasper Thornton, in Smith County. When news reached Gov. McLaurin of the projected attempt he went to Brandon and accompanied the prisoner to the place of trial, leaving orders for the Mississippi Rifles to hold themselves in readiness. By the Governor's prompt action a lynching was avoided.

In December two negroes were lynched by a mob at Bolton for the murder of an aged man, Milton S. Harre. News of the murder reached Bolton on the day it was committed, and the town marshal and a posse set out in search of the murderers. Robbery was the incentive of the act. Two negroes were arrested, and both confessed. The prisoners were lodged in the calaboose, and shortly after dark a mob of 150 unmasked men broke open the frail structure and took possession of them. They carried the prisoners about a quarter of a mile from town and hanged them to a bridge.

Decisions.—In April an interesting decision, concerning the rights of railroad companies, was handed down by Chief-Justice Woods, of the Supreme Court. The suit was that of D. C. Latimer vs. the Illinois Central Railroad Company. Latimer alleged that he had been maliciously libeled by the company by having his name placed on what he called a "black list." He had been employed as a conductor, and in answer to the suit the company charged that on Aug. 25, 1896, he had wrongfully appropriated \$17.25 collected in cash fares on his run. The company immediately

discharged him. The company denied that it kept such a thing as a black list, but admitted that it kept a record of the 30,000 men in its employ in order to ascertain who are reliable, and that it employs men to make reports on the habits and conduct of these workmen. Chief-Justice Woods held that the employment of these men is absolutely necessary both as a protection to the company and to the traveling public; that the action of the company in keeping a history of its workmen is in strict accord with the law, and is in no sense of the word a black list.

In May Associate-Justice Terral, of the Supreme Court, handed down an opinion in the suit of S. Sokolosky vs. New South Building and Loan Association, holding that under the laws of the State a fixed premium charged by a building and loan association is usurious. The decision, however, only affects foreign companies. In Justice Terral's decision he says: "A domestic building and loan association is authorized by law to exceed the legal rate of interest, but such is not allowed to a foreign building and loan association, and comity would not authorize an association of the last-named kind to make contracts here which, under our jurisprudence, are held to be usurious."

Constitutional Amendments.—The total vote of the State on constitutional amendments at the autumn election was: Yeas, 21,169; nays, 8,643. Although the vote showed a large majority in favor, the question was raised that the amendments failed of adoption because the highest vote was not a majority of the total vote cast for the State ticket. The Legislature will be called upon to settle the question. The amendments provided for striking out five sections of the Constitution relating to the judiciary and inserting new ones providing for a Supreme Court of three judges; the division of the State into three Supreme Court districts, and convenient circuit and chancery court districts; fixing the terms of the several judges, etc.

Political.—The Democratic State Convention was held in Jackson, Aug. 23. A. H. Longino was nominated for Governor. The other nominations were: For Lieutenant Governor, J. T. Harrison; Attorney-General, Monroe McClurg; Auditor, W. Q. Cole; State Treasurer, Robert Stowers; State Revenue Agent, Wirt Adams; State Land Commissioner, E. H. Nall; Railroad Commissioner, J. C. Kincannon.

On the same date the Populist State Convention was also held in Jackson. Dr. R. K. Prewitt was nominated for Governor. The other nominations were: Lieutenant Governor, J. W. Prude; Secretary of State, N. M. Hollingsworth; State Auditor, T. J. King; State Treasurer, John A. Bailey; Attorney-General, J. J. Dennis; Superintendent of Education, J. H. Simpson; State Revenue Agent, J. W. Anderson; Clerk of Supreme Court, E. E. Anderson; Land Commissioner, T. J. Vinig; Railroad Commissioners, W. T. Ray, A. M. Monroe, G. M. Cain.

At the election the ticket headed by A. H. Longino received 42,273 votes; that headed by R. K. Prewitt received 6,097 votes. The Legislature for 1900 consists of 45 Democrats in the Senate and 133 Democrats in the House. The Populists have 2 members in the House.

MISSOURI, a Western State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 383,702 in 1840; 682,044 in 1850; 1,182,012 in 1860; 1,721,295 in 1870; 2,168,380 in 1880; and 2,679,184 in 1890. Capital, Jefferson City.

Government.—The following were the State officers during the year: Governor, Lon V. Stephens; Lieutenant Governor, August H. Bolte; Secretary of State, Alexander A. Lesueur; Treasurer, Frank L. Pitts; Auditor, James M. Seibert; Adjutant General, M. Fred Bell; Attorney-General, E. C. Crow; Superintendent of Education, W. T. Carrington; Railroad and Warehouse Commissioners, T. J. Hennessey, J. Flory, W. E. McCully; Secretary State Board of Agriculture, John R. Rippey; Commissioner of Insurance, E. T. Orear—all Democrats, except Flory, Republican; Chief Justice of the Supreme Court, James B. Gantt; Associate Justices, Thomas A. Sherwood, Gavon D. Burgess, L. B. Valliant, W. C. Marshall, Theodore Brace, Democrats, and Walter M. Robinson, Republican; Clerk, J. R. Green, Democrat.

Finances.—The report of State finances given in the last issue of the Annual is the latest official statement. Figures under this heading are published biennially. The approximate amount required to meet ordinary expenses of the State government for 1899-1900 is \$4,666,446. The estimated receipts into the State interest fund in 1899-1900 are \$2,100,000; amount to be appropriated for interest on bonds and certificates of indebtedness, \$754,943.94; leaving \$1,345,056.06, which amount should be appropriated for the payment of bonds. The estimated receipts into the revenue fund for 1899 and 1900 are \$4,500,000 (predicated upon present laws), leaving a deficit for ordinary expenses of \$166,446.

Building and Loan Associations.—The Hon. H. L. Gray, State supervisor of the building and loan associations, in his biennial report says: "Reports have been received from 222 associations—141 from associations outside of St. Louis and 81 in St. Louis. The tables of resources and liabilities show a total of \$18,255,186.22; outside of St. Louis, \$9,816,400.92; in St. Louis, \$8,438,785.30." There are in the State 226 associations. There are 66 fewer reporting associations in 1898 than there were in 1896; 33 fewer than in 1897. The assets are \$8,097,768.58 less than 1896 and \$4,242,523.27 less than in 1897. Of the reporting associations, 27 are called nationals, because they do not confine their operations to the city of their domicile; their resources are \$5,242,663.21, leaving to the 195 locals \$13,012,523.01.

Department Stores.—"In connection with the 'trusts and monopolies,'" says Gov. Stephens in his message of Jan. 5 to the Legislature, "I desire to call your attention to the large department stores in St. Louis and Kansas City. It is told to me by many of the prominent citizens of St. Louis and Kansas City that they are detrimental to the best interests of the people of the State, affecting as they do the great majority; and as legislation is for the purpose of conferring the greatest good to the greatest number, you should correct these evils, if evils they are found to be. Arguments have been presented to me to show that these department stores in the cities of over 100,000 inhabitants are ruining the small dealers in the country towns as well as in the cities. They are building up a great combination of goods under one roof, and depriving the smaller dealers of their legitimate profit, and are forcing them out of business altogether."

Education.—In the session of 1899-1900 the State University enrolled at Columbia about 1,000 students, and at Rolla about 160. This means an increase of nearly 28 per cent. The enrollment in the cadet corps is 270—the largest muster in the history of the university. All departments of the university except that of military science

and tactics are open to women under the same conditions as to men. The last General Assembly appropriated for the university \$57,000 for the biennial period, \$33,000 for the erection of a dormitory for boys, and \$10,000 for ordinary repairs.

The condition of the public schools of Missouri can be accurately learned from the following data given by State Superintendent Carrington for the school year ending June 30: Enrollment—white, male, 323,096; female, 314,808; colored, male, 14,347; female, 15,767; grand total, 668,018; average daily attendance, 416,364; number of pupils that may be seated—white, 674,120; colored 33,013; number of volumes in the libraries, 168,720; value of libraries, \$121,723.72; number of teachers employed—male, 5,979; female, 7,803; white, 13,153; colored, 629; average salaries of teachers per month, \$45; number of schools in operation (corresponding to number of school-houses)—white, 9,842; colored, 484; number of schoolhouses built during 1898-'99, 298; estimated value of school property, \$17,020,880; assessed value of the taxable property, \$1,106,066,625.

Penal Institutions.—The Reform School for boys, at Boonville, is in a flourishing condition. More boys have been sent to it within the past two years than at any time in its history, owing to the more liberal laws governing it which were passed by the last Legislature. There are 430 boys in the school. The school is well equipped. An industrial shop building, a cottage for boys, and a hospital have been added, covering an appropriation of \$12,500, and 186 acres of good land adjoining the State's property have been purchased from an appropriation of \$7,000.

On Jan. 1, 1899, there was a balance in the State treasury to the credit of the earnings of the Penitentiary of \$56,555.45. The number of convicts is increasing rapidly. On Jan. 1 there were 2,327 inmates. An average of 1,362 daily during the past two years were employed by the contractors at the rate of 50 cents a day.

Charitable Institutions.—At the beginning of the year there were nearly 2,500 patients at Fulton, St. Joseph, and Nevada insane asylums. The enrollment at the School for the Deaf and Dumb for 1898-'99 is reported as 240 males and 164 females. At the School for the Blind the enrollment for 1898-'99 was 61 males and 64 females. The report of the Confederate Home shows that the average number of persons cared for is 147, including old soldiers, their wives, and their children under fourteen years of age.

Agriculture.—The Governor, in his message of Jan. 5, 1899, strongly recommended the establishment of an annual State agricultural fair, such as is held in many other States, and the Legislature passed an act authorizing a State fair. On May 19 the Legislature appropriated \$30,000 for the erection of an agricultural experiment station, with laboratory buildings, in Columbia.

Mining.—In 1898 large sums of money were invested by capitalists outside of the State in Missouri developed and undeveloped mineral lands. As a result of the extraordinary prices and demand for ores, an activity prevails in the mining districts never before experienced. The large increase of \$2,833,415 in the value of the product for the fiscal year ending June 30, 1898, over the year before, with the promise based upon the actual business of six months of the current year of a \$3,000,000 increase over the last year, shows a marvelous development. "This rapid growth," says Gov. Stephens, "and especially in the case of the zinc ore product, can not be classed

as spasmodic, for the reason that the new uses to which it has of late been applied cover so wide a field, and the territory in which it has thus far been developed is so limited (for Missouri now produces one sixth of the entire zinc output of the world), that good prices must prevail for some time. The importance of our mining industry can be better appreciated when we realize the extent of the claim made—"that the lead and zinc ore product for this year of the Jasper County alone will exceed in value the gold and silver production of the celebrated Cripple Creek region." During the year 1,038 shafts were operated in Missouri lead, zinc, and coal fields, in and about which 16,000 men were employed.

Railroads.—The number of companies operating railroads in Missouri June 30, 1898, was 58. Of these but ten declared dividends on their capital stock, and of the roads operated but two—the Hannibal and St. Joseph and Kansas City Suburban Belt—are wholly within Missouri. The following-named railroads were in the hands of receivers June 30, 1898: St. Clair, Madison and St. Louis Belt; St. Louis, Kansas City and Colorado; and St. Louis, Cape Girardeau and Fort Smith. The increase in the railroad mileage of Missouri for 1898 was greater than any year since 1892, the increase for that year being 240 miles. The larger proportion of the increase was in the extension of the Kansas City, Osceola and Southern and the lines controlled by the Kansas City, Pittsburg and Gulf Railroad Company. The total railroad mileage, June 30, 1898, was 8,495.72. The aggregate capital stock of companies operating in the State on that date was \$1,028,108,946. The total of taxes paid was \$817,799.07.

Industries.—The report of Thomas P. Rixey, Commissioner of Labor Statistics, for the year ending Nov. 5, 1899, shows for 40 leading industries the following statistics: Value of grounds, \$11,533,603; buildings, \$16,257,756; machinery, \$13,288,759; capital invested, \$70,322,334; goods manufactured, \$126,932,008; material and supplies used during 1898, \$77,512,396; amount of taxes paid, \$3,491,826.

Proposed Exposition.—The centennial anniversary of the purchase of the Louisiana territory, in 1803, by the United States from France will be celebrated in St. Louis during the years 1903 and 1904. The celebration was decided upon by a convention, held Jan. 19, of delegates representing the States and Territories included within the original purchase. It was also decided that the observance should be in the form of a great international exposition, in which the United States Government, the States and Territories, and foreign countries should be invited to participate.

Cyclone.—On April 27, 1899, north and northeast Missouri were visited by a devastating cyclone; portions of the cities of Kirksville and Newtown were laid waste, causing an appalling destruction of life and property. About 50 persons were killed, and hundreds were injured and possibly maimed for life. The homes of more than 500 families were totally destroyed by the elements. Gov. Stephens made an appeal for aid in behalf of the sufferers, and the response was hearty and prompt from all parts of the State.

Lawlessness.—Under the directions of the father of the girl whom he had assaulted, and close to the scene of his crime, Frank Embree, a negro, was flayed and then lynched at Fayette, on July 22, by a mob. The lynching occurred at the hour that had been set for the prisoner's trial. The mob wrested Embree from a squad of

deputy sheriffs after a spirited struggle. Embree is the third negro that has been hanged for criminal assault on white women in Howard County.

Political.—The Legislature consists of 9 Republicans and 25 Democrats in the Senate, and 58 Republicans, 80 Democrats, and 2 Populists in the House. The House and Senate on Jan. 17 voted separately for United States Senator to succeed Francis M. Cockrell for the term of six years beginning March 4, 1899, the vote being: Senate—R. C. Kerens (Republican) 9, Cockrell (Democrat) 25; House—Kerens 52, Cockrell 76. The election took place in joint session on the following day, resulting in the election of Mr. Cockrell for the fifth term, the vote being Kerens, 61; Cockrell, 103.

MONTANA, a Western State, admitted to the Union Nov. 8, 1889; area, 146,080 square miles. The population, according to the census of 1890, was 132,159. Capital, Helena.

Government.—The following were the State officers in 1899: Governor, Robert B. Smith; Lieutenant Governor, A. E. Spriggs; Secretary of State, T. S. Hogan; Treasurer, T. E. Collins; Auditor, T. W. Poindexter, Jr.; Attorney-General, C. B. Nolan; Superintendent of Education, E. A. Carleton—all elected on a fusion ticket of Democrats and Populists; Adjutant General, C. F. English; Commissioner of Agriculture, J. H. Calderhead; Land Agent, Henry Neill; Land Register, H. D. Moore; Mine Inspector, John Byrne; President of the State Board of Sheep Commissioners, T. C. Power; Examiner, J. G. Moroney; Architect, C. S. Haire; Chief Justice of the Supreme Court, Theodore M. Brantley, Republican; Associate Justices, W. H. Hunt, Republican, and W. T. Pigott, Democrat; Clerk, Henry G. Rickerts, Democrat.

Finances.—The receipts of the treasury from all sources in the year ending Nov. 30 amounted to \$1,081,036.65. In the year \$558,727.27 in warrants were drawn. On Dec. 1, 1898, \$337,649.21 in general fund warrants were outstanding, and Dec. 1, 1899, there were \$376,042. The interest paid on general fund warrants amounted to about \$13,000, but by reason of the reduction in the interest rate by the Legislature the interest is expected to be much less the coming year. The cash on hand in the treasury on Nov. 30 was \$637,416.62.

Valuations.—The value placed upon property for assessment in 1898, exclusive of railroads, was \$119,960,108. The value for 1899, as given by county assessors, was \$125,829,181. The railroads were valued at \$14,992,689 in 1899; in 1898, at \$13,793,581. The live-stock valuation was increased \$1,474,741 in 1899. There was a general protest among those interested against the values placed by the State Board of Equalization on cattle and sheep for purposes of taxation. The total valuation of cattle is \$12,057,087; horses, \$3,289,717; sheep, \$8,302,944, making the total assessment \$23,649,748. The assessors' reports show 3,186,742 head of sheep in the State, which have been assessed at an average of \$2.604. The average assessment of beef cattle was \$37.37; of yearlings, two year olds and three year olds \$21.83, and of cows \$25.71. The assessors this year found 1,173 thoroughbred horses, 133,642 range horses, and 59,672 work horses. The average assessment of thoroughbred horses was \$95.76; range horses, \$11.28; and work horses, \$27.99.

The attempt of a county board to tax the Associated Press franchises of newspapers was not sustained, the county attorney deciding that they were not franchises in the strict sense of the

word, but contracts between the agency and the papers.

Education.—The estimates for the higher institutions of learning of the State for the biennial period were: Normal school, \$29,910; university, \$42,180; College of Agriculture and experiment station, \$15,910, in addition to the Government appropriation; School of Mines, \$26,300.

It is expected that the School of Mines will be ready for opening in September, 1900. The dedication exercises of the State University, at Missoula, took place Feb. 18.

A table of the libraries of the State gives the total number of volumes as 157,000. It includes not only public and free libraries and those in State institutions, but those of school districts and of private institutions.

The school children of the State have chosen the pine by vote as the State tree. Last Arbor Day they planted 375 trees.

The Supreme Court gave a decision in October which threatens to close the schools for a large part of the time before the next session of the Legislature in some parts of the State. The law, passed some years ago and amended in 1897, providing for the voting of special school levies was declared inoperative, because of vagueness and ambiguity in its wording. The law came before the courts on a suit by the Great Northern Railroad, which refused payment of a tax of \$1,800 levied after vote according to the law.

Charities and Corrections.—The number of inmates at the State Soldiers' Home, Dec. 1, was 51, the same number as on Dec. 1, 1898. In the year 19 were admitted, 10 died, and 9 were discharged. The average age is between 62 and 63. The receipts were \$11,308.30, of which \$7,200 was the State appropriation, \$3,358 came from the Government, and the remainder from pensions retained. The total expenses were \$9,894.24.

The deaf-mute asylum cost the State for the year \$12,683.02.

The report of the Commissioners for the Insane shows that, while there were 457 patients in the asylum on Dec. 1, 1898, there were 427 at the same date in 1899, of whom 375 were men. The whole number treated during the year was 602. The total cost of maintenance was \$114,140.50 for the year; \$2,250 was received for those not indigent.

In the State Prison there were 328 convicts on Dec. 1; in the year 148 had been received, 183 released, and 6 had died. The cost of maintenance was \$52,806.40. The contractors reported great improvement in the conduct of the prisoners this year. They have organized a full military band among the inmates.

Products.—The sheep industry is reported to have yielded about \$4,500,000 during the year ending Nov. 30. Of this amount about \$3,000,000 came from the sale of wool. The number of sheep and lambs slaughtered or shipped out of the State since March 1 was 368,421; the number of pounds of wool sheared was 23,290,639.

The latest figures at hand on the mineral production are for 1898, published in May. They show that the total value of mineral products of the State that year was \$51,319,067.15. Of this amount the following sums were contributed by the different metals: Gold, valued at \$5,247,912.91; silver, \$19,159,842; copper, 216,979,354 fine pounds, valued at \$26,102,616.29. The value of the lead taken out of the mines last year was \$809,035.78.

The Mine Inspector says of 1899: "A comparison of the mining industry during the year with previous years exhibits a marked improvement. More mines are in operation, a greater number

of men employed, with better methods and results in the mining, smelting, milling, cyaniding, and the combination of these and other processes which are being applied to the recovery of values contained in the ores of this State. Several old mines, after a long period of inactivity, have resumed operations, and are yielding handsome profits from a class of ores that were worthless to their early operators."

Lands.—In the year 218,058 acres were selected for the State. This nearly completes the location of lands to which Montana is entitled. Of the several grants made by Congress, all have now been filled, with the exception of the public buildings grant and the Agricultural College income grant, which have approximately 45,000 and 3,500 acres respectively to be selected.

To meet the unusual demand for grazing lands the Land Agent, acting under instructions of the board, selected 115,000 acres of indemnity school land in lieu of the school lands upon the Fort Peck Indian reservation, also 21,000 acres of lieu lands for school lands claimed by homesteaders and miners.

The Northern Pacific, having facilities for ascertaining the exact location of valuable bodies of timber on unsurveyed land, forestalls the State in regard to many desired locations and places forest-reserve scrip upon them. In addition, speculators have secured large amounts of California forest-reserve scrip, and are indefatigable in their searching and scripping the unsurveyed domain.

The report of the Land Register shows a large increase in business, the receipts for the year ending Nov. 30 having been \$200,195.20, against \$126,883.31 the preceding year. Of the sum received, \$100,415.80 was for leases, \$41,666.23 for timber sales, and \$27,098.78 for land sales of the year, the remainder coming from payments on sales and rental of preceding years.

Insurance.—The fire companies doing business in the State in 1898 wrote \$37,396,391.69 of insurance, \$739,954.29 was received in gross premiums, \$255,255.31 losses paid, and \$246,783.14 in losses incurred.

The regular life insurance companies collected in premiums \$703,262, and incurred losses of \$154,115, and had at the end of the year \$20,192,790 insurance in force.

The mutual benefit companies received \$30,526 and disbursed \$24,000.

The New Capitol.—The corner stone of the new Capitol was laid July 4. Joseph K. Toole, first Governor of the State, was the orator of the day. He deprecated the inscription on the great seal of the State, "Oro y Plata" (gold and silver), and suggested as a better motto, "No tyrannical sentiment can intimidate, no gilded bribes seduce."

Legislative Session.—The Legislature was in session from Jan. 2 to March 2. T. P. Cullen was President *pro tempore* of the Senate and Henry C. Stiff was Speaker of the House.

There were in the Senate 5 Republicans, 18 Democrats, and 1 Populist; in the House, 10 Republicans, 56 Democrats, and 4 Silver Republicans, but 1 Democratic Senator was later unseated in favor of a Republican.

The election of a successor to United States Senator Lee Mantle devolved upon this Legislature. The leading candidates were W. A. Clark and W. G. Conrad, both Democrats. Other candidates who received support were J. K. Toole, T. C. Marshall, J. M. Fox, F. M. Malone, E. D. Matts, C. S. Hartman, Lee Mantle, H. L. Frank, C. W. Hoffman, Martin Maginnis, and Messrs.

Sanders, Grubb, Powers, Goddard, Henry, C. R. Leonard, Hedges, Carney, and L. A. Luce.

On Jan. 9 a resolution was passed providing for a joint committee to investigate charges of bribery in connection with the senatorial contest against members of the Legislature and lobbyists. The next day the committee reported to a joint session that evidence had been found upon which to base an indictment before a grand jury, and asked that the matter be referred to the district attorney with that purpose. State Senator Whiteside made a speech in which he said that, in order to get a case against the corruptionists, he had taken \$5,000 from John B. Wellcome, acting for W. A. Clark, with the understanding that he was to get more if he should negotiate successfully for the purchase of other legislators, and that he received \$25,000 for three others—Messrs. Myers, Clark, and Garr—who also went into the scheme for the purpose of exposing the attempt at bribery. This money (\$30,000) was turned over to the committee, and from them to the joint session, and the three members made statements concerning it. The Legislature accepted the report, resolved to ask for a grand jury investigation, and continued the committee. The money was intrusted to the State Treasurer. A grand jury was called Jan. 11, and on Jan. 26 reported that 44 witnesses had been examined, and that, "while there has been some evidence which tends to show that money has been used in connection with the election of a United States Senator, it has been contradicted and explained in such a way that all the evidence introduced before us, taken together, would not, in our judgment, warrant a conviction by a trial jury."

A contest for the seat held by Mr. Whiteside was decided against him that day, and it was given to his opponent, a Republican, Mr. Geiger, by the votes of all the Republicans and 9 Democrats.

On the seventeenth ballot (Jan. 28) Mr. Clark was elected, several Republicans voting for him. There were 54 votes for Clark, 27 for Conrad, 4 for Marshall, and 4 scattering.

In the summer disbarment proceedings were instituted against John B. Wellcome for alleged bribery in connection with the contest; the Supreme Court decided that he must plead to the charge, and Nov. 6 was fixed as the time for beginning the hearing. The principal witnesses were those who gave testimony before the investigating committee of the Legislature and the grand jury; Mr. Wellcome did not appear in person or make a direct denial, but his counsel made answer under oath upon information and belief. The decision of the court was against him, and he was disbarred.

Several of the State officers signed a protest against the seating of Mr. Clark, which was sent to the United States Senate, and an investigation was begun in January, 1900, before the Senate Committee on Privileges and Elections.

A bill that was passed over the Governor's veto referred to the disposal or mortgaging of the property of mining corporations. In his message the Governor said the bill was an attempt to reverse the decision of the Supreme Court, which declared invalid the sale of the property of the Boston and Montana Copper and Silver Mining Company to a New York corporation, compelling its stockholders to accept stock in that corporation instead of that which they held in the home company; that the bill was in the interest of a great copper trust about to be formed; and that it allows private property to be taken for pri-

vate use by the provision that if any stockholder dissents from the action of the majority in combining with other corporation or trading for the stock of another corporation a commission is appointed to appraise the value of his stock, which is his individual property, and sell it out at public auction or to the grantee of the corporation.

Foreign surety companies may do business in the State under certain restrictions, and they may be accepted on bonds given for the performance of any duty. Fire companies may insure property in the State only through resident agents, and companies authorized to do business in the State must not reinsure risks in unauthorized companies.

Acts were passed permitting the Arid Land Grant Commission to construct water systems for irrigation and other purposes; allowing the exercise of eminent domain for aqueducts supplying mills, mines, and smelters with water; fixing a standard for measuring water rights; substituting the cubic for the miner's inch; and providing that a commissioner may be appointed to distribute water from streams to those entitled to it by decrees of court.

The tax levy for stock inspection was fixed at $1\frac{1}{2}$ mill on the assessed valuation of stock (formerly the law required only that it should not exceed that amount), and horses before removal from the State must be inspected by a sheriff or stock inspector.

The privileges of the State Soldiers' Home were extended to soldiers and sailors of the Mexican and Spanish wars.

Provision was made for division of counties into road districts by county commissioners. The act of the preceding Legislature abolishing the office of road supervisor was repealed, and provision was made for the election of such officers. This act the Attorney-General held to be unconstitutional, as it interfered with the rights of county surveyors, depriving them of their duties and their fees; but the Supreme Court declared it valid.

The creation of a State board of horticulture was provided for. The State is to be divided into five districts, each to be represented by a member of the board, appointed by the Governor, and these five are to select a sixth. None of them may be interested directly or indirectly in the fruit or tree business. They are to inspect nursery stock and destroy any found to be infested with dangerous insects or otherwise diseased. The term of office is four years.

The offices of deputies to the Treasurer, the Secretary of State, the Auditor, and the Land Register were created.

The office of Supreme Court Reporter was abolished, and justices of the court are to report their own decisions and receive each \$1,500 additional salary.

Other session acts were:

Providing for liens on lumber or other timber in favor of those who work upon it and the owner of the land on which the timber is cut.

Providing that a bishop, priest, or elder of a church or society may be a sole corporation and hold property in trust.

Prescribing 4 per cent. interest for State Treasurer's warrants not paid for lack of funds, instead of 6 per cent., and for county warrants 6 per cent. instead of 7.

Reducing the legal rate of interest from 10 to 8 per cent.

Fixing the bounty on wolves at \$5, that on coyotes at \$2, and on wolf puppies at \$2.

Repealing the law prohibiting selling at retail on credit.

Exempting graduates of the State Normal School from examination before teaching, and providing for granting them life certificates after two years' experience.

Permitting the maintenance of kindergartens in connection with district schools, and of county high schools after a vote in favor.

Providing that reports of State officers may not be printed oftener than once in two years, except by order of the State Board of Examiners.

Prohibiting insolvent banks from accepting deposits, and regulating the increase or diminution of the capital stock of banks and trust companies; also regulating their dissolution.

Amending the law regulating powers of building and loan associations.

Changing the method of sale or lease of State lands.

Requiring contracts for sale of personal property to be recorded with the county clerk in cases where the title does not pass till the whole price is paid.

Changing the boundary between Deer Lodge and Lewis and Clarke Counties.

Annexing part of Meagher County to Cascade.

Appropriating \$11,000 for completing the Orphans' Home at Twin Bridges.

Providing for a 2½-mill State levy.

Appropriating \$577,000 to State institutions.

The Governor vetoed bills legalizing 20-round glove contests; amending the antigambling act so as practically to license gambling, and making it a misdemeanor instead of a felony; depriving an applicant for a medical certificate who has failed to be certified by the Board of Medical Examiners of the right to appeal to a jury; permitting doctors to compound drugs without having passed an examination in pharmacy; and repealing the license on State banks.

MORAVIANS. The following are the statistics of the Moravian Church in America to Dec. 31, 1898, as officially published in March, 1899:

Northern Province: Number of communicants, 11,775; of noncommunicant members, 1,155; of children, 4,802; total membership, 17,822; membership of Sunday schools, 1,237 officers and teachers and 10,248 pupils.

Southern Province: Number of communicants, 2,955; of noncommunicant members, 234; of children, 1,553; total membership, 4,742; membership of Sunday schools, 346 officers and teachers and 3,708 pupils.

Total for the American Province: 14,730 communicants, 1,389 noncommunicant members, and 6,445 children—in all, 22,564 members—1,583 officers and teachers, and 13,956 pupils in Sunday schools. The numbers show increase during the year of 177 communicants, 162 children, 219 in the total membership, 17 officers and teachers, and 122 pupils in Sunday schools, and a decrease of 120 noncommunicant members. The returns from the Northern Province represent 89 churches, classified as in four districts, of which the first district embraces churches in New York and Pennsylvania; the second district, churches in New Jersey and Pennsylvania; the third district, churches in Ohio, Iowa, Indiana, Indian Territory, Missouri, and Illinois; and the fourth district, churches in Wisconsin, Minnesota, Michigan, and North Dakota; and the Alberta (Canada) district, comprising three churches. Detailed statistics are given of the contributions and expenditures of the Northern Province. The whole amount contributed during the year for Church support was \$120,128, or \$13,612 more than in

1897. The contributions for Church enterprises were: For retired ministers, \$1,295; for the Bohemian Mission, \$1,277; for foreign missions, \$7,987; for the Alaska Mission, \$3,026; for home missions, \$7,189; for the Theological Seminary, \$4,476; for all other Moravian causes, \$1,655; for general Christian objects, \$1,220. The whole amount of contributions of this class (\$28,105) was \$4,731 more than in 1897. The average salary of pastors is \$502.

A summary of the gifts of the American Moravian Church, North, for foreign mission causes for 1899 gives the whole amount as \$28,690, showing an average contribution per communicant of \$2.44.

The General Synod met at Berthelsdorf, Saxony, in May. A number of important constitutional changes were adopted, mainly bearing upon the status and relations of the several provinces and missions. The West Indian missions were organized into two provinces, to be called the Eastern West Indian Province and the Jamaica Province, each of which is to be governed by a provincial synod and a provincial elders' conference. These provinces will be aided by the General Synod with yearly grants of £700 each, to be increased to £1,000 if necessary, for the next ten years, while the Mission Board will bear the entire cost of the Theological Seminary for the two West India provinces, the Mosquito Coast, Demerara, and possibly other fields, and the training schools will be supported by the general missionary treasury. The Mission Board will continue to bear the expenses, as hitherto, for foreign brethren now in service, and one half the expenses connected with outfit, pension, education of children, etc., of foreign missionaries appointed after December, 1899. Sanction was given to an agreement made in 1897 between the Mission Board, on the one hand, and the American Provincial Elders' Conference in the North and the Society for Propagating the Gospel on the other hand in reference to the administration of affairs in the mission in Alaska; and the agreement was interpreted to mean that the American congregations and the Society for Propagating the Gospel would provide the means to meet the entire cost of the current expense of the mission, while the general missionary treasury would bear the expenses involved in the outfit of the missionaries called to Alaska, their sustentation during furlough at home, the education of their children, and their pensions. The Synod decided to transfer the mission in Greenland to the Danish Lutheran Church. The work of evangelization in Bohemia and Moravia was assumed as the charge of all the provinces, to be carried on with the intention of re-establishing the Church in the land of its origin, the final decision in matters of administration resting in the hands of the Directing Board of the Unity, with seat at Berthelsdorf. In the management of this work the Directing Board will be assisted by the Bohemian-Moravian Committee, which committee will consist of two sections—namely, the executive section and the circle of nonresident members. It was decided that in each of the larger mission provinces there shall be a bishop; that missionaries called to those provinces shall, as a rule, go out unordained, and shall be ordained as deacons only after serving one or two years; that, as a rule, five years shall elapse between the missionary's ordination as deacon and as presbyter, with exceptions in case of a missionary receiving a call as superintendent or warden of a province or as head of a regular station or as a member of a helpers' conference, when he may be ordained a presbyter at once. In

defining its financial policy as to missions the Synod declared that "a mission is supported by the home province in the early days of its existence either out of the general mission exchequer or out of the proceeds of businesses existing for the purpose. The aim of mission work, however, is to create in the mission fields self-supporting, independent churches, which shall look for no help from abroad, but raise all the money that is necessary for church and school and for the salaries of their ministers, according to the ability of their members." The minute further defined the relations of the missions, etc., in the different steps between entire dependence and complete self-support. The Mission Board was authorized, if means allow, to found and carry on in the West Indies one theological seminary for the West India provinces, Mosquito Coast, and Demerara, and one in Surinam; to make arrangements for the training of native ministers in the Himalayan Province; and to provide for the further education of native ministers in connection with the training school at Guadendal. The Mission Board was further commissioned to lay before the members and friends of the Church a complete and unreserved and detailed statement of the condition of the missionary operations as a whole. A declaration was made in the adoption of these rules that the office of bishop as such carries with it no connection with Church government.

The Rev. Edward C. Greisler, president of its Conference, was elected bishop of the Eastern Province of the West Indies.

A special grant of £1,000 was made to Antigua for the payment of its debt and of £500 for repairs, and a loan of £1,500 was made to Kingston, Jamaica.

In a formal statement the Synod again declared "its adherence to the fundamental doctrines of the Church as given in the second chapter of the general synodical results of 1889. The Synod holds that all that is essential is expressed there, and that nothing therein should be changed either by additions or by omissions. At the same time the Synod declares that it accepts all Holy Scripture, Old and New Testament, which is the source of these doctrines, as the word of God, given by God as the rule of our faith and life, and that we are determined to adhere thereto with all earnestness and faithfulness." The declaration further urged fidelity to these principles, and continued: "As to the request of the Synod of the Northern American Province, to the effect that the staff of every educational establishment in the Unity shall be called upon plainly to declare their adherence to the fundamental doctrines of the Brethren's Church, the Synod declares such profession of faith to be the concern of the individual provinces. At the same time all intrusted with the management of our schools, and especially of our theological colleges, are admonished and requested conscientiously to do all in their power to bring up our young people in the spirit, the doctrines, and the principles of our Church."

The reports of the committee in charge of the work of evangelization in Bohemia and Moravia recited the course of events during the past ten years, showing slow progress. Stated services were held at 20 places, with a membership of 597. The accounts of the decade showed a deficit

of \$1,250. The contributions from America had averaged \$1,500 a year, those from the German Province \$3,821, and those from the British Province \$680. The revolt in Bohemia against Roman Catholic ecclesiasticism was interpreted as a call to prosecute the evangelistic work.

The committee in charge of the leper hospital near Jerusalem reported that the number of inmates had risen from 20 to 37. The institution was under the charge of Charles and Anna Schubert as managers, and the actual attendance on the patients was in the hands of three deaconesses (in future to be four), who belonged to the Deaconess Institute of the Brethren's Church at Niesky. Two of the number had adopted the work of the home as their life work. Among the improvements in the property of the institution was a steam disinfecting apparatus, the gift of the Emperor of Germany.

The New Constitution.—In the revised constitution of the Church as adopted by the General Synod the general divisions of the Unity are classified as: (a) The four self-supporting and independent divisions—the Brethren's Unity in Germany, the British Province, the American Province, North, and the American Province, South; (b) the 15 mission fields; and (c) the Brethren's Church in Austria. The General Synod is the legislative body of the whole Church, and consists of members *ex officio* (certain missionary and provincial officers); elected members, including nine delegates from the German and British districts respectively and nine from the two American districts, which for this purpose are counted as one; one delegate from each mission field entitled to such representation; and not more than five missionaries called by the Mission Board, with also advisory members. These members of the General Synod, while considering the welfare of their own provinces and being generally guided by their directions, are expected to be primarily solicitous for the good of the whole Church. The General Synod relegates to the provincial synods the right to elect their bishops, while it reserves to itself the election of bishops for the work of missions among the heathen. The General Synod will meet every ten years, but special convocations may be ordered by the Governing Board. The Governing Board or Unity's Board, which takes the place and the general power of the former Unity's Elders' Conference, consists of the Mission Board and the directing boards of the four independent provinces. Its organization and functions are so shaped as to give the provincial boards more freedom in their own administration than they had before, while it remains as the central body for reference and appeal and for ultimate decision in matters that may touch the unity as a whole; and it will act when necessary in the intervals between meetings of the General Synod, holding meetings at which each corporation shall be represented by one delegate (the two American provinces having one delegate and one vote each), except that the Mission Board is given two delegates. The Mission Board will have its seat at Berthelsdorf, near the General Synod. Provision is made in the constitution of all the committees and of the Mission Board for the even representation upon them of all the three nationalities—German, British, and American—of the Church.

N

NATIONAL ACADEMY OF SCIENCES.

The officers of the Academy in 1899 were: President, Wolcott Gibbs; Vice-President, Asaph Hall; Foreign Secretary, Alexander Agassiz; Home Secretary, Ira Remsen, Johns Hopkins University, Baltimore, Md.; Treasurer, Charles D. Walcott.

Two meetings were held in 1899. The first or stated meeting was held in Washington, April 18-20. On that occasion the following papers were read: On the Diamond and Gold Mines of South Africa and On the Tanner Deep-sea Tow Net, by Alexander Agassiz; also On the Acalephs of the East Coast of the United States, by Alexander Agassiz and A. G. Mayer; On the Development by Selection of Supernumerary Mammary in Sheep and On Kites with Radial Wings, by Alexander G. Bell; Ophiura Brevispina, by William K. Brooks and Caswell Grave; exhibition of specimens of *Nautilus pompilius*, by William K. Brooks and L. E. Griffin; The Shadow of a Planet, by Asaph Hall; Remarks on the Work of the Nautical Almanac Office during the Years 1877-'98 in the Field of Theoretical Astronomy, by Simon Newcomb; and Progress in Surveying and Protection of the United States Forest Reserves, by Charles D. Walcott.

The following papers were read by scientists not members of the Academy: On the Limestones of Fiji, by E. C. Andrews (communicated by Alexander Agassiz); On the Bololo of Fiji and Samoa, by William McM. Woodworth (communicated by Alexander Agassiz); The Work of the Division of Forestry, Department of Agriculture, by Gifford Pinchot; and The Resulting Differences between the Astronomic and Geodetic Latitudes and Longitudes in the Triangulation along the Thirty-ninth Parallel, by Henry S. Pritchett, both of whom were introduced by Charles D. Walcott.

The meetings were held in the hall of Columbian University. The public business included the fifth conferring of the Watson gold medal, the recipient of which was David Gill, astronomer in the observatory at the Cape of Good Hope for the British Government, for his work in perfecting the application of the heliometer to astronomical measurements; also the conferring of the Draper medal on James A. Keeler, of the Lick Observatory, for his researches in spectroscopic astronomy. The new members elected were Charles E. Beecher, of the department of paleontology in Yale University, New Haven, Conn.; George C. Comstock, director of Washburn Observatory, University of Wisconsin, Madison, Wis.; Theodore W. Richards, of the chemical department of Harvard University, Cambridge, Mass.; Edgar F. Smith, of the chemical department of the University of Pennsylvania, Philadelphia, Pa.; and Edmund B. Wilson, of the biological department of Columbia University, New York city. The following six members were elected to the council: John S. Billings, Henry P. Bowditch, George J. Brush, Arnold Hague, Samuel P. Langley, and Simon Newcomb. These gentlemen, together with the officers *ex officio* of the Academy, constitute the council. A popular lecture On the Photography of Sound Waves and a Description of a New Process of Color Photography was presented by Prof. Robert W. Wood, of the University of Wisconsin, Madison, Wis.

The scientific session was held in Columbia University, New York city, Nov. 14 and 15, 1899, when the following papers were read: The Hydrogen Vacua of Dewar, by George F. Barker; The Definition of Continuity, Topical Geometry in General, and The Map-coloring Problem, by Charles S. Peirce; Recent Results of the Henry Draper Memorial, by Edward C. Pickering; The Electro-chemical Equivalents of Copper and Silver, by Theodore W. Richards; Variations in Normal Color Vision, by Ogden N. Rood; and The Statical Properties of the Atmosphere and A Direct Proof of the Effect on the Eulerian Cycle of an Inequality in the Equatorial Motions of Inertia of the Earth, by Robert S. Woodward; also, by invitation, The Time of Perception as a Measure of Difference in Intensity; Relations of Time and Space in Vision, by J. McKeen Cattell, of Columbia University.

A biographical Memoir of William A. Rogers as a Physicist, by Edward W. Morley, was read. At the business session Henry P. Bowditch presented the report of the delegates who represented the Academy at the congress held in Wiesbaden during the summer to consider the establishment of an international scientific association. A committee of five was appointed to select the name of the scientist who, within the past five years, has made a discovery in physics or astronomy or in the application of science which shall be adjudged most valuable to the human race, and to present the name of that person as a candidate for the Barnard medal at the next meeting.

NEBRASKA, a Western State, admitted to the Union March 1, 1867; area, 77,510 square miles. The population, according to each decennial census since admission, was 122,993 in 1870; 452,402 in 1880; and 1,058,910 in 1890. Capital, Lincoln.

Government.—The following were the State officers in 1899: Governor, William A. Poynter; Lieutenant Governor, E. A. Gilbert; Secretary of State, W. F. Porter; Treasurer, J. B. Meserve; Auditor, John F. Cornell; Attorney-General, C. J. Smythe; Adjutant General, P. H. Barry; Superintendent of Education, W. R. Jackson, all Populists except E. A. Gilbert, Silver Republican, and C. J. Smythe, Democrat; Land Commissioner, J. V. Wolfe; Chief Justice of the Supreme Court, T. O. C. Harrison, Republican; Associate Justices, T. L. Norval, Republican, and J. J. Sullivan, Fusion; Clerk, D. A. Campbell, Republican.

Finances.—The receipts for the year ending Nov. 30 were \$2,650,324.78; the expenditures, \$2,660,737.87. The balance at the beginning of the year was \$624,523.43; at the end, \$614,110.34.

Of the receipts, \$996,378.25 were for the general fund, the main part of which, \$856,638.86, came from taxes. The disbursements from this fund were \$968,819.33; of this amount, \$894,033.63 were for general fund warrants and the remainder for interest.

The permanent school fund received from sales of lands \$243,059.36.

The total appropriations of the Legislature for 1899 were \$2,591,373.

The assessed valuation for 1899 was \$169,105,905. The general fund levy was \$845,529, and the total levy \$1,286,792. The floating debt now consists almost solely of general fund warrants outstanding. Nov. 30, 1898, there were general

fund warrants outstanding amounting to \$1,571,686.61. This with a bonded debt amounting to \$153,267.35 made a total of \$1,724,953.96. The bonded debt is now \$55,000 and the outstanding warrants amount to \$1,774,588.92.

Education.—The school population in 1898 was 366,069; the enrollment, 273,919; the average daily attendance, 173,930; number of school-houses, 6,676; average number of days of school in all districts, 131; number of teachers in public schools, 9,608; total wages, \$2,359,807. The total expenditures, including a balance on hand at the close of the year of \$673,341, were \$4,385,358.

The number of students in the State University in December, 1899, was 1,560. There were 622 new students admitted in the autumn.

The enrollment at the State Normal School for the year ending June, 1898, was 699.

There were 110 at the Institute for the Blind. The School for the Deaf had 165 pupils.

Charities and Corrections.—The State Industrial School for Boys, at Kearney, in 1898, had 150 inmates. In all 1,202 boys have been in the school since it was established in 1881. The Girls' Industrial School was established at Geneva in 1893.

The Institution for Feeble-minded Youth, at Beatrice, had 220 inmates, and applications for 250 more who could not be accommodated.

A fire at the State Penitentiary, Dec. 15, consumed the manufactures building and caused a loss amounting to between \$75,000 and \$100,000. The principal part of the loss falls upon the State, which owned the building and machine shop, together valued at \$50,000 and uninsured.

Products.—The annual crop review of the Omaha Bee, compiled from reports of correspondents in every part of the State, and published in October, indicates that the corn crop of 1899 exceeds the record of 1897, the best previous year, by 142,17,240 bushels and reaches 244,125,093 bushels. The average yield per acre is 34.5 bushels, and the crop is not only the largest, but, taken as a whole, is of as good quality as any ever raised in the State. The total of the wheat yield is below that of the last two previous years. This is due to the damage to the plant during the winter in the winter wheat district. In the spring wheat region in the northern part of the State the crop is fully up to the average in quality and quantity. The total yield is 29,333,914 bushels, an average of 11.4 bushels per acre. The oat crop amounts to 53,575,097 bushels, an average yield of 33.1. This is about an average with other years.

Mortgages.—The report of the mortgages given and canceled in the first half of 1898 shows the number of farm mortgages filed to be 6,411, the amount being \$7,003,266.46. The number satisfied was 8,758, amounting to \$8,197,147.84. The number of town and city mortgages filed is 2,593, amounting to \$1,908,343.60. The number satisfied is 3,215, amounting to \$3,623,290.64.

The number of chattel mortgages filed is 38,839, amounting to \$21,518,388.48. The number satisfied is 20,558, amounting to \$9,019,358.87. The number of foreclosures of farms is 502, and of city property 432. Lancaster County is not included in the report of chattel mortgages.

Banks.—The semi-annual report of the State banking department in July shows a total of resources and liabilities of \$30,453,723; with loans and discounts, \$17,898,386; capital stock paid in, \$7,232,485; and general deposits, \$21,025,766. This was believed to be the best showing so far made by the banks of the State. The whole number of banks covered by the statement is 398,

including State, savings, and private banks. The average reserve is 45 per cent. In three months the legal reserve had increased \$2,230,506; the cash reserve, \$64,170; the capital and surplus, \$190,740; the deposits, \$1,772,716; the total resources, \$1,658,125.

Building Associations.—There were 60 of these doing business in the State June 30, 8 having gone out of operation since the beginning of the year, while 4 new ones had been formed. Their assets amounted to \$3,331,042, of which \$2,358,773 was in first mortgage loans, besides \$35,652 that were in process of foreclosure. The loans made amounted to \$539,149.

Insurance.—From the statement of the insurance department, published in April, covering 1898, it appears that the joint fire insurance companies of other States and nations wrote risks amounting to \$96,326,346 and received \$1,250,079 in premiums. The losses paid amounted to \$552,704, and the losses incurred to \$569,760. This shows a great increase in the amount of business. The Nebraska farmers' mutual companies wrote risks amounting to \$18,592,249, and received an income of \$176,409. The expenses of these companies amounted to \$77,456. The losses paid were \$79,349, and the policies in force at the end of the year amounted to \$56,537,124. This does not include the Nebraska farmers' mutual companies organized under the law of 1873. Companies organized under that law wrote risks amounting to \$7,972,723, and received \$134,693 in premiums. Their expenses amounted to \$54,454, and the losses paid were \$33,827. The losses incurred amounted to \$31,244. In addition there were many city and village insurance companies that paid \$32,654 for losses and wrote risks amounting to \$6,852,566 and received an income of \$86,151. Agents' commissions and expenses amounted to \$80,498.

Nebraska joint stock companies wrote risks amounting to \$11,106,593, received \$157,947 in premiums, and paid out \$63,752 for losses. The expenses of these companies amounted to \$81,375.

The business of these mutual companies also shows a large increase.

The Exposition.—No full account of the affairs of the Omaha Exposition has come to hand, but reports at the close appear to indicate that it was not financially successful. An Omaha letter of Nov. 1 says: "It would be impossible to state the exact total receipts. The paid stock was \$89,300; sale of buildings and material about \$50,000; water plant, \$18,000; concessions, about \$70,000; admissions, something over \$190,000; making a total of something less than \$420,000 as received by the management. At the opening of the gates the corporation was in debt something like \$60,000. At the time of the reorganization, a month later, the new management, by hard work, was able to secure loans to the amount of about \$40,000 within ten days after taking control. The gates closed with a debt in excess of \$130,000, not counting the \$89,300 capital stock paid up."

Legislative Session.—The session of the Legislature lasted from Jan. 3 to March 31. A. R. Talbot was president *pro tempore* of the Senate, and Paul F. Clark Speaker of the House.

There were 6 Democratic members of the Senate, 10 of the House; 18 Republicans in the Senate and 55 in the House; 9 Populists in the Senate and 35 in the House.

The term of United States Senator William V. Allen having expired, a successor was elected, but only after a long contest. Mr. Allen was the candidate of the fusionists, Monroe L. Hay-

ward was the leading candidate of the Republican members, but there were so many others that no choice was made till March 7, after Mr. Hayward had been made the caucus candidate. He was elected by a vote of 74 against 58 for Mr. Allen. Among the candidates were D. E. Thompson, J. L. Webster, G. M. Lambertson, and Messrs. Field, Reese, Hinshaw, Hainer, Weston, Foss, Van Duzen, Adams, Cornish, Talbot, and J. S. Morton. Mr. Hayward died before taking his seat, and the Governor appointed William V. Allen.

An important amendment to the law for the registration of voters was adopted, making it the duty of the registrars to provide an additional column in the registry list for the name of the party with which each voter claims to be connected. The object is to prevent frauds at primary elections by votes of men not belonging to the party; and committees in charge of primaries may take copies of the registry lists. The voter is not obliged to declare allegiance to any party, but if he refuses so to register he can not vote at any primary. The use of voting machines was authorized.

A general law to prevent corrupt practices at elections was adopted. Candidates and political committees must file statements of expenditures; the expenses of candidates are limited, the maximum from \$100 to \$650. Contributions to defray expenses of naturalization are prohibited. Changes were made in the form of the ballot—a return substantially to the style of the Australian ballot as adopted in the State in 1891. No candidate may have his name on the ballot more than once; if one is nominated by more than one party, the party designations must be set at the right of a brace.

A committee was appointed to investigate charges against the conduct of the Auditor and his examiners in the affairs of the insurance department; and in consequence, presumably, of this inquiry, an act was passed taking the department from the charge of the Auditor, and making the Governor the insurance commissioner, with power to appoint a deputy. The law also provided for an increase of fees from insurance companies. The Governor appointed a deputy, but the Auditor resisted the enforcement of the law, taking the ground that it was unconstitutional, in that it created a new executive office, contrary to the constitutional prohibition. The Supreme Court decided in December against the validity of the law.

Other laws affecting insurance authorized the incorporation of mutual companies to insure against loss of hogs by disease; provided that only resident agents may issue policies on property in the State; that brokers may be licensed to act as agents for companies not authorized to operate in the State; and extending the powers of mutual benefit life associations.

Another committee inquired into charges of newspapers against the Supreme Court and the commission that has been in existence about six years, the object of which was to give help to the court until the number of judges should be increased by constitutional amendment. The charges seem not to have been sustained, as a bill was passed continuing the life of the Supreme Court commission, but it was vetoed.

A law was passed, at the instance of labor leaders and the confederated women's clubs, regulating and limiting the hours of employment of women in manufacturing, mercantile, and mechanical establishments, and requiring that seats be provided for them. The limit is ten hours a day or sixty hours a week.

Children under ten may not be employed in manufacturing or mercantile establishments, nor children under fourteen except in school vacations—with some exceptions. A record of the age and residence of every employee under sixteen must be kept at each establishment, and be open for inspection.

The law relating to deposits of State funds was amended; the interest on daily balances was reduced from 3 to 2 per cent.; and the officers of a bank seeking to qualify as a depository are ineligible to sign the required bond. Warrants issued by the State will draw interest at 4 per cent., instead of 5 as formerly.

It was enacted that any precinct, township, or city of 1,000 to 25,000 inhabitants may issue bonds, and the maximum rate of interest was reduced from 8 to 6 per cent. Provision was made for the refunding of bonded indebtedness of counties, villages, and second-class cities.

A board of medical examiners was created. Other boards that were created were: For examining barbers, for licensing embalmers, for exercising supervision over brands and marks.

Further acts in the interest of health and safety were: Creating an emergency fund for the suppression of epidemics and contagious diseases, to be under the control of the State Board of Health; providing that it shall be unlawful to build fire escapes without permit from the department of labor and in accordance with its directions.

Some amendments were made to the laws regarding irrigation districts and the levying of taxes in them. The law providing for a bounty on trees along section lines was repealed. Dogs were declared personal property, and owners were made liable for damage done by them. Cities and villages of 100 to 25,000 inhabitants are permitted to collect a dog tax of \$1 to \$3, instead of \$3 to \$10. The law relating to destruction of grasshoppers was repealed.

Mutual bond companies were authorized to insure members in offices of responsibility.

A food commission was created, and regulations were made for preventing adulterations of food; \$5,000 annually was appropriated for the department. The power of the Legislature to create the office seems to have been disputed. A packing company applied for an injunction restraining the commission from interference, attacking the legality of the act creating the commission. The court had not passed upon it at the end of the year.

A compulsory education law requires children between eight and fourteen to attend some public, private, or parochial school, and the board of education is required to serve notice on parents of delinquents. Public high schools must be open to nonresident pupils free of tuition to the pupils; but the county where each one resides must pay for him 75 cents a week. A one-mill levy for the State University was made a law.

The Governor vetoed a resolution commending the conduct of the First Nebraska Regiment in the Philippines, objecting to the clauses which spoke of the men as "defending the principles of our Government and adding new glory to the flag." The Senate passed the bill over the veto, but the House had not the necessary three-fifths vote.

Among appropriations made were: \$25,000 for the purchase of an executive mansion; \$13,500 for buying the site of the Soldiers' Home at Milford; \$48,000 for new buildings at the Beatrice Institute for Feeble-minded Youth; \$40,000 for a new wing at the Lincoln Hospital for the Insane; \$20,000 for a new building at the Hast-

ings Hospital for the Incurable Insane. The estimates of expenses deemed necessary by State officers and heads of State institutions, not including new buildings, amounted to \$2,613,235. A deficiency of \$186,785 was included.

Other enactments were:

Providing that receivers in insolvency cases may be paid by salary, percentage, or fixed sum, according to the discretion of the court.

Providing that railroad companies may not permit trainmen to work more than eighteen consecutive hours without eight hours for rest.

Forbidding street railway companies to carry municipal officers free; does not apply to firemen and policemen.

Locating the State fair permanently at Lincoln, and appropriating for buildings.

Requiring pawnbrokers to be licensed and to keep records of pledged goods and descriptions of persons pledging.

Regulating the control of building and loan associations.

An appropriation of \$17,840 was made to pay chicory bounty claims. The bounty law was passed by the Legislature of 1895, but no specific appropriation was made. The Legislature of 1897 declined to make an appropriation, but the Legislature of 1899 appropriated money to pay the chicory bounty, but failed to make provision for the bounty on beet sugar.

A committee was appointed by the Senate to investigate certain charges relative to alleged irregularities in the recount of ballots on a constitutional amendment relating to increasing the number of judges of the Supreme Court, as well as other matters in connection with the official conduct of certain State officers. The Governor vetoed a bill appropriating \$2,000 for expenses of the investigation, but the investigation took place after the adjournment of the Legislature, and the report was finished July 27 and forwarded to the Governor, who declined to receive it, on the ground that the investigation was not properly authorized, the committee without standing, and that he did not wish to encumber his office with documents that are not public. The report declares "that the charges of fraud in connection with the recount on the constitutional amendments have been sustained by the most conclusive evidence, as well as by the appearance of the ballots themselves. It finds that ex-Gov. Holcomb has misappropriated at least \$773 of the amount drawn by him on account of house rent during his terms of office, and recommends that the Attorney-General be instructed to take the necessary steps to recover the amount. The committee also comments with some severity on the action of the State officials in refusing to aid its members in their investigations.

Court Decisions.—The Board of Transportation was created by an act of 1887, and in 1897 its powers were extended so as to apply to telephone, telegraph, and express companies. The Pacific Express Company applied for an injunction to restrain the board from proceeding in the matter of a complaint against certain express rates, taking the ground that the act of 1897 was invalid because, while it was amendatory of the act of 1887, that act was not mentioned in the later act. The Supreme Court decided against the company and declared the law not unconstitutional.

In a suit in which the State sought to recover \$5,622.56, collected as fees by ex-Oil Inspector Hilton and his deputies for the inspection of gasoline, the Supreme Court gave judgment

in favor of the State. The defense was that the law did not require the inspection of gasoline, and therefore the State was not entitled to the fees. The court held that the law did not contemplate the inspection of gasoline.

In an opinion given at the close of the year the Supreme Court held that the State can recover from insurance companies the fees paid to Eugene Moore and retained by him when he left the office of auditor of public accounts. The decision came in the form of a reversal in the case of the State against the Home Insurance Company of New York, in which suit the State sought to recover \$272 from that company. The decision is construed to mean that the State will be able to recover from insurance companies the full amount of Eugene Moore's shortage, amounting to over \$23,000. Nearly the entire shortage comprised fees paid by insurance companies. The court holds that the Constitution prohibited the insurance companies from paying fees to the auditor.

Political.—A State election was held this year for a justice of the Supreme Court and two regents of the university.

Three conventions were held in Omaha, Aug. 22, and all united upon one ticket. The Populists nominated ex-Gov. Silas A. Holcomb for the Supreme Court, and the nomination was accepted by the Silver Republicans and by the Democrats, though not without some opposition on the part of the Democratic convention, where ex-Senator William V. Allen was the choice of many delegates. The candidates for regents were J. L. Teeters and Edson Rich. The platform of the Democratic convention opens as follows: "We, the Democrats of the State of Nebraska, in convention assembled, indorse and emphasize each and every plank of the national platform adopted at Chicago in 1896." Then follows a specific declaration in favor of the free coinage of silver at the ratio of 16 to 1, and this: "Our confidence in the principles set forth in that platform has been increased, as these principles have been vindicated by events. The gold standard is less defensible now than it was in 1896."

The Populist platform contains a deliverance upon the question of the war in the Philippines, protesting that if the Cubans "are and of right ought to be free, the same can be said of the Filipinos, and this nation would suffer no humiliation in acknowledging adherence to the doctrine that governments derive their just powers from the consent of the governed."

The platform of the Silver Republicans is much the same.

The Republican convention met in Omaha, Sept. 21. M. B. Reese was made the candidate for the Supreme Court judgeship, and E. G. McGilton and Dr. William B. Ely were nominated for regents of the university. The resolutions approved the policy of the administration, declared for the gold standard, and denounced "the attempt now desperately being made to again array labor and capital in hostile camps. The Republican party now, as always, opposes trusts and combinations having for their purpose the stifling of competition and arbitrarily controlling production or fixing prices, but we also recognize that legitimate business interests, fairly capitalized and honestly managed, have built up our industries at home, given the largest employment to labor at the highest wage, and have enabled us to successfully compete with foreign countries in the markets of the world. Such industries must not be struck down by legislation aimed at dishonestly organized institutions which

destroy legitimate enterprise and the opportunities of labor and plunder the public. We favor the creation by act of Congress of a bureau of supervision and control of corporations engaged in interstate business with powers similar to those exercised over national banks by the controller of the currency, enforcing such publicity and regulations as shall effectually prevent dishonest methods and practices, and generally such legislation, State and national, as from time to time may be required for the correction of abuses."

The resolutions also recommended a liberal pension policy, commended the loyalty of the sound-money Democrats, and praised the bravery of the First Nebraska Volunteers in the Philippines.

The Prohibition party made no nomination for justice, but named Charles E. Smith and Albert Fitch for regents.

The result of the election was the success of the fusion candidates. The vote for justice stood: Holcomb, 109,320; Reese, 94,213. For regents, the returns gave: Teeters, 101,194; Rich, 96,202; Ely, 94,411; McGilton, 90,464; Smith, 5,695; Fitch, 4,437.

A dispatch from Hastings, Dec. 23, notices the organization of a new party. It says: "Under the banner of the Union Reform party over three-score delegates met here to-day and effected a State organization. The old Middle-of-the-Road element is behind the plan, and the spirit of that branch of Populism was rampant. The convention was sprinkled with Democrats, but at no time during the conference was Bryan's name mentioned. Ordinances as fundamental law of party organization and management were adopted, and channels laid out by which contributions may reach national headquarters. The National Union Reform party platform was adopted."

NETHERLANDS, a monarchy in western Europe. The legislative authority is vested in the States General, consisting of a First Chamber, containing 50 members, elected by the provincial councils for nine years, and a Second Chamber, containing 100 members, elected for four years by the direct votes of all citizens who pay 10 guilders of direct taxes above the limit of partial exemption or who occupy separate dwellings. The reigning sovereign is Queen Wilhelmina, born Aug. 31, 1880, daughter of Willem III by his marriage with Princess Emma of Waldeck, who succeeded to the throne Nov. 23, 1890, on the death of her father, and assumed the royal authority on Sept. 6, 1898, the Queen Dowager having acted as regent during her minority.

The Council of Ministers constituted July 26, 1897, was composed as follows: President of the Council and Minister of Foreign Affairs, Dr. W. H. de Beaufort; Minister of the Interior, Dr. H. Goeman Borgesius; Minister of Finance, Dr. N. G. Pierson; Minister of Justice, Dr. P. W. A. Cort van der Linden; Minister of the Colonies, J. T. Cremer; Minister of Marine, J. C. Jansen; Minister of War, Lieut.-Gen. K. Eland; Minister of Public Works and Commerce, C. Lely.

Area and Population.—The area of the Netherlands, or Holland, is 12,648 square miles. The population was 4,511,415 at the census of 1889, and on Dec. 31, 1897, it was computed to be 5,004,204. On Dec. 31, 1898, the estimated population was 5,074,631, of whom 2,513,267 were males and 2,561,364 females. The number of emigrants in 1897 was 792; but the emigrants, both Dutch and foreigners, that took passage in Dutch ports numbered 9,036. Amsterdam at the end of 1897 had 503,285 inhabitants; Rotterdam, 298,433; The

Hague, 196,325. The number of marriages in 1898 was 36,817; of births, 167,991; of deaths, 93,039; excess of births, 74,152; emigration, 1,172.

Finances.—The revenue of the Government in 1897 was 135,408,474 guilders from ordinary and 260,000 guilders from extraordinary sources; total, 135,668,474 guilders. The expenditures were 39,312,394 guilders for defense, 32,643,746 guilders for the debt, 11,596,285 guilders for public works, and 55,674,733 guilders for general expenses; total, 139,227,158 guilders. The estimate of revenue for 1898 was 134,432,350 guilders, and of expenditure 141,743,746 guilders. For 1899 the budget estimate of revenue was 140,796,900 guilders, and of expenditure 152,613,959 guilders. Of the revenue for 1899 the land tax was estimated to yield 12,400,000 guilders; the personal tax, 8,675,000 guilders; the tax on capital, 7,000,000 guilders; the tax on incomes from trades and professions, 5,044,000 guilders; excise duties, 45,600,000 guilders; indirect taxes, 20,732,000 guilders; import duties, 8,816,950 guilders; the tax on gold and silver plate, 300,900 guilders; domains, 2,350,000 guilders; the post office, 9,447,000 guilders; the telegraphs, 1,795,000 guilders; the state lottery, 659,000 guilders; shooting and fishing licenses, 130,000 guilders; pilot dues, 1,950,000 guilders; mining dues, 7,245 guilders; state railroads, 4,162,990 guilders; share of the interest and sinking fund of the debt paid by the Government of the East Indies, 3,847,250 guilders; miscellaneous receipts, 7,789,565 guilders. The total yield of direct taxes in 1897 was 32,998,960 guilders; of excise duties, 44,800,796 guilders; of indirect taxes, 20,075,659 guilders; of customs duties, 8,588,810 guilders. Of the expenditures as provided in the budget for 1899 the civil list took 800,000 guilders; the legislative body and royal Cabinet, 684,707 guilders; the Ministry of Foreign Affairs, 849,134 guilders; the Ministry of the Interior, 15,067,028 guilders; the Ministry of Justice, 5,841,167 guilders; the Ministry of Marine, 15,890,424 guilders; the Ministry of War, 22,585,901 guilders; the Ministry of Finance, 25,081,465 guilders; the Ministry of Public Works and Commerce, or Waterstaat, 26,633,231 guilders; the Ministry of the Colonies, 1,300,696 guilders; the public debt, 37,830,205 guilders; provision for contingencies, 50,000 guilders. The total receipts for 1899 were estimated at 140,796,900 guilders, of which direct taxes supplied 33,209,000 guilders, excise 45,600,000 guilders, stamps, registration, and succession duties 20,732,000 guilders, customs 8,816,950 guilders, guarantee of works of gold and silver 300,900 guilders, domains 2,350,000 guilders, posts 9,447,000 guilders, telegraphs 1,795,000 guilders, lottery 659,000 guilders, hunting and fishing licenses 150,000 guilders, pilot dues 1,950,000 guilders, railroads 4,162,990 guilders, and other sources 11,638,060 guilders. The total expenditures for 1899 were estimated at 151,744,632 guilders.

The funded debt in 1899 consisted of 626,008,500 guilders of 2½-per-cent. consols, 517,327,000 guilders of loans issued in 1895 and 1898 at 3 per cent., and 294,000 guilders of 5-per-cent. and 2,719,693 guilders of 6-per-cent. bonds issued for the purchase of railroads and maturing in 1899; total, 1,146,349,193 guilders, requiring an annual payment of 31,289,614 guilders for interest and 6,228,571 guilders for the sinking fund and redemption of debt. The annuities amounted to 262,019 guilders for the year, and interest on floating debt to 50,000 guilders, making the annual charge to the public debt 37,830,204 guilders. The interest in 1898 was 29,852,993 guilders, and the sinking fund 2,638,100 guilders.

The paper money amounts to 15,000,000 guilders. Since 1850 the payments for redemption of debt have amounted to 302,868,689 guilders.

The expenditure of the provincial administrations amount to 5,760,000 guilders per annum, and the expenditures of communes to 93,994,000 guilders, including 22,051,000 guilders of interest on debts.

The Army.—The standing army at the end of 1897 consisted of 1,971 officers and 27,834 men. The main part is composed of soldiers enlisted for a term of years, in addition to whom about 11,000 young men are drawn by lot every year to serve in the ranks for twelve months, after which they are summoned for six weeks of training each year till the five years of service in the active army have passed. Substitution was abolished by the law of 1898, and personal service was rendered compulsory without exemption except for ministers of religion. The militia embraces the whole male population capable of bearing arms, and is divided into three bans, one composed of the unmarried men and widowers who have no children, one of men with small families which are able to subsist without their labor, and one of married men and widowers who have sons in the militia. The first ban in 1897 numbered 42,243 men. The colonial army of the East Indies has no connection with that of the Netherlands.

The Navy.—The naval force maintained for the defense both of the Dutch coast and the East Indies consists of 6 armor clads, 20 armored gunboats of from 240 to 2,500 tons, 3 fast and powerful deck-protected cruisers, 50 unprotected cruisers, gunboats, and small-armed craft for river and harbor defense, 28 first-class torpedo craft, and 28 torpedo boats of the second and third classes. Whenever vessels become obsolete or inefficient they are replaced by modern ships, according to an authorized programme. The ram *Koningin Willemine*, of 4,600 tons, carries 1 11-inch, 1 8½-inch, and 2 6½-inch guns in turrets protected by 9½ inches of armor, and has a nominal speed of 17 knots. The *Koning der Nederlanden*, of 5,400 tons, is protected by 8-inch plates and armed with 4 11-inch guns, but can make only 11 knots. The *Prins Hendrik*, of 3,375 tons, carries 4 8½-inch and 4 4½-inch guns, and has a speed of 12 knots. The *Evertsen*, *Kortenaer*, and *Piet Hein*, of 3,400 tons, having 6 inches of armor on their sides, are designed to carry 3 guns of 8½ and 6 inches caliber, and to have a speed of 20 knots. The new protected cruisers are the *Holland*, *Zeeland*, and *Friesland*, built for a speed of 20 knots, and an armament of 2 6-inch and 6 4½-inch guns, besides smaller quick-firing and machine guns.

Commerce and Production.—There were 865,458 hectares under crops in 1896, and of pasture lands 1,182,879 hectares, 61,405 hectares of garden and orchard, and 248,383 hectares of forest; total productive area, 2,358,125 hectares. Of estates exceeding 100 hectares there were only 192, while 25,198 ranged from 20 to 100 hectares, 64,147 from 5 to 20 hectares, and 78,813 were less than 5 hectares, 58.5 per cent. of the total number being cultivated by the proprietors and 42.8 per cent. by tenant farmers. Of the area cropped, 214,917 hectares were devoted to rye, 150,203 hectares to potatoes, 128,420 hectares to oats, 62,265 hectares to wheat, 45,571 hectares to beets, and the rest to barley, beans, buckwheat, peas, flax, and minor crops. The imports of wheat in 1897 were 144,359,000 guilders in value, and exports 113,677,000 guilders; imports of rye were 78,838,000 guilders, and exports 37,769,000

guilders; imports of rye and wheat flour were 48,870,000 guilders, and exports 12,227,000 guilders; imports of barley were 27,395,000 guilders, and exports 19,239,000 guilders; imports of oats were 23,398,000 guilders, and exports 20,352,000 guilders; imports of potatoes were 197,000 guilders, and exports 1,081,000 guilders; imports of potato starch were 4,230,000 guilders, and exports 16,059,000 guilders; imports of buckwheat were 2,956,000 guilders, and exports 1,013,000 guilders; imports of flax were 967,000 guilders, and exports 13,585,000 guilders; imports of beets were 107,000 guilders, and exports 1,494,000 guilders; imports of bulbs, plants, and trees were 425,000 guilders, and exports 5,109,000 guilders; imports of vegetables were 1,752,000 guilders, and exports 39,167,000 guilders. The herring catch in the North Sea in 1897 was valued at 5,567,756 guilders.

The total value of imports of cereals and flour in 1897 was 325,816,000 guilders, and of exports 204,277,000 guilders; imports of drugs were 176,105,000 guilders, and exports 236,726,000 guilders; imports of iron and steel and manufactures thereof were 160,196,000 guilders, and exports 101,142,000 guilders; imports of textile materials and manufactures were 98,339,000 guilders, and exports 73,984,000 guilders; imports of copper were 72,882,000 guilders, and exports 67,801,000 guilders; imports of timber and wood were 50,944,000 guilders, and exports 34,298,000 guilders; imports of coffee were 47,939,000 guilders, and exports 24,762,000 guilders; imports of sugar were 25,854,000 guilders, and exports 54,440,000 guilders; imports of margarine were 19,018,000 guilders, and exports 48,093,000 guilders; imports of rice were 44,955,000 guilders, and exports 20,110,000 guilders; imports of hides and skins were 26,921,000 guilders, and exports 29,696,000 guilders; imports of coal were 49,516,000 guilders, and exports 3,480,000 guilders; imports of saltpeter were 21,760,000 guilders, and exports 19,686,000 guilders; imports of oil seeds were 32,917,000 guilders, and exports 15,881,000 guilders; imports of paper were 5,144,000 guilders, and exports 32,035,000 guilders; imports of tin were 18,914,000 guilders, and exports 15,365,000 guilders; imports of paints were 12,250,000 guilders, and exports 10,787,000 guilders; imports of grease and tallow were 22,331,000 guilders, and exports 9,326,000 guilders; imports of butter were 1,655,000 guilders, and exports 17,625,000 guilders; imports of cheese were 82,000 guilders, and exports 13,334,000 guilders; imports of mineral oil were 11,419,000 guilders, and exports were 82,000 guilders; imports of flax were 967,000 guilders, and exports 12,685,000 guilders; imports of indigo were 8,789,000 guilders, and exports 6,119,000 guilders; imports of zinc were 10,997,000 guilders, and exports 10,792,000 guilders; imports of tobacco were 9,208,000 guilders, and exports 5,388,000 guilders. The imports of gold and silver in 1897 were 22,194,000 guilders, and the exports were 81,000 guilders.

The total value of imports in 1898 was 1,795,700,000 guilders, of which amount 544,300,000 guilders represent articles of alimentation, 654,800,000 guilders raw materials, 290,500,000 guilders manufactured articles, 273,500,000 guilders miscellaneous merchandise and 32,600,000 guilders precious metals. The total value of exports was 1,515,800,000 guilders, of which 518,300,000 guilders represent alimentary substances, 547,300,000 guilders raw materials, 288,600,000 guilders manufactured articles, 159,300,000 guilders miscellaneous merchandise, and 2,300,000 guilders precious metals. The commerce of 1898, valued in guilders,

was distributed among different countries as shown in the following table:

COUNTRIES.	Imports.	Exports.
Germany	00	787,300,000
Great Britain ..	00	337,800,000
Dutch India	00	68,600,000
Belgium	00	180,900,000
United States	00	41,400,000
Russia	00	7,400,000
British India	00	1,600,000
France	00	32,100,000
Sweden and Norway ..	00	10,100,000
Spain	00	2,900,000
Roumania	00	3,800,000
Brazil	00
Peru and Bolivia	00
Italy	00	3,800,000
Turkey	00	6,100,000
Africa ..	00	4,600,000
All other countries ..	00	45,000,000
Total	1,785,700,000	1,815,800,000

Navigation.—During 1898 there were 1,201 sailing vessels, of 954,538 cubic metres, entered at the ports of Holland, 534 of them, of 251,124 cubic metres, being Dutch, and 667, of 897,281 cubic metres, having cargoes. The number of sailing vessels cleared was 1,288, of 959,032 cubic metres, of which 626, of 264,051 cubic metres, were Dutch, and 662, of 383,878 cubic metres, carried cargoes. The total number of steamers entered was 9,866, of 23,652,325 cubic metres, of which 2,468, of 5,958,563 cubic metres, were Dutch, and 9,405, of 23,017,237 cubic metres, brought cargoes. The number of steamers cleared was 9,709, of 23,466,194 cubic metres, of which 2,480, of 5,991,166 cubic metres, were Dutch, and 6,279, of 12,214,790 cubic metres, carried cargoes.

The Dutch mercantile navy in the beginning of 1899 consisted of 429 sailing vessels, of 249,918 cubic metres, and 176 steamers, of 605,375 cubic metres.

Railroads, Posts, and Telegraphs.—There were 2,648 kilometres of railroads in operation on Jan. 1, 1899. The telegraph lines of the Government had a total length of 5,907 kilometres, with 20,945 kilometres of wire. The number of dispatches during the year was 5,072,788, of which 2,678,420 were internal, 2,279,271 international, and 115,097 service dispatches. The receipts were 3,590,552 francs; the ordinary expenditures 4,835,333, and extraordinary 1,183,735 francs.

The post office in 1898 forwarded 78,375,000 internal and 26,622,000 foreign letters, 40,510,000 internal and 7,724,000 foreign postal cards, 130,450,000 internal and 15,671,000 foreign newspapers and circulars, and 3,702,000 internal letters with declarations of value and postal money orders, remitting 353,838,000 francs, and 617,000 foreign ones, remitting 120,211,000 francs.

Legislation.—The States General in the session opened on Sept. 19, 1899, gave long consideration to a measure for the reorganization of the army. Another bill dealt with labor contracts, and one was passed against the excessive consumption of spirituous liquors. Changes were made in the import duties, and a different system was adopted for the keeping of public accounts. The estimates for 1900 amounted to 151,000,000 guilders, showing a deficit of 6,500,000 guilders, of which 3,500,000 guilders represented expenditure on public works. The accumulated deficit from previous years was reduced to 15,500,000 guilders. There was an increase of 650,000 guilders in army expenditure, but the Minister of Finance saw no necessity for fresh taxation.

The Peace Conference.—The proposal of the Emperor of Russia for a conference on the limita-

tion of armaments, communicated by Count Muravieff to the foreign representatives in St. Petersburg on Aug. 24, 1898, in a circular that was commonly called the Czar's *ironicon*, received ostensibly favorable and sympathetic responses from all the governments, and they promised to delegate representatives to the conference whenever they received the invitation. Lord Salisbury suggested that this should be accompanied by some indication of the special points to which the attention of the conference was to be directed. On Dec. 30, 1898, Count Muravieff, at the Czar's behest, addressed a second circular to the powers, in which the restriction and diminution of armaments, the extension of arbitration as a mode of settling international differences without war, and the modification of the laws of war so as to bring them more nearly into accord with modern ideas of humanity and civilization were indicated as the general objects of the conference, with a suggestion that the conference be not held in the capital of any great power, where political interests center that might impede its work. Since the issue of the *ironicon* some of the powers had taken steps to increase their armaments. Notwithstanding these untoward symptoms, the hope was expressed that the general situation would again become favorable to the success of the conference. It was suggested that there should be a preliminary exchange of ideas between the cabinets in order to prepare the way for diplomatic discussion, with the object of seeking without delay means for putting a stop to the progressive increase of military and naval armaments, which had become more urgent in view of the fresh extension given to those armaments, and of preparing the way for the discussion of questions relating to the possibility of preventing armed conflicts by the pacific means at the disposal of international diplomacy. It was well understood that, as a condition of holding the conference, nothing touching the existing political relations of states or the actual order of things as established by treaties, should be admitted as a subject of discussion, nor in general any question not entering into the programme adopted by the cabinets. In this second Russian circular the following subjects were tentatively suggested as matters for the preliminary consideration of the powers suitable for discussion at the conference:

"An understanding not to increase for a fixed period the present effective of the armed military and naval forces, and at the same time not to increase the budgets pertaining thereto. A preliminary examination of the means by which a reduction might even be effected in the future in the forces and budgets above mentioned.

"To prohibit the use in the armies and fleets of any new kind of firearms whatever and of new explosives, or any powders more powerful than those now in use, either for rifles or cannon; to restrict the use in military warfare of the formidable explosives already existing, and to prohibit the throwing of projectiles or explosives of any kind from balloons or by any similar means; to prohibit the use in naval warfare of submarine torpedo boats or plungers or other similar engines of destruction; to give an undertaking not to construct vessels with rams in the future; to apply to naval warfare the stipulations of the Geneva convention of 1864 on the basis of the articles added to the convention of 1868; to neutralize ships and boats employed in saving those overboard during or after an engagement; and to raise the declaration concerning the laws and customs of war elaborated in 1874 by the

conference of Brussels, which has remained unratified to the present day.

"To accept in principle the employment of the good offices of mediation and optional arbitration in cases lending themselves thereto, with the object of preventing armed conflicts between nations; an understanding with respect to the mode of applying these good offices, and the establishment of a uniform practice in using them."

Questions of a technical character would have to be dealt with by the aid of specialists who should be invited to take part in the labors of the conference.

Both circulars were sent through the Russian minister to the Vatican at the same time and in the same manner as to the other governments. The Government of Italy, which had acquiesced in the admission of a papal delegate to the International Metrical Congress of 1872, with the reservation that it should not be taken as a precedent for the representation of the Vatican in conferences of a political character, intimated that it would send no representative if the Holy See were invited to take part in the conference. The efforts of partisans of the Church to secure the representation of the Vatican for the avowed purpose of establishing its position as an international state and raising political questions confirmed the Italian Government in its attitude. The incorporation of Tuscany, Modena, Parma, the Two Sicilies, and the papal states in the Kingdom of Italy had indeed never been consecrated by treaty, as the cession of Alsace-Lorraine to Germany had been, and if territorial questions came to be discussed in the conference the rights of the deposed princes and the temporal power of the Pope could not be excluded. The invitations to the conference were issued by the Government of the Netherlands, The Hague having been selected by the Czar as the place of meeting. The Czar's Government retained the initiative and the right to decide the preliminary conditions. No programme was discussed or decided upon by the cabinets beforehand. No invitation was sent to the Vatican, the Italian minister having, on Feb. 16, positively informed the Dutch Government that the presence of a papal delegate would be incompatible with that of a representative of Italy, and when the conference assembled the papal internuncio departed from The Hague. The Dutch Government desired to send invitations to the South African Republic and the Orange Free State. The British Government, however, let it be known that it would not recognize the international position of the former. The Dutch Government therefore suggested that in order not to make an invidious distinction between the two Boer republics neither should be invited. The Porte consented to the representation of Bulgaria, but raised a question of precedence, which was settled by seating the Bulgarian representatives with the Turkish delegation, but giving them an independent vote. Montenegro was represented only by the Russian delegates. None of the Spanish-American republics received an invitation. Outside of Europe, only the United States, China, Japan, Persia, and Siam were invited to send delegates.

The conference assembled in the Huis ten Bosch at The Hague on May 18. Baron De Staal, the first Russian delegate, was elected president. The states represented were Germany, the United States, Austria-Hungary, Belgium, China, Denmark, Spain, France, Great Britain, Greece, Italy, Japan, Luxembourg, Netherlands, Persia, Portugal, Roumania, Russia, Servia, Siam, Sweden and Norway, Switzerland, Turkey, and Bulgaria.

Three commissions were appointed. The first commission, which had to inquire into the question of the restriction of armaments and expenditure for military purposes, had as material to guide its deliberations Prince Metternich's memorandum of 1816 regarding the suggestion of the Prince Regent of England, supported by Alexander I of Russia, that the normal peace footing of the individual powers should be determined by an international conference; the letter sent by Napoleon III, the Emperor of the French, on Nov. 4, 1863, to the various sovereigns of Europe, proposing a conference in Paris to lay the foundations of universal peace; and documents containing arguments for disarmament or the reduction or limitation of armaments by Rolin Jacquemyns, Prof. Lorimer, Count Kamarowski, David Dudley Field, M. Merignhac, Johann von Bloch, M. Bastiat, and Prince Obolinsky. The second commission, which dealt with the laws governing civilized warfare, had its attention directed to the declaration of the congress of Paris signed on April 6, 1856; the Geneva convention of Aug. 22, 1864; the additional clauses to the Geneva convention adopted on Oct. 20, 1868, but never ratified; the St. Petersburg convention prohibiting among civilized nations the use of certain projectiles; the minutes of the Brussels conference of 1874 on the laws and observances of war, which did not lead to the conclusion of a convention; the original suggestions for an international convention on the laws and observances of war which the Russian Government laid before the Brussels conference; the manual on the laws of land warfare adopted by the Institute of International Law sitting at Oxford in 1880; the rules regarding the bombardment of cities by naval forces adopted by the Institute of International Law sitting at Venice in 1896; the declaration of France and Great Britain regarding the additional clauses to the Geneva convention; the proposal of M. Moynier for the revision of the Geneva convention; the provisional programme submitted by the Swiss Federal Council; and the circular sent by the Dutch Minister of Foreign Affairs on Feb. 13, 1871, suggesting an agreement of the powers to admit the principle of the inviolability of private property on the seas and a precise definition of the term contraband of war. The third commission, to which the question of mediation and arbitration was referred, received as documents to guide its deliberations Lord Clarendon's proposal at the Paris congress of 1856 as regards a friendly state being called in as mediator before having recourse to force; Signor Mancini's resolution presented in the Italian Chamber of Deputies, expressing the hope that arbitration would become the frequent and accepted method of solving international controversies in accordance with the principles of justice; the resolution regarding compromise adopted by the Institute of International Law sitting at Zurich in 1877; the twelfth article of the general act of the Berlin conference of 1885, regarding mediation or arbitration in the case of controversies connected with the basins of the Congo and the Niger; the scheme of procedure in international arbitration drawn up by the Institute of International Law sitting at The Hague in 1875; David Dudley Field's plan for the establishment of an international arbitration tribunal; the bases of an international treaty for arbitration laid down at the meeting of the Association of International Law at Brussels in 1895; the proposal for the establishment of a permanent court of international arbitration adopted by the interparliamentary conference at Brussels in 1895;

the conclusions arrived at in the interparliamentary conference on arbitration and peace which met at Brussels in 1897; the Washington treaty of May 8, 1871; the proposal for the establishment of a tribunal of arbitration for the settlement of disputes between states of North, Central, and South America, signed at Washington on April 18, 1890; Lord Salisbury's letters of March 5 and May 18, 1896, to the British ambassador at Washington relating to the conclusion of a treaty of arbitration; the treaty of arbitration concluded between the United States and Great Britain, but not ratified; the treaty providing for arbitration between the Argentine Republic and Italy, signed at Rome on July 23, 1898; the fifty-fifth and fifty-eighth clauses of the Brussels general act of July 2, 1890; the twenty-third clause of the Universal Postal Convention of July 4, 1891; the decisions of the Madrid Judicial Congress of 1892; and the opinion of M. Descamp on the subject of arbitration.

The 15 articles added to the Geneva convention of 1864 by the second convention of 1868, which Russia proposed to bring before the conference, aimed at giving more security for the protection of the wounded during war on land, and at applying for the first time in naval warfare the principles of the Red Cross. After they were adopted by the Geneva conference Russia proposed an amendment to one of the articles that Germany hesitated to accept, and that the Netherlands and Portugal accepted only with reservations. Hence the convention was never ratified. During the Franco-German War the two belligerents agreed upon a special *modus vivendi* for observing the additional articles.

Petitions were received from the Armenian and Macedonian committees and from Finland presenting the grievances of the former against the Turkish Government and of the latter against violations of its charter of liberties by the Russian Government. The petitioners were given to understand that the conference could not go outside of the points contained in Count Muravieff's circular.

The American delegates submitted a proposal for exempting private property at sea from capture. It was not supported by Great Britain, and was opposed by France and Russia, as it would enable Great Britain to wage war without endangering her vast commerce or her food supplies, and allow her to concentrate her great naval forces against a weaker enemy. The representatives of other countries having small shipping interests were also opposed to the proposal. The United States had declined in 1856 to sign the declaration of Paris abolishing privateering and agreeing that the neutral flag covers enemy's goods except contraband of war; but at that time the United States Government expressed its willingness to forego the right of privateering if the powers would agree to declare all private property at sea exempt from capture, as President Monroe had argued that it ought to be. In the Spanish-American War the governments of the United States and Spain issued declarations that they would not employ privateers. The proposal submitted by the American commissioners to the Peace Conference was as follows:

"The private property of all citizens or subjects of the signatory powers, with the exception of contraband of war, shall be exempt from capture or seizure on the high seas or elsewhere by the armed vessels or by the military forces of any of the said signatory powers. But nothing herein contained shall extend exemption from seizure to vessels and their cargoes which may

attempt to enter a port blockaded by the naval forces of any of the said powers."

The commission would not admit that the subject came within the scope of the matters to be considered at the conference as defined in the circular of the Russian minister, and resolved to refer its consideration to a future conference.

The Russian delegates laid before the first commission the following proposals for the limitation of the military forces and budgets:

"1. The establishment of an international agreement for a term of five years stipulating the nonaugmentation of the present peace establishment of the troops serving in their own country.

"2. In case such an agreement be arrived at, the strength of the armies of all the powers, not including colonial forces, shall be determined for time of peace.

"3. The maintenance for the same term of five years of the military budgets at their present figures."

The Russian proposal for the limitation of naval armaments was as follows:

"Acceptation of the principle that for a term of three years the sum of naval budgets shall be determined, with the engagement not to increase the total during that triennial period, and with the obligation of announcing in advance for the said period, first, the total in tonnage of those ships of war which it is proposed to build without specifying the models thereof; secondly, the number of officers and crews in the navy; thirdly, the expenditure on works in ports, such as forts, docks, arsenals, etc."

None of the Continental military experts favored the principle of arresting or limiting the military armaments. The German delegate denied that military service was a burden in his country, arguing that, on the contrary, the army had made Germany united, strong, and prosperous, and was a school of civic virtue, of duty, energy, and application. Germany, England, and other countries were equally loath to submit their naval armaments to international control or self-denying restrictions. The commission, on June 30, adopted the following conclusions:

"1. That it would be very difficult to determine, even for a period of five years, the figure of effective forces without regulating at the same time the other elements affecting national defense.

"2. That it would be no less difficult to regulate by an international convention the elements of that defense as organized in each country according to very different views.

"3. That the restriction of the military burdens that at present weigh upon the world is greatly to be desired for the material and moral welfare of humanity."

The convention for the peaceful regulation of international conflicts by mediation and arbitration contains the principal ideas of the Russian, British, and American projects, in so far as they do not conflict with suggestions made by French, German, Belgian, Portuguese, and other delegates. Clauses providing for obligatory arbitration in certain classes of cases were omitted because Germany objected strongly to anything of the nature of compulsion. The Russian delegates first submitted the scheme proposed by their Government of mediation and arbitration. The British representatives had another plan, involving the creation of a permanent tribunal, which was acceptable to the Russians. A permanent court was also a feature of the American scheme, more complete and elaborate than the British. The American representatives also introduced a plan

for special arbitration. The text of the convention finally completed and adopted by the conference is as follows:

"THE MAINTENANCE OF THE GENERAL PEACE.

"ARTICLE I.—In order to prevent as far as possible the recourse to force in international relations, the signatory powers agree to employ all their efforts to bring about, by pacific means, the solution of the differences which may arise between states.

"GOOD OFFICES AND MEDIATION.

"ART. II.—The signatory powers agree that in case of grave disagreement or conflict, before appealing to arms, they will have recourse, so far as circumstances allow it, to the good offices or mediation of one or more of the friendly powers.

"ART. III.—Independently of this recourse, the signatory powers consider it useful that one or more powers that are not concerned in the conflict should offer of their own initiative, so far as the circumstances lend themselves to it, their good offices or their mediation to the disputing states.

"The powers not concerned in the conflict have the right of offering their good offices or their mediation even during the course of hostilities.

"The exercise of this right can never be considered by either of the disputing parties as an unfriendly act.

"ART. IV.—The part of the mediator consists in the reconciliation of contrary pretensions and in the allaying of the resentments which may be caused between the disputing states.

"ART. V.—The duties of the mediator cease from the moment when it is announced, whether by one of the disputing parties or by the mediator himself, that the compromise or the bases of a friendly understanding proposed by him have not been accepted.

"ART. VI.—Good offices and mediation, whether recourse is had to them by one of the disputing parties or on the initiative of powers not concerned in the conflict, have exclusively the character of counsel and are devoid of any obligatory force.

"ART. VII.—The acceptance of mediation can not have the effect, unless it be agreed to the contrary, of interrupting, retarding, or impeding mobilization and other measures preparatory to war.

"If it (mediation) intervenes before the opening of hostilities, it does not, unless the contrary be agreed upon, interrupt the current military operations.

"ART. VIII.—The signatory powers agree to recommend the application, in circumstances which permit it, of a special mediation in the following form:

"In the case of a grave disagreement endangering peace the disputing states should each choose one power to which they may intrust the mission of entering into direct communication with the power chosen by the other side for the purpose of preventing the rupture of pacific relations.

"During the continuance of their mandate, the duration of which, unless the contrary is stipulated, can not exceed thirty days, the question in dispute is considered as referred exclusively to these powers. They must apply all their efforts to arranging the difference.

"In case of the actual rupture of pacific relations these powers remain charged with the common mission of profiting by every opportunity of re-establishing peace.

"INTERNATIONAL COMMISSIONS OF INQUIRY.

"ART. IX.—In cases in which a difference of appreciation of questions of fact should arise between the signatory powers which has given rise to a disagreement of an international character which could not be settled by the ordinary diplomatic methods, and in which neither the honor nor the vital interests of these powers are at stake, the interested parties agree to have recourse, so far as the circumstances permit it, to the institution of international commissions of inquiry, in order to establish the circumstances which have given rise to dispute and to clear up by an impartial and conscientious inquiry on the spot all questions of fact.

"ART. X.—The international commissions of inquiry are instituted by special convention between the disputing parties, defining the scope of the inquiry and the powers of the commissioners. The question at issue is to be argued from the standpoint of the two contending parties.

"ART. XI.—The commissions of inquiry, unless otherwise stipulated, are constituted as described in Article XXXI.

"ART. XII.—The interested powers undertake to furnish to the international commission of inquiry, to the fullest extent that they shall consider possible, all the means and all the facilities necessary for the complete knowledge and exact appreciation of the facts in question.

"ART. XIII.—The international commission of inquiry shall present to the interested powers its report signed by all the members of the commission.

"ART. XIV.—The report of the international commission of inquiry has in no wise the character of an arbitral decision. It leaves the disputing powers entire freedom, either to conclude a friendly arrangement on the basis of this report or to have recourse ultimately to mediation or to arbitration.

"INTERNATIONAL ARBITRATION.

"ART. XV.—International arbitration has for its object the settlement of disputes between states by judges of their own choosing and in conformity with their reciprocal rights.

"ART. XVI.—In questions of right, and especially in questions of the interpretation or application of international conventions, arbitration is recognized by the signatory powers as the most effective and at the same time the most equitable means of settling disputes not arranged by diplomatic methods.

"ART. XVII.—The agreement to arbitrate may be concluded for disputes already in existence or for disputes about to arise. It can deal with every sort of dispute or only with disputes of a specified category.

"ART. XVIII.—The arbitral convention involves an engagement to submit in good faith to the arbitral decision.

"ART. XIX.—Independently of general or special treaties, which may already bind the signatory powers to have recourse to arbitration, these powers reserve to themselves the liberty to conclude, either before the ratification of the present article or afterward, new agreements, general or particular, with the object of extending compulsory arbitration to all cases which they judge capable of being submitted to it.

"ART. XX.—With the object of promoting the development of arbitration, the signatory powers consider it useful to lay down certain rules concerning arbitral jurisdiction and procedure.

"These provisions are only applicable in case

the parties themselves do not adopt other rules with reference to this matter.

"OF THE PERMANENT COURT OF ARBITRATION.

"ART. XXI.—With the object of facilitating immediate recourse to the arbitration of international differences not settled by diplomatic means the signatory powers pledge themselves to organize in the following manner a permanent court of arbitration, accessible at all times and working, except there be a contrary stipulation of the disputing parties, in conformity with the rules of procedure inserted in the present convention.

"ART. XXII.—This court has competence in all cases of arbitration unless the disputing parties agree to establish a special arbitral jurisdiction.

"ART. XXIII.—An international bureau established at The Hague, and placed under the direction of a permanent secretary general, is to act as the office of the court.

"It is to be the intermediary for the communications dealing with the meetings of the latter.

"It is to have care of the archives and the conduct of all the administrative business.

"The signatory powers shall communicate to the bureau a copy of every agreement to resort to arbitration and of every arbitral decision made by special arrangement apart from the permanent court. They shall likewise communicate all laws, regulations, and documents evidencing the execution of sentences of the court.

"ART. XXIV.—Each of the signatory powers shall designate in the three months following the ratification of the present act four persons at the most, of recognized competence in questions of international law, and enjoying the highest esteem, and ready to accept the duties of arbitrators.

"The persons thus nominated will be entered, with the title of members of the court, on a list which will be communicated by the bureau to all the signatory powers.

"Every modification of the list of arbitrators shall be brought to the notice of the signatory powers by the bureau.

"Two or more powers may agree to nominate one or more members in common.

"The same person may be nominated by different powers.

"The members of the court are appointed for a term of six years. Their appointment may be renewed.

"In case of the decease or of the retirement of a member of the tribunal the vacancy will be filled in accordance with the rules established for nomination.

"ART. XXV.—The signatory powers which desire to apply to the court for the settlement of differences which have arisen between them choose out of the general list the number of arbitrators jointly agreed upon.

"They give notice to the bureau of their intention to apply to the court and of the names of the arbitrators whom they have nominated.

"In case of a difficulty arising as to the choice of an umpire the choice is to be intrusted to a third power designated by agreement between the parties. Failing such agreement, each party is to designate a different power, and the umpire is to be agreed upon by the powers thus designated.

"ART. XXVI.—The tribunal sits usually at The Hague.

"It has the right to sit elsewhere with the consent of the parties in litigation.

"ART. XXVII.—Every power, though not a signatory of this act, can apply to the court

under the conditions prescribed by the present convention.

"ART. XXVIII.—The signatory powers consider it a duty, in case a sharp conflict should threaten to break out between two or more of them, to remind these that the permanent court is open to them.

"Consequently, they declare that the fact of one or several of them reminding the disputing states of the provisions of the present convention and the advice given, in the higher interest of peace, to apply to the permanent court, can only be considered an exercise of good offices.

"ART. XXIX.—A permanent council, composed of the diplomatic representatives of the signatory powers resident at The Hague and the Dutch Minister for Foreign Affairs, who shall discharge the functions of president, shall be constituted in that city as soon as possible after the ratification of the present act.

"This council shall be charged with establishing and organizing the international bureau, which shall remain under its direction and under its control.

"It shall notify the powers of the constitution of the court, and shall provide for its installation.

"It shall decree its procedure, as well as all other necessary regulations.

"It shall decide all questions which may arise touching the working of the tribunal.

"It shall have absolute powers as to the nomination, suspension, or recall of the functionaries and employees of the bureau.

"It shall fix the pay and salaries, and control the general expenditure.

"The presence of five members at meetings duly convoked shall suffice to enable the council to deliberate in valid form. Decisions are taken by a majority of votes.

"The council addresses each year to the signatory powers a report on the labors of the court, on the discharge of the administrative services, and on the expenditure.

"ART. XXX.—The costs of the bureau shall be borne by the signatory powers in the proportion fixed by the international bureau of the Universal Postal Union.

"OF ARBITRATION PROCEDURE.

"ART. XXXI.—The powers which accept arbitration will sign a special agreement or compromise, in which are clearly laid down the object of the dispute as well as the extent of the arbitrators' powers. This document shall confirm the undertaking of the parties to submit themselves in good faith to the arbitrators' decision.

"ART. XXXII.—The arbitral functions may be conferred on one single arbitrator, or on several arbitrators, named by the parties at their own discretion, or chosen by them among the members of the permanent arbitration court established by the present act.

"In the absence of a contrary agreement the formation of the tribunal of arbitration shall be proceeded with in the following manner:

"Each party shall name two arbitrators, and they shall choose together an umpire.

"In case of a division of votes, the choice of the umpire shall be intrusted to a third power, named in agreement by the parties.

"If an agreement is not come to on this subject, each party shall designate a different power, and the choice of the umpire shall be made in concert by the powers so designated.

"ART. XXXIII.—When the arbitrator is a sovereign or the chief of a state the arbitration pro-

cedure shall be exclusively settled by his high determination.

"ART. XXXIV.—The umpire is president *de jure* of the tribunal.

"When the tribunal does not include an umpire it shall itself name its president.

"ART. XXXV.—Except there be a stipulation to the contrary, in case of the decease or resignation of one of the arbitrators, or his inability from any cause whatever to act, the vacancy will be filled in accordance with the rules established for nomination.

"ART. XXXVI.—The seat of the tribunal is designated by the disputing parties, or, in default of such designation, by the tribunal of arbitration.

"The seat thus fixed upon can only be changed in consequence of a new agreement between the interested states or, in case of necessity, by decision of the tribunal itself.

"ART. XXXVII.—The disputing parties have the right to name to the tribunal delegates or special agents to serve as intermediaries between the tribunal and the litigating parties.

"They are, moreover, authorized to intrust the defense of their rights and interests before the tribunal to counsel or advocates named by them for that purpose.

"ART. XXXVIII.—The tribunal decides upon the choice of languages authorized to be employed before it.

"ART. XXXIX.—The arbitral procedure comprises as a general rule two phases—the phase of instruction and the phase of pleading.

"The first consists in the communication made by the agents of the disputing parties to the members of the tribunal and to the opposing party of all printed or written deeds and of all documents containing the cases of the parties.

"The second is oral, and consists in the hearing before the tribunal.

"ART. XL.—Every document produced by one of the parties must be communicated to the other party.

"ART. XLI.—The hearing before the tribunal is directed by the president.

"It is recorded in reports set forth by secretaries appointed by the president. These reports alone are to be regarded as authentic. The pleadings are to be public only if so decided by the court with the consent of the parties.

"ART. XLII.—The preliminary procedure being private and the debates being public, the tribunal has the right to refuse all new deeds or documents which the representatives of one of the parties wish to submit to it without the consent of the other.

"ART. XLIII.—The tribunal remains free to take into consideration new documents or proofs of which the agents or counsel of the disputing parties have made use in their arguments before it.

"It has the right to demand the production of these documents or proofs apart from the obligation of making them known to the opposite party.

"ART. XLIV.—The tribunal can, moreover, require from the agents of the parties the production of all the documents and explanations which it requires. In case of refusal the tribunal takes note of the fact.

"ART. XLV.—The agents and counsel of the litigating parties are authorized to present orally to the tribunal all the arguments they consider useful for the defense of their cause.

"ART. XLVI.—They have the right to raise objections or incidental points. The decisions of the tribunal upon these points settle the contro-

versy, and can not give rise to any further discussion.

"ART. XLVII.—The members of the tribunal have the right to ask questions of the agents and counsel of the disputing parties, and to demand from them explanations of doubtful points.

"Neither the questions put nor the observations made by the members of the tribunal in the course of the debates can be regarded as enunciations of the opinion of the tribunal in general or of its members in particular.

"ART. XLVIII.—The tribunal alone is authorized to settle its competence by the interpretation of the agreement to arbitrate as well as of other treaties which may be invoked in the matter, and by the application of the principles of international law.

"ART. XLIX.—The tribunal has the right to make rules of procedure for the direction of the arbitration, to settle the forms and periods within which each party will be obliged to finish its case, and to carry out all the formalities necessary for the receiving of evidence.

"ART. L.—The agents and counsel of the disputing parties having presented all explanations and evidence on behalf of their cause, the president of the tribunal announces the closing of the hearing.

"ART. LI.—The deliberations of the tribunal take place with closed doors.

"Every decision is taken by a majority of members of the tribunal.

"The refusal of a member to give his vote must be noted in the report.

"ART. LII.—The arbitral decision voted by a majority must state the reasons on which it is based. It is to be set down in writing and signed by all the members of the tribunal.

"Those of the members who are in a minority may, when signing, record their dissent.

"ART. LIII.—The arbitral decision is read out at a public sitting of the tribunal in the presence of the agents and counsel of the disputing parties or after they have been duly summoned.

"ART. LIV.—The arbitral decision, duly pronounced and notified to the agents of the disputing parties, definitely decides the question at issue, and closes the arbitration proceedings instituted by the agreement to arbitrate.

"ART. LV.—Except in the case of a contrary provision contained in the agreement to arbitrate, revision of the arbitral decision may be demanded of the tribunal which has given the decision, but only on the ground of the discovery of a new fact, which would have been of such a nature as to exercise a decisive influence on the judgment, and which at the moment of such judgment was unknown to the tribunal itself and to the parties.

"The procedure of revision can only be opened by a decision of the tribunal expressly declaring the existence of the new fact, possessing the character set forth in the preceding paragraph, and declaring that the demand is admissible on that ground.

"No demand for revision can be accepted three months after the notification of the decision.

"ART. LVI.—The arbitral decision is only obligatory on the parties who have concluded the agreement to arbitrate.

"When it is a question of the interpretation of a convention existing between a greater number of powers than those between which the difference at issue has arisen the disputing parties notify to the other powers who have signed the convention the agreement to arbitrate which they have made. Each of those powers has the right

to intervene in the proceedings. If one or more of them have availed themselves of this privilege, the interpretation contained in the judgment is equally obligatory on them also.

"ART. LVII.—Each party bears its own expenses and an equal share of the expenses of the tribunal, without prejudice to the penalties which may be imposed by the tribunal against one or another of the parties.

"ART. LVIII.—The present convention shall be ratified with the least possible delay and the ratifications deposited at The Hague. The officer is to draw up a *procès-verbal* of each ratification, a certified copy of which is to be sent by the intermediary of diplomacy to all the powers which have been represented at the conference.

"ART. LIX.—Nonsignatory powers which have been represented at the conference can adhere to the present convention. For this purpose they must make known their adhesion to the contracting powers by means of a written notification addressed to the Government of the Netherlands, and communicated by the latter to the other contracting powers.

"ART. LX.—The conditions on which powers which have not been represented at the conference can adhere to the present convention will form the object of a further agreement among the contracting powers.

"ART. LXI.—If it should occur that one of the high contracting powers denounce the present convention, such denunciation shall only take effect one year after notification made in writing to the Government of the Netherlands, and immediately communicated by the latter to all the other contracting powers. This denunciation only to affect the power which has given such notification."

The representatives of the United States desired to have the wording of the twenty-eighth article altered, so as to leave no implication of an obligation or pledge of the United States to intermediate or intervene in any way in international differences arising between European states, since that would contravene the principles of Washington and Monroe that have been adopted as the settled policy of the United States. The French representatives were so desirous of letting the phrase stand that the American delegates accepted it, expressing their reservation in the following declaration:

"The delegation of the United States of America, in signing the convention regulating the peaceable settlement of international conflicts as proposed by the International Peace Conference, makes the following declaration: Nothing contained in this convention shall be so construed as to require the United States of America to depart from its traditional policy of not entering upon, interfering with, or entangling itself in the political questions or internal administration of any foreign state. Nor shall anything contained in the said convention be construed to require a relinquishment by the United States of America of its traditional attitude toward purely American questions."

In signifying the adhesion of the Ottoman Government to the arbitration convention the Turkish delegation made the following declaration:

"1. It is formally understood that recourse to good offices, to mediation, to the commissions of inquiry, and to arbitration is purely optional, and can not in any case assume an obligatory character or degenerate into intervention.

"2. The Imperial Government will have to judge for itself as to the cases in which its interests allow of its admitting of those means, with-

out its abstention or refusal to have recourse thereto being considered by the signatory states as an unfriendly proceeding. Of course, none of the means referred to can be applied to questions of a domestic order."

The second convention adopted by the conference deals with the laws and customs of war on land. The signatory powers bind themselves to issue instructions to all their land forces to act in conformity with the articles of this convention. The articles only apply to the contracting powers. Powers not represented at the conference or not signatories of the convention can give in their adhesion by notifying the Government of the Netherlands. The convention, which replaces the code drawn up at the Brussels conference of 1874, runs as follow:

"SECTION I.—OF BELLIGERENTS.

"CHAPTER I.—OF THE QUALITY OF BELLIGERENT.

"ARTICLE I.—The laws, rights, and duties of war apply not only to the army, but also to the militia and corps of volunteers which combine the following conditions:

"1. Of having at their head some person responsible for his subordinates;

"2. Of having a fixed distinctive badge recognizable at a distance;

"3. Of carrying their arms openly; and

"4. Of conforming in their operations to the laws and customs of war. In countries where the militia or corps of volunteers constitute the whole or part of the army they are included in the designation army.

"ART. II.—The population of a nonoccupied territory which at the approach of the enemy spontaneously takes up arms to combat the invading troops without having had time to organize itself conformably to the first article shall be considered as belligerent, provided it respects the laws and customs of war.

"ART. III.—The armed forces of the belligerent parties may be composed of combatants and non-combatants. In the case of capture by the enemy both have the right to be treated as prisoners of war.

"CHAPTER II.—OF PRISONERS OF WAR.

"ART. IV.—Prisoners of war are in the power of the hostile government, but not of the individuals or corps which have captured them. They are to be treated with humanity. All their personal belongings excepting their arms, their horses, and military papers remain their property.

"ART. V.—Prisoners of war may be interned in a town, fortress, camp, or other place, with the obligation of not transgressing certain fixed boundaries; but they may only be imprisoned when that is an indispensable measure of precaution.

"ART. VI.—The state can employ prisoners of war for work according to their rank and their aptitudes. The work must not be excessive, and must have no relation with the operations of the war.

"The prisoners can be authorized to work for public administrations or individuals or on their own account.

"The work done for the state is to be paid on the scale applicable to the same work when done by soldiers of the national army.

"When the work is done for other public administrations or for private individuals, the terms

are regulated by agreement with the military authorities.

"The wages of the prisoners are to contribute to making their condition more pleasant, and the balance, after deducting the cost of their maintenance, is to be handed to them at the moment of their liberation.

"ART. VII.—The government in whose power prisoners of war have fallen has to support them.

"In default of a special agreement between the belligerent parties prisoners of war are to be treated as regards food, lodging, and clothing on the same footing as the troops of the government which has taken them captive.

"ART. VIII.—Prisoners of war shall be subject to the laws, regulations, and orders in force in the army of the state in whose power they are. Any act of insubordination will authorize the application of such rigorous measures as are necessary. Prisoners who escape but are recaptured before being able to rejoin their army, or before quitting the territory occupied by the army which has captured them, are liable to disciplinary penalties.

"Prisoners who, after having made good their escape, are again made prisoners are not liable to any penalty for their former flight.

"ART. IX.—Every prisoner of war is bound to declare, if questioned on the subject, his true name and rank, and make himself liable, if he contravenes this regulation, to a restriction of the privileges accorded to prisoners of war of his class.

"ART. X.—Prisoners of war can be liberated on parole, if the laws of their country permit it, and in such a case are obliged under the guarantee of their personal honor to fulfill scrupulously, both toward their own government and toward the government which has made them prisoners, the engagements they have entered on. Their own government, in such a case, is bound not to demand or accept of them any service contrary to the parole given.

"ART. XI.—A prisoner of war can not be compelled to accept liberty on parole; nor is the hostile government obliged to accede to the prisoner's request to be set at liberty on parole.

"ART. XII.—Every prisoner of war who has been liberated on parole and is then retaken while bearing arms against the government to which he has pledged his word of honor, or against its allies, loses the right to be treated as a prisoner of war, and may be surrendered to the tribunals.

"ART. XIII.—Individuals who follow an army without actually forming part of it, such as the correspondents and reporters of newspapers, sutlers, and contractors, who fall in the power of the enemy, and whom the latter thinks it advisable to detain, have the right to be treated as prisoners of war, provided they are furnished with a legitimation from the military authorities of the army they have been accompanying.

"ART. XIV.—An office of information relating to prisoners of war is to be established from the commencement of hostilities in each of the belligerent states, or, as the case may be, in neutral countries which have received the belligerents in their territory. This office, which has the duty of answering all questions addressed to it concerning prisoners, shall receive from the various competent sources all the indications necessary to enable it to individually identify each prisoner of war. It is to be kept informed of all internments and transfers of prisoners, as well as of all admissions to hospital and deaths. The information office also has the duty of collecting and bringing to one place all the objects of per-

sonal use, money, or letters, etc., found on fields of battle or left by prisoners who have died in hospitals or ambulances, and of transmitting them to the interested parties.

"ART. XV.—The societies of aid for prisoners of war, if regularly constituted in accordance with the law of their country with the object of acting as the agents of charity, are to receive every facility for effectively accomplishing their humane task on the part of the belligerents both for themselves and their duly accredited agents within the limits of military necessities and administrative regulations. The delegates of these societies may be admitted to distribute relief in the depots where prisoners are interned, as well as to the halting places of prisoners who are being sent back to their country, on obtaining personal permission from the military authorities, and on undertaking, in writing, to submit to all the disciplinary and police measures prescribed by them.

"ART. XVI.—The information offices are exempt from customs dues. Letters, checks, and money orders, as well as postal packets addressed to prisoners of war or dispatched by them, are to be post free, not only in the countries from and to which they are sent, but also in those they have to pass through. Gifts and help in kind destined for prisoners of war shall be admitted free of all customs or other dues, as well as of all transport rates on railways worked by the state.

"ART. XVII.—Officers who are prisoners may be paid such portion of their pay as becomes due to them in this situation according to the regulations of their country, their own government being responsible for repaying the amounts thus expended.

"ART. XVIII.—Prisoners of war are to be allowed all possible freedom for the exercise of their religion, including the right of attending their own particular services, provided always they conform to the disciplinary and police measures prescribed by the military authorities.

"ART. XIX.—The wills of prisoners of war are to be taken care of or drawn up on the same conditions as those of the soldiers of the national army. The same rules are also to be followed with regard to the documents testifying the decease, and to the burial of prisoners of war having regard to their rank and position.

"ART. XX.—After the conclusion of peace the repatriation of prisoners is to take place with the least possible delay.

"CHAPTER III.—OF THE SICK AND WOUNDED.

"ART. XXI.—The obligations of belligerents with regard to attendance on the sick and wounded are regulated by the Geneva convention of Aug. 22, 1864, excepting such modifications as may be introduced.

"SECTION II.—OF HOSTILITIES.

"CHAPTER I.—OF THE MEANS OF INJURING AN ENEMY, OF SIEGES AND BOMBARDMENTS.

"ART. XXII.—The right of belligerents as to the choice of means to injure an enemy is not unlimited.

"ART. XXIII.—Besides the prohibitions established by special conventions, it is more particularly forbidden—

"(a) To employ poison or poisoned arms.

"(b) To kill or wound treacherously individuals belonging to the hostile nation or army.

"(c) To kill or wound an enemy who, having laid down his arms, or having no means of defense, has surrendered at discretion.

"(d) To declare that no quarter will be given.

"(e) To employ arms, projectiles, or other objects of a nature to inflict unnecessary injury.

"(f) To make improper use of flags of truce, of the national flag or the ensigns or uniform of the enemy, or of the distinctive badges of the Geneva convention.

"(g) To destroy or seize hostile property except where such destruction or seizure is imperatively enjoined by the necessities of war.

"ART. XXIV.—Ruses of war and the employment of the means necessary to secure information about the enemy and about the conformation of the country are considered permissible.

"ART. XXV.—It is forbidden to attack or bombard undefended towns, villages, dwellings, or buildings.

"ART. XXVI.—The commander of an attacking force before commencing bombardment, except in the case of an attack by storm, must do all he can to warn the authorities.

"ART. XXVII.—In sieges and bombardments all the necessary measures ought to be taken for sparing as much as possible buildings devoted to worship, the arts, the sciences and benevolence, hospitals and places for assembling the sick and wounded, on condition that they be not employed at the same time for a military purpose. It is the duty of the besieged to distinguish these buildings or places of assembly by special visible signs, which shall be notified beforehand to the besieging party.

"ART. XXVIII.—It is forbidden to give up to pillage even a town or locality taken by assault.

"CHAPTER II.—OF SPIES.

"ART. XXIX.—Only the individual who, acting clandestinely or under false pretenses, gathers or seeks to gather information in the zone of operations of a belligerent, with the intention of communicating it to the opposing side, can be considered a spy.

"Thus soldiers not disguised who have gone within the zone of operations of the enemy's army in order to gather information are not to be considered spies. Similarly, the following are not to be considered spies: Soldiers and civilians who have been intrusted with the duty of taking dispatches, whether intended for their own army or for the army of the enemy, and are fulfilling their mission openly. To this category belong equally persons sent in a balloon to take dispatches, and, in general, to maintain communications between the different parts of an army or a territory.

"ART. XXX.—It shall not be possible to punish untried a spy taken in the act.

"ART. XXXI.—A spy who having rejoined the army to which he belongs is captured later by the enemy is to be treated like a prisoner of war, and incurs no responsibility for his previous acts of espionage.

"CHAPTER III.—OF BEARERS OF FLAGS OF TRUCE.

"ART. XXXII.—The individual is considered the bearer of a flag of truce who is authorized by one of the belligerents to enter into negotiations with the other, and who presents himself with the white flag. He has the right of inviolability, just as have the trumpeter, bugler, or drummer, the flag bearer, and the interpreter who accompany him.

"ART. XXXIII.—The commander to whom the bearer of a flag of truce is dispatched is not obliged to receive him in all circumstances.

"He can take all the measures necessary to hinder the bearer of a flag of truce from profiting by his mission to gain information.

"He has the right, in case of abuse of privileges, to detain the bearer of a flag of truce temporarily.

"ART. XXXIV.—The bearer of a flag of truce loses his rights of inviolability if it is proved, in a positive and undeniable manner, that he has profited by his privileged position to provoke or to commit an act of treason.

"CHAPTER IV.—OF CAPITULATIONS.

"ART. XXXV.—Capitulations agreed upon between the contracting parties ought to take into account the rules of military honor.

"Once settled, they ought to be scrupulously observed by the two parties.

"CHAPTER V.—OF THE ARMISTICE.

"ART. XXXVI.—An armistice suspends the operations of war by a mutual agreement of the belligerent parties. If its duration has not been fixed, the belligerent parties can resume operations at any time, provided always that the enemy be warned within a time agreed upon, in conformity with the conditions of the armistice.

"ART. XXXVII.—An armistice may be general or local—the former suspends everywhere the operations of war of the belligerent states; the latter only between certain divisions of the belligerent armies and within a defined radius.

"ART. XXXVIII.—The armistice must be notified officially, and within time to be of use, to the competent authorities and the troops. The hostilities are suspended immediately after the notification or at a fixed period.

"ART. XXXIX.—It depends on the contracting parties to settle, in the clauses of the armistice, the relations which should obtain on the theater of war with the populations and between themselves.

"ART. XL.—Every serious violation of the armistice by one of the parties gives to the other the right of denouncing it, and even, in an urgent case, of resuming hostilities immediately.

"ART. XLI.—The violation of the clauses of the armistice by individuals acting on their own initiative gives only a right to demand the punishment of the guilty persons, and an indemnity for proved losses if there have been any.

"SECTION III.—OF MILITARY AUTHORITY ON THE TERRITORY OF THE HOSTILE STATE.

"ART. XLII.—A territory is considered occupied when it is placed actually under the authority of the enemy's army.

"The occupation only extends to those territories where that authority is established and in a position to be exercised.

"ART. XLIII.—The authority of legal power having actually passed into the hands of the occupying state, that state shall take all the measures which depend on it in order to re-establish and to assure as much as possible public life and order, while respecting, unless it is absolutely prevented from doing so, the laws in force in the country.

"ART. XLIV.—It is forbidden to force the population of an occupied territory to take part in military operations against their own country.

"ART. XLV.—It is forbidden to compel the population of an occupied territory to take an oath of allegiance to the hostile power.

"ART. XLVI.—The honor and the rights of the family, the life of individuals, and private prop-

erty, as well as religious convictions and the performance of worship, ought to be respected.

"Private property can not be confiscated.

"ART. XLVII.—Pillage is formally forbidden.

"ART. XLVIII.—If the occupying power levies in the occupied territory the taxes, rights, and tolls established for the profit of the state, it shall do so as much as possible according to the rules of the assessment and apportionment in force, and on it therefore will also rest the obligation to provide for the expenses of the administration of the occupied territory to the same extent to which the legal government was bound in that respect.

"ART. XLIX.—If, apart from the taxes referred to in the preceding article, the occupying power levies other contributions in money in the occupied territory, it shall only be for the needs of the army or for the administration of this territory.

"ART. L.—No collective penalty, pecuniary or other, shall be proclaimed against the populations by reason of individual acts of which they could not be considered responsible in the mass.

"ART. LI.—No contribution shall be collected except in virtue of a written order and under the responsibility of a general in chief.

"This collection shall only be proceeded with, as far as possible, according to the rules of the assessment and apportionment of the taxes in force.

"For every contribution a receipt shall be delivered to the contributors.

"ART. LII.—Requisitions in kind and of services shall only be demanded of communes or of inhabitants for the needs of the army of occupation. They shall be in accordance with the resources of the country, and of such a nature as not to imply on the part of the populations the obligation to take part in the operations of the war against their country.

"These requisitions and these services shall only be demanded with the authorization of the commandant in the occupied locality.

"Levies in kind shall, as far as possible, be paid for in cash; if not, they shall be certified by receipts.

"ART. LIII.—The army which occupies a territory shall only seize the specie, the funds, and the realizable securities belonging to the state in its own right, the depots of arms, means of transport, magazines, and victualing, and, in general, all movable property of the state of such a kind as to subserve the operations of war.

"The plant of railways, land telegraphs (including cables at the landing points), telephones, steamships and other vessels, apart from cases governed by maritime law, as well as depots of arms and, in general, every kind of munitions of war, even belonging to companies or private persons, are equally means of a kind to subserve the operations of war; but they ought to be given back and the indemnities for their use shall be adjusted at the conclusion of peace.

"ART. LIV.—The plant of railways coming from neutral states, which belongs to those states or to companies or private persons, shall be sent back to them as soon as possible.

"ART. LV.—The occupying state shall consider itself only as the administrator and usufructuary of public buildings, landed property, forest, and agricultural estates belonging to the hostile state and situate in the occupied country. It shall be bound to safeguard the substance of these properties and to administer them in conformity with the rules of usufruct.

"ART. LVI.—The property of local bodies, that

of establishments devoted to worship, to charity, and to teaching, to the arts and sciences, even when belonging to the state, shall be treated as private property.

"Every intentional seizure, destruction, or degradation of establishments of this kind, of historic monuments, of works of art and science, is forbidden and ought to be prosecuted.

"SECTION IV.—OF BELLIGERENTS CONFINED AND WOUNDED CARED FOR AMONG NEUTRALS.

"ART. LVII.—The neutral state which receives on its territory troops belonging to the belligerent armies shall confine them, as far as possible, at a distance from the theater of war.

"It shall keep them in camps, and even shut them up in fortresses or in places appropriated to this object.

"It shall decide if the officers can be set free while giving their parole not to leave the neutral territory without permission.

"ART. LVIII.—In default of special convention, the neutral state shall furnish to the confined persons the victuals, clothes, and relief enjoined by humanity.

"Allowance shall be made, when peace is restored, for the expenses occasioned by their confinement.

"ART. LIX.—The neutral state shall authorize the passage on its territory of wounded or sick persons belonging to the belligerent armies, under the stipulation that the trains bringing them shall not carry either men or equipment of war. In like case the neutral state is bound to take the measures of safety and control necessary to secure this object.

"The wounded or sick persons who are brought under these conditions on to the neutral territory by one of the belligerents, and who belong to the opposing side, shall be kept by the neutral state in such a manner that they shall not be able to take part afresh in the operations of war. The neutral state shall have the same duties as regards the wounded or sick persons of the other army who may be intrusted to it.

"ART. LX.—The Geneva convention applies to sick and wounded persons confined on neutral territory."

The convention extending the provisions of the Geneva convention of 1864 to naval warfare was, like the convention given above amending and supplementing the Brussels declaration of 1874, the task of a subcommission, which adopted with few alterations a scheme submitted by Prof. Louis Renault, the French member. The draft convention adopted at Geneva in 1868 provided in substance that hospital ships, merchantmen with wounded on board, and boats picking up wounded and wrecked men shall be neutral; that they should carry the Red Cross flag and their crews the Red Cross armband; that hospital ships belonging to a government should be painted white with a green streak, and those of aid societies white with a red streak; and that in naval warfare if any strong presumption arises that the convention was being abused for belligerent purposes the power having presumptive evidence of such abuse would have the right to suspend the convention toward the suspected power until the contrary is proved, and if the presumption becomes a certainty of suspending it till the end of the war. These provisions, with the exception of the last, were incorporated in the convention contained in the final act of the conference. Hospital ships were divided into three classes: 1.

Military hospital ships—that is, ships built and fitted out by states specially and solely for the purpose of carrying aid to wounded, sick, and shipwrecked persons. 2. Hospital ships equipped entirely or in part at the cost of private individuals or of relief societies officially recognized by a belligerent government. 3. Hospital ships fitted out entirely or in part at the cost of private persons or of officially recognized societies belonging to neutral countries. All three classes are neutralized—that is, are to be respected and exempted from capture, provided the names of the vessels have been communicated to the belligerent powers before they are employed; and in the case of the second and third classes, provided the belligerent power to which they are attached has given them an official commission and has notified their names to the other belligerent power, as in the case of the first class. All three classes are expected and required to take relief and assistance to the wounded, sick, and shipwrecked without distinction of nationality. The hospital ships of any of the three classes are not to impede in any way the movements of the combatants. During and after a battle they will act at their own risk and peril. Either belligerent shall possess the right of controlling and visiting the ships, and shall be able to reject their aid, order them away, oblige them to take a given direction, put a commissioner on board, and even detain them should the gravity of the situation require it. Trading vessels, yachts, or neutral boats carrying the wounded, sick, or shipwrecked men of the belligerents may not be captured on account of this transportation, but they will be liable to be captured if they commit any violation of their neutrality. An article providing for the internment of sick, wounded, and shipwrecked men landed at a neutral port was only carried after much discussion. The rules are only binding on the contracting powers in case of war between two or more of them, and they cease to be binding from the moment when in a war between several of the contracting powers a non-contracting power joins one of the belligerents. The convention was to be ratified with the least possible delay, and the ratifications were to be deposited at The Hague and certified copies sent to all the powers represented at the conference. Powers not signing the convention, but being signatories of the Geneva convention of 1864, could give in their adhesion at any subsequent time by notifying the Government of the Netherlands, which would communicate the notification to all the other contracting governments. The convention remains in force until denounced, and this must be done in a written notification to the Netherlands Government, which will instruct the other governments. The denunciation shall only take effect one year after notification, and only affect the notifying power.

A Dutch resolution, supported by Russia, to extend the St. Petersburg declaration of 1868 against explosive bullets, so as to prohibit also the use of bullets that expand in the human body, such as jacketed bullets with a part of the core exposed, was directed against the dum-dum bullet employed by the British in fighting the Pathans in India and the dervishes in the Soudan. The description covers also the latest service bullet adopted for the British army. The British military delegate denied that even the dum-dum bullet inflicted a cruel wound, saying that it was not equal in stopping power to the Martini bullet. Capt. Crozier, of the United States delegation, showed how easily bullets could be devised that would inflict more tearing wounds, and yet not

come within the prohibited classes. He therefore offered an amendment, by which the use of bullets which inflict wounds of useless cruelty, such as explosive bullets, and in general any kind of bullet which exceeds the limit necessary for placing a man immediately *hors de combat*, would be forbidden. The resolution was carried in its original form. Another, forbidding the dropping of explosives from balloons, and one against filling shells with asphyxiating gases, were opposed by Capt. Mahan, a United States delegate, who asked why submarine torpedo boats should not be prohibited, as they were intended to be far more destructive of human life than such devices could be, and to cause asphyxiation by water. The prohibition of submarine torpedo boats was one of the specified subjects in the original Russian programme. It was strongly opposed by France, whose engineers have applied themselves especially to the invention of boats of that kind; and when the conference decided against the prohibition, the vote of Russia was given also in favor of the French contention. The other resolutions were carried and were embodied in declarations, separate from the conventions, as follow:

"DECLARATION I.—The undersigned, as plenipotentiary delegates at the International Peace Conference, duly authorized by their governments to this effect, inspired by the sentiments which found expression in the declaration of St. Petersburg of Dec. 11, 1868, and taking in consideration the final clause of that declaration, hereby declare that the contracting parties prohibit themselves, for a period of five years, from throwing projectiles or explosives from balloons or by other new analogous means.

"DECLARATION II.—The undersigned, as plenipotentiary delegates, hereby declare that the contracting parties prohibit themselves from making use of projectiles whose sole object is to diffuse asphyxiating or deleterious gases.

"DECLARATION III.—The undersigned, as plenipotentiary delegates, hereby declare that the contracting parties prohibit themselves from making use of bullets which expand or flatten easily in the human body, as, for instance, bullets with a hard case which case does not cover the whole of the inclosed mass or contains incisions."

Suggestions in the original Russian programme which were not adopted by the conference, but were platonically approved, were made the subject of pious aspirations, including also the American proposal to exempt maritime commerce from seizure. These pious wishes were expressed in a series of resolutions referring to future conferences such subjects as these, on which this conference was deterred by political motives from coming to a decision:

"I. The conference considers that the limitation of the military charges at the present time weighing upon the world is greatly to be desired for the increase of the material and moral welfare of humanity.

"II. The conference expresses the wish that the question of the rights and duties of neutrals should be inscribed on the programme of a conference to be held at an early date.

"III. The conference expresses the opinion that questions relative to the type and the caliber of rifles and naval artillery such as have been examined by it should be the subject of study by the different governments with a view to arriving eventually at a uniform solution by means of a further conference.

"IV. The conference, taking into consideration the preliminary steps taken by the Swiss Federal

Government for the revision of the Geneva convention, expresses the wish that a special conference be shortly convened for the purpose of revising this convention.

"V. The conference has resolved unanimously, with the exception of a few abstentions, that the following questions should be reserved for examination by future conferences: (1) A proposal tending to declare the inviolability of private property in war at sea; (2) a proposal regulating the question of the bombardment of ports, towns, and villages by a naval force."

The following additional protocol, fixing the conditions of adhesion, was appended to the final act:

"Considering that a certain number of the governments represented at the Peace Conference have not yet found themselves able to sign the conventions and declarations, the text of which has been fixed by the conference, the undersigned, as plenipotentiary delegates, at the moment of proceeding to sign the final act have agreed as follow: The conventions and declarations, the text of which is annexed to the final act, can be signed by the governments represented at the conference either at once or at a future date, but at the latest by Dec. 31, 1899. After Dec. 31, 1899, adhesion to the conventions can be made in conformity with the final dispositions of the aforesaid conventions. Adhesion to the declarations can be made by means of a notification addressed to the Government of the Netherlands, and communicated by it to all the governments who have signed the declaration."

The Peace Conference ended its labors and separated on July 29. The final act was signed by all of the 26 powers represented. The convention on arbitration was signed immediately by 16 powers, but Germany, Austria-Hungary, China, Great Britain, Italy, Japan, Luxembourg, Servia, Switzerland, and Turkey withheld their signatures in order to study its provisions more carefully. The same states abstained from signing the convention on the laws of war and the convention adapting the principles of the Geneva convention to maritime warfare, and were joined by Portugal. The declaration interdicting balloon projectiles was signed by all the states that gave their adhesion to arbitration and by Turkey. The same powers, with the exception of the United States, signed the declaration concerning the prohibition of projectiles containing asphyxiating gases. The declaration concerning the interdiction of expanding bullets was signed by the same states without Portugal.

The Dutch East Indies.—The total area of the Dutch possessions in the East Indies is estimated at 736,400 square miles, and the population at 34,000,000. The island of Java, the principal one, contains, with the adjacent island of Madura, 25,697,701 inhabitants, as estimated at the end of 1897, on an area of 50,554 square miles. The estimate for the island of Sumatra is 3,209,037 inhabitants, on an area of 161,612 square miles. The island of Celebes has an area of 71,470 square miles, with 1,997,860 inhabitants. The Riau-Lingga Archipelago has 107,861 inhabitants, area 16,301 square miles; Banca, 93,600 inhabitants, area 4,446 square miles; Billiton, 41,558 inhabitants, area 1,863 square miles; Molucca Islands, 309,208 inhabitants, area 43,864 square miles; Timor Archipelago, 119,230 inhabitants, area 17,698 square miles; Bali and Lombok, 1,044,757 inhabitants, area 4,065 square miles; Borneo, 1,180,578 inhabitants, area 212,737 square miles; Dutch New Guinea, extending to 141° of east longitude, about 200,000 inhabitants, area 151,789

square miles. The number of Europeans and persons assimilated to them in 1896 was 67,156, of whom 35,134 were males and 32,022 females. Of the males 29,666 were Dutch, of whom 23,295 were born in the East Indies; of the females 25,389 were Dutch, 22,435 of them born in the East Indies. There were 1,183 Germans, 243 French, 236 English, and 236 Belgians, and the others were Swiss, Austrians, Armenians, etc. The Chinese numbered 460,000; Arabs, 24,000; other Orientals, 27,000. The number of Christians among the natives and foreign Orientals was 19,193 in Java and 290,065 in the other possessions. In March, 1899, the ordinances were revised by the vote of the States General so as to place Japanese in the Dutch East Indies on the same footing as Europeans.

The revenue in 1898 amounted to 139,412,904 guilders, and expenditure to 154,519,438 guilders, leaving a deficit for the year of 15,106,534 guilders. Of the receipts 36.3 per cent. came from taxation, 24.1 per cent. from monopolies, 22.4 per cent. from sales of products, and 17.2 per cent. from other sources. The budget for 1899 makes the revenue 132,742,514 guilders and the expenditure 146,085,944 guilders, leaving a deficit of 13,343,430 guilders. Of the revenue 7,543,168 guilders come from sales of Government coffee in the Netherlands and 6,626,600 guilders from sales in India, 148,500 guilders from sales of cinchona and 7,164,729 guilders from sales of tin in the Netherlands, 470,000 guilders from the profits of the Billiton company, 925,000 guilders from railroads in the Netherlands and 10,975,000 guilders from railroads in Java, 8,807,000 guilders from sales of salt, 18,860,000 guilders from sales of opium, 17,211,500 guilders from import, export, and excise duties, 19,806,100 guilders from land revenues, 824,567 guilders from other sources in the Netherlands, and 33,380,350 guilders from other sources in India.

The area planted to rice in Java and Madura was 4,828,642 acres in 1896; to maize, arachis, cotton, and various crops, 3,595,226 acres; to sugar cane, 213,349 acres; to tobacco, 258,930 acres; to indigo, 54,252 acres. The production of coffee in 1896 was 42,164,666 pounds by the Government, 10,663,066 pounds by free cultivation, 58,309,333 pounds on leased Government lands, and 4,928,000 pounds on private properties. The production of cinchona was 293,603 kilogrammes by the Government, 3,440,393 kilogrammes on leased lands, and 63,932 kilogrammes on private lands. The production of tobacco was 13,360,013 kilogrammes in Java and 15,704,703 kilogrammes in Sumatra. The production of tea in Java was 3,916,398 kilogrammes; of indigo, 721,719 kilogrammes. The production of sugar in 1896 was 501,122 tons, and in 1897 it was 548,750 tons. The farm animals in Java at the beginning of 1896 were 2,643,000 buffaloes and 2,572,000 oxen and cows. The quantity of tin produced in 1896 was 15,000 tons; of mineral oil, 111,387,385 litres. The Government imports of merchandise in 1896 amounted to 6,746,332 guilders and of specie to 615,000, private imports of merchandise to 152,055,300 guilders and of specie to 8,932,001 guilders; total value of imports, 168,348,633 guilders. The Government exports of merchandise were 14,325,256 guilders; private exports of merchandise were 184,413,534 guilders and of specie 891,921 guilders; total value of exports, 199,630,711 guilders.

There were entered during 1896 at the ports of the Dutch East Indies 213 sailing vessels, of 133,812 tons, and 3,692 steamers, of 1,469,808 tons. The length of railroads open at the beginning

of 1897 was 1,112 miles. The receipts in 1896 were 14,048,230 guilders. The telegraphs in East India had a total length of 6,899 miles. The number of dispatches in 1896 was 638,388. Telephone lines connected Batavia, the capital, with Samarang and Soerabaya, the other large cities.

The most determined and formidable of the rebel chiefs in Acheen, and almost the last to hold out, Tokoe Oemar, was fatally wounded in a skirmish on Feb. 10, 1899, at Malabuh, on the west coast. He and his party were surprised by an ambuscade prepared by a lieutenant with a detachment of Dutch troops. The Acheenese, who greatly outnumbered the soldiers, fled after a sharp fight, losing 16 killed, while the leader of the Dutch troops was wounded and 2 soldiers were killed. Gen. Van Heutz, who was operating with a column from Tenom, after this received the submission of many of the chiefs. Tokoe Oemar's force dispersed. That crafty and influential chief was once the pretended ally of the Dutch, and for a long time received subsidies and arms for fighting their enemies, which he employed secretly to fight the Dutch themselves. When found out at last he resisted with great energy and ability the expeditions sent against him by the Dutch Government, which resolved to end once and for all the interminable Acheenese war. Jonkheer van der Wyck, the Governor General, followed up this policy with energy, on the principle that an immediate sacrifice of men and treasure in active operations would prove more economical than the prolonged retention of garrisons in unhealthy posts. Gen. Van Heutz proved himself equal to the task of carrying on a harassing guerrilla war in a difficult mountainous country, covered with forest and jungle and to a great extent unexplored, against brave and skillful enemies, who were well supplied with arms and ammunition by English and American traders, the Dutch blockade of the extended coast proving inefficient. Nearly every expedition proved successful, yet Tokoe Oemar, the leading spirit of the rebellion, always slipped through, to reappear with another army in a remote district. Except for him the resources and the spirit of the rebellion that has lasted twenty years were exhausted long before his death. Disturbances almost ceased, and the Dutch garrison was reduced to its former strength. On the coast Dutch influence continued to increase.

Colonies.—In America the Dutch have the colonies of Curaçoa (see WEST INDIES) and Surinam, or Dutch Guiana. The area of Surinam is 46,060 square miles. The population in 1897 was 64,372, exclusive of the negroes of the forests. The Governor is assisted by a council of four members, and for purposes of legislation by the Colonial States, which is partly appointed and partly elected by the people. The revenue in 1898 was 2,348,000 guilders, of which 2,141,000 were raised in the colony and 207,000 contributed by the home Government. The imports in 1897 were valued at 5,635,161 guilders, and exports at 5,241,671 guilders. The number of vessels entered during that year was 248, of 107,153 tons; cleared, 253, of 108,988 tons.

NEVADA, a Western State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial census since admission, was 42,491 in 1870, 62,266 in 1880, and 45,761 in 1890. Capital, Carson City.

Government.—The following were the State officers in 1899: Governor, Reinhold Sadler; Lieutenant Governor, James R. Judge; Secretary of State, Eugene Howell; Treasurer, D. M. Ryan;

Comptroller, Samuel P. Davis; Attorney-General, William D. Jones; Surveyor General, Edward D. Kelley; Superintendent of Instruction, Orvis Ring; Adjutant General, J. R. Judge, *ex officio*—all of the Silver party except Superintendent Ring, who is a Republican; Chief Justice of the Supreme Court, M. S. Bonnifield; Associate Justices, W. A. Massey, C. H. Belknap; Clerk *ex officio*, Eugene Howell—all of the Silver party.

Finances.—The valuation placed on Nevada assets by assessors in the State is about \$25,000,000. The tax levy throughout the State averages 3.8 per cent. The State Board advises the raising of the assessed valuation to \$75,000,000.

Education.—The school population in 1898 was 8,996. The expenditures for the schools amounted to \$203,339.93. The apportionment of State school moneys for 1899 was \$119,844.88. The State University, by the last report at hand, had 366 students. It has an endowment of \$128,600. The expenses for the last biennial term were \$88,980.63.

Public Lands.—Applications were made in 1897 and 1898 for 111,451 acres of State lands. The vacant public land of Nevada amounts to about 61,358,000 acres, or very nearly seven eighths of the total area—a larger proportion than in any other State, according to the Department of Agriculture. There are in addition nearly 6,000,000 acres reserved for settlement. Of the 3,000,000 acres or less no longer in the hands of the National Government by far the greater part is included in a 2,000,000-acre grant to the State for the support of common schools and in minor grants for various other purposes. The amount taken up by individuals is therefore very small in proportion to the State's surface, and it is scattered in small tracts along the borders of streams, the only considerable areas being in the western corner of the State, near Lake Tahoe. The vacant public land is described in the General Land Office report as arid, mountainous grazing land, with little or no timber, but it appears to include also the greater part of the numerous small valleys between the mountain ranges. The last annual report of the Surveyor General places the area of unselected land remaining from the 2,000,000-acre grant mentioned above at 57,242 acres, and to this is to be added 732,884 acres to which the State is still entitled, leaving an area of nearly 800,000 acres still open to entry.

Mining.—The value of the gold, silver, copper, and lead produced in 1898 was given as \$3,595,542; the gold alone, \$2,799,785, though the estimate of the director of the mint was about \$160,000 more. In 1899 it was \$2,742,000.

The deposits of copper are in process of rapid development.

Among other minerals found in the State and attracting recent attention are manganese, found in nearly every mining district in the State; silicon, found in the chalk hills northeast of Virginia City; gypsum, of which the Nevada deposits are of superior quality; and kaolin.

The following in regard to the utilization of the drainage of the Sutro Tunnel was published in September: "The Sutro Tunnel discharges a vast volume of water into Carson valley, for it embraces not only the drainage of the Comstock by gravitation to the tunnel's level, but also the water used by two hydraulic pumps under a pressure of nearly 2,000 feet and the drainage of the lower levels which these pumps lift. This big stream emerges from the mouth of the tunnel at an elevation of about 150 feet above the floor of Carson valley. So far, the power represented in the descent of so much water has gone

to waste. The recent proposition of developing electric power from the Truckee river at Floriston and transmitting it to the Comstock for service in the conduct of mining operations has directed attention to the tunnel's neglected source of power. The value of the proposition of thus utilizing the drainage of the Sutro Tunnel is not restricted to the economy of mining operations on the Comstock, but it opens up the probability that in many other mines lies a new factor of profit in their drainage which has been hitherto overlooked."

Agriculture.—Projects for water storage promise to add materially to the productive farming lands of the State. One of these is a design to store the waters of Humboldt river for irrigating the valley in the dry season.

Legislative Session.—The session of the Legislature began Jan. 16 and ended March 10. Lemuel Allen was Speaker of the House, and H. H. Coryell Speaker *pro tempore*.

The term of William M. Stewart, United States Senator, expired, and he was re-elected. Other candidates were: F. G. Newlands, W. W. Williams, A. C. Cleveland, N. H. A. Mason, P. L. Flannigan, and William Woodburn.

Two constitutional amendments were proposed and referred to the next Legislature: one for assessing patented mining claims at \$10 an acre—they are now exempt from assessment—and one for admitting the incorporation of a lottery, and to designate the amount to be paid by the corporation to the State.

Some changes were made in the election laws. The act of 1895 regarding corrupt practices was repealed. A method for taking the vote of electors in the United States military service outside the State was prescribed. Hereafter candidates for the office of United States Senator may be nominated and voted for by electors, just as those for State offices, and the result given to the Legislature.

Mining and other corporations may divide their capital stock into shares of lesser denominations.

A bill was passed for the reapportionment of the Senators and Assemblymen. Compilation of the laws of the State was provided for.

It was enacted that any citizen of the State—instead of the United States, as before—is entitled to admission to practice in all courts if possessing necessary qualifications.

A fund for relief of indigent patients discharged from the asylum for the insane was provided for. An act of 1885 in aid of indigent veterans of the Mexican War and of the civil war was repealed.

Itinerant trading was defined and regulated; city councils and county commissioners may require licenses.

The act granting bounties for planting forest trees was repealed.

A State committee on marks and brands was created; appointments are to be made by the Governor. The office of State Live Stock Inspector was created; it was provided that any five freeholders may demand inspection.

The shipment of certain wild game out of the State was prohibited. County commissioners have power to extend the close season indefinitely for fishing in waters stocked by others than the State. The law permitting the granting of public lands to fish cultivators was repealed.

Railroad companies are permitted to transfer their franchises and property to other corporations. Telephone lines may be bought or constructed by county commissioners on petition of two thirds of the taxpayers.

The Board of Capitol Commissioners was enlarged so as to include the Governor and Secretary of State, as well as the Lieutenant Governor, Comptroller, and Treasurer.

The law on the militia was changed; the National Guard is to consist in time of peace of not more than 5 companies. Armories are to be provided by county commissioners.

A general law relating to guardians was passed. It was provided that notices of a hearing on petition for the distribution of the estate of a decedent must be served personally on all interested at least five days before the appointed time or published at least three weeks in a newspaper. Objections to the settlement of an estate may be filed with the clerk if the court is not in session; and the clerk may send notices without order from the judge. The whole estate of an intestate dying childless is to go in equal shares to the surviving husband or wife and the father or mother. Claims against an estate must be filed within three months; they are to be treated as rejected if not indorsed within fifteen days thereafter.

Other measures were:

Giving the State Board of Education power to issue two-year certificates for teaching music, penmanship, drawing, foreign languages, and kindergarten classes.

Permitting the State Board of Education to issue high-school and grammar-grade life diplomas; and also temporary certificates, to be good till time of regular examination.

Providing that persons authorized to perform the marriage ceremony must first receive the license.

Making it a misdemeanor for a minor to misstate his age in order to obtain liquor.

Repealing an act of 1875 prohibiting camels and dromedaries from running at large.

Amending the law prescribing the manner of locating and recording lode and placer claims, mill sites, and tunnel rights.

Providing that stored water may be turned into the natural channel and then reclaimed; water appropriated by others must not be diminished.

Providing for county boards of water commissioners and regulating water rights.

Regulating the sale of public lands and payment of interest.

Making mechanics' liens superior to any incumbrance placed after work has been begun and before limit of time for filing lien.

Creating a Paris Exposition commission.

Several resolutions were passed; one in favor of the establishment of a national department of mines; one concerning free and unlimited coinage of silver at the ratio of 16 to 1, regardless of the action of every foreign nation; one favoring the election of United States Senators by direct vote of the people; one in favor of the Nicaragua Canal.

The Governor vetoed a bill providing for a constitutional convention on account of the financial condition of the State and some informalities relating to its passage.

Political.—The returns of the State election of 1898 gave Reinhold Sadler, candidate of the Silver party, a plurality of 22. William McMillan, the candidate of the Republicans, contested the election on the ground that illegal votes were counted in 4 counties, and that there were irregularities at the polls. The case was decided by the Supreme Court in September. The court held that the statute calling for bipartisan clerks and inspectors was directory only, and

that noncompliance did not invalidate the vote of a county or precinct. As regarded alleged misconduct of inspectors and bystanders in Humboldt and Lander Counties, the court held that as there was no allegation that the respondent, Sadler, participated in said acts, or that they were done with his knowledge or consent, such misconduct would not invalidate the votes cast therein. The Nevada soldiers' vote taken at sea on a transport *en route* to Manila was rejected, as there is no provision in the State statutes governing such cases. The findings of the court gave Sadler a plurality of 63 votes, and he was declared elected.

NEW BRUNSWICK, an eastern province of the Dominion of Canada; area, 28,100 square miles; population in 1891, 821,263. Capital, Fredericton.

Government and Politics.—Since 1883 a government nominally coalition, but practically Liberal in politics, has held office in New Brunswick. A. G. Blair, now a member of the federal ministry, was Premier until 1896. His successor, the Hon. James Mitchell, died in June, 1897, and was replaced by the Hon. H. R. Emmerson, who in February, 1899, appealed to the electorate for an expression of confidence. The contest was somewhat complicated. At least two members of the Government were Conservatives in federal politics—or called themselves so—but as for many years the weight of provincial Government influence had been thrown against the Conservative party at Ottawa, the position had grown unbearable to the latter organization, and in the summer of 1898 a Conservative convention at Moncton had decided to run the next election on strict party lines, and, as a result, speeches had been made in the province by Sir C. Tupper, G. E. Foster, and other party leaders. But the party would not unite entirely on this local issue, and John Costigan, a late federal minister, openly supported the Government, as did Senator Poirier. When the issue was precipitated A. G. Blair came from Ottawa and threw all the weight of the federal Cabinet in favor of the local Government, so that the picture was presented of a nominal coalition fighting in defense of nonparty government and of a platform of "no federal politics in provincial matters," with the active aid of a prominent federal minister. Logic was therefore against the Government, but, as it turned out, the votes were with it. On Feb. 18 the elections took place, and on Jan. 28 preceding Mr. Emmerson issued his manifesto to the people. He drew a strongly worded but very general picture showing how well the province had been governed, how economically the revenues had been handled, how carefully the farming interests had been guarded and fostered, and how anxiously industrial interests had been promoted. He concluded in the following words:

"We claim the honor of having inaugurated a new and prosperous policy as respects the agricultural interests of the province, and of entering upon a more vigorous development of our agricultural resources, whose products are finding new and profitable markets in the motherland, by means of the improved and near-at-home facilities for transportation; of legislating in the interests of and promoting other industrial advancement; and of contributing toward awakening in the minds of capitalists and men endowed with business enterprise an interest that will surely inure to the benefit of the whole people and of all sections of the province. To all this we ask with assurance your overwhelming approval, not only that the work now initiated may

grow and prosper, but that we may, in your interests and for the good of our land, have a greater incentive to renewed and increased efforts. We have honestly and faithfully conserved the public resources, and in our expenditures have been guided by the needs of the people consistent with a strict regard to economy. Other provinces may be more wisely governed, but none more economically."

A. A. Stockton, Q. C., the Opposition and Conservative leader, issued an address, which was much more detailed in statement and allegation and promise. The main points may be given here:

"The financial condition of our province demands serious attention. The net debt on Dec. 31, 1884, was \$757,697; at the close of the fiscal year 1897 it was \$2,488,577, an increase during that period of \$1,730,880, or an average increase per year of \$134,683. The interest charge has increased from \$46,000 in 1883 to about \$130,000 in 1897. How much longer can we afford, at the same rate, to add to our debt? This is a very important question for the electors to answer. The record of the Government gives no hope of economy on their part, but the reverse. The increase of the public debt, we are told by friends of the Government, is almost wholly due to railway subsidies granted under legislation for which the Government is not responsible. Such a statement is not true. Nearly one half of the increase in our net debt during the last thirteen or fourteen years has been for public services outside of railway subsidies, and chiefly for services which before that time were paid for out of the ordinary annual revenues.

"Our system of auditing the public accounts should be entirely changed. The Auditor General of this province holds his office at the pleasure of the Government of the day. He can be dismissed from office at any time. At Ottawa it is not so. The Auditor General there is independent of the Government. It should be the same in New Brunswick. The expenditure of public money should be by public competition and tender. Thousands of dollars under the present Government have been expended yearly by private contract without competition. The work has been done by friends and favorites of the Government, to the advantage of the contractor, but not in the interest of the taxpayer. To insure honesty and economy there should be public competition and tender, and the successful tenderer should be compelled faithfully to carry out the terms of his contract.

"The expenditure on by-roads is not satisfactory. We must have good roads. They add to the value of every farm along which they pass. Here the evils of favoritism are particularly seen. The political necessities of the Government have led them to hand over the by-road money to their friends in the different counties, not so much for improving the roads as to strengthen the Government. I am satisfied it would be better for the road service, as far as practicable, to allow the by-road money to be spent through the municipalities. The highway act of 1896 is not satisfactory as a general law. It has too much machinery. When the bill was before the House members of the Opposition suggested amendments which, if accepted by the Government, would have made it more satisfactory. The act of 1886, with some amendments, would be a much better law. The expenditure on great roads and bridges is made through the Department of Public Works. In addition to the yearly grant, the Government has given bonds to the amount of

to waste. The recent proposition of developing electric power from the Truckee river at Floriston and transmitting it to the Comstock for service in the conduct of mining operations has directed attention to the tunnel's neglected source of power. The value of the proposition of thus utilizing the drainage of the Suto Tunnel is not restricted to the economy of mining operations on the Comstock, but it opens up the probability that in many other mines lies a new factor of profit in their drainage which has been hitherto overlooked."

Agriculture.—Projects for water storage promise to add materially to the productive farming lands of the State. One of these is a design to store the waters of Humboldt river for irrigating the valley in the dry season.

Legislative Session.—The session of the Legislature began Jan. 16 and ended March 10. Lemuel Allen was Speaker of the House, and H. H. Coryell Speaker *pro tempore*.

The term of William M. Stewart, United States Senator, expired, and he was re-elected. Other candidates were: F. G. Newlands, W. W. Williams, A. C. Cleveland, N. H. A. Mason, P. L. Flannigan, and William Woodburn.

Two constitutional amendments were proposed and referred to the next Legislature: one for assessing patented mining claims at \$10 an acre—they are now exempt from assessment—and one for admitting the incorporation of a lottery, and to designate the amount to be paid by the corporation to the State.

Some changes were made in the election laws. The act of 1895 regarding corrupt practices was repealed. A method for taking the vote of electors in the United States military service outside the State was prescribed. Hereafter candidates for the office of United States Senator may be nominated and voted for by electors, just as those for State offices, and the result given to the Legislature.

Mining and other corporations may divide their capital stock into shares of lesser denominations.

A bill was passed for the reapportionment of the Senators and Assemblymen. Compilation of the laws of the State was provided for.

It was enacted that any citizen of the State—instead of the United States, as before—is entitled to admission to practice in all courts if possessing necessary qualifications.

A fund for relief of indigent patients discharged from the asylum for the insane was provided for. An act of 1885 in aid of indigent veterans of the Mexican War and of the civil war was repealed.

Itinerant trading was defined and regulated; city councils and county commissioners may require licenses.

The act granting bounties for planting forest trees was repealed.

A State committee on marks and brands was created; appointments are to be made by the Governor. The office of State Live Stock Inspector was created; it was provided that any five freeholders may demand inspection.

The shipment of certain wild game out of the State was prohibited. County commissioners have power to extend the close season indefinitely for fishing in waters stocked by others than the State. The law permitting the granting of public lands to fish cultivators was repealed.

Railroad companies are permitted to transfer their franchises and property to other corporations. Telephone lines may be bought or constructed by county commissioners on petition of two thirds of the taxpayers.

The Board of Capitol Commissioners was enlarged so as to include the Governor and Secretary of State, as well as the Lieutenant Governor, Comptroller, and Treasurer.

The law on the militia was changed; the National Guard is to consist in time of peace of not more than 5 companies. Armories are to be provided by county commissioners.

A general law relating to guardians was passed. It was provided that notices of a hearing on petition for the distribution of the estate of a decedent must be served personally on all interested at least five days before the appointed time or published at least three weeks in a newspaper. Objections to the settlement of an estate may be filed with the clerk if the court is not in session; and the clerk may send notices without order from the judge. The whole estate of an intestate dying childless is to go in equal shares to the surviving husband or wife and the father or mother. Claims against an estate must be filed within three months; they are to be treated as rejected if not indorsed within fifteen days thereafter.

Other measures were:

Giving the State Board of Education power to issue two-year certificates for teaching music, penmanship, drawing, foreign languages, and kindergarten classes.

Permitting the State Board of Education to issue high-school and grammar-grade life diplomas; and also temporary certificates, to be good till time of regular examination.

Providing that persons authorized to perform the marriage ceremony must first receive the license.

Making it a misdemeanor for a minor to misstate his age in order to obtain liquor.

Repealing an act of 1875 prohibiting camels and dromedaries from running at large.

Amending the law prescribing the manner of locating and recording lode and placer claims, mill sites, and tunnel rights.

Providing that stored water may be turned into the natural channel and then reclaimed; water appropriated by others must not be diminished.

Providing for county boards of water commissioners and regulating water rights.

Regulating the sale of public lands and payment of interest.

Making mechanics' liens superior to any incumbrance placed after work has been begun and before limit of time for filing lien.

Creating a Paris Exposition commission.

Several resolutions were passed; one in favor of the establishment of a national department of mines; one concerning free and unlimited coinage of silver at the ratio of 16 to 1, regardless of the action of every foreign nation; one favoring the election of United States Senators by direct vote of the people; one in favor of the Nicaragua Canal.

The Governor vetoed a bill providing for a constitutional convention on account of the financial condition of the State and some informalities relating to its passage.

Political.—The returns of the State election of 1898 gave Reinhold Sadler, candidate of the Silver party, a plurality of 22. William McMillan, the candidate of the Republicans, contested the election on the ground that illegal votes were counted in 4 counties, and that there were irregularities at the polls. The case was decided by the Supreme Court in September. The court held that the statute calling for bipartisan clerks and inspectors was directory only, and

that noncompliance did not invalidate the vote of a county or precinct. As regarded alleged misconduct of inspectors and bystanders in Humboldt and Lander Counties, the court held that as there was no allegation that the respondent, Sadler, participated in said acts, or that they were done with his knowledge or consent, such misconduct would not invalidate the votes cast therein. The Nevada soldiers' vote taken at sea on a transport *en route* to Manila was rejected, as there is no provision in the State statutes governing such cases. The findings of the court gave Sadler a plurality of 63 votes, and he was declared elected.

NEW BRUNSWICK, an eastern province of the Dominion of Canada; area, 28,100 square miles; population in 1891, 821,263. Capital, Fredericton.

Government and Politics.—Since 1883 a government nominally coalition, but practically Liberal in politics, has held office in New Brunswick. A. G. Blair, now a member of the federal ministry, was Premier until 1896. His successor, the Hon. James Mitchell, died in June, 1897, and was replaced by the Hon. H. R. Emmerson, who in February, 1899, appealed to the electorate for an expression of confidence. The contest was somewhat complicated. At least two members of the Government were Conservatives in federal politics—or called themselves so—but as for many years the weight of provincial Government influence had been thrown against the Conservative party at Ottawa, the position had grown unbearable to the latter organization, and in the summer of 1898 a Conservative convention at Moncton had decided to run the next election on strict party lines, and, as a result, speeches had been made in the province by Sir C. Tupper, G. E. Foster, and other party leaders. But the party would not unite entirely on this local issue, and John Costigan, a late federal minister, openly supported the Government, as did Senator Poirier. When the issue was precipitated A. G. Blair came from Ottawa and threw all the weight of the federal Cabinet in favor of the local Government, so that the picture was presented of a nominal coalition fighting in defense of nonparty government and of a platform of "no federal politics in provincial matters," with the active aid of a prominent federal minister. Logic was therefore against the Government, but, as it turned out, the votes were with it. On Feb. 18 the elections took place, and on Jan. 28 preceding Mr. Emmerson issued his manifesto to the people. He drew a strongly worded but very general picture showing how well the province had been governed, how economically the revenues had been handled, how carefully the farming interests had been guarded and fostered, and how anxiously industrial interests had been promoted. He concluded in the following words:

"We claim the honor of having inaugurated a new and prosperous policy as respects the agricultural interests of the province, and of entering upon a more vigorous development of our agricultural resources, whose products are finding new and profitable markets in the motherland, by means of the improved and near-at-home facilities for transportation; of legislating in the interests of and promoting other industrial advancement; and of contributing toward awakening in the minds of capitalists and men endowed with business enterprise an interest that will surely inure to the benefit of the whole people and of all sections of the province. To all this we ask with assurance your overwhelming approval, not only that the work now initiated may

grow and prosper, but that we may, in your interests and for the good of our land, have a greater incentive to renewed and increased efforts. We have honestly and faithfully conserved the public resources, and in our expenditures have been guided by the needs of the people consistent with a strict regard to economy. Other provinces may be more wisely governed, but none more economically."

A. A. Stockton, Q. C., the Opposition and Conservative leader, issued an address, which was much more detailed in statement and allegation and promise. The main points may be given here:

"The financial condition of our province demands serious attention. The net debt on Dec. 31, 1884, was \$757,697; at the close of the fiscal year 1897 it was \$2,488,577, an increase during that period of \$1,730,880, or an average increase per year of \$134,683. The interest charge has increased from \$46,000 in 1883 to about \$130,000 in 1897. How much longer can we afford, at the same rate, to add to our debt? This is a very important question for the electors to answer. The record of the Government gives no hope of economy on their part, but the reverse. The increase of the public debt, we are told by friends of the Government, is almost wholly due to railway subsidies granted under legislation for which the Government is not responsible. Such a statement is not true. Nearly one half of the increase in our net debt during the last thirteen or fourteen years has been for public services outside of railway subsidies, and chiefly for services which before that time were paid for out of the ordinary annual revenues.

"Our system of auditing the public accounts should be entirely changed. The Auditor General of this province holds his office at the pleasure of the Government of the day. He can be dismissed from office at any time. At Ottawa it is not so. The Auditor General there is independent of the Government. It should be the same in New Brunswick. The expenditure of public money should be by public competition and tender. Thousands of dollars under the present Government have been expended yearly by private contract without competition. The work has been done by friends and favorites of the Government, to the advantage of the contractor, but not in the interest of the taxpayer. To insure honesty and economy there should be public competition and tender, and the successful tenderer should be compelled faithfully to carry out the terms of his contract.

"The expenditure on by-roads is not satisfactory. We must have good roads. They add to the value of every farm along which they pass. Here the evils of favoritism are particularly seen. The political necessities of the Government have led them to hand over the by-road money to their friends in the different counties, not so much for improving the roads as to strengthen the Government. I am satisfied it would be better for the road service, as far as practicable, to allow the by-road money to be spent through the municipalities. The highway act of 1896 is not satisfactory as a general law. It has too much machinery. When the bill was before the House members of the Opposition suggested amendments which, if accepted by the Government, would have made it more satisfactory. The act of 1896, with some amendments, would be a much better law. The expenditure on great roads and bridges is made through the Department of Public Works. In addition to the yearly grant, the Government has given bonds to the amount of

over half a million dollars for building what they call permanent bridges. For the superstructure of all those bridges built within the last five years, so far as can be ascertained, Mr. Emmer-son, without competition or tender, has paid two prices, and in some cases even more. The province should have two bridges where there is but one. It would have been far better in the public interest to have paid a fair price and have two bridges than two prices and have but one bridge. The application of ordinary business principles would have saved large sums of money.

"All fines derived from civic and county officers, and from licenses after paying necessary salaries and expenses, should go to the funds of the municipality. The reckless extravagance of the Government has forced direct taxation upon us, and in seizing those sources of revenue, always before held by the municipalities, the burden of taxation upon them has been still further increased. The Government has no right to take from the municipalities fines properly belonging to them.

"We need cold-storage facilities to enable our farmers to hold their farm produce for the highest markets. We can produce excellent butter and cheese. These industries should be given every encouragement. Pork packing should become a great industry. The great majority of our farmers could raise pigs for that purpose without very great labor or expense.

"The lumber industry is growing in importance every year. The introduction of pulp mills increases the value of our forest wealth. Measures should be taken to prevent unnecessary destruction of our forests, and the labor required to fit the raw material for the foreign market should as far as possible be done within the province.

"Our fisheries need careful attention. The recent judgment of the Privy Council gives to the province larger rights in the fisheries than it was supposed we had. The extent of those rights it is not necessary now to consider. But great care and wise legislation are required to obtain from our fisheries the largest benefit for all of our people."

The result was singularly disastrous to Mr. Stockton, and gratifying to the Government. The latter swept the province, winning 42 seats and leaving the Opposition 4 seats. Mr. Stockton himself was defeated for the Assembly. When the Legislature met, March 22, it was opened by Lieut.-Gov. A. R. McClellan with a speech from the throne, of which the following paragraphs are the most important:

"The interesting character of the exhibit made by this province at the Sportsmen's Show, held in Boston in March last, did so much to bring to the notice of the people of this continent the unrivaled opportunities which we offer to the sportsman and tourist, and was in all respects so promotive of good results that the expectations of my Government in undertaking this display were, I am pleased to say, more than realized.

"The awakened interest which I am glad to note is being taken in the mineral resources of our province has encouraged my Government to take further steps to secure the prospecting and development of the heretofore dormant wealth of our country's undeveloped resources, and a measure having this object in view will be submitted for your consideration.

"The efforts already put forth by my Government in the past to stimulate and advance the agricultural interests of New Brunswick have been fraught with such favorable results that

further advances in this same direction are deemed desirable, and there will be presented to you propositions to develop and promote that branch of animal husbandry known as pork raising, with a view to the promotion of pork-packing establishments in our midst, thus enabling us as a province to compete more successfully with other provinces and states in the markets of Great Britain and other countries.

"The pronounced success which has attended the efforts of my Government to advance the cheese industry has encouraged them to make additional strenuous efforts to induce the manufacture of creamery butter throughout the province during the whole year. To this end there has been erected a model creamery and butter-making establishment at Sussex, which is now in successful operation, and has so fully demonstrated the fact that butter of the best grade can be advantageously made in the province at all seasons that the Government confidently anticipate that similar industries will be established as the result of private enterprise at all suitable points; already one such industry has been started at Woodstock. This establishment at Sussex has incidentally enabled the Government to provide the very best facilities for a provincial dairy school.

"The desirability of encouraging the settlement of our public lands by our own people and by suitable emigrants from other lands has been recognized in the past by the Government, and I feel assured that there is no abatement of that desire upon the part of the present Legislature and the people generally. The authority given at their last session has been acted upon, with results that promise favorably, but it is realized that if we are to encourage any appreciable flow of desirable settlers from the old lands it will be necessary to have more and better information, in succinct form, as to the natural features and varied resources of our whole province, and of its facilities for every branch of industry than has heretofore existed, with a view to its judicious dissemination and distribution among the people of Great Britain and other European countries.

"You will be asked to make provision for the introduction of modern road machinery, so as to demonstrate to the people as far as possible its utility in making and maintaining proper roadways.

"The recent decision of the Judicial Committee of the imperial Privy Council, dealing with the subject of the fisheries, and the respective rights therein of the provinces and Dominion, confirms the claim made by the provinces to valuable and extensive fishing rights over which the Dominion Government has hitherto assumed the exclusive property and control, and define more fully than had before been done the respective jurisdictions of the federal and local governments over the subject-matter of the fisheries, at the same time leaving unimpaired the duty cast upon the Dominion to foster and protect all fisheries. A committee of my Government early in the year held a conference on the matter with a committee of the Federal Government, and their report will be submitted to you, from which it will appear that the Department of Marine and Fisheries claims that, while the judgment of the Privy Council is explicit upon most points, it still, unfortunately, leaves open to question the claim of the province to proprietary rights in those shore fisheries located within the three-mile limit and below low-water mark.

"The unprecedentedly high price realized from

the sale of provincial 3-per-cent. bonds issued in February, 1898, to redeem outstanding debentures then maturing, was most satisfactory, demonstrating, as it did, the very excellent standing of the province in financial circles. Since then my Government has effected the sale of 3-per-cent. bonds at par. A measure will be submitted to you giving authority to redeem from time to time, as they mature, bonds bearing a rate of interest above 3 per cent. by other bonds to be issued at a rate not exceeding 3 per cent."

J. D. Hazen, Q.C., was elected leader of the Opposition, and George F. Hill Speaker of the House. Mr. Hazen announced the Conservative provincial policy as follows: Secret ballot in provincial elections; tender and public competition for Government contracts; independence of the Auditor General, as at Ottawa; abolition of the office of Solicitor General; decreased number of members in the House, with single-member constituencies; special steps for the preservation of forests.

On April 12 a debate took place on the question of woman suffrage, and Premier Emmerson introduced the following resolution, which was lost by a vote of 7 to 34:

"Resolved, That in the opinion of this House the time is now ripe for the enactment of a law providing that the rights of citizenship shall not be denied or abridged on account of sex, but that full franchise shall be granted to the women of this province on the same terms as to the men."

A few days later an Opposition motion in favor of an absolutely secret ballot was voted down, and on April 24 a resolution asking the Dominion Government to assume control of the Canadian Eastern Railway and incorporate it with the Intercolonial was carried unanimously. The Government also introduced useful legislation regarding provincial fairs and agricultural matters generally. But the legislation effected, as a whole, was not of material importance.

Finances.—On April 13 L. J. Tweedie, provincial Treasurer, reviewed the finances of the preceding year, and the following extracts may be given from his speech:

"The largest item of receipt, of course, was the Dominion subsidies, which last year amounted to \$483,510.36. Territorial revenue came next. It was hard to estimate this item, owing to the uncertainty of the lumber cut, or the amount derived from the annual sale of licenses. Last year he had estimated for territorial revenue, including stumpage and sales of licenses, mining receipts and game returns, \$155,000, whereas the amount actually returned was \$155,959.63. The same observation might be made in regard to fees in the provincial Secretary's office, which vary greatly from year to year. The succession duties of course depend upon the number of deaths and the value of the estates. Last year the Government estimated something more than they got from this source, because several estates were included which had not yet been settled for.

"In his estimate of income last year he had predicted a balance over the expenditure of \$6,038.52. He regretted that that had not been verified on account of a shortage of revenue and some other expenditures, which he would explain in detail. The fact was that there had been about \$14,000 of overexpenditure. A great deal of criticism was often made upon the fact that over-expenditures were made, but, as he had already said, it was not possible to estimate some of these items closely, and an overexpenditure was no more evidence of mismanagement than an under-expenditure would be. Last year the territorial

revenue had fallen short of the expectation by \$3,040.37. The revision of the statutes had cost \$1,479.48, or \$2,052 less than the estimate. Unforeseen expenses, placed at \$2,000, had amounted to \$1,032.25. The total expenditure had been for the year \$727,049.75, as contrasted with the estimate of \$712,991.98, an excess of \$14,057.77."

Commerce and Navigation.—The decline in the registered tonnage of the province continued during 1898, the drop being more than 14,000 tons. The comparative statement of vessels and tonnage for 1897-'98 shows that in the former year the number was 913 and the tonnage 104,028, while in the latter the figures were 903 and 89,976 respectively. The loss in St. John vessels during the year, from the standpoint of value, was much greater than usual. The total value was \$305,000, compared with \$171,000 in 1897, \$118,420 in 1896, and \$102,050 in 1895. The vessels lost in 1898 numbered 25, of 9,771 tons, against 16 vessels, of 9,466 tons, in 1897, 23 vessels, of 6,748 tons, in 1896, and 15 vessels, of 10,150 tons, in 1895.

The exports from the port of St. John for 1898 were valued at \$6,830,429, against \$6,256,659 in 1897. The imports were \$3,333,446, against \$3,444,338. Of the exports, products of the forest were nearly \$3,000,000, and agricultural products \$2,318,000.

Education.—On June 30, 1898, there were 1,778 public schools in the province, with 1,864 teachers, 63,333 pupils, and an average attendance of 38,874. The grammar-school pupils were only 657, and those at the normal school 281. The Education Department's receipts from Government grant were \$188,104; from municipalities, \$90,807; from district assessments, \$230,000; a total of \$508,911. The expenditure for the year was \$483,829.

NEWFOUNDLAND, a North American British colony; area, 42,200 square miles; population, 210,000. Capital, St. John's.

Legislation.—The legislative work of the Parliament in the session of 1899 comprised several useful and important enactments, bearing mainly on the industrial activities connected with the settlement of lands along the railway, mining, pulp making, lumbering, etc. One of the most important of these is an act relating to Crown lands. It deals with mining, the establishment of pulp mills, and the survey of lands, and is a marked improvement on previous acts. It provides that lands hereafter applied for shall be surveyed within a year and all fees be paid, and that lands already applied for shall be surveyed within two years. For the establishment of pulp mills it declares that the Governor in Council may grant, after one month's notice in the Royal Gazette, license to cut timber over not less than 5 nor more than 150 square miles, the licensee to pay a premium of \$5 a mile and an annual rental of \$3 a mile. The licensee must further expend \$20,000 on buildings and machinery. The licensee is not to exclude any person from cutting wood on the land for the *bona fide* purposes of the fisheries. In regard to mining grants, it provides that the applicant must mark distinctly the place he applies for. The extent of the square of land applied for shall not be more than 320 acres. Upon the payment of \$10 the person filing the notice shall receive a lease good for one year, and, if he wishes it, shall then, on payment of \$20, receive a lease for ninety-nine years, subject to a rental of \$20 for the first year, \$30 a year for the next five years, \$50 a year for the next five years, and \$100 a year for the remainder of the term. A lessee may, if he chooses, commute rent

by a single payment, or may obtain a grant in fee simple on payment of \$8,000. Where more than one apply for the same location it shall be granted to the first erecting boundary posts and applying within two months thereof for a grant. Mining leases entitle the holder to all minerals in his location. On the treaty coast the rental of mineral lands is to be one fifth of those above, and holders of licenses on that part of the island shall apply within one year for a new lease, when previous payments will be accepted as far as they go.

by a stipendiary magistrate, a warden, or Minister of Marine and Fisheries on payment of \$1 and the fee for the particular license taken. The fee for license to take two stags and one doe is \$40; to take three stags and one doe, \$50; and five stags and two does, \$80. The first license is good for four weeks, the second for six weeks, and the third for two months. Nondomiciled guides are not to be employed unless licensed. The fee for such license is \$25. No guide or member of a hunting party shall kill caribou except as part of the number specified in the license.

PLACENTIA BAY, NEWFOUNDLAND.

The next most important is the act that relates to the constitution, incorporation and registration, management and winding up of companies, liabilities of shareholders, powers of courts, etc. It provides for its application to existing companies, which must register under the new law within six months from the passing thereof (July 10, 1899).

The act respecting the extradition of criminals provides that a warrant for the apprehension of fugitive criminals may be issued by a stipendiary magistrate in St. John's on an order from the Governor—in other places, on complaint—but the Governor to whom the issue of such warrant must be communicated may order release. If a stipendiary magistrate apprehending a fugitive criminal do not receive an order from the Governor in a reasonable time, he shall discharge such criminal.

Important changes have been made in the game laws by an amendment of the act for the preservation of deer. In future caribou may not be hunted from Feb. 1 to July 15 or from Oct. 1 to Oct. 20 in one year. No one not licensed under this act shall kill more than three stags and one doe caribou. Persons not domiciled may not hunt caribou without a license, which may be issued

Export of caribou carcass or skin is prohibited except to licensee, who may export what he may have killed under his license, entering the same at the customhouse. Pits and snares for caribou are not allowed, under penalty of \$50, nor are they to be hunted with dogs or with hatchet or other contrivance except firearms.

Another act authorizes a loan of \$100,000 for encouragement of agriculture, to be expended in bonuses on clearing land.

An amendment of the revenue act imposes 10 per cent. additional on the duties collected under the revenue act of 1898. It provides that an excise duty of 1 per cent. a pound shall be paid on all oleomargarine manufactured, and 27½ cents on tobacco manufactured.

By another act the Governor's salary is increased to \$10,000 per annum.

A loan of \$146,000 for the erection of lighthouses, beacons, fog alarms, public wharves, public buildings, repairs, and improvements is authorized by another act.

An act for the amendment of the law relating to trial by jury provides for special juries in criminal and civil cases.

An act relating to light dues provides that

vessels entering shall pay once a year dues at the rate of 24 cents up to 500 tons, 12 cents additional per ton from 500 to 1,000 tons, and 6 cents additional on every ton over 1,000 up to 2,000. No ship shall pay more than \$240 in one year. Ships entering for repairs or supplies shall pay half rates, and Labrador coasting and fishing craft shall be exempt.

The act respecting marine courts of inquiry confers on such courts the power to inquire as to the conduct of any master who has failed to render assistance in a case of collision. It further provides that the court shall have power to cancel the certificate of a master's mate or engineer if through any wrongful act any ship has been lost or loss of life has occurred; if he is incompetent, drunk, or cruel; if in case of collision he has failed to render all practicable assistance or to stay by the other vessel until she has no further need of assistance; or if he has refused in case of collision to give the master of the other vessel particulars of his own.

Finances.—The prosperity of the colony in 1899 is indicated by the revenue, which is mainly derived from duties on imports. The average revenue is \$1,500,000, but the year's returns show a marked increase. The revenue for the last six months of 1899 was \$1,043,966, being \$230,862 more than in the corresponding period of 1898, and the largest ever received. At the close of the fiscal year, June 30, 1900, it is anticipated there will be a surplus of \$300,000. This advance is largely owing to the increased industrial activities resulting from the operations of the Reid contract, and partly to the abundant fisheries of the year and the good prices of fish in foreign markets.

The value of the exports in 1898-'99 was \$6,936,315. In the previous year the exports were in value \$5,226,933, and in 1896-'97 \$4,925,789. The value of the imports in 1898-'99 was \$6,311,244, against \$5,188,863 in 1897-'98.

The funded public debt of the colony is \$16,485,878, the greater part of which was spent in the construction of railways and public works.

The value of the fishery products in 1898-'99 was \$6,024,931.

The value of exports to the United Kingdom in 1898-'99 was \$1,443,266; to the Dominion of Canada, \$541,727; to the United States, \$620,056; to Italy, \$143,397; to Spain, \$88,317; to Portugal, \$799,649; to Brazil, \$1,912,868.

Mining.—The mining industries are making satisfactory progress. Mr. G. P. Howley, director of the Geological Survey, in his last report shows that the total value of the copper ore exported from 1888 to 1898 was \$5,907,638, and that the total value of copper ore exported since its first discovery was \$10,500,000. The total value of all minerals exported from 1888 to 1898 was \$7,829,158. Of this, \$1,502,260 was realized from the export of iron pyrites. The story of the copper mine at Tilt Cove, Notre Dame Bay, is remarkable. It was opened in 1864, and has been worked ever since without showing any signs of exhaustion. In the first twelve years it yielded 49,719 tons of ore, valued at \$1,572,347. The value of copper ore has advanced greatly, and last year the shareholders had a net profit of £70,000 sterling. Other copper mines are in operation. A new discovery of copper ore has been made at York harbor, Bay of Islands, of which mining experts report very favorably. It is worked by an English company. The splendid iron mine at Belle Isle has been already referred to. That portion of it purchased by the Whitney Syndicate is not the whole. Another, though

probably much smaller, deposit on the island is held by another company. Reports of the discovery of iron ore have been received from many quarters. On the west coast magnetic iron ore and chrome iron are found over large areas. Asbestos is also abundant on that coast. Petroleum wells have been sunk, with favorable results, in two localities on the west coast.

The greater part of the southern peninsula, called Avalon, belongs to the Cambrian formation, and contains immense veins of the finest roofing slate. Hitherto these slate deposits were considered to be of little importance, as the slate could not be exported with profit. But recently it has come to light that all the best slate quarries in Wales are approaching exhaustion, and no new deposits are in sight or likely to be found. The consequence is that from 15,000 to 20,000 Welsh quarrymen are likely to be thrown out of work ere long. Much anxiety is felt regarding their future, and the Welsh slate capitalists are looking round for new fields. Their attention has been drawn to Newfoundland. On the shores of Smith's Sound, Trinity Bay, is a large deposit of roofing slate. Charles D. Walcott, Esq., director of the United States Geological Survey, saw this slate quarry last summer. In his report he says: "In my opinion, this is one of the great roofing-slate deposits of the world, comparable with that of North Wales and the American deposits of Washington County, New York, and Rutland County, Vermont." This quarry has lately been sold for \$25,000. At Bay of Islands is another fine deposit on one of Mr. Reid's land concessions.

Gypsum of the best quality is found on the west coast in immense masses. It is also rapidly advancing in value. One gypsum property in St. George's Bay was lately sold for \$30,000. It will be worked on a large scale in 1900.

The Seal Fishery.—The seal fishery of 1899 was fairly remunerative. Eighteen steamers were employed, having a tonnage of 5,730 tons, and carrying 3,502 men. The number of seals taken were 268,541; gross weight, 6,280 tons. The greatest number of seals was brought in by the steamer Neptune, 32,134.

The Bank Fishery.—In 1898 the number of vessels employed was 74; number of men, 1,000; tonnage of vessels, 4,224 tons; codfish caught, 74,002 quintals.

The French Shore.—The Imperial Government appointed a commission in 1898 to report on the operation of the treaties and the condition of the people on the treaty shore. This report has not yet been published. The *modus vivendi* expired on Dec. 31, 1899. It is expected that it will be renewed for another year when the Legislature meets in April, 1900, so as to afford further time for negotiations.

Events.—Early in March Lieut.-Col. Sir Henry Edward McCallum, R. E., K. C. M. G., arrived as Governor of the colony. He was an officer of distinction, who had been Governor and commander in chief in Lagos. When there he had been sent on a special mission to the *Hinterland* in connection with French aggression, for which service he received the thanks of her Majesty's Government. Previously he had been colonial engineer and surveyor general at the Straits Settlements and commandant of the Singapore volunteer artillery. Since his arrival in the colony he has become very popular, having taken a deep interest in public affairs and shown zeal and energy in promoting the best interests of the people. In the summer and autumn he made tours around the island, calling at the principal

towns, inquiring into the condition and wants of the population, and in his public addresses pointing out various improvements and suggesting new industries. He specially urged the young fishermen to take advantage of the Naval Reserve, the organization of which has been extended to the colony, dwelling on the advantages they would derive from it. He is also endeavoring to promote the formation of a volunteer force.

The beneficial effects of the Reid contract of 1898 were fully apparent last year. One good result to the working classes has been the employment of more than 2,500 men in connection with the various operations of this contract at good wages. Indirectly, too, the contract has awakened among the people a spirit of hopefulness and enterprise. The operation of the railway was thoroughly efficient and satisfactory. Mails were carried regularly three times a week between Canada and the island, thus greatly increasing the facilities of business men. At Grand lake coal mining was carried on. In the same region, on one of Mr. Reid's land concessions, preparations are made for the erection of a great pulp factory, which will give a large amount of employment. A joint-stock company with a capital of \$2,500,000 has been formed, and in connection with the pulp works a fine mine of iron pyrites at the Bay of Islands will be worked. The first of Mr. Reid's fine fleet of seven steamers, built under the contract, has arrived. This is the *Glencoe*, intended to ply in summer between St. John's and Labrador, going as far north as Nain. Meantime during the winter months she will run between St. John's and Halifax. She is a splendid vessel, and beautifully fitted up for passengers. The other steamers built by Mr. Reid will arrive in May and June, and will ply on the great bays. The scenery of these bays is very fine, and hitherto almost unknown.

The influx of tourists, sportsmen, and health and pleasure seekers in 1899 was very great. One of the chief attractions to sportsmen is caribou shooting. The deer are in immense numbers in the interior, and their haunts can now be readily reached by the railway. Newfoundland is by far the finest deer-stalking country in the world, and is attracting sportsmen from all quarters. There is also ptarmigan shooting and salmon fishing. Mr. Reid is about to erect a fine hotel in St. John's for the accommodation of tourists and travelers, and along the line of railway several comfortable hotels are in course of erection.

Another notable event of the year was the visit of Sir William Van Horn, accompanied by several capitalists from the United States and Canada. The main object of their visit was to examine the great iron mine lately opened in Belle Isle, Conception Bay, about a dozen miles from St. John's. The Whitney Syndicate recently purchased this mine for \$1,000,000. The ore, which is red hematite, yielding from 48 to 56 per cent. of iron, lies in horizontal strata a few feet under the surface, and can be put on board for 25 to 30 cents a ton. No shafts are needed; it is worked like an open quarry. Experts estimate the quantity of ore in sight at 80,000,000 tons, and the probability is that the beds run out under the sea. Two thousand men will be employed here next summer, and the ore will be shipped at the rate of 3,000 tons a day. The bulk of it will go to Sydney, Cape Breton, where the Whitney Syndicate are erecting enormous steel works.

In St. John's the year 1899 will be memorable for the introduction of the electric street railway. The power house is at Petty Harbor, 7 miles from

St. John's, where there is a fine water power capable of generating sufficient electricity to operate the street railway, to light the streets and houses, and to drive all the machinery in the city. The work was approaching completion at the close of the year.

A deputation of Finlanders visited the colony in August, with the view of ascertaining whether the unoccupied lands would be suitable for the settlement of Finnish immigrants. Owing to the oppressive measures of the Russian Government, there is likely to be a large emigration from Finland, and the attention of the people had been directed to this island as likely to afford them desirable lands for colonization. The plan adopted by the leaders of this movement is to settle the immigrants in large groups of 1,000 or 2,000 families each, so that they can carry with them their language and customs. The deputies visited various parts of the island, but were unable to find sufficiently large spaces of good lands for their purpose. The fertile lands lie in belts along the principal rivers, but none were found to be sufficiently spacious. They then went to British Columbia.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,916 in 1850; 326,073 in 1860; 318,300 in 1870; 346,991 in 1880; and 376,530 in 1890. Capital, Concord.

Government.—The following were the State officers during the year: Governor, Frank W. Rollins; Secretary of State, Edward N. Pearson; Treasurer, Solon A. Carter; Attorney-General, Edwin G. Eastman; Adjutant General, Augustus D. Ayling; Insurance Commissioner, John C. Linehan; Bank Commissioners, John Hatch, Alpheus W. Baker, and George W. Cummings; Superintendent of Public Instruction, Channing Folsom; Secretary of the Board of Agriculture, N. J. Bachelder; Labor Commissioner, Lysander H. Carroll; Public Printer, Arthur E. Clarke; Chief Justice of the Supreme Court, Isaac N. Blodgett; Associate Justices, William M. Chase, Robert M. Wallace, Frank N. Parsons, Robert G. Pike, Robert J. Peaslee, John E. Young; Law Reporter, John H. Riedell.

Finances.—The cash in the treasury June 1, 1898, was \$414,515.86; the receipts during the year were \$1,260,239.07; total, \$1,674,754.93. The disbursements during the year amounted to \$1,333,168.05, and the cash on hand June 1, 1899, was \$341,586.88. The revenue was from the following-named sources: State tax, \$425,000; railroad tax, \$135,619.40; insurance tax, \$28,277.03; interest on deposits, \$3,843.11; license fees (peddlers), \$2,050; license fees (fertilizers), \$1,200; telegraph tax, \$3,283.50; telephone tax, \$4,202.55; charter fees, \$1,932.50; fees (insurance department), \$10,197.20; Lura S. Craig refunds part of the asylum charges, account of the Commissioner of Lunacy, \$10; Benjamin Thompson estate, income for the year ending Jan. 30, 1899, \$14,968.90; fees (Secretary of State) \$100.50; fines and forfeitures, \$110.

The ordinary expenses were \$344,616.57; extraordinary expenses, \$145,828.68; interest, \$107,759.88; total expenses, \$598,205.13; excess of revenue over expenses, \$32,589.56.

The disbursements by departments were: Executive, \$6,871.41; Secretary, \$5,351.33; Treasurer, \$5,050.95; Adjutant General, \$3,008.18; Public Instruction, \$5,942.28; Insurance, \$5,565.24; Su-

preme Court, \$29,315.05; State Library, \$17,424.80; Asylum for the Insane, \$15,014.84; Industrial School, \$6,182.62; State Prison, \$3,697.57; College of Agriculture, \$6,524.15; Normal School, \$10,580.11; Railroad Commissioners, \$8,736.60; Bank Commissioners, \$10,632.76; National Guard, \$29,999.56; Board of Agriculture, \$5,475.47; Board of Equalization, \$2,389.90; Board of Health, \$7,194.76; Forestry Commission, \$1,140.58; Labor Bureau, \$3,525.04.

The State debt was reduced during the year by \$32,589.56, leaving the net indebtedness June 1, 1899, \$1,335,068.05. The trust funds are: Fiske legacy, \$26,378.43; Kimball legacy, \$6,753.49; teachers' institute fund, \$58,668.98; Agricultural College fund, \$80,000; unclaimed savings bank deposits, \$2,096.19; Benjamin Thompson trust fund, \$517,834.02; Benjamin Thompson State trust fund, \$33,018.34; Hamilton Smith trust fund, \$10,000; total, \$734,749.45. The total expenditures on account of the Soldiers' Home for the year ending May 31, 1899, were \$15,626.25; received from the United States during the year as above, \$7,227.

The Treasurer says in his report: "The results of the operations of the treasury department the past year have been generally satisfactory, and the close of the year finds the treasury in a strong condition. The reduction of the State debt has not been as large as for the past three years, owing to two causes: First, the reduction of the State tax in the sum of \$75,000, and second, the expenses on account of the Spanish war, which have all been charged to the extraordinary expense account during the year to the amount of \$110,018.66, no part of which has been reimbursed by the United States. Notwithstanding this unusual expenditure, the balance has been on the right side and the State debt reduced \$32,589.56."

Banks.—There are under the supervision of the Bank Commissioners 80 savings banks, 13 State banks and trust companies, 10 of which have savings departments, 17 building and loan associations organized under the general laws, and 2 building and loan associations organized under special charters—the Granite State Provident Association, now in the hands of an assignee, and the Citizens' Building and Loan Association of Manchester, in liquidation by vote of its directors. Of the 80 savings banks, 28 are, in liquidation, as are 4 of the 13 trust companies.

The liabilities of the savings banks and savings departments of the trust companies that were in active business June 30, 1899, were: Amount due depositors, \$52,131,878.75; guarantee fund, \$2,964,930.30; interest, \$1,159,803.82; miscellaneous indebtedness, \$2,000—\$56,258,612.87; premium, \$3,491,632.17; total, \$59,750,245.04, showing an increase in bank deposits of \$2,570,148.05, against an increase of about \$80,000 for the year 1898—a fair index of the prosperity of the State in 1899.

The total accumulations of the building and loan associations organized under the general laws were, on June 30, 1899, \$1,921,927.88. Of this sum, there is invested in loans on local real estate, \$1,755,495.93; loans on shares, \$52,440.50; cash on hand and on deposit, \$42,074.09.

The total withdrawals during the year were as follow: Dues (capital), \$164,272.50; profits, \$34,826.77; dues retired, \$127,745; profits retired, \$51,070.69; dues matured, \$46,748; profits matured, \$28,912.80; profits forfeited, \$3,723.57; total dues withdrawn, retired, and matured, \$342,081.50; total profits withdrawn, retired, and matured, \$115,217.83.

Two cases of financial wrongdoing were un-

earthed in the year, one in the Colebrook Guarantee Savings Bank, involving \$18,765.94; the other in the Cochecho Savings Bank of Dover. In the former case, the deficit was made good by the stockholders, and the bank continues business; in the latter, the bank goes into liquidation.

Insurance.—The report of the Insurance Commissioner for the year ending Dec. 31, 1898, shows that 9 companies—7 of other States and 2 of other countries—were admitted during the year. One is conducted on the mutual and 8 on the stock plan. A recapitulation of the business of the New Hampshire companies, 30 in number, gives these figures: Risks written, \$41,887,421.13; premiums received, \$527,888.16; losses paid, \$233,112.53. The transactions of the Grange Mutual Company extend over the whole State, but insurance is written by it only on property belonging to members of the order of that name. Sixty-nine foreign fire and marine insurance companies (of other States and countries), including four mutuals, have done business in the State as follow: Risks written, \$49,511,494.67; premiums received, \$641,979.14; losses paid, \$384,347.03. Total business of all authorized companies: Risks written, \$91,398,915.80; premiums received, \$1,169,867.30; losses paid, \$617,459.56. The number of fires reported for the year 1898 was 467, against 403 reported for 1897.

The business of 18 authorized fidelity and casualty companies was: Risks written, \$16,161,151.03; premiums received, \$85,418.95; losses paid, \$26,703.73. No changes have taken place among the life insurance companies. The New Hampshire business of the 23 authorized companies for the year was: Premiums received, \$956,309.85; losses paid, \$381,879.30; policies issued (2,904), \$3,867,335.01; policies in force (18,843), \$30,402,181.82.

Six assessment life associations had 1,538 policies in force, amounting to \$3,065,648; assessments, etc., were paid to the amount of \$83,163.44; while the losses and claims paid amounted to \$63,359. Nine assessment casualty companies had 4,730 risks in force, amounting to \$3,785,150; assessments paid, \$48,903.32; losses and claims paid, \$23,712.10. Fraternal beneficiary associations to the number of 29—a reduction of six since 1897—report 18,803 certificates in force; amount received from assessments, \$291,299.80; and losses and claims paid to the amount of \$297,332.24.

Railroads.—The report of the Railroad Commissioners for 1899 says that the business depression which so diminished the earnings of all American railroads and seriously crippled those that were not very strong in 1893 and 1894 was not overcome until the spring of 1899, when the recovery came suddenly and with great force. The returns, therefore, for the year ending June 30, 1899, cover but a few weeks of prosperity, and show but a moderate improvement in earnings. Since then, however, our roads have had an immense traffic, especially in freight, the volume of which has been fully up to their ability to handle it promptly.

The report contains the returns of 23 steam railroad and 8 street railway corporations doing business in the State June 30, 1899, and the findings, decisions, and orders in 69 cases heard by the board during the year.

Taken together, the earnings of the four systems of steam railroads which include nearly all the mileage of the State—the Boston and Maine, the Fitchburg, the Atlanta and St. Lawrence, and the Maine Central—were respectively \$32,-

\$51,694.94 in 1897, \$33,107,952.11 in 1898, and \$33,735,540.02 in 1899.

There was no addition to the mileage during the year, which was 1,171 June 30, but the trackage was considerably increased by the construction of sidings. The Boston and Maine laid in the State 516,214 new ties, and 2,892 tons of new and 3,637 tons of old steel; the Maine Central, 48,853 ties and 500 tons of new steel rails; the Atlantic and St. Lawrence, 35,617 ties and 610 tons of new steel; and the Fitchburg, 24,075 ties and 400 tons of new steel.

During the calendar year 1899 the Boston and Maine purchased the property rights and franchises of the Eastern Railroad in New Hampshire, extending 16.08 miles from the State line of Massachusetts to the State line of Maine; the Portsmouth and Dover Railroad, 11 miles from Portsmouth to Dover; and the Portland and Rochester Railroad, from Rochester to Portland, 52 miles. Having acquired the Eastern Railroad in New Hampshire, the Boston and Maine proceeded to construct a second track and separate the grades upon the highway crossings between Newburyport and Portsmouth. The improvements involve an expense of about \$400,000, and will be completed early in 1900.

The Boston and Maine has completed the equipment of its locomotives and cars with the automatic couplers and power brakes required by the act of Congress, having expended for this purpose about \$800,000. The Maine Central and the Fitchburg have also practically met the requirements of the law, and the Atlantic and St. Lawrence are progressing with the same work.

The burning of coke fuel and the oiling of roadbeds in summer to prevent annoyance caused by smoke, cinders, and dust, have proved highly successful as experiments, under the direction of the Boston and Maine Railroad. These improvements will be adopted by this railroad system at an early day.

The Legislature of 1899 passed an act authorizing the Concord and Montreal Railroad to construct a branch from some point on its Manchester and North Weare road to Milford. It runs from a point beginning near Grasmere station, through Goffstown, Bedford, Merrimack, and Amherst, to a junction with the Wilton and Fitchburg roads in Milford. The new track will be 18½ miles long, and, with the section of the North Weare branch below Grasmere junction, which is to be used to make a connection with the Manchester station, will make a road 23 miles in length. It will be opened for business in 1900.

The Legislature of 1899 granted special charters for 8 electric railroads, and authorized several extensions. The earnings of the five principal street railways for the year ending June 30, 1899, were \$328,565.80; all expenses, \$313,230.99.

Bureau of Labor.—It has been the purpose of the Bureau of Labor in its canvass of the summer boarding statistics to collect for the general information of the public the most reliable data possible. The following is a general summary of the summer business of 1899:

Capital invested in summer property, as listed for taxation, \$10,442,352. Number of different guests remaining one week or longer, 58,222; number of guests remaining less than one week, 95,706; total, 174,280. Number of male help employed, 3,297; female help, 9,057; total, 12,354. Total wages paid, \$539,901. Increase in number of guests over 1898, 8,093; increase in cash received at hotels and farmhouses over 1898, \$402,341.

Cash received from summer people, \$4,947,935;

from railroad fares (estimated), \$600,000; from stage fares, \$63,275.50; from steamboat fares on Lakes Winnepesaukee, Assquam, Sunapee, and Newfound, \$60,369.21; invested in buildings and properties for summer use, \$937,785; total volume of summer business and investments for 1899, \$6,609,364.71.

Agriculture.—The Board of Agriculture, composed of 10 members appointed by the Governor, has a general oversight of the agricultural interests of the State. Educational work has been carried on by means of holding annually a good-roads institute, field meetings, winter public meetings, and 16 farmers' institutes. It has also taken action in advertising the attractions of the State for summer homes, resulting in the occupancy of many farms for the purpose. Dairy and fertilizer laws are enforced. Arrangements for carrying into effect the first systematic observance of Old Home Week, under State supervision, were, at the suggestion of Gov. Rollins, directed from its office. About 50 gatherings in as many towns were held during the period fixed upon as Old Home Week—Aug. 26 to Sept. 1. The largest of these gatherings was in Concord, Aug. 31, where 30,000 persons assembled, coming from all sections of the country.

The Grange is a farmers' organization, composed of 260 local branches, containing 23,000 members, and is a permanent educational and social factor. Over 7,000 meetings were held in 1899.

There were held in the State in 1899 1 State, 16 county or district, and 60 town agricultural fairs.

Military.—This State has a well-equipped National Guard of about 1,300 officers and men, organized as a brigade of 3 8-company regiments of infantry, 1 4-gun light battery, 1 troop of cavalry, a signal corps, and a hospital corps. This force, in uniforms, equipments, drill, and discipline, conforms as closely as is possible to the regulations of the United States army. The quota of New Hampshire under the President's call of April 23, 1898, was one 12-company regiment, with a maximum of 84 and a minimum of 81 officers and men to a company. The Third Regiment National Guard was selected as the basis of the quota, and was designated the First Regiment New Hampshire Volunteers. It left Concord, May 17, with 1,009 officers and men. On May 25 the President called for 75,000 additional volunteers, and the State quota under this call was 318 men, who were promptly enlisted as recruits for the First Regiment. The regiment was stationed at Chickamauga until Aug. 26, when it returned to Concord, and was mustered out Oct. 12, having seen no active service.

Education.—A law, known as "the Grange law," was enacted which it is believed will materially advance the cause of education in the smaller and financially weaker towns. It provides for the annual distribution of \$25,000 from the treasury, as follow: \$18,750 is to be distributed among those towns whose valuation is less than \$3,000 for each child of the average attendance in the public schools of such towns the preceding year, in direct proportion to said average attendance, and in inverse proportion to valuation per child. (Sixty-two towns received such aid.) The remainder of the \$25,000, or \$6,250, is devoted to skilled supervision in the following manner: School boards of two or more towns or districts whose aggregate number of teachers is not less than 20 nor more than 60 may unite and organize, elect a superintendent, fix his salary, and determine and apportion his services. Such superintendent assumes the powers

and duties delegated by law to town superintendents, and has a general oversight, examination, and charge of the teachers in his union. He must hold a State teachers' certificate and devote his entire time to the work. When a union of towns or districts has been effected, and a superintendent has been employed and paid, then the State reimburses the towns in the union to the extent of half the amount so expended for supervisory purposes. The towns or districts entitled to State aid are those under \$2,000,000 of valuation each.

The State Library.—This library consisted of about 1,000 volumes in 1846, 7,000 in 1867, 36,000 in 1890, 49,000 in 1898, and 61,000 at present. About half this number consists of the law library and the reports and journals of the different States and of the United States; the other half, of a general reference library on all subjects. The trustees are prohibited by law from purchasing fiction and poetry, except as written by New Hampshire authors or printed within the State, in which cases they are of special interest to the institution. The collection of works illustrating the bibliography of New Hampshire is large and constantly increasing. The miscellaneous library is also strong in New England local history, genealogy, natural science, and sociology. The rate of increase is about 7,000 bound volumes each year, and as many pamphlets. The librarian is Arthur H. Chase, of Concord.

The Anti-Saloon League.—This is a branch of the American Anti-Saloon League, a temporary organization having been effected by Dr. H. H. Russell, superintendent of the American League, Feb. 1, 1899. Dr. P. S. McKillop was appointed superintendent to carry forward the work of agitation with a view to permanent organization. This was perfected in Manchester, March 14, 1899. The president is Rev. J. H. Robbins, and the secretary and treasurer, L. M. Robbins, both of Concord. Rev. P. S. McKillop, who remained superintendent until his resignation, June 30, held about 100 meetings, and sought to arouse a better public sentiment in towns visited, and to concentrate such awakened public sentiment in organized effort for the suppression of the liquor traffic. After his resignation the work was continued by the president with such help as he could secure from the pastors of the State. In November the Hon. M. J. Fanning, of Baltimore, Md., was made superintendent, and continued a vigorous campaign throughout the year.

The objects of the league are the maintenance of the prohibitory law upon the statute books, with improvements as may from time to time be found necessary, and the securing of its impartial enforcement.

Legislative Session.—The session of the Legislature began Jan. 4 and ended March 11, with 24 Senators (22 Republicans and 2 Democrats) and 359 Representatives. Thomas N. Hastings was President of the Senate, and Frank D. Currier, Speaker of the House.

Frank W. Rollins was inaugurated, Jan. 5, the fifty-fifth Governor of the State and the forty-sixth person to occupy the office. The following were declared to have been elected councilors: Sumner Wallace, Stephen H. Gale, George F. Hammond, Harry M. Cheney, Henry F. Green.

The Republican candidates for State officers—Edward N. Pearson for Secretary of State, Solon A. Carter for Treasurer, and Arthur E. Clarke for Public Printer—were also elected.

In all, 179 bills (public and private) and 43 joint resolutions were passed; no bill was vetoed.

Punishment by imprisonment in the State Prison not exceeding ten years, or by fine not exceeding \$1,000 and imprisonment not exceeding one year, is provided for any person knowingly having in his possession, for any purpose, burglarious tools or implements.

An act relating to the repairs of highways provides that each town shall be divided into highway districts, with a surveyor for each; that each town shall annually appropriate a prescribed sum for the repair of highways and bridges, to be expended under the supervision of the surveyors; that the selectmen may determine the prices of labor and materials; and that the highway surveyors shall make all repairs subject to the general direction of the selectmen. This act to be in force only in such towns as vote to adopt the same.

An act in amendment of existing laws concerning the "public printer and public printing" materially reduces prices of composition, presswork, and stock.

All payments and expenditures made by the Governor and Council in connection with the furnishing of troops in the war with Spain are ratified and confirmed and the Treasurer authorized to charge them to the account of the Spanish war, against such time as a settlement may be effected with the United States Government.

The State accepts the donation of \$10,000 from Hamilton Smith, of Durham, for the benefit of the New Hampshire College of Agriculture and the Mechanic Arts, with the conditions specified in the deed of gift.

Every plumber in any city (or town, under certain conditions) must, before he can prosecute his business, secure a plumber's license from a board of examiners, which license is to be paid for and recorded, and renewed every year.

Provision is made for the appointment of State and town liquor agents, with regulations for their conduct.

Verification of the books of depositors in savings banks must be made every four years, under stringent provisions.

Foreign insurance companies may not write policies except through resident agents, nor re-insure risks except as provided.

The width of wheel rims or fellies for heavy wagons is prescribed, the act to take effect Jan. 1, 1900. Violations of its provisions are subject to a fine not exceeding \$25.

Two commissions were appointed to represent the State at the Paris Exposition of 1900.

The sum of \$25,000 was appropriated to the Asylum for the Insane for new buildings for each of the years 1899 and 1900; a special appropriation of \$9,400 for the Industrial School; \$20,000 for a "Soldiers' Home fund," to cover the years 1899 and 1900; \$7,500 for the New Hampshire College of Agriculture and the Mechanic Arts for each of the years 1899 and 1900; \$10,000 annually for two years to Dartmouth College; and \$8,000 for special uses at the State Normal School. The State Prison is nearly self-sustaining through its manufactures.

Among other measures passed were these:

Relating to holidays.

Relating to registration of births, marriages, and deaths.

For the protection of fish and game.

To prevent the adulteration of candy.

For protecting bald eagles.

A new apportionment for assessment of public taxes.

For better protection of water supplies.

To prevent the desecration of national and State

flags. For the better protection of the colors of the State war regiments.

To regulate the practice of embalming.

A State highway was authorized to be laid out between Nashua and Manchester; also one between the State line at Salisbury Beach and Newcastle.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles. The population, according to each decennial census, was 184,139 in 1790; 211,149 in 1800; 245,562 in 1810; 277,426 in 1820; 320,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,035 in 1860; 906,096 in 1870; 1,131,116 in 1880; and 1,444,933 in 1890; by the State census of 1895, 1,672,942. Capital, Trenton.

Government.—The following were the State officers during the year: Governor, Foster M. Voorhees; Secretary of State, George Wurtz; Treasurer, George B. Swain; Comptroller, William S. Hancock; Attorney-General, Samuel H. Grey; Adjutant General, William S. Stryker; Superintendent of Public Instruction, Charles J. Baxter; Commissioner of Banking and Insurance, William Bettle—all Republicans. Chief Justice of the Supreme Court, William J. Magie, Republican; Associate Justices, Gilbert Collins, Republican; David A. Depue, Republican; Jonathan Dixon, Republican; Bennet Van Syckel, Democrat; Charles G. Garrison, Democrat; Job H. Lippincott, Democrat; William S. Gummere, Republican; George C. Ludlow, Democrat; Clerk, William Riker, Republican. Court of Errors and Appeals: Judges, J. W. Bogart, G. Krueger, Frederic Adams, W. H. Vredenburgh, Charles E. Hendrickson, and James H. Nixon. Chancellor, Alexander T. McGill.

Finances.—The income and disbursements of the State fund for 1898-'99 were as follow: Gross receipts, \$3,049,700.82; balance on hand Oct. 31, 1898, \$1,001,524.45; total, \$4,051,225.27; gross disbursements, \$2,798,071.85; balance in bank Oct. 31, 1899, \$1,253,153.42.

Payments were made during the year classed as "extraordinary disbursements," amounting to \$778,706.91, an increase over the preceding year of \$587,536.57, largely due to the expenditure of nearly \$400,000 for expenses incurred in aiding the United States to raise the volunteer army.

The "civil war debt" has been reduced by the payment of \$123,000, leaving a balance of \$71,000 of the "war debt," which falls due Jan. 1, 1902.

Valuation.—The assessed value of real and personal property taxable locally for all purposes for 1899 is as follows: Real estate, \$755,276,846; personal property, \$141,450,551; making the total, less the deductions for debts, \$864,516,527. The increase of the assessments of 1899 over those of 1898 shows a net gain of \$20,151,329. The total valuation of exempt property in the State for 1899 is \$97,096,589.

Corporations.—There were 1,945 corporations chartered and authorized to issue capital stock to the amount of \$3,500,000,000 in New Jersey during the fiscal year of the corporation department. Nearly 200 of these are each capitalized at \$2,000,000 and upward. Six hundred of them each have a capitalization of \$1,000,000 or more. Fifteen thousand corporations in every section of America are to-day operating under the laws of New Jersey. By the incorporating of these concerns, the State has legalized the issuance of stock aggregating nearly \$8,000,000,000. This year has witnessed the formation of more corporations in New Jersey than any other in the history of the State.

Banks.—The Legislature of 1899 changed the system of taxing bank shares by providing that "every person shall be assessed in the township or ward where he resides for all shares of the stock of any national bank in this State, or of any bank organized under the laws of this State, owned by him or in his possession or control as trustee, guardian, executor, or administrator; and in case said owner, trustee, guardian, executor, or administrator shall be a nonresident of this State, then and in that case such bank shall be assessed in the township or ward where said bank has its principal place of business, to the amount of such shares so owned or held by nonresidents as aforesaid in the manner now provided by statute in the case of other corporations, and except as aforesaid the property, real and personal, of such banks, shall not be subject to assessment or tax." This act apparently excludes the bank building and the real estate of the bank from taxation, and its constitutionality is likely to be passed upon by the Supreme Court in *certiorari* proceedings brought before it by the Mechanics' National Bank of Trenton.

Education.—The annual enrollment in the Normal School was, through the raising of the standard of admission, brought within the range of efficient management. The Model and Farnum schools each show an increased enrollment. The total annual enrollment was 1,455, or 5 more than last year. The Normal School graduated 273 students, all of whom are teaching. The average salary was \$40.66.

State Prison.—At the close of the fiscal year, Oct. 31, 1898, there were 1,228 inmates of the prison, against 1,131 a year before. The daily average for the year was 1,207. There were received under commitment during the year 640. There were received at the institution during the following year 478 felons. Of this number 445 males were received from the State courts, 22 females were received from the same source, 9 males were received from the Federal courts, and 2 males were returned from the insane asylums as cured. There were discharged during the year by the expiration of sentence 469 State prisoners and 99 United States prisoners.

Riparian Commission.—The commission, during a large part of the year, suspended the making of grants and other conveyances while it considered a change in the method of dealing with the riparian lands. Its receipts, therefore, were less than they would have been had the old policy been pursued. They report having received: From grants in fee, \$11,884.17; from leases, \$1,726; from licenses, \$710; from conversions, \$41,813.50; from rentals from leases, \$46,609.85; total, \$102,743.52. The State realized in all from the sale of its lands under waters about \$4,000,000 and from rentals therefor about \$1,000,000.

Sewerage Commission.—The Legislature created a State Sewerage Commission, and the following were appointed commissioners: William T. Hunt, president; John Hinchcliffe, treasurer; Charles A. Fuller, Charles T. Harrington, and David L. Wallace. The Legislature gave to the members a veto power upon new sewerage systems which they might deem injurious to the public.

Manufactures.—The following statement of leading manufactures having a capital invested of \$1,000,000 or more has been issued from the Bureau of Statistics. The results given are for 1898. Artisans' tools: 22 establishments; capital, \$2,317,144; product, \$1,529,630. Brewing: 26 establishments; capital, \$10,722,417; product, \$9,-

990,845. Brick and terra cotta: 45 establishments; capital, \$4,752,438; product, \$3,566,941. Chemical products: 22 establishments; capital, \$4,073,688; product, \$7,266,638. Cotton goods: 14 establishments; capital, \$1,642,500; products, \$2,062,493. Cotton goods (finishing and dyeing): 14 establishments; capital, \$4,449,400; product, \$6,640,930. Electrical appliances: 7 establishments; capital, \$1,692,000; product, \$1,534,969. Fertilizers: 10 establishments; capital, \$3,857,300; product, \$3,781,101. Food products: 9 establishments; capital, \$1,510,500; product, \$3,569,892. Foundry (iron): 24 establishments; capital, \$1,903,623; product, \$3,810,689. Furnaces, ranges, and heaters: 13 establishments; capital, \$2,184,437; product, \$3,493,282. Glass (window and bottle): 16 establishments; capital, \$2,654,440; product, \$3,225,205. Graphite products: 3 establishments; capital, \$1,134,300. Hats (felt): 36 establishments; capital, \$1,814,272; product, \$6,130,543. High explosives: 6 establishments; capital, \$1,488,735; product, \$1,433,750. Jewelry: 57 establishments; capital, \$2,651,107; product, \$4,587,405. Leather: 36 establishments; capital, \$2,994,653; product, \$8,249,889. Leather goods: 12 establishments; capital, \$1,021,000; product, \$1,819,004. Lamps: 7 establishments; capital, \$1,553,969; product, \$2,325,615. Machinery: 65 establishments; capital, \$8,790,070; product, \$10,431,775. Metal goods: 31 establishments; capital, \$3,191,794; product, \$4,398,335. Oilcloth (floor and table): 6 establishments; capital, \$1,975,000; product, \$2,574,426. Oils: 9 establishments; capital, \$13,969,270; product, \$27,071,024. Paper: 30 establishments; capital, \$2,255,200; product, \$3,627,503. Pottery: 22 establishments; capital, \$4,598,026; product, \$2,393,681. Rubber goods (hard and soft): 21 establishments; capital, \$3,359,794; product, \$6,057,748. Shoes: 40 establishments; capital, \$2,230,131; product, \$6,216,895. Shirts: 18 establishments; capital, \$725,100; product, \$1,811,099. Silk (broad and ribbon): 106 establishments; capital, \$18,663,609; product, \$37,042,215. Silk dyeing: 21 establishments; capital, \$1,692,773; product, \$4,279,859. Silver goods: 7 establishments; capital, \$1,263,400; product, \$1,021,203. Smelting and refining: 2 establishments; capital, \$2,500,000; product, \$18,958,000. Steel and iron (structural): 15 establishments; capital, \$1,786,500; product, \$3,256,964. Steel and iron (forging): 6 establishments; capital, \$2,180,900; product, \$2,314,801. Varnish: 10 establishments; capital, \$1,711,500; product, \$1,229,938. Watches, cases and materials: 8 establishments; capital, \$2,276,000; product, \$2,242,360. Woolen and worsted goods: 22 establishments; capital, \$5,764,066; product, \$6,818,752. Unclassified: 33 establishments; capital, \$4,043,110; product, \$3,316,299.

Labor Troubles.—Between Jan. 1, 1898, and Aug. 31, 1899, there were 34 strikes and lock-outs in the State, involving the labor of 5,257 men and 456 women. The number of idle days aggregated 1,751, and the loss in wages amounted to \$353,841. In 9 instances the strike was reported as successful, in 8 partly so, in 13 not successful, and 2 were unreported.

Vital Statistics.—The State Board of Health reports that the number of births in New Jersey during the last fiscal year was 34,687; the number of marriages, 13,664; the number of deaths, 28,033; the number of stillbirths, 2,083. This was an increase over the fiscal year of 1897 of 3,092 in births and 52 in stillbirths, and a decrease for the same period of 4,507 in marriages and 1,799 in deaths. The falling off in the marriages was due to the marriage license law, which

stopped the hasty marriages in Camden and some other points bordering on other States.

Insane.—This year 272 patients were admitted to the hospital at Morris Plains and 206 were discharged; 267 were sent to the hospital at Trenton, and 216 discharged therefrom. The total number under treatment during the year was 1,508 in the former and 1,386 in the latter.

National Guard.—The National Guard as re-organized consists of 4 regiments of infantry, of 12 companies each, 2 troops of cavalry, 2 field batteries of artillery, organized into 2 brigades, each brigade to consist of 2 regiments of infantry, 1 troop of cavalry, and 1 field battery of artillery. One signal corps, to be attached to division headquarters.

Political.—The Republican members of the Legislature on Jan. 10 nominated John Kean for United States Senator, to succeed James Smith (Democrat) for the six-year term beginning March 4. The two houses met on Jan. 24 and voted separately, the result being: Senate—Kean 14, Smith 7; House—Kean 37, Smith 22. On Jan. 25 the joint session confirmed the ballot of the day previous and declared Mr. Kean elected.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; and 153,593 in 1890. Capital, Santa Fe.

Government.—The following were the Territorial officers: Governor, Miguel Antonio Otero; Secretary, George H. Wallace; Treasurer, J. H. Vaughn; Auditor, L. M. Ortiz; Adjutant General, William H. Whiteman; Solicitor-General, E. L. Bartlett; Superintendent of Public Instruction, Manuel C. de Baca; Mine Inspector, J. W. Fleming; Chief Justice of the Supreme Court, William J. Mills; Associate Justices, Frank W. Parker, Jonathan W. Crumacker, John R. McFie, and Charles C. Leland; Clerk, José D. Sena.

Finances.—From November, 1896, to June, 1899, the revenues of the Territory amounted to \$287,046.96. This amount does not include the following items: Proceeds of capital rebuilding bonds, \$73,125; proceeds of Insane Asylum bonds, \$30,000; money borrowed to complete payment of interest coupons under section 2607, Compiled Laws of 1897, \$51,600; United States annual appropriation for Agricultural College, \$47,000. The principal items of revenue are: Taxes, \$252,425.60; cattle indemnity fund, \$12,000; fees paid by district court clerks, \$7,820.79.

The expenditures for the same period are given as \$347,315.15, exclusive of the following items: United States annual appropriation for Agricultural College, \$47,000; paid notes given for the interest fund, \$23,600. The principal items of expenditure are: Interest funds, \$86,142.50; Territorial Institutions, \$42,459.19; Penitentiary, \$40,035.05; capital rebuilding fund, \$34,323.86. The Territorial debt, June 30, 1899, was \$1,243,400. The total indebtedness of the counties, June 30, 1899, was \$2,997,665. There has been paid to the several Territorial institutions during the past two years as follows: University, \$23,180; Agricultural College, \$9,404.57; Insane Asylum, \$59,189.03; School of Mines, \$8,655; Military Institute, \$9,700; Silver City Normal School, \$9,033; Las Vegas Normal School, \$9,318; total, \$128,479.60.

Valuation.—The assessed valuation of the Territory, 1898, is reported as \$40,124,724.79, as against \$39,478,119.18 in 1897, and \$36,091,192.48 in 1896. The rate of taxation, 1897, was 10.80 mills, as against 7.75 mills in 1896.

Education.—In 1898 the amount raised for schools was \$182,172.18; the number of teachers was 541; the average daily attendance for each school was 30 pupils; the average daily attendance for the Territory was 16,558 pupils; and the average number of months taught was five.

There are in successful operation the following Territorial institutions: The Agricultural College, at Las Cruces, with two substations, one at Las Vegas and one at Aztec; the University of New Mexico, at Albuquerque; the School of Mines, at Socorro; the Normal University, at Las Vegas; the Normal School, at Silver City; the Military Institute, at Roswell; and the School for the Deaf, Dumb, and Blind, at Santa Fé. These institutions during the last past school year have had 405 students. The Catholic Church has 18 schools in operation, attended by 1,602 pupils, employs 72 teachers, and has school property to the value of \$231,700. The Methodist Church supports 11 schools, attended by 462 pupils, and has school property valued at \$10,000. The New West Educational Commission supports 5 schools, attended by 219 pupils, employs 7 teachers, and has school property to the value of \$44,000. The Presbyterian Church supports 25 schools, attended by 1,105 pupils, employs 25 teachers, and has school property to the value of \$37,000. The total average daily attendance for the Territory is 20,273 pupils, counting all educational institutions.

The New Mexico Military Institute was first opened for students in September, 1898. It is at Roswell, 3,700 feet above the level of the sea. It receives about \$12,000 annually from the Territory, and during the session of 1898-'99 earned \$9,500 additional in tuition fees, enrolling 105 cadets.

Penitentiary.—The number of inmates during the past two years varied but little. Its highest number in 1897 was 215, and its highest number in 1898 was 222.

Insane Asylum.—The number of patients remaining at the asylum Nov. 1, 1896, was 59—36 males and 23 females. There were admitted during the two years 37 patients—23 males and 14 females, who, added to the 59 patients remaining in the institution Nov. 1, 1896, made a total of 96.

Irrigation.—The improved systems of irrigation are developing rapidly. The Springer system of irrigation is in operation, with 50 miles of ditches and 5 reservoirs, covering 22,000 acres. The Vermejo system of irrigation, which controls 57 miles of ditches and 10 reservoirs, supplies 30,000 acres. In the northwestern portion of the Territory there are 200 miles of ditches, watering 24,000 acres. Here are several tracts of fertile soil, accessible to streams that will afford an ample water supply. Also extensive ditch systems are in operation in the Mimbres region of Grant County.

Railways.—There were 290 miles of new railroad constructed within the Territory during the year by the following companies: El Paso and Northeastern, 152; Pecos Valley and Northeastern, 100; Alamogordo and Sacramento Mountain, 20; Atchison, Topeka and Santa Fé, 18.

Arrangements are being made for a new railroad to be constructed from Las Vegas through the Mora valley to Taos, 100 miles. A company has also been organized for constructing a new railroad from Durango, in Colorado, through San Juan County, New Mexico, to Albuquerque or Gallup.

State Capitol.—Senator Elkins introduced a bill in the United States Senate to authorize the

New Mexican Territorial Legislative Assembly to contract a debt not exceeding \$30,000, for completion and furnishing of the Territorial Capitol, at Santa Fé.

Statehood.—In the annual report, 1899, of Gov. Otero to the Secretary of the Interior, the Governor estimates the population at 285,829, and makes an urgent appeal for statehood. He says: "Our assessed value for taxation has increased, and it is now more than \$40,000,000, and constantly growing, while the population, owing to immigration, is also increasing rapidly. New Mexico sold more than 18,000,000 pounds of wool this year, which is 3,000,000 pounds more than ever before in her history, while her mines of copper and gold are being developed in a manner never before known. More capital has been invested in their development during the past year than previously."

Political.—The Territorial Legislature has 6 Democrats and 30 Republicans in the two branches.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each decennial census, was 340,120 in 1790; 589,061 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; and 5,997,853 in 1890. According to a State census taken in 1892, the population was 6,513,344, and according to an estimate made at the close of 1899 the population was 7,100,000. Capital, Albany.

Government.—The following were the State officers during the year: Governor, Theodore Roosevelt, Republican; Lieutenant Governor, Timothy L. Woodruff; Secretary of State, John T. McDonough; Comptroller, William J. Morgan; Treasurer, John P. Jaeckel; Attorney-General, John C. Davies; State Engineer and Surveyor, Edward A. Bond; Superintendent of Public Instruction, Charles R. Skinner; Superintendent of Insurance, Louis F. Payn; Superintendent of Banking Department, Frederick D. Kilburn; Superintendent of State Prisons, Cornelius V. Collins; Superintendent of Public Works, the vacant office was filled early in January by the appointment of John N. Partridge; Commissioner of Labor Statistics, John T. McDonough, who was succeeded on Jan. 23 by John McMackin; Railroad Commissioners, Ashley W. Cole, George W. Dunn, and Frank M. Baker; Chief Judge of the Court of Appeals, Alton B. Parker; Associate Judges, John C. Gray, Denis O'Brien, Celora E. Martin, Edward T. Bartlett, Albert Haight, and Irving G. Vann.

Finances.—The State Treasurer reported a balance of \$3,973,804 in the treasury on Oct. 1, 1899, compared with \$1,654,225 on Dec. 31, 1898. The receipts for the fiscal year ending Sept. 30 were \$25,837,136, which, with the balances of the preceding year, gave a total of \$29,810,941. The total payments amounted to \$25,306,126, leaving a balance in the treasury of \$4,505,814. The present valuation of the State is \$5,076,396,824. The amount received for corporation and organization taxes was \$2,741,318. The amount in 1898 was \$2,497,247, showing an increase of \$244,071. The amount received for tax on inheritance was \$2,194,612, an increase of \$197,402. The amount received from the Excise Department was \$4,231,278, an increase of \$15,417. The State tax rate was 2.49, compared with 2.08 for 1898 and 2.67 in 1897. This increase is considered due to the fact that in 1898 there was a large surplus of the Raines law revenue. It is distributed as follows: Gen-

eral, including care of insane, 1.26; school, 0.81; canal maintenance, 0.18; canal, payment of debt, 0.13; canal, new work, 0.04; canal, extraordinary expenses, 0.07; total tax levy, 2.49 mills. This tax is on an estimated valuation of \$5,076,396,824, and will realize the following sums: General purposes, including care of the insane, \$6,396,200; for free schools, \$4,111,881; maintenance and ordinary repairs of the canals, \$913,751; new work on the canals, \$203,055; canal debt, \$659,931; extraordinary canal expenses, \$355,347; total, \$12,640,228. The revenues from indirect sources for the year are estimated at \$14,600,312.

Valuation.—According to a report issued by the Comptroller, showing the assessed valuation of real and personal property in the counties of the State, as returned to his office by boards of supervisors for 1899, the total valuation of real and personal property was \$5,562,204,198, as compared with \$5,186,635,964 in 1898, an increase of \$375,568,234. The total value of real property was \$4,813,779,260, as compared with \$4,419,918,435 in 1898, an increase of \$393,860,825. The total personal property was \$748,424,938, as compared with \$766,617,529 in 1898, a decrease of \$18,192,591. The total valuation of real estate in New York County was \$2,178,605,905, an increase of \$322,137,982. The personal property was \$490,482,930, a decrease of \$18,539,519. In Kings County the value of the real estate was \$669,822,267, an increase of \$99,714,525, and of personal property \$45,270,713, an increase of \$11,581,992. In Nassau County the real estate was \$21,176,703, an increase of \$1,356,041, and the personal property \$1,530,260, a decrease of \$44,620. In Richmond County the real estate was \$40,264,692, an increase of \$15,893,141, and the personal property \$3,838,890, an increase of \$2,210,181. The other larger counties of the State show the following: Queens, valuation of real estate, \$103,752,600, an increase of \$21,162,057; valuation of personal property, \$6,314,032, an increase of \$4,306,232. Albany, valuation of real, \$91,066,799, a decrease of \$46,068; personal, \$9,562,940, a decrease of \$295,880. Rensselaer, valuation of real, \$71,302,808, a decrease of \$45,899; personal, \$7,551,432, a decrease of \$405,499. Monroe, valuation of real estate, \$137,058,462, an increase of \$355,977; personal, \$10,217,432, a decrease of \$3,030,068. Onondaga, valuation of real, \$103,248,842, an increase of \$1,002,462; personal, \$15,124,626, an increase of \$1,239,609. Oneida, valuation of real estate, \$56,815,559, a decrease of \$5,169,032; personal, \$13,163,598, a decrease of \$92,739.

Legislative Session.—The one hundred and twenty-third session of the Legislature began on Jan. 4, 1899, and continued until April 28. As elected, the Senate consisted of 27 Republicans and 23 Democrats, and the Assembly of 87 Republicans and 63 Democrats.

Timothy E. Ellsworth was continued as President *pro tem.* of the Senate, and Samuel F. Nixon was chosen as Speaker of the Assembly. The Legislature passed 900 bills, of which 471 were approved by the Governor.

Among the more important measures enacted were the following, which were approved by the Governor:

Changing the title of the office of Capitol commissioner to State architect.

Providing that the highest rank on the Governor's staff shall be colonel.

Amending the insurance law by providing that the provisions of that act pertaining to the making of special deposits by domestic life insurance companies with the State Superintendent of Insurance and the registration of insurance com-

panies and annuity bonds of such corporations by the State Insurance Department shall apply to life insurance corporations organized on the stipulated premium plan.

Amending the insurance law by providing that companies operating on the stipulated premium plan shall maintain upon all their outstanding policies or certificates a reserve fund of not less than one annual net premium for a one-year term insurance computed upon the actuaries' table of mortality, with interest at 4 per cent. per annum, at the last age attained prior to the date of the valuation.

Permitting casualty insurance companies to engage in the business of insuring mercantile credits.

Providing for the appointment of an additional State race-track inspector to superintend the collection of the racing fees required by law from the trotting clubs that conduct race meets in the eastern district of the State.

Authorizing the levy of a State tax of 0.07 of a mill for extraordinary repairs to the canals, and authorizing the Comptroller, in anticipation of that tax, to borrow \$350,000.

Extending the period from two weeks to one month for the service of notices of tax collectors.

Amending the act taxing the transfers of property by providing that an appraisal of such property shall be made at its market value at the time of the transfer.

Providing that a certificate of a United States census officer as to the population of any political division of the United States shall be received as *prima facie* evidence in the courts of this State.

Prohibiting justices of the peace from holding court in a room where liquor is sold or in an adjoining apartment. The present law prohibits holding such courts in a building where liquor is sold.

Amending the State factory law providing for 50 deputy factory inspectors, of whom 10 shall be women, and for the better protection of employees in buildings used for manufacturing.

Providing that the filing of a certificate of consolidation of two companies with the Secretary of State shall be *prima facie* evidence in certain actions.

Exempting from jury duty licensed engineers of steam boilers.

Authorizing the Governor to remove county treasurers on charges, after due hearing has been given to the accused.

Amending the civil code relative to the discharge of a judgment against a bankrupt discharged from his debts.

Amending the penal code making it a misdemeanor for any person to sell air or spring guns to any person under twelve years of age.

Amending the code of civil procedure to allow correspondents in divorce suits to appear and defend themselves.

Providing that all moneys and jurors' fees forfeited shall be transferred and applied to the fund of the city or county from which they were taken on or before March 1.

Providing that justices of the peace shall keep docket books.

Amending the transportation corporation law to allow any company organized for the purpose of using electricity in cities, except in cities of the first class, to acquire its additional power of supplying steam to consumers from a central station or stations through pipes laid in the public streets of the cities, towns, and villages within this State.

Providing that no person shall be eligible to the office of justice of the municipal court after

March 1, 1899, unless he is a resident of the district for which he is elected or appointed or has heretofore served as a justice in such court.

Authorizing Supreme Court and county court judges to extend upon application of a lienor a mechanic's lien for a period of six months.

Providing that town clerks shall be among the persons designated to grant burial permits.

Amending the village law relative to imprisonment for nonpayment of penalties.

Amending the public-health law relative to the protection of potable water supplies.

Prohibiting the pollution of the waters of the Grass, Racquette, St. Regis, and Deer rivers, St. Lawrence County.

To prevent the adulteration of feeding stuffs, and providing for the official analysis and labeling of them.

Amending the State agricultural law by providing that boiled or process butter shall be branded with the words "renovated butter."

Providing for the branding of such as "process butter."

Providing that the canvass of the votes of soldiers and sailors absent at war shall be made on the seventh Tuesday after election.

Giving to Grand Army posts the control of public funds to be distributed to indigent veterans and their families.

Authorizing the city of Buffalo to pay the salaries of its employees while they are absent as soldiers during the war.

Authorizing State departments and institutions to pay salaries of employees while they are in the volunteer service of the United States.

Allowing veterans to sell at auction without a license.

Providing that beets raised and sold pursuant to the provisions of the State sugar-beet culture law shall be weighed by agreement of the buyer and seller at the station of shipment, the expenses to be paid by the buyer.

Authorizing town boards to make appropriations not to exceed \$500 in any one year for the erection of soldiers' and sailors' monuments.

Authorizing the Governor to appoint a commission of nine persons to have charge of the New York State exhibit at the Pan-American Exposition to be held in Buffalo in 1901.

Appropriating \$20,000 for continuation of work on the topographical map of the State.

Authorizing the acquisition of Watkins Glen by a commission appointed by the Governor.

Appropriating \$75,000 for the participation of the State in the Dewey reception.

Providing for the branding of all packages of fertilizers with weight, chemical composition, etc.

Repealing the law that required that all windows in tenement houses should be equipped with guards to prevent persons from falling out.

Providing for the licensing of all buildings or tenements used for manufacturing, and for the tagging of sweat-shop-made goods from other States.

Amending the banking law relative to co-operative building and loan associations, so that they may sell installment shares as a basis for making loans or advances on which the maximum number of payments may be definitely fixed.

Providing that any person who shall sell tickets for the benefit of any humane, benevolent, or charitable organization without obtaining the consent of its officers, or for any nonexistent organization of that character, shall be guilty of a misdemeanor; and making it a misdemeanor to interfere with any life-saving apparatus to the extent of damaging it.

Amending the stock-corporation law to provide that a domestic railroad corporation may increase or reduce its capital stock in the manner herein provided, notwithstanding any provision contained herein or in any general or special law fixing or limiting the capital stock that may be issued by it.

Amending the forest-preserve and land-purchase act to permit part payments to landowners releasing lands to the State under certain conditions to be imposed by the forest-preserve board.

Authorizing the United States Government to purchase in any city of this State one or more pieces of land, not exceeding two acres in extent, for the erection of a Government building.

Extending for five years from Dec. 31, 1899, the time allowed for the completion of all railways that have acquired one third of their right of way.

Authorizing the State Engineer and Surveyor to make a survey of Seneca lake and its outlet.

Repealing the bill of 1898 providing for the payment of bounties for the seizure of illegal fish nets.

Amending the fisheries, game, and forest law relative to the possession of quail killed on Long Island.

Providing that the section of the game law prohibiting the killing of meadow larks shall apply to Long Island, as it hereafter has to other parts of the State.

Authorizing the use of floating devices for shooting web-footed wild fowl in Gardiner's Bay, Long Island.

Amending the game law, providing that hares and rabbits shall not be hunted or possessed, except in that portion of Long Island embraced within the territory of Greater New York, except from Nov. 1 to Dec. 31.

Providing that in the counties of Alleghany, Livingston, Wyoming, Erie, Sullivan, Oneida, Orange, Schoharie, Montgomery, Fulton, Hamilton, Albany, Greene, Ulster, and Columbia hares and rabbits shall not be hunted or possessed except from Sept. 1 to Dec. 15 following, and prohibiting the use of ferrets in those counties.

Authorizing the distribution of \$98,000, collected from racing associations, among the organizations specified in the State agricultural law.

Providing for the better protection for bees from the disease known as foul brood.

Providing that fish shall not be caught for five years in the streams in Franklin and Clinton Counties that flow into the Chateaugay lakes.

Prohibiting fishing for pickerel, pike, perch, and bullheads through the ice of Loon lake, Steuben County.

Prohibiting the killing of partridge, woodcock, and quail in Rensselaer County until Sept. 1, 1903.

Prohibiting the transportation of more than 12 pounds of trout caught within the State to any point without the State.

Prohibiting until 1903 the catching of fish in East brook, West brook, Indian brook, and Finkle brook, Warren County.

Amending the fish and game law to provide as follows: "No salt-water striped bass less than 8 inches in length shall be intentionally taken from any of the waters of this State nor possessed; nor shall any person fish for or take any striped bass from the Hudson river with a net of any kind between the thirty-first day of March and the first day of July."

Amending the game law to allow the owner of any inclosed farm lands to kill hares and rabbits thereon at any time.

Amending the bass law to allow fishing in Jefferson County to begin June 9.

Also the following local measures for New York city were enacted:

Prohibiting the police from membership in a political organization.

Amending the New York building law relative to projection of buildings on the street.

Authorizing an additional appropriation by New York city of \$40,000 for the American Museum of Natural History.

Amending the Greater New York charter in relation to appropriations for charitable, eleemosynary, correction, or reformatory institutions.

Increasing the salaries of the New York city school-teachers.

Amending the charter of Greater New York relative to the consolidation of volunteer fire departments, and providing that on June 1 of each year in the borough of Richmond the treasurer of each engine company shall receive \$1,200, the treasurer of a hook-and-ladder company \$1,000, and the treasurer of a hose company and a patrol company \$1,000 each.

Authorizing a change in the plans of the East River Bridge.

Authorizing New York city to allow the present sheriff of the county such legal expenses as he may be put to, not exceeding \$5,000 a year, for three years after the expiration of his official term.

To place police matrons in Greater New York on the same plane as patrolmen as eligible for pensions.

Empowering the Municipal Assembly of New York city to regulate the use of every building now used, or hereafter to be used, as a hotel, in so far as the use thereof may involve the safety of the inmates in case of fire.

For the office of United States Senator to succeed Edward Murphy, Jr., Democrat, the nominees were Chauncey M. Depew by the Republicans and Edward Murphy, Jr., by the Democrats. A joint session was held on Jan. 18, when the vote was as follows: Depew, 111; Murphy, 83.

An extra session of the Legislature was convened on May 22, and continued until May 27. This session was called by the Governor for the purpose of preparing a substitution franchise-tax bill in place of the bill introduced in the Legislature, which he found to be defective. His message said: "I recommend the enactment of a law which shall tax all these franchises as realty, which shall provide for the assessment of the tax by the Board of State Tax Commissioners, and which shall further provide that from the tax thus levied for the benefit of each locality there shall be deducted the tax now paid by the corporation in question." An amended bill was duly passed, as well as one authorizing the expenditure of \$75,000 for the celebration of the return of Admiral George Dewey.

The Mazet Inquiry.—In consequence of a resolution introduced in the Assembly on March 29, declaring that it is "currently reported and generally believed that in the city of New York funds are being raised by levy upon the members of the police force, saloon and resort keepers, and by other contributions, for use in corruptly influencing legislation; that there is a lax enforcement of the laws in said city and in the counties included in said city; that corrupt and tyrannical methods have been resorted to in the enforcement of the same; and that the public funds of said city are being wasted in extravagant increases of official salaries and in other ways," a committee, consisting of Robert Mazet, chairman, Edward

H. Fallows, Benjamin Hoffman, Thomas M. Costello, Anthony J. Boland, Harris Wilson, and James B. McEwan, was appointed to investigate the said reports and charges, and all matters and things pertaining thereto. The commission convened in New York city on April 8, and, after selecting Frank Moss, John P. Clarke, and Francis E. Laimbeer as counsel, began their work by hearing witnesses in regard to the working of the Police Department. Nearly every branch of the municipal government received their attention, and many witnesses were heard, including Richard Croker. The failure of the commission to call Republican leaders before them led to the suggestion that the investigation was organized for partisan purposes. The report of the counsel was given to the public on Dec. 25, and early in 1900 a full report with testimony was submitted to the Legislature. The recommendations of the commission, as remedies for the existing abuses, are embodied in the following bills, which were introduced into the Legislature:

1. "To authorize the appointment of a commission to inquire into the local government of the city of New York and the charter thereof, and suggest legislation thereon." This bill provides that within thirty days after its passage the Governor shall appoint 11 persons as a commission to revise the charter, and said commission shall report to the Legislature by Jan. 15, 1901. The commission to have power to employ assistants, subpoena witnesses, books, and papers, to be given the power of a legislative committee, and the provisions of the code of civil procedure as to contempts made to apply to it.

2. "To amend section 410 of the Greater New York charter in relation to the Board of Public Improvement and the powers of borough presidents as members thereof." This bill confers upon the borough presidents power to vote on all matters in the Board of Public Improvements.

3. "To amend section 471 of the Greater New York charter in relation to the restriction on the power of the Commissioner of Water Supply to contract for the supplying or selling of water for public or private use or consumption." The bill requires the Commissioner of Water Supply before making any water contract to lay the full contract before and obtain the approval of the Board of Public Improvements, the Board of Estimate and Apportionment, and three fourths of all the members elected to the Municipal Assembly.

4. "To repeal chapter 942 of the laws of 1896, entitled 'An Act in relation to the supply of pure and wholesome water in certain counties of the State.'" This bill repeals the law under which the Board of Supervisors of Suffolk County can prevent the city from getting water in that county.

5. "To amend section 1528 of the Greater New York charter in relation to the printing of lists of officials in the City Record." This bill provides for the printing in January and July of a full list of all city employees, with their offices, residences, time of service, and salaries, and increase or decrease thereof, and provides that until such information is given to the supervisor of the City Record the head of the department offending shall not be paid his salary.

6. "To amend the Greater New York charter by repealing section 1527 thereof, relating to the publishing in the City Record of the registry of voters." As the election law now requires the Board of Police to publish in pamphlet form the registry, the retention of this section in the charter means an unnecessary duplication of work.

7. "To amend section 821 of the Greater New

York charter, relating to the regulation of the construction of piers and docks." This bill requires the Dock Board to purchase its tools, supplies, and material after public advertisement at public letting to the lowest bidder, as other departments are required to by sections 419 and 420 of the charter.

8. "To amend section 854 of the Code of Civil Procedure, in relation to compelling the attendance and testimony of a witness." This bill extends to a legislative committee sitting during the session or after the adjournment of the Legislature the power to invoke the prompt aid of the courts of record in aid of its process and authority.

Banks.—These are under the supervision of a State superintendent, who is appointed for three years and receives a salary of \$5,000. The incumbent during the year was Frederick D. Kilburn, whose term of office expired on May 9, and who was then reappointed to serve until 1902. His report for the year ending Sept. 30 shows that 7 new banks were organized in the year, with an aggregate capital of \$300,000. Four State banks were merged with other State institutions, one was converted into a national bank, another was merged with a national bank, and one went into liquidation. The aggregate capitalization of the 7 institutions which thus ceased to do business as State banks was \$1,193,500. There was a total increase of \$600,000 in the capital stock of 2 banks. The aggregate capital of the discount banks on Sept. 30, 1899, was \$29,545,700, a net decrease of \$293,500. The total resources of the institutions under the supervision of the department are as follow: Banks of deposit and discount, Sept. 20, 1899, \$372,982,538; savings banks, July 1, 1899, \$968,978,167; trust companies, July 1, 1899, \$722,356,523; safe-deposit companies, July 1, 1899, \$5,203,224; foreign-mortgage companies, Jan. 1, 1899, \$12,716,773; building and loan associations, Jan. 1, 1899, \$64,746,636; total, \$2,146,983,861; increase over 1898, \$322,434,231. The resources of the savings banks increased \$45,500,000 from January to July, which nearly equals the gain made by them during the entire year 1898, and the number of open accounts was augmented by more than 65,000 in the same time, whereas the increase in 1898 was 60,000. He also called attention to the fact that many startling disclosures had been made regarding extravagance in management and fraudulent operations of men who make a business of acquiring control of building and loan associations only to plunder and wreck them.

Insurance.—The insurance interests of this State are under the charge of a superintendent, who receives \$7,000 a year and holds office five years. The incumbent in 1899 was Louis F. Payn, whose term of office expires on Feb. 11, 1900. His report for 1898 shows that 185 fire, fire-marine, and marine insurance companies were doing business in the State, whose total assets were \$301,168,040, an aggregate increase of \$15,248,834. Their liabilities were \$133,840,776, an increase of \$4,627,288. The risks of these companies in force was \$20,216,898,434. The receipts were \$140,019,261; disbursements, \$132,338,978, an excess of \$7,680,282. The disposition of the receipts were: \$137,045,777 received in premiums, \$80,447,509 paid for losses, \$52,225,189 for expenses, and \$7,163,782 for dividends. The fire premiums received were \$19,864,031; fire losses paid, \$10,041,904; fire losses incurred, \$11,312,776. The amount of fire risks written in 1898 was \$3,830,230,868, as against \$3,625,411,110 in 1897, an increase of \$204,819,758. The amount of marine and inland

risks written in 1898 was \$539,231,482, as against \$507,118,954 in 1897, an increase of \$32,112,528. A statement of the income of the department shows: Total receipts, five years, \$999,551; received from foreign companies, \$839,288; received from New York State companies, licensed agents, and individuals, \$22,636; examination of companies and appraisal of property, \$137,586; total, \$999,551. Excess of receipts over expenses for the year was \$86,502.

Excise.—The collection of the excise dues is under the charge of a commissioner, who serves five years and receives a salary of \$5,000. The incumbent during the year was Henry H. Lyman, whose term of office expires on April 1, 1901. His report for the fiscal year ending Sept. 30, 1899, shows the total collections to have been \$12,643,593, and the Treasurer's fees to have been \$61,344, leaving a net balance for the fiscal year of \$12,582,248. Of this amount the State's share was \$4,231,231, and the cities' and towns' share \$8,351,017. The report further shows a large increase of business in every branch. Excise litigation included 453 legal proceedings, 361 of which pertain to the fiscal year. Many decisions have been made by the courts sustaining important and essential provisions of the law. More criminal convictions were secured under the law than in any previous year. Slot-machine gambling received special attention, and the efforts of the commissioner to rid the State of this nuisance from places selling liquor have been uniformly successful and satisfactory. The statistics of arrests for drunkenness and public intoxication show a decrease compared with previous years under the present law or under operation of the old excise law. This decrease since 1895 is 12,000, or 14 per cent., the percentage being a little less than the percentage of decrease in drinking places.

Health.—The account of vital statistics is under the supervision of a Board of Health, composed of Dr. S. Case Jones, President; Dr. Baxter T. Smelzer, Havana, Secretary; Owen Cassidy, Dr. Frederick W. Smith, Dr. William T. Jenkins, and Walter F. Wilcox, together with the Attorney-General, the State Engineer, and the Health Officer of the Port of New York, *ex officio*. The report for 1898 says 129,972 deaths have been reported, which is 3,894 more than in 1897. The delayed returns, not reported, numbered 733, making the death rate per 1,000 of population 18.10, the average of the past ten years being 18.25. The death rate of the maritime district was 20, against 18.90 in 1897, there having been about 3,500 more deaths. The infant mortality (under five years) was greater by 2,300 than in 1897, though relatively decreased, constituting 30.2 per cent. of the total, against 32.5 last year, and an average of 33.5. The zymotic mortality constituted 13.6 per cent. of the total, against 14 last year, and an average of 17.5. The decrease is confined to the urban communities. The number of deaths attributed to acute respiratory diseases was 16,350; consumption, 13,000; diarrheal diseases, 8,500; diphtheria, 2,612; grip, 2,500; typhoid fever, 1,810; whooping-cough, 1,155; measles, 837; scarlet fever, 825; cerebrospinal meningitis, 700; and malarial diseases, about 400. In connection with diphtheria the great decrease in mortality from this disease during the past three years, from 6,616 deaths in 1894 to 2,612 deaths in 1898, is noted. During 1898 the examination and tuberculin test of 1,874 cattle, of which 192 have been condemned and 64 of that number have been destroyed, was reported.

Education.—This department is under the supervision of a superintendent, whose term of

office is three years and who receives a salary of \$6,000. The incumbent during the year was Charles R. Skinner, whose term of office will expire on April 6, 1901. His report shows that the number of children of school age was 1,550,079 (an increase of 31,271), of which number 510,173 were outside of the cities. The number of children attending school was 1,179,351, of whom 458,819 live outside of the cities. There are 1,001 private schools in the State, an increase of 100. The number of children attending private schools was 161,708, an increase of 80,260. There were 33,992 teachers employed during the year, 17,876 of this number teaching outside of the cities. The increase in the number of teachers employed was 919. The average annual salary of teachers outside of the cities was \$318, and in the cities \$771. During the year \$16,484,646 was expended for teachers' salaries, an increase of \$1,328,368. Of the amount expended, \$11,534,571 was in the city schools and \$4,950,075 in those of the country districts. The total expenditures during the school year of 1899 were \$28,052,999, a decrease of \$422,881. The expenditures in the cities were \$20,854,544, a decrease of \$360,529, and in the country districts \$7,198,445, a decrease of \$62,351. The net decrease in the total amount of money expended for school purposes is caused by a falling off in the moneys expended for new building sites, furniture, and repairs. In 1898 \$8,611,548 was expended for such purposes, while in 1899 but \$6,417,915 was expended. This, combined with a decrease of \$23,269 in the expenditures for libraries, more than offsets the increase of \$1,328,368 in teachers' salaries, and produces the net decrease of \$422,881. On May 12 the superintendent made the following public offer: "I hereby offer, in behalf of the State of New York, free tuition in our State normal schools to 48 men and women of Cuba and Puerto Rico (24 from each island) who are willing to attend these institutions not less than two years for the purpose of fitting themselves for teaching, pledging that they will return to the islands and devote at least five years to active service in the public schools."

The annual report of the State Board of Regents shows that there were 31,499 students in 1899 in New York colleges, professional, technical, and other special schools, compared with 69,776 in New York high schools and academies. Also that there has been during the past year a decided advance in the standards of business education in New York State, and largely on account of the movement in this State there has been also a distinct increase in the interest taken in business education in other States.

Charities.—The charities are under the care of a board, whose annual report is prepared from the sworn statements filed by the treasurers or other responsible officers of the charitable institutions, societies, and associations subject to the board's supervision. William R. Stewart is president of the board. Subject to the provisions of the State charities law are 12 State charitable institutions, 8 schools for the deaf, 1 for the blind, and an institution for juveniles, mainly supported by State appropriations, and more than 1,000 other institutions, societies, and associations under private control, including hospitals, homes, dispensaries, orphan, and other asylums, reformatories, day nurseries, and general and special relief societies. The beneficiaries of these institutions aggregate more than 2,500,000, and the expense of their maintenance amounts to nearly \$22,000,000 annually. The number and classification of beneficiaries in institutions Oct. 1, 1898, were: Aged and friendless persons, 6,627;

almshouse inmates, 11,788; blind, 723; deaf, 1,721; dependent children, 31,090; disabled soldiers and sailors, 1,354; epileptics in almshouses, 193; epileptics in Craig Colony, 322; hospital patients, 9,622; idiotic and feeble-minded in almshouses, 1,085; idiotic and feeble-minded in State institutions, 1,288; juvenile offenders, 3,514; inmates of reformatories, 1,686; total, 71,013. The number of idiotic and feeble-minded of both sexes in idiot asylums is: Syracuse State Institution for Feeble-minded Children, 540; New York State Custodial Asylum for Feeble-minded Women, at Newark, 406; Rome State Custodial Asylum, at Rome, 342; New York City Institution, on Randall's island, 470. During the year ending Sept. 30, 1898, the number of poor for whom provisions was made was 1,913, as against 2,074 during the previous year, a decrease of 161. This left 86 in State almshouses Oct. 1, 1898, of whom 80 were males and 6 females. The per capita expenditure was \$14.62, against \$13.56 in 1897.

Prisons.—These are under the care of a superintendent, who holds office five years and receives a salary of \$3,000. The incumbent during the year was Cornelius V. Collins, whose term of office will expire on April 17, 1903. The criminal statistics for the fiscal year show that the number of convictions reported by county clerks in courts of record was 3,567, a decrease of 956. The number of women convicted in courts of record was 209, a decrease of 39. The number of convictions in special sessions courts reported by county clerks was 43,555, a decrease of 19,847. The number of women convicted in courts of special sessions was 3,055. The resolution of the Assembly appointing a committee on prison labor instructed its members particularly to inquire into the effect of the present system of convict labor upon free labor. The general conclusions of the committee were: 1. That the present system has not yet succeeded in furnishing employment for all the convicts in State prisons. 2. That the financial results are as yet inadequate and unsatisfactory. 3. That the labor classes of the State are not at the present time suffering from the competition of convict labor, as the same is carried out in the prisons and penal institutions of the State. 4. That the unsatisfactory results up to the present time will be in some degree obviated by greater experience and organization. 5. That the principle of the greatest diversification of industries, coupled with a complete supply for the special market for any line of goods manufactured, will best preserve the laboring classes from convict competition in the future. 6. That the industries in the penitentiaries and marketing of the products should be placed under the same control as industries in the State prisons. 7. That the cell systems of the three State prisons should be rebuilt by convict labor, and also that a new wall should be constructed at Sing Sing in the same manner. 8. That the policy of prohibiting by legislative enactment the employment of convicts upon certain industries should be discountenanced, and, generally, that if the present system be carried out faithfully and intelligently, and without interference, it will demonstrate within a few years the wisdom of those who caused its adoption, and will prove a better system of convict labor than has ever before been employed in this State.

Labor Statistics.—This department is under the charge of a commissioner, who receives a salary of \$3,000. The incumbents during the year were John T. McDonough, who, having become Secretary of State, was succeeded on Jan. 23 by John McMackin. The report for 1898 shows that

the total number of organizations reported to the bureau each quarter was: First quarter, 1898, 1,048; second quarter, 1898, 1,079; third quarter, 1898, 1,087. Of the 1,087 unions, 280 were in the building trades; iron and steel, 137; railroad (steam), 131; printing, binding, etc., 68; clothing, 62; and cigar, cigarettes, and tobacco, 54. The others vary from 3 to 36 unions. As to distribution, Greater New York shows the largest returns, with 40.4 per cent. of all the unions in the State. Following New York are Buffalo, 7.4 per cent.; Syracuse, 6 per cent.; Albany, 4.1 per cent.; Rochester, 3.9 per cent.; Utica, 2.7 per cent.; Troy, 2.3 per cent.; and Newburg, 2 per cent. The other cities and towns vary from 19 unions to 1. Of the 87 cities and towns represented, the 8 mentioned had 68.6 per cent. of all the organizations in the State. The total membership of both sexes of all unions at the end of the third quarter, 1898, was 171,067. In regard to distribution of membership by towns, Greater New York heads the list of cities and towns with 73.3 per cent., followed by Buffalo with 5.3 per cent.; Syracuse, 3.7 per cent.; Rochester, 2.6 per cent.; Albany, 2 per cent.; Utica, 1.3 per cent.; Troy, 1.3 per cent.; Newburg, 1 per cent. The other localities vary from 1,077 to 3 members. Of the 87 cities and towns represented, the 8 mentioned had 90.4 per cent. of the total membership. Of the organized wage workers in the State, the proportion of women in each quarter varies from 2.7 per cent. to 4.4 per cent. (an average of 3.7 per cent.), with a somewhat larger proportion in 1898 than in 1897. Women appear in any one quarter in but 8 industries, and of the total number from 75 to 86 per cent. in the different quarters (an average of 80 per cent. for all) are in cigars, etc., and clothing. After these two the only industries with any considerable representation of women are the printing, textile, and theatrical trades, the three containing in the various quarters from 11 per cent. to 20 per cent. (an average of 16 per cent.) of all the women. The report also discusses fully the frauds and impositions that are practiced upon immigrants.

Canals.—The canals are chiefly under the charge of the Superintendent of Public Works. On Dec. 2, 1898, George W. Aldridge, holding that office, was suspended, and on Jan. 16 John N. Partridge was confirmed as his successor. The report of the commission appointed by Gov. Black to investigate the canals apparently yielded testimony that showed acts of such character as to warrant the recommendation that they should be investigated by a grand jury. Accordingly Gov. Roosevelt, shortly after his inauguration, appointed Austen G. Fox and Wallace MacFarlane, of opposite political faith to the Superintendent of Public Works, to assist the Attorney-General in the institution and prosecution of such criminal proceedings as should be warranted by the testimony taken by the investigating commission. The Legislature appropriated \$20,000 to pay the expenses of the investigation. After several months they reported that criminal prosecutions were inadvisable and impracticable. In the absence of evidence of fraudulent collusion between the State officers and the contractors, the counsel concluded that the numerous instances of apparently unjustifiable favoritism to contractors and of improvident agreements reported by the commission could not be said to be criminal, though they did subject the State to a large pecuniary loss, and apparently showed grave delinquency on the part of those charged with the execution of the work. The delinquency shown justified public indignation, but it did not afford

ground for criminal prosecution. The report giving their reasons for their conclusions was transmitted, with the Governor's message, to the Legislature.

In his annual report on the State canals, covering the period between Jan. 18 and Sept. 30, Col. Partridge says: "On Feb. 1 the balance of the ordinary repair fund available for the last eight months of the fiscal year was \$126,913 less than for the year before, and there were outstanding bills aggregating upward of \$37,651. To meet this condition I at once cut the force of employees down to the minimum, and later increased the force during navigation season by the employment of only so many as were clearly shown to be needed. The results obtained were: The earliest opening of navigation (April 17), a small number of interruptions to navigation, a balance of \$2,061.76 at the end of the year, and no unpaid bills in the office, with the exception of several in dispute, aggregating \$776.64. The canals were closed officially on Dec. 1."

On March 8 Gov. Roosevelt appointed a commission, consisting of Major Thomas W. Symonds, John N. Scattherd, George E. Greene, Frank S. Witherbee, and Gen. Francis V. Greene, with State Engineer and Surveyor Bond and State Superintendent of Public Works Partridge, for the purpose of formulating a definite canal policy for the State, and to submit a report to form the basis of recommendations to the next Legislature, with a view of finally disposing of the canal question. The field of inquiry was unlimited by the Governor. It included: Whether the present improvement plan, which has been suspended, providing for the deepening of the Erie and Oswego Canals to 9 feet and the Champlain Canal to 7 feet, should be carried to completion, and the cost of the same; whether a large canal should be constructed from Albany to Oswego, and the western section of the Erie closed; whether it is wisest to turn the canals over to the National Government for a ship water way, and to what extent the railroads have taken the place of the canals. In answer, the commission recommended that the deepening of the Oswego and Champlain Canals be completed at a cost of \$2,642,120; that the present canals be maintained and enlarged; and said the project of a ship canal is a subject for consideration by the Federal Government.

Fisheries.—The commissioners in charge of this department are Barnet H. Davis, Edward Thompson, William R. Weed, H. S. Holden, and Charles H. Babcock. They reported that during the year the new hatchery at Constantia, on Oneida lake, was completed. It has a capacity of 125,000,000 eggs of the spring spawning fish and 35,000,000 eggs of the fall or winter spawning fish, such as whitefish or ciscoes. The following is the distribution from each hatchery: Adirondack, 508,060 brook trout, 147,140 brown trout, 23,000 rainbow trout, 130,000 lake trout, 3,250,000 brook trout, 1,000 red-throat trout, 18,300,000 whitefish, 65,000 fresh-water shrimp; Clayton, 15,000,000 ciscoes, 5,800,000 whitefish, 115,100 large-mouth black bass; Chautauque lake, 2,650,000 muscalonge; Oneida, 50 pickerel, 17,550,472 pike perch, 1,350 small- and large-mouth black bass, 2,562,800 yellow perch; Cold Spring, 466,000 brook trout, 93,835 brown trout, 44,485 rainbow trout, 48,000,000 tomocods, 48,000,000 smelt, 6,550,000 lobsters, 1,214,800 shad; Catskill, 1,500,000 herring, 3,882,000 shad; donated to State waters by the United States Fish Commission, 5,800,000

shad; Fulton Chain, 790,750 brook trout, 55,000 brown trout, 199,000 lake trout, 1,500,000 frost-fish; Pleasant Valley, 295,250 brook trout, 120,800 brown trout, 75,400 rainbow trout, 29,000 lake trout; Sacandaga, 858,000 brook trout, 90,000 brown trout, 187,000 lake trout, 1,035,000 frost-fish.

Railroads.—This department is cared for by three commissioners, each of whom serves five years and receives a salary of \$8,000. Those holding office during the year were Ashley W. Cole, George W. Dunn, and Frank M. Baker. The total number of passengers carried by the steam surface railroads for the year ended June 30, 1899, was 149,926,184, an increase of 672,925. This includes passengers not carried in this State. The number carried in the State was 68,720,642. The gross earnings of steam surface railroads for the year were \$5,977,508.39 in excess of those of the previous year. The operating expenses were \$2,855,613.34 in excess of those of 1898, making the net earnings from operations \$3,121,895.05 more than in 1898. The income from other sources was \$2,034,990.89 in excess of 1898. The companies paid in taxes \$506,051.74 more than in 1898, and declared dividends \$534,692.90 in excess of those declared in 1898. Capital stock increased \$8,977,400 over that of 1898, and funded debt increased \$11,983.01 over 1898. The percentage of dividends to capital stock was 2.43, as compared with 2.39 in 1898. Four more persons were killed on steam surface roads in the State in 1899 than in 1898, but the number of persons injured was 181 fewer. The total number of accidents on steam surface railroads in which persons were killed or injured during the year was 2,030—704 persons were killed and 1,326 injured. Three employees were killed and 9 injured through catching feet in frogs and guard rails. The number of persons carried on the street surface railroads, including the few remaining horse railroads, during the year, including "transfers," was 920,365,560, an increase over 1898 of 71,054,890. One hundred and twenty-six persons were killed and 589 wounded. The total number of passengers carried by the elevated roads in New York and Brooklyn during the year was 213,248,419.

Forest Preserves.—According to the report of Verplanck Colvin, superintendent of the Adirondack Survey, the total amounts of land owned by the State in forest counties are as follow: Clinton, 14,106.32; Delaware, 6,455.50; Essex, 208,729.47; Franklin, 88,868.64; Fulton, 17,061.87; Greene, 507.50; Hamilton, 437,692.65; Herkimer, 123,629.71; Lewis, 3,008; Oneida, 3,013.70; Saratoga, 8,221.90; St. Lawrence, 27,451.66; Sullivan, 293.90; Ulster, 33,038.90; Warren, 84,314.81; total, 1,056,444.53. The purchases made recently are: Essex, 24,513 acres; Franklin, 24,909; Hamilton, 150,438; Herkimer, 40,305; and Warren, 16,467. A large additional area is under contract for purchase, but title has not been perfected. The lands contracted for are as follow: In Essex County, 310 acres; Hamilton, 16,545; Herkimer, 2,160; Warren, 1,154; total areas, 20,169 acres. At the last regular session of the Legislature a preliminary bill was passed, which has become a law, under which commissioners have been appointed to make a survey of Watkins Glen and such adjacent woodlands on either side as they may deem desirable to have embraced in a proposed park. They are to ascertain the prices at which the Glen and other properties can be purchased, and report their proceedings to the next Legislature for final action.

National Guard.—The charge of the State militia is with the Adjutant General, who is chief

of the Governor's staff. The incumbent during the year was Avery D. Andrews, whose resignation was offered at the close of the year, and on Dec. 26 Edward M. Hoffman was appointed his successor. Gen. Andrews's report says: "The system of staff administration adopted by the State of New York, while entirely new in this country, bears a general similarity to the staff organization of many of the armies of Europe, there known as the general staff. The Adjutant General, as chief of staff to the commander in chief, becomes the directing agency not only of the line, but of the staff, thus insuring harmony and co-ordination of action. Under the military code the major general commands the National Guard and the captain commands the Naval Militia, and to them and to their subordinate commanders has been given the fullest authority and the most cordial support in all matters relating to the drill, instruction, discipline, and command of their troops, while to their staffs and to the staffs of the various brigades and regiments have been assigned the duties relating to their various offices. The National Guard consists of 15 regiments and 5 battalions of infantry, 4 troops of cavalry organized into a squadron of 3 troops, and 1 separate troop, 4 batteries of light artillery, and 4 mounted signal corps. These are organized into 5 brigades, each commanded by a brigadier general, and the whole under the command of a major general. The organization closely resembles that of a division. The separate companies throughout the State (with the exception of the Seventeenth, at Flushing) have been organized into battalions and regiments, with headquarters in convenient localities. The Naval Militia consists of 2 battalions and 1 separate naval division, all under the command of a captain." According to the annual report of Major-Gen. Charles F. Roe, commanding officer of the National Guard of the State of New York, the strength of the National Guard, as reported on Sept. 30, 1899, was 795 officers and 13,439 enlisted men.

Historian.—The State Historian has charge of the historical records. The incumbent during the year was Hugh Hastings. His fourth annual report was largely devoted to the work of New York regiments during the war with Spain, including a brief sketch of the policy pursued in securing information and reports from the different organizations. A chapter described the manner in which the colors of the One Hundred and Fourth New York Volunteers (Wadsworth Guards), lost during the civil war, were recovered. The regiment lost two sets of colors, one at Gettysburg, on Seminary Ridge, on July 1, 1863, and the other at the Weldon Railroad, Aug. 19, 1864. The colors lost at Gettysburg were found in the War Department in Washington, and by special act of Congress were restored to New York and deposited in the Bureau of Military Records. The State Historian recommended that Congress should be requested to return to New York the 12 remaining battle flags that were captured from State organizations during the civil war, and that were subsequently found in Richmond, Va., at the close of the war. On Jan. 12 the State purchased 33 acres of land on Stony Point peninsula, on the Hudson river, in Rockland County, the scene of Anthony Wayne's capture of Stony Point from the British army in the War of the Revolution. The purchase was made on recommendation of the Society for the Preservation of Scenic and Historic Places and Objects. The price paid was \$21,500, and the land was bought from the estate of Frederick Tompkins and from Watson Tompkins.

Topography.—The United States Geological Survey completed the mapping of nearly half of the area of the State during the year. Seven topographic parties were sent to New York early in the spring, and have been actively at work ever since. The surveying was under the joint supervision of the State and Federal authorities—the New York Legislature appropriated \$20,000 and the director of the Geological Survey an equal sum. During the summer the topographers mapped enough ground to make up 15 atlases, covering the counties of Wayne, Oswego, Ontario, Seneca, Yates, Tioga, Madison, Albany, Dutchess, and Orange. The neighborhood of the Fulton chain of lakes, the Racquette and Blue mountain lakes in the Adirondacks, and the regions about Northville, Saratoga, and Lucerne were also surveyed. This work will all be reproduced on maps at the scale of one mile to an inch. When they shall have been completed the Geological Survey will have maps of the main highways, of the Hudson river, the territory along the routes of the New York Central Railroad and the Erie Railroad, the watershed for the supply of the Erie Canal, including nearly all of the big lakes in central New York, embracing a large part of the Mohawk river branches in the Adirondacks. The survey has also completed nearly all the international border lakes—Ontario and Erie—leaving only a portion of the St. Lawrence to be filled out. These maps are executed in wonderful detail, and are the most complete and finest made in this country. In the country districts every house is indicated, as well as all public and private roads, town and county boundaries, all streams, lakes, and ponds, railways (electric and steam), streets, and other highways. In the mountains the various trails and paths are shown, and every block in each of the larger cities is clearly reproduced.

Political.—The usual election was held in November, on which occasion candidates for 7 vacancies in the 4 judicial districts were voted for. The nominees were as follow: Democratic—First District, George C. Barrett, James A. O'Gorman; Fifth District, Howard C. Wiggins; Sixth District, Albert H. Sewell; Eighth District, John Cunneen, Charles F. Tabor, and Louis Braunlein. Republican—First District, George C. Barrett and Joseph F. Daly; Fifth District, William S. Andrews; Sixth District, Albert H. Sewell; Eighth District, Daniel J. Kenefick, Truman C. White, and Warren B. Hooker. Prohibition—First District, Charles E. Manierre and Thomas Drew Stetson; Sixth District, Steven M. Wing; Eighth District, Dexter D. Dorn and Walter T. Bliss. Socialist Labor—First District, John J. Kinneally and Thomas Wright; Fifth District, Frank W. Roberts; Sixth District, Edward C. Elston; Eighth District, Max Forker, James A. McKenzie, and James W. Sharpe. The election resulted in the choice of the following candidates: First District, George C. Barrett and James A. O'Gorman; Fifth District, William S. Andrews; Sixth District, Albert H. Sewell; Eighth District, Truman C. White, Daniel J. Kenefick, and Warren B. Hooker. There was also an election in the Thirty-fourth Congressional District to fill the vacancy caused by the resignation of Warren B. Hooker, who had been nominated as a Supreme Court justice. Edward B. Vreeland, Republican, and Stillman E. Lewis, Democrat, were the opposing candidates, and the former was elected by a vote of 21,733 against 12,406 for Lewis. The following four amendments were also voted for, all of which were carried by large majorities: 1. Giving to the New York Municipal Assembly the powers of a

Board of Supervisors. 2. Relative to the increase of the bonded indebtedness of municipalities (relating solely to New York city). 3. Authorizing the Governor to appoint additional justices of the appellate division benches. 4. Authorizing the Governor to designate additional justices of the Court of Appeals.

NEW YORK CITY. Government.—The city officials who held office during the year were: Mayor, Robert A. Van Wyck (salary, \$15,000); President of the Council, Randolph Guggenheimer (salary \$5,000); Borough Presidents, Manhattan, James J. Coogan (salary, \$5,000), who succeeded, on Jan. 5, to the place made vacant by the death of Augustus W. Peters; Brooklyn, Edward M. Grout (salary, \$5,000); Bronx, Louis F. Haffen (salary, \$5,000); Queens, Frederick Bowley (salary, \$3,000); and Richmond, George Cromwell (salary, \$3,000), all of whom are Tammany Democrats and took office on Jan. 1, 1898, except Mr. Coogan. Also there are the following county officers: County Clerk, William Sohmer (salary, \$15,000); Sheriff, William F. Grell (salary, \$12,000 and half the fees); and Register, Isaac Fromme (salary, \$12,000), all of whom are Tammany Democrats and took office on Jan. 1, 1898, except the sheriff, who took office on Jan. 1, 1900.

Finances.—The conditions of the debts of the city of New York, including the boroughs of Manhattan, the Bronx, Brooklyn, Queens, and Richmond, Jan. 1, 1900, is shown on the next page.

In the year bonds and corporate stock of the city were issued as follow: For public buildings, \$10,108,974.28; for public parks, \$1,880,715.08; for bridges, \$3,345,823.66; for repavement of roads and drives, \$567,740; for water supply, \$3,749,343; for docks, \$3,000,000; for condemnation of rear tenements, \$11,241.16; for street openings, \$1,923,728.77; for refunding matured loans, \$1,683,800.73; for local improvements, \$61,514.65; for memorial arch, \$5,000; for Wallabout basin, \$100,000; for Street Cleaning Department, \$400,000; for Fire Department, \$300,000; special revenue bonds, \$3,170,311.35; a total of \$30,308,190.68. The tax rate confirmed by the Municipal Assembly on Aug. 2 was for Manhattan and Bronx, \$2.48 for each \$100 of assessment. The rate for 1898 was \$2.01. For Brooklyn the rate was \$2.36, Queens, \$3.27; and Richmond, \$2.42.

Bonds.—On April 4 the Municipal Council passed the resolution authorizing the issue of \$500,000 in bonds for tearing down the reservoir at 42d Street and Fifth Avenue, and doing the subsurface work on the foundations of the New York Library Building. On Aug. 9 the Council passed the resolution authorizing the issue of \$2,100,000 in bonds for the erection of a new Hall of Records. The vote of President Guggenheimer was required to make the necessary majority, but as he was Acting Mayor his right to vote was questioned. His action was sustained by the Corporation Counsel, and the corporation issued the bonds.

Board of Estimate and Apportionment.—This body consists of the Mayor, the President and Secretary of the Department of Taxes and Assessments, the Comptroller, the President of the Council, and the Corporation Counsel. This board allowed the following-named amounts for 1900: The Mayoralty, \$63,755; Municipal Assembly and City Clerk, \$200,052; Department of Finance, \$779,305; interest on city debt, \$10,094,197.54; interest on bonds and stocks to be issued after Oct. 10, 1899, and in 1900, \$884,180.74; interest on revenue bonds of 1900, \$729,166.67;

HOUSE OF COLLIS P. HUNTINGTON.

A. FUNDED DEBT OF THE CITY OF NEW YORK AS NOW CONSTITUTED, ISSUED SUBSEQUENT TO JAN. 1, 1898.

1. Payable from the sinking fund of the city of New York under the provisions of section 208 of chapter 878 of the Laws of 1897....	\$41,298,888 92	
2. Payable from the water sinking fund of the city of New York under provisions of section 10, Article VIII, of the Constitution of the State of New York, and under section 208 of chapter 878 of the Laws of 1897....	6,899,843 00	
3. Payable from taxation....	3,170,311 85	
4. Payable from assessments....	999,988 78	\$52,368,432 00

B. FUNDED DEBT OF THE CITY OF NEW YORK AS CONSTITUTED PRIOR TO JAN. 1, 1898.*Boroughs of Manhattan and the Bronx.*

1. Payable from the sinking fund for the redemption of the city debt (first lien) under ordinances of the Common Council.....	\$1,827,300 00	
2. Payable from the sinking fund for the redemption of the city debt (second lien) under the provisions of section 218 of chapter 878 of the Laws of 1897.....	9,700,000 00	
3. Payable from the sinking fund for the redemption of the city debt under the provisions of section 229 of chapter 878 of the Laws of 1897.....	108,451,668 75	
4. Payable from the sinking fund for the redemption of the city debt under the provisions of section 1 of chapter 79 of the Laws of 1899....	9,833,100 00	
5. Payable from the sinking fund for the redemption of the city debt No. 2 under the provisions of the constitutional amendment adopted Nov. 4, 1894, and of section 10, Article VIII, of the Constitution of the State of New York.....	41,977,000 00	
6. Payable from taxation....	35,390,460 00	
7. Payable from assessments....	9,332,536 21	216,408,044 96

C. FUNDED DEBTS OF CORPORATIONS IN THE BOROUGH OF BROOKLYN, INCLUDING KINGS COUNTY, ISSUED PRIOR TO JAN. 1, 1898.*City of Brooklyn, including Annexed Towns.*

1. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 488 of the Laws of 1880 and amendments thereto.....	\$8,697,000 00	
2. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 573 of the Laws of 1880 and chapter 448 of the Laws of 1881.....	2,350,000 00	
3. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 648 of the Laws of 1898.....	7,065,567 41	
4. Payable from the water revenue under the provisions of chapter 208 of the Laws of 1889, and acts amendatory thereof and supplementary thereto....	14,132,749 75	
5. Payable from taxation....	24,705,173 98	
6. Payable from assessments....	6,422,343 00	

Kings County.

7. Payable from taxation....	14,807,393 88	77,680,235 98
------------------------------	---------------	---------------

D. FUNDED DEBTS OF CORPORATIONS IN THE BOROUGH OF QUEENS, ISSUED PRIOR TO JAN. 1, 1898.

1. Payable from the special sinking fund of Long Island City for the redemption of revenue bonds under the provisions of chapter 782 of the Laws of 1895....	\$380,500 00	
2. Payable from the sinking fund under the provisions of chapter 122 of the Laws of 1894.....	35,000 00	
3. Payable from water revenue.....	735 000 00	
4. Payable from taxation....	6,335,483 85	
5. Payable from assessments....	1,341,234 17	8,767,217 52

E. FUNDED DEBTS OF CORPORATIONS IN THE BOROUGH OF RICHMOND, INCLUDING RICHMOND COUNTY, ISSUED PRIOR TO JAN. 1, 1898.

Payable from taxation.....	\$2,961,386 70	2,961,386 70
Total funded debt.....		\$358,104,307 11

TEMPORARY DEBT.

Issued in anticipation of taxes of 1898.....	\$7,600 00	7,600 00
Total bonded debt.....		\$358,111,907 11

SUMMARY.

Total gross funded debt....		358,104,307 11
Less amount held by the commissioners of the sinking fund on account of sinking fund No. 1.....	\$80,642,958 74	
Less amount held by the commissioners of the sinking fund on account of sinking fund No. 2.....	17,980,863 27	
Less amount held by the commissioners of the sinking fund on account of sinking fund of the city of Brooklyn.....	6,524,065 69	
Less amount held by the commissioners of the sinking fund for account of the sinking fund of the city of New York.....	227,000 00	
Less amount held by the commissioners of the sinking fund for account of the water sinking fund of the city of New York.....	100,000 00	
Less amount held by the special sinking fund of Long Island City for the redemption of revenue bonds....	11,000 00	105,435,871 70

(The remainder of bonds (\$519,000) held by this fund are not yet approved, and are not included in the foregoing statement.)

Net funded debt.....	\$252,654,435 41
Revenue bonds.....	7,600 00
Net bonded debt.....	\$252,672,035 41

redemption of the city debt, \$4,576,561.76; installments payable in 1900, \$3,362,511.59; rents, \$315,379.91; borough officers, \$51,300; the Law Department, \$399,758; Board of Public Improvements, \$239,500; Department of Highways, \$2,251,844.67; Department of Sewers, \$803,173.17; Department of Bridges, \$431,957; Department of Public Buildings, Lighting, and Supplies, \$3,819,683.75; Department of Water Supply, \$1,442,914.17; Department of Parks, \$1,825,113.45; Department of Public Charities, \$1,896,812.97; Department of Correction, \$762,775; Department of Health, \$1,055,515; Police Department, \$11,327,503.42; Bureau of Elections, \$665,000; total, Police Department, \$11,992,503.42; Department of Street

Cleaning, \$5,031,282.27; Fire Department, \$4,840,676.52; Department of Buildings, \$546,525; Department of Taxes and Assessments, \$334,450; Board of Assessors, \$42,700; Department of Education, \$14,504,111.09; College of the City of New York, \$200,000; Normal College, \$175,000; total, Department of Education, \$14,969,111.09; Coroner's office, \$165,150; Commissioners of Accounts, \$156,000; Civil Service Commission, \$76,000; Board of City Record, \$460,200; Bureau of Municipal Statistics, \$11,200; Examining Board of Plumbers, \$3,594; for library purposes, \$214,779.30; courts, \$960,050; charitable institutions, \$2,857,084.27; miscellaneous, \$549,000; grand total, city budget, \$79,201,763.26; New York County, \$8,391,332.16; Kings County, \$2,613,663.40; Queens County, \$436,039.58; Richmond County, \$136,174.02; total of counties, \$11,577,209.22; grand total, city and counties, \$90,778,972.48.

The total budgets for all boroughs of New York city for 1899 aggregated \$93,520,082. The budgets for 1900 therefore show a decrease of \$2,741,109.52.

Taxes and Assessments.—These are under the care of a department of which Thomas L. Feitner (salary, \$8,000) is president. The other members are Edward C. Sheehy, Arthur C. Salmon, and Thomas J. Patterson (salaries, \$7,000 each). Office, 280 Broadway. They reported the total valuations of real and personal property for taxation at \$3,478,252,029, of which \$2,932,445,404 was for real estate and \$545,806,565 for personal property. The valuation for the real estate was subdivided as follows: Manhattan, \$2,054,903,875; Brooklyn, \$609,822,267; the Bronx, \$123,702,030; Queens, \$103,752,600; and Richmond, \$40,264,092; total, \$2,932,445,404, an increase of \$403,912,023 over last year. That for personal property was subdivided as follows: Manhattan, \$483,575,042; Brooklyn, \$45,270,713; the Bronx, \$6,806,988; Queens, \$6,314,032; and Richmond, \$3,838,890; total, \$545,806,565. Among the larger properties assessed are the following valuations: The Washington Building, 1 Broadway, \$1,250,000; Brown Brothers & Co., 59 Wall Street, \$650,000; the Sampson Building, 93 Wall Street, \$670,000; the Seamen's Bank for Savings, 74 Wall Street, \$425,000; the Hoyt Building, 44 Pine Street, \$390,000; the Metropolitan Telephone and Telegraph Company, 13-17 Dey Street, \$475,000; the Corbin Building, 192 Broadway, \$580,000; the Evening Post Building, 206 Broadway, \$525,000; the St. Paul Building, 218 Broadway, \$1,300,000; the Park Row Building, 13-19 Park Row, \$2,000,000; the Temple Court Building, 5-9 Beekman Street, \$850,000; the Vanderbilt Building, 132 Nassau Street, \$450,000; the American Tract Society Building, \$1,000,000; the Casino Theater, \$450,000; the Empire, \$260,000; Wallace's, \$575,000; the Waldorf Hotel, \$1,800,000; the Astoria, \$3,150,000; and the Murray Hill Hotel, \$650,000. Applications from William W. Astor, Bradley Martin, and others for the reduction of their personal property assessment on the ground of nonresidence (having removed to England) was denied by this board, and in consequence it was publicly announced later that Mr. Astor had become a citizen of Great Britain.

Law.—This department is under the direction of the Corporation Counsel, who receives \$15,000 a year. The incumbent during the year was John Whalen. His report was for the thirteen months previous to Jan. 31, 1899. He said of the bills introduced to the Legislature affecting the city, 402 were defeated, 7 were vetoed by the Governor, and 57 by the Mayor on representations of his office. Had these bills been enacted the

city's debt would have been increased \$48,000,000. The number of suits disposed of was 5,860, and 4,356 cases were begun. The judgments against the city aggregate \$1,305,000, and those in favor of the city, \$17,091.15. By the increased number of assistants which he was able to employ he was enabled to dispense with the services of high-priced experts, which resulted in a saving of \$217,035.71 in legal fees paid by the city.

The District Attorney, Asa Bird Gardiner, having been denied permission to enter any part of the Court of General Sessions during important procedures by the Recorder, sought redress in the Supreme Court. Later charges were preferred against him by members of the City Club, and a committee named by the Governor had them under consideration. On Nov. 9 Job E. Hedges was appointed by the Attorney-General of the State as Deputy Attorney-General, with charge of the prosecution of election law violations in the city. The new Courthouse for the Appellate Division of the Supreme Court, at Madison Avenue and 23th Street, was opened Dec. 20, 1899.

Surrogates' Court.—There are two surrogates in New York city, each of whom receives a salary of \$15,000 and serves for a term of fourteen years. At the beginning of the year Frank T. Fitzgerald and John H. V. Arnold were in office. In January, rumors of the inefficiency of the office having been circulated, the Assembly appointed a committee to investigate the manner in which the various judicial, clerical, and other duties were performed in the Surrogates' Court and office in New York. As this investigation was specially directed against Mr. Arnold, he soon resigned, and James M. Varnum was appointed to the vacancy on Feb. 15, and then held office until Dec. 31. Of 2,059 wills offered for probate in 1899, 121 were foreign and 1,835 were admitted to probate. Of the 112 wills contested, 90 have been decided, not including 18 that were unfinished on Jan. 1, 1899. The surrogates heard 4,402 motions and held 462 hearings in will contests, rendering 3,270 written decisions and 1,741 oral decisions. There were 87 hearings on issues of fact.

Public Improvement.—The Board of Public Improvements consists of the president of the board, Maurice F. Holahan (salary, \$8,000), the Commissioners of Water Supply, of Highways, of Street Cleaning, of Public Buildings, Lighting and Supplies, and Bridges, each of whom receives a salary of \$7,500. Offices, 15 Park Row. The reports for 1898 were issued during the year. That on water supply shows that the watersheds of Manhattan and the Bronx have an area of more than 360 square miles, and that there are 93 miles of conduits, with a maximum daily capacity of 400,000,000 gallons. In the Croton, Bronx, and Byram watersheds the reserve supply in 10 reservoirs and 5 lakes is more than 42,000,000,000 gallons. The total cost of the Croton, Bronx, and Byram systems to Dec. 31, 1898, was \$86,236,630.75, including, under the new aqueduct system, \$38,036,519.29 for the new aqueduct, reservoirs, lands, etc. The revenue was \$4,459,905.17. Brooklyn's watershed has an area of 154 square miles, and the supply is from the Hempstead reservoir and 15 ponds, with 1,283,480,000 gallons' capacity, and from streams and wells. The water revenues for Brooklyn were \$1,928,581.85. Part of the borough of Queens has public water plants and part private water companies. The receipts from water revenue were \$85,690.96. Richmond borough has a water plant at Tottenville with a daily capacity of 400,000 gallons; 52 supply wells with a capacity of 510,

HOUSE OF ISAAC V. BROKAW.
5th Avenue and 79th Street.

HOUSE OF CORNELIUS VANDERBILT, Sr.
5th Avenue and 68th Street

000 gallons, 5.1 miles of water mains, and 69 fire hydrants; and 2 private water companies with a daily capacity of 14,000,000 gallons. The water revenues of the borough were \$413.32.

The report of the Department of Highways shows that 38 contracts, involving \$356,726.49, were entered into, and that 84 contracts were completed at a cost of \$2,075,762.11. In the borough of Manhattan 18.49 miles of asphalt pavement, 1.91 mile of asphalt blocks, and 1.09 mile of granite pavement were laid. In the borough of the Bronx 40 miles of streets were paved, repaved, or repaired; and in the borough of Brooklyn 270,000 square yards of paving were laid.

The report of the Department of Street Cleaning showed that 1,623,041½ cart loads of refuse matter were collected in the boroughs of Manhattan and the Bronx, and 525,730 cart loads of snow and ice were removed. The expense incurred was \$3,366,879.48. In Brooklyn the refuse material collected amounted to 1,112,477 cart loads, and the snow and ice removed to 183,185 cart loads. The total expenditures were \$854,142.60. The collection of refuse and removal of snow in Brooklyn was done under contract. During the year hearings were held on the proposition of widening Pell Street to 100 feet from Chatham Square westward to Mott Street, with an extension from Mott Street to Mulberry Bend Park. The unfinished state of the Elm Street improvement was made the subject of an investigation by the August Grand Jury, and it was found that records in the Mayor's office show that ordinances providing for the grading, regulating, and paving of Elm Street through its entire length had been passed by the Board of Public Improvements and the Municipal Assembly and signed by the Mayor. But this work could not be done until the sewers had been laid. The sewer ordinances were faulty in form, and the Mayor vetoed them all on June 13. Ordinances were signed during the year changing the name of the Boulevard between 59th Street and Spuyten Duyvil to Broadway; also the name of Elm Street was changed to Dewey Avenue, and Whitehall Street to South Broadway. The name of Mail Street was changed to Van Cott Place.

Parks.—This department is under the charge of three commissioners, one having jurisdiction in Manhattan and Richmond, one in Brooklyn and Queens, and one in Bronx, each of whom serves six years and receives a salary of \$5,000. During 1899 the commissioners were: George C. Clausen, Manhattan and Richmond; George V. Brower, Brooklyn and Queens; and August Moebus, Bronx. The office is in the Arsenal, Fifth Avenue and 65th Street. According to the report for 1898 the city's total park area is: In Manhattan and Richmond, 1,288,287 acres; in Queens and Brooklyn, 1,573,378; in the Bronx, 4,057,890; total area for the city, 6,919,545 acres. The proposition to convert Coney Island into a park was considered, and two plans were submitted, as follow: The first was the purchase of that part of Coney Island embraced between the Ocean Boulevard and Sea Gate and between the ocean and Coney Island creek. The estimated cost of the land is \$9,000,000, while the improvements would cost about \$6,000,000 more. The other recommends the purchase of a strip 400 feet wide from Sea Gate to Ocean Boulevard, and includes the treating of Surf Avenue as a boulevard. This plan, which would be far less expensive than the other, would give a beach 250 feet wide, extending along a mile of ocean front; a board walk 50 feet wide, with broad steps leading to the beach; a bicycle path 15 feet in width, and

a driveway and promenade adjoining. This plan provides for 4 new recreation piers. The Commissioners of Estimate for the Colonial Park submitted their report to the Supreme Court on April 7, and the court heard argument on a motion to confirm. The park embraces the territory comprised between 145th and 155th Streets and Edgecombe and Bradhurst Avenues. There were 192 parcels of land to be appraised, and the commissioners fixed the values at sums that aggregate about \$1,500,000. Progress on the development of Grand Boulevard and Concourse—which, when completed, will run from 161st Street and Mott Avenue north to the city line—was stopped. About \$3,000,000 of the city's money had been expended in payment for land condemned, and in the near future a million more will be paid out. The plan shows a speedway 54 feet wide, with a sidewalk of artificial stone 15 feet wide, an asphalt driveway 24 feet wide, a macadam bicycle path 7 feet wide, and a promenade 18 feet on either side of it. Nearly 5,000 shade trees will be required. The estimated total cost is about \$14,000,000.

The visitors at the Aquarium in 1899 numbered 1,841,330, a daily average of 5,045—the greatest number of any year in its history. The excess of 1899 over 1898 was 171,245.

Zoological Park.—This is under the care of the New York Zoological Society, of which Levi P. Morton is president. It is in the Bronx, and is a splendid stretch of 261 acres. The present collection of animals includes 43 species of mammals (157 specimens), 36 species of birds (175 specimens), 1 species of alligators (16 specimens), 13 species of lizards (71 specimens), 18 species of turtles (94 specimens), 36 species of serpents (293 specimens), 10 species of batrachians (37 specimens), making a total of 157 species (843 specimens). The park was formally opened to the public on Oct. 8. It is open daily free to visitors from 10 A. M. till sunset, except on Mondays and Thursdays, when an admission fee is charged. The aggregate cost of all the buildings and animals' quarters thus far constructed and in process of construction was upward of \$90,000. The society collected \$49,760 for the park during the year, making a total of \$160,779 thus far obtained. The membership is 736.

Fire.—This department is managed by a single commissioner, who receives a salary of \$7,500. The incumbent during the year was John J. Scannell. The chief of the department on Jan. 1 was Hugh Bonner, who resigned on May 1, and was succeeded by Edward F. Croker. The headquarters are at 157 East 67th Street. In 1899, for the boroughs of Manhattan, Bronx, Brooklyn, and Queens there were 2,404 officers and men; 134 engine companies, including fire boats; 40 hook-and-ladder companies; 6 fire boats; and 4 water towers. There were in the year 8,050 fires; 33 arson cases were tried, of which 23 resulted in dismissal, 8 in conviction, and 2 are still pending. The receipts for licenses, permits, and penalties were: In the boroughs of Manhattan, Bronx, and Richmond, \$50,452.50; in the boroughs of Brooklyn and Queens, \$43,150.50; total, \$93,603. There is a volunteer force of 2,000 in Queens, and 1,500 in Richmond, making a total of 3,500.

Health.—The collection of vital statistics is under the care of a board consisting of the president of the Board of Health, the health officer of the port, and three commissioners, one of whom must have been for five years a practicing physician. The officials for 1899 were: Michael C. Murphy, president (salary, \$7,500); Dr. William T. Jenkins, Dr. John B. Cosby, Health Officer Dr.

Alva H. Doty, and President Bernard J. York, of the Police Board. The secretary of the board is Emmons Clark, and the office is on the corner of Sixth Avenue and 55th Street. The vital statistics were as follow: The number of deaths in 1899 was 65,218, against 65,864 in 1898. There were 23,750 deaths of children under five years, 15,364 under one year, 8,922 sixty-five years and over, 15,544 deaths in institutions, and 35,734 deaths in tenements. There were 77,648 births and 30,470 marriages reported. The number of deaths from pneumonia was 8,529, against 7,485 for 1898—more than from any other disease. There were 629 suicides, against 693 for 1898; and 131 homicides, against 115 in 1898. The death rates for the 5 boroughs are as follow: Manhattan, 18.49; Bronx, 22.61; Brooklyn, 17.56; Queens, 18.67; and Richmond, 18.79. The rate for the 5 boroughs together is 18.37. The statistics give the estimated population of the city for 1898 as 3,438,899; and for 1899, 3,550,053.

Police.—This department is managed by a board of four commissioners, appointed by the Mayor for a term of six years, each member of which receives a salary of \$5,000. The board during the year consisted of Bernard J. York, president; John B. Sexton, Jacob Hess, and Henry E. Abell. The chief of police is William S. Devery, and the Central Office is at 300 Mulberry Street. The report for 1898 shows the need of an increase in the number of patrolmen. In 1876, with a population of 1,075,532, there were 2,261 patrolmen, a proportion of 1 to 475; in 1896 the proportion was 1 to 525, and in 1899 (Greater New York) 1 to 555. The expense of the police departments of the territory afterward consolidated for 1897 was \$10,235,280.14. For 1898 the expenses of the consolidated city were \$10,705,764.91. In 1898 141,745 arrests were made, including 26,141 females. The causes of arrest were classified as follow: Intoxication, 46,170; disorderly conduct, 31,460; violation of corporation ordinances, 13,725; larceny, 8,824; vagrancy, 7,759; suspicious persons, 6,446; excise law violators, 2,128. Altogether arrests were made on 184 charges. Of those arrested, 70,865 were natives of this country, 23,304 were Irish, 11,950 Germans, and 9,156 Russians.

The report of the Bureau of Elections shows that the amount expended in 1898 to carry out the primary election law was \$223,282.50. The total expenditure for general elections was \$454,746.06. The result of the first year of consolidation upon the cost of a general election within Greater New York boundaries shows that in the items of salaries, storage, cartage, and ballots there will be a saving of one fourth.

Buildings.—The construction of these is cared for by a board consisting of three commissioners. During 1899 these were President and Commissioner of Manhattan and Bronx, Thomas J. Brady (salary, \$7,000); Commissioner of Brooklyn, John Guilfoyle (salary, \$7,000); and Commissioner of Richmond and Queens, Daniel Campbell (salary, \$3,500). Offices, 220 Fourth Avenue, Manhattan, and Borough Hall, Brooklyn. Their report for Manhattan and Bronx for 1899 shows an estimated expenditure of \$135,982,960, against \$78,484,627 for 1898. In 1899 there were 2,262 applications for building 4,933 new buildings at an estimated cost of \$128,798,576, against 2,083 applications for 3,592 buildings, costing \$72,887,146, in 1898. There were 2,854 applications for altering 3,350 buildings, at an estimated cost of \$7,184,384, against 2,137 applications for altering 2,308 buildings, costing \$5,597,481 in 1898. The new building code is responsible for a consider-

able part of these increased amounts, but, allowing this, the officials say that the year was the busiest in the history of the department.

Education.—The board having control of this subject consists of 21 commissioners, who are appointed by the Mayor and receive no salary. The president of the board on Jan. 1 was Charles B. Hubbell, but on Feb. 21 he was succeeded by Joseph J. Little. The borough superintendent is John Jasper (salary, \$7,500), and the headquarters were at 146 Grand Street until removed to the corner of Park Avenue and 50th Street. The report for the fiscal year of 1899 shows that the total number of schools and departments, not including the Nautical School, is 496; number of instructors or class teachers, 8,844; the number of principals, principals' assistants, and heads of departments not teaching, 650; the number of teachers of special branches, 300; the number of pupils registered, 385,474; the average daily attendance, 347,670; the number of regular sittings in school buildings, 407,423; the average number of pupils to a class teacher, 44. The expenditure for school purposes was \$15,316,865.48, of which \$1,219,049.14 was received from the State. The estimated school population is as follows: Manhattan and Bronx, 398,000; Brooklyn, 284,244; Queens, 33,000; Richmond, 14,172; total, 729,416, which is an increase of 27,254. The board, on Feb. 20, 1899, awarded a contract for a new schoolhouse in Manhattan, the first since consolidation, and since then contracts have been awarded for 8 other new school buildings and 4 additions in Manhattan and the Bronx, and for 3 new buildings and 8 additions in Brooklyn, involving a total expenditure of \$3,107,289. These buildings and additions have 547 classrooms, and accommodations for 27,300 pupils. Of the \$7,673,640 of corporate stock issued in March, Manhattan and the Bronx received \$4,083,640. During the school year 8 new school buildings were opened in Manhattan and the Bronx, containing 260 classrooms and accommodations for 12,000 pupils; 2 in Brooklyn, with 57 classrooms and accommodations for 3,037 pupils; 7 in Queens, with 35 classrooms and 1,400 seats; and 2 in Richmond, with 36 classrooms and 1,640 seats; making a total of 19 schoolhouses, 388 classrooms, and seating capacity for 18,077 pupils. In the latter part of the year much ill feeling and suffering was caused by the refusal of the Comptroller to pay the salaries of the teachers, and in explanation he said that "there will probably be considerable delay in paying the school-teachers of Manhattan and the Bronx the balance of the amounts due them for the year 1899. This is entirely due to the inability of the School Board to state how much of the amount claimed is due to the Ahern law."

Rapid Transit Railroad Commission.—This body consists of Alexander E. Orr, president; Woodbury Langdon, John Clafin, George L. Rives, John H. Starin, and Charles S. Smith, together with the Mayor and Comptroller *ex officio*. Mr. Clafin withdrew from the commission, and Morris K. Jesup was added to it. Office, 320 Broadway. At the beginning of the year the commission was at work on a bill to extend its power so that it could let a contract for building the underground road to a private corporation. On March 27 a proposition to provide rapid transit along the route and in the main according to the plans adopted by the commission was submitted. It was favorably received, and the commission directed its counsel to prepare amendments to the rapid transit law that would enable it to act on the bid, provided the

amendment should be adopted by the Legislature. The motive power proposed was electricity, and one of the important features asked for was a perpetual franchise. At the meeting held on March 29 the proposed memorial and amendments were considered, and ordered sent to the Legislature. At this meeting a resolution was adopted, which said: "It is the sense of this board that it is in the public interest that, in addition to the powers already possessed by the board, the Legislature should grant to the board the power to contract for the construction and operation of the rapid transit railroad by private capital." On April 3 another proposition was received by the commission for the building of an underground road, the essential features of which were that it should have a fifty-years' franchise and the city issue \$33,000,000 of bonds, which the builders agreed to pay and surrender the road free of incumbrance at the termination of the franchise. This proposition was not favorably considered, as it would be impossible for the city to issue the desired bonds. The bill passed the Legislature, and was submitted to the Mayor for his approval. It received a public hearing on May 3, at which much opposition came from the representatives of the laboring men, in consequence of which it was "not accepted by the city of New York." This veto by the Mayor put an end to the discussion of any appeal to private capital in behalf of rapid transit. Soon afterward the Mayor, by his public utterances, committed the present administration to begin the construction of an underground rapid transit railroad before it left office. In the autumn the plan of building the tunnel by the city began to take definite shape, and the form of a contract for the construction of the proposed underground railroad was prepared by the counsel of the commission and submitted to the Corporation Counsel for his opinion. On Nov. 10 the Supreme Court granted the commissioners power to reduce the bond to be given by the contractor for the construction of the underground tunnel from \$14,000,000 to \$5,000,000. At a meeting on Nov. 12 the commissioners took the final steps necessary to authorize the advertising of bids from contractors to build the road. Sealed bids were to be submitted on Jan. 15, 1900.

Street Railways.—In consequence of a report by the Board of Health that the droppings of water and oil from the elevated railroad were a nuisance and an annoyance to pedestrians, and that the pools beneath the tracks were a menace to the public health, the Park Department, on Feb. 17, served an order on the Manhattan Railway Company to remove the structure of the elevated railroad from Battery Park. A public hearing was held by the Board of Health on Feb. 23, at which time the Manhattan Company gave positive assurances that it would do its utmost to comply with the requirements of the Health authorities. The purchase by the Manhattan Railway Company of a large tract in the vicinity of 177th Street for the purpose of establishing a terminal indicates that it will extend its line to Yonkers. A traffic agreement between the Manhattan Railway Company and the Third Avenue and Union Railway Companies was entered into on May 1 by means of which a general city transfer system was established at the rate of three cents between the elevated and surface service. In consequence of this, for eight cents, a continuous ride may be had over the allied systems from any downtown point to Yonkers on the Hudson river, or to New Rochelle on Long Island Sound. The consolidation of the

Brooklyn street railway systems into the Brooklyn Rapid Transit Company resulted in the improvement of the transportation, and the establishment of a continuous service from Manhattan, over the bridge, to Coney Island for the single fare of five cents.

Bridges and Tunnels.—The report for the New York and Brooklyn Bridge, submitted to the Comptroller in March, shows that the receipts in 1898 were \$704,478.17, and the expenditures \$512,250.10. The tolls from the roadway amounted to \$76,261; from the bridge railroad, \$389,772.52; from electric cars, \$50,726.70; and from elevated railroads, \$45,528.25. It was found necessary to increase the toll paid by the trolley companies and the elevated companies, as an annual loss was suffered at the old rate. Much progress was made in the work on the East River Bridge, and the towers at the foot of Delancey Slip in Manhattan are well advanced. On Dec. 31 the Board of Aldermen voted in favor of the proposition to build a bridge between the foot of East 60th Street in Manhattan and Long Island City. Also a resolution was adopted at the same time for the construction of a bridge between Pike Slip, Manhattan, and Washington Street, Brooklyn.

On June 17 the Hudson River Tunnel, on which much work has been done, was sold for \$100,000 to attorneys representing the American bondholders. The Manhattan and Jersey City Railway Company announced their intention of building a tunnel under the Hudson river, the station in New York to be within 1,000 feet of Cortlandt Street, and that in Jersey City not far from Montgomery Street. The Metropolitan Tunnel Railroad Company was incorporated in July for the purpose of building tunnels to start from points near Willoughby and Fulton Streets, in Brooklyn, passing thence down Adams Street to the East river, then under the river bed to Manhattan Island, crossing the city under New Chambers and Chambers Streets to the Hudson River, and thence to some point in Jersey City. The New York and Long Island Terminal Railroad Company has for its purpose the connection of the boroughs of Manhattan and Brooklyn by tunnels, with the intention to run fast electric trains between downtown underground stations in Manhattan borough and the farthest limits of Brooklyn.

Monuments.—The Lorelei monument was erected on a knoll that rises above East 161st Street and Mott Avenue. It was unveiled with simple ceremonies on July 8, and was accepted for the city.

On July 14 a bronze statue of Chester A. Arthur, modeled by George E. Bissell, was unveiled. It is in the northeast corner of Madison Square, and was presented to the city in behalf of the committee by Elihu Root, who made the oration. Randolph Guggenheimer, president of the City Council, accepted the statue in behalf of the city.

On May 2 the Mary Washington Colonial Chapter of the Daughters of the American Revolution marked the first official residence of President Washington, at No. 1 Cherry Street, by the unveiling of a bronze tablet on one of the arches of the Brooklyn Bridge.

On Aug. 10 a bronze tablet, stating the fact that the Tower Building at 50 Broadway was the earliest example of the steel skeleton construction, was unveiled. Its erection was due to the Society of Architectural Iron Manufacturers.

Dewey Reception.—On May 16 the Municipal Assembly of the city of New York adopted a

resolution requesting the Mayor to appoint a representative committee of citizens for the purpose of making all necessary arrangements to give a fitting and patriotic reception to Admiral Dewey and the officers and crew of the flagship Olympia on their arrival in New York. The expenditure of \$150,000 to carry out a celebration programme was authorized by the Municipal Assembly on June 6. Subsequently by like appropriations \$50,000 more was obtained. A Citizens' Committee of 1,000 members was named by Mayor Van Wyck on June 17, and on June 21 that committee was organized with the Mayor as permanent chairman, and Alfred M. Downes as secretary. At that time the Mayor was authorized to appoint an Executive Committee of 150 members. This committee organized on June 26 with Gen. Daniel Butterfield as chairman; Tunis G. Bergen, vice-chairman; and Warren W. Foster, secretary. On June 30 Mayor Van Wyck, in behalf of the city, extended to Admiral Dewey, in a formal letter, a public reception and the hospitalities and courtesies of New York; and from Trieste, on July 24, came the reply from Admiral Dewey accepting the invitation. Later advices enabled the committee to arrange for a naval parade to take place on Sept. 29 and a land parade on Sept. 30; and the timely arrival of the Olympia on Sept. 26 made it possible to carry out these plans. Attendant features were the presentation by the city of New York of a loving cup to the admiral and the erection of a memorial arch. In order to do honor to Admiral Dewey, a proclamation was issued by Gov. Roosevelt, making Sept. 29 and 30 legal holidays. The preparation for the naval parade began on Sept. 28, when the North Atlantic squadron, then in the lower bay, moved up and anchored off Tompkinsville with Admiral Sampson's flagship, the New York, leading. The Olympia, with Admiral Dewey, followed the squadron, and, passing the fleet, took its place in the van as flagship of the squadron. Admiral Sampson then, with his staff, visited the Olympia and officially greeted the admiral. The entire Staten Island and Jersey coasts as far as Seabright and Long Island as far as Rockaway were illuminated with colored fires furnished by the committee. The first formal act on the 29th was a visit of Mayor Van Wyck, accompanied by the Plan-and-Scope Committee, to Admiral Dewey, when a welcome was extended to him in behalf of the city. At noon the naval parade started up Hudson river from the Government anchorage off Tompkinsville, with the Olympia in the lead, followed by the squadron, which in turn was followed by the merchant marine and flotilla of yachts. The latter was led by J. Pierpont Morgan's Corsair and Sir Thomas Lipton's Erin. The Olympia was escorted by the Sandy Hook, bearing the Mayor and official guests of the Citizens' Committee. Other vessels carrying the committees and city officials followed in the wake of the Mayor's boat outside the lines. As they reached a point in the river opposite Grant's tomb, the Olympia came to anchor in midstream, and in response to salutes fired from the tomb the naval vessels, with colors half-masted, fired the President's salute of twenty-one guns. The naval procession then passed the Olympia in review, and counter-sailed down the river until it disbanded below the Battery. At night fireworks were displayed from various points in Manhattan, Brooklyn, and Richmond, while on the water lighters started from opposite Grant's tomb, on the Hudson river, and from opposite Ward's island, on the East river, and moved

down, sending off fireworks on their way to the Battery, where they joined other lighters, and the pyrotechnic display continued. Unique and original electrical displays were conspicuous; and, most of all, the words "Welcome Dewey," in gigantic letters of light, 50 feet high and 300 feet long, displayed from the south end of Brooklyn Bridge. The culmination of the reception came on Sept. 30. Before seven o'clock in the morning the little police boat Patrol, containing a special committee to escort Admiral Dewey, ran alongside of the Olympia, and, taking the admiral on board, proceeded to the Battery, whence, escorted by Squadron A, they proceeded up Broadway to City Hall. At nine o'clock the loving cup* was presented to the admiral by the Mayor, whose address was briefly responded to by Admiral Dewey. At the close of these ceremonies the admiral was escorted back to the foot of Warren Street, where the Sandy Hook was in waiting to take him and other guests of the city and the city officials up the river to 133d Street. There the party were met by carriages, in the first of which Admiral Dewey and Mayor Van Wyck were placed, after which came the six captains of the war ships that had taken part in the battle of Manila Bay, and then the other guests with their escorts, forming a procession of 42 carriages. These were driven to the head of the parade at 122d Street and Riverside Drive, where at eleven o'clock sharply the procession began. The line of march was down Riverside Drive to 72d Street, thence to Eighth Avenue, down to 59th Street, to Fifth Avenue, and thence to Washington Square. The procession consisted of the representatives of the United States navy, including the crew of the Olympia, after which came the United States army, then the National Guard of New York, followed by the National Guards of other States, and finally other uniformed bodies. It was estimated that more than 30,000 men were in line. At 23d Street Admiral Dewey, with the Mayor and committees and visitors, left the procession, and took their places on the stand and reviewed the line of march. When the procession was over, Admiral Dewey was driven to the Waldorf-Astoria, escorted by Troop A, apartments having been reserved for him at that hotel, where he remained until he left for Washington. In the evening the sailors of the Olympia were entertained at the Waldorf-Astoria by a vaudeville smoker. The memorial arch, the original suggestion of which came from Charles R. Lamb, was on Fifth Avenue, opposite 24th Street, and was designed by a committee of the National Sculpture Society, composed of John Q. A. Ward, chairman; Karl Ritter and F. Wellington Ruckstuhl, sculptors; Charles R. Lamb, architect. In general, this arch was a copy of the Arch of Titus and Vespasian in the Forum at Rome, which was erected by

* The loving cup was of gold, 18 carats fine, 13 inches in height, with a capacity of 4 quarts. The form of the cup was Roman, and the handles were three green golden dolphins. They divided the cup into three panels. The front panel was decorated with a relief portrait of the admiral framed in an oak wreath. The frame rested on the outstretched wings of an eagle. Under this panel on the band that ran round the foot of the cup were the letters "G. D. U. S. N." Between the next two handles was a half-relief picture of the flagship Olympia. Under it was a shield bearing the four stars that denote the rank of the admiral. The commemorative inscription was: "Presented to Admiral George Dewey, United States Navy, by the City of New York, September thirtieth, eighteen hundred and ninety-nine. Beneath this were the coat of arms of the city of New York. About the upper circumference of the cup was a row of 45 stars. Around the foot were anchors, small dolphins, seaweed, knotted ropes, and other nautical devices. The cup cost \$5,000.

Domitian in commemoration of the taking of Jerusalem by Titus. It stood 75 feet above the street, and was surmounted by a Quadriga and Victory by J. Q. A. Ward; the distance to the garland in the hand of Victory being about 100 feet. The span of the arch inside was about 30 feet from pier to pier. The four groups on the piers, two on the north and two on the south side, were: Call to Arms, by Philip Martiny; Battle, by Karl Ritter; Return of the Victors, by C. H. Niehaus; Peace, by Daniel C. French. On the attic were full-length statues of Paul Jones, by E. C. Potter; Hull, by H. K. Bush-Brown; Perry, by J. Scott Hartley; Decatur, by George L. Brewster; McDonough, by Thomas S. Clarke; Farragut, by W. O. Partridge; Porter, by J. J. Boyle; and Cushing, by Augustus Lukeman. Also medallion heads of the following naval heroes: Commodores John Barry, Esek Hopkins, Dahlgren, Worden, Lawrence, Bainbridge, Preble, and Foote, by various artists. The symbolical figure in the north spandrels was the Atlantic and Pacific, by R. H. Perry; in the south, the North and East Rivers, by Isidor Konti. Over the keystones to the arch were American eagles, by A. P. Proctor; and in relief on the sides of the arch were the groups Progress of Civilization, by John Gelert, and Protection of Our Country, by William Couper. The legend on the north side of the attic was:

"To Admiral George Dewey,
Greeting, welcome, honor,
From the people of New York,
September XXX, MDCCCXCIX."

On the south side was the inscription:

"To the Glory of the American Navy
In greeting to its Admiral,
To signalize their triumphs
A grateful city protected by
Their valor
Has built this arch, A. D. MDCCCXCIX."

On the east and west sides of the entablature were the single words Santiago and Manila, respectively. Double columns that formed a colonnade led up to the arch as the approach was made from the north and from the south. These consisted of sculptural decorations of a Victory by Herbert Adams, repeated on each. The first pair of columns as the approach was made from the north or the south had a third or extra column in order to provide a broader front for display of statuary in groups. These were the Army, by F. W. Ruckstuhl, and the Navy, by George E. Bissell. The arch and the colonnades were made in staff, and the work, other than the cost of the materials and the labor of the workmen, was the volunteer contribution of the American Sculpture Society in honor of Admiral Dewey. It has been decided to reproduce this arch in permanent form, and a committee of citizens has been organized, with William C. Church as chairman, who are collecting money for that purpose.

Post Office.—The Postmaster is Cornelius Van Cott. The Post Office building is at the junction of Broadway and Park Row. Besides the general post office, there are 32 branch offices, of which the one known as Branch T, at 3319 Third Avenue, was opened on Aug. 1. The revenue from the postal department in 1899 amounts to more than \$5,600,000. Within the jurisdiction of the post office are 32 railway stations and about 120 substations. The transactions of the money-order department amounted to \$135,000,000, an increase of \$10,000,000 over 1898. The increase in the number of domestic orders in December,

compared with December, 1898, was 2,000 a day, and \$16,000,000 of foreign orders were certified. The sum of \$9,200,000 was realized from the sale of stamps and stamped envelopes, an increase of \$600,000 over 1898. There was much agitation in favor of a new post-office building, and on the recommendation of Postmaster Van Cott, Postmaster-General Smith, in his annual report, recommended a new building.

Customhouse.—Active proceedings for securing the property comprising the block inclosed by Bowling Green, State, Bridge, and Whitehall Streets for the site of a new customhouse building were begun early in the year. The sum available for the purchase of the property is \$2,244,977.52. An average of the appraisal by seven real-estate experts in the spring of 1892 gave the valuation of this block as \$1,955,661, which is equivalent to \$30.45 a square foot. The old Customhouse on Wall Street was purchased by the National City Bank of New York on a bid of \$3,265,000. That corporation purposes to remodel the interior and adapt the structure to its own use. The building is regarded as one of the best specimens of classic architecture in this country, and has been occupied as a customhouse since 1862.

Hart Island.—On March 23 Hart island, in Long Island Sound, with its buildings and plants, was formally transferred back to the city by the State, for the reason that the State could not advantageously use the property. A survey of the island was made by members of the United States Engineer Corps and the United States Ordnance Board, and it is understood that it will be fortified and used for protecting the entrance to Long Island Sound. Guns mounted on the plateau of Hart island would command the sound entrance for 8 miles.

Political.—The election this year in the city was restricted to candidates for the offices of surrogate and sheriff, and for judges of the general session. For surrogate, Abner C. Thomas received 148,566 votes, against 92,585 for James M. Varnum. For sheriff, William F. Grell received 147,615 votes, against 94,732 for John J. O'Brien. Warren W. Foster received 146,999 votes, against 94,430 for James C. Blanchard for judge of the Court of General Sessions. The candidates elected were the official nominees of Tammany Hall. There were Democratic, Republican, Socialist, Prohibitionist, and Labor tickets in the field for Assemblymen, and out of 37 districts 33 Democrats were elected and 4 Republicans. The chief interest centered on the Nineteenth District, where the Republican candidate, Robert Mazet, was defeated by the Tammany candidate, Perez M. Stewart.

Events.—On Feb. 12 a severe snowstorm visited New York city, which culminated on the 14th. In comparison with the great blizzard of March 12 and 14, 1888 (see Annual Cyclopædia for 1888, page 612), the snowfall was not so heavy, although the velocity of the wind was much higher. The highest velocity of the wind was 58 miles an hour; the maximum temperature was 10 degrees, and the minimum 4 degrees. The total snowfall was 14.4 inches. The Governor ordered 7 National Guard armories to be thrown open for the sheltering of those who needed protection from the storm. It was estimated that one tenth of the city's population had no gas for fuel or lighting, because of frozen pipes. The sum of \$20,000 was collected from various sources and placed at the disposition of the Mayor, who ordered the Commissioner of Charity to purchase and dispense coal and food to the needy.

On April 15 the United States cruiser Raleigh, the vessel of Admiral Dewey's fleet to fire the first gun at Manila, arrived in New York. Two days later the Raleigh came up to the city, and was met by Mayor Van Wyck, who extended to Capt. Coghlan and his men the freedom of the city. A naval procession followed, in which the Raleigh steamed up as far as Grant's tomb, which was saluted with 21 guns, and then returned to her station off the Battery.

On Oct. 23 electric cars began running on the Third Avenue surface line between 65th Street and Harlem Bridge.

NICARAGUA, a republic of Central America. The Congress is a single Chamber composed of 48 members, half of them elected by direct popular suffrage and half by the Legislatures of the 12 provinces. The President, who is elected for four years by universal male suffrage, is Gen. José Santos Zelaya, whose term will expire in 1902. The Cabinet appointed on Dec. 3, 1898, was composed as follows: Minister of the Interior, Justice, Police, Ecclesiastical Affairs, Dr. Fernando Abaunza; Minister of War and Marine, José Dolores Estrada; Minister of Foreign Affairs and of Public Instruction, Dr. Joaquin Sanson; Minister of Finance and Public Credit, Col. Felix Pedro Zelaya; Minister of Communications and Public Works, Dr. Leopoldo Ramirez Maiarena.

Area and Population.—The republic has an area of 49,200 square miles, with a population of 420,000, including 40,000 uncivilized Indians. Leon has a population of 40,000 and Managua 20,000. The military force comprises the active army, the reserve, and the National Guard. Every Nicaraguan can be called out for service in the active army from his eighteenth to his thirty-fifth year, then for ten years in the reserve, and then in the National Guard for twenty years longer. The troops kept under arms number about 3,500.

Finances.—The revenue for 1896 was \$3,572,407, and expenditure \$4,059,674. For 1897 the revenue was \$4,688,016, and expenditure \$3,852,750. Of the receipts in 1897 the tax on commerce produced \$2,645,249; liquor tax, \$620,090; export duty on coffee, \$187,529; slaughter tax, \$132,742; direct tax, \$134,248; national railroad and steamboats, \$693,391; telegraphs and telephones, \$47,559; the post office, \$33,726. Of the expenditures, \$2,667,012 were the ordinary expenses of the administration, including \$850,013 for the interior, \$429,303 for the army, \$446,719 for financial administration, and \$132,804 for education. Supplementary credits absorbed \$899,441 more, and war expenses \$176,124. The budget of 1898 provided for an expenditure of \$5,007,588, including \$663,008 for the army, \$1,735,816 for finance, and \$1,099,888 for the interior. In 1897 the revenue was \$4,688,061, and expenditure \$3,852,750. The expenditure in 1898 was \$5,007,588.

The foreign debt outstanding on July 1, 1898, amounted to £288,923 sterling, inclusive of £10,723 of unpaid interest. By a compromise with the creditors the interest was reduced in 1895 from 5 to 4 per cent., and coupons in arrears are redeemed for half their face value. There was an internal debt of \$7,000,000 in 1894, and in 1896 treasury warrants receivable for customs dues were issued to the amount of \$500,000.

Commerce and Production.—The terrace lands in the north occupy two thirds of the country. The principal agricultural product is coffee. There are estimated to be 27,000,000 trees. Some of the large plantations are owned by American companies. The exports of coffee in 1896 were

6,501,113 kilogrammes, of which one half went to Germany, one sixth to the United States, and one eighth to Great Britain. The Government encourages planting by paying a bonus of 5 cents for each coffee tree, 21 cents for each cacao tree, and 10 cents for each rubber tree under cultivation. The cacao plantations are not half as large as they were twenty years ago, owing to neglect and frequent droughts. The cultivation of indigo has ceased to be profitable, and the crop is grown only in a few localities. In some districts tobacco is grown successfully. Beans, mandioca, sweet potatoes, bananas, pineapples, rice, sugar cane, and sorghum are raised extensively. Nearly every family of the rural population tills a small farm, often rented from a large landowner, and the crop usually includes beans, maize, bananas, and oranges and other fruits. To encourage agriculture the Government pays for a certain number of years a small premium for every hectare of wheat, sugar, tobacco, rice, beans, corn, potatoes, and pasture, and to improve the grade of farm animals a bonus is given to the importer of blooded stock. There are about 313,000 head of cattle and 32,000 horses and mules in the republic. The liquor business is a monopoly of the Government, which sells the product of the large distilleries, that make *aguardiente* out of sugar cane, and produce sugar and molasses also. The small farmers are accustomed to make their own sugar. Indigo, starch, cheese, soap, cigars, and cigarettes are manufactured, but none of the factories are large. Panama hats and palm-leaf matting are made in certain districts. Labor is difficult to obtain. The law requires, however, a laborer who owes money that he can not pay to give his labor until the debt is paid, and also any fresh debts that he contracts for wages advanced or goods furnished. The legal rate of wages is 50 cents a day. The landowners use every means to keep their laborers in constant debt, and thus maintain a system of peonage. A landlord may transfer his claim to any one else who will pay the man's debt, and every laborer must be provided with a document showing where he works.

Of the imports in 1898, the British Islands supplied 41 per cent., the United States 24 per cent., and Germany 18 per cent. Cotton muslins and prints come from England, ducks and drills from the United States, woolen dress goods from England, men's suitings from Germany and France, trimmings, hosiery, and blankets from Germany, cutlery, coffee sacks, and coal from England, beer, wire fencing, hardware, and machinery from the United States and Germany, leather from Germany. The total value of imports in 1898 was £573,236 sterling; of exports, £636,710. The export of coffee was £250,000 in value; gold, £113,726; gum, £103,605; wood, £57,178; hides, £31,238; cattle, £35,000.

There were 182 vessels, of 176,747 tons, entered at the port of Corinto in 1898, including 128 steamers, of 168,559 tons. The railroads have a length of 91 miles; telegraph, 1,250 miles of wire.

Political Affairs.—In the early part of 1899 Gen. Reyes headed a revolt against the Central Government in the Mosquito Territory. Marines from the United States gunboat Marietta and from the British cruiser Intrepid landed at Bluefields. The Government levied war contributions on the citizens and drafted the laborers everywhere into the army to the injury of the coffee crop, which was left to spoil on the trees. The export duty on coffee was raised to \$4 a quintal. The Nicaraguan army, under Gen. Estrada,

marched upon Aguas Calientes and Rama, and at its approach the rebels disbanded and fled into the forest. The captains of the American and English war vessels offered to arrange an armistice with the revolutionists, and when the Government troops captured the bluff in front of Bluefields Gen. Reyes took refuge in the British consulate and offered to surrender without further resistance. The captains of the foreign war ships delivered Bluefields to President Zelaya's troops on March 1, receiving a pledge that order would be maintained and the revolutionists spared. Gen. Torres, the new Governor appointed by President Zelaya, called upon the merchants to pay again the duties that they had already paid to Gen. Reyes. Martial law was declared, and a commission that had been appointed to frame a permanent tariff was dissolved, disappointing the merchants, who looked to it for relief from burdens on foreign capital and commerce. The American merchants who had paid duties to the insurgent government, although warned by the Nicaraguan Government not to do so, appealed to Minister William L. Merry, who arranged with the Nicaraguan Government that, pending a diplomatic settlement of the question, the merchants should pay the duties claimed into the hands of the British consul for safe-keeping. While the negotiations were proceeding Minister Merry found himself suddenly cut off from telegraphic communication with Washington, and consequently he went on a war vessel to Colon. Another British war vessel arrived at Bluefields while the British consular authorities were investigating the claims of British subjects who had been shot or flogged during the revolution.

The federation called the Greater Republic of Central America, formed in 1896 by treaty between the five Central American republics, in which a central Diet that sat at Amapala was intrusted with the partial direction of foreign affairs and the settlement of questions in dispute between the several states, came to a standstill in consequence of mistrust and discord between some of the republics. In 1899 the three adjacent middle states of Nicaragua, Salvador, and Honduras arranged to revive the scheme and to perpetuate the league for themselves under the name of the United States of Central America. It was agreed that the President of the new republic should be elected on Dec. 13, 1899, and that none of the presidents of the component states, who are reduced to the rank of governors, shall be a candidate for the post. The capital was transferred from Amapala, Honduras, to Chinandega, Nicaragua. The new Government could not be organized, in consequence of a political upheaval in Salvador. Therefore Nicaragua resumed her independent international status in 1899, and appointed a separate minister to Washington.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 393,751 in 1790; 478,103 in 1800; 555,500 in 1810; 638,829 in 1820; 737,987 in 1830; 753,419 in 1840; 869,030 in 1850; 992,622 in 1860; 1,071,361 in 1870; 1,399,750 in 1880; and 1,617,947 in 1890. Capital, Raleigh.

Government.—The following were the State officers during the year: Governor, Daniel L. Russell, Republican; Lieutenant Governor, C. A. Reynolds, Republican; Secretary of State, Cyrus Thompson, Populist; Treasurer, W. H. Worth, Populist; Auditor, H. W. Ayer, Populist; Attorney-General, Z. V. Waiser, Republican; Adjutant

General, R. B. Royster, Democrat; Superintendent of Instruction, C. H. Mebane, Populist; Commissioner of Agriculture, John R. Smith, Republican; Insurance Commissioner, James R. Young, Democrat; Labor Commissioner, J. V. Hamrick, Populist; Railroad Commissioners, R. B. Royster, L. C. Caldwell, J. H. Pearson, and D. H. Abbott; Chief Justice of the Supreme Court, William T. Faircloth, Republican; Associate Justices, R. M. Douglas, Republican; Walter Clark, Democrat; D. M. Furches, Republican; W. A. Montgomery, Democrat; Clerk, Thomas S. Kenan, Democrat.

Finances.—The receipts of the State treasury for 1899 were \$1,730,997.60, against disbursements of \$1,600,033.30. Among the receipts for 1899 were: Railroad company dividends on State's stock, \$37,998; license tax on banks, \$4,723.70; tax on bank stock, general purposes, \$10,527.50; prison debt bonds, \$120,202.50; prison farm bonds, \$65,250; insurance fees, \$6,868.50; insurance licenses, \$25,454.86; insurance companies, 2-per-cent. tax, \$54,662.59; North Carolina Railroad Company, dividends on State's stock, \$195,013; State Prison earnings, \$84,707.20; railroad property tax, general, \$72,937.21; railroad property tax, pensions, \$11,220.41; taxes from the counties, for general purposes, \$550,135; tonnage tax on fertilizers, \$59,644.76. Among the items of expenditure were: Agricultural department, \$64,985.16; interest on 4-per-cent. consolidated bonds, \$133,750; on 4-per-cent. prison debt bonds, \$2,200; on 6-per-cent. construction bonds, \$195,210; judiciary, \$63,869.15; normal schools, \$16,650; College of Agricultural and Mechanical Arts, \$33,735; Experiment Station, \$15,000; Institution for Deaf, Dumb, and Blind, \$87,500; School for the Deaf and Dumb, \$47,189.46; Oxford Orphan Asylum, white, \$10,000; Oxford Orphanage, colored, \$5,000; State Hospital, Goldsboro, \$45,000; State Hospital, Morganton, \$105,734.08; State Hospital, Raleigh, \$67,049.95; State Normal and Industrial College, \$30,000.

The bonded debt of the State at the close of the fiscal year was \$6,501,770.

The State's income from investments includes: Income from railroad shares, \$220,345, and interest on bonds \$5,470. The income to the State Board of Education from investment is \$5,850.

Banks.—There are in North Carolina 27 national banks, 44 State banks, 21 private banks, 4 savings banks, and 2 trust companies. The total resources of all State and private savings banks in 1898 were \$10,526,900. The report of the Corporation Commission shows that the total resources of the same classes of banks on Dec. 2, 1899, were \$13,222,501.12. In 1898 the deposits in these banks subject to check were \$5,208,917; in 1899 the deposits were \$8,178,782.47.

Railroads.—In the past year 108.25 miles of railroad were built in the State. In the same period the railroads increased their earnings over 1898 \$796,281.93, the total earnings for 1899 being \$13,253,627.43. The valuation of railroad property in the State increased \$10,769,099.34. The railroads of the State earned during the year a trifle over 12 per cent. on their total valuation.

Education.—The most important bill for popular education that has been enacted in a decade by a North Carolina Legislature is that appropriating \$100,000 for the public schools. It passed both houses practically without opposition, and was supported by members of all parties.

The enrollment of white male pupils increased from 133,788 in 1898 to 138,124 in 1899, and the number of white females enrolled increased from

124,463 to 125,093. The average attendance of white children fell off from 144,346 in 1898 to 140,162 in 1899. This was probably due to the severe blizzard of February, which almost stopped attendance at many country schools. The enrollment of colored males fell from 65,688 in 1898 to 60,586 in 1899, and of colored females from 67,875 in 1898 to 66,813 in 1899.

State Institutions.—The three hospitals for the insane accommodate 1,537 patients, and the whole number under treatment the past year exceeded this by several hundred.

In the Central Hospital, at Raleigh, the daily average number of patients treated last year reached 413; admissions were 190 and discharges of the cured 125; as improved, 6. The percentage of mortality on the whole number under treatment was 4.8.

In the State Hospital, at Morganton, 1,073 patients were under treatment for the biennial period of 1897-'98. The report notes 120 discharged during the year, and 251 for the biennial term. The percentage of mortality was 3.53.

The Eastern Hospital, at Goldsboro, exhibits a needed improvement in the new building and machinery for electric lighting. The percentage of mortality upon the whole number of patients was 5.6, and that of cures upon admission 35.77. For two thirds of the year its capacity was entirely filled by 430 patients, and acute cases are largely shut out.

At the Institution for the Blind, the Deaf, and the Dumb, two new buildings have been erected, giving accommodations to 400 pupils. Another story is being added to the old building. This will bring up the capacity to 500.

The School for the Deaf, at Morganton, by the erection of a new \$20,000 building has increased its capacity to 300.

Many improvements have been made at the Oxford Orphan Asylum. The amount expended this year was \$22,667, of which the State contributed \$10,000.

At the colored orphan asylum, a superintendent's house has been built and the schoolrooms enlarged to accommodate 200 children. The enrollment Dec. 1, 1898, was 134; at the corresponding date of 1897 it was 108. The debt on the farm of 168 acres in cultivation has been reduced to \$469.20. The general expenses and improvements amounted to \$6,029 for the year.

During the year there were 94 veterans on the rolls of the Soldiers' Home, with an average attendance of 70. An appropriation of \$5,000 has been made for new buildings and for repairs.

Industries.—By far the most striking feature of the year's industrial progress in the State was the projection and building of new cotton mills and the enlargement and better equipment of old mills. In 1870 there were 33 mills with 39,897 spindles; in 1886, 80 mills with 199,433 spindles; in 1898, 186 mills with 1,018,000 spindles. Today the enlargement of the old mills and new ones just beginning operation increase the number of spindles to 1,200,000. In 1896 the cotton crop of the State was about 500,000 bales, and the mills consumed 300,000 bales; for 1899 the crop estimate was 480,000 bales, and the mills would need more than 400,000 bales.

The capitalization of the mills in the State reaches \$20,702,400. There are 11 woolen, 28 knitting, 1 silk, and 1 jute bagging mill.

Nearly all the mills projected are being built, and almost entirely by local capital.

The increase of the lumber product of 1899 over that of 1898 is estimated at 30 per cent. Eighteen new lumber companies were organized

in 1899, with a total capital of \$562,000. Nine furniture factories, with estimated total capital of \$100,000, have been added. Twenty-nine other establishments, with aggregated capital of \$342,000, also began work in 1899.

Mining.—In the gold mines work is being pushed in Greer, Capp's Hill, Summerville, and perhaps other mines in Mecklenburg County; at several mines in Cabarrus County; at the Gold Hill, Dutch Creek, and one or two other points in Rowan County; at a new discovery in Caldwell County from which encouraging reports come; at the Belle mine, in Moore County; at the Portis mine, in Franklin County; at the Mann-Arrington mine, in Nash County; and perhaps at two other points in the Eastern belt; Stanly and Montgomery Counties have small operations going on most of the year.

In silver, the most notable activity is at the old Silver Hill mines, in Davidson County. The operations are perhaps the deepest in the State, reaching a depth of 800 feet below the surface. Other silver mines are the Siler Valley, also in Davidson County, and the Troutman, near the dividing line between Rowan and Cabarrus Counties.

In copper mining, the most noted recent discovery is at what was formerly known as the Union Gold and Copper Mine, between Gold Hill in Rowan County, and the Cabarrus County line. The ore includes native free copper, cuprite, azurite, malachite, red oxide, copper glaze, and the green and blue carbonates of copper.

The iron mines are active—notably the famous Cranberry mines, in Mitchell County. The Ormond Ore Banks are also active. Ore Hill, in Chatham County, is being operated, and recently some very fine ores have been uncovered. At Wilson's Mills a new iron property has been opened.

A company has purchased 5,000 acres in Macon County for the purpose of mining systematically for the gem rhodolite, also ruby, sapphire, and other corundum gems.

Legislative Session.—The Railroad Commission was abolished and the act repealed. In lieu thereof a corporation commission was established, composed of three members elected by the General Assembly, to hold their places until the next general election, when their successors will be elected by the people for a term of six years.

The insurance laws were consolidated and the insurance department was established.

The agricultural department was reorganized, and provision was made for the election of the commissioner by the people.

An antitrust law was enacted. Many perplexing and serious difficulties presented themselves when the attempt was made to frame a statute. It was found that a number of local industries important in their nature would be seriously affected by any drastic legislation.

A separate car law was passed.

The subject of municipal government received consideration, and a large number of charters were revised. Many towns and cities secured new charters.

Labor Day was made a legal holiday.

The criminal courts of the State were reorganized.

Provision was made for reorganization of the State Guard.

A constitutional amendment on the subject of suffrage and office holding is to be voted on by the people in August, 1900.

Political.—The 1899 Legislature consists of 40 Democrats in the Senate and 94 in the House; 10 fusionists in the Senate and 26 in the House.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles. The population in 1890 was 182,719. Capital, Bismarck.

Government.—The State officers during the year were as follow: Governor, Frederick B. Fancher; Lieutenant Governor, J. M. Devine; Secretary of State, Fred Falley; Treasurer, D. W. Driscoll; Auditor, A. N. Carlbom; Attorney-General, J. F. Cowan; Adjutant General, Elliott S. Miller; Superintendent of Public Instruction, J. G. Halland; Commissioner of Insurance, George W. Harrison; Commissioner of Agriculture, H. U. Thomas; Bank Examiner, H. A. Langlie; Railroad Commissioners, Luke L. Walton, John Simons, Henry Erickson; Chief Justice, J. M. Bartholomew; Board of Dental Examiners, R. B. Foster, H. L. Starling, H. S. Sowles, D. B. McLean; Land Commissioner, Hugh J. Watt, resigned Aug. 5, 1899, followed by D. J. Laxdal; Superintendent of Irrigation and Forestry, W. W. Barrett; Oil Inspector, P. B. Wickham—all Republicans.

Finances.—The condition of State funds, Jan. 1, was (total, \$169,890.80) as follows: Overdraft on general fund, \$11,923.16; bond interest fund, \$10,994.16; permanent school fund, \$69,939.57; endowment for agricultural college, \$60; State tuition funds (fines and taxes), \$42,040.95; wolf bounty fund, \$1,374.87; Grafton School for Feeble-Minded, \$27,894.56; Capitol building fund, \$487.27; trust fund, \$1,100.25; school-district bonds, permanent school fund, \$601,700; State bonds, \$10,000; securities for State land loans, \$113,705; State funds in suspended banks, \$55,000; total indebtedness of the State, \$800,000, of which \$600,000 is upon State institutions and real estate and \$200,000 represents the bonded indebtedness of the State. The State Treasurer took up \$22,000 of 4-per-cent. bonds, maturing ten years hence, because the money lay idle in the treasury. The total valuation of property in the State, as equalized by the State Board, was: Real property, \$72,010,059; personal property, \$24,641,156; railroads, \$16,985,084. The tax levy was fixed at 3.8 mills, and for bond interest 0.5 of a mill. The wolf bounty tax was 0.2 mill.

Banks.—The report of the 23 national banks on Feb. 4, 1899, showed a decrease in total resources since Dec. 1, 1898, of \$581,794; in loans and discounts of \$7,240; in cash reserve, \$321,090, of which gold holdings increased \$19,020; deposits decreased \$394,235; average reserve held decreased from 35.40 to 31.71. The State Examiner reported the July loans and discounts as \$4,529,548.07; total resources of the 106 State banks, \$6,991,379.49; capital stock paid in, \$1,258,250; surplus fund, \$164,022.25; certificates of deposit, \$2,138,955.43; bills payable, \$151,112.30. The amount on hand, as reported Dec. 2, was \$6,225,491; loans and discounts, \$5,467,909; average reserve held, 23.28.

Insurance.—The total of fire risks written in the State in 1899 was \$26,500,000; the total premiums received, \$543,000; and the total losses incurred, \$382,000.

The total life insurance written was \$2,500,000 by the fixed premium life companies and \$625,000 by the assessment companies; the total premiums received, \$366,000 by the fixed premium companies and \$44,000 by the assessment companies. The total life insurance in force at the close of the year in the State was \$13,800,000 by the fixed life companies and \$3,600,000 by the assessment companies. The total of losses incurred was \$105,700 in the fixed premium companies and \$33,000 in the assessment companies.

Forestry.—The North Dakota State Sylvaton Society has for its prime object the enlistment of school children in the subject of forestry. It has furnished millions of forest seed and some seedlings to the schools for the pupils to plant on or near Arbor Day in the school grounds, and also at the home places in the village and city lots and on the farms in the country districts. North Dakota has 460,000 acres of native woods, and about 40,000 acres of domestic trees, with 50 varieties of trees and 20 kinds of wild fruit, all natives of its own woods.

Land Sales.—The Land Commissioner reported an area of 19,928,030 acres, of which 12,091,904 had been surveyed. The survey for the present covered 2,260,000 acres. During the past two years 29,247 acres of land have been selected for State institutions. The business transacted at the Bismarck land office between July 1, 1898, and June 30, 1899, was as follows: Cash entries, 87, comprising 2,981.85 acres; homestead entries, 1,099, of 189,785.91 acres; final entries, 246, of 38,430.27 acres; final tree-claim entries, 23,216.16 acres; total fees and commissions, \$27,501.68, on a total of 234,414.19 acres.

Decisions.—The Supreme Court holds that the cashier, without authority from the directors specifically, could not bind a bank.

A person was convicted of having stolen wheat from a granary, his method of abstracting it being by boring an auger hole in the floor and securing the grain that ran through. The judge held that this did not constitute a burglarious entrance into the building, but the Supreme Court held that the crime as committed was burglary.

Curfew Law.—The city of Bismarck passed the following ordinance on April 13: It shall be unlawful for any person under sixteen years of age to be or loiter upon the public streets between the hours of 9 o'clock P. M. and 5 o'clock A. M. from the 1st day of March to the 30th day of April; between the hours of 10 o'clock P. M. and 5 o'clock A. M. from the 1st day of May to the 31st day of August; between the hours of 9 o'clock P. M. and 5 o'clock A. M. from the 1st day of September to the 30th day of November; between the hours of 8 o'clock P. M. and 5 o'clock A. M. from the first day of December to the last day of February. The ordinance makes certain proper exceptions.

Live Stock.—For 1899 the number of horses reported was 175,131, value about \$6,000,000; milch cows, 171,073, value \$4,892,000; other cattle, 252,640, value \$6,528,000; sheep, 359,721, value \$1,014,000; swine, 111,959, value \$250,000.

Charity and Correction.—The number of patients admitted to the insane asylum in the past two years was 225; died, 68; discharged, 140.

The convicts at the Penitentiary farmed more than 1,100 acres; built a new barn, also a factory and power house for the twine plant; made 1,750,000 of brick, and hauled them from the yards to the Penitentiary grounds. There were 34 of the convicts engaged in brickmaking. The last Legislature appropriated \$150,000 to be used in building the twine plant on the Penitentiary grounds; the work is to be done by convict labor.

Military.—At the end of a year's service in the Philippines the North Dakota regiment showed 623 men out of 660 sent into service. The soldiers were mustered out Sept. 25, and each man was paid \$200, the amount due for his services to Sept. 25, two months' extra pay, clothing allowance, and travel fees. The last Legislature appropriated \$2,500 for the regiment in the Philippines, but the fund was brought back to this country intact, and \$1,784 was paid for tourist

sleepers for the enlisted men on the return trip from San Francisco.

The new military buildings at Bismarck, to take the place of the post at Fort Yates, are modern in every respect. The barracks are of brick, 2 stories high, with attic and basement.

The battle flag of the First North Dakota Regiment has 36 silver rings on the staff, indicating the engagements in which the regiment fought. This flag and the State flag were transferred to the Adjutant General, Oct. 24.

Products.—The number of artesian wells in the State is 678, giving, with the springs, a flowage of 6,096,960,000 gallons of water per annum.

The flax acreage in the State was reported as 600,000, with an average of 12 bushels to the acre, at a value of \$8,000,000, against 416,230 acres last year, with a yield of 4,134,166 bushels.

Education.—The total number of school districts organized in 1899 was 36; number discontinued, 8; total number of districts, 1,177; number of schoolhouses built during the year, 117; total seating capacity of all schoolhouses, 80,982; number of children enumerated, 76,651; number of days school was taught, 313,459; average daily attendance, 41,155; number of teachers employed, male 1,115, female 2,522; average monthly salary, male \$39.92, female \$35.51; amount paid teachers during the year, \$682,175.36; receipts for school purposes, \$2,089,617.63; number of school libraries, 425; volumes, 32,902; volumes added during the year, 7,244.

Physical culture will hereafter be taught in all schools of the State receiving State aid.

The Agricultural College, at Fargo, received from the State 130,000 acres of land; the normal schools, 80,000 acres; the university, 86,080; in all, for school purposes, 586,080. The college at Fargo reported its total enrollment as 166; average attendance, 150; annual expenses, \$11,000; value of property, \$60,000; endowment, \$30,000; volumes in library, 2,556.

The Northwestern Normal School gave the number of teachers as 6; total pupils, 200; value of property, \$40,000.

The industrial boarding school at Standing Rock agency reported 17 teachers, 169 pupils, 122 average attendance, and 125 volumes in the library.

The School for the Deaf, at Devil's Lake, had 50 pupils, with 16 applications on file at last report; about \$20,000 of the last appropriation of \$47,000 for additional room has been spent.

The last report of the State University, covering the biennial years of 1897 and 1898, shows that 326 students attended the university in 1898, exclusive of 150 that were in the summer school. The placing of the high-school law on the statute books has been of great benefit to the university, as 21 schools in the State are now doing two years of high-school work, 14 of them three years, and 7 of them four years of such work, thus freeing the university from the preparatory work almost entirely. The Sylvaton museum contains collections of the grains of the State, seeds from the field and garden and woods, sections of trees, birds, birds' eggs, animals' heads, minerals, coals, soils, etc. The walls are covered with historical pictures, and the resources and history of Dakota is attractively displayed.

The State traveling libraries are doing good work, and have received the support of educational bodies throughout the State.

Legislative Session.—The Legislature assembled Jan. 5, and closed its session March 10. The following were among the bills passed and approved by the Governor:

Extending the term of residence in divorce cases to twelve months, and requiring that plaintiff must be a resident of the United States, or must have declared his intention to become such.

Providing that the innocent purchaser of incumbered realty shall have recourse against the grantor.

Providing that the court may direct the payment of alimony in divorce cases, where the decree is granted for the offense of either the husband or the wife.

The appropriations for the State institutions were: For the Agricultural College, \$27,700; the Penitentiary, \$64,000; the university deficiency, \$7,000; the Mayville Normal School, \$22,300; the Valley City Normal School, \$25,500; the State deaf school, \$47,000; the Soldiers' Home, \$14,000; the insane asylum, \$105,500.

On Jan. 26 Porter J. McCumber (Republican) was elected United States Senator, receiving 32 votes out of a total of 46.

NORTHWEST TERRITORIES OF CANADA. In 1898 the Legislature of these territories was dissolved and Mr. F. W. G. Haultain, who since 1888 had been at the head of its changing constitutional system—under the Lieutenant Governor—was sustained as Premier by a large majority. The Legislature met on April 4, 1899, and was opened by the recently appointed Lieutenant Governor, A. E. Forget, with a speech from the throne, of which the following are extracts:

"After a residence of nearly a quarter of a century in the territories, I am not unacquainted with earlier conditions of life in this country, and am well pleased to note that even at this comparatively early period in their political history the people of the Territories are assured of their future welfare, of which fact there are many evidences.

"On the twenty-sixth day of September last, within three months of his arrival in the territories, Lieut.-Gov. Cameron died at London, in the province of Ontario. My lamented predecessor fittingly closed a long life, of which a considerable part was actively spent in the service of Canada, in the administration of these territories, and his unique personality will long remain a warm memory among those who knew him. Though the period of his actual residence in the territories was but brief, he had abundantly shown that his heart and sympathies were with our country and our people.

"Owing to the unprecedented increase in the work of departmental administration, I found it necessary at the beginning of the year to call to my aid the continuous services of the third member of the Executive Council, and to make such a distribution of the various offices provided for by law as permitted the duties devolving upon the members of my Government to receive closer and more detailed attention than was previously found to be possible. Much benefit to the public services has resulted from this change. The consolidation of the ordinances of the territories has been completed since the close of the last session of the Legislative Assembly, and the printed volumes will shortly be available.

"The work of organizing the country under the local improvement ordinance has been nearly completed. There are now 450 districts ready to commence their work with the opening of spring. The operation of the ordinance has shown that its provisions can not be made to apply in certain portions of the country where the settlement is not close or continuous, and a measure will be submitted to you dealing with this

phase of the question without violating the principle underlying the ordinance.

"The question of the supply of water for general purposes in certain parts of the territories is one to which considerable attention has been given by my Government. The work carried on by the Public Works Department during the past season in seeking to establish the extent of the disabilities in this respect under which those parts of the country labor has met with gratifying results, and has shown that the difficulty—hitherto deemed almost insurmountable—is one that in nearly every instance can be removed. You will be asked to provide the necessary means for extending this work and prosecuting it with vigor.

"The initiatory work of the Department of Agriculture has already been attended with a considerable amount of success. A number of stock owners in various parts of the territories are availing themselves of the opportunity to improve their herds by the introduction of thoroughbred animals under the supervision of the department, and arrangements have been completed, under the authority given at the last session of the Legislative Assembly, for the operation this year of an experimental station near Calgary, at which demonstrations of the agricultural possibilities under local conditions will be afforded. Arrangements for the establishment of similar stations in other parts of the territories are receiving attention."

William Eakin was elected Speaker, and the Executive Council or Ministry as now constituted consisted of F. W. G. Haultain, Attorney-General; J. H. Ross, Treasurer and Commissioner of Public Works; and G. H. V. Bulyea, Commissioner of Agriculture and Provincial Secretary. At the close of the session, after sundry lively debates, the following measures, among others, were assented to by the Lieutenant Governor in the Queen's name:

To amend an ordinance respecting the Legislative Assembly.

To amend an ordinance respecting elections.

To amend an ordinance making regulations with respect to coal mines.

To declare and amend the law of partnership.

To amend an ordinance respecting agricultural societies.

An ordinance respecting the winding up of joint-stock companies.

An ordinance respecting agricultural societies.

To amend an ordinance respecting municipalities.

To amend an ordinance respecting villages.

To amend an ordinance respecting local improvement.

To amend an ordinance respecting irrigation districts.

An ordinance respecting the inspection of stock.

An ordinance to protect horse breeders.

To amend an ordinance for the protection of game.

To amend an ordinance respecting insane persons.

Finances.—The sums granted to the Lieutenant Governor for the financial year ending Dec. 31, 1899, and the purposes for which they were granted, were as follow: Civil government, \$43,826.77; legislation, \$30,125; administration of justice, \$9,950; public works, \$136,000; education, \$158,000; agriculture and statistics, \$16,650; hospitals, charities, and public health, \$8,750; miscellaneous services, \$10,323.96. The total amount was \$413,625.73. To defray the expenses of legislation, maintenance of public institutions, salaries

of the officers of the Government and public service, and for all other expenditures of the Government from Jan. 1, 1900, until the final passage of the estimates of expenditure for the financial year 1900, the sum of \$60,000 was also voted.

Education.—According to the annual report of the Council of Public Instruction, 426 organized school districts were in operation in 1898. The registered number of children of all ages was 16,754, with a daily attendance of 8,826. The average period all schools were open during the year was one hundred and fifty-nine days. The teachers numbered 483. The average cost of educating each child was \$18.45 per annum. Twenty-eight new school buildings were erected, at a total cost of \$19,964.60, which in most instances was raised by debentures, although a few buildings were erected by voluntary contributions of money and labor. The grounds around several buildings were inclosed, wells were dug, stables and sheds added, and extensive alterations and improvements made. The aggregate cost of buildings and improvements was \$29,740. New furniture was added at a cost of \$5,933.32. The sum of \$3,522.60 was spent on school apparatus, including libraries.

Agriculture.—In the year 2,942 homestead entries were made in the Northwest Territories. The Canadian Pacific Company land sales showed an enormous increase over previous years. In 1897 199,481 acres were disposed of in the West, 67,000 of which were in Assiniboia and Alberta, while in 1898 the sales reached the area of 348,627, of which about 160,000 were in Assiniboia and Alberta. It is estimated that about one sixth of the purchasers settled in the country within the year. The arrivals at Winnipeg showed an increase of about 175 per cent. over the previous year's figures. According to the report of the Department of Agriculture for the year, the production of wheat was 5,542,478 bushels and the acreage 307,580; oats, 3,040,307 bushels, acreage 105,077; and barley, 449,512 bushels, 17,092 acres. The total acreage was 429,749.

NOVA SCOTIA, an eastern province of the Dominion of Canada; area, 20,907 square miles; population in 1891, 450,396. Capital, Halifax.

Government and Politics.—The second session of the thirty-second Legislature of the province met on Feb. 2, 1899, and was opened by Lieut.-Gov. M. B. Daly with the usual ceremony and a speech from the throne, of which the following are extracts:

"The past year may be fairly spoken of as one of general prosperity throughout the Dominion, and it must be a gratification to us to know that in our own province a fair degree of success rewarded the industry of our people in their various fields of labor. During the past year the sales of coal from the mines of the province show an increase, and are the largest on record. This increase has continued since the close of the fiscal year, necessitating the working of our collieries during the winter months, which is a matter of the greatest importance to our coal-mining population. This satisfactory condition of affairs is owing to an increased demand and to the fact that a large quantity of our coal is being mined to make coke and gas.

"The operations of our gold mines also shows an increase, the productions of gold last year being the largest yet recorded. Gold mining in Nova Scotia is now for the most part conducted by companies, which, working with modern appliances, have as a rule made profitable returns. The preparations for opening new mines promise still larger productions in the present year. You

will be pleased to learn, from a report to be submitted, that large areas in the island of Cape Breton, hitherto considered of doubtful mineral value, offer good fields for mining enterprise and investment, and that explorations during the past season have shown that the area of the Cumberland coal field is much more extensive than it was previously believed to be.

"Very satisfactory progress has been made in the construction of the Midland Railway between the towns of Windsor and Truro. We have every reason to look forward to the completion of this road during the coming summer. I regret the progress made with the projected railroads between Halifax and Yarmouth during the past year has not been as satisfactory as we could have desired. The subject of certain railway claims of this province against the Federal Government has engaged the attention of my ministers during the recess, and renewed efforts have been made to have these claims effectively placed before the federal authorities. A delegation visited Ottawa recently for that purpose.

"Since the last meeting of the Legislature, by a decision of the Judicial Committee of the imperial Privy Council, it has been determined that the ownership of the beds of lakes and rivers, and inferentially of the foreshores in bays and along the coast, is vested in the provincial Government. While this decision in no way affects the responsibility of the Federal Government in respect to the regulation and protection of the fishing industry of the country, it has made it clear that the right to issue leases of fishing privileges over a defined area is vested in the provincial Government. A measure dealing with this subject will be submitted for your consideration.

"A great deal of importance is properly attached to the question of the maintenance of our common roads. A large amount of intelligent discussion and the introduction of modern road machinery in many parts of the province have done much to assist in bringing about a more desirable condition of affairs. It has been felt that our present road law does not meet present requirements.

"The act of the last session providing for a revision of the statutes required that the work should be completed on or before the 31st of December, 1898. The commissioners appointed for this purpose, while proceeding with the work with the utmost vigor, have officially reported to my Government that it was absolutely impossible to complete the work in a thorough and satisfactory manner within the time specified, and for this reason the complete work can not be submitted to the Legislature this session."

On March 10, in pursuance of a policy that the Liberal provincial governments were putting in practice of supporting proposals made by the Dominion Liberal Government, Attorney-General Longley moved the following resolution regarding the constitution of the Senate of Canada, and it was carried by a vote of 30 to 2:

"That an humble address be presented to her Majesty the Queen setting forth that the provisions of the British North America act, 1867, respecting the legislative functions of the Senate of Canada, are unsatisfactory, and should be so amended as to bring that body more into harmony with the principles of representative government, and praying that her Majesty may be pleased to recommend to the imperial Parliament such an amendment of the said act as will provide that if the House of Commons passes any bill and the Senate rejects such bill or fails to pass it, or passes it with any amendments to

which the House of Commons will not agree, and to which amendments the Senate adheres, the Governor General may by message, upon the advice of his Council, convene a joint sitting of the two houses, which sitting shall decide by a joint vote, without debate, the question in controversy between the two houses."

The session of the Assembly closed on March 30 with the following review of its work by the Lieutenant Governor:

"The special act respecting roads will, I feel assured, meet with public approval. It is a measure of reform which should bring about a more efficient supervision of this important branch of the public service. I notice with satisfaction the passing of an important measure in relation to agriculture, including provisions for the assistance of creameries, which should have the effect of giving to all the counties of the province the advantages of improved dairying. It is gratifying to observe the passing of an act for the encouragement of the production of iron and steel in this province, which, I trust, will have the effect of leading to a larger development of this most important industrial enterprise. The legislation of the session with respect to the fisheries will, it is hoped, enable this province to efficiently carry out provincial interests in this leading industry. Prominent among the measures which you have passed is an act to consolidate our marriage laws; also acts relating to juries, mechanics' lien, secret bills of sale, and an act effecting a change in the granting of Crown lands. I congratulate you upon the passing of these important measures."

Iron and Steel Industries.—The legislation and discussion connected with this important branch of provincial development attracted much attention during the year, and the work already accomplished was well reviewed by Mr. Whitney, the American-Canadian capitalist, in a letter to the Premier, from which the following extracts are taken:

"Through your position with the Government of Nova Scotia you are, of course, cognizant of the history of the coal trade in your province and of my connection therewith since the year 1893. Although you are aware of the facts, you will, perhaps, pardon me if I pass in review the history of the coal business in Cape Breton County since I became connected therewith. I wish to do this as I am about to make later in this letter a proposal to you leading to a further and larger development of this trade. You will remember that I procured the organization of the Dominion Coal Company, which has already spent in the purchase of mines and in equipping them with modern plant and machinery between \$6,000,000 and \$7,000,000. The greater part of this money was fresh capital, and came from outside of the province. That the company has been successful appears from the fact that the output of coal from the mines which were purchased by the Dominion Coal Company has been increased from 700,000 tons a year to 1,200,000 tons. The wages have increased from \$700,000 (the highest ever paid by the old companies) to \$1,100,000 a year. The royalty paid by the Dominion Coal Company is substantially greater than that paid by any other coal company, and the increase in the provincial revenue has been very considerable. I found early in the history of the Dominion Coal Company that it was cramped for markets, and with a view to the further development of the mining industry in Cape Breton I promoted in the city of Boston the formation of a coke and gas company, involving an expenditure of about

\$5,000,000. This company was formed for the purpose of manufacturing coke and gas from Nova Scotia slack coal. The works are nearing completion, and are taking a moderate quantity of coal from our mines at the present time. About the 1st of April the company will begin the consumption of Nova Scotia coal at the rate of about 750,000 tons a year. To meet this increased output, the Dominion Coal Company is continuing its work in Cape Breton through the present winter season with practically the same vigor with which it prosecuted the work during the summer season. This, you will admit, is an entirely new phase of coal mining in the country of Cape Breton. The great difficulty in the past with these mines was the short period during which mining was carried on, leaving so many men idle through the long and hard winter. It could not be expected that matters would be on an entirely satisfactory basis until this great difficulty was overcome. You will probably, therefore, be glad to know that this difficulty has been overcome, and that the miners of Cape Breton have a much better future than they could possibly have had under anything less than the development brought about by the Dominion Coal Company or an institution of similar character, prosecuted with the same energy.

"Since the formation of the Dominion Coal Company I have given my entire time and energy to further its best interests, and am desirous of further developing its business and putting it on such a basis that the company and the mining interests shall be independent of all governments and tariffs, excepting the Government of Nova Scotia and the Parliament of Canada, under whose jurisdiction it is, and who must always be interested in the success and advancement of the company. Within the last year experiments on a working scale have proved what hitherto was unknown and even denied—namely, that the coal of our mines was suitable for the manufacture of metallurgical coke. Coincident with this has been the discovery of the existence of a cheaply mined ore, easily brought to Cape Breton, where limestone abounds, making the conditions for the manufacture of pig iron and steel most favorable. Access by sea facilitates the importation of foreign ore, and there is therefore found in connection with our mines all the conditions for a successful iron-making industry—namely, raw materials close at hand and water transportation to the markets of the world."

Mr. Whitney submitted a proposal that the Legislature of Nova Scotia should take power to itself, by order in Council or by an act of Parliament, to remit the whole royalty on all coal used in the manufacture (or in connection therewith) of iron and steel in the county of Cape Breton to any company that would begin active operations on or about the 1st of August next, and continuously and actively prosecute its work, making an expenditure on the whole enterprise which shall be not less than \$3,000,000. In great measure the proposals were accepted, and on March 15 Mr. G. H. Murray, the Premier, introduced legislation in a speech explaining that the bill authorized the Governor in Council to refund half of the royalty paid on coal used within the province of Nova Scotia in the making of iron and steel to any company that might be organized and begin operations within twelve months from the 1st of August next, and also should within two years of said date have erected within the province of Nova Scotia a plant at a cost of not less than \$3,000,000 for the manufacture of iron and steel. The second clause of the bill stated

that this refund of royalty should not be for a longer period than eight years. The third clause enabled the Governor in Council to make regulations for ascertaining the amount of coal consumed by any company. The fourth clause of the bill provided against a possible criticism or objection which might be raised in respect to the lessening of the revenue which the province now enjoyed. Members of the house would recollect, explained Mr. Murray, that in the contract with the Dominion Coal Company it was provided that the minimum amount of royalty to be paid by this company in any one year was fixed, and it was felt advisable to have it clearly understood that this contract should not be weakened in any sense by a rebate. It was consequently provided that any coal on which a royalty had been refunded under this act should not be counted as part of the minimum output of coal required by the Dominion Coal Company.

Finances.—On Feb. 20 Mr. Murray, Premier and provincial Treasurer, presented his annual report to the house. He began by stating that he had estimated a small surplus of \$3,000, which had actually amounted to \$6,630.25. The expenditure was \$849,330.45, and the receipts \$855,960.70. The money to the credit of the province at Ottawa was \$1,056,133.49, which bore interest at 5 per cent. The interest on this and the allowance under the British North America act in 1898 amounted to \$432,807.10. The Mines Department had yielded \$277,870.74, against \$270,387 the year before, or an increase of about \$7,000. The figures of revenue derived from coal since 1870 showed the following increases: 1870, \$71,575.28; 1880, \$70,548.51; 1885, \$119,294.77; 1890, \$168,644.62; 1898, \$277,870.74. This showed an increase of more than \$200,000 in less than thirty years, and in less than ten years the increase had been considerably more than \$100,000. The Premier spent some time in combating the view that it was the protective clause of the (Conservative) Dominion policy that had brought pronounced growth to the provincial coal industry. He was not prepared, however, to say that protection had not accomplished some good for Nova Scotia coal, but he held that it was the legislation of Nova Scotia itself that had been the great stimulant to the revenues from coal. Up to 1885, he said, the royalty had been 9.7 cents a ton on round coal, slack being free, but in that year the royalty was fixed at 7½ cents on all coal. In 1892 the royalty was raised to 10 cents, and in 1893 the royalty on all coal raised by the Dominion Coal Company had been fixed at 12½ cents, while that paid by other companies was left at 10 cents. Since 1893 there had been mined 11,533,777 tons, which at the present rate of royalty gave \$1,291,810.66. If this quantity had paid merely the old rate of 7½ cents, all that would have been received was \$864,333.25. Thus provincial legislation in five years had added \$427,477.41.

In speaking of the succession duties, the Premier admitted that legacies for religious and charitable purposes should be exempt from the tax. The estimated revenue from this source for 1898 had been \$45,000. The amount received was \$13,161.87 more than the estimate. The chief sources of revenue during the year were the interest and allowance from Ottawa, \$432,807; marriage license fees, \$6,783; succession duties, \$58,161; Crown lands, \$20,386; Hospital for Insane, \$41,539; and the Victoria General Hospital, \$7,348. With some small miscellaneous items these make a total revenue of \$855,960.70.

The expenditure on current account in 1898 was \$4,368 less than the year before. The figures

were \$853,698.87 in 1897, and \$849,330.45 in 1898. The items of expenditure were as follow: Education, \$247,998; public charities, \$124,266; interest, \$122,292; road grant, \$84,912; legislative expenses, \$47,173; steamboat subsidies, \$38,219; provincial engineer's office, \$10,280; mines office, \$20,968; Public Works Department, \$11,802; salaries, \$22,450. On capital account the expenditure for the year had been \$119,206.56, of which the construction of iron bridges had received \$72,312, the coast railway \$36,000, and the Exhibition Committee \$10,000. The total expenditure on capital account up to September, 1898, on bridges, railways, and other public works had been \$3,742,156.23. The Premier deducted from this the amount of \$1,056,133.49 to the credit of the province at Ottawa, and placed the net provincial debt at \$2,387,314.18.

Lumber.—The lumber output from Nova Scotia averaged only about one third of that from New Brunswick. The combined shipments from Nova Scotia in 1898 amounted to about 561,000,000 superficial feet, or 119,000,000 less than in 1897. The feature of this year's business was the large decrease in the exports from almost every New Brunswick and Nova Scotia port, showing a reduced shipment from the former province of 82,000,000 superficial feet, and from the latter of 37,000,000 superficial feet. The shipment of lower port woods is still too large for present market requirements, and a further curtailment of 10 to 20 per cent. would, it is said, give much better results for both shippers and producers. The stock of merchantable spruce deals and logs wintering at Chatham, Nova Scotia, was above the average, although 23,000,000 superficial feet less than last year. Following is a comparison in the transatlantic shipments of deals from New Brunswick and Nova Scotia, the figures being given in round millions of superficial feet: 1894, New Brunswick 326,000,000 feet and Nova Scotia 106,000,000 feet; 1898, New Brunswick 412,000,000 feet and Nova Scotia 148,000,000 feet.

Education.—The report of the Superintendent of Education for the year ended July 31, 1898, showed that the educational affairs of the province during the year were satisfactory. The number of sections that were without schools had been reduced from 153 to 124, which was a continuation of the improvement of the previous year, when they were reduced from 171 to 153. The number of schools increased from 2,346 to 2,385. The annual enrollment of pupils increased from 100,847 to 101,203. What was of greater importance, the daily average attendance increased from 54,922 to 57,771. The superintendent reported that this was the best attendance in the history of the province. The number of teachers rose from 2,485 to 2,510, and it was regarded as even more important that the number of normal-school trained teachers rose from 752 to 798. The report showed a steady gain in the number of trained teachers remaining in the profession since 1893. The numbers employed each year since 1893 were as follow: 403, 499, 616, 690, 752, 798. The number of male teachers increased from 576 to 614, while the female teachers diminished from 1,909 to 1,896. This change was in keeping with the general trend since 1893. The school sections increased their vote for buildings and repairs by \$22,481 over the previous year, and for teachers' salaries by \$11,139. The former indicated a growing appreciation of improved accommodation for the children, and the latter of the value of skilled teachers. The average of salaries had not increased, however, as the small

increase in some classes was offset by a small decrease in others. The teachers' licenses granted each year from 1893 to 1898 were as follow: 218, 250, 365, 513, 571, 573.

Agriculture.—The annual report on agriculture showed that in 1878 there were 77 agricultural societies in the province, having a membership of 4,138 persons, who subscribed \$4,860.82, and in 1895 the number had only increased to 83, with a membership of 4,597, subscribing \$5,356. In 1898, three years later, there were 103 societies, containing 6,155 members, subscribing \$7,092.90. In the current year (1899) 15 of these societies were formed. The subscription of these societies in 1898 (\$7,092.90) was supplemented by the Government grant of \$8,000, and this made a total sum of over \$15,000 spent for improving the live stock in the province. The report on the subject of creameries, with a detailed table, showed at least an encouraging intimation of progress. The total product of the creameries and butter and cheese factories subsidized for the Government for 1897 was \$73,000, while in 1898 it was \$104,500.

On March 14 the subject was discussed in the Legislature, and a special report of a committee was presented by the Hon. J. W. Longley, which, said, among other things:

"We note with pleasure a firm belief in the practicability of cultivating fruit on a more extended scale in many sections of the eastern counties. Your committee has been waited upon by a joint committee of the Nova Scotia Farmers' Association and Nova Scotia Fruit-growers' Association regarding the School of Agriculture and model farm. While admitting the beneficial results to our young men from instruction received at the college and farm at Truro in the past, and also the good work at the Horticultural School at Wolfville, we are of opinion that, in order to keep up with the march of improvement and development, and also taking into consideration the awakened interest in agriculture and horticultural matters throughout the province, we were justified in advocating better facilities for scientific agricultural training. Your committee would respectfully recommend that the Schools of Agriculture and Horticulture be united and established on a model farm, in a part of the province best adapted, naturally and by environment, for the successful operation of such a school and farm, where, with sufficient equipment, our farmers' sons and others may receive a scientific, technical, and practical agricultural education. Your committee is of opinion that if an abattoir company were to establish a business in Halifax on an extensive scale the result would be the encouragement of our farmers to produce much more stock for slaughter. Should a *bona fide* company, with sufficient capital to guarantee successful prosecution of the work, be established in Halifax, or put forward such substantial evidences of good faith as would show that it is prepared to commence business, the Government would be justified in giving the most serious consideration to the question of giving such company such support as in their wisdom they may deem expedient and in the public interest. Your committee again respectfully directs the attention of the Government to a matter dealt with in the report of last year—viz., the placing within easy reach of the farmers of Nova Scotia of literature dealing with scientific improvement of the soil and fertilization of worn-out lands. The importation and distribution of thoroughbred stock by the Government has heretofore been met with approval, and your committee is of

opinion that a continuation of this policy commensurate with the resources of the province is highly desirable."

Fisheries.—The yield of the provincial fisheries in 1897 was \$899,346 in value. The principal fish thus caught were salmon, mackerel, herring, cod, haddock, lobster, hake, and pollock. The bounties paid by the Dominion in 1897 amounted to \$102,084, and the number of fishermen was 17,371. The value of the boats and material engaged was \$3,149,174. A good deal of public attention was paid to the provincial fisheries during the year, and a special committee of the Legislature reported on March 28, 1899, as to their condition in the following terms:

"Your committee appointed to consider the state of the fisheries of Nova Scotia generally, and practically to inquire into the desirability of establishing a system of cold-storage depots along the coast, to insure a constant supply of fresh bait for bank and shore fishermen and for the preservation in a fresh state of a portion of the catch and its shipments in refrigerators by water and rail to distant markets, beg to report as follows: The committee met twice, and the meetings were attended by masters of vessels and fishermen engaged in the bank fishing, shore fishermen, and merchants engaged in supplying the business. The need of bringing within the reach of fishermen the means of developing to the utmost the fishing industry of Nova Scotia is urgent. The value of the fisheries of the province a few years ago was about \$8,000,000, and dur-

ing the last few years it has greatly diminished. Evidence from practical men all along the coast shows that scarcity of bait occasions great loss of time to both shore and bank fishermen. It was asserted that bank schooners frequently lost from four to six weeks out of a season of five months on account of having to leave the banks to hunt about the coast for bait, and that this loss would be reduced by two thirds if the schooners were provided with small refrigerators, which could be supplied with certainty at bait-supply depots. It was also asserted by many persons that from twenty to fifty days are lost each year by the shore fishermen from the same cause, and that each shore fisherman would be benefited to an extent of \$25 to \$50 yearly if a permanent bait supply was within easy reach. It appears that the annual value of the industry may be increased to an extent of half a million dollars by the establishment of a system of bait depots along the coast, and that by this means a still further increase in the value of the catch may be obtained by holding in cold-storage depots a portion of the most valuable fish to be shipped in a fresh state to Canadian, American, and British markets. Six or eight large refrigerators at convenient ports of call for bank fishermen would to a large extent meet the requirements of the province. The large refrigerators can be constructed for \$2,000 each. Smaller ones, suitable for local needs, for \$500 to \$1,000 each. We urge that the Dominion Government be requested to bonus a number of refrigerators."

OBITUARIES, AMERICAN. **Adams, Julius Walker**, civil engineer, born in Boston, Mass., Oct. 18, 1812; died in Brooklyn, N. Y., Dec. 13, 1899. He was appointed to the United States Military Academy, but in 1832 became assistant engineer of the Stonington and Providence Railroad. In 1835 he was assistant engineer of the Paterson and Hudson Railroad, and from that time he was connected with many railroads in the capacity of chief engineer. He was also connected with the United States service in the survey of harbors and lighthouses and of the Connecticut river. In 1845 he was resident engineer of the United States dry docks at Brooklyn and engineer for the Boston waterworks. From 1850 for several years he was consulting engineer of the city of New York. He designed the sewerage and drainage system of Brooklyn in the years 1857-'60. In 1860 he was colonel of the engineers of the 2d Division, New York State militia; in June, 1861, he was commissioned colonel of the 1st Regiment of Long Island Volunteers, and he served under Gen. McClellan in the Army of the Potomac. In November, 1862, he was appointed colonel of the 2d Hawkins Zouaves, and he was in command of the troops stationed in Printing House Square during the draft riots in 1863. As early as 1855 he had agitated the necessity of a bridge between Brooklyn and New York city, and after his return from the war he interested William C. Kingsley in the project, the result being the incorporation, Feb. 4, 1865, of the East River Bridge Company. In the early period of the construction of the big bridge he held various posts in connection with it. In 1881-'82 he was the editor of Engineering News. He was the last surviving member of the 12 founders of the American Society of Engineers, and was also a member of the New York Academy of Science

and of the American Association for the Advancement of Science.

Agnew, John T., merchant, born in New York city, Oct. 13, 1815; died there, Nov. 29, 1899. He was in the wholesale tobacco business from 1837 till 1869. He was closely connected with the old volunteer fire department, and was also a member of the Dock Board that built the sea wall around the Battery. He was one of the trustees of the Brooklyn Bridge from 1877 to 1885, the period of its construction. He was a presidential elector on the Cleveland and Hendricks ticket in 1884, and he served in recent years on several citizens' committees as a representative Democrat and business man.

Alexander, Joseph, manufacturer, born in Newburg, N. Y., in 1804; died in South Orange, N. J., Jan. 30, 1899. For many years, beginning with 1829, he was a manufacturer of paper molds in Springfield, N. J. He was a remarkable penman, and in his later years spent much time in writing souvenirs for his friends. On a piece of paper the exact size of a postal card he repeatedly wrote the 119th Psalm and 5 of the following psalms, a total of 214 verses, 3,000 words, and 12,400 letters, and he embellished the four corners with the Lord's Prayer, written in a space the size of a 10-cent piece.

Alexander, Robert C., lawyer and journalist, born in West Charlton, N. Y., July 7, 1857; died in New York city, Nov. 4, 1899. He was graduated at Union College with first honors in 1880, and at the Albany Law School in 1881, and for three years thereafter he practiced law in Elmira, N. Y. Removing to New York city in 1884, he became counsel for Col. Elliott F. Shepard, and as such he negotiated the sale of the Mail and Express by Cyrus W. Field to Col. Shepard. He became secretary of the new corporation, and was also

private counsel for Col. Shepard. On the death of Col. Shepard, Mr. Alexander and R. E. A. Dorr carried on the paper for the Shepard estate until 1897, when they became owners. At that time Mr. Alexander was treasurer and editor and Mr. Dorr was president and publisher. He resigned the trusteeship in 1898. He was a trustee of Union College, and he organized and was two years president of the Adirondack League Club.

Alger, Horatio, author, born in Revere, Mass., Jan. 13, 1834; died in Natick, Mass., July 18, 1899. He was graduated at Harvard in 1852, and several years later at the Cambridge Divinity School. He was ordained pastor of the Unitarian Church at Brewster, Mass., in 1864, but removed to New York city in 1866 and devoted himself to the writing of books for young people. The literary quality of his work is very slight, but it is morally unexceptionable. His books include *Bertha's Christmas Vision*; *Nothing to Do*, a poem; *Frank's Campaign*; *Helen Ford*, a novel; *Paul Preston's Charge*; *Abraham Lincoln*, the *Backwoods Boy*; *Ben the Luggage Boy*; *Bob Burton*; *Bound to Rise*; *Brave and Bold*; *Charlie Codman's Cruise*; *Dan the Detective*; *Do and Dare*; *The Errand Boy*; *Fame and Fortune*; *Frank Fowler*; *From Canal Boy to President*; *Grandfather Baldwin's Thanksgiving*, with *Other Ballads and Poems*; *Helping Himself*; *Herbert Carter's Legacy*; *Hector's Influence*; *Jack's Ward*; *Joe's Luck*; *Julius*; *Luck and Pluck*; *Mark the Match Boy*; *Paul the Peddler*; *Phil the Fiddler*; *Ragged Dick*; *Risen from the Ranks*; *Rough and Ready*; *Rufus and Rose*; *Sam's Chance*; *Shifting for Himself*; *Sink or Swim*; *Slow and Sure*; *The Store Boy*; *Strive and Succeed*; *Strong and Steady*; *Tattered Tom*; *The Telegraph Boy*; *Tom the Bootblack*; *Tom Temple's Career*; *Tony the Hero*; *Try and Trust*; *Wait and Hope*; *Young Adventurer*; *Young Circus Rider*; *Young Explorers*; *Young Miner*; *Young Outlaw*; *Only an Irish Boy*; *Erie Train Boy* (1890); *Struggling Upward* (1890); *Young Boatman of Pine Point*; *Dean Dunham* (1891); *Five-hundred-dollar Check* (1891); *Digging for Gold* (1892); *Facing the World* (1892); *In a New World* (1893); *Victor Dane* (1894); *Adrift in the City* (1895); *Odds against Him* (1896); *Frank Hunter's Peril* (1896); *The Young Salesman* (1896); *Frank and Fearless* (1897); *The Young Bank Messenger* (1898).

Ames, Oakes Augier, manufacturer, born in North Easton, Mass., April 15, 1829; died there, Sept. 19, 1899. He was the eldest son of Oakes Ames, of Credit Mobilier and Union Pacific Railroad fame, and a brother of the late Oliver Ames, ex-Governor of Massachusetts. Oakes Augier spent his business life in close attention to the extensive shovel manufactory with which the Ames family has been connected for many years, resisting all inducements to enter political life. He entered the shovel factory when eighteen years old, and became superintendent of the concern in 1873 and president in 1877. As a member of the old firm of Oliver Ames & Sons he participated in the gift of a schoolhouse to North Easton. In association with his brother Oliver he erected a public hall in the town at a cost of \$60,000 and placed a costly window in the Unitarian Church, both in memory of his father. The Ames corporation also gave the town the plot of 9 acres.

Andrews, George Leonard, military officer, born in Bridgewater, Mass., Aug. 31, 1828; died in Brookline, Mass., April 4, 1899. He was graduated at the United States Military Academy at the head of his class in 1851; entered the army as brevet second lieutenant of engineers; was pro-

moted second lieutenant in 1854; and resigned to engage in civil engineering, Sept. 1, 1855. On May 25, 1861, he was commissioned lieutenant colonel of the 2d Massachusetts Infantry, of which he became colonel on June 13, 1862. For highly meritorious services in the battles of Winchester, Cedar Mountain, and Antietam he was promoted brigadier general of volunteers in November following. In the campaigns of the Army of the Gulf he served as chief of staff to Gen. N. P. Banks, and received the surrender of the Confederates under Gen. Frank Gardner at Port Hudson, La. As chief of staff to Gen. E. R. S. Canby he rendered such important service in the operations against Mobile and its defenses that he was brevetted major general of volunteers, March 26, 1865. In August following he was mustered out of the volunteer army and resumed civil engineering. After holding the office of United States marshal for the district of Massachusetts for four years, he was appointed Professor of French at the Military Academy, Feb. 28, 1871, and June 30, 1882, was advanced to the chair of Modern Languages. He was retired with the pay of colonel, Aug. 31, 1892. Gen. Andrews was one of the 15 officers named in the Army Register who received commissions "for specific distinguished services." He participated in several of the most venturesome exploits of the civil war, and at Mobile he personally conducted large numbers of troop ships through the harbor, then filled with mines and torpedoes.

Anthony, James Danelly, clergyman, born in Abbeville District, S. C., in 1825; died in Savannah, Ga., Jan. 26, 1899. He was a son of the Rev. Whitfield Anthony, and in early youth accompanied his parents to the Cherokee district in Georgia, where he was reared among the Indians. In 1846 he united with the South Georgia Methodist Conference, with which he remained through life, excepting a period of service in Alabama. During the fifty years of his active ministry he had held the highest offices his conference could confer, and because of his almost continuous service in the one field he was popularly known as "Bishop of the Wiregrass." In late years he wrote his memoirs, which at the time of his death had passed through two editions.

Appleton, William Henry, publisher, born in Haverhill, Mass., Jan. 27, 1814; died at Riverside, N. Y., Oct. 19, 1899. His father, Daniel Appleton, born in Haverhill, Mass., in 1785, was a dry-goods merchant in Haverhill, and afterward in Boston. The son's education was obtained at private and public schools in Haverhill, and at Phillips Academy, Andover. In 1825 Daniel Appleton removed to New York. Soon after his arrival he decided to engage in bookselling, and he was joined in the venture by his brother-in-law, Jonathan Leavitt, a bookbinder. Half of his little store in Exchange Place was devoted to dry goods and half to books, and this new department was placed under the charge of William H. Appleton, then a clerk in his father's employ. It was a time when, as Mr. Appleton once said in an interview, "Exchange Place was a promenade for ladies, and fashionable life was found down around the Battery and Bowling Green." The book business, which consisted of importation of foreign books and their sale at retail, prospered in the hands of father and son, and after a short time Mr. Leavitt left the firm and Daniel Appleton devoted himself altogether to the book business, which was removed to the old Clinton Hall. In 1831 the house published its first book, of which William H. Appleton said a few years since: "This book was about three

inches square and half an inch thick, but its publication caused the firm of D. Appleton & Co. more anxiety than the American Cyclopædia, undertaken some thirty years later. The little book was called *Daily Crumbs from the Master's Table*, and consisted of selections from Bible texts. We sold about a thousand 'Crumbs,' and were very well satisfied—so well, indeed, that we followed it by a similar book, which was equally successful. The third book we published was called *A Refuge in Time of Plague and Pestilence*, and it had an enormous sale, for it appeared in 1832, the terrible cholera year, and the public mistook it for a treatise on that disease, whereas it was a religious volume, pointing out Christ as the refuge." With the growth of the business, which still consisted for the most part of the sale of foreign importations, it became desirable

year before his death. In 1838 also the business, which had been growing rapidly, was removed to No. 200 Broadway. One of the successful ventures of that time was the publication of Tract No. 49 and other products of the Tractarian controversy. The firm had been best known as jobbers in domestic and imported books, but their publishing enterprises soon became more extensive. The output included several editions of the *Prayer Book*, *Ure's Dictionary*, the works of Byron and Moore, and a series known as *Tales for the People*, which proved to be some of the most successful publishing ventures of the period. In 1848, when Daniel Appleton retired from the house he had founded, the firm was reorganized, and William H. Appleton became its head, with his brothers John Adams and Daniel Sidney as partners. Later he was joined by his brothers Samuel Francis and George Swett. In the arrangements for two of the most important publishing enterprises undertaken by this house William H. Appleton had a leading part. One was the publication of the *New American Cyclopædia*, under the editorship of George Ripley and Charles A. Dana; and the other was the introduction of Darwin, Huxley, Tyndall, and Spencer to American readers. In 1857 the first of the 16 volumes of the *Cyclopædia* appeared. In spite of the great panic of 1857 and interruptions due to the civil war, the work, which cost \$500,000 before there was any return, was carried to a successful completion in six years under the supervision of Mr. William H. Appleton and his brothers. In 1876 a revised edition of the *American Cyclopædia* was completed at an initial cost of more than \$500,000. Through the late Prof. Edward L. Youmans the Messrs. Appleton became the publishers of Darwin and others of the group associated with him. One result of this enterprise, which seems curious now, was the violent criticism of the firm by clergymen. Among the many personal appeals made to William H. Appleton against these books was one from a bishop, who warned him that he would be punished in this world and the world to come. Mr. Appleton replied by asking whether he was to be held responsible for converts to Rome made by the Pusey books, which were published on the bishop's advice. Throughout his career Mr. Appleton, himself a strong Churchman, took the position that, while a publisher should decline immoral or absolutely irreligious books, he was at liberty to issue books representing radically different phases of belief without the presumption that his imprint meant indorsement. Among the many other large affairs in which Mr. Appleton took an important part were the publication of Webster's *Speller*, of which more than 1,000,000 copies a year were sold, Benton's *Thirty Years' View* in Congress, Disraeli's *Lothair*, *Picturesque America*, and the *Popular Science Monthly*. The first volume of Prof. McMaster's *History of the People of the United States* was read and accepted by Mr. Appleton himself. The history of his life is practically the history of the house. The part that Mr. Appleton took personally in laboring for international copyright was most active and honorable, and there is probably no one living whose relation to this long struggle has been approximately so close. He was convinced very early in his active life of the injustice done to authors and to all who were interested in literary property by the failure of this country to respect its rights. In 1853 he addressed a letter to Edward Everett advocating an international arrangement as a matter of justice and sound policy. In 1871

to form closer relations with foreign publishers, and in 1835 William H. Appleton crossed the ocean in a sailing vessel to make his business known abroad. While in London he met John Murray, whose relations with Byron, Scott, Southey, and others are a part of the annals of literature, and the meeting was the beginning of a family friendship. He was also welcomed by Thomas Norton Longman, then the senior member of a firm that dates from the first half of the eighteenth century. At a dinner given, as was Mr. Longman's custom, in a room over the store, Mr. Appleton met Thomas Moore, of whose humor and geniality the young American naturally retained a vivid impression. In the course of a visit to Germany, which followed his stay in England, Mr. Appleton met the elder Tauchnitz, founder of that well-known publishing house. In January, 1838, William H. Appleton was taken into partnership with his father, and the firm assumed the familiar title of Daniel Appleton and Company, the name always signed officially in full in accordance with the request which the founder made of his son William when he retired from business, in 1848, the

he renewed his public advocacy of such a measure, and drafted an international copyright bill which contained many of the features embodied in the act adopted in 1891. His long championship of the cause of honest books was recognized by his brother publishers in his election as first president of the American Publishers' Copyright League, Dec. 29, 1887. Mr. Appleton's part in the conduct of the firm's business continued from his first experience with his father in Exchange Place, through the successive removals of the business, until after the firm occupied its present building at No. 72 Fifth Avenue. His business career showed a courage and largeness of view equal to the greatest enterprises, and the fortitude and wisdom necessary when fortune seemed adverse or results were long delayed. He was in every way a commanding figure, and his sagacity, far-sightedness, coolness, grasp of affairs, and singular executive ability were shown in many fields of effort outside of the business to which his life was primarily devoted. For nearly fifty years he was a trustee of the New York Life Insurance Company, and the fortieth anniversary of his election to this office was recognized by the presentation of a handsome testimonial prepared by his associates. His services as chairman of the Committee on Finance for an extended period form of themselves a remarkable record. For many years he was a director of the Delaware, Lackawanna and Western Railroad, and a trustee of the Institution for the Savings of Merchants' Clerks. He had been a director of the Central Trust Company and the New York Security and Trust Company. He was long the senior warden of St. Bartholomew's Church. His loyal interest in his church was illustrated, to cite but one instance, in the erection and endowment of the Appleton Church Home for Orphan Girls at Macon, Ga. Mr. Appleton became one of the first members of the Century Association, and with the exception of Daniel Huntington, whose membership began with the Sketch Club, which preceded the Century, he was the oldest living member. His date of election was 1847. He became a member of the Union Club in 1863, and was twice elected vice-president. He was a member of the Riding Club, the Aldine and Players' Clubs, and many other organizations. He married, April 16, 1844, Mary Worthen, of Lowell, Mass. His children now living are Miss Mary Appleton, William Worthen Appleton, and Henry C. Appleton. One daughter, Kate, who married H. Seymour Geary, died in 1873.

Armstrong, William, historical character, died in Ashland, Cass County, Ill., in May, 1899. In 1857 he and James H. Norton were accused of causing the death of James Metzger, in Menard County. Norton was tried in that county, found guilty, and sentenced to eight years' imprisonment in the penitentiary. Armstrong secured a change of venue to Cass County, and was tried in Beardstown in 1858. Abraham Lincoln volunteered to take charge of the case without fee as an obligation of gratitude. During the trial a witness for the prosecution, one Allen, testified that he could see the fatal blow struck by the light of the moon, which at midnight, he swore, was shining brightly. To contradict this apparently strong testimony Mr. Lincoln produced an almanac for 1857, and called the attention of the court and jury to its record that the moon did not shine on the night of the murder till several hours after midnight. This presentation was the most potent factor in the acquittal of the accused. Several years afterward Mr. Lincoln was charged with having had the almanac that he

exhibited in court prepared for the purpose by means of an inserted fictitious page. This allegation has been repeated many times, and appears in several published biographies. As the question has been revived by the death of Armstrong, it may here be noted that in an address before the Kansas Bar Association several years ago Judge Bergen, who lived in Ashland at the time and was in constant attendance at the trial, denied the charge against Mr. Lincoln.

Atherton, Alice (Mrs. William Edouin), actress, born in Cincinnati, Ohio, Aug. 25, 1854; died in New York city, Feb. 4, 1899. She was the daughter of an Irishman named Hogan. At the age of three she made her first effort on the stage at the National Theater in her native city as the child Marie in the melodrama *The Sea of Ice*. For four years she played with the company of this theater such parts as Eva in *Uncle Tom's Cabin*, Little Pickle in *The Spoiled Child*, and *The Young Actress* in the farce of that name. In 1862 she became a member of the Opera House company in Louisville, where she identified her remarkable talents with the soubrette rôles of the regular drama, and in the following season (1863-'64) she occupied the same position at Wood's Theater, Louisville. After the civil war she was engaged for four seasons with the company playing in Mobile, Ala. Her ability as a comedienne brought her into association with the Lydia Thompson burlesque troupe, which she joined at Detroit, Mich., in February, 1869. After traveling with that company for a season she was engaged for Wood's Museum, New York city (now Daly's Theater), where for three years she played all kinds of parts, as she used laughingly to say, "naughty girls, nice girls, rich girls, poor girls, starving mothers, and hungry boys, pages, soldiers, sailors, and saints." She returned to the Lydia Thompson company in 1873, and in December of that year married Willie Edouin, a popular comedian, at that time a principal member of the Thompson troupe. Thereafter Miss Atherton and her husband played together. At the opening of the season of 1877, on Aug. 27, *Oxygen*; or, *Gas in a Burlesque Meter*, at Wallack's Theater, gave Miss Atherton her first recognition as a burlesque actress from a metropolitan audience. She appeared as Queen Ylang-Ylang in *Robinson Crusoe* on Sept. 12 of the same year with similar success. When *The Babes in the Wood* was produced at the Eagle Theater, New York, she made a hit as one of the babes. A burlesque company formed by Samuel Colville was headed by Mr. and Mrs. Edouin for two years (1878-'79) in successful performances throughout the country. Rice's *Surprise Party* was organized in 1879, and Miss Atherton and her husband were its principal fun makers until the organization of a company by Mr. Edouin and Mr. Sanger in 1880 to play one of the first of the distinctively original American farce comedies, called *Sparks*. With this comedy and *Dreams*; or, *Fun in a Photograph Gallery*. Mr. and Mrs. Edouin traveled over the United States and Canada for half a dozen years, making much merriment for others and innumerable friends for themselves and their wholesome play making. The good fortune of their American ventures caused a trip to England, where they were so well received that in 1888 Mr. Edouin took a lease of the Strand Theater, and on Feb. 25 of that year Kate, the *Family Help*, was produced with Miss Atherton in the title part. The London public took her into great favor at once. On April 4 she appeared as *Airey Annie* in Burnand's travesty of *Ariane*. On June 30 she made an-

other hit as Collie Parker in *Run Wild*, and so for several years Miss Atherton identified herself with her husband's management of the Strand Theater. Her specially notable performances were Mimi Mahew in *Our Daughters*, Lady Betty Vane in *A Night's Frolic*, and Jeffie in *Hans the Boatman*. In 1892 she appeared at the Opera Comique, and subsequently at several of the popular music halls of London. In November, 1897, she returned home and became a popular favorite in the various vaudeville theaters of different cities. Her last appearance was at Hyde & Behman's Theater, Brooklyn, Jan. 27, 1899.

Atkinson, William Yates, lawyer, born in Oakland, Ga., Nov. 10, 1854; died in Newnan, Ga., Aug. 8, 1899. He was a son of John P. Atkinson, a farmer and teacher, and brother of Prof. T. E. Atkinson, who prepared him for college. He was graduated at the University of Georgia in 1877, was admitted to the bar in 1878, and established himself in Newnan. In 1879 Gov. Colquitt appointed him solicitor of the Coweta County Court, an office he held for three years. He was elected to the Legislature in 1886, 1888, 1890, and 1892, and in the last year was Speaker of the House. During 1890-'94 he was chairman of the Democratic State Executive Committee, and in 1894 and 1896 he was elected Governor of Georgia. He was an advocate of free silver and an income tax; founder of the Georgia Normal and Industrial College for Girls, at Milledgeville, and president of its Board of Trustees; and a trustee of the University of Georgia.

Bailey, Isaac Hazeltine, journalist, born in Yarmouth, Me., in May, 1819; died in New York city, March 24, 1899. He was a direct descendant of John Alden and Priscilla Mullins. When eleven years old he was apprenticed to the printer's trade, but subsequently spent several years at sea, and in 1837 went to New York and entered the leather house of Gideon Lee. About ten years afterward he went into the leather business in partnership with George Palen and William B. Isham. The firm speedily became conspicuous in the trade, and Mr. Bailey was influential for many years in adjusting disputes between merchants and customers in the trade. He entered political life at an early age, first as an earnest abolitionist and later as an original adherent of the Republican party. In 1859 he was appointed a police commissioner of the city, and in 1873-'76 he was a commissioner of the Board of Charities and Correction. In 1873 also he was appointed receiver of the National Bank of the Commonwealth, which failed in the panic of that year, and was an unsuccessful candidate for Congress. Two years afterward he became editor and proprietor of *The Shoe and Leather Reporter*. He held these posts till 1882, when the paper passed to a corporation, which continued him as editor till his death.

Baiz, Jacob, merchant, born in Barcelona, Venezuela, about 1839; died in New York city, June 20, 1899. He was brought to New York in childhood, was educated there, and was engaged in the commission business till his death. For many years he was the consul general of the republics of Guatemala, Salvador, and Honduras. In 1878 he was appointed *chargé d'affaires* for Honduras in Washington, and while holding the office was instrumental in preventing a steamer from leaving New York with munitions of war for the insurgents, for which service the Honduran Government commissioned him a brigadier general. During his business career he was influential in developing trade between the United States and Central America. He was the first

merchant to introduce into this country the famous brand of Guatemala coffee raised by ex-President Barrios.

Bardwell, Elizabeth Miller, educator, born in Colrain, Mass., Dec. 4, 1831; died in Greenfield, Mass., May 27, 1899. She was a daughter of Amos Bardwell, for many years active in the public affairs of Colrain, and was educated for a teacher. After leaving Shelburne Falls Academy, she taught till she entered Mount Holyoke Seminary, where she was graduated in 1866. In the following year she became an instructor there, and for twenty years she taught at different times algebra, trigonometry, and physics, as well as astronomy, but after 1886 she devoted herself wholly to the last branch. In the interest of her department she had visited the observatories at Washington, Princeton, Berlin, and Potsdam, and the Lick in California. Prof. Bardwell was a member of the Astronomical Society of the Pacific and of the British Astronomical Association.

Baker, David Jewett, jurist, born in Kaskaskia, Ill., Nov. 20, 1834; died in Chicago, Ill., March 13, 1899. He was a son of United States Senator David J. Baker, and was graduated at Shurtleff College in 1854. He was admitted to the bar in 1856, and began practice in Cairo, Ill. He was always a warm supporter of the Republican party. In 1864 he was elected mayor of Cairo, in March, 1869, judge of the 19th Judicial District, and in June, 1873, judge of the 26th District. On the organization of the Appellate Court in 1877 he was assigned by the Supreme Court to be one of the three judges of the 4th District. In 1878 he was appointed a justice of the Supreme Court of Illinois to fill the vacancy caused by the death of Judge Sidney Breese, and in 1888 he was elected to the bench of that court, on which he served nine years. At the expiration of his term he removed to Chicago.

Baker, Lewis, journalist, born in Belmont County, Ohio, Nov. 7, 1832; died in Washington, D. C., April 30, 1899. He received a common-school education, was apprenticed to the printer's trade when sixteen years old, and, excepting the period of his diplomatic service, spent his active career in journalism. When twenty years old he edited the *Jeffersonian* in Cambridge, Ohio. Subsequently he was associated with Samuel S. Cox in conducting the *Daily Ohio Statesman* in Columbus, and owned and edited the *Wheeling Daily Register* and the *St. Paul Globe*. He was admitted to the bar, but never practiced. While editing his paper in Wheeling, W. Va., from 1863 till 1884, he served on the Democratic National Committee and as president of the State Senate, and was a leader in West Virginia politics. In 1885 he bought the *St. Paul Globe*, which he made a power in the political and commercial development of the Northwest. He was chairman of the Democratic State Committee of Minnesota and delegate at large from that State to the Democratic National Convention in 1892, became interested in several financial corporations in St. Paul, and was active in promoting the educational concerns of the city. In 1893 he was appointed minister to Nicaragua, Costa Rica, and Salvador, and after retiring from that office he passed the remainder of his life in Washington.

Baker, Sarah, actress, born in Philadelphia, Pa., in 1817; died in Holmesburgh, Pa., Sept. 1, 1899. She was a daughter of Charles Porter, an actor and manager, of Philadelphia. Her *début* was made in the Walnut Street Theater, Philadelphia, in the part of Virginia in *Sheridan Knowles's Virginus*, Dec. 17, 1838. She was then engaged for small parts in the Pittsburg Theater,

from which she went again to Burton's company at the Chestnut Street Theater. In 1839, with her father, she was a member of the People's Theater, New Orleans. She remained there two years, and became a favorite juvenile leading woman. For many years she played the sympathetic heroines in legitimate and standard drama with the elder Booth, Edwin Forrest, E. L. Davenport, Charlotte Cushman, and Joseph Jefferson in the cities of the southwest. In the summer of 1853 she made her *début* at the Bowery Theater, New York, as Pauline in the *Lady of Lyons*. Shortly before this engagement she had married J. S. Baker, an actor, at Buffalo. After the civil war, her husband having died in 1863, Mrs. Baker—"Mamma Baker," as her comrades always affectionately called her—became a cherished member of Edwin Booth's successive companies, and occupied the position of old woman therein until about 1890, when she took a similar place in the company of Thomas Keene. Upon Mr. Keene's death, in 1898, she was admitted to the Forrest Home, where she died as gently as she had lived.

Baxter, Elisha, lawyer, born in Rutherford County, North Carolina, Sept. 1, 1827; died in Batesville, Ark., June 2, 1899. He received a public-school education and removed to Batesville soon after attaining his majority. In 1853 he was elected mayor of the city, and in 1854 and 1858 was sent to the Legislature. At the outbreak of the civil war he espoused the national cause and entered the army, becoming colonel of the 4th Arkansas Mounted Infantry in 1863. In 1864 he was elected United States Senator, but was not permitted to take his seat because Arkansas had not been legally reconstructed. From 1868 till 1872 he was judge of the 3d State Judicial District. In the spring of 1872 he was nominated for Governor by the wing of the Republican party which supported President Grant's administration. The Liberal or Greeley wing nominated Joseph Brooks, who also had the support of the Democrats generally. The campaign that followed was one of intense excitement. On Jan. 6, 1873, Judge Baxter was declared elected. His opponent, alleging frauds at the polls, appealed in turn to the Legislature, the State Supreme Court, and the United States Circuit Court without success. He finally brought suit against Judge Baxter in one of the State district courts, and on April 15, 1874, in the absence of Judge Baxter's counsel, obtained a favorable judgment. Thereupon he forcibly ejected Judge Baxter from the Governor's office. Both men now claimed the office, issued proclamations, had armed supporters, and appealed to the President. The situation assumed a serious aspect till Federal troops were sent to Little Rock to preserve the peace. On the opinion of the Attorney-General, President Grant recognized Judge Baxter as the lawful Governor, May 15. The Brooks party immediately disbanded, and Judge Baxter held the office till the autumn of 1874, when the provision of the new State Constitution, reducing the Governor's term from four years to two, took effect. After retiring from the office Judge Baxter resumed practice.

Beckley, Fanny (Mrs. Thomas Allston Brown), actress, born in New York city, July 9, 1842; died there, Jan. 25, 1899. She first appeared as a member of the Marsh troupe of children at the age of sixteen. After two seasons with this traveling company she was for a time a member of Laura Keane's Varieties Theater, from which she went to play juvenile female parts with Edwin Forrest. During the years 1861 and 1862 she was a member of a pantomime and ballet company, and in September, 1862, she mar-

ried Mr. Brown, a journalist of New York city, author of a *History of the American Stage*. After her marriage Miss Beckley retired to private life.

Bissell, Lora C. (born Lora C. Hudson), army nurse, born in Devereux, N. Y., Aug. 4, 1839; died in Buffalo, N. Y., Feb. 6, 1899. She received a good education, and was a successful teacher in the academy at Schenectady at the breaking out of the civil war. At the time of the killing of Col. Ellsworth, in Alexandria, the feeling was intense in that part of the State of New York, and the regiment known as the "Ellsworth Avengers"—the 44th New York Volunteers—was formed. Miss Hudson was one of those most deeply impressed, and she wrote a popular war song, entitled *Ellsworth's Avengers*. The volunteers tendered the young teacher, as the highest compliment, an election as "child of the regiment." Soon after this Miss Hudson volunteered as an army nurse, and she accompanied the 44th to the war and shared in all its fortunes. Her marriage to Lieut. Bissell occurred soon after the war, and from that time she resided in Buffalo. She was a member of the Society of Army Nurses and an honorary member of the regimental association of the 44th.

Blair, Charles W., lawyer, born in Georgetown, Ohio, in 1820; died in Kansas City, Mo., Aug. 21, 1899. For several years he was active in the political affairs of his native State, and he was once defeated for Lieutenant Governor on the Democratic ticket by a small majority. In the civil war he assisted in raising the 2d Kansas Regiment, organized the Blair Battery, and became colonel of the 7th Cavalry, and at the close of the war was brevetted brigadier general of volunteers. At the time of his death he was attorney for the Kansas City, Fort Scott and Memphis Railroad Company.

Blair, John Insley, born near Belvidere, N. J., Aug. 22, 1802; died in Blairstown, N. J., Dec. 2, 1899. The Blair family, from which he descended, came from Scotland in 1720 and settled in Hunterdon County, N. J., the founder of the American branch being John Blair. In the latter part of the eighteenth century Samuel Blair, great-grandfather of John I. Blair, was sent by a Philadelphia firm to take charge of the iron works at Oxford Furnace, Warren Co., N. J. Mr. Blair's father moved to the Delaware to look after

the shipping of the iron from this furnace, and there John I. Blair was born. Later the family moved to a farm on Beaver Creek, a short distance from Hope, where young Blair passed the first few years of his life. As was usual with country boys in those days, he attended the country schools in winter and helped his father during the summer. The first manifestation he gave of his rare business instincts and his indomitable determination was when he announced to his mother that his brothers and sisters needed education, therefore he would have to get rich. This incident, the starting point in his financial career, took place when he was only ten years old. The

same year he became a clerk in a general store in Hope, and so closely did he devote himself to his work that at fourteen he was looked upon as a good merchant, and at nineteen he embarked in business for himself, opening a country store in what is now Blairstown. The venture, despite the fact that the surrounding country was almost a wilderness, prospered, and in the course of a few years Mr. Blair found himself able to extend his business by opening branch stores in several places, each of which he placed in charge of a brother or a brother-in-law, thus laying the foundations of several large fortunes. An important factor in his business was his trading in country produce, for which he found a ready market in New York city. As his fortune grew he devoted his talents to the encouragement of the iron industry at Oxford Furnace, where operations had been going on ever since William Penn settled in Pennsylvania. The necessity for means of transporting the metal to the seaboard led Mr. Blair and others to organize the Lackawanna Coal and Iron Company, out of which has grown the great system of the Delaware, Lackawanna and Western Railroad. In the early days of the settlement of the great West Mr. Blair found ample opportunity for the exercise of his rare judgment and untiring energy, and his name was connected, either as builder or director, with 25 different lines. Mr. Blair was one of the original directors of the Union Pacific Railroad. He was also a director in the following companies: The Warren Railroad, the Blairstown Railroad, the Delaware, Lackawanna and Western, the New York, Susquehanna and Western, the Chicago and Northwestern, the Burlington, Cedar Rapids and Northern, the Sioux City and Yankton, the Sioux Falls and Dakota, the Chicago and Pacific, the Chicago, Iowa and Dakota, the Kansas City and Southern, the Cedar Rapids and Missouri River, the Green Bay and Western, the Sioux City and Pacific, the Iowa Falls and Sioux City, the Chicago, Iowa and Nebraska, the Fremont, Elkhorn and Missouri Valley, the Maple River, Sussex and Mount Hope, the Cayuga and Susquehanna, and the Bangor and Portland. In connection with his railroad building Mr. Blair received enormous grants of public lands, and it has been said that as he built and owned in his lifetime more railroads than any one man in the world so, at one time and another in his life, he owned more land than any other man in the world. He formed land companies, and these companies, under his direction, laid out the sites for what are now more than 100 flourishing cities and towns in the West. In his railroad building it was Mr. Blair's custom to take a road that somebody had begun and failed to complete, rebuild it entirely or complete it, and then lease it or sell it to a trunk line after connecting it with the trunk line. In this way he made a profit on the railroad building, acquired great quantities of valuable land, and made still more money by selling or leasing the road he had thus rehabilitated. The last road that Mr. Blair built was the Kansas City, Osceola and Southern. This was completed in 1898 and turned over to the St. Louis and San Francisco Railroad to operate for a term of years. Mr. Blair was always identified with the Republican party, and with two exceptions he attended all the national conventions in the capacity of a delegate. In 1868 he was defeated by Theodore F. Randolph in the contest for the governorship of New Jersey, but, aside from this, he was never a candidate for public office. He had the distinction for several years of being the oldest bank president in the

country. He contributed an endowment fund of \$150,000 to the Presbyterian Academy in Blairstown, which bears his name, and he also founded professorships in Princeton University and Lafayette College, and in 1897 erected a large dormitory at Princeton, which bears his name, besides giving generous aid to Western colleges. To the Presbyterian Church as a whole he gave large sums, and more than 100 churches of that denomination owe their existence to his liberality.

Blake, John H., scientist, born in Boston, Mass., in 1808; died there, July 5, 1899. He was the youngest son of Thomas Blake, a lieutenant in the 1st New Hampshire Regiment in the Revolutionary War, and was one of the earliest graduates of the Boston High School. When eighteen years old he established a laboratory at Jamaica Plain for the manufacture of pure chemicals, and here was made the ether that was used in the first experiments in anesthesia. In 1835 he went to South America to investigate the extensive niter beds over which Chili and Peru subsequently quarreled. The outcome of this journey, in addition to its commercial importance, was a geologic and geodetic survey and exploration of the Atacama region and an exploration of the prehistoric graves at Tacna, the results of which are in the Peabody Museum, at Cambridge. On his return from South America Mr. Blake took charge of the copper mines at San Fernando, Cuba, subsequently explored a portion of the Isle Royale region near Lake Superior, and then settled in Boston as a consulting chemist and civil engineer, also filling many important business and administrative posts.

Bland, Richard Parks, legislator, born in Ohio County, Kentucky, Aug. 19, 1835; died near Lebanon, Mo., June 15, 1899. Left an orphan at an early age, he was compelled to earn his own living, and for four years he worked on a farm. From his small wages he saved enough to enable him to attend school in winter. When eighteen years old he took a teacher's course for one year in the Hartford (Ky.) Academy, and then taught three terms in Kentucky and Missouri. In 1855 he went to California. Ten years were passed in that State, Nevada, and Colorado in teaching and studying and practicing law, and he was admitted to the bar in Utah in 1860. During this period he also served a term as treasurer of Carson County. In 1865 he opened a law office in Rolla, Mo., and, after practicing there three years, settled in Lebanon, where he combined law, politics, and farming. In 1872 he was elected to Congress as a Democrat, and he was re-elected to each succeeding Congress till 1894, when he was defeated by Dr. T. D. Hubbard, Republican. In the next election he in turn defeated Dr. Hubbard, and he then held his seat till his death. Mr. Bland will be longest remembered by reason of his intimate connection with the silver movement. From the beginning of his long congressional career till his death he was the most conspicuous champion of free-silver coinage. He voted for the famous inflation bill of 1874, which President Grant vetoed, and opposed the bill of 1875 for resumption of specie payments. In 1876 he introduced a bill providing for free coinage of silver, which was afterward amended by the Senate into a limited purchase, and in that form was passed over President Hayes's veto in 1878. This bill called for the coinage of \$2,000,000 worth of silver a month, and remained in force till repealed by the Sherman act of 1890. In 1891 and 1893 Mr. Bland was chairman of the Committee on Coinage, Weights, and Measures, of which he was before and afterward a member. From 1878

till his death he neither neglected an opportunity nor spared an effort to induce the House to pass an out-and-out free-coinage measure.

Bonner, John, author, born in Quebec, Canada; died in San Francisco, Cal., May 5, 1899. In early life he removed to New York city and engaged in literary work. He was connected for some time with Harper's Weekly, and for several years was the Wall Street reporter of the Herald. His experience in the last post induced him to become a stockbroker. In 1878 he failed for a large amount, and soon afterward he returned to literature. Since 1882 he had resided in San Francisco, where he had been connected successively as leading editorial writer with the Call, the Chronicle, and the Bulletin, and had also corresponded with Eastern newspapers. He prepared a series of popular child's histories, covering France, the United States, Greece, Rome, and Spain, the last being published in 1894.
